and A. and J. Churchil in Pater-Noster-Row. MDCCCL.

To my Honoured U N C L E

JOHN MARSHAM, Esq;

S I R,

I Send this Book to you, because you first directed me to this Design. The Learned *Gassendus* was my Precedent; whom nevertheless I have not follow'd in his Partiality: For he, tho' limited to a Single Person, yet giveth himself Liberty of Enlargement, and taketh occasion from this Subject to make the World acquainted with many excellent Disquisitions of his own. Our Scope being of a greater Latitude, affords less Opportunity to favour any Particular; whilst there is due to every one the Commendation of their own Deserts. This Benefit I hope to have received from the variety of the Subject; but far more are those I owe to your Encouragement, which if I could wish less, I should upon this Occasion, that there might seem to have been expressed something of Choice and Inclination in this Action, which is now but an inconsiderable Effect of the Gratitude of,

Dear Uncle,

Your most affectionate Nephew, and

Humble Servant,

THOMAS STANDLEY.

P R E F A C E.

P R E F A C E.

HISTORY (which by Expounding actions past teacheth to regulate the future, and furnisheth us with Wisdom at the cost of other Mens Experience) is not unlike Painting: Their scope is the same; and as in the latter it argues want of Skill to look upon the whole Draught with an indifferent eye, but to select and insist upon some chief particular is proper to an Artist; so he who rests satisfied with the general Relation of Affairs, (not fixing upon some eminent Actor in that Story) loseth its greatest benefit; since what is most particular, by its nearer affinity with us, hath greatest influence upon us.

Hence it is that there are two kinds of History; one represents general affairs of State; the other gives account of particular persons, whose Lives have rendred them Eminent. Homer hath given an Essay of each; of the first in his Iliads, a relation of a War betwixt different Nations; of the second in his Odysses, confined to the Person of Ulysses.

Now the life of Man being either practick, busied in civil Affairs of Peace and War, or Contemplative, retir'd from publick Business to Speculation and Study of Wisdom, Divine or Humane, it follows that this personal History be two-fold likewise, describing either the Actions of such Persons as are wholly interess'd in the Affairs of State (properly compared to the Persons of a dramatical design, whose single Characters and Parts serve only to make up one joynt Plot. Such are most of those whose Lives are related by Plutarch, and the twelve Cæsars of Suetonius) or the Lives of such as have been excellent in some kind of Learning; thus Antipho writ of Poets; Eudemus of Astrologers; Cicero and Plutarch of Orators, Suetonius of Grammarians. They who writ of Philosophers exceeded the rest far in number, of whom to give a particular account will be unnecessary, because their Works are not extant, and therefore we shall only name them, Aetius, Anaxilides, Antigonus, Antisthenes, Aristocles, Aristoxenus, Callimachus, Clitomachus, Diocles, Diogenes Laertius, Eunapius, Heraclides, Hermippus, Hesychius, Hippoborus, Son, Idomeneus, Nicander, Nicias, Panætius, Porrius, Plutarch, Sorion and Theodorus.

Of almost all these (which is much to be deplored) there remain not any footsteps; the only Author in this kind for the more ancient Philosophers is Diogenes Laertius, for the later Eunapius. And to make the Misfortune the greater, that which Laertius gives us is so far short of what he might have done, that there is much more to be found of the same Persons dispersed among other Authors, which I have here collected and digested, with what diligence I could.

Nor is it unseasonable at this time to examine the Tenents of old Philosophers, when so great variety of Opinions daily spring up; some of which are but raked out of the Ruines of Antiquity, which ought to be restored to their first Owners; others being of late invention will receive addition, when advanced to such height we look down to the bottom from which Philosophy took her first rise, and see how great a progress she hath made, whose beginnings are almost inscrutable.

Although some Grecians have challenged to their Nation the Original of Philosophy, yet the more Learned of them have acknowledged it derived from the East. To omit the dark Traditions of the Athenians concerning Musæus, of the Thebans concerning Linus, and of the Thracians about Orpheus, it is manifest that the Original of the Greek Philosophy is to be derived from Thales, who Travelling into the East, first brought Natural Learning, Geometry, and Astrology thence into Greece, for which reason the Attribute of Wise was conferred upon him, and at the same time upon six others for their Eminence in Morality and Politicks. Thus Learning in the ancientest times was by the Greeks called Sophia (Wisdom) and the Professor thereof, who raised his Soul to an eminent degree of knowledge, Sophos (wise :) Pythagoras first named it Philosophy (love of Wisdom) and himself a Philosopher, affirming, that no Man is Wise, but only God.

* Laert. vit. Thalet.

* As concerning those who were honoured with this Attribute of Wise, Damon the Cyrenean undervalues them all, especially the seven. Anaximenes saith, They were all addicted to Poetry; Dicæarchus, that they were neither wise Men, nor Philosophers, but upright Men and Law-givers: Archetimus the Syracusian wrote concerning their meeting with Cypselus (Father to Periander) whereat he saith himself was present. Ephorus affirms they all met with Croesus, Thales only excepted. Some say they met also at the Panionian Feast, and at Corinth, with Periander at Delphi.

There is some controversie concerning their Sentences, of which some are ascribed to several persons, as that, Lacedæmonian Chilon this profess'd,
Nothing too much; a Mean in all is best.

† Not Leophantus Gorgiadem as the Interpreters render
* So Suidas
Ἀκουσίλαος
Κάβα υἱὸς Ἀργεῖου,
by which Laertius is explained contrary to the Interpreters.

There is no less dissent concerning their number. Leandrius for Cleobulus and Myson, inserts Leophantus Son of † Gorgiades a Lebedian, or Ephesian, and Epimenides the Cretan. Plato (in his Protagoras) substitutes Myson for Periander: Ephorus, Anacharsis for Myson. Some add Pythagoras. Dicæarchus alledgeith four, acknowledged by all, Thales, Bias, Pittacus and Solon: then names six more, out of which are to be selected three, Aristodemus, Pamphilus, Chilon the Lacedæmonian, Cleobulus, Anacharsis, Periander; some add * Acusilaus Son of Caba or Scabra an Argive. Hermippus in his Treatise of the seven wise men, saith, they were in all seventeen, of which seven were variously named, which were, Solon, Thales, Pittacus, Bias, Chilon, Cleobulus, Periander, Anacharsis, Acusilaus, Epimenides, Leophantus, Pherecydes, Aristodemus, Pythagoras, Lasius of Hermionea, Son of Charmantides, or (according to Aristoxenus) of Simbrinus, Anaxagoras. Hippobotus in his Commentary of Philosophers, reckons Linus, Orpheus, Solon, Periander, Anacharsis, Cleobulus, Myson, Thales, Bias, Pittacus, Epicharmus, Pythagoras.

Laertius reckons them thus, Thales, Solon, Chilon, Pittacus, Bias, Cleobulus, Periander; whereunto he adds Anacharsis, Myson, Epimenides, and Pherecydes. These, saith he, were called the Wise Men, to whom some annex Pisistratus the Tyrant.

Among the Romans also three had the fir-name of Sapiens, M. Cato, C. Laetius, and L. Acilius.

Life and Writings
O F

THOMAS STANLEY, Esq;

THE Reader cannot expect to find in this Place a long Recital of Intrigues and Adventures; for as the Life of a Courtier or a Soldier is past in a Court or a Camp, so that of a Scholar is in the Solitude of his Study: And as Mr. Stanley's Learning made up the brightest part of his Character, so an Account of his Life is but a Relation of his Atchievements in the Learned World.

Mr. Stanley was Son of Sir Thomas Stanley, and Born at Cumberlorn-Green in Hartford-Shire, at the Age of 14 Years he was sent to Cambridge, and placed at Pembroke-Hall under the Tuition of Mr. Balcanhol, Brother to the Dean of Durham. This worthy Gentleman, who had Married the Lady Steward his Grand-Mother, took a more than Ordinary Care in the Education of his Pupil: He spared no Pains to Cherish and Animate those Desires of Learning which visibly appear'd the predominant Passion of his Mind.

While he continued yet in the University, his Fancy began to exert it self, and give some presages of what the World was to expect from his Genius: It was Here he composed those * *Madrigal's Poems*, and other Pieces, which together with some Translations out of the *French, Italian, and Spanish*, were published in one Volume after his Return from his Travels. As in his first Pieces he has given the World a Proof of the Fertility of his Invention; so in the latter, which are incomparably better, he has, beyond Exception, done of his Great Diligence and Learning.

Soon

Soon after his Return Home, when he had finished his Tour of *France, Italy, and Spain*, and by Travel extended his Knowledge beyond the Bounds of his Native Island, he Married *Dorothy*, Daughter of *Sir James Engan of Flower*, in the County of *Northampton*, whilst his Father and Mother were still living ; and before he was arrived at that Age, which by the Laws of his Country put an End to his Minority. This alteration in his State and Condition of Life did not in the least change his Temper and Disposition, or abate his Affection to Learning, which was no less vigorous now than before. Neither the Cares nor Concerns for his Family, nor the Caresses and Endearments of a Young Wife, could prevail with him to intermit his ordinary Studies, on which he was obstinately bent. I will not say of him as a Learned Chancellor of *France* has spoke of himself, † who complains in Print, that upon his Wedding Day he had not more than Six Hours to employ in his Studies ; but his Assiduity and Application is visible to all who shall consider the Greatness of his Works, and the short Limits of Life in which he finished them.

† *Buletin de*
Aff. Prof.

The first Work which He enriched the Publick with, was this History of the Lives and Opinions of the Ancient Greek Philosophers. This Work was first begun after the Example of the Learned *Gassendus* who has composed the Lives of *Copernicus, Tycho Brahe, Peurbachius, Regiomontanus*, and other Modern Astronomers and Philosophers. Mr. Stanley was not the first who had attempted this Province ; *Diogenes Laertius* in the Time of the Emperour *Marcus Antoninus* compiled a Volume of the Lives of the Elder Philosophers, and after him *Ennapius* writ the Lives of the Sophists. Besides what is extant, *Antisthenes* and many others, whose Volumes have perished, writ upon the same Subject. The Learned *Gerard Vossius* in our Age has writ a short Treatise of the Ancient Philosophy, and the several Sects, not to mention others ; but Mr. Stanley has out-done all that preceded him in the Extent of his Design, and the vast Multitude of particulars He has amass'd together.

The many Editions of so large a Work are undeniable Proofs of the Approbation it has received from the Publick. To speak the Truth, the Excellence and Variety of the Matter, and the vast Reading which the Author has discover'd in every part of it, could not miss of Admiration. Besides, most Men have a relish for Discourses of this kind ;
and

and there are few who have not a Curiosity to know the Lives and Actions of those whose Virtues they admire. This has engaged so many Pens to write the Lives of Princes, Great Captains, Ministers of State, and other Persons who have made a considerable Figure in the World, or had a share in the Revolutions of Empires and Kingdoms. Others again have entertained the Publick with the Lives of Divines, Lawyers, Poets, Physicians, &c. which have been kindly received and judged both Useful and Diverting.

There are two ways of Instruction; the one by Precept, the other by Example; the former is dry and barren, and makes at most but a languid Effort; the latter is lively and brisk, and leaves a strong Impression, creating in the Mind Desires and Inclinations to imitate what is Good and Excellent, and a Horror for what is Base and Ill. Mr. Stanley only considers Philosophers, and the Amusements and Speculations of Men retired from the Hurry and Noise of the World. He has with extreme Diligence compiled an exact History of their Lives, their Opinions and Notions of Good and Evil, of God and Nature; their Theories of the Universe, their Thoughts about the Principles of Things, their Schemes of Morality and Policy, their Conduct and Behaviour.

By this we see the Steps by which the Arts and Sciences, and all Parts of Humane Knowledge have been promoted, and the several Advances it has made from its Infancy, till it arrived at the Pitch it is at present at.

I mentioned before those Writers who preceded our Author in this Design, but none have executed it with so much advantage; his Aim is more Comprehensive, his Account is in every part Succinct, Pertinent, without Excursions, and consists of a vast Number of Fragments, which are not in others, supplied out of the vast Treasures of his Reading.

The following History consists of Nineteen Parts; the first treats of the Seven Sages or Wisemen of Greece, so Famous in Antiquity; the other give us an ample Account of the Twelve different Sects of Philosophers, the Lives of the most Eminent Professors, and the Opinions held by them. The last treat of the Chaldaick Philosophy, an Abstruse and Difficult Subject, and which required no less Learning than Mr. Stanley's to venture on it.

Thales,

An Account of the Life and Writings

Thales, the *Milesian*, was the first who employ'd himself in Natural Enquiries, and was thought to deserve the Magnificent Title of Wise for his Noble Discoveries in Geometry, Astronomy, and the Theory of the Universe. His Principle was, that Water is the chief Material of which Natural Bodies are formed, and into which they are resolved. He imagined the *Earth* a great Mass, floating on a vast Abyss or Ocean of Water; and from hence gave the Reason of Earthquakes and Eruption of Springs. He conceived God as the Author of all Natural Motion, and the Soul which animated the Universe. Mr. *Stanley* tells us, he imagined *Loadstone* and *Jett* to have Souls, because of their Virtue of attracting Bodies to them. To him is ascribed the Invention of Measuring the Height of the Pyramids by their Shadows, and found the Natural Reason of Eclipses, which before were lookt on as Portentous, and Prefages of some Calamity. Our Author tells us, he foretold that which ended the Five Years Wars between the *Lydians* and the *Medes*; when those poor People, frightened at the strange Darkeness, and believing the Sun hid himself to avoid seeing the Slaughter, laid down their Arms, and Compos'd their Quarrels. Besides *Thales*, *Solon*, *Chilon*, *Pittacus*, *Bias*, *Cleobulus*, *Periander*, had the same Title bestowed on them. And as *Thales* was the first, who by his Travels into the Eastern Countreys made himself acquainted with Mathematical and Natural Learning, and introduced it into *Greece*, these were the Authors of several Excellent Laws and Schemes of Government: And as the Illustrious Title of Wise was conferr'd on the first for his Excellent Skill in Geometry, and the knowledge of Nature, it was conferr'd on the other for their Excellent Precepts in Morality and Politics. Indeed the Attribute of Wise was given to all who professed any sort of Knowledge above the Vulgar, till *Pythagoras* changed that into the Name of Philosophy, piously thinking so great a Title could only be ascribed rightfully to the Infinite and Supreme Wisdom.

It will not be expected we should enter into a Detail of their Lives; this would be to anticipate the Reader, who will find all their Doctrines, Letters, Occasional Speeches, &c. recounted by our Author in their place.

The Sects of Philosophers had a Double Original; the one from *Anaximander* the Disciple of *Thales*, and therefore *Ionick*; and the other from *Pythagoras*, that Prince of Philosophers, which from the place where he held his School
was

was called the *Italic*. *Anaximander* varied from the Doctrine of his Master, and instead of *Water* made *Infinity* the Principle of all Things, but has left us without an Explanation of his Meaning. He first discover'd the Obliquity of the *Zodiack*, made Geographical Charts, and invented Dials : Tho' Mr. Stanley, after *Salmasius*, thinks his Gnomon did only note the Tropick and Equinoctial Points, the division of Hours not being used till a long Time after. Of this Sect, besides him, were *Anaximenes*, *Anaxagoras*, &c.

Socrates, an Athenian, was the Author of the Second Sect : His chief Study was Virtue, Morality, and the Regulation of our Lives and Actions. He was Son of a *Statuary*, but the Greatness of his Genius raised him above his Birth and Condition. He did not confine himself to set Lectures in the Chair. Where-ever he was his Conversation was still Pleasant and Instructive. The Camp, the *Forum*, the Publick Streets, the Houses of his Friends, the Prison in which he endured great Hardship, were so many Schools of Knowledge and Virtue. For his great Wisdom, his Manly and Noble Thoughts, the Ease and Sweetness of his Expression he was admired by all Men, and esteemed the Prince of Philosophers. He had a right Notion of the Divine Nature, and Vigorously opposed *Politheism*; for which his Enemies reproach'd him as an Infidel, and an Enemy of the Gods, and Condemn'd him to Death ; which he Drank with such Majesty of Soul, such Serenity of Mind, as shew'd the absolute Empire of his Reason over his Passions, and the impotence of his Enemies Malice ; who by Death it self could not break in upon the Tranquility of his Mind, or make him Die other than *Socrates*. There are great Disputes maintain'd, not without some Heat, among Christian, as well as Pagan Writers concerning the *Dæmon* which attended *Socrates*, and gave him Presages of Events which should happen soon after : The discussion of this may be seen in an entire Chapter, in the Life of this Philosopher. Notwithstanding his Eminent Vertue and Wisdom, he could not escape the Malice and Wit of *Aristophanes*, who has expos'd him in a Play called *The Clouds*, which Mr. Stanley has translated into English, and annexed as an Appendix to his Life.

The Succession of the *Ionick* Philosophy, which before *Socrates* was single, was soon after divided into several Schools and Sects, some of which were of less Note, and lasted but a short Time, others were more Considerable, and of longer Continuance ; of the first sort were

b

the

An Account of the Life and Writings

the *Cyrenaick*, *Megarick*, *Eleack*, and *Eretriack* Sects ; of the latter were the *Academick* and *Cynick*, which two gave Birth to the *Peripatetick* and *Stoick*.

Aristippus, a Disciple of *Socrates*, was the Chief of the *Cyrenaick* Sect. He placed the Sovereign Good in Pleasure, and thinks Virtue only commendable as it conduces to acquire that. The Distinction of Right and Wrong, Just and Unjust, he thought Arbitrary, and not established by Nature, but Law and Custom. As his Principles were loose, his Life was suited to his Doctrine, which he pass'd away in Jollity and Mirth. His good Humour render'd him agreeable to *Dionysius* the Tyrant of *Sicily*, while the Severity of *Plato*, which he miscall'd Moroseness, offend'd that haughty Prince. I cannot forbear here to recount one or two of the many Witty Replies which are recorded of that Philosopher, and which our Author has collected among the other Incidents of his Life. When *Dionysius* asked him what brought him to his Court, He replied, He came to Traffick with him, to offer him what He had, and receive from him what He wanted, meaning to Barter the Wit and Humour He was Master of for the other's Money. He did not confine himself to the Rules of Temperance, Sobriety, and Continence. Upon a certain Time entring into the House of a Famous *Curtizan*, He observed one of the Company to blush. Sir, said he, *there's no Harm in going in, but in not being able to come out.* When a certain Strumpet charged him with being with Child by him, *You know that no more,* says he, *than in passing thro' a Bush which Thorn it is that pricks you.* When *Dionysius* offer'd him three Beautiful Women, and bid him chuse one out of them, which he liked best ; he took them all three away with him, that he might not, as he said, incurr the Fate of *Paris*, who had been so severely punished for his Indiscretion in preferring one to two. *Aristippus* own'd but two Passions, Pleasure and Grief, as the Springs of all Humane Actions ; and these are diversified according to the Temper and Complexion of every Person. He derided the Calmness and Serenity of Mind, or Exemption from all Passion, in which others place all Humane Happiness, regarding this as meer Inactivity, and a tiresome Indolence. He likewise derided the Plainness, Simplicity, and Course Living of his Old Friend *Antisthenes*, and admired the Plenty, Ease and Luxury of the *Sicilian* Court. Many other Pleasantries of the same Kind are mention'd in their Place, but I fear I have trespass'd the Bounds I prescribed my self in descending to these Particulars. Be-

Besides the *Cyrenaick*, Mr. Stanley treats of *Megarick*, *Eleack*, and other Sects; but the most eminent of all those derived from *Socrates*, was the *Academick*, who took their Name from the place where their School was erected. *Plato* was the chief of these, concerning whose Birth Mr. Stanley relates several odd and marvellous Rumours. It was the common Fame at *Athens*, that *Apollo* had condescended to visit his Mother's Bed; and the God appearing in a Vision to his Father, required him to refrain the Company of his Wife till after her Delivery. A pretty Artifice, sometimes used by the *Pagan* Women, to delude their Credulous Husbands. He had a plentiful Fortune, and after he had been a Scholar of *Socrates* for a while, he Travelled to hear the Greatest Masters of his Time. In *Italy* he studied the *Pythagorick* Doctrines, and seems to have drawn many Things out of the Books of *Moses*, which he might probably have met with in his Voyages. He passes with some for the Inventor of Dialogue, but Mr. Stanley pretends he did only refine and polish it, and thinks the Analytick Way of Reasoning, a Noble Invention, ought to be ascribed to him. This is the Method of Discovering Truth, by supposing the Thing sought as true or known, and enquiring what the Consequents are.

Mr. *Des Cartes* has given us an illustrious Instance of the Use of this Method in his *Meditations* and *Method*, where the chief Truths of Philosophy are demonstrated with great Force and Exactness. The Examples of this Method are to be found in the Books of *Euclid*, *Appollanius*, *Pappus*, and other places of the Old Geometers, as Mr. Stanley has marked. *Plato* thought Mathematical Learning of Use in all Parts of Humane Knowledge, and requires all his Scholars to be previously instructed in the Elements of Geometry.

His Philosophy was held in Veneration in the first Ages of Christianity, which Mr. Stanley thinks proceeded from his teaching, that God had one only begotten Son, whose Power extended over all Creatures. In short, his Notions are in many Points agreeable to the Scheme of our Religion.

Plato held the Soul was Immaterial and Immortal; that it was Free and Independent, but subject to Necessity or Fate.

He

An Account of the Life and Writings

He had a Great and Noble Genius, and surprizes the Mind with the Eloquence of his Stile, and the Abundance of his Imagination. To give us a more Compleat Idea of his Philosophy, Mr. Stanley presents us with an Abridgement of the Doctrines of the Old Academy out of *Cicero*, and after that a Compleat Summary. Several Collections of this Kind are found in *Plutarch*, *Laertius*, *Apuleius*, but our Author passing these by, has chosen that of *Alcius*, as most perfect and compleat, and annexed it entire as an Appendix to the Life of this Philosopher. In the last place, to illustrate the Matter, he has inserted a Platonick Discourse, written after a Poetical manner in Italian by the Famous *John Picus*, Earl of *Mirandola*.

After the Death of *Plato*, his Disciples divided into two Sects, the first remained in the old Academy, the other took Possession of the *Lycæum*. The rest were call'd *Peripateticks*, of whom *Aristotle*, a Native of *Staggra*, was chief. Neither his Birth nor Education were so advantageous as *Plato*. Mr. Stanley denies that he ever practised as a Quack, or sold Remedies at *Athens*. This, and the pretended Divine Honours paid to his Wife *Pythias*, and being concerned in a Plot against *Alexander*, Mr. Stanley rejects as Calumnies groundless and injurious to the Memory of so Great a Man. He made great Improvements in Logick as well as other Parts of Philosophy, invented Categories, formed the Syllogism, and determined several Modes and Figures, detected the Arts of Sophistry, writ a great Number of Books of Metaphysics, Physics, Natural History of Animals, &c.

The Fortune of this Philosopher is very strange; and it is surprising to find Men judge so differently of the same Person, in one Age: Men have been excommunicated and treated as Hereticks for reading him to their Disciples: At other times he has been Introduced into Schools and Universities, and no other Doctrine taught to their Scholars. His Writings in one Age have been made the Standard of Truth. He has been stiled the Genius of Nature, and his Performances the highest Pitch of humane Wit. Again, at others his Philosophy has been treated as Trifling, Verbose, Empty and Litigious. However it be, Mr. Stanley has given a curious and exact Abstract of his Doctrine.

Another Branch of the School of *Socrates* were the *Cynicks*. *Antisthenes* was the Chief of these, which after was made

made famous by *Diogenes* his Scholar. It is Difficult to determine whence this Name took its Rise. Mr. Stanley thinks partly from the *Cynosarges*, the *Gymnasium* or School of *Antisthenes*, and partly the Roughness and Severity of their Manners. *Diogenes* was the most considerable of this Sect, and made so great a Noise by the Singularity of his Maxims, that *Alexander* had the Curiosity to see him. His odd manner of living in a Tub, his seeking Honest Men with a Candle and Lantern at Noon, and the other pleasant Incidents of his Life, are all collected by Mr. Stanley.

The Sect of *Stoicks* had its Original from that of the *Cynicks*. *Zeno* was the Author of this, who having first been a Scholar of *Crates*, and afterwards a Hearer of other Philosophers, at last instituted this New Sect. This Philosophy has formed Great Men, and charmed a World of People by its Proud and Ostentatious Principles. It aims to fortifie Men against Bodily Torments, and Arm them against the Blows of Fortune. *Zeno* admitted only one God, whose different Powers and Operations were exprest by several Names. The Sovereign Happiness of Man he placed in Virtue as the only Means to make him Immortal, and afford him a Solid and Lasting Pleasure. He thought the Frame of the World would one Day be dissolved, and perish in Flames. That Absolute Empire of Man over his Body and Mind, which he so highly asserted, gave rise to that pernicious Doctrine, that any one might lawfully destroy himself. And yet there is something in this Philosophy which is bright and glorious, and capable of dazzling the Sight of those who only look at the Splendor of the *Pagan* Virtues; with what an Air did *Zeno* teach his Wise Men the Contempt of Death, and an Indifference for the Things of the World?

The *Stoicks* were subtil *Logicians* as well as excellent *Moralists*, but we must not enter into particulars. Mr. Stanley has collected the Remains out of *Laertius*, *Cicero*, *Stobæus*, and others, and given us a Large Summary of that Philosophy at the End of the Life of this Philosopher. Besides *Zeno*, were eminent *Cleanthes*, *Chrysippus*, *Panætius*, *Posidonius*, and others, all whom have Justice done them by our Author.

The *Stoicks* were the last of all the Philosophers derived from *Thales*, and conclude the Succession of the *Ionick* School.

Pythagoras, whom most believe a *Samian*, was Chief of the *Italick* Sect. He continued a great while in *Ægypt* to

An Account of the Life and Writings

to learn their Myſteries. Mr. Stanley tells us, that He was made Priſoner by *Cambyſes*, who ſent him to *Babylon*, where He became familiar with the *Magi* and *Chaldeans*, and was acquainted with the Prophet *Ezekiel*. He was a Comely Man, and had a Maſtick Mien proper to attract the Veneration of the People, and was thought by his Followers to be Hyperborean *Apollo*.

No Philoſopher had more Diſciples than *Pythagoras*. He enjoined an exact Submiſſion to all he ſaid, and impoſed a rigorous Silence on his Scholars for two Years. Temperance was the Virtue which he moſt earneſtly recommended as moſt neceſſary to bring the Body to an entire Subjection. His Philoſophy was Cabaliſtick, and full of Myſteries. He held the Pre-exiſtence of the Soul, and its Migration from one Body to another. Thus he reported in his Writings of himſelf, that before the *Trojan War* he was *Æthalides* the Son of *Mercury*, then *Euphorbus*, then *Hermotimus*, then *Pyrrhus* a *Delian*, laſtly, *Pythagoras*. In his Writings he reports that he came 207 Years ſince from the *Inferi*, and other Extravagancies. After his Life, Mr. Stanley has annexed an Account of his Diſcipline and Doctrine, his Symbolical Way of Teaching, and tranſcribed into his Works the Learned *Reuchlinus* Explanation of the Pythagorick Doctrine. Of this Sect were *Empedocles*, *Archytus*, *Philolaus*, and to them it muſt be own'd we are indebted for the True System of the Universe, which places the Sun in the Center, and the Earth in the Planetary Chorus.

The Sects which ſpring from the *Italick* may be reduced to four, the *Heraclitian*, the *Eleatick*, the *Sceptick*, or *Pyrrhonian*, and the *Epicurean*.

Heraclitus, by the advantage of a Good Genius, was Maſter of that Knowledge, which others acquire with Difficulty and painful Reſearches.

His Contemplative Humour and Diſdain for the World made him love Retirement and Solitude. He withdrew from the Society of Men, and ſpent his Time in the Solitary Top of a Mountain, in ſeriouſly bemoaning the Follies and Vanity of the World.

Democritus, the Head of the *Eleatick* Sect, was of a Temper very different from *Heraclitus*: He had a ſmiling Countenance, and diverted himſelf with Laughing at the Ridiculous Paſſion which Men diſcover'd for Trifles, the Diligence

Diligence and Pains they used to obtain them, and the Regret and Grief they shew'd upon any Loss or Disappointment. The People of *Abdera*, among whom he lived, observing him to laugh frequently, began to doubt of his Good Sense, and sent for *Hippocrates* to cure him. But having shewn his *Diacosmus*, the Opinion they had of his Folly was soon converted into Admiration. He was the first Inventer of the Doctrine of *Atoms* and a *Vacuum*, or the *Corpuscular Philosophy*, the Elements of which Mr. Stanley has deliver'd.

Pyrrho was Chief of the *Scepticks*. He affirmed Man could only Judge by Appearances of Truth and Falshood, and therefore Pretended the Mind only ought to continue in suspense, and not determine any thing. All the Subtilty of these Gentlemen lay in finding Reasons of Diffidence and Distrust in Matters which appeared Plain and Evident. The Curious will find their Entire Philosophy in its proper place.

The Author of the last Sect was *Epicurus*, whom our Author tells us writ more than any other of the Philosophers. He placed the Sovereign Good in Virtuous Pleasure. The wrong Interpretation of his Opinions, and the Abuse of them by his Disciples, has brought his Philosophy into Disrepute, and caused it to be decried as the Source of all Vice and Immorality. But Mr. Stanley affirms the Weakness of his Constitution, and his extreme Sobriety, ought to remove so injurious a Charge. Besides, the Altars erected to his Honour after his Death will not suffer us to believe him so voluptuous a Man as his Enemies would represent him. Every one knows he taught *Atoms* and a *Void* to be the Principles of things held, and contrary to *Aristotle* and others, that the World was not Eternal. Nay, he affirms it bears sensible Marks of its Newness; urging for Instance, the Rise of Arts and Sciences as undeniable Proofs of its small Continuance. *Lucretius* in his Elegant Poem has given us his Doctrine of the Universe, Providence, the Principles of Things; and *Gassendus*, who revived his Philosophy in this Age, has written his Life.

It is Time now to proceed to the three last parts of this large Work, which contain an Account of the *Chaldaick*, *Persian*, and *Sabaean* Learning. As the *European* Sciences had their Source in *Greece*, so the Philosophy of those People was derived from the Eastern Nations, whose Original is very obscure. The Writings of the Ancient Sages are long since perished, and *Plato* and *Pythagoras*, who have mixed

ed

ed their Tenets with their Philosophy, have done it in such manner, that it is hard to distinguish what they have borrowed from their own Inventions. This Difficulty has rather animated than discouraged Mr. Stanley, who with mighty care has amassed the scatter'd Fragments, and by digesting what is Genuine, has compiled an Idea of the Oriental Learning.

The *Chaldeans* in the Time of *Alexander*, pretended they had continued to observe the Stars for 470000 Years. But this must be regarded as an Empty Boast, since all the Observations they could then produce, as Mr. Stanley assures us, did fall short of two Thousand Years, and there is nothing extant, at present, of their *Astronomy* more ancient than the *Æra* of *Nabonassar*, or the 3967th Year of the *Julian* Period.

Zoroaster is commonly own'd as the first Author of Arts and Sciences amongst the *Chaldeans*, but who He was, or in what Age He lived, is dark and uncertain. His Disciples, the *Magi*, propagated this Learning, which was introduced into *Greece* by *Berosus* before or about the Time of *Alexander*.

The Eastern Learning was not taught in Schools to a promiscuous Audience, but confined to certain Families, the Father of whom instructed his Children, and by this Means convey'd his Mysterious Knowledge to Posterity. Their Wisemen were regarded by the Vulgar as sacred Persons, and had a separate Habitation, enjoying great Privileges, and an Exemption from Publick Charges. They were divided into Several Kinds or Sects, according to the Subject of their Studies, as *Naturalists*, *Priests*, *Astrologers*, &c.

Their Great Master *Zoroaster* divided all Things into three Kinds. The first Eternal, without Beginning or End. The next Immortal, which had Beginning, but no End. And the last Mortal and Corruptible. They thought the First of all Things was Eternal and Supreme God, whom they termed Father and King, and placed his Effence in Light and Truth.

After God, were their Good and Ill *Dæmons*, which they conceived to inhabit the Regions of Fire, Air, Water, and Earth. The former they fancied to dwell in the Light of the Divine Presence, and were the
Mi-

Ministers and Messengers of God. The latter, whom they supposed to be Spirits of Darknes, did wander up and down, and were Enemies and Haters of Mankind, and continually seeking to Hurt and Destroy them. Of these they thought the Earth, and Sea, and their most retired Cavities and Depths were full. Of the Ill *Dæmons* they accounted some to be worse than others. Those who kept their Residence in the Air they thought to be Wanton and Sportive, who either Diverted Men with their Capricious Tricks, or Inspired them with Sanguine and Amorous Thoughts. On the contrary, those which frequented solitary and dark places, or lodg'd in the Caverns of the Earth, were extremely Malignant and Fierce, and like wild Beasts, attacked and tore in Pieces whomsoever they met. If by the Permission of Heaven they were suffered to remove their Seats they enter'd into the Bodies of Men, threw them into Madnes, Epilepsies, Convulsions, and other Dismal and Affrighting Distempers.

After the Immaterial Beings, the next Order were the Corporeal Worlds, of which they accounted Seven; one *Empyrean*, three *Ethereal*, and three more *Material*, by which they meant the Terrestrial Globe compos'd of Water, Air and Earth.

We have said enough of their *Theology*, and *Physicks*, the next Branch of the *Chaldaick* Learning was their Arts of *Prognostick*, or *Presages of Future Events*. The chief of these were *Astrology*, *Augury*, *Interpretation of Dreams*, *Explanation of Prophecies*, and other like Mystical Sciences.

The third Part of the Wisdom these Sages were Famous for, was their *Magick Natural* and *Theurgick*. By the Help of the former they pretended to have a great Power over the Natural World, to drive away Wild-Beasts and Venomous Creatures, to preserve the Fruits of the Earth, to keep off Storms and Tempests, Thunder, and what not. By the latter they affirm'd they could command *Dæmons*, and call the Good to their Aid and Assistance, and repel and chase the Malignant ones. I shall not enter further into an Enumeration, but leave the Reader to see the Original, where Mr. Stanley has given us a large and ample Account of the Worship, Religions, Rites, Arts and Sciences of these Nations.

ed their Tenets with their Philosophy, have done it in such manner, that it is hard to distinguish what they have borrowed from their own Inventions. This Difficulty has rather animated than discouraged Mr. Stanley, who with mighty care has amassed the scatter'd Fragments, and by digesting what is Genuine, has compiled an Idea of the Oriental Learning.

The *Chaldeans* in the Time of *Alexander*, pretended they had continued to observe the Stars for 470000 Years. But this must be regarded as an Empty Boast, since all the Observations they could then produce, as Mr. Stanley assures us, did fall short of two Thousand Years, and there is nothing extant, at present, of their *Astronomy* more ancient than the *Æra* of *Nabonassar*, or the 3967th Year of the *Julian* Period.

Zoroaster is commonly own'd as the first Author of Arts and Sciences amongst the *Chaldeans*, but who He was, or in what Age He lived, is dark and uncertain. His Disciples, the *Magi*, propagated this Learning, which was introduced into *Greece* by *Berosus* before or about the Time of *Alexander*.

The Eastern Learning was not taught in Schools to a promiscuous Audience, but confined to certain Families, the Father of whom instructed his Children, and by this Means convey'd his Mysterious Knowledge to Posterity. Their Wisemen were regarded by the Vulgar as sacred Persons, and had a separate Habitation, enjoying great Privileges, and an Exemption from Publick Charges. They were divided into Several Kinds or Sects, according to the Subject of their Studies, as *Naturalists*, *Priests*, *Astrologers*, &c.

Their Great Master *Zoroaster* divided all Things into three Kinds. The first Eternal, without Beginning or End. The next Immortal, which had Beginning, but no End. And the last Mortal and Corruptible. They thought the First of all Things was Eternal and Supreme God, whom they termed Father and King, and placed his Essence in Light and Truth.

After God, were their Good and Ill *Dæmons*, which they conceived to inhabit the Regions of Fire, Air, Water, and Earth. The former they fancied to dwell in the Light of the Divine Presence, and were the Mi-

Ministers and Messengers of God. The latter, whom they supposed to be Spirits of Darkneſs, did wander up and down, and were Enemies and Haters of Mankind, and continually seeking to Hurt and Deſtroy them. Of theſe they thought the Earth, and Sea, and their moſt retired Cavities and Depths were full. Of the Ill *Dæmons* they accounted ſome to be worſe than others. Thoſe who kept their Reſidence in the Air they thought to be Wanton and Sportive, who either Diverted Men with their Capricious Tricks, or Inſpired them with Sanguine and Amorous Thoughts. On the contrary, thoſe which frequented ſolitary and dark places, or lodg'd in the Caverns of the Earth, were extremely Malignant and Fierce, and like wild Beaſts, attacked and tore in Pieces whomſoever they met. If by the Permiſſion of Heaven they were ſuffered to remove their Seats they enter'd into the Bodies of Men, threw them into Madneſs, Epilepfies, Convulſions, and other Diſmal and Affrighting Diſtempers.

After the Immaterial Beings, the next Order were the Corporeal Worlds, of which they accounted Seven; one *Empyrean*, three *Ethereal*, and three more *Material*, by which they meant the Terreſtrial Globe compos'd of Water, Air and Earth.

We have ſaid enough of their *Theology*, and *Phyſicks*, the next Branch of the *Chaldaick Learning* was their Arts of *Prognostick*, or *Preſages of Future Events*. The chief of theſe were *Aſtrology*, *Augury*, *Interpretation of Dreams*, *Explanation of Prophecies*, and other like Myſtical Sciences.

The third Part of the Wiſdom theſe Sages were Famous for, was their *Magick Natural* and *Theurgick*. By the Help of the former they pretended to have a great Power over the Natural World, to drive away Wild-Beaſts and Venomous Creatures, to preſerve the Fruits of the Earth, to keep off Storms and Tempeſts, Thunder, and what not. By the latter they affirm'd they could command *Dæmons*, and call the Good to their Aid and Aſſiſtance, and repel and chaſe the Malignant ones. I ſhall not enter further into an Enumeration, but leave the Reader to ſee the Original, where Mr. Stanley has given us a large and ample Account of the Worſhip, Religions, Rites, Arts and Sciences of theſe Nations.

An Account of the Life and Writings

Having thus given a View of the History of Philosophy, we shall proceed to the rest of his Learned Labours, which are either Printed, or remain in Manuscript in the Hands of the Curious.

When Mr. Stanley had happily Finish'd this Work, and before he was Twenty Eight Years of Age, he undertook *Æschylus*, the most knotty and intricate of all the Greek Poets, and in the Year 1663. after a World of Pains spent in illustrating and restoring him, he published his Accurate and Beautiful Edition of that Author. This was a Work of great Difficulty, and an Enterprize worthy of Mr. Stanley's Abilities and great Skill in the Greek Language. Henry Stephens, Salmasius, and divers other Criticks, thought the Difficulties insuperable, and despair'd of seeing this Accomplished.

Quis *Æschylum* possit affirmare Græcè nunc scienti, magis patere explicabilem, quam Evangelia & Epistolas Apostolicas. Unus ejus *Agamemnon* superat obsecratione quantum est Librorum Sacrorum cum suis Hebraïsmis & Syriaisinis & toto Hellenisticâ suppellectile vel farragine. CC. Salmasii de Hellenisticâ Ep. Ded. P. 37.

Six Tragedies of this Poet were first of all published by *Aldæ* at Venice in the Year 1518. After this *Adrian Turnebus* printed them with various Readings at the end in 1558. The same Year they came out at Venice Revised by *Roboretus*, who added his own Conjectures, together with those of *Michael Sophianus*, and in this Edition the *Choephora* was first added with *Scholia* out of the Ancient Copies. Not long after the whole came out all more Correct than before, by the Care of *Petrus Victorius* from the Press of Henry Stephens. In the last place, these Seven Tragedies were published by G. *Cauterius* at Antwerp in 1580. in which Edition, besides the Correction of an infinite number of Faults, there is an Account given of his Versification. *Isaac Casaubon* in his Notes upon *Strabo* declares his intent to publish and illustrate *Æschylus*; but either he did nothing in it, or his Labours have perished, to the great detriment of Learning.

After these Great Men, Mr. Stanley engaged in this Work, and what he has done in it, may be drawn from the Account himself has premised to his Edition. The Greek Text he has taken from the *Cauterian* Edition, and the *Scholia* from *Victorius*, to which, that he might omit nothing, he has annexed the various Readings, Epistles, Prefaces, Conjectures and Observations. He has farther Collated the former Tragedies, with Two Manuscripts, the one in the *Bodleyan*, and the other in the *Arundellian* Library, both of which were Lent him by Mr. *Selden*. By means of the first he has enriched the *Scholiast* on the first Three Tragedies, and by help of the latter published

a *Scholiast* which never before saw the Light. The Account of the Verification which *Cauterus* published, he has Amended, Collected the Fragments, made a New *Latine* Translation; and lastly, Completed the whole Work with a most Learned Commentary.

Besides these Monuments of his Learning which are published, there are divers other Proofs of his unwearied Application remaining still in Manuscript, all or most of which are in the Library of the Right Reverend the Lord Bishop of *Norwich*. Here are his large Commentaries on *Æschylus* in Eight Volumes in *Folio* which were never published, his *Adversaria*, or Promiscuous Remarks, in which several Passages of *Sophocles*, *Euripides*, *Stephanus de Urbibus*, *Juvenal*, *Persius*, *Hesychius*, *Callimachus*, and other Ancient Authors are amended and explained. Besides what is mentioned, there are large *Prælectiones* on *Theophrastus* his Characters, and a Critical Essay on the First-Fruits and the Tenths of the Spoil said in the Epistle to the *Hebrews* to be given by the Prophet *Abraham* to *Melchisedeck*, all which are full of Excellent Learning, and no less justly valued by their present Possessors.

And thus you have a short Account of our Author, who was a Gentleman of a Comely Aspect, and exceeded by none of his Time for Modesty, Candour and Learning.

His Contemporaries paid that Deference to him which he so well deserved; his Works were much beyond the Number of his Years; and in this he might be accounted another *Picus Mirandola*, in that he Died about the same Age, leaving our Nation exceedingly indebted to his Family for affording Two such Illustrious English Men as Sir *John Marsham* and himself.

*B O O K S Printed for and Sold by H. Walwyn, at the Three
Legs in the Poultry, the Corner of the Old-Jury.*

A Brief Exposition of the Church Catechism, with Proofs from Scripture. By the Right Reverend Father in God, Dr. *John Williams*, Lord Bishop of *Chichester*. The 12th Edition. Price 6 *d*.

The same in French, very proper for such as Learn either Language. Price 6 *d*.

The English Exercise for School-Boys to Translate into Latin, Comprizing all the Rules of Grammar, ascending gradually from the meanest to higher Capacities. By *J. Garretson*, School-Master, the Eighth Edition. Price 1 *s*.

Exercitia Latina; Or Latin for *Garretson's* English Exercises for School-Boys to Translate Syntactically, with the Declension, Gender, Genitive Case of Nouns Substantives, Termination of Adjectives and Participles, Declension of Pronouns, Conjugations, Præter Tense, &c. of Verbs, and other Requisites for the more ready Translating English into Latin. Price 1 *s*.

A Christian Taught to Pray; or Instructions how to perform your Devotions to God in an acceptable manner, by way of Exposition of the Lord's Prayer. By *Jos. Stephens*, Late Lecturer of *St. Giles's Cripplegate*, *St. Margaret's Lothbury*, and *St. Michael WoodStreet*. Price 1 *s*.

Sermons on several Occasions. By the same Author. Price 1 *s*.

The *London* Spelling-Book; being a more Easie and Regular Method of Teaching to Spell, Read, and Write true English. Being easier for Children than a Primer; and by the use of which a Person may Learn to Read without the help of any other English. Price Bound 6 *d*.

The Considerations of *Dræxellius* upon Death. In Three Parts. First, Considerations upon Death, for such as are in Health: Containing a Well Man's Daily Thoughts upon Death. Reflections upon the various Aspects of Humane Life, on the Uncertainty, Vanity, and Misery of it; the Doctrines and Sayings of the Antient Philosophers and Fathers, concerning the present Life. A Discourse of *Assamus* a Turk. How to retain the Memory of Death in our Minds. Prayers for these Occasions. The Second Part Containing a Sick Man's Christian Behaviour. An Antidote against Grief. Examples of Pagans and Christians that have Contemn'd Death. A Mind Prepar'd for Death. The Benefit of Sickness. How we ought to Read, Pray and Think in our Sickness. The Faults of Sick People. Consolations in Sickness. Examples of Patience in Sickness. The Sick Person's Bargain with God. His perpetual Song. An Answer to all the Objections of Sick People. Prayers for the Occasions of Sick People. The Third Part Containing the Divine Art of Dying well. How to regain lost Time. What all Ages and Nations have thought of Death. How they behaved themselves at that time. Nine Wills of the Antients. Nine remarkable Epitaphs. A Dying Man's Considerations. His Farewel to the World. The Happiness of Death. The Dying Man's Invitation to Christ. Last Breathings to Heaven. His surrendering himself to God. Prayers suitable to these Occasions. This Book never before in English, now Translated by a Fellow of the Royal Society. With Cuts. Price 2 *s*.

Stanley's Lives of the Philosophers. *Folio*.

THE TABLE.

The first Part.

Containing those on whom the Attribute of WISE was conferred.

THALES.

Chap.	Page
1. T HE County and Parents of Thales,	1
2. The time of his Birth,	2
3. His Travels,	3
4. How he lived at Miletus.	ibid
5. The Attribute of Wise conferred on him,	ib.
6. Of his Philosophy.	
—Sect. 1. That Water is the Principle of all Things,	ib.
2. Of God.	6
3. Of Demons,	ib.
4. Of the Soul,	7
5. Of the World,	ib.
7. Of his Geometry,	8
Sect. 1. Propositions invented by him,	ib.
2. Of his taking the height of the Pyramids,	9
8. Of his Astronomy,	ib.
Sect. 1. Of the Cælestial Spheres,	ib.
2. Of the Sun, Moon and Stars,	10
3. Of Eclipses,	ib.
4. Of the Year,	11
5. His Astrological Predictions,	ib.
9. His Moral Sentences,	ib.
10. His Judgment in Civil Affairs,	12
11. Of his Writings,	13
12. His Auditors and Scholars,	ib.
13. Of his Death,	14

SOLOON.

1. Solon's Parents, Country, and Children,	15
2. How by his means the Athenians took Salamis, Cyrrha, and the Thracian Chersonesus,	16
3. How he composed Differences and Seditions at Home,	17
4. What Alterations he made during his Government, and first of the Sisakbia	19
5. How he divided the People into Classes and erected Courts of Judicature,	ib.
6. His Laws,	20
7. Of the Axes, and Gyrbes, Senators, Oaths, and other Institutions of Solon,	24
8. How he entertained Anacharsis; his Travels to Egypt, Cyprus, Miletus, Delphi, Corinth, and Creet,	25
9. The Attribute of Wise conferred on him: His moral Sentences,	26
10. How he opposed Pisistratus and reprehended Thespis,	27
11. How he travelled to Lydia and Cilicia,	28
12. His Death,	30
13. His Writings,	ib.

Chap.

Chap.	Page
23. <i>Whether there is any thing naturally Good, Ill, or Indifferent.</i>	ib.
24. <i>What that is which is called, Art about Life.</i>	526
25. <i>Whether there be an Art about Life?</i>	529
26. <i>Whether there is in Men an Art about Life?</i>	530
27. <i>Whether the Art about Life can be taught?</i>	ibid
28. <i>Whether there be any thing taught?</i>	ibid.
29. <i>Whether there be a Teacher and a Learner?</i>	531
30. <i>Whether there be a way of Learning?</i>	ib.
31. <i>Whether the Art concerning Life be profitable to him that hath it?</i>	532
32. <i>Why the Sceptick sometimes on set purpose alledgeth weak Arguments.</i>	ibid

The Thirteenth Part.

Containing the Epicurean Sect.
E P I C U R U S.

1. H IS Country, Parents, Brethren.	533
2. H is time of his Birth.	534
3. <i>Where he lived in his younger time.</i>	535
4. <i>His Masters.</i>	ibid
5. <i>When, and upon what occasion he addicted himself to Philosophy, and instituted a Sect.</i>	536
6. <i>His School.</i>	ibid
7. <i>How he lived with his Friends.</i>	537
8. <i>His Friends and Disciples.</i>	ib.
9. <i>How much he wrote.</i>	539
10. <i>What Writings of his are particularly mentioned by Authors.</i>	ibid
11. <i>His Will.</i>	542
12. <i>The manner of his Death.</i>	543
13. <i>The time of his Death.</i>	ib.
14. <i>How dear his memory was to his followers.</i>	544
15. <i>With what constancy and unanimity the succession of his School flourished.</i>	ib.
16. <i>The Successors and followers of Epicurus.</i>	445
17. <i>Laertius, his Vindication of Epicurus.</i>	ibid

The Doctrine of Epicurus.

Of Philosophy in General.	547
CANONICK , of the Criteries.	549
1. <i>Of Truth and its Criteries.</i>	ib.
2. <i>Canons of Sense, the first Criterium.</i>	ib.
3. <i>Canons of Prænotion, or Anticipation; the second Criterium.</i>	552
4. <i>Canons of Affection or Passion, the third Criterium.</i>	554
5. <i>Canons concerning the use of Words.</i>	ib.

PHYSICK, or of Nature.

1. <i>Of the Universe, or the nature of things.</i>	ib.
1. <i>That the Universe consists of Body, and Vacuum or Place.</i>	556
2. <i>That the Universe is infinite, immovable, and immutable.</i>	ib.
3. <i>Of the Divine Nature in the Universe.</i>	557
4. <i>Of first Matter, or of the principles of compound things in the Universe.</i>	559
5. <i>That there are Atoms in Nature, which are the Principles of compound Bodies.</i>	ib.

Chap.	Page
6. <i>Of the Properties of Atoms, and first of their Magnitude.</i>	560
7. <i>Of the Figure of Atoms.</i>	561
8. <i>Of the gravity (or weight) and manifold motions of Atoms.</i>	ibid
9. <i>That Atoms (not the vulgar Elements or Homoiomera's) are the first principles of things.</i>	562
10. <i>Of the first and radical cause of Compounds, that is, of the Agent or Efficient.</i>	563
11. <i>Of Motion, which is the same with Action or Effect; and of Fortune, Fate, End, and Sympathetical and Antipathetical causes.</i>	ib.
12. <i>Of the Qualities of compound things in general.</i>	564
13. <i>Qualities from Atoms considered according to their substance and interception of Vacuum.</i>	565
14. <i>Qualities springing from Atoms, considered according to the properties peculiar to each.</i>	ib.
15. <i>Qualities from Atoms, considered according to their properties taken together.</i>	566
16. <i>Of those Qualities which are esteemed the Accident of things; and particularly of Time.</i>	567
17. <i>Of the Generation and Corruption of Compounds.</i>	568
18. <i>Whence it comes, that a generated Body is in a certain kind of things, and distinguished from other things.</i>	569

SECT. 2. Of the World.

1. <i>Of the form and Figure of the World.</i>	ib.
2. <i>Of the late beginning of the World.</i>	571
3. <i>Of the cause of the World.</i>	ib.
4. <i>Of the Generation of the World.</i>	572
5. <i>Of the Vicissitudes in the World.</i>	573
6. <i>A digression concerning Genii or Atoms.</i>	574
7. <i>Of the end or corruption of the World.</i>	575
8. <i>Of infinite Worlds.</i>	576

SECT. 3. Of Inferiour Terrestrial things.

1. <i>Of the Earth situate in the middle of the World.</i>	577
2. <i>Of Earthquakes, and the Flames of Ætna.</i>	ib.
3. <i>Of the Sea, Rivers, Fountains, and the overflowing of Nilus.</i>	578
4. <i>Of the properties of some Waters, and of Ice.</i>	579
5. <i>Of things terrestrial inanimate.</i>	ib.
6. <i>Of the Load-stone in particular.</i>	580
7. <i>Of the Generation of Animals.</i>	581
8. <i>Of the use of Parts in Animals.</i>	582
9. <i>Of the Soul the intrinsick form of Animals.</i>	ib.
10. <i>Of Sense in General, which is the Soul, (as it were) of the Soul.</i>	583
11. <i>Of Sight, and of the Images which glide into it.</i>	585
12. <i>That Seeing is performed by means of those Images.</i>	586
13. <i>Of Hearing.</i>	ibid
14. <i>Of Smelling.</i>	587
15. <i>Of Tasting.</i>	588
16. <i>Of Touching.</i>	ib.
17. <i>Of the Intellect, Mind, or Reason, and its Seat.</i>	ibid
18. <i>That the Soul thinketh by Images which glide into it.</i>	589

[c]

19 Of

The Table.

Chap.	Page
19. <i>Of the Affections or Passions of the Soul.</i>	590
20. <i>Of voluntary Motion, and particularly of Speaking, and Imposition of Names.</i>	591
21. <i>Of Sleep and Dreams.</i>	592
22. <i>Of Death.</i>	593

SECT. 4. Of Superior things, as well Celestial as Aerial.

1. <i>Of the substance and variety of the Stars.</i>	595
2. <i>Of the magnitude and figure of the Stars.</i>	596
3. <i>How the Stars move, out-run one another, and are turned round.</i>	ibid
4. <i>Of the rising and setting of the Stars, and of the alternate length of days and nights.</i>	597
5. <i>Of the light of the Stars, and of the changes and spots in the Moon.</i>	598
6. <i>Of the Eclipses of the Stars, and their set periods.</i>	ib.
7. <i>Of the presignifications of the Stars.</i>	599
8. <i>Of Comets, and those which are called falling Stars.</i>	ib.
9. <i>Of Clouds.</i>	600
10. <i>Of Winds and Presters.</i>	ibid
11. <i>Of Thunder.</i>	ibid
12. <i>Of Lightning and Thunder-claps.</i>	601
13. <i>Of Rain and Dew.</i>	602
14. <i>Of Hail, Snow, and Frost.</i>	ibid
15. <i>Of the Rain-bow and Halos.</i>	603
16. <i>Of Avernial places.</i>	ibid
17. <i>Of Pestilence.</i>	ibid

ETHICK, or Morals.

1. <i>Of Felicity, or the end of God, as far as Man is capable of it.</i>	605
2. <i>That Pleasure (without which, there is no notion of Felicity) is in its own Nature good.</i>	ib.
3. <i>That Felicity consists generally in Pleasure.</i>	607
4. <i>That the Pleasure wherein consists Felicity is Indolence of Body, and Tranquility of Mind.</i>	608
5. <i>Of the means to procure this Felicity; and of Vertues the chief.</i>	609
6. <i>Of Right-Reason, and Free-Will, from which the Vertues have all their praise.</i>	610
7. <i>Of the Vertues in general.</i>	611
8. <i>Of Prudence in general.</i>	ibid
9. <i>Private Prudence.</i>	612
10. <i>Domestick Prudence.</i>	613
11. <i>Civil Prudence.</i>	614
12. <i>Of Temperance in general.</i>	ibid
13. <i>Of Sobriety opposite to Gluttony.</i>	615
14. <i>Of Continence, opposite to Lust.</i>	617
15. <i>Of Meekness, opposite to Anger.</i>	618
16. <i>Of Modesty, opposite to Ambition.</i>	619
17. <i>Of Moderation, opposite to Avarice.</i>	ibid
18. <i>Of Mediocrity, betwixt hope and despair of the future.</i>	620
19. <i>Of Fortitude in general.</i>	621
20. <i>Of Fortitude, as to fear of the gods.</i>	622
21. <i>Of Fortitude as to fear of Death.</i>	623
22. <i>Of Fortitude against corporeal pain.</i>	624
23. <i>Of Fortitude against discontent of Mind.</i>	625
24. <i>Of Justice in general.</i>	626
25. <i>Of Jus (Right) or Just, whence Justice is denominated.</i>	ibid
26. <i>Of the Original of Right and Just.</i>	627
27. <i>Between whom Right and Justice is to be exercised.</i>	629
28. <i>With what right Justice is to be exercised.</i>	630

Chap.	Page
29. <i>Of Beneficence, Gratitude, Piety, Observance</i>	631
30. <i>Of Friendship.</i>	632
31. <i>Wherein Epicurus, asserting Pleasure to be the ultimate God, differs from the Cyrenaicks.</i>	633

The Fourteenth Part.

Of the Chaldaick Philosophy,

THE Chaldean Philosophers, Institution and Sects.

SECT. I. Of the Chaldean Philosophers. ib.

1. <i>The Antiquity of the Chaldaick Learning.</i>	ib
2. <i>That there were several Zoroasters.</i>	2
3. <i>Of the Chaldaean Zoroaster, institutor of the Chaldaick Philosophy.</i>	3
4. <i>Of Belus, another reputed Inventor of Sciences among the Chaldaeans.</i>	4
5. <i>Other Chaldaean Philosophers.</i>	5
6. <i>Of Berofus, who first introduced the Chaldaick Learning into Greece.</i>	ib.

SECT. II. The Chaldaick Institution and Sects.

1. <i>That all Professors of Learning were more peculiarly termed Chaldaeans.</i>	ib.
2. <i>Their Institution.</i>	ibid
3. <i>Sects of the Chaldaeans distinguished according to their several Habitations.</i>	7
4. <i>Sects of the Chaldaeans distinguished according to their several Sciences.</i>	ib.

The Fifteenth Part.

The Chaldaick Doctrine.

SECT. I. Theology and Physick. ib.

1. <i>OF the Eternal Being, God.</i>	ibid
2. <i>The Emanation of Light or Fire from God.</i>	ibid.
3. <i>Of things eviternal or incorporeal.</i>	9
4. <i>The first Order.</i>	ibid
5. <i>The Second Order.</i>	ibid
6. <i>The Third Order.</i>	10
7. <i>Fountains and Principles.</i>	ib.
8. <i>Unzoned God's and Zoned Gods.</i>	11
9. <i>Angels and Immaterial Demons.</i>	ib.
10. <i>Souls.</i>	ib.
11. <i>The Suramundane Light.</i>	12
12. <i>Of things Temporal or Corporeal.</i>	ib.
13. <i>The Empyrean World.</i>	13
14. <i>The Æthereal Worlds.</i>	ibid.
15. <i>The Material Worlds.</i>	ibid
16. <i>Of Material Demons.</i>	14

SECT. II. Astrology and other Arts of Divination.

1. <i>Of the Stars, fixed and erratick, and of their pre-signification.</i>	ib.
2. <i>Of the Planets.</i>	17
3. <i>The Divisions of the Zodiac.</i>	ib.
4. <i>Of the Planets considered in respect of the Zodiac.</i>	18
5. <i>Aspects</i>	

The Table.

<p>Chap. 5. <i>Aspects of the Signs and Planets.</i> 6. <i>Schemes.</i> 7. <i>Other Arts of Divination.</i></p>	<p>Page 19 ibid 20</p>	<p>Chap. 2. <i>Of Histaspes a great improver of the Persian Learning.</i> 3. <i>Of Osthanes, who first introduced the Persian Learning into Greece.</i></p>	<p>Page ibid 31</p>
<p>SECT. III. Magick Natural and Theurgick. ib.</p>		<p>SECT. II. The Institution and Sects of the Persians.</p>	
<p>1. <i>Natural Magick</i> 2. <i>Magical Operations, their kinds.</i> 3. <i>Of the Tsilmenaia (or Telesmes) used for averruncation.</i> 4. <i>Of the Tsilmenaia used for prediction.</i> 5. <i>Theurgick Magick.</i> 6. <i>Theurgick Rights.</i> 7. <i>Apparitions.</i> 8. <i>Material Demons how to be repulsed.</i></p>	<p>21 ib. ib. 23 ib. 24 ib. 25</p>	<p>1. <i>The Persian Magi, their Institution.</i> 2. <i>The Sects, Discipline, and Manners of the Magi.</i></p>	<p>ib. 32</p>

The End of the Table.

*A TABLE of AUTHORS, Restored, Explained, and
Noted, (or Censured) in the History of the Chaldaick and
Greek Philosophy.*

A *Nonymous Summarist* of the *Chaldaick*
Doctrin, frequently in the *Chaldaick*
Philosophy.
Aristotle, Thal. chap. 6. sect. 1. Democr. ch. 9.
sect. 6, 7, 8.
Arnobius, Chald. ch. 1 sect. 2.

Basil, Plat. ch. 1. Pyth. Doctr. sect. 1. ch. 3.
Cicero, Speusip. ch. 2. Zeno, Eleat. ch. 2.
Clemens Alexandrinus, Chald. sect. 1. c. 2. Pyth.
 ch. 24. Heracl. ch. 1. Démocr. chap. 4.
Curtius, Chald. sect. 1. ch. 1.

Diodorus

The Table.

Diodorus Siculus, Chal. sect. 2. ch. 7. Socr. ch. 1.
 Pyth. doct. ch. 10.
Diogenes, Laertius, frequently in *Greek Philosophy*.
Dionysius Halicarnassensis, Socr. ch. 16.
Epicarmus, Pla. ch. 4.
Etymologicum magnum, Solon, ch. 11.
Eustathius, Pyth. doct. sect. ch. 3. 4.
Gregar. Nazianzenus, Pyth. ch. 22.
Herodotus, Thales, ch. 10. Anacharf. ch. 1.
Hierocles, Euclid. ch. 3.
Higinus, Thal. ch. 1.
Jamblichus, frequently in the *Life and Doctrine of Pythagoras*.
Marmora Arundeliana, Chilon ch. 1. Xenophon ch. 2.
Micomachus, frequently Pyth. doct.
Pliny, Pyth. ch. 20.
Plutarch, Pyth. ch. 19.
Porphyrius, Pyth. ch. 2. 7. doct. ch. 1.
Proclus, Chald. doct. sect. 2. ch. 7. Thal. ch. 7.
 ibid. sect. 1. Euclid ch. 3. Pyth. doct. sect. 2. ch. 2. sect. 3. ch. 2.
Sextus Empericus, his *Pyrrhonian Hypotyposes*, in the *Scepticism*.
Socratic Epistles, Socr. Epist. 1, 5, 6, 7. Simon. Aristip. ch. 6.
Stobæus, Sto. doct.
Strabo, Chald. sect. 2. ch. 4. Pyth. ch. 10.
Themistius, pyth. ch. 19.
Timeus, after the *Life of Pythagoras*.
Zoroastrian Oracles, after the *Chaldaick Philosophy*.

Anonymous Author of Aristotle's Life, Aristot. ch. 3, 6, 8.
Apuleius, pyth. ch. 2.
Casaubon, Thal. ch. 1. Chilo. ch. 1.
Anaximander, sect. 2. ch. 2. *Xenoph.* ch. 1.
Eugubinus, pla. ch. 4.
Gassendus, Democr. ch. 9. sect. 3. Epic. ch. 2.
Kircher, Chald. sect. 1. ch. 2. and frequently in the *Chaldaick Doctrine*.
Leo Allatius, Socrat. ch. 1. 12. Epist. 1. 6.
Xenoph. Epist. 5. 8. Simon. Aristip. ch. 8.
Lipsius, Zeno, Eleat. ch. 2.
Leucas Holstenius, pyth. ch. 19.
Lucian, Thal. ch. 13.
Magnenus, Democr. ch. 2, 7, 8, 9. sect. 1, 2, 4. ch. 10.
Meibomius, pythag. doct. sect. 2. ch. 3, 4.
Meursius, Thal. ch. 2. Socr. ch. 1, 12.
Naudæus, Chald. sect. 1. ch. 2.
Nunnesius, Arist. ch. 8.
Olympiodorus, Arist. ch. 3.
Patricius, Chald. sect. 1. ch. 2.
Petavius, Thal. ch. 2. 13. Carnead. ch. 5.
Pliny, pyth. ch. 10. doct. sept. 4. ch. 4.
Ramus, Thal. ch. 7. sect. 1.
Salmasius, Thal. ch. 5. pla. ch. 1. pyth. ch. 1.
Scaliger, Chald. sect. 2. Thal. ch. 2. Socr. c. 12.
Selden, Chilon, ch. 1. Xenoph. ch. 2.
Sigonius, Thal. ch.
Simplicius, pyth. doct. sect. 4. ch. 1.
Stephanus, Thal. ch. 10.
Suidas, Thal. ch. 2. Zeno, ch. 6.
Valerius Maximus, plat. ch. 7.
Valla, Thales, ch. 10.
Vossius, Thales, ch. 2.
Ursinus, Chald. sect. 1. ch. 2.
Zoroastrian Oracles, after the *Chaldaick philosophy*.

NOTED.

Aldobrandinus, Thal. ch. 6. sect. 4. and frequently else-where.

The End of the Table.

A TABLE of PHILOSOPHERS mentioned in the History of the Chaldaick and Greek Philosophy.

<p>A.</p> <p>A Bavis, Pyth. ch. 23, 24. Abroteles, ch. 24. Acmonides, <i>ibid.</i> Aroutiladas, <i>ibid.</i> Acufilaus, Preface. Adicus, Pyth. ch. 24. Adrastus, Arist. ch. 14. 17. THE
HISTORY of PHILOSOPHY.

The First Part,
Containing those on whom the Attribute of WISE was conferred.

THALES.

CHAP. I.

The Country and Parents of Thales.

Great wits, which have been happy in benefiting Posterity by their excellent inventions, have not always had the fortune to enjoy the just reward, their glory being intercepted oftentimes by some later disguise of alteration or addition. It were therefore gratitude

tude in us, who find our selves instructed by the Ancients, to vindicate the memory of our Masters, by enquiring diligently the Author of those Labours whereof we reap the Harvest. This kind of injury hath happened very considerably to THALES the wise Man of Miletus, who first introduc'd Natural and Mathematical Learning into Greece, from whence it is derived to us; but the honour of so noble a design, the ambitious opposition of some, the industry of others hath so obscur'd, that there is little of the reputation left to the deserving Author. I have therefore esteem'd it worth my pains, to digest what I could collect or observe of a person, to whom all lovers of Learning are so much oblig'd.

The Original of *Thales* is very obscurely delivered. Some conceive he was a *Phœnician* by birth, whose opinion seeming to be strongly founded upon *Laertius*, and the Authorities by him alledged, it is necessary that we begin with a disquisition upon his words, which are, as commonly rendred, these:

Now *Thales* was born, as *Herodotus*, *Duris* and *Democritus* affirm, his Father being *Exanius*, his Mother *Cleobulina*, of the *Thelidæ*, who were *Phœnicians*, the most illustrious of all from *Cadmus* and *Agenor*, [as *Plato* also saith.] The Testimony of *Herodotus*, though * *Hiernius* and * *Suidas* seem to understand it according to the common error, as if he were born in *Phœnicia*, expressly confirms the contrary, being thus: *Thales* a *Milesian*, afar off by descent a *Phœnician*; whence we may gather, that the other two Authorities of *Duris* and *Democritus* imported little more, or at least nothing to a contrary sense. So likewise that of *Leander*, which is by * *Clemens Alexandrinus* cited jointly with *Herodotus*, to prove him of a *Phœnician*, extract.

He was made free of Miletus when he went with *Neleus* who was banish'd out of *Phœnicia*.] The learn'd * *Casaubon* to reconcile this Story with that of *Neleus*, who was not banish'd out of *Phœnicia*, when he built *Miletus*; for *ἔτε ἡλθε σὺν Νελέῳ ἐκπεσόντι ποινίῃς*, reads, *ἐκπεσόντι ποινίῃς*, as if *Thales* being banish'd out of *Phœnicia* had gone with *Neleus* to *Miletus*; which alteration begetteth a very great Anachronism, for this *Thales* was above four hundred years later than that *Neleus*. Therefore if *Laertius* meant the same *Neleus*, either he was strangely mistaken, or his Text is corrupt, and ought to be understood of the Ancestors of *Thales*, to which sense it may be reduc'd with little alteration, thus, *ἐπιπλεῖν ἐκπεσόντι ποινίῃς ὃ ἐν Μιλήτῳ ὄντι ἡλθε σὺν Νελέῳ ἐκπεσόντι ποινίῃς*; as if they being *Phœnicians*, went into *Caria*, and became Citizens of *Miletus*, at what time *Neleus* Son of *Cordrus* being put beside the Kingdom of *Athens* by his younger Brother *Medon*, led thither the Ionian Colonies, whereof *Miletus* (which he built) was the chief City. Of this Colony see *Herodotus*, *Strabo*, and *Ælian*.

But as most say he was born there, at Miletus, and of a noble Race:] So they render *ἰθαγενὴς*, but in opposition to the first opinion, which only mentions his Family, not Country, it may perhaps be understood here in the same relation: Some (saith he) think he was of a *Phœnician*

extract, of those who were incorporated at *Miletus*; others that he was of a *Grecian* Family; and that noble. Of this latter opinion is *Plu.* ^b *De Herod.* *tarch*, who reproves *Herodotus* for making *Thales* malign. descended afar off from a *Barbarian* stock, and * *Hermippus*, who ascribes that saying to ^c *Laert. vit.* him, that he thanked the Gods he was a *Grecian*, ^{Thal.} not a *Barbarian*.

CHAP. II.

Of the time of his Birth.

A *Pollodorus* saith, that *Thales* was born the first year of the thirty fifth Olympiad; * *De.* * *Laert.* *inetrus Phalereus* saith, that he was honoured * *Laert.* with the title of *Wise*, when *Damastius* was *Archon*. *Damastius* was *Archon* according to * *Di.* * *Lib. 3.* *onysius Halicarnassæus* the second year of the thirty fifth Olympiad, when *Ancus Martius* the fourth King of *Rome* began his Reign.

Hereupon an Anachronism of one year is supposed by very learned Men, who would have *Thales* to be born the same year that *Damastius* was *Archon*. Whence * *Sigonius*, * *Vossius*, ^b *De Athen.* and others bring down the Birth of *Thales* to the ^{ens. tempor.} second year of this Olympiad; * *Scaliger*, ^c *De scient.* * *Meursius*, * *Petavius* and others raise ^{mathemat.} *Damastius* to the first year, that they may make ^{32. 8.} his Magistracy agree with *Thales's* Birth; nei- ^{In Euseb.} ther rightly; for the office of *Damastius* relateth ^{Archont.} not to the Birth of *Thales*. For the clearing ^{11.} whereof we must take notice, that *Damastius* in ^{Rational.} the *Athenian Fasti* is twice said to be *Archon*, ^{temp. 2. 12.} first in the second year of the thirty fifth Olympiad, the next year after the Birth of *Thales*, and again the fourth year of the forty eighth Olympiad, when he obtained the title of *Wise*; the latter we cannot mention without acknowledgment of the great light Chronology hath received by Mr. *Selden's Marmora Arundeliana*.

It will be also worth observance, that there was another of this name, whom *Eusebius* placeth at the eighth Olympiad, and *Laertius* and * *Plutarch* make contemporary with *Homer*, ^b *Vita Lycurg.* *Hesiod* and *Lycurgus*. * *Scaliger*, who perceiv- ^{In Euseb.} ed the inconsistency of this account, perceived ^{Phlegon.} not the reason of it; for *Lycurgus* and *Iphi-* ^{fragm.} *tus* instituted the Olympick Games twenty seven Olympiads before *Coræbus* was Victor, who according to *Eusebius* is the first. These two *Thales* are by some confounded; *Eusebius* calls the first a Natural Philosopher, whereas it is certain that kind of Learning was first introduc'd into Greece by the second. * *Suidas* cites ^{In voce Th.} *Phlegon*, that the latter *Thales* flourish'd in the ^{les.} seventh Olympiad, which *Phlegon* doubtless meant of the first. * They who place *Thales* a- ^{See St. Au-} bout the seventh Olympiad, and make him con- ^{gustin. de civit.} temporary with *Romulus*, confounded the latter ^{Dei, lib. 18. cap.} *Thales* with the first, and the true Epocha of ^{24. & 27.} the Olympiads with the vulgar. For the first *Thales* lived in the seventh Olympiad from the first of *Iphitus*; *Romulus* liv'd about the same distance from the Olympiad of *Coræbus*.

This time is mistaken by that learned Father *Clemens Alexandrinus*, to prove *Thales* younger than the later Prophets. Thus (saith he) it is ^{Stromat. 1.} demonstrated that they who prophesied in the time of *Darius Hystaspes* in the second year of his Reign,

* *Astronm. Na-*
tione fuit Phœ-
nix, ut Herodo-
tus Milesius di-
cit. Which
doubtless is
corrupt (for
what Herodo-
tus is that?)
and to be re-
stored to this
effect, Natio-
fuit Phœnix ut
Herodotus, Mi-
lesius ut alii
dicunt.
^a *In voce*
Thales.

Reign, that is to say, Aggrus, Zacharias, and Malachy, who was one of the twelve, seeing that they Prophesied in the first year of the forty eight Olympiad, were more ancient than Pythagoras, who is said to have been in the sixty second Olympiad; and then Thales eldest of the Greek Sages, who was about the fiftieth Olympiad; as if this were not rather an Argument to prove these Prophets contemporary with Thales, which Eusebius allows. * About the time (saith he) of Cyrus King of Persia, the seven wise Men flourished; this was the time in which the last of the Hebrew Prophets Prophesied, since Troy, above six hundred years after Moses, no less than fifteen hundred years. But if with Clemens Alexandrinus we account these Prophets cotaneous with Darius Histaspes, they will appear much younger than Thales, for Darius began his Reign in the last year of the sixty fourth Olympiad.

* Prop. 10.4.
Evangel.

CHAP. III.

His Travels.

HE employed the first and greatest part of his time in Travel; he went to Crete, to inform himself of the Mysteries of their Religion, (for that Island was famous for the Birth of Jupiter) as is acknowledged by himself in an Epistle to Pherecydes.

That he Travelled also into Asia is affirmed in the same Epistles; some say into Phœnicia, arguing from his Astrology which he is thought to have learned of the Phœnicians, Masters of that Science; and particularly because he is said to have first observed the constellation of the Lesser Bear by which the Phœnicians failed. b Vossius, essays to prove the word Cynosura to be Phœnician, not as derived from *κυνος* *seg* but from *κυν* and *ουρα* as being a Collection of Light; or *κυνος* *ουρα* Umbilicus igneus.

His last Journey (being c in years) was into Egypt, to confer (as he acknowledgeth in his Epistle to Pherecydes) with Priests and Astronomers. There he was instructed by the Priests at Memphis, particularly, saith (saith * Familicus) by those of Jupiter. Lærtius affirms he learnt Geometry of them; Plutarch implies as much of his Philosophy.

He was there in the Reign of a Amasis, by whom much favoured and admired for many things, especially for measuring the height of the Pyramids by the shadow; until at last accused to him of disaffection to Monarchs and that kind of Government, to which effect many bitter sayings of his were alledged concerning Tyrants. As when Molpagoras an eminent Person of Ionia demanded what was the strangest sight he ever saw, he answered, a Tyrant old. Another time being at a Feast where a question arose, what Beasts were most dangerous; of Wild, saith he, a Tyrant, of Tame, a Flatterer; and Princes (saith Plutarch) however they profess themselves far different from Tyrants, yet take no pleasure in such Apothegms: Hereupon he lost the favour of Amasis. Thus having Studied Philosophy in Egypt, he returned to Miletus, and d Transported that vast Stock of Learning which he had there collected, into his own Country.

CHAP. IV.

How he lived at Miletus.

HIS Life at Miletus (as * Heraclitus affirms) e was retired and private; some report he Married and had a Son named Cibyllus, but the truer Opinion is of those who say he lived unmarried, and made his f Sitters Son (whom Plutarch calls Cybisthus) his Heir. d He put off his Mother when she first moved him to Marry, by telling her it was not yet time; and when he was more in years, being again solicited by her, he answered, nor is it now time, meaning, it was then too late. Being demanded why he took not some course to have issue, he answered, *διὰ φιλοτεκνίαν*, which is the same in pronouncing with *διὰ φιλοτεκνίαν*, and may be taken either because he loved Children, or did not love them, as * Casaubon conjectures; but perhaps his meaning may better be gathered out of another answer of his to the same question, that he did not mean to draw voluntary cares upon his life, and disturb the quiet thereof; or from this Story related by g Plutarch.

Solon coming to Miletus to visit him, told him that he wondred he wholly neglected Marriage and Issue. Thales at that time answered nothing, but some few days after Suborned a Stranger to pretend that he came within ten days from Athens; Solon demanded what news from thence; nothing (answered the other as he was instructed) but the burial of a young man attended by the whole City, being as was said Son of the most eminent Person of the City, who at the same time was abroad in Travel. Unhappy Man (cries Solon) what was his name? I heard it, answered the other, but have forgot, only I remember he was very famous for Wisdom and Justice. Solon's fear encreasing upon every answer, he at last asked him, if the Father's name were not Solon? which the other affirming, he beat his own Head, and did other actions accompanied with speeches proper to such as are transported with grief; whereupon Thales smiling, and interrupting him; these things, Solon, said he, deterred me from Marriage, which thus disorder even thee a most constant person, but be not troubled at this news, it is counterfeit.

In this privacy of life he was solicited and sent unto by many Princes, whose invitations and amities, (Plutarch h saith) he refused; visited by many eminent Persons.

i He is said to have cohabited some time with Thrasybulus (a Man of excellent Wit and Judgment) who was King, (or according to the Greek Word) Tyrant of Miletus, k though his Reign continued but eleven months; l about the time that the Milesians entred into a League with Alyates the second, then King of Lydia.

CHAP. V.

The Attribute of Wise conferred on him.

THE attribute of Wise, as a Plutarch and Saint Augustine m observes, was conferred upon the rest in respect of their moral Rules and Practice, but upon Thales particularly for his speculative

speculative Learning. It was first bestowed on *Thales*, at what time *Damastius* was Archon, under whom (according to *b* *Demetrius Phalareus*) all the seven were called Wise. The second *Damastius* was Archon in the third year of the 49th Olympiad, which *c* *Salmasius* knew not, when to make the words of *Laertius* agree with the first *Damastius*, he misinterpreted *Eusebius* and *Clemens Alexandrinus*, and Subverted all other accounts of the Birth and Death of *Thales*, whereas this fortunately complies with the times of all the seven.

The first was *Thales*, justly preferred before the rest in respect of his great Learning, which he owed not to any Master. The time when this Honour was conferred on him, falls upon the fifty ninth year of his age.

The second, *Pittacus*, of *Mitylene*, who flourished in the forty second Olympiad, and died in the third year of the fifty second,

The third, *Bias*, of *Price*, contemporary with *Pittacus*, living under *Alyattes* and *Cresus*.

The fourth, *Solon*, who was Archon at *Athens* the third year of the forty sixth Olympiad. He died Olymp. 55.

The fifth, *Cleobulus* of *Lindus*, coetaneous with *Solon*.

The sixth, *Myson* of *Chene*.

The Seventh, *Chilon* of *Lacedæmon*, who was *Ephorus*, Olymp. 56.

The Credit and Glory of these Seven, was much increased (saith *Plutarch*) by a Tripod sent round from one to another, by a mutual, noble, and modest concession: the occasion related thus, by *Laertius* and *Valerius Maximus*.

d Some young Men of *Ionia* having bought a Draught of the *Milesian* Fishermen, when the Net was drawn up, there was found in it a Tripod, [*e* a Golden Delphick Table of great weight.] *f* Hereupon arose a dispute, [*g* those affirming they had Bargain'd only for the Fish; the others, that they bought the Draught at a venture: by reason of the strangeness of the case, and the value of the Tripod; it was delivered to the City *Miletus*.] *h* The *Milesians* sent to the Oracle at *Delphi* about it, and received this answer:

Com'st thou *Milesian* to consult my Shrine?
The Tripod to the Wisest I assign.

Hereupon the *Milesians*, by agreement, presented it to *Thales*, he sent it to *Bias*, *Bias* to *Pittacus*, he to another, till it pass'd through all the seven, coming at last to *Solon*, who affirming God to be the wisest, sent it back to *Delphi*, [*i* giving him at once the Title and reward of greatest Wisdom.]

But *Callimachus* in his *Iambicks*, (continueth *Laertius*) relates it otherwise; that *Bathycles* an *Arcadian* left a Cup, with order that it should be given to the wisest, whereupon it was presented to *Thales*, and pass'd about in course till it came to him again, who then dedicated it to *Apollo Didymæus*, with these Verses, according to *Callimachus*:

Thales to him that Rules th' *Ionian* State
This twice obtained prize doth consecrate.

In Prose thus, *Thales* the *Milesian*, Son of *Examius*, to *Delphian Apollo* of the *Grecians*

offers this twice received Prize of eminence. He that carried the Cup from one to another, was *Thyrion*, Son to *Bathycles*,] whither allude these Verses of *k* *Phanix Colophonius*.

k *Athen. dīpr.*

Thales, whose Birth his Country blest,
Esteemed of all Men the best,
Was of the Golden Cup possesst.

Eudoxius of *Gnidus*, and *Euanthes* of *Miletus*, report that a friend of *Croesus* having receiv'd from him a Golden Cup to be given to the wisest of the *Grecians*, delivered it to *Thales*, and that at last it came to *Solon*, who sending to the *Pythian Oracle* to know who was the wisest, was answered *Myson*; whom *Eudoxius* substitutes for *Cleobulus*, *Plato* for *Periander*, the Oracle concerning *Myson* was this:

Ocean *Myson* I declare
Wiser than those that wisest are.

He that was sent upon the enquiry was *Anacharsis*. *Dædacus* the *Platonist*, and *Clearchus* affirm, that the Cup was sent by *Croesus* to *Pittacus*, and so carried about. *Andron* in *Tripode*, (which seems to have been a discourse wholly upon this subject, and is likewise cited by *Clemens Alexandrinus*, to prove that *Thales* and the other six flourished about the fiftieth Olympiad) writes that the *Argives* proposed this Tripod as a Prize to the wisest of the *Greeks*, and that it was adjudged to *Aristodemus* a *Spartan*, who resigned it to *Chilon*; *Aristodemus* is mentioned by *Alcæus*.

This Speech we to *Aristodemus* owe,
Money's the Man, none's Poor and Honest too.

There are who report that a Ship richly laden, sent by *Periander* to *Thrasibulus* Tyrant of *Myletus*, was cast away in the *Coan Sea*, and the Tripod taken up by some Fishermen. *Phanodius* affirms it was lost in the *Athenian Sea*, and afterwards brought to the City, and upon consultation voted to be sent to *Bias*. Others say this Tripod was made by *Vulcan*, who gave it to *Pelops* as his Wives Portion; from him it came to *Menelaus*, and afterwards being taken away with *Helena* by *Paris* was by the *Lacedæmonian* [*Hellen*] thrown into the Sea, calling to mind [*l* an Oracle] that it would prove in time to come the ground of many Contentions. After this some *Lebedians* fishing thereabouts drew it up, and quarrelling with the Fishermen about it, it was brought to *Coos*, but the Controversie not decided, the business was told to those of *Miletus*, which is the chief City of that Country; they sent a Messenger to demand it, and finding themselves slighted, made War upon the *Coans*; in which many being slain on both sides, the Oracle declared that the Tripod should be given to the wisest, whereupon both Parties with joynt consent presented it to *Thales* [*m* the *Coans* being willing to grant that to a private Person, for which they before contested with all the *Milesians*] who Dedicated it to *Apollo Didymæus*; the effect of the Oracle to the *Coans* was this:

This Contestation shall continue till
The Golden Tripod's into th' Ocean cast
By *Vulcan*, you present to one whose skill,
Extends to things to come, present and past.

To the Milesians,

n Vit. Sol.

Comest thou Milesian to consult my Shrine? as before. Thus Laertius. n Plutarch adds, that Thales said, Bias was wiser than himself, whereupon it pass'd to him, from him to another, as wiser; so passing in a circle from one to another, it came at last to Thales the second time. Finally it was sent from Miletus to Thebes, and dedicated to Ilieni-an Apollo. Theophrastus saith it was first sent to Bias at Priene, then by Bias to Thales at Miletus, so passing through all, it came again to Bias; and finally was sent to Delphi. This is most generally reported, saving instead of a Tripod, some say it was a Cup sent from Croesus; others, that it was left there by Bathycles.

Thus was the Priority of Thales confirmed by the Oracle, for which reason he is by Cicero and Strabo stiled Prince of the Wise Men, to whom the rest yielded the Preheminence.

CHAP. VI.

Of his Philosophy.

Thales (saith Laertius) is by many affirmed to be the first that made disquisitions upon Nature. * Cicero (who taught the Greek Philosophers first to speak Latin,) acknowledges Thales to be the first Author thereof. † Strabo saith, that he first of the Grecians made enquiry into natural Causes and the Mathematicks. a Plutarch calls him Inventor of Philosophy; Justin Martyr, b The most ancient of Philosophers; c Tertullian, first of Natural Philosophers; d Lactantius, the first that made enquiry after natural Causes.

Sect. 1. That Water is the Principle of all things.

IN his disquisition of the Natural Causes of things, he conceived Water to be the first Principle of all natural Bodies, whereof they consist, and into which they resolve. His Reasons (as delivered by c Plutarch, and repeated by f Sto-beus) these:

First, Because Natural Seed, the Principle of all living Creatures is humid, whence it is probable that humidity is also the principle of all other things.

Secondly, Because all kinds of Plants are nourished by moisture; wanting which, they wither and decay.

Thirdly, Because Fire, even the Sun it self and the Stars are nourished and maintained by Vapors proceeding from Water, and consequently the whole World consists of the same. Whence Homer supposing all things to be engendred of Water, saith,

Ὠκεανὸς ὅσπερ γενέσθαι πάντας τεύχεαι.

The Ocean whence all things receive their Birth.

In pursuit (g as Aristotle saith) of this Opinion, he assigned Water the lowest place, holding (according to b Seneca) that the whole Earth floats, and is carried above the Water, whether that we call the Ocean or great Sea, or any simple moisture of another nature, or a moist Element. By this Water (saith he) the Earth is sustained as a great Ship, which presseth upon the Water that bears it

up, because the most weighty part of the World cannot be upheld by the Air, which is subtle and light. Thus is i Aristotle to be explained, who i Metaphys. 1. 3 saith, Thales held, that the Earth being capable of swimming, resteth as Wood or the like; none of such things, none swim upon Air, but upon Water.

Upon this ground it was that he held Water (as Laertius saith) to be the cause of Earthquakes. k Nat. quæst. 3. 13. Thus k Seneca, He holds that the Globe of the Earth is upheld by the Water, and carried as a Barque, and floateth by the mobility thereof, at such time as it is said to quake. One of his Reasons alleged by l Seneca, is this, because in all extraordinary motions thereof some new Fountains commonly issued, which if they incline to one side, and shew their Keel asidelong, gather Water; which, if it chance the burden they bear be over weighty, raiseth it self higher towards the right or left side.

From the Testimony of Homer, by which Thales (according to Plutarch and Justin Martyr) defended this Tenet (that Water is the Principle of all things) it is manifest it was delivered, (tho' imperfectly) by other Grecians before Thales; m Ignis an aqua utilis? n Theogon. Plutarch m elsewhere producing this Authority of n Hesiod.

παντῶν μετὰ πρῶτα χάος γενέτ'—

Of all things Chaos was the first.—

addeth, the greater part of ancient Philosophers being called Water Chaos, οὐδὲ τὴν χάσιν from diffusion. The Scholiast of o Apollonius upon these words,

Ἐξ ἡλὸς ἐγένετο καὶ ὕδωρ ἄτη.

The Earth of Slime was made.

affirms (citing Zeno) that the Chaos, whereof all things were made according to Hesiod, was water, which settling became Slime, the Slime condensed into solid Earth; to which add this Testimony of p Orpheus,

Ἐκ τῆς ὕδατος ἰλὸς κατέσκη.

Of Water Slime was made.

This Opinion they borrowed from the Phœnicians, with whom the Grecians had a very ancient correspondence. Linus came from thence; Orpheus had his Learning from thence: as Thales is conceived to have done likewise, which appears clearly in q Numenius, an ancient Philosopher, who cites the very words of Moses for this Opinion. The Spirit of God moved on the Face of the Waters. There is an eminent place in r Eusebius to prove this: the divinity of the Phœnicians asserts the Principle of this World to be a dark Spiritual Air, or the Spirit of dark Air, and Chaos troubled and involved in darkness, that this was Infinite, and a long time had no bounds: but (say they) the Spirit being moved with the love of his own Principles, there was made a mixture, which nexure was called Love; this was the beginning of the production of all things; but the Spirit it self had no Generation, and from this connexion of the Spirit was begotten s Mōt, which some call Slime, others corruption of watery mixture, and of this was made the Seed of all Creatures, and the Generation of all things.

Nor

f Strab. lib. 15. Nor were the Indians ignorant of this, as *Alcagsthenes* delivers their Opinion. *f* They are of the same mind in many things, with the Grecians, as that the World had beginning, and shall have end; that God its Maker and Governor goes quite through it; that all things had different beginnings, but that of which the World was made was Water.

The word *ἀρχή*, Principle, because with Philosophers it includes the efficient cause, and consequently understood singly excludes the rest, that being the most Noble, hath given occasion to some to mistake *Thales*, as if by acknowledging no other Principle, he consequently accounted Water to be God; but that *Thales* understands by Principle only the material Cause, we may easily gather from *Plutarch*, who condemneth *Thales* for confounding a Principle with an Element, and for holding them to be both one; whereas (saith he) there is great difference; Elements are compounded, Principles are neither compounded, nor are any compleat Substance, and truly Water, Air, Earth, Fire, we term Elements, but Principles we call other Natures, in this respect that there is nothing precedent to them, whereof they are engendred. For otherwise, if they were not the first, they would not be Principles, but that rather should be so termed whereof they were made. Now certain things there are precedent, whereof Earth and Water are compounded, viz. The first in form Matter, and the form it self and privation. *Thales* therefore errs, affirming Water to be both Element and Principle of all things. Thus we see by *Plutarch*, that the objection can only be as to the name, not to reason of the name; for the distinction of Principle and Element being not used in that time, *Thales* by Principle, meant nothing of the efficient cause, which is most certain from *Aristotle*. *Thales*, saith he, affirms Water to be the Principle: wherefore he held the Earth to be above the Water; perhaps he conceived so, because he saw that the nutriment of all things, is humid, that heat it self consists thereof, and that every Creature lives thereby; he held that of which things are made to be the Principles of all things, for those reasons he was of this Opinion, as also because the Seeds of all things are of a humid Nature, and Water is the principle of things humid.

Sect. 2. Of God.

Apolog. contra gent. *Metaphys. 1. 3.* **T**ertullian saith, That *Thales* to *Cræsus* enquiring concerning the Deity, gave no certain account, but desired several times of deliberating to no effect. He seems to reflect upon the same or a like Story to that which is reported of *Simonides* and *Hieron*.

But what the Opinion of *Thales* was concerning God, may be gathered from two Apothegms cited by *Laertius*, repeated with this gloss by *a Clemens Alexandrinus*; and what are not those the sayings of *Thales* that are derived from hence, That God is Glorified for ever and ever, and he openly confesses that he is called *καὶ ὁ γινώσκων*, he who knoweth Hearts. For *Thales* being demanded what God was, that (saith he) which hath neither beginning nor end. Another asking if a Man might do ill and conceal it from God. How, said he, when a

Man that thinks it cannot? Men ought to think (says *b Cicero* in his name) that the Gods see *b, De legib. 2.* all things.

He acknowledged the first of Beings, and Author of the World, asserting (according to *Laertius*) that the most ancient of all things is God, for he is not begotten; that the fairest is the World, for it is his Work. This is confirmed by *Cicero*. *Thales* the Milesian (saith he ***) who first enquired into these things, said, that Water was the Principle of things, but that God was that Mind which formed all things of Water. If Gods may be without Sense and Mind, why did he joyn the Mind to Water? Why Water to the Mind, if the Mind can subsist without a Body? Thus *Cicero*, who understands *Thales* to intend the material Principle to be co-eternal with the efficient; which *Thales* himself seems not to mean, when he declared God to be the first of Beings. But that the *Mens* of *Anaxagoras*, for the annexing of which to Matter, he was so much famed, was no more than what he borrowed from *Thales*, the words of *Cicero* make good.

He affirmed that God by the immutable Decree of his Providence Governs the World. *Thales* (saith *Stobæus*) being demanded what was most strong, answered Necessity, for it Rules all the World. Necessity is the firm Judgment and immutable Power of Providence. Hither we must likewise refer what is cited under his name by the same *Stobæus*, that the first mover is immovable, which *c Aristotle* hath borrowed from him, not owning the Author.

Something imperfectly was before delivered by *Orpheus*, concerning God, alledged by *d Clemens Alexandrinus* and others; but as *Cicero* said, *Thales* was the first among the Grecians, who made any Search into these things; and that he brought it out of *Ægypt*, the Grecians themselves deny not, *e* for they acknowledge that they received the names of their Gods from thence, and believed the *Ægyptians* to be the first, who looking up to the World above them, and admiring the Nature of the Universe, reflected upon the Deity.

Sect. 3. Of Demons.

Thales (saith *a Plutarch*) with *Pythagoras*, *a Placit. philosoph. 1. 8.* *Plato*, and the Stoicks hold, that Demons are Spiritual Substances, and the Heroes Souls separated from the Bodies, of which sort, there are two, good, and bad; the good Hero's are the good Souls, the bad, the bad. The same order *b A. b Apolog.* *thenagoras* attests to be observed by *Thales*, ranking the three degrees thus: First, that of the Immortal Gods, next Demons, thirdly, Heroes: This was followed by *Pythagoras*, that the Gods were to be preferred in reverence before Demons, Hero's before Men.

He affirmed (as *Stobæus* saith) the World to be full of these Demons. This is thought the meaning of that of *c Aristotle*, repeated by *Cicero*, *†* *Thales* thought that all things were full of Gods. The same assertion *Laertius* *** ascribes to *Pythagoras*, that all the Air is full of Souls, which are Heroes and Demons.

This Opinion was asserted by the Greeks, before the time of *Thales*, particularly by *Hesiod*; but

but whether that be argument enough, to deny, that *Thales* had it from the *Ægyptians*, I question; that they held it in the same manner, we may learn by * *gamblichus*. Besides, *Pythagoras* and *Plato* (whom *Plutarch* joyns in the Tenet with *Thales*) drew their learning from the same fountain.

SECT. 4. Of the Soul.

Plutarch and *Stobæus* say, that *Thales* first affirm'd the Soul to be *αὐτοκίνητον*, a self-moving nature. * *Aristotle* that he calls it *ἰσχυρὸν* in respect to the motion it gives to other things, in which are included both parts of the definition of the * *Platonists*, a substance, having within it self a power to move it self and other things: which * *Plato* argues to this effect: The first of motions is that whereby a thing moves it self; the second, that whereby it moves another: Everything that moves it self, lives; every living thing lives, because it moves it self, therefore the power of self-motion is the essence of that substance which we call the Soul, which Soul is the cause of the first generation and motion of things which are, were, and shall be; and of all their contraries, as of all transmutation, the principal of motion, and therefore more antient than the Body, which it moves by a second motion. And afterwards declares these to be the names of the Souls motion, to will, to Consider, to take Care, to Consult, to judge Rightly, and not Rightly, to Joy, to Grieve, to Dare, to Fear, to Hate, to Love, and the like. These which are the first motions, and suscipient of the second corporal, bring all things into augmentation, and decrease, conversion, or condemnation, and densation, or rarefaction. This opinion first raised by *Thales*, was entertained in the Schools with the assent of * *Pythagoras*, *Anaxagoras*, *Socrates*, and *Plato*, till exploded by * *Aristotle*, whose chief arguments against it were these. 1. That nothing is moved but what is in place, nothing in place but what hath quantity, which because the soul wants none of the four kinds of motion (*viz.* Lation, Alteration, Diminution, Accretion) are competent (*per se*) to her. Secondly, that self-motion is not essential to the Soul, because she is moved accidentally, by external objects. The first, if understood of Circumscription, not only denies the motion of all things, that are definitively in place, as Spirits, but of the highest sphere, if compared with *Aristotle's* definition of place; yet that some of these species of motion, though in a different extraordinary manner, are competent to the soul, and not accidentally, may be argued 1. From the further diffusion of the Soul, according to the augmentation of the Body. 2. From intellect, which is acknowledg'd a perfection, and consequently a kind of alteration, which that *Thales* understood to be one of the Soul's motions, is clear from that Apothegm ascribed to him by *Laertius*, the swiftest of things is the mind, for it over-runs all things: Whence * *Cicero* (confessing almost in every word of *Thales*, that nothing is swifter than the mind, that no swiftness may compare with the swiftness of the mind) would interpret the *ἐνταλέχεια* of *Aristotle*, a continued and perpetual motion.

The second reason may be questioned by comparing the acts of the memory, and reminiscence; the first occasion'd by exterior things yet objective only, so that the motion is within her self; but by the other she moves her self, from a privation to a habit, without the help of any exterior.

It is worth notice, that among these and other reasons alledg'd by * *Aristotle* to destroy this * *De anime.* assertion, one is the possibility of the resurrection of the Body; but this *ἐκ παρρησίας*.

From the second part of the difference in the definition (*viz.* from moving other things) *Thales* argued, that the Load-stone, and Amber had souls; the first because it draws Iron; the second straw. He further (saith *Laertius*) asserted those things we count inanimate, to have souls; arguing it from the loadstone and amber: The reason of which latter example, * *Aldobrandinus* falsely interprets its change of colour, and jarring as it were at Prison: But * *Aristotle* more plainly, for of those whom we mentioned, *Thales* seems to have taken the Soul to be something *ἰσχυρὸν*, apt to move, since he affirmed a stone to have a Soul, because it moved Iron.

He asserted likewise the Soul (of Man) to be immortal, and according to * *Cherilus*, was the first that held so. * *Cicero* ascribes the original of this opinion to *Phercydes*, but it rather seems to have been brought by *Thales* from the Egyptians; that they held so * *Herodotus* attests.

SECT. 5. Of the World.

Thales held, (1.) that there was but one World, and that (2.) made by God; which truth was follow'd by all Philosophers; as * *Aristotle* confesseth, untill he rejected it, to defend, by the contrary, an assertion equally false; that the World is everlasting, which could not be, saith he, if it had beginning.

That the World being God's Work, is the fairest of things, whatsoever disposed in lively order being a part thereof, for which reason *Pythagoras* (according to * *Plutarch*) called it first *κόσμος*.

That Night is elder than Day. This Circumstance of the Creation was held likewise by * *Orpheus*, and *Hesiod*, who had it from the *Phœnicians*: For this reason the * *Numidians*, * *Germans*, and * *Gauls* reckoned by Nights.

That the World is animated, and that God is in the Soul thereof, diffus'd through every part, whose divine moving virtue penetrates through the element of Water. Thus explained by the *Hermetic* Philosophers, the divine Spirit who produc'd this World out of the first Water, being infus'd as it were, by a continual inspiration into the works of nature, and diffus'd largely through, by a certain secret, and continual act, moving the whole, and every particular according to its kind, is the Soul of the World.

That the World is contained in place. This agrees with the definition of place by space; but they who with *Aristotle* define place a superficies, though they hold the parts of the World to be in place, as forced to deny the whole to be so.

11.

That there is but one earth, round, in fashion of a Globe, seated in the midst of the World, to which relates that speech ascribed to him by Cleodemus, that, if the earth were taken out of the World, there must of necessity follow a confusion of all things.

Sept. sap.
conclu.
Luert.

That the overflowing of Nilus is caused by the Etesian (yearly) winds, which rise with the Dog-star, after the summer Solstice, and beginning the blow from the North, spread (as Aristotle describes them) into remote quarters. These (saith Plutarch) blowing directly against Ægypt, cause the water to swell, that the Sea driven by these winds, entereth within the mouth of that River, and hindereth it, that it cannot discharge it self freely into the Sea, but is repulsed. Whereupon (adds Diodorus Siculus) it overflowses Ægypt, which lieth low and level. But this reason, though it seem plausible, is easily disproved; for if this were true, all the Rivers which are discharged into the Sea, opposite to the Etesian winds, should have the same overflowing. Thus Diodorus in his excellent Discourse upon this Subject, which concludes with the opinion of Agatharchides that it is occasion'd by rain, coming from the mountains of Ethiopia.

CHAP. VII.

Of his Geometry.

Florid. lib. 4.
Laert. vit. Pythag.

A Puleius, who calls Thales the inventor of Geometry amongst the Grecians, is more just to his memory than Anticlides and others, who ascribe the honour thereof to Maris, or to Pythagoras, who by the acknowledgment of Jamblicus, a Pythagorean, learnt Mathematicks of Thales. The original and progress of this science, to the perfection it received from Pythagoras (which gave occasion to that mistake) is thus delivered by Proclus.

De vita
Pythag. 1. 2.

In Euclid. 2. 4.

Geometry was invented by the Egyptians, taking its beginning from measuring fields; it being necessary for them, by reason of the inundation of Nilus, which washed away the bounds of their severals. Nor

is it to be wondered at, that as well this, as other sciences, should have their beginning from Commodity and opportunity; since, as is said in generation, it proceeds from imperfect to perfect; therefore not without reason is the transition from sense to consideration, and from consideration to the mind. As therefore among the Phœnicians, by reason of Merchandise and traffick, the certain knowledge of numbers had its beginning; so likewise among the Egyptians, Geometry was found out upon the fore-said occasion; and Thales going to Egypt, first brought over this science into Greece: And many things he found out himself, and taught his fellows the principles of many things, declaring some more generally, other things more plainly. Next him Ameristus, brother to Stefichorus the Poet, is remembered as having touched Geometry, of whom Hippias the Elean makes mention, as eminent is that knowledge: After these Pythagoras considering the principles thereof more highly, advanced it into a liberal science.

Read, ὡς ἐπαλάμεινε ὁ τῆς αἰῶνος ἀριστοτέλης, καὶ οὐκ ἔστιν ἐκείνου μνημονεύεται.

SECT. 1. Propositions invented by him.

That he improved (as Proclus implies) the Geometry which he learnt of the Ægyptians with many propositions of his own, is confirmed by Laertius, who saith, that he much advanced those things the invention whereof Callimachus in the Iambicks, ascribes to Euphorbus the Phrygian, as scalenous triangles, and others. Nor is it to be doubted, but that many of them are of those, which Euclid hath reduced into his Elements; whose design it was to collect and digest those that were invented by others, accurately demonstrating such as were more negligently proved, but of them only, these are known to be his.

[^a 1. Every Diameter divides its circle into two equal parts.] This proposition which Euclid makes part of the definition of a Diameter, * Proclus affirms to have been first demonstrated by Thales.

2. [In all Isosceles triangles, the angle at the base are equal the one to the other, and those right lines being produced, the angles under the base are equal.] * Proclus saith, that for the invention of this likewise, as of many other propositions, we are beholden to Thales, for he first observed and said, that of every Isosceles, the angles at the base are equal, and according to the ancients called equal like. These are three passages in the demonstration, which infer nothing towards the conclusion, of which kind there are many in Euclid, and seem to confirm the antiquity thereof, and that it was less curiously reformed by him.

3. [If two lines cut one the other, the verticle angles shall equal the one the other] ^b Eudemus attests this Theorem to have been invented by Thales, but first demonstrated by Euclid.

4. [If two triangles have two angles equal to two angles the one to the other and one side equal to one side, either that which is adjacent to the equal angles, or that which subtendeth one of the equal angles, they shall likewise have the other sides, equal to the other sides, both to both, and the remaining angle equal to the remaining angle] ^c Eudemus attributes this Theorem (saith Proclus) to Thales, for shewing the distance of ships upon the Sea, in that manner as he is said to do, it is necessary that he perform it by this.

Paraphila

Geom. Pamphilia (saith *Laertius*) affirms, that he first described the rectagle triangle of a circle. *Th* *Ramus* attributes to *Thales* (upon this authority of *Laertius*) the second, third, fourth, and fifth propositions of the fourth Book of *Euclid*, which are concerning the adscription of a Triangle and a Circle, and consequently takes *καταγράφει* here to include both Inscription, and circumscription; whereas in all those propositions, there is nothing proper to a Rectangle Triangle; so that if the word *ὁρθογώνιον* be retain'd, it must relate to the 31st proposition of the third Book, whence may be deduced the description of a Rectangle Triangle in a Circle. But because there is no such proposition in *Euclid*, and this hath but an obscure reference to part of that Theorem; it is to be doubted that the Text of *Laertius* is corrupt, and the word (or mark) *κύβη* inserted by accident, without which these words *καταγράφει τὸ τρίγωνον ὁρθογώνιον* exactly correspond with those of *Vetruvius*, *Pythagoricum trigonum orthogonium describere*: by which he means (as he at large expresth *ℓ* elsewhere,) the forty fifth Proposition of the first Book of *Euclid*, that in rectangle triangles, the square of the hypotenuse is equal to the square of the sides containing the right Angle. That *Vitruvius*, *Proclus*, and others, attribute this Invention to *Pythagoras*, confirms it to be the same here meant by *Laertius*; who adds, that *Thales* for the Invention Sacrificed an Ox, though others (saith he) among whom is *Apollodorus*, ascribe it to *Pythagoras*. And in the Life of *Pythagoras*, he cites the same *Apollodorus*, that *Pythagoras*, Sacrificed a Hecatomb, having found out, that the hypotenuse of a right Angled Triangle, is of equal power to the two sides, including the right angle according to the Epigram.

That Noble Scheme *Pythagoras* devis'd,
For which a Hecatomb he Sacrific'd.
Cicero, tho' he differ in the Author, agrees in quantity of the Offering with *Laertius*; affirming, that *Pythagoras* upon any new Invention used to Sacrifice an Ox: which kind of gratitude begun by *Thales*, was imitated by others also, as by *Perseus*.
ℓ Finding three Spiral Lines, in Sections five,
Perseus an Offering to the Gods did give.

ℓ Sect. 2. Of his taking the height of the Pyramid.
THE Pyramids of Egypt are supposed by *a* *Solinus*, *b* *Ausonius*, *Amianus* *c* *Marcellinus*, and *d* *Cassiodorus*, to cast no shadow at all, which (as *Mr. Greaves* hath observed in his excellent Discourse upon this Subject) must be meant either of the Summer time, or, which is nearer the Truth, that for the three quarters of the year, they have none at mid-day.
For, that *Thales* by the shadow measured their height, is acknowledged. *e* *Hieronymus* saith, he measured the Pyramids by the shadow, observing when they are of equal bigness. *f* *Pliny* affirms he found out a way to take the height of them, and all such like, by measuring the shadow, at what time it is equal to the Body. But *Plutarch* hath given a more regular and exact account of his manner of operation, by erecting a staff perpendicular upon

the end of the shadow of the Pyramid, and by two triangles made by the Beams of the Sun, he demonstrated, that what proportion there was between the shadows, the same was betwixt the Pyramid and the Staff: A demonstration so rational, that it is the ordinary way of taking heights by shadows, founded upon this Theorem.

g Of equiangle triangles, the sides that are about equal angles are proportional, and the sides that subtend the equal Angles are homologous. *Euclid. lib. 6. prop. 4.*
Which if *Proclus* had proceeded as far as the sixth Book of *Euclid*, we should in all likelihood have found ascribed to *Thales*; for the same argument wherewith *Eudemus* proves him inventor of the fourth Theorem in the foregoing Section, whereby he took distances, is of equal force in this, whereby he took altitudes.

The height of the great Pyramid (which *Thales* measured) is by its perpendicular (according to *Mr. Greaves*) 499 Feet, by its declining ascent, 693 Feet.

CHAP. XVIII.

Of His Astronomy.

OMitting the Fable of *Orpheus's* Harp alluding to the seven Planets, and the observations of *Hesiod*, which were little more than of the Rising and Setting of some principal Stars, (so imperfect, that *Plato* calls all those who satisfy themselves with such superficial knowledge, *Astronomers according to Hesiod*) we may with *Eudemus* and others affirm, that *Thales* was the first of the Grecians that was skilful in Astronomy. Which Science *a* *Pliny* asserts to have been brought out of *Phenicia*; *b* *Aristotle*, that the Grecians owe much of it to the Egyptians, where it hath been a long time practised: Thither indeed *c* *Thales* acknowledgeth that he Travelled to confer with Astronomers.

Sect. 1. Of the Celestial Sphere.

THales, *Pythagoras* (saith * *Plutarch* repeated by * *Stobaeus*) with his followers affirm, that the Celestial Sphere is divided into five Circles (which they call Zones) whereof one is called Arctick, and is always in view to us; one of the Summer Tropicks, one the Equinoctial, one the Winter Tropick, one the Antartick Circle, never seen by us. The oblique Circle, called the Zodiack, lieth under the three middle Circles, it toucheth them all three as it passeth, and each of them is cut in right Angles by the Meridian, which goeth from Pole to Pole. Unjustly therefore is the invention of the Zones ascribed by *e* *Posidonius* to *Parmenides*; and that of the obliquity of the Zodiack by *f* others to *Anaximander*, *Pythagoras*, or *Aenipodes*.

g *Eudemus* saith, that he first observ'd the Tropicks; *Laertius*, that he first found out the accession of the Son from Tropick to Tropick. The word *ἡμεραι* signifies not only the Solstices, but the Equinoxes likewise: *h* *Sextus Empiricus*. The Tropick signs are those into which the Sun coming, changeth and maketh conversions of the Air; such a sign is Aries, and the opposite to it Libra, so also Capric. and Canc: for in Aries is made the vernal conversion, in Capr. the winter, in Canc. the summer, in Libra the

Lansbergius, Olympiad. 48. 3. the 163 year of Nabonassar, the 12th day of Tybi, which is May 28, digits Eclipsed 12. 20^m in Hellespont: 10 12^m in Alexandria.

Kepler, Scaliger, Buntingus, and Saliarius, follow Pliny: digits Eclipsed (according to Buntingus) 11. 30^m.

Neither is it easie to determine whether this variety arises from the incertainty of the Astronomers, or of the Chronologers.

Sect. 4. Of the Year.

L Aertius saith, that he distinguished the seasons of the year, that, he first called the last day of every Month *τελευταίος*, the thirtieth day, that he divided the year into three hundred sixty and five days.

This Calculation of the year he seemed to have learned in *Ægypt*, where it was in use, thus explained and commended by * *Herodotus*. The Egyptians were of all Men the first that found out the year, distinguishing it into twelve Months; this they gathered from the Stars, and more judiciously (in my Opinion) than the Grecians, for as much as the Grecians every third year, intercalate a Month to make up the time; but the Egyptians to the number of 360 days, which twelve Months make, add yearly five days, whereby the account of the Circle of Time returning into it self is made good.

This was called in latter times, the Egyptian year (perhaps because used by Ptolemy, who lived in *Ægypt*) in distinction from the Julian year, which was then used in all the Western parts, and hath the addition of six hours: the most perfect is the Gregorian, consisting of three hundred sixty five days, five hours, forty nine minutes, twelve seconds.

Sect. 5. His Astrological Predictions,

T Hales being earnestly addicted to Astrology, became obnoxious to the Censure of some Persons. As he was led abroad one night by an old Woman, his Maid, (a * *Thracian*) to look upon the Stars, he fell into a Ditch (wherein she purposely led him) to whom as he complained, Thales, said she, do you think, when you cannot see those things that are at your feet, that you can understand the Heavens?

He was also for preferring this Study before Wealth, reproved by some Friends, not without Reproach to the Science, as conferring no advantage on its professors; whereupon he thus vindicated himself and the Art from that Aspersi-
on. When they upbraided him, saith b *Aristotle*, with his Poverty, as if Philosophy were unprofitable, it is said, that he by Astrology, foreseeing the plenty of Olives that would be that year, before the Winter was gone *antequam florere cœpissent*, (saith c *Cicero*) gave earnest, and bought up all the places for Oyl at Miletus and Chios, which he did with little Money, there being no other chapman at that time to raise the price; and when the time came that many were sought for in haste, he setting what rates on them he pleased, by this means got together much Money, and then shew'd, that it was easie for Philosophers to be Rich, if they would themselves, but that Wealth was not their

aim. To this *Plutarch* alludes, when he says, that *Thales* is reported to have practised Merchandize.

CHAP. IX.

His Moral Sentences.

O F his Moral Sentences those are first to be remembred which a *Plutarch* mentions a Sept. safe upon this occasion. *conviv.*

Amasis King of *Ægypt* entring into contestation with the King of *Æthiopia* concerning Wisdom, propounded these questions to be resolved by him; what is oldest of all things, what fairest, what greatest, what wisest, what most common, what most profitable, what most hurtful, what most powerful, what most easie?

The answers of the *Æthiopian* were these, the oldest of things is Time, the wisest Truth, the fairest Light, the most common Death, the most profitable God, the most hurtful the Devil, the most powerful Fortune, the most easie that which pleaseth. *Thales* demanded of *Niloxenus* whether *Amasis* approved these solutions? *Niloxenus*, who was sent by *Amasis* into Greece with these other questions to be resolved by the Sages, answered that with some he was satisfied, with others not; and yet, replies *Thales*, there is not one but is erroneous and betrays Ignorance. As for the first, how can it be defended that Time is the oldest of Things, when one part of it is past, the other present, the third yet to come, for that which is to come must in reason be esteemed younger than all Men or Things? Next to affirm that Truth is Wisdom, is as much as if we should say, that the Light and Seeing is all one. Again, if he esteem Light Fair, why doth he forget the Sun? His answers concerning God and the Devil are Bold and Dangerous, but that of Fortune most improbable, for if she be so Powerful, how comes it that she is so easily changed. Nor is Death the most common, for it is not common to the Living. The most ancient of Things is God, for he never had Beginning or Birth, the greatest place of the World containeth all other things, place contains the World; the fairest the World, for whatsoever is orderly disposed is part thereof. The wisest is Time, for it hath found out all things already devised, and will find out all that shall be; the most Common, Hope, for that remains with such as have nothing else; the most Profitable, Virtue, for it maketh all things useful and commodious; b the most hurtful, Vice, for it destroyeth all good things; b *Etiam a. pud. Stob. serm. 109.* the most Powerful, Necessity, for that only is invincible; the most Easie, that which agreeth with Nature, for even Pleasures are many times given over and cloy us. *Etiam apud Stob. serm. 46.*

To which Apothegms these are added by *Laertius*, The swiftest of things is the Mind, for it over-runs all. He affirm'd that there is no difference betwixt Life and Death; being thereupon asked why he did not die; because, saith he, there's no difference; to one who ask'd which was eldest, night or day; he answer'd, night by a day; another enquiring whether a man might do ill and conceal it from the Gods; nor think it said he. To an Adulterer, questioning him if he might clear himself by Oath * *Perjury*, says he, is worse than Adultery: Being demanded what was difficult, he answered, to know one's self; what easie, to be rul'd by another; what sweet, to

to follow ones own Will; what Divine, that which hath neither beginning nor end. At his return from Travel, being demanded what was the strangest thing he had seen, he answered, a Tyrant old. What will help to bear ill Fortune? to behold our Enemies in worse. How shall a Man live justly? by avoiding what he blames in others. Who is happy? he who hath a sound Body, a rich Fortune, and a docile Nature.

c Plutarch adds these; We may well report probable News, but improbable should not be related. We ought not to believe our Enemies in credible things, nor to distrust our Friends in incredible. Periander being much troubled at a Monster which a Youth brought him, born of a Mare, with the head only of a Horse, the rest resembling a Man, he advised him not to take care for expiation of what the Prodigy portended, ἐγὼ δὲ σοὶ παραινῶν (saith he) ἐδίδω τὸ μὴ χεῖρ δαίμονος ἔχειν ἢ δίδοναι γυναικας ἀνδρῶς.

Stobæus these; † Being demanded how far Falshood was distant from Truth, as far saith he, as the Eyes from the Ears. It is hard but good to know our selves, for that is to live according to Nature.

His Moral precepts are thus delivered by Demetrius Phalereus; † If thou art a Surety, loss is nigh; be equally mindful of friends present and absent; study not to beautifie thy face but thy mind: enrich not thy self by unjust means. † Let not any words fall from thee which may accuse thee to him who hath committed any thing in trust to thee. Cherish thy Parents. Entertain not Evil. What thou bestowest on thy Parents thou shalt receive from thy Children in thy old Age. It is hard to understand well. The sweetest thing is to enjoy our desire. Idleness is troublesome. Intemperance hurtful. Ignorance intolerable. Learn and teach better things. Be not Idle tho' Rich. Conceal thy domestick ills. To avoid Envy be not pitiable. Use Moderation. Believe not all. If a Governor, Rule thy self. I follow those Copies of Stobæus, that ascribe these to Thales rather than to Pittacus, because the greater part are confirmed by Laertius.

Ansonius hath reduced these into Verse under his name.

Fear e'er thou sin, thy self tho' none else nigh;
Life fades, a Glorious Death can never die.
Let not thy Tongue discover thy intent,
'Tis Misery to dread, and not prevent.
He helps his Foes that justly reprehends.
He that unjustly praiseth, harms his Friends,
That's not enough that to excess extends.

His Motto was according to Laertius, Know thy self; according to f Didymus and g Higynus, if thou be a Surety, loss is nigh; by h Herippus, this is ascribed to him, tho' by others to Socrates: He gave thanks to Fortune for three things: first, that he was born Rational, not a Beast; secondly, that a Man, not a Woman: thirdly, that a Grecian, not a Barbarian.

There are beside cited by Laertius, under the name of ἀδοκίμα, or loose Verses, these sentences,

Not many Words much Wisdom signifie.
Choose one thing excellent, to which apply
Thy Mind, and stop the mouth of Calumny.

CHAP. X.

His Judgment in Civil Affairs.

Politicks were, according to Laertius, his first Study, in which his advice was of great Authority, tho' he were the only person (as Cicero observes) of the seven Wise Men, that was not Ruler of the City wherein he lived.

Of his Judgment herein we have two instances; the first from i Herodotus; Good also, even before the destruction of Ionia, was the advice of Thales, a Milesian, as far off by descent a Phœnician, who commanded the Ionians to build one Common Council-Hall, and that in Teos, for that Teos is in the midst of Ionia, and the rest of the Inhabited Cities, nevertheless, to be in Repute, according as the Citizens were.

tem civitates habitatas nihilo minus huic parituras, quam aliarum civitatum tribus legibus parent. Stephanus thus: Nihilo minus eodem loco haberi quo tribus: both (I conceive) amiss.

The other cited by Laertius (with no less applause) is this. In the first year of the fifty eighth Olympiad, Cræsus King of Lydia, fearing the greatness of Cyrus, and encouraged thereunto, as he conceived, by the Oracle, sent Ambassadors and Presents to the most considerable of the Grecians, perswading them to joyn with him in an expedition against Cyrus, which the Lacedæmonians with many others did: but Thales forbade the Milesians to enter into League with him. It appears (adds Laertius) that his Advice in Civil Affairs was excellent; for this thing (Cyrus getting the better) preserv'd the City.

Yet did he afford Cræsus his particular assistance in passing his Army over Halys, as the Grecians affirm, though Herodotus be of a contrary Opinion, who gives this account of both. When Cræsus was come to the River Halys, then, I believe, by Bridges that were there, he passed over his Army; but the common report of the Grecians is, that Thales the Milesian was he who conveyed it over: For Cræsus being doubtful over what part of the River his Army should pass, there being in those days no Bridges, Thales, who was in the Field with him, is said to have caused the River that did run on the left hand of the Army, to run also on the right, which he brought to pass thus. Beginning above the Trench, he digged a deep Trench, and brought it in the fashion of a half Moon, that the River being turned into the Trench from the former Channel at the back of the Army, and passing by the Camp, came into the old Channel again, so that as soon as the River was thus divided. (which k Lucian saith, was done in one night) it became fordable on either side: some say that the old Channel was quite made up, but that I do not believe, for then, how could they in their return pass over? That this is the meaning of Herodotus, mistaken by * Valla, will appear from the m Scholiast of Aristophanes, who relates it in the same manner, not without applauding Thales, for his excellency in Mechanics.

δρῶν καὶ αὐτὸς ἐκταμείβεσθαι τὸ ἐκατέρωθεν, εἰς τὰ ἀρχαῖα ἐκβαλὼν in quam cum introisset ex pristino alveo fluvium, iterum cum ubi trajectus esset in eum alveum refunderet. m In Nubes.

He was a great Enemy to Tyrants, and accounted all Monarchy little better, as appears by *Plutarch*, who makes him speak thus: 'As for taking one for the other, (*viz. A Monarch for a Tyrant*) I am of the same mind with the young man, who throwing a Stone at a Dog, hit his Step-mother; it is no matter, said he, for even so, it lights not amiss, truly always esteemed *Solon* very wise, for refusing to be King of his own Country: and *Pittacus*, if he had not taken upon him a Monarchy, would never have said, how hard it is to be a good man: and *Pericles* under being seized (as it were with an hereditary disease, derived from his Father) by the same Tyranny, did very well to endeavour as much as he could to disengage himself from it, by frequenting the conversation of the best Men, inviting Sages, and Philosophers, and being invited by them, not approving the dangerous Counsel of *Thrasibulus* my Country-man, who persuaded him to take off the heads of the chiefest. For a Tyrant, who chooseth rather to command Slaves than Free-men, is like a Husband-man, who preferreth the gathering of Locusts, and catching of Fowl, before reaping of good Corn. These Sovereign Authorities have only this good, in recompense of many Evils, a kind of Honour and Glory, if Men be so happy, that in ruling good Men, they themselves prove better; as for such, who in their office aim at nothing but security, without respect of Honour and Honesty, they are fitter to be set over Beasts than Men.

In the same Symposium, he gives this Account of Monarchy, Democracy, and Oeconomicks. That Prince is happy, who lives till he is old, and dies a natural Death. That Common-wealth is best ordered, where the Citizens are neither too rich, nor too poor. That House is best, wherein the Master may live most at ease.

Stob. serm. 147
Stob. serm. 141
Stob. serm. 43

C H A P. XI.
Of his Writings.

Some affirm (saith *Laertius*) that he left nothing behind him in writing. Others, that he writ

Of Natural Philosophy: St. a *Augustin*, saith, that *Thales*, to propagate his Doctrine to Succession, searched into the Secrets of Nature, and committing his Opinion to Monuments and Letters, grew Famous.

Of Nautick Astrology (mentioned by b by *Simplicius*) which is by some ascribed to *Phocus* a *Samian*.

Of the Tropicks and Equinoctials: which two Treatises *Laertius* saith, he composed, as judging the rest easie to be understood. These seem to be those Astrological Writings which *Lobon*, an *Argive*, who writ concerning the Poets, affirmeth to have extended to two hundred Verses.

Of Meteors: A Treatise in Verse, mentioned by *Suidas*.

The History of his own Times: if we may give credit to c *Johannes Antiochenus*, who saith, These things *Thales*, *Castor*, and *Polybius* most wise Authors committed to writing, and after them *Herodotus the Historian*: but perhaps this may be no more probable, than that *Polybius* and *Castor* should precede *Herodotus*

c lib. 6.
ταύτα δ' ἴσονται οἱ σοφοὶ καὶ Καστωρ καὶ Πολύβιος καὶ Ἡρόδοτος ὁ ἱστορικός.

Asquēva, of which those that are cited by *Laertius*; we have inserted among his Moral Sentences; for such they were, tending to the instruction of the common People, a kind of loose Verse coming near Prose, whence *Demosthenes* makes two kinds of Poets, τὰς ἐμπύκτους καὶ τὰς ἀσκήτους, (as *Casaubon* observes) those that write in metre, and, (if we may so term it) those that write in blank Verse. Whatsoever *Laertius* in the Lives of the seven Wise Men produceth in this kind, seemeth not to be taken out of any Poet, but to have been written by the Wise Men themselves.

Epistles, of which two only are extant, preserved by.

Thales to Pherecydes

I Hear, that you first of the Ionians, are about to publish a Discourse to the Greeks concerning Religion, and * justly you conceive that your work ought rather to be laid in a publick Library than transmitted to uncertain Persons: if therefore it may any way pleasure you, I will willingly confer with you about that which you have written, and if you desire, will visit you at Syrus; for neither my self, nor *Solon* the Athenian should deserve the titles of wise men, if we, who sail'd to Creet to inform our selves of matters there, and into Egypt, to confer with Priests and Astronomers, should not likewise make a Journey to you: *Solon* also, if you think fit, will come. You who affect home, seldom pass into Ionia, nor care to enjoy the society of strangers; we, who write nothing, spend our time in travelling through Greece and Asia.

* But the interpreters render this to another effect.

Thales to Solon.

IF you leave Athens, you may, in my Opinion, settle your self (with those you take along with you) at Miletus, for here is nothing to trouble you. If you dislike that we Milesians are Governed by a Tyrant (for you are averse to all Monarchs, even Elective) yet may you please your self in the society and conversation of me your Friend. Bias likewise hath sent to invite you to Priene; if to abide at Priene please you better, we will also come and dwell there with you.

C H A P. XII.

His Auditors and Scholars.

THE first eminent Person of those who heard *Thales* and professed his Philosophy, was *Anaximander* Son of *Praxides* a Milesian, who flourished in the time of *Polycrates* Tyrant of *Samos*.

Next is *Anaximenes* a Milesian also, Son of *Euristratus*, (who according to *Eusebius*) flourished in the second year of the 56th Olympiad. He was Scholar to *Anaximander* and *Parmenides*; but that he heard *Thales* also, he acknowledgeth in an a Epistle to *Pythagoras*.

We may (as in that Epistle *Anaximenes* doth) amongst the Disciples of *Thales* reckon *Pythagoras* the Samian, institutor of the Italick Sect, who being from his youth particularly addicted

a Laert. vit. A. 12.

* De vita Pythag. 1, 2.

Vit. Pythag. † 2.

* Vit. Pythag. 1. 3.

addicted to investigation of Religious Mysteries, address his first Journey to *Thales* at *Miletus*, as to one that could best further his design, being (according to * *Jamblicus*) not fully eighteen years old; which if we follow the account of *Eusebius* for his Birth (the fourth year of the seventieth Olympiad) and that of *Soficrates* for his Age, eighty years (for the rest, the farther they exceed that time, are so much the more incapable of Reconcilement) will fall about the second year of the fifty fourth Olympiad, which is the 82d. of *Thales*. From *Thales* he received the Rudiments of that excellence which he afterwards attained. This is acknowledged by † *Jamblicus*. *Thales*, saith he, entertained him very kindly, admiring the difference between him and other Youths, which exceeded the Fame he had received of him. After that he had instructed him as well as he was able in the Mathematicks, alledging for excuse his old Age and infirmity, he advised him to go to Egypt, and to converse with the Memphian Priests, especially those of Jupiter, of whom he himself had in his Travels learned those things; for which by many he was esteemed wise; and, * again, among other things *Thales* chiefly advised him to husband his time, in respect whereof he abstained from Wine and Flesh, only eating such things as are light of digestion, by which means he procured shortness of sleep, wakefulness, purity of Mind, and constant health of Body.

C H A P. XIII.

Of his Death.

† Laert.

T*hales* having now lived to a great age, being full of Honour and Wisdom, * died in the first year of the fifty eighth Olympiad (when according to *Pausanias* *Erxyclides* was Archon) as he was beholding the Olympick Games, oppressed with heat, thirst, and the burden of his years which amounted to ninety two. *Laertius*

under-reckons him to have lived but eighty seven years, having before acknowledged his Birth to have been in the first of the 35th Olympiad. † *Petavius* over-reckons, who makes him live to the end of the 58th, which could not be, because he died spectator of the Olympick Games. * *Lucian* and † *Sincellus* more, who say he lived 100 years. *Soficrates* comes nearest to the Truth, who allows him to have lived 90 years; and to have died in the 58th Olympiad; for from the first of the 58th are 23 entire Olympiads.

The manner of his Death gave *Laertius* occasion to favour him with this Epigram.

*Viewing th' Olympick Games Eleon Jove,
Thou didst wise Thales from that his race remove
Nigher thy self; and 'twas well done, now old
He could not well from Earth the Stars behold.*

He was Buried according to his own appointment in a poor obscure part of the *Milesian* Field, where he presag'd that in future times their Forum should be; upon his Tomb this Distich,

*Narrow the Tomb, the Fame than Heaven more wide,
Of wisest Thales whom this Earth doth hide.*

There was also a Statue erected in Honour of him bearing this Inscription,

*Milesian Thales this doth represent,
Who all in wise Astrology outwent.*

† There were five more of this Name mentioned by *Demetrius* the *Magnesian*, an Orator of *Calates*, an affected Imitator. A Painter of *Sicyonia*, of a great Spirit. The third very Ancient, contemporary with *Hesiod*, *Homer*, and *Lycurgus*; The fourth mentioned by *Duris*: The fifth of later times, by *Dionysius* in *Criticis*. * *Laertius* names *Phercydes* as a detractor from *Thales* the Philosopher.

S O L O N.

Solon.

CHAP. I.

Solon his Parents, Country, and Condition.

Philochus, cited by Didymus, affirms that Solon's Father was named *Euphorion*, but by the unanimous consent of all other Writers he was called *Execestides*, a Person though of small Fortune and Account among the Citizens, yet of the most Noble Family in *Athens*, descended from *Codrus*, * *Solon* deriving himself from Ne-

leus, Son of *Codrus*, and from *Neptune*: † His Mother near of kin to the Mother of *Pisistratus*, his Parents had another Son named *Dropides*, Archon, the year after *Solon*, from him was *Plato* descended.

Solon was born (according to *Laertius*) at *Salamis*, for which reason he desired at his death

Plut.

* Laert.
Plut.

Proclus in Tim.
maum.

death that his Body might be carried thither; but from his Parents and the place of his Residence, he was firnamed *Athenian*.

* *Plut.*

* His Father by Munificence and Liberality brought his Estate so low, as to want even necessities: *Solon* (ashamed to receive from any being of a House which used to maintain others) betook himself to Merchandize: others say, he Travelled rather to improve his Knowledge and Experience, for he was a professed lover of Wisdom, and even to his last used to say, *I grow old in Learning*; Riches he esteemed not much, but to grow Rich like

———him who abounds
In heaps of Gold, as in rank Corn his Grounds
In Mules and Horses, whilst his numerous wealth
Made pleasing by uninterrupted health:
If to compleat these Joys, he be possess'd
Of Wife and Children, he is truly blest.

And else where,

*Riches I wish, not Riches that are plac'd
In unjust means, for Vengeance comes at last.*

That he was Profuse and Delicate, and more Luxurious in his Verses than befits a Philosopher, is attributed to his practising Merchandize, such persons requiring more than ordinary Delicacies and freedoms in Recompence of their many and great dangers. That he was rather in the number of the Poor than of the Rich, is apparent from these his Verses.

*Many Unjust grow Rich, and Pious Poor,
We would not change our Virtue for their store,
For constant Virtue is a solid base:
Riches from Man to Man uncertain pass.*

† *Polit. 4. 11.*

* *In Scythia.*

* *Orat. 1.*

† *Aristotle* ranks *Solon* amongst the inferior sort of Citizens, which (saith he) is manifest from his Elegies, meaning perhaps, some of these which *Plutarch* cites. † *Lucian* saith, he was extremely poor: * *Palæologus*, that he neither had nor valued Wealth.

C H A P. II.

*How by his means the Athenians took Salamis,
Cyrreha, and the Thracian Chersonesus.*

* *Orat. de falsa leg. 11.*

Many (saith * *Demosthenes*) of obscure and contemptible have become illustrious by profession of Wisdom. *Solon* both living and dead flourished in extraordinary Glory, to whom the utmost honours were not denied, for he left a monument of his Valour, the *Megarian Trophy*, and of his wisdom, the recovery of *Salamis*; the occasions these.

† *Pausan.*
* *Plut.*

† The Island *Salamis* revolted from the Athenians to the *Megarenses*; * the Athenians having had a long troublesome War with the *Megarenses* for its recovery, grew at length so weary, that giving it over, they made a Law, forbidding any upon pain of death to speak or write any thing to persuade the City to re-attempt it: *Solon* brooking with much reluctance this ignominy, and seeing many young men in the City desirous to renew the War, (though not daring to move

it, by reason of the Edict) counterfeited himself mad, which he caused to be given out through the City, and having privately composed some elegiack Verses and got them by heart, came skipping into the Forum with his Cap (or as *Laertius* saith, a Garland) on; the People flocking about him, he went up into the place of the Cryer, and sung his Elegy, beginning thus:

*A Cryer I, from Salamis the fair,
Am come in Verse this Message to declare:*

* The Lines wherewith they were most excited were these: * *Pausan.*

*Rather than Athens would, I ow'd my Birth
To Pholegondrian, or Scirian Earth:
For Men where e'er I go will say this is
One of the Athenians that lost Salamis.*

And,

*Then let's to Salamis, renew our Claim,
And with th' Isle recover our lost Fame.*

† This Poem was intituled *Salamis*; it consisted of a hundred Verses, very Elegant: when he had made an end of singing, it was much applauded by his Friends, particularly by *Pyfistratus*, who excited the Citizens to follow his advice: By this means the Law was Repealed, the Warre commenced, wherein *Solon* was made General: the common report is that taking *Pyfistratus* along with him, (whence it is that some ascribe the whole Glory of the Action to *Pyfistratus*, of whom are *Frontinus*, *Æneas*, and *Iustine*) he Sailed to *Colias*, where finding all the Women Celebrating the Festival of *Ceres*, he sent a trusty Messenger to *Salamis*, who pretending to be a Renegade, told the *Megarenses*, that if they would surprize the principal Women of *Athens*, they should go with him immediately to *Colias*: The *Megarenses* believing what he said, Manned a Ship, and sent it along with him; *Solon*, as soon as he saw the Ship come from the Island, commanded the Women to retire, and as many Beardless young Men to put on their Gowns, Head-tyre, and Shoos, hiding Daggers under their Garments, and so danced and played by the Sea-side, till the Enemy were Landed, and their Ship at Anchor: by this time the *Megarenses*, deceived by their outward appearance, Landed in great haste, and came upon them, thinking to take them away by Force, * but they suddenly drawing their Swords, shewed themselves to be Men, not Women; † the *Megarenses* were all slain † *Plut.* not one escaping, the Athenians going immediately to the Island took it.

* Others deny it was taken in this manner, but that first receiving this answer from the Delphian Oracle. * *Polyan. lib. 1.*

*Let Sacrifice be to those Heroes paid,
Who under the Asopian Ground are laid,
And dead, are by the setting Sun survey'd.*

Solon by night Sailed to the Island, and Sacrificed Burnt Offerings to the Heroes *Peripheemus*, and *Cichris*; then he received five hundred Men of the Athenians, with condition, that if they gain'd the Island, the Supream Government

ment thereof should be in them: Shipping his Men in Fisher-boats, attended by one Ship of thirty Oars, they cast Anchor by Salamis, near a Point opposite to Eubœa: The Megarenses who were in Salamis hearing an uncertain rumor hereof, betook themselves confusedly to Arms, sending forth a Ship to bring them more certain intelligence from the Enemy, which Solon, as soon as it came near, took, and killing the Megarenses, manned with choice Athenians, whom he commanded to make directly for the City, with all possible secrecy; in the mean time, he with the rest of the Athenians, assaulted the Megarenses by Land, and whilst they were in fight, they who were in the Ship, making haste, possessed themselves of the Town. This relation is confirmed by their Solemnity, an Athenian Ship comes thither first in silence, then falling on with cries and shouts, an armed Man leaps forth, and runs directly towards the Scirradian Promontory; against those that come from the Land: hard by is the Temple of Mars, built by Solon; for he overcame the Megarenses, and let go ransomless all those that escaped the misery of the War: † *Ælian* faith, he took two Ships of the Megarenses, whereinto he put Athenian Officers and Soldiers, bidding them put on the Armour of the Enemy, whereby deceiving the Megarenses, he slew many of them unarmed.

* But the Megarenses persisting in obstinacy, to the loss of many lives on both sides, the business was referred to the Lacedemonians to be decided; many affirm Solon alledg'd the Authority of *Homer*, inserting a Verse into his Catalogue of Ships, which he thus recited at the trial,

*Ajax twelve Vessels brought to Salamis,
And where the Athenian Men had stood rank'd his.*

By which second Verse of his own making and addition he evinc'd, that Salamis of old belonged to the Athenians. But the Athenians esteem this relation fabulous, affirming, Solon demonstrated to the Judges, that *Phylæus* and *Eurisaces*, Sons of *Ajax*, being made free Denizens by the Athenians, delivered this Island to them; and dwelt, one at *Branco*, in *Attica*, the other in *Melita*, whence there is a Tribe named *Philaide*, from *Philaus*, of which was *Pisistratus*. † He overcame the Megarenses in an Oration, getting the better of them, not with specious words, but weight of argument: * more clearly to convince them, he instanced in the burial of the dead, and inscription of the names of Towns, used by those of Salamis, || as he shew'd, by digging up some Graves, after the manner of the Athenians, not of the Megarenses; for in Megara they buried their dead with their Faces to the East, in Athens, to the West. But *Hereas* of Megara denying this, affirms, the Megarenses buried also with their Faces toward the West; for further confirmation, Solon alledg'd, that the Athenians had for each Man a several Coffin, the Megarenses buried three or four in the same. It is said also, that Solon was much helped by certain Oracles of *Apollo*, wherein he calls *Salamis Ionia*. This cause was decided by five Spartans, *Critolaidas*, *Amomphoretus*, *Hypsechidas*, *Anaxilas*, and *Cleomènes*.

† By this action Solon grew into great esteem and honour, but he became [not long after] much

more admired and cried up by the Greeks, for speaking concerning the Temple at *Delphi*. The *Cyrrhæans* committed many impieties against *Apollo*, and cut off part of the Land belonging to him. † Solon declared, that it behoved them to relieve it, and not to suffer the *Cyrrhæans* to profane the Oracle, but that they should vindicate the Gods cause. The *Amphiſtions* thus instigated by him, undertook the War with much eagerness, as *Aristotle* affirms, ascribing to Solon the honour of that Enterprize. *Æschines* faith, the motion made by Solon was confirmed by the Oracle. Some affirm he was made General; others *Alcmaon*: But the whole Army of the Greeks was (according to † *Pausanias*) led by *Cliftthenes*, † *In Phœc.* Tyrant of *Sycionia*, along with whom they sent Solon from Athens to be his Counsellor. * *Suidas* * *In voce Solon.* faith, he was chosen Counsellor by those who were pickt out for the service of that War. † *Whist* † *Polyæn. lib. 3.* *Cliftthenes* besieged *Cirra*, || they enquired concerning the Victory; and from the *Pythian Oracle* received this Answer,

This City's Fort you shall not take before
Blew *Amphitrites* swelling Billows roar
Against my Wave-wash'd Grove, and hallow'd Shoar.

Whereupon Solon advis'd to consecrate the *Cyrrhæan field* to *Apollo*, by which means the Sea should touch sacred Land. * He used also another stratagem against the *Cyrrhæans*; the River *Pliftus* which ran through the City, he diverted another way, the Town holding out against the Besiegers, some drunk Well-water; others Rain, which they saved in Cisterns. He caused Roots of *Hellebore* to be thrown into *Pliftus*, and when he found it was full poison'd, turned the River again into its proper channel: The *Cyrrhæans* drinking greedily of that Water, were taken with a continual Flux, and forced thereby to give over the defence of their works: The *Amphiſtions* being possess'd of the City, punished the *Cyrrhæans*, and avenge the Gods. These two stratagems were ascribed to *Cliftthenes*, the first by † *Polianus*, the second by || *Æron*. † *Lib. 3.* *tinus*; but the reason is apparent, he doing them || *Lib. 3. c. 7.* by the direction of Solon.

* Solon perswaded also the Athenians to reduce into their power the *Thracian Chersenes*. * *Laert.*

CHAP. III.

How he compos'd differences and seditions at home, and was made Archon.

† THE *Cylonian* impiety had for a long time † *Plut.* vexed the City, ever since the Complices of *Cylon*, having taken sanctuary, were perswaded by *Megacles* the Archon to put themselves upon a Trial, they laying hold of a Thread which was tied to the Image of *Pallas*; when they came near the Images of the *Furies*, the Thread broke of it self, whereupon *Megacles* with the other Archons fell upon them, as persons disown'd by the Goddess; those that were without the Temple they stoned, those who run to the Altars, they were murdered; they only escaped who fled to their Wives, whence being called impious, they were accounted odious

† *Var. Hist.*
7. 19.

* *Plut.*

† *Ælian. Var. Hist.* 7. 19.

* *Plut.*

† *Laert.*

† *Plut.*

dious: those that remained of the *Cylonians* were grown very rich, and had perpetual enmity with the Family of *Megacles*; at what time this dissention was highest, and the People thereby divided into factions, *Solon* being of much Authority amongst them, taking with him the chiefest of the City, interposed betwixt them, and with intreaties and advice persuaded those who were called impious to submit to the judgment of three hundred of the chief Citizens: *Miro* was their Accuser; they were condemned, the Living to be banished, the Bones of the dead to be digged up, and thrown beyond the confines of the Country.

During these Cominations, the *Megarenses* took *Nyssa*, and recovered *Salamis* from the *Athenians*; the City was full of superstitious terrors and apparitions; the Priests declared, that the entrails of the sacrificed Beasts imported great crimes and impieties, which required expiation. † *There was also a great Plague*; * the Oracle advis'd them to lustrate the City; to this end they sent († *Nicias*, Son of *Niceratus*, with a Ship) * to fetch *Epimenides* out of *Creet*, who coming to *Athens*, was entertained by *Solon* as a Guest, conversed with him as a friend, instructed him in many things, and set him in the way of making Laws. *This lustration of the City*, *Eusebius under-reckons*, placing it in the second year of the forty seventh Olympiad, whereas *Solon's* being Archon, which certainly happened after this, was in the third of the forty sixth. *Suidas seems to over-reckon*, ranking it † in *Epimenid.* in the forty forth: the opinion of † *Laertius* agrees best with the circumstances of the story, that it was in the forty sixth.

* The Cominations of the *Cylonei*, being thus appeased, and the Offenders extirpated, the People fell into their old difference about the Government of the Commonwealth, whereby they were divided into as many factions, as the Province contained distinctions of People; the Citizens were Democratical, the Countrymen affected Oligarchy, the Maritimes stood for a mixt kind of Government, and hindred both the other Parties from having the rule; at the same time the City was in a dangerous condition, by reason of a dissention betwixt the rich and the poor, arising from their inequality, the business seemed impossible to be composed, but by a Monarchy; the Commons were generally oppressed by the Mony which they had borrowed of the rich, and either had tilled their Land, paying to them the sixth part of the Crop, whence they were called *Heckemoru*, and *Thetes*, or ingaged their Bodies to their Creditors, whereof some served at home, others were sold abroad, many also (there being no Law to the contrary) were necessitated to sell their Children, and leave the City; through the cruelty of these Usurers, the greatest part (such as had most courage amongst them) assembling together, mutually exhorted one another not to indure these things any longer, but chusing some trusty Man to be their Leader, to discharge those that paid not their Mony at the set day, to share the Land, and quite invert the State of the Commonwealth. The discreetest amongst the *Athenians* looking upon *Solon* as a Person free from any crime,

(neither ingaged in the oppressions of the rich, nor involved in the necessities of the poor) intreated him to take charge of the Commonwealth, and to compose the differences of the People. *Phanias the Lesbian* affirmeth, that for preservation of the State, he deceived both Parties, promising under-hand to the poor, a division of the Land; the rich, to make good their contracts; but that he first made scruples of undertaking the business, deterred by the avarice of the one, and insolence of the other; he was chosen Archon, next after *Cleombrotus* († in the third year of the forty sixth Olympiad) † *Laert.* at what time he made his Laws also, being at once a Peace-maker, and a Law-giver, acceptable to the rich, as rich, and to the poor, as good; the People had often in their Mouths this saying of his, *Equality breeds no strife*; which pleased alike both Parties; one side understanding it of Number and Measure, the other of Worth and Vertue; upon which hope, the most powerful of both Factions courted him much, and desired him to take upon him the Tyranny of that Commonwealth, which he had now in his power, offering themselves to his assistance: Many also of the moderate part, seeing how laborious and difficult it would be to reform the State by Reason and Law, were not unwilling to have a Prince created, such an one as were most prudent and just: some affirm he received this Oracle from *Apollo*;

*Sit at the Helm of State, their Pilot be,
The Commonwealth's glad to be Steer'd by thee.*

But he was most of all reproved by his familiar Friends, for being deterred by the name of a Tyranny, as if the virtue of a King were not diffus'd through the Kingdom, instancing in *Tynondas*, long since Tyrant of *Eubæa*, and *Pittacus*, at present of *Mytelene*: nothing they alledg'd could move him; he told them a Tyranny was a fair possession, but it had no passage out: to *Phocus* writing thus in Verse,

*That I preserved free my Native soil,
Nor did with bloody Tyranny defile
My honour, I not blush at by this deed,
All that was done by others I exceed.*

Whereby it appears, he was of great Authority before he writ his Laws. The Contumelies of such as reproved him for declining the Government, he thus exprest in Verse:

*Nor wise is Solon, nor good counsel knows,
For he resists the good that God bestows,
The prey within his power he did behold,
But would not draw the Net; thoughts meanly cold:
Had but his Soul with noble aims been fir'd,
The Kingdom for one day he had desir'd,
Then split, and all his family expir'd.*

C H A P. IV.

What alterations he made during his Government, and first of the Sifachthia.

* Plut.

THough he refused the Tyranny, yet he behaved not himself remissly in the Government, not complying with the powerful, nor making Laws to please those who had chosen him; where things were tolerable, he corrected nor altered nothing; fearing, lest if he should change and confound the Commonwealth in every particular, he should want strength to settle it again, and to temper it with the best reason; but such things unto which he conceived he might persuade the obsequious, and compel the refractory, those he enacted; joyning (as he said) Force and Justice, whence, being afterwards demanded if he had given the Athenians the best Laws, the best (saith he) they would receive.

† Plut.
* Laert.

† The first change he made in the Government was this, he (* introduced the Sifachthia, which was a discharge of Bodies and Goods, or as Hesychius defines it, a Law for remission of private and publick debts, so called from shaking off the oppression of Usury: † for at that time they engaged their Bodies for payment, and many through want were constrained to serve their Creditors, he therefore) ordained that for the time past, all Debts should be acquitted, and for the future, no security should be taken upon the Body of any; this by a moderate term he called Sifachthia, there want not (of whom is Androtion) who affirmed he contented the Poor, not by an absolute discharge of the Debt, but by moderating the Interest, which he called Sifachthia; whereto he added the increase of Measures, and valuation of Money; for the Mina which was before seventy three Drachms, he made a hundred: by this means the poorer sort paid a greater sum in less Coin, which was a great ease to the Debtor, and no wrong to the Creditor: but the greater part hold it was an absolute discharge, which agreeth best with the Verses of Solon, wherein he boasteth he had removed the bounds throughout the Land, freed such as were under oppression, called home those, who being forced to travel, had forgotten their native Language; and others that were at home under bondage, set at Liberty. The same Law, * Diodorus Siculus observes to be among the Egyptians, conceiving Solon (tho' as yet he had not been there) derived it from them.

* Lib. 1.

* Plut.

* But in this design a great misfortune befel him, whilst he endeavoured to redress the oppression of Usury, and was studying how to begin an Oration suitable to the thing, he acquainted his intimate Friends, in whom he reposed most confidence, Conon, Clinias, and Hipponicus, that he meant not to meddle with Land, but to cut off all Debts; they (preventing the Edict) borrowed of the Rich great Sums of Money, wherewith they purchased much Land; the Edict being published, they enjoyed their purchase, without satisfying their Creditors: Solon was much blamed, as not defrauded with the rest, but as being a defrauder with those, and a partaker of their cozenage; but this imputation was immediately washed away with five

Talents, so much he had forth at Interest, which he first, according to the Law, blotted out, (Laertius saith fix, persuading others to do the like) others, of whom is Polyzelus the Rhodian, fifteen; but his Friends were ever after called *ἑταῖροι*.

* This pleased neither parts; he discontented the Rich by cancelling their Bonds, the poor more, not making good a parity of Estates, which they expected, as *Lycurgus* had done, he being the eleventh from *Hercules*, having reigned many years in *Lacedaemon*, great in Authority, Friends, and Wealth, whereby he was able to make good what he thought convenient for the State, rather by force than persuasion, even to the loss of his Eye, effected as a thing most expedient to the preservation and peace of the Commonwealth, that none of the Citizens were either rich or poor: But *Solon* attained not this in the Commonwealth, he was one of the People, and of a mean degree; yet he omitted nothing within his power, carried on by his own Judgment, and the Faith which the Citizens had in him; that he displeased many, who expected other things, is thus acknowledged by himself.

*Before they look'd upon me kindly, now
With Eyes, severe, and a contracted Brow:
Had any else my power, he would exact
Their Riches, and their fattest Milk extract.*

But both Parties soon found how much this conduced to the general good, and laying aside their private differences, Sacrificed together, calling the Sacrifice *Σπονχία*.

C H A P. V.

How he divided the People into Classes, and erected Courts of Judicature.

† Hereupon they chose *Solon* Reformer and † Lawgiver of the Commonwealth, not limiting him to any thing, but submitting all to his Power, Magistracies, Convocations, Judgments, Courts to take an account of them, to prescribe what number and times he pleased; to disannul or ratifie of the present Law what he thought good.

* First, then he quite abolished all the Laws of *Draco*, except for Murther, because of their rigidity and severity, for he punished almost all offences with Death; as that they who were surpris'd in Idleness should be put to death; they who stole Herbs or Apples should undergo the same punishment with such as had committed Murther, or Sacrilege; whence *Demades* wittily said, *Draco* writ his Laws not in Ink, but Blood; he being asked why he punished all offences with Death, answered, he conceived the least deserved so much, and he knew no more for the greatest. Herodicus alluding to his name, said his Laws were not of a Man, but of a Dragon, they were so rigid; And † Aristotle saith, there was nothing in them extraordinary and worthy of memory, but that severity and greatness of penalty which was so excessive, that * not by any edict or command, but by a silent unexpressed consent amongst the Athenians

† Arist. Rhet. 2. 23.

* A. Gell. 11. 1.

nians they were laid aside; afterwards they used the milder Laws made by Solon, differing even in name, the first being called *δεσμοί*, the latter *υῖμοι*. † Those of Draco were made in the 39th Olympiad, 47 years (as * Ulpian accounts) before these of Solon.

† Next, Solon (being desirous that all Offices might continue as they were, in the Hands of the Rich, but that other Privileges of the Commonwealth, from which the People were excluded, might be promiscuously disposed) took an account and valuation of the People [† and divided them into four orders] those whose stock of dry and liquid Fruits amounted to 500 measures he ranked in the first place, and called *Pentacosiomedimni*, [* these paid a Talent to the publick Treasury.] In the second Class were those who were able to maintain a Horse, or received 300 Measures, these he called [† for that reason] *Horsemen*; they paid half a Talent. The third Class were *Zengitæ* (*so called because) they had 200 Measures of both sorts, † these paid 10 Minæ; the rest were all called *Thetes*, whom he suffered not to be capable of any Magistracy, neither did they pay any thing, but only had so far Interest in the Commonwealth, as to have a suffrage in the publick Convocation, and at Judgments, which at first seemed nothing, but afterwards appeared to be of great Consequence; for in whatsoever was brought before the Judges, he gave them leave (if they would) to appeal to the common Forum; moreover writing his Laws obscurely and perplexedly, he increased the Power of the Forum, for not being able to determine Controversies by the Law, they were forced to have recourse to the Judges, as Masters of the Law; this equality he himself thus expresseth,

*The Commons I sufficient Power allow;
Honour from none I took, on none bestow;
Those who in Power or wealth the rest outshin'd,
In bounds of Moderation I confin'd;
To either part I was a firm defence,
And neither did allow prebeminence.*

Hither † Seneca alluding saith, Solon founded Athens upon equal right; and * Justin he carried himself with such temper between the Commons and the Senate, that he attracted equal favour from both, he suffered no Man (saith † Eneas Gazeus) to have a peculiar Law, but made all Men subject to the same.

† He likewise (continues Plutarch) constituted the Court of the *Areopagus*, consisting of the yearly Archons, whereof himself (being the chief) was one; perceiving the People to be much exalted and emboldened by the remission of their Debts, he ordained a second Court of Judicature, selecting out of each Tribe (which were in all four) a hundred Persons, who should resolve upon all Decrees before they were reported to the People; nor should any thing be brought to them, until it had first pass'd the Senate: the Supreme Senate he appointed Judge and preserver of the Laws, conceiving the City would be less apt to float up and down, and the People become more settled, relying upon these two Courts, as on two

Anchors; thus the greater part of Writers make Solon Institutor of the Court of *Areopagus*, (of whom also is † Cicero) which seems to be confirmed, in that Draco never mentions the *Areopagites*, but in Criminal Causes always names the *Ephetae*; but the eighth Law of the thirtieth Table of Solon hath these words, *Those who are branded with Infamy before Solon was Archon, let them be restored to their fame, except such as were condemned by the Areopagites, or by the Ephetae, &c.* And it is certain, That the Court of *Areopagus* was long before Solon's time, until then consisting promiscuously of such Persons as were eminent for Nobility, Power, or Riches, but Solon reformed it, ordaining none should be thereof, but such as had first undergone the Office of Archon, See Meursius, *Areop. cap. 3.*

† Pollux saith, that Solon ordained a thousand Men to judge all Accusations; * Demetrius Phalerius, that he constituted the Demarci, first called *Naucleari*,

CHAP. VI.

His Laws.

HAVING thus disposed the Commonwealth, and Courts of Judicature, he in the next place applied himself to making Laws, which he performed so excellently, that he is generally remembred under that notion, with *Minos* of *Creet*, and *Lycurgus* of *Lacedemon*, whose Laws those of Solon exceeded, (as † Tacitus saith) both in exquisiteness and number: * of how much greater esteem they were than all before them, may be computed from this, That they were the last, and continued always in the City: They, for whom they were made, thought them more illustrious than their publick Ornaments, which transcended those of all other Cities, more impregnable than their Tower, which they accounted the strongest of all upon Earth, and far better than those things wherein they gloried most: † nor were they of less esteem among Foreign Nations, insomuch that the Romans agreeing concerning Laws in general, but differing about the Law-giver, sent Ambassadors to Athens, *Sp. Posthumius Albus*, *A. Manlius*, *P. Sulpitius Camerinus*, commanding them to transcribe the renowned Laws of Solon: † which transferred out of the Books of Solon, the *Decemviri*, expounded in the twelve Tables. Hence * Ammianus Marcellinus saith, that Solon assisted by the Sentences of the Egyptian Priests, having with just moderation framed Laws, added also to the Roman State the greatest Foundation.

Of his Laws, these have been preserved by Plutarch, and others.

† If any Man were beaten, hurt, or violently treated, whosoever had the means and will, might sue the Offender, Thus (saith Plutarch) he wisely brought the Citizens to a mutual sense of one anothers hurts, as if done to a Limb of their own Body.

† Of infamous Persons, let all such as were infamous before the Government of Solon, be restored to their fame, excepting whosoever were condemned by the *Ephetae*, or in the Prytanæum by the Magistrates, banished for Murder, Theft, or aspiring to Tyranny. This was the eighth Law of the thirteenth

thirteenth table. There were two kinds of infamy, by the lesser a Man was degraded and made incapable of all honour or office in the Commonwealth; by the greater, he and his Children were lyable to be killed by any man, and he not to be questioned for it.

^a Plut. Of his laws, those seem most singular and paradoxal, which declare him infamous, who in a sedition takes neither part: it is cited out of Aristotle by ^b A. Gellius in these words: *If through discord and dissention, any sedition and difference divided the people into two factions, whereupon with exasperated minds both parties take up arms and fight; he, who at that time, and upon that occasion of civil discord shall not engage himself on either side, but solitary and separated from the common evil of the City withdraw himself, let him be deprived of house, Country and goods by banishment.* ^c He would not that any one saving himself harmless, should be insensible of the common calamity, or boast himself to have no share in the publick grief, but that instantly applying himself to the better and juster side, he should interest himself in the common danger, and assist, rather than out of all hazard, expect which side should get the better. When we did read (saith A. Gellius) this law of Solon, a person indued with singular wisdom, at first we remained in great suspense and admiration, enquiring for what reason he judged those worthy of punishment, who withdrew themselves from sedition and civil war; then one whose sight pierced more deeply into the use and meaning of the law, affirmed, the intent thereof was not to encrease, but appease sedition; and so indeed it is: for if all good persons, who in the beginning are too few to restrain a sedition, should not deter the distracted raging people, but dividing themselves, adhere to either side, it would follow, that they being separated as partakers of both factions, the parties might be temper'd and govern'd by them, as being persons of greatest authority; by which means they might restore them to peace, and reconcile them, governing and moderating that side whereof they are, and desiring much rather the adverse party should be preserved than destroyed. ^d Cicero citing this law, averreth the punishment to have been capital, perhaps understanding infamy here of the more severe kind.

Aburd and ridiculous (saith Plutarch) seemeth that Law which alloweth an inheritor, if he who possesseth her by law as her Lord and Master be impotent, to admit any of her husbands nearest kindred. But some aver it is just, as to those, who tho' they are impotent, yet will marry rich heirs for their money, and by the privilege of law wrong nature; for when they see it lawful for the heir to admit whom she pleaseth, either they will refrain from such marriages, or undergo them with the reproach of avarice and dishonesty: It is well ordered also, that she may not admit any one, but only whom she will of her husbands kindred, whereby the issue may be of his family and race. ^e Hitherto likewise it tends, that the Bride be shut up in a room with the Bridegroom, and eat a Quince with him. (Intimating, according to ^f Plutarch's interpretation, that the first grace of her lips and voice should be agreeable and sweet) and that he who marieth an

heir, be obliged to visit her thrice a Month at the least: For though they have not children, this argues a respect due to a chaste Wife, and prevents or reconciles unkindness and dissention.

Those words of the former law, *He who possesseth her by law as her Lord and Master*, have reference to another Law of his, mentioned by ^g Diodorus Siculus, that the next of kin to an heir might by law require her in marriage, and she likewise might require him that was next of kin who was obliged to marry her, though never so poor, or to pay 500 Drachms for her dowry. Here-^h to ⁱ Terence alludes.

^j Hec. Act. 1. Scen.

The Law commands an heir to marry with Her Husbands next of kin, and him to take her.

And to the putting her off without a dowry of 500 drachms, (that is five mine) ^k elle ^l Phorm. act. 2 scen. 3.

Though I be injur'd thus, yet rather than I be contentious, or bound still to hear thee, Since she's my kinswoman, take hence with her The Dower the law enjoyns me, here's five pound.

^m In all other marriages he forbade Dowries, ⁿ Plut. ordaining that a Bride should bring with her no more than three gowns, and some slight Household-stuff, of small value, the particulars whereof were express'd, as ^o Pollux seems to imply, for he ^p 1. 12. 15. would not that marriage should be mercenary or vendible, but that the Man and Woman should cohabit for Issue, love, and friendship. Hither ^q Ipsi ^r Lib. 3. Epist. 243. alludes amongst the Athenians legal marriage was said to be contracted in respect of issue.

That Law of his also was commended, as ^s Demosthenes and Plutarch attest, which forbade ^t Orat. in Lep. to revile the dead, *Let no man revile any dead person, though provoked by the revilings of his Children.* ^u To esteem the deceased holy, is pious, to spare the absent, just, to take away the eternity of hatred, civil.

^v He forbade to revile any living person at sacred solemnities, Courts of Judicature, and publick spectacles, upon penalty of three drachms to be paid to the reviled person, two more to the common treasury. To moderate anger no where he accounted rude and disorderly, every where difficult, to some impossible. A law must be accommodated to what is possible, intending to punish some few, to advantage not many to no purpose.

^w His law concerning Testaments is much approved; for before, no man had power to make a Will, but his goods, and lands continued in the family of the deceased person. Solon made it lawful for him that had no Children, to give his estate to whom he pleased. He preferred friendship before kindred, and favour before necessity, and ordered, that wealth should be at the disposal of him in whose hands it was: yet he permitted not this rashly, or absolutely, but conditionally, *If he were not wrought upon by sickness, potions, bondage, or the blandishments of a Wife.* Justly he esteemed it all one whether a Man be seduced by indirect means, or violently constrained, thus comparing deceit with force, and pleasure with pain, as being of equal power to

put

^a Plut.

^b In precept. conjugial.

put a Man out of his right Mind. This Law is mentioned likewise by ^g Demosthenes.

^e Orat. in Lept. He also limited the Visits, Mournings, and Feasts of Women, by a Law which curbed their former Licentiousness. *Her who went abroad, he permitted not to carry with her above three Gowns, nor more meat and drink than might be bought with an obolus, nor a basket above a Cubit in bigness, nor to travel by Night, unless in a Chariot, and with Torch-light: He forbade them to tear their Cheeks to procure mourning and lamentation, at the Funerals of those, to whom they have no relation. He forbade to sacrifice an Ox at Funerals, and to bury more than three Garments with the dead Body; not to approach the Monuments of strangers unless at their Exequies.* Of which (saith

^b De leg. lib. 2. Plutarch) our Laws are full: ^h Cicero also affirms, that the Laws of the twelve Tables for contracting the pomp of Funerals, and concerning mourning, are transferred from those of Solon, who (as Phalerius writes) as soon as Funerals began to be solemnized with pomp and lamentation, took them away: Which Law the Decemviri put into the tenth table, almost in the very same words, for that of three Neighbourhoods and most of the rest are Solon's, that of Mourning in his express words, *Let no Women tear their Cheeks, nor make lamentation at a Funeral.*

ⁱ Plut. Considering that all the City grew very populous, many recurring thither from all parts of Attica, for liberty and security, that the Country was for the most part barren and bad, that such as trade by Sea import nothing for those, that have not wherewith to barter or exchange with them, he added the Citizens to Arts, and made a Law, that *the Son should not be obliged to maintain his Father, if he had not brought him up to*

^k Prefat. lib. 6. ^a Trade (mentioned also by ^l Vitruvius, Galen, ^m Theophrast, and others) and commanded the Court of Areopagus to examine by what gain every Man maintained himself, and to punish idle Persons, whom he made liable to the action of every Man, and at the third Conviction punished with Infamy. This Law ⁿ Herodotus, and ^o Diodorus Siculus affirm to have been in use amongst the Egyptians, made by Amasis, and from them derived by Solon to the Athenians.

^p Plut. Yet more severe was that mentioned by Heraclides of Pontus, which disengaged the Sons of Concubines from maintaining their Fathers. He who transgresseth the bounds of marriage, professeth he doth it not out of desire of issue, but for pleasure, and therefore already hath his reward, and can expect to have no further tye upon those he begets, whose birth is their Shame.

^q Plut. Most incongruous seem those Laws of Solon, which concern Women, for he permitted that whosoever surprised an Adulterer (with the Wife or ^r Concubine of any) might kill him, (or exact Money of him) *he that ravished a free Woman was fined 100 Drachms, he that plaid the pander, (20 ^s Æschines saith, to die) except to such women as were common.* He also forbade any Man to give his Sister or Daughter to that profession, unless himself first surprise her with a Man. This (saith Plutarch) seems absurd to punish the same offences sometimes severely with Death, sometimes with a pecuniary mulct, unless, because at that time Money was very rare in A-

thens, the scarcity thereof aggravated the punishment.

^c He assigned five hundred Drachms to the Victor of the Isthmian Games, a hundred to the Victor of the Olympick: attested also by ^d Laertius, who saith, he contracted the Rewards of the Athleta's, judging them dangerous Victors, and that they were Crowned rather against, than for their Country.

^e Whosoever brought a She-Wolf was to receive ^f five drachms, for a She-Wolf one; according to ^g Demetrius Phalerius, this being the price of a Sheep, that of an Ox. It is customary with the Athenians, that such as have grounds fitter for Pasture than Plowing, make War with the Wolves,

^h Forasmuch as there is such scarcity of ⁱ Rivers, Lakes, and Springs in the Country, that they are constrained to dig Wells, he made a Law, *Where there was a common Well within a Hippicon, they should make use of it.* (A Hippicon is the distance of four Furlongs) ^j they that lived further off should procure Water of ^k their own, and if when they have digged ten ^l Fathom deep, they find not any, they might be ^m allowed to fill a Pitcher of six Gallons twice ⁿ a Day at their Neighbours Well.

^o These exact Rules he prescribed for planting, *Whosoever planted any young Tree in his Ground, should set it five foot distant from his Neighbours; who a Fig-tree or Olive-tree, nine:* Because the Roots of these spread far, nor is their Neighbourhood harmless to all, but sucks away the nourishment, and to some their blatt is prejudicial.

^p Whosoever diggeth any hole or ditch must ^q make it so far distant from his Neighbours, as ^r it is deep. These are confirmed by ^s Cajas, adding, *Whosoever makes a Hedge to divide himself from his Neighbour, must not exceed his own Bounds; if a Wall, he must leave the space of a Foot, if a House, two Feet, if a Well, a Fathom.*

^t Whosoever placeth a Hive of Bees, should observe the distance of thirty Feet, from those that were before placed by his Neighbour.

^u He commanded the Archons to *Curse him* ^v who exported any thing out of the Country, or that he should pay a hundred drachms to the publick Treasury, whereby they are not to be rejected, who say, that of old the exportation of figgs was prohibited, and that he who discovered an Exporter, was called a Sycophant.

^w He made a Law concerning such as should be ^x hurt by a Dog, wherein he ordained, *the Dog that bit to be bound in a Chain four Cubits long.*

^y This Law concerning Denization is difficult, ^z That none should be made free of the City, except such who were Banished for ever out of their own Country, or came to Athens with their whole Families to exercise some trade; this he did not to drive away Foreigners, but to invite them to Athens by certainty of admittance into the City, conceiving such would be faithful, those out of necessity, these out of good-will.

^a Likewise to be feasted in the publick Hall ^b was the peculiar Institution of Solon, which he called *πρωτανειαν*, not permitting the same person to eat there frequently: but if he who were invited, would not accept of it, he was punished.

punished, conceiving this contempt of the public honour, that an inordinate appetite.—

Hitherto *Plutarch*: these following are recited by *Laertius*.

* *Laert.*
† *Orat. in Timarch.*
* *If any one maintain not his Parents, let him be infamous, as likewise he that devours his patrimony.* Hitherto † *Æschines* alludes; in the fourth place with whom hath he to do? If any Man by prodigality hath consumed his patrimony or hereditary goods; for he conceived, he who had ordered his own Family ill, would in the same manner take care of the Common-wealth; neither did the Law-giver imagine it possible, that the same Person should be privately wicked, and publicly good, or that it were fitting such a one should go up into the chair, who took more care to frame an Oration, than to compose his Life.

* *Laert.*
† *In Timarch.*
* *He forbade such as haunted common Women to plead; confirmed by Æschines †.* In the third place with whom hath he to do? If any Man (saith he) be a haunter of common Women, or procure Money by such means; for he conceived, such a one as sold his own fame for money, would easily sell the business of the State. And * *Demosthenes*, it is worth inquiry and consideration, *Athenians*, how great care, *Solon*, the Author of this Law, had in the Common-wealth in all those which he made, and how particularly solicitous he was herein above all other things, which as it is evident by many other laws, so also by this, which forbids those *qui se prostuerunt*, either to plead or judge in publick.

* *Laert.*
* *In Panathen.*
* *Monacem.*
* *He augmented the rewards of such as should die in War, whose Sons he ordered to be brought up and instructed at the publick charge.* * *Aristides*, thou alone of all Men didst ordain these three things by Law, that such as died for their Country should be annually praised publicly at their Sepulchers, their Children, till grown Men, maintained at the publick charge, then sent back to their Fathers House with compleat Arms; likewise that infirm Citizens should be maintain'd at the publick charge. * *Plato* adds that the same indulgence was allowed to the Parents, you know the care of the Common-wealth, which in the laws concerning the Children and Parents of such as died in the War, commands the supreme Magistrate to take care, that the Parents of those that died in the War, above all other Citizens should not receive any injury. The State brings up the Children also: hereby, saith *Laertius*, they became eager of fame and honour in War, as *Polyzelus*, as *Cynegyrius*, as all those in the *Marathonian* fight: to whom may be added *Harmodius*, *Aristogiton*, *Miltiades*.

* *Laert.*
* *In Hermog.*
† *In Hermog.*
* *Let not a Guardian marry the Mother of his ward, nor let any one be ward to him, who if he die, shall inherit his estate,* confirm'd by * *Syrianus*, † *Marcellius*, and others, who add that the same law forbade the ward to marry her Guardians Son.

* *Laert.*
* *Let not a Graver keep the impression of any Seal after he hath sold it.*

* *Laert.*
* *If any Man put out the Eye of another, who had but one, he shall lose both his own.*

* *Orat. in Timarch.*
His Law concerning theft, *Laertius* expresseth thus; *What thou laidst not down, take not up, otherwise the punishment death.* * *Æschines* adds, if

they confessed themselves guilty: others affirm the punishment was only to pay double the value, of whom is * *A. Gellius* and † *Hermogenes*.^{h. lib. ii. c. 18.} who affirm, the Law made that distinction betwixt Sacrilege and Theft, punishing the first with death, the latter with double restitution.^{† Partit. sect. 4. * Orat. in Timarch.}

* *Demosthenes* clears this, reciting this Law exactly in these words, *If any Man steal in the day time above fifty drachms, he may be carried to the eleven Officers, if he steal any thing by night, it shall be lawful for any to kill him, or in the pursuit to wound him, and to carry him to the eleven Officers. Whosoever is convicted of such offences, as are liable to chains, shall not be capable of giving bail for his theft, but his punishment shall be death, and if any one steal out of the Lyceum, or the Academy, or Cynosarges, a Garment or a small vessel of Wine, or any other thing of little value, or some vessel out of the Gymnasium, or Havens, he shall be punished with death; but if any Man shall be convicted privately of theft, it shall be lawful for him to pay a double value, and it shall be also at the pleasure of the Convictor, besides payment of Money, to put him in chains five days, and as many nights, so as all Men may see him bound.* Even those who stole dung, were by *Solon's* Law liable to punishment.^{i. Schol. Aristoph. ad equites.}

* *That if an Archon were taken drunk, he should be punish'd with death.* * *Laert.*

To those recited by *Laertius*, add these collected by others.

He allowed Brothers and Sisters by the same Father to marry, and prohibited only Brothers and Sisters of the same venture; Whereas contrariwise (saith * *Philo*) the Lacedæmonian Law-giver allowed these, and prohibited those. Hence * *Cornelius Nepos* affirms, *Cimon* married his Sister *Elpinice*, invited, not more by love, than the Athenian custom, which allows to marry a Sister by the same Father.^{k. De leg. spec. lib. 2. In Proem. of Cimonis vita.}

* *He writ according to the manner of the Antients, severally concerning the discipline of Matrons, for a Woman taken in Adultery he permitted not to wear ornaments, nor to come into publick Temples, lest by her presence she should corrupt modest Women; if she came into a Temple, or adorned her self, he commanded every one to rend her Garments, to tear off her Ornaments, and to beat her, but not to kill or maim her: By this means depriving such a Woman of all honour, and giving her a life more bitter than death. This is also confirmed by * *Demosthenes*, who adds, *If any Man surprise an Adulterer, it shall not be lawful for him who took them to have the Woman in marriage, if he continue to keep her as his Wife, let him be infamous.**

* *Let the dead Body be laid out within the house, according as he gave order, and the day following before Sun-rise carried forth; whilst the body is carrying to the Grave, let the Men go before, the Women follow; it shall not be lawful for any Woman to enter upon the goods of the dead, and follow the body to the grave, under threescore years of age, excepting those within the degree of consens, nor shall any Woman enter upon the goods of the deceased after the body is carried forth, excepting those who are within the degree of Consens.*^{m. Demosth. Orat. in Macedonia. c. i.}

* *Concerning Sepulchers, he saith no more, than that no man shall demolish them, or bring any new thing into them; and he shall be punished, whosoever violates, casts down, or breaks any tomb, monument, or column.* * *Cicero de leg. 2.*

* *If*

put a Man out of his right Mind. This Law is mentioned likewise by ^g Demosthenes.

^e Orat. in Lept. He also limited the Visits, Mournings, and Feasts of Women, by a Law which curbed their former Licentiousness. *Her who went abroad, he permitted not to carry with her above three Gowns, nor more meat and drink than might be bought with an obolus, nor a basket above a Cubit in bigness, nor to travel by Night, unless in a Chariot, and with Torch-light: He forbade them to tear their Cheeks to procure mourning and lamentation, at the Funerals of those, to whom they have no relation. He forbade to sacrifice an Ox at Funerals, and to bury more than three Garments with the dead Body; not to approach the Monuments of strangers unless at their Exequies.* Of which (saith

^b De leg. lib. 2. Plutarch) our Laws are full: ^h Cicero also affirms, that the Laws of the twelve Tables for contracting the pomp of Funerals, and concerning mourning, are transferred from those of Solon, who (as Phalerius writes) as soon as Funerals began to be solemnized with pomp and lamentation, took them away. Which Law the Decemviri put into the tenth table, almost in the very same words, for that of three Neighbourhoods and most of the rest are Solon's, that of Mourning in his express words, *Let no Women tear their Cheeks, nor make lamentation at a Funeral.*

ⁱ Plut. Considering that all the City grew very populous, many recurring thither from all parts of Attica, for liberty and security, that the Country was for the most part barren and bad, that such as trade by Sea import nothing for those, that have not wherewith to barter or exchange with them, he added the Citizen to Arts, and made a Law, that *the Son should not be obliged to maintain his Father, if he had not brought him up to*

^k Prefat. lib. 6. ^a Trade (mentioned also by ^u Vitruvius, Galen, ^l Exhort. Vrat. ^m Theophrast, and others) and commanded the Court of Areopagus to examine by what gain every Man maintained himself, and to punish idle Persons, whom he made liable to the action of every Man, and at the third Conviction punished with Infamy. This Law ⁿ Herodotus, and ^o Diodorus Siculus affirm to have been in use amongst the Egyptians, made by Amasis, and from them derived by Solon to the Athenians.

^p Plut. Yet more severe was that mentioned by Heraclides of Pontus, which disengaged the Sons of Concubines from maintaining their Fathers. He who transgresseth the bounds of marriage, professeth he doth it not out of desire of issue, but for pleasure, and therefore already hath his reward, and can expect to have no further tye upon those he begets, whose birth is their Shame.

^q Plut. Most incongruous seem those Laws of Solon, which concern Women, for he permitted that whosoever surpris'd an Adulterer (with the Wife or ^r Concubine of any) might kill him, (or exact Money of him) *he that ravished a free Woman was fined 100 Drachms, he that plaid the pander, (20 ^s Æschines saith, to die) except to such women as were common.* He also forbade any Man to give his Sister or Daughter to that profession, unless himself first surpris'd her with a Man. This (saith Plutarch) seems absurd to punish the same offences sometimes severely with Death, sometimes with a pecuniary mulct, unless, because at that time Money was very rare in A-

thens, the scarcity thereof aggravated the punishment.

^c He assigned five hundred Drachms to the Victor of the Isthmian Games, a hundred to the Victor of the Olympick: attested also by Lactantius, who saith, he contracted the Rewards of the Athleta's, judging them dangerous Victors, and that they were Crowned rather against, than for their Country.

^u Whosoever brought a She-Wolf was to receive ^v five drachms, for a She-Wolf one; according to Demetrius Phalerius, this being the price of a Sheep, that of an Ox. It is customary with the Athenians, that such as have grounds fitter for Pasture than Plowing, make War with the Wolves,

^w Forasmuch as there is such scarcity of ^x Rivers, Lakes, and Springs in the Country, that they are constrained to dig Wells, he made a Law, *Where there was a common Well within a Hippicon, they should make use of it.* (A Hippicon is the distance of four Furlongs) ^y they that lived further off should procure Water of their own, and if when they have digged ten Fathom deep, they find not any, they might be allowed to fill a Pitcher of six Gallons twice a Day at their Neighbours Well.

^z These exact Rules he prescribed for planting, *Whosoever planted any young Tree in his Ground, should set it five foot distant from his Neighbours; who a Fig-tree or Olive-tree, nine:* Because the Roots of these spread far, nor is their Neighbourhood harmless to all, but sucks away the nourishment, and to some their blatt is prejudicial.

² Whosoever diggeth any hole or ditch must make it so far distant from his Neighbours, as it is deep. These are confirmed by ^a Cujas, adding, *Whosoever makes a Hedge to divide himself from his Neighbour, must not exceed his own Bounds; if a Wall, he must leave the space of a Foot, if a House, two Feet, if a Well, a Fathom.*

^b Whosoever placeth a Hive of Bees, should observe the distance of thirty Feet, from those that were before placed by his Neighbour.

^b He commanded the Archons to Curse him ^b Plut. who exported any thing out of the Country, or that he should pay a hundred drachms to the publick Treasury, whereby they are not to be rejected, who say, that of old the exportation of figgs was prohibited, and that he who discovered an Exporter, was called a Sycophant.

^c He made a Law concerning such as should be hurt by a Dog, wherein he ordained, *the Dog that bit to be bound in a Chain four Cubits long.*

^d This Law concerning Denization is difficult, ^d Plut. That none should be made free of the City, except such who were Banished for ever out of their own Country, or came to Athens with their whole Families to exercise some trade; this he did not to drive away Foreigners, but to invite them to Athens by certainty of admittance into the City, conceiving such would be faithful, those out of necessity, these out of good-will.

^e Likewise to be feasted in the publick Hall ^e Plut. was the peculiar Institution of Solon, which he called *πρωσιον*, not permitting the same person to eat there frequently: but if he who were invited; would not accept of it, he was punished.

punished, conceiving this contempt of the publique honour, that an inordinate appetite.—

Hitherto *Plutarch*: these following are recited by *Laertius*.

* *Laert.*
† *Orat. in Timarch.*

Whosoever is convicted of such offences, as are liable to chains, shall not be capable of giving bail for his theft, but his punishment shall be death, and if any one steal out of the Lyceum, or the Academy, or Cynosarges, a Garment or a small vessel of Wine, or any other thing of little value, or some vessel out of the Gymnasia, or Havens, he shall be punished with death; but if any Man shall be convicted privately of theft, it shall be lawful for him to pay a double value, and it shall be also at the pleasure of the Convictor, besides payment of Money, to put him in chains five days, and as many nights, so as all Men may see him bound. Even those who stole

dung, were by *Solon's* Law liable to punishment.^{Schol. Aristoph. ad equites.} * That if an Archon were taken drunk, he should be punish'd with death. * *Laert.*

To those recited by *Laertius*, add these collected by others.

He allowed Brothers and Sisters by the same Father to marry, and prohibited only Brothers and Sisters of the same venture; Whereas contrariwise (saith * *Philo*) the Lacedæmonian Law-giver allowed these, and prohibited those. Hence * *De leg. spec. lib. 2.* *Cornelius Nepos* affirms, *Cimon* married his Sister *Elpinice*, invited, not more by love, than in *Cimonis vita.* the Athenian custom, which allows to marry a Sister by the same Father.

* He writ according to the manner of the Antients, severally concerning the discipline of Matrons, for a Woman taken in Adultery be permitted not to wear ornaments, nor to come into publick Temples, lest by her presence she should corrupt modest Women; if she came into a Temple, or adorned her self, he commanded every one to rend her Garments, to tear off her Ornaments, and to beat her, but not to kill or maim her: By this means depriving such a Woman of all honour, and giving her a life more bitter than death. This is also confirmed by * *Demosthenes*, who adds, If any Man surprise an Adulterer, it shall not be lawful for him who took them to have the Woman in marriage, if he continue to keep her as his Wife, let him be infamous.

* Let the dead Body be laid out within the house, according as he gave order, and the day following before Sun-rise carried forth; whilst the body is carrying to the Grave, let the Men go before, the Women follow; it shall not be lawful for any Woman to enter upon the goods of the dead, and follow the body to the grave, under threescore years of age, excepting those within the degree of consens, nor shall any Woman enter upon the goods of the deceased after the body is carried forth, excepting those who are within the degree of Consens.

* Concerning Sepulchers, he saith no more, than that no man shall demolish them, or bring any new thing into them; and he shall be punished, who soever violates, casts down, or breaks any tomb, monument, or column. * *Cicero de leg. 2.* If

¹ *Demost. var. hist. 2. 42. &c.* If any one light upon the dead body of a Man unburied, let him throw earth upon it.

² *Demost. in Lipton.* * Whosoever shall dislike a received Law, let him first accuse it, then if it be abrogated, substitute another: The manner whereof is largely expressed by Demosthenes.

³ *Declam. 18.* He ordained (according to ⁴ Libanius) that Children should be obliged to perform all due offices to their Parents. † Sextus, saith he, made a Law of indemnity, whereby he allowed any Man to kill his Son; but * Dionysius Halicarnassensis affirms, he permitted them to turn their Children out of doors, and to disinherit them, but nothing more.

† *Æschin. in Ctesiph.* † He ordained that all such as declined to be engaged in War, or forsook the Army, or was a Coward, should have all one punishment, to be driven out of the bounds of the Forum, not permitted to wear a Garland, or to enter into public Temples.

⁵ *Demost. Orat. in Timocr.* * If any one be seized on, for having abused his Parents, or forsaken his Colours, or being forbidden by Law, hath gone into places where he ought not, let the eleven officers take and bind him; and carry him into the Heliea, it shall be lawful for any one that will to accuse him, and if he be cast, it shall be at the judgment of the Heliea to impose what Punishment or Fine they should think fit, if a Fine, let him be kept in fetters till it be paid.

⁶ *Athenens. deign. lib. 15.* * He permitted not a man to sell unguents, as being an effeminate office.

⁷ *Æschin. in Ctesiph.* * As concerning Orators, he ordered, that the Eldest of the Citizens should go up first into the pleaders chair modestly without tumult and perturbation to move, he out of experience should conceive best for the Common-wealth; then that every Citizen according to his age should severally by and in order declare his judgment.

⁸ *Liban. declam. 13.* * He ordered that a Citizen of Athens should be tried no where but at Athens.

⁹ *Stob. 112.* * He commanded that no young man should bear the office of a Magistrate, nor be admitted to council, though he were esteemed exceeding wise.

¹⁰ *Demost. in Aristogit.* * For the common people he ordained slow punishments, for Magistrates and Rulers of the people fuddain, conceiving those might be punished at any time, but that the correction of these would admit no delay.

¹¹ *Maxim. Tyr. 39.* * As for the Gods and their Worship, he decreed nothing, * nor against Parricides, answering those who questioned him about it, he did not think any could be so wicked.

CH A P. VII.

Of the Axes and Cyrbes, Senators Oath, and other institutions of Solon.

¹² *Plut.* * These Laws be ratified, for a hundred years; They were † carved in different Tables*. † *A. Gell. 2. 12.* Those which concerned private actions, in oblong quadrangular tables of Wood, with cases, which reached from the ground and turned about upon a Pin like a Wheel, whence they were called * *Ἀξες*, † placed first in the Tower, then brought into the Prytanæum, that all might see them, where there were some remains of them in *Plutarch's* time. Those which concerned a pub-

lick orders and sacrifices, in * triangular tables of stone called *κύρβεις* either from * *Cyrbus* who took the account of every mans estate, or *κύρβας* *τῶν νόμων*, or *ἀπὸ τῆς κυρβανίας*, or from the *Corybantes*, to whom the invention thereof is by some ascribed. These were placed in the *Porticus regia*; * Both the *Ἀξες* and *Cyrbes* were written after the same manner as Oxen to turn in ploughing *ὑποστροφῶν*, whence *Demosthenes* calls that law the lowest which beginneth on the left side.

¹³ *Plut.* * The Senate took one common oath to make good the laws of Solon for a hundred years, each of the *Thesmethetae* sworn in the Forum at the Criers Stone; if he violated them, to dedicate a golden statue of equal weight with himself at Delphi.

Some particulars of the oath imposed by Solon mention'd by several Authors, (as, not to abrogate his Laws, by *Plutarch*, to admit no young man to be judge, by * *Stobæus*; to hear impartially both the Plaintiff and Defendant, by *Demosthenes*; argue it to be the same which the same Author delivers in these words.

¹⁴ *Demost.* * I will declare my opinion according to the laws of the Athenians, and five hundred Senators. By no assistance from me shall Tyranny or Oligarchy be admitted. I will never side with him who hath corrupted the People, intends, or indeavours, it. I will never suffer any new tables or any division of those already received, or a parity of Lands or Goods. I will never call home any banished or confined Person. I will consent that he be expelled the City, who denies these Laws, decreed by the Senate, confirmed by the People; I will never permit any to be injured, I will never constitute any Magistrate before he hath given account of his last Magistracy. I will never permit the same Man to be chosen twice in one year, or at once to hold two Offices. I will neither take, nor suffer any to take Bribes or rewards. I am thirty years old, I will hear impartially both Plaintiff and Defendant, and condemn without excuse those that deserve it. I swear by *Jove*, by *Neptune* and by *Ceres*, may they destroy me, my House and Children, if I observe not all these particulars. Hence perhaps it is that * *Hesychius* affirms, *Solon* in his Laws to have ordained on oath by three Gods.

Considering the irregularity of Months, and the course of the Moon, which agreed not always with the rising and setting of the Sun, but sometimes overtook and went past him in one day, he called that day the *ἑνὴς ἡμέρας*, last and first, attributing that part which precedes the conjunction to the last Month, the rest to the beginning of the next. Thus he taught the Athenians to accommodate the reckoning of their days to the motion of the Moon: * and was (as it appears) the first who understood rightly that of *Homer*.

When one Month ended and the next began,

The day following he called *ἡγεμένης*, The new Moon; from the twentieth day to the thirtieth he reckon'd not by addition but by subtraction, in respect of the Moons decrease: for this see * *Aristophanes*.

¹⁵ *The clouds. Act. 4. scen.* * He

* Laert.

* He ordered the Verses of *Homer* to be recited successively, that where the first ended the next should begin; whence *Diuchides* saith, he illustrated *Homer* more than *Pisistratus* (by whom the *Rhapsodies* were first collected) the principal Verses were.

They who inhabit Athens, &c.

† Athen. deipn. 13.

† He first tolerated common Curtesans, and with the Money they paid to the State erected a Temple to *Venus*, *παιδονομία*.

* Sest. Empiric. advers. Ma-them. 6.

* He first taught Soldiers to march by the sound of Fifes and Harps, observing a kind of measure in their pace.

C H A P. VIII.

How he entertained Anacharsis; his Travels to Ægypt, Cyprus, Miletus, Delphi, Corinth, and Crete.

* Plut.

* Laert.

IN the forty seventh Olympiad (according to * *Soficrates*) *Anacharsis* came to *Athens*; *Eucrates* being Archon, * he went immediately to the House of *Solon*, and knocking at the door, said he was a Stranger desirous of his Friendship and Hospitality: *Solon* answered, *It is better to contract friendship at home; then you that are at home, (replies Anacharsis) make me your Friend and Guest.* *Solon* admiring his acuteness, entertained him kindly, and kept him some time with him, whilst he was employed about publick affairs, and ordering his Laws; which *Anacharsis* understanding, smiled, that he undertook to curb the injustice and covetousness of Citizens by written Ordinances, nothing differing from Cobwebs, holding fast the weak and poor, whilst the powerful and rich break through them; whereto *Solon* answered, *That Men stand fast to those Covenants which it is not convenient for either party to break:* He gave the Citizens such Laws, as it was evident to all, that to keep were better than to transgress; but the event agreed more with the conjecture of *Anacharsis*, than the expectation of *Solon*.

* Plut.

* After his Laws were promulgated, some or other coming daily to him, either to praise, or dispraise them, or to advise to put in or out whatsoever came into their minds, the greater part to have the meaning explained, questioning how every thing was to be understood, and intreating him to unfold the sense; he (considering, that not to satisfy them, would argue pride, to satisfy them would make him lyable to censure) determined to avoid ambiguities, importunities and occasions of blame; (for, as he said,

*In things that are not small.
'Tis hard to sing to all.)*

Colouring his travail with being Master of a Ship, and having obtained leave of the *Athenians* to be absent ten years, he put to Sea, hoping in that time his Laws would become familiar to them.

* Plut.

* The first place of his arrival was *Ægypt*, where he dwelt, as himself saith,

At Nilus mouth, near the Canobian Shoar.

He studied Philosophy awhile with *Psenophis*, of *Heliopolis*, and *Sonches* of *Sais*, the most learned of those Priests, by whom, *Plato* affirms, he was taught the *Atlantick* Language, which he afterward began to explain in Verse; when he questioned them in Antiquities the elder said to him, *O Solon, Solon, you Greeks are always Children, there is not one Greek an old Man.*

* Thence he went to *Cyprus*, where he was * *Plut.*

much favoured by *Philocyprus*, one of the Kings of that Country, who had a little Town built by *Demophoon*, Son of *Thesens*, upon the River *Clarins*, in a strong place, but rugged and barren: *Solon* perswading him, their lying a pleasant Plain underneath it, to transfer the Town thither, making it more spacious and delightful: *Solon* being present at the doing hereof, took care it might be Peopled, and assisted the King to contrive it, as well for Health as Strength; whereupon many came in to *Philocyprus*, whom other Kings emulated; for this reason he ascribed the honour thereof unto *Solon*, naming the City (which before was called *Æpea*) from him *Soli*. This Foundation he mentions in his Elegies, addressing his speech to *Philocyprus*,

*Mayst thou in Cyprus long as King abide,
And or'e this People and this Town preside;
In a fleet Vessel from this Haven may
Cythera Crown'd with Violets me comocy.
Her kind aspect and happiness may she
Grant to this Town, a safe return to me.*

He visited *Thales* also at *Miletus*, whose impo-
sture towards him (related already in *Plutarch's* words) receive from *Tzetzes*.

*Solon's friend Thales led a single life,
By Solon often mov'd to take a Wife;
These a Milesian (Thales so contriv'd)
Meeting, pretends from Athens late arriv'd,
Solon asks curiously what news was there;
One that's abroad, saith he, hath lost his Heir,
The City waited on his obsequies.
Was it not Solon's Son, Solon replies?
To this the Stranger (as suborn'd) assents:
He with torn hair in cries his passion vents;
Whom Thales, (tenderly embracing) Leave
This grief, saith he, I did thee but deceive;
'Tis for these reasons Marriage I decline,
Which can deject so great a Soul as thine.*

Whether it belong to this deceit, or to a real loss * *Dioscorides*, and * *Stobæus* report, that * *Laert.*
weeping for the death of his Son; one told * *Serm. 121.*
him, But this helps nothing, he answered, And
therefore I weep.

* At *Delphi* he met with the rest of the wise * *Laert.*
Men, and the year following at *Corinth*, by
Periander's invitation; which was as *Plutarch*
implies, long before *Pisistratus* came to Reign;
nor doth * *Dion Chrysostom* intend the contrary, * *Orat. 37.*
though so interpreted by * a learned Person, * *J. Meursius.*
his words importing only this; *Solon fled not
the Tyranny of Periander, though he did that of
Pisistratus.*

E

That

That he went also to *Creet* (perhaps to visit *ad Pherecyd. Epimenides*) is evident from an *Epistle* of *Thales*.

CHAP. IX.

The attribute of Wise conferred on him: His moral Sentences.

* *Laert.* * **W**hen *Damastius* (the second was) *Archon*, (in the year of the 49 *Olympiad*) all the seven received the attribute of *Wise*: of these was *Solon*, upon whom († *Themistius* faith, it was conferr'd as an honourable title full of dignity: * *Plutarch* avers that all of them (except *Thales*) were so called from their skill in civil affairs. And again, † In *Philosophy* *Solon* chiefly affected (as did like wise most of the wise Men) that part of morality which concerns *Politicks*; and speaking of *Menestiphilus*, 'he was not (faith he) an Orator of those Philosophers who are called Natural, but embraced that Wisdom which teacheth government of a State, and prudence in publick Actions, which he retained as a Sect delivered by succession from *Solon*. Whence * *Macrobius*, instanceth *Solon*, as skilful in that kind of learning which draweth Philosophy deeper, and establisheth a State.

* *Somm. Scip.*
2. 17.

Hereto may be added his moral Learning, for which (though *Socrates* reduced it first to a Science, and was thereupon honoured as the inventor thereof) the seven were so famous, that some affirm the Title of *Wise* was given them only for excelling others in a laudable course of life, and comprehending some moral Rules in short Sentences; of these they had three sorts, *Apothegms*, *Precepts*, and *Admonitions*.

Of his *Apothegms* *Laertius* recites these, 'Speech is the Image of Action; he is a King who hath power. Laws are like Cobwebs which intangle the lesser sort, the greater break through: Those who are in favour with Princes resemble Counters used in casting accounts, which sometimes stand for a great number, sometimes for a lesser; so those are sometimes honoured, sometimes cast down. Being demanded how Men might be brought to do no wrong, if, said he, they who have received none, and those who are wronged be alike concern'd: Satiety comes of Riches, contumely of Satiety.

* *Vit. Sol.*

* *Plutarch* and others, these; 'He conceived that City to be best govern'd, where the People as eagerly prosecute wrongs done to others, as to themselves. 'Being demanded how a City might be best ordered, he answered if the Citizens obey'd the Magistrates, the Magistrates the Laws; he affirmed that King and Tyrant should become most glorious, who would convert his Monarchy to Democracy. He esteemed that Family best, wherein wealth is gotten not unjustly, kept not unfaithfully, expended not with repentance.

* *Sympos. Sept. Sapi.*

* *Arist. Ethic.*
1. 8.

'He defined the happy those who are competently furnished with outward things, act honestly, and live temperately; which definition *Aristotle* approves.

'He said, 'A Common-wealth consists of two things, Reward and Punishment. *Cicero. Epist. 15. ad Brut.*

'Seeing one of his Friends much grieved, he carried him to the Tower, and desired him to view all the buildings below, which observing the other to have done, now faith he, think with your self, how many sorrows have heretofore and do at present dwell under those Roofs, and shall in future Ages; and forbear to be troubled at the inconveniences of Mortality as if they were only yours. 'He said also, that if Men should bring their misfortunes together in one place, every one would carry his own home again, rather than take an equal share out of the common stock. *Val. Max. 7. 2.*

'Being in drinking, demanded by *Periander*, whether he were silent through want of Discourse, or through Folly, answered, no Fool can be silent amidst his Cups. 'He said, that City was best ordered, where in the good were rewarded, the bad punished. *Stob. Serm. 34.*

'He said, a Man ought to fear nothing, but that his end exceed not Philosophy. *Johan. Sa. lib. polycr. 8.*

'*Demosthenes* recites a Discourse which he used to the Judges, in accusing one who had moved a pernicious Law, to this effect; 'It is a Law generally received in all Cities, that he who makes false Money should be put to Death. Then he demanded of the Judges, whether that Law seemed to them just and commendable, whereunto they assenting, he added, that he conceived Money to be used amongst Citizens, in respect of private contracts; but that Laws were the Money of the Common-wealth: therefore Judges ought to punish those, who embased the Money of the Common-wealth much more severely, than those who embase that of private Persons: and that they might better understand it to be a far greater offence to corrupt Laws, than adulterate Coin; he added, that many Cities use Money of Silver alloy'd with Brass or Lead, without any prejudice to themselves; but whosoever should use Laws so adulterated, could not escape ruine and death. *Orat. in Timocrat.*

* *Mimnermus* writing thus, *Laert.*

*From trouble and diseases free,
At threescore years let Death take me.*

He reproved him, saying,

*By my advice, that wish extend,
Nor for his counsel slight thy Friend.
Alter thy Song, and let it be,
At fourscore years let Death take me.*

His moral Precepts are thus delivered by *Demetrius Phalereus*, some whereof are cited by *Laertius*. 'Nothing too much. Sit not as Judge; if thou dost, the condemned will esteem thee an Enemy. Fly pleasures, for it brings forth sorrow. Observe honesty in thy Conversation more strictly than an Oath. Seal Words with silence, silence with opportunity. Lie not, but speak the truth. Consider on serious things. Say not ought *Stob. Serm. 3.*

'is juster than thy Parents. Procure not Friends
'in haste, nor procur'd, part with in haste.
'By learning to obey, you shall know how to
'command. What forfeiture you impose on
'others, undergo your self. Advise not Citi-
'zens what is pleasant, but what is best. Be
'not arrogant. Converse not with wicked per-
'sons. Consult the Gods. Cherish thy Friend.
'Reverence thy Parents. Make Reason thy
'Guide. What thou see'st speak not. What
'thou knowest conceal. Be mild to those that
'belong to thee. Conjecture hidden things from
'apparent.

His particular sentence according to ⁱⁿ *Dyd-*
mus and *Laertius* was, *Nothing too much*; ac-
cording to *Ansonius*, *Know thy self*, who ascribes
these also to him.

*Him I dare happy call whose end I see.
Match with thy like, unequals not agree.
By fortune guided, none to honour raise;
A friend in private chide, in publick praise;
Honours achiev'd created far exceed;
If fates be sure, what helps it to take heed?
And if unsure, there is of fear less need.*

Of his ἀδούμεια *Laertius* mentions these.

*Of every Man be careful, lest he bear
A Sword conceal'd within his breast, a clear
Aspect, and double tongue, a mind severe.*

CHAP. X.

*How he oppos'd Pisistratus, and reprehended
Thespis.*

* **D**URING the absence of *Solon*, the former
dissention broke forth again in the Ci-
ty: *Lycurgus* was head of the Countrymen,
Megacles of the Maritimes, *Pisistratus* of the
Townsmen, who were most violent against
the rich; *Solon's* Laws were still observed in
the City, but the People aimed at novelty
and change, not as thinking it most just, but
in hopes to be Masters of other Men's goods
and to suppress the adverse party. *Solon* whilst
things stood thus, return'd to *Athens*, where
he was much revered and honoured by all,
but could not speak or act in publick, through
the weakness of his Body and Spirits, yet pri-
vately taking every one of the Commanders
apart, he endeavoured to reconcile their diffe-
rences, wherein *Pisistratus* seem'd the most
ready to be perswaded, with whom he had a
very ancient friendship, grounded as well upon
their kindred, as upon the good qualities of
Pisistratus, than whom (as *Solon* us'd to say)
there could not be a Person of more worth, if
he were cured of his ambition.

† About this time (according to *Plutarch*)
which was in the fiftieth Olympiad, *Thespis*
began to present Tragedies (which *Suidas* er-
roneously accounts ten Olympiads later, as is
observed by *Meursius*) the People were much
taken with the novelty of the thing, for as
yet there were no contentions therein. *Solon*
naturally desirous to hear and learn, and by
reason of his age indulging more to ease and

pleasure, feasting and musick, went to see *Thes-*
pis himself act, as was then the manner; the
Play ended, he went to *Thespis*, and asked him,
if he were not ashamed to speak so many lies
before so great an Auditory? *Thespis* answered,
it was no shame to act or say such things in
jest. *Solon* striking the ground hard with his
Saff, replied, but in a short time we, who ap-
prove this kind of jest shall use it in earnest,
in our contracts and transactions. ^{In fine, he}
^{absolutely forbid him to teach or act Tragedies, con-}
^{ceiving their falsity unprofitable, whereto he dissi-}
^{multated the deceit of Pisistratus, who soon after}
† having wounded himself, came into the Forum
in a Chariot, pretending to have been so used
by his Enemies in the behalf of the Common-
wealth, and inflamed the People with much
rage. *Solon* coming near to him, Son of *Hippo-*
crates (saith he) you act *Homer's* *Ulysses* ill, in
using the same means to deceive the Citizens,
wherewith he (whipping himself) deluded the
Enemy. Immediately the People flocked in to
defend *Pisistratus*: *Aristo* mov'd he might be
allowed a standing guard of fifty Men: *Solon*
rose up to oppose it, using speeches, the effect
whereof, he afterwards thus exprest in Verse.

*If evil your impieties befall,
Gods not the Author of those mischiefs call,
Your selves the causes, have given power to those,
Who in requital, servitude impose.
Lion whom the footsteps of the Fox pursue,
Whose Souls deceit and vanity endue,
The man's smooth tongue and speech you only heed,
But never penetrate into the deed.*

He also foretold them the aims of *Pisistra-*
tus, in an Elegy to this effect.

*Vapours condens'd ingender Hail and Snow,
And Thunder doth from radiant lightning flow.
The Sea is troubled by the raging Wind,
When not disturb'd by that, nothing more kind.
A City by great Persons is orethrown.
And taught beneath a Monarchy to groan.*

But seeing the poorer sort much addicted to
Pisistratus, and tumultuous, the richer afraid,
consulting their safety by flight, he retired,
saying, *Athenians*, I am wiser than some, vali-
anter than others, wiser than those who under-
stand not the deceit of *Pisistratus*, valianter than
those who understand it, yet hold their peace,
through fear. The Senate being of the same
faction with *Pisistratus*, said he was mad, where-
to he answered,

*A little time will to the people clear
My madness, when'th' midst truth shall appear.*

The People having granted *Pisistratus* his re-
quest concerning a guard, question'd not the
number of them, but conniv'd so long at
his pressing and maintaining as many Soul-
diers as he pleased, that at last he possess'd
himself of the Tower; whereupon the City
being in a tumult, *Megacles*, with the rest of
the *Alcmaeonide* fled. *Solon* now very old,
and destitute of those that might back him,
went into the Forum, * armed with a Spear, and

and Shield, and made an Oration to the People, partly accusing them of folly and cowardise, partly inciting them not to forsake their liberty, using this celebrated speech, 'It had been far easier to have suppressed this Tyranny in the growth, but much more noble to cut it off now it is at the height. No Man daring to hear him, he went home, and taking his Arms, set them in the Street before his Door (*Laertius* saith, *before the Magazin*) saying, 'I have helped my Country, and the Law as much as lay in me; or as *Laertius*, 'O Country, I have assisted thee both in Word and Deed. *Plutarch* adds, that from that time he lived retired, addicted to his study; and told by many the Tyrant would put him to Death, and demanded wherein he confided so much, he answered, in his Age: but *Laertius* affirms (which seems truer) that as soon he as had laid down his Arms, he forsook the Country: and *A. Gellius*, that in the Reign of *Scovius Tullius*, *Pisistratus* was Tyrant of *Athens*, *Solon* going first away into voluntary exile.

* *Lit.* 17. cap. 21.

CH A P. XI.

How he travelled into Lydia, and Cilicia.

Solon at his departure from *Athens*, received invitations from many; by *Thales* desired to come to *Miletus*; by *Bias*, to *Priene*; by *Ephimenides*, to *Creet*; by *Cleobulus*, to *Lindus*, as is evident from their several Letters to that effect: even *Pisistratus* pressed him to return home by this Epistle.

Pisistratus to Solon.

NEither am I the only Person of the *Greeks*, nor am I without right to the Kingdom I possess, as being descended from *Codrus*: that which the *Athenians*, having sworn to give to *Codrus* and his Heirs, took away, I have recovered; no other wise do I offend either God or Man; I take care that the Common-wealth be governed according to the Laws you ordained for the *Athenians*, and that better than by a Democracy: I suffer none to do wrong, neither do I enjoy any priviledges of a Tyrant, more than Honour and Dignity, such Rewards only as were conferr'd upon the antient Kings; every Man pays the tenth of his Estate, not to me, but to the maintenance of publick Sacrifices, or other charges of the Common-wealth, or against time of War. You I blame not for discovering my intents, you did it more in love to the State, than in hate to me; besides, you knew not what Government I meant to establish, which if you had, perhaps you would have brooked my rule, and not banished your self; return therefore home, and believe me without an Oath: *Solon* shall never receive any displeasure from *Pisistratus*, you know my very Enemies have not, and if you will vouchsafe to be of my Friends, you shall be of the first, for I never saw any thing in you de-

ceitful or False; if otherwise, you will live with the *Athenians*, use your Freedom, only deprive not your self of your Country, for my sake.

Solon returned this answer.

Solon to Pisistratus.

I Believe I shall not suffer any harm by you, for before you were Tyrant, I was your Friend, and at present am no more your Enemy, than any other *Athenian* who dislikes Tyranny: whether it be better they be governed by a single Person, or by a Democracy, let both Parties determine. I pronounce you the best of Tyrants; but to return to *Athens* I think not fitting, lest I incur blame, who settled an equality in the *Athenian* Common-wealth, and would not accept of the Tyranny; by returning, I shall comply with thy actions.

Cresus also sent to invite him, to whom he thus answered.

Solon to Cresus.

I Love your humanity towards us, and by *Pallas*, but that I affect above all things to live under a Democracy, I should much sooner choose to live in your Kingdom, than at *Athens*, whilst *Pisistratus* rules there by force; but it is most pleasing to me to live where all things are just and equal; yet will I come over to you, being desirous to become your Guest.

Solon upon this invitation went to *Sandys*, where *Cresus* (saith *Herodotus*) received him kindly: after the third or fourth day, the Officers at *Cresus* appointment led him into the Treasuries, to shew him all their Greatness and Riches; when he had beheld all, *Cresus* spoke thus unto him: *Athenian* Guest, because we have heard much fame of your Wisdom and Experience, having out of love to Philosophy travelled into many Countries, I have a desire to enquire of you if ever you saw any Man whom you could call most happy. This he demanded, hoping himself to be esteemed such. *Solon* nothing flattering him, answered according to the truth, saying, O King, *Tellus* the *Athenian*. At which speech *Cresus* wondering. Why do you judge *Tellus* the most happy? Because (replied *Solon*) in a well ordered State, he had Children honest and good, and saw every one of those have Children all living; thus having passed his life as well as is possible for Man, he ended it gloriously: a fight happening between the *Athenians* and their Neighbours in *Eleusis*, he came into their succour, and putting the Enemy to flight, died nobly; the *Athenians* buried him in the place where he fell, with much honour. Whilst *Solon* recounted the happiness of *Tellus*, *Cresus* being moved, demanded to whom he assign'd the next place, making no question but himself should be named a second. *Celobis* (saith he) and *Bito*, they were *Argives* by birth, they had sufficient

sufficient wherewithal to maintain them-
 selves; and withal, so great strength of Bo-
 dy, that both were alike victors in the pub-
 lick Games, of whom it is thus reported;
 the *Argives* celebrating the Festival of *Juno*,
 it was necessary their Mother should be drawn
 to the Temple by a pair of Oxen, there be-
 ing no Oxen in the Field ready, these young
 Men, streightned in time, underwent the
 Yoke, and drew the Chariot of their Mother
 forty five Stadia, till they came to the Tem-
 ple; when they had so done, in the sight of
 all the People, they obtain'd the happiest end
 of their days, whereby the God declared it
 better for a Man to die than to live; the *Ar-
 gives*, pressing about them, the Men applau-
 ding the Piety of the Sons; the Women the
 happiness of the Mother; the Mother her-
 self infinitely joyed with the action, and the
 glory thereof, standing before the Image, pray-
 ed the Goddess to give her Sons, *Cleobis* and
Bito, the best thing that could happen to Man;
 after this Prayer, having sacrificed and feasted,
 they lay down to sleep in the Temple, and
 never waked more, but so ended their days;
 their Images (as of most excellent Persons)
 were made by the *Argives*, and set up at *Del-
 phi*. These *Solon* ranked the second Degree.
 Hereat *Crasus* growing angry; Stranger (said
 he) doth our happiness seem so despicable
 that you will not rank us equal with private
 Persons? He answered, Do you enquire *Cra-
 sus* concerning humane affairs of me, who
 know, that Divine Providenc is severe and
 full of alteration? In process of time we see
 many things we would not, we suffer many
 things we would not; let us propose seventy
 years, as the term of Mans life, which years
 consist of twenty five thousand and two hun-
 dred days, besides the additional month, if
 we make one year longer than another by
 that month, to make the time accord, the
 additional months, belonging to those seventy
 years, will be thirty five, the days of those
 months a thousand and fifty, whereof one is
 not in all things like another: so that every
 Man, O *Crasus*, is miserable! you appear to
 me very rich, and are King over many, but
 the question you demand, I cannot resolve,
 until I hear you have ended your days happi-
 ly; he who hath much wealth is not happier
 than he who gets his living from day to day,
 unless Fortune continuing all those good
 things to him, grant that he die well. There
 are many Men very rich, yet unfortunate, ma-
 ny of moderate Estates, fortunate, of whom
 he who abounds in Wealth, and is not happy,
 exceeds the fortunate only in two things, the
 other him in many; the rich is more able to
 satisfy his desires, and to overcome great in-
 juries; yet the fortunate excels him; he can-
 not indeed inflict hurt on others, and satisfy
 his own desires, his good fortune debars him
 of these: but he is free from ills, healthful,
 happy in his Children, and beautiful, if to this
 a Man dies well, that is he whom you seek,
 who deserves to be called happy; before
 death he cannot be stil'd happy, but fortunate;
 yet for one Man to obtain all this is impossi-
 ble, as one Country cannot furnish it self

with all things, some it hath, others it wants,
 that which hath most is best; so in Men, no
 one is perfect; what one hath, the other
 wants; he who hath constantly most, and at
 last quietly departs this life, in opinion, O
 King, deserves to bear that name. In every
 thing we must have regard to the end, whither
 it tends; for many, to whom God dispenseth
 all good fortunes, he at last utterly subverts:
 This Story is related by *Plutarch*, also menti-
 oned by *Laertius*, who adds, that *Crasus* be-
 ing magnificently adorned and seated one his
 Throne, asked him. *Whether he had ever seen
 any thing more glorious?* who answered, *Cocks,
 Pheasants, and Peacocks, who are much more
 beautiful in their natural flower.* † *Solon* after † *Herodot.*
 his discourse with *Crasus*, not soothing him,
 or making any esteem of him, was dismissed,
 and accounted unwise for neglecting the pre-
 sent good in regard to the future. * *Æsop*, the * *Plut.*
 Writer of Fables was at that time at *Sardis*, sent
 for thither by *Crasus*, with whom he was much
 in favour; he was grieved to see *Solon* so un-
 thankfully dismiss, and said to him, *Solon*, we
 must either tell Kings nothing at all, or what
 may please them. No, saith *Solon*, either no-
 thing at all, or what is best for them. Thus
 was *Solon* much despised by *Crasus*.

† Afterwards *Crasus* being taken Prisoner † *Herodot.*
 by *Cyrus* was at his command fettered and set
 upon a great Pile of Wood to be burned: as
 he was in this posture, it came into his mind
 what *Solon* had divinely said to him, that no
 living Man is happy; as soon as he remem-
 bred these words, he fell into a great dejection
 of Spirit, and sighing deeply, named *Solon*
 thrice, which *Cyrus* hearing, commanded the
 Interpreters to ask upon whom he called; they
 went to him and asked, he was silent; at last
 pressing him further, he answered, *Upon him
 who I desire above all wealth, might have spoken
 with all Tyrants*; notwithstanding, after much
 pressure and importunity, he told them, *Sol-
 on an Athenian came long since to him, and be-
 holding all his Wealth, valued it at nothing;
 moreover, that all which he told him had come to
 pass, nor did it more belong to him than to all
 Mankind, especially to those who think themselves
 happy.* Whilst *Crasus* said this, the fire began
 to kindle, and the outward parts thereof to be
 seized by the flame. *Cyrus* being informed by
 an Interpreter of all that *Crasus* had said, be-
 gan to relent, knowing himself to be but a
 Man, who delivered another Man, nothing
 inferiour to him in Wealth, to be burned a-
 live, * fearing to be punished for that act, and
 considering that nothing was certain in human
 affairs, he commanded the fire to be instantly
 quenched, and *Crasus*, and those that were with
 him to be brought off; * whom ever after as * *Plut.*
 long as he lived, he had in esteem. Thus *Solon*
 gained praise, that of two Kings, his speech
 preserved one, and instructed the other.

Plutarch relates this done in the former ten
 years travel of *Solon*, upon the finishing of his
 Laws, whence he maketh an Apology for the
 incongruity thereof with the rules of Chrono-
 logy, which had less needed, if with *Laertius*,
 he had placed it after *Pisistratus* his usurpation
 of the Tyranny.

Laertius

Laertius saith, he went from hence to Cilicia, and built there a City called after him *Soleis*, whither he brought also some few *Athenians*, whose Language growing corrupt by that of the Country, they were said to *solæcise*; of this is the Etymologist doubtless to be understood, who derives Σολοκοὶ ἀπὸ σόλων καλικίων (so read we, not ἀπὸ Σόλωνος καλίας.) This is also attested by *Suidas*, as a distinct relation from that of *Cyprus*, in confirmation whereof *Laertius* adds, the *Cilicians* were called *Solenses*, the *Cyprians* *Solii*.

CHAP. XII.

His Death.

† *Plut.* † *Heracles* affirms *Solon* lived long after *Pisistratus* began to Reign; * *Lucian* that his life extended to a hundred years; with whom those best agree, who said (as *Suidas* relates) he lived in the fifty sixth Olympiad; † but according to *Phanias*, *Pisistratus* took the Tyranny upon him, when *Comias* was Archon, and *Solon* died, *Hegestratus* being Archon, who succeeded *Comias*, which was in the first year of the fifty fifth Olympiad. If this later opinion had not every where taken place of the other, the disagreement betwixt the time of *Solon's* Death, and *Cæsus* Reign had not been urged by many, as an argument against the story of their meeting.

He died (according to *Laertius*) aged eighty years (being, as * *Ælian* saith; very decrepit) in *Cyprus*, (as is likewise attested by (*Valerius Maximus*, and † *Suidas*) and left order with his Friends that they should carry his Bones to *Salamis*, and there causing them to be burnt, scatter the Ashes all over the Country; which story *Plutarch* (though he counts it fabulous) acknowledgeth to be attested by many Authors of credit, particularly *Aristotle*.

† *Laertius* confirms it by the testimony of *Cratinus*, who makes him speak thus:

*The Island I inhabit, sown
As fame reports in Ajax Town.*

That desire of knowledge which he usually profess, continued with him to his end, † confirmed the last day of his life, his Friends sitting about him, and falling into some discourse, he raised his weary head, and being demanded why he did so, he answered, *That when I have learnt that, whatsoever it be, whereon you dispute, I may die.* * His Brothers Son singing an Ode of *Sappho*, he delighted therewith, bad him teach him it, and being demanded why, that, said he, *I may learn whilst I depart out of this life.*

After his Death, the *Athenians* erected his Statue in Brass, before the † checker'd Cloister * in the Forum: Another was set up at *Salamis*, hiding (as *Demosthenes* and *Æschines* describe it) the Hand within the Garment, in the same habit wherein he used to make Speeches to the *Athenians*, perhaps the same that carried this Inscription,

*Fam'd Salamis, the Persian pride cast down,
And gave to Solon Birth, the Laws renewen.*

Laertius bestows this Epigram upon him,

*A Foreign Cyprian fire burn'd Solon, yet
Salamis keeps his Bones, their Ashes Wheat;
His Soul to Heaven mounts with his Laws so
light
A burthen they not clog, but help his flight.*

CHAP. XIII.

His Writings.

HIS excellency both in Rhetorick and Poetry is attested by many: *Cicero*, † *Be-* † *In Bruto.*
fore *Solon's* time, no Man is recorded for Eloquence. * And again, *Lycurgus*, and *Solon* we * *De Orat. lib. 1.*
place in the number of the Eloquent. || *Dion,* || *Orat. 21.*
Chrysostom, *Aristides*, *Lycurgus*, *Solon*, *Epaminondas*, and if there be any other of the same kind, ought to be esteemed Philosophers in the Common-wealth, or Orators, according to ingenious true Rhetorick. * *Aristides,* * *Orat. Plat. 2.*
Solon is said to have sung those things which concern the *Megarenses*, but neither his Laws nor Orations, which sometimes he made for the Rich to the Commons, sometimes for the Commons to the Rich, did he sing or comprise in Verse, but used a Rhetorical form, excellently demonstrating in all these, that he deserved to be esteemed an Orator and a wise Man, having attained both those titles and faculties.

As to Poetry, *Plutarch* avers, he addicted himself thereto from the beginning, not in serious matters, but ludicrous, used (as it seems) for his exercise and pastime; afterwards he included many Philosophical Sentences in Verse, and many affairs of State, not in relation to History, but to vindicate his own actions, sometimes also to correct and reprove the *Athenians*. *Plato* saith, † That at the † *In Timæo.*
Apaturian Feast, the Boys used to repeat his † *1. Crit.*
Poems; and that if he applied himself to nothing but Poetry as others did, and had finished the History he brought out of *Egypt*, and had not been constrained by seditions and other distractions to lay aside that study, neither *Hesiod*, *Homer*, nor any of the Poets would have been more famous.

Of his Writings in Prose, we must with *Laertius* name in the first place his
Laws; of which already.

Orations to the People.

His Poems are cited under that general title by || *Phrynicius*, their particular subjects and titles these, || *Eclog. dist. Attic.*

Exhortations to himself, mentioned by *Laertius*, || *Aristides*, and *Suidas*.

Elegies.

Salamis: of which Chap. 2.

Of the *Athenian Common-wealth*, which *Laertius* affirms to have extended to two thousand Verses, according to † *Pausanias*, and and † *Attic.*
|| *Philo*, *Elegiack*.
† *ἐπὶ κοινῶν.*

Iambicks, mentioned by *Laertius*, cited by *Athenæus* and *Aristides*.

Epodes,

Epodes, mentioned by *Laertius*.

Elegies to King Cypranor, cited by the Author of *Aratus*, his life. *Αδούενα*, cited by *Laertius*.

Some, saith *Plutarch*, affirm, he began to reduce his own Laws into Verse.

The last work he undertook was concerning the Atlantick speech or fable, which beginning late, he was deterred by the greatness of the Work, as *Plutarch* saith, and prevented by Death.

Besides those Epistles already alledged, these are preserved also by *Laertius*.

Solon to Periander.

YOU send me word, there are many who plot against you; if you should put them all to death, it would advantage you nothing; some one there may be of those, whom you suspect not, who plots against you, either fearing himself, or disdaining you, or desirous to ingratiate himself with the City, though you have done him no injury; it is best, if you would be free from jealousy, to acquit your self of the cause; but if you will continue in Tyranny, take care to provide a greater strength of Strangers than is in your own City; so shall you need to fear no Man, nor to put any to death.

Solon to Epimenides.

Neither are my Laws likely to benefit the *Athenians* long, nor have you advantaged the City by lustration; for Divine Right and Lawgivers cannot alone benefit Cities; it importeth much of what mind they are who lead the common People; Divine Rights and Laws, if they direct them well, are profitable, if they direct them ill, profit nothing; neither are those Laws I gave in any better condition; they who had charge of the Commonwealth, not preventing *Pisistratus* his usurpation of the Tyranny, lost the City, of which, when I foretold them, I could not be believed; the *Athenians* would rather credit his flatteries, than my truth; wherefore laying down my Arms before the Magazin, I said, that I was wiser than those who did not see *Pisistratus* aimed at the Tyranny; and stouter than those who durst not resist him: they reputed *Solon* a Madman. Lastly, I made this profession, O Country! behold *Solon* ready to vindicate thee in word and deed: they again esteem'd me mad. Thus I being the only Person that oppos'd *Pisistratus*, I came away from them; let them guard him with their Arms if they please; for know (dear Friend) the Man came very cunningly by the Kingdom, he complied at first with the Democracy, afterwards wounding himself, came into *Elia*, crying out, he had received those hurts from his Enemies, and required a guard of four hundred young Men, which they (not hearkening to me) granted; these carried Halberds: after this, he dissolved the popular Government; truly I laboured in vain to free the poorer sort from mercenary slavery, when they all now serve one *Pisistratus*.

Such fragments of his Poems as have been hitherto preserved are thus collected.

One of his Elegies

Sprung from *Mnemosyne* and *Jove's* great line,
Pierian Muses, to my prayer incline,
Grant that my life and actions may call down
Blessings from Heaven, and raise one Earth renown:
Sweet to my Friends, and bitter to my Foes,
To these my fight bring terror, joy to those.
Riches I wish, not riches that are plac'd
In unjust means, for vengeance comes at last.
Riches dispenc'd by Heavens more bounteous

hand,
A base on which we may unshaken stand.
But that which Men by injuries obtain,
That which by arts and deeds unjust they gain
Comes slowly, swiftly by revenge pursued,
And misery like a close spark include,
Which soon to a devouring flame dilates,
Wrong is a weak foundation for estates.
Jove doth the end of every thing survey:
As sudden vernal blasts chase clouds away.
Ransack the bottom of the roaring main,
Then swiftly overrun the fertile plain,
Ruffling the wealthy ears; at last they rise
To *Jove's* high seat, a calm then smooths the
skies.

The *Sun's* rich lustre mildly gilds the green
Enamel of the Meads, no Clouds are seen.
Such is *Jove's* heavy anger differing far
From Men whose every trifle leads to War:
They are not hid for ever, who offend.
In secret, judgment finds them in the end.
Some in the act are punish'd, others late,
Even he who thinks he hath deluded fate:
At last resents it in just miseries,
Which Nephews for their Ancestors chastise.
We think it fares alike with good and bad;
Glory and self-conceit our Fancies glad
Till suffering comes, then their griev'd spirits
bleed,
Who did before their Souls with vain hope
feed.

He whom incurable diseases seize.
Sooths his deluded thoughts, with hopes of ease.
The coward's valiant in his own esteem,
And to themselves, fair the deformed seem.
They who want means, by poverty oppress.
Believe themselves of full estates possess.
All is attempted, some new seas explore
To bring home riches from a foreign shore:
Seas, on whose boisterous back secur'd they ride,
And in the mercy of the winds confide:
Others to crooked ploughs their Oxen yoke,
And Autumn with their plants and sets provoke.
Some *Vulcan's* and *Minerva's* arts admire,
And by their hands their livelihoods acquire.
Others the fair *Olympian* Muses trace,
And lovely learning studiously embrace.
One by *Apollo* is prophetick made,
And tells what mischiefs others shall invade:
With him the Gods converse, but all the skill
In Birds or Victims cannot hinder ill.
Some to *Peonian* knowledge are inclin'd.
Nor is the power of Simples unconfin'd.
The smallest hurts sometimes increase and rage,
More than all art of Physick can assuage;
Some-

Sometimes the fury of the worst disease,
 The hand by gentle stroking will appease.
 Thus good or bad arrives as fates design,
 Man cannot what the Gods dispenc'd decline.
 All actions are uncertain, no Man knows
 When he begins a Work, how it shall close.
 Some, who their business weigh with prudent
 care,
 Oft of the issue intercepted are :
 Whilst others who have rashly ought design'd,
 An end successful of their labours find.
 There is no bound to those who wealth acquire,
 For they who are possess of most, desire
 As much again, and who can all content,
 Even those full blessings which the Gods have
 lent,
 Man variously to his own harm applies,
 Whom Jove by means as various doth chastise.

Again.

Our City never can subverted be
 By Jove or any other Deity :
 For Pallas eye surveys with pious care
 The Walls, which by her hand protected are :
 Yet the Inhabitants of this great Town,
 Fondly inclin'd to wealth, will throw it down ;
 And those unjust great Persons who are bent
 Others to wrong, themselves to discontent ;
 For their insatiate fancies have not power
 To enjoy the sweetness of the instant hour,
 But by all wicked means, intent on gain,
 From hallowed, nor from publick things refrain.
 Riches by theft and cozenage to possess,
 The sacred bounds of justice they transgress.
 Who silent sees the present, knows the past,
 And will revenge these injuries at last :

Causing a careless rupture in the State,
 And all our liberties shall captivate.
 Rouse War from his long slumber, who the flower
 Of all our youths shall bloodily devour.
 For Cities which injuriously oppose
 Their Friends, are soon invaded by their Foes.
 These are the common evils : of the poor
 Many transported to a foreign shore,
 To bondage there, and fetters shall be sold.
 Each private House thus shares the publick fate,
 Nor can exclude it with a barr'd up gate ;
 For scaling furiously the higher walls,
 On those whom beds or corners hides it falls.
 My Soul, Athenians, prompts me to relate
 What miseries upon injustice wait :
 But justice all things orderly designs,
 And in strict fetters the unjust confines.
 What's sour, she sweetens, and allays what cloy.
 Wrong she repels, ill in the growth destroys,
 Softens the stubborn, the unjust reforms,
 And in the state calms all seditious storms :
 Bitter dissention by her reign suppress,
 Who wisely governs all things for the best.

Another.

NO Man is blessed, bad is every one
 That feels the warmth of the all-seeing
 Sun.

Another.

Let me not die unpit'd, every Friend
 With sighs and tears my latest hour at-
 tend.

CHILO.

CHAP. I.

Chilon his Life.

* Laert.
† Serm. 28.

* Herodot. lib. 1.
Laert.

* Chilon was a Lacedæmonian, Son of Damagetus, corruptly termed in † Stobæus, Pages. He was eminent among the Greeks for two Predictions. The first to Hippocrates* to whom (being a private Person) happened a great prodigy at the Olympick Games: having prepared an Offering, and filled a Cauldron with Flesh and Water, it boiled over without Fire: This portent Chilon (accident-

ally present) beholding, advised him that he should not take a Wife by whom he might have Issue; that if he had one, he should put her away, and if a Son, turn him out of Doors: Hippocrates not following this advice, brought up his Son Pisistratus, who in the sedition of the Maritimes and Country-Men at Athens, those led by Megacles, these by Lycurgus, stirred up a third Faction, and gained the Tyranny.

F

† He

† Laert.

† He was much renowned also for his Prediction concerning Cythera, a Lacedæmonian Island; examining the Situation thereof, would to God (said he) it had never been; or since it is, it might be swallowed up by the Sea, and wisely did he foresee Damaratus a Lacedæmonian exile, counselled Xerxes to seize upon that Island, which advice if he had followed, would have ruined all Greece. His words (according to a Herodotus)

Lib. 7. 235. were these: You may effect your desires if you send three hundred Ships to the Lacedæmonian Coast; there lies an Island named Cythera, of which Chilon, a Person of greatest Wisdom amongst us, said, it were better for the Lacedæmonians that it were under Water than above: He, it seems, expected from it some such thing as I am now going to declare, not that he foresaw your Navy, but doubting any in the same kind; Let your Men issue out of this Island upon the Lacedæmonians, to strike them into terror.

b Laert.

b Afterward, in the time of the Peloponnesian War, Nicias taking the Island, placed some Athenians therein, who much infested the Lacedæmonians.

Laertius saith, that he was old in the fifty second Olympiad, at what time Esop flourished: that he was Ephorus in the fifty sixth. (Cassaubon reads the fifty five) but Pamphila, (continueth Laertius) saith in the sixth, he was first Ephorus, when Euthydemus was Archon, as Socrates also affirms, and first appointed the Ephori to be joyned with Kings, which Satyrus saith, was the Institution of Lycurgus. Hence it is doubtful whether Chilon was Ephorus in the sixth Olympiad, or in the fifty sixth; the latter is more probable, in as much as he bore that office when Euthydemus was Archon at Athens, which was in the fifty sixth Olympiad, as appears by the Marmor Arundelianum, where for *Εὐθυδημῶν* is corruptly read *τῶν Ἀρχόντων* rendred Archonte populo. But it is likewise true that the Ephori were first Created about the sixth Olympiad, when Polydorus and Theopompus were Kings of Lacedæmon, a Hundred and thirty years after Lycurgus, as Plutarch (in his Life affirms,) from which time there were five annual Ephori chosen in Lacedæmon, whereof the first is called *ἐπιθύμιος*, because the Year had its denomination from him: The first of the first Election was c Elatus; Chilon in the fifty sixth Olympiad was the first of the five of his year; which might perhaps give the occasion of the Mistake to them, who take him to be the first of that Institution, of whom is a Scaliger.

c Plut. vit. Lycr.

d In Enseb.

p. 67.

e Laert.

f Laert.

How he behaved himself in this Office, may be gathered from his Speech f to his Brother, displeased that himself was not Ephorus at the same time: I can bear Injuries, saith he, you cannot.

Lib. I. cap. 3. He was so just in all his actions, z that in his old Age he professed he never had done any thing contrary to the Conscience of an upright Man, only that of one thing he was doubtful; having given Sentence against his Friend according to Law, he advised his Friend to appeal from him (his Judge) so to preserve both his Friend and the Law: A Gellius relates it thus; when his Life drew towards an end, ready to be seized by death, he spoke thus to his Friends about him: My Words and Actions in this long term of

years, have been (almost all) such as I need not repent of, which perhaps you also know truly even at this time I am certain, I never committed any thing, the remembrance whereof begets any trouble in me, unless this one thing only, which whether it were done amiss or not, I am uncertain: I sat with two others as Judge upon the Life of my Friend; the Law was such, as the person must of necessity be Condemned; so that either my Friend must lose his Life, or some deceit be used towards the Law: revolving many things in my Mind for relief of a condition so desperate, I conceived that which I put in practice to be of all other the most easie to be born: Silently I condemned him, and perswaded those others who judged to absolve him: Thus preserving (in so great a business) the duty both of a Judge and Friend; but from that act I receive this trouble, that I fear it is not free from perfidiousness and guilt, in the same business, at the same time, and in a publick affair, to perswade others, contrary to what was in my own judgment best.

CHAP. II.

His Moral Sentences, Precepts, and Verses.

OF his Apothegms, these are remembered by Laertius; he said Providence of future things collected by reason, is the vertue of a Man. Being demanded wherein the Learned differ from the Unlearned? He answer'd in a good hope: What is hard? to conceal secrets, to dispose of leisure well, and to be able to bear an Injury.

a Being invited to a Feast by Periander, (with the rest of the wise-men) he would not promise to come before he knew what other company would be there, saying, a Man is necessitated to brook an ill Companion in a Ship at Sea, or in a Tent in a Camp; but to mix indifferently with all sorts of People at a Feast is indiscretion. Upon the same occasion Plutarch recites these Sentences of his; A Prince must not think upon any transitory mortal things, but only upon the eternal, and immortal. That Common-wealth is best where the People mind the Law, more than the Lawyers. A Family must resemble as much as possible a City govern'd by a King. b Hearing a Man say he had no Enemy, he asked him if he had any Friend; conceiving Love and Hate necessarily must follow one another.

His moral Precepts are thus delivered by c Demetrius Phalerius. Know thy self. Speak not much in thy drink, for thou wilt transgress; (or as Laertius, rule thy tongue, especially at a Feast.) Threaten not free persons, for it is not just. (Laertius, Threaten none, for that is like a Woman) Speak not ill of thy Neighbour; if thou dost, thou shalt hear what will trouble thee. Go slowly to the feasts of thy Friends, swiftly to their Misfortunes; (Laertius, go more readily to a Friend in adversity than in prosperity.) Celebrate Marriage frugally. Speak well of the Dead. Reverence thy Elder; (Laertius honour Age) Hate him who is inquisitive into the business of others. Prefer loss before unjust gain (for that (adds Laertius)

Plutarch Sympos. sept. sap.

Plut. de ami.

Stob. serm. 28.

Laertius) brings grief but once, this for ever) *Deride not the unfortunate. If thou art strong, be- have thy self mildly, that thou mayst rather be respected than feared* (Laertius, of thy Neigh- bours, Learn to) *Order thy House well. Let not thy Tongue run before thy Mind. Bridle thy An- ger. Covet not Impossibilities. In the way hasten not forward. Shake not thy Hand* (Laertius, in Discourse) *for it is like a Mad-man. Obey the Laws. Be reconciled to those who have wronged you, but revenge Contumelies. To which Laertius adds these, To preserve thy self. Not to hate Divination, make use of Quietness.*

^a Lib. 7. cap. 32. ^a Pliny speaking of Authority, saith, that *Men ranked Chilon amongst Oracles, consecrating three precepts of his at Delphi, in Golden letters, which are these: Every Man to know himself, and to desire nothing too much; the Companion of anothers Money and strife is misery.*

^a A. Gell. ^a He only kept within bounds the two most fierce affections of the Soul, Love, and Hate, saying, *Love with such limitation, as if hereaf- ter you might chance to hate: hate so far, as that perhaps you might hereafter love.*

Ausonius ascribes to him the effect of these Verses:

- ‘ Me, may the mean not fear, nor great despise,
- ‘ Have death and health alike before thy Eyes.
- ‘ The benefits thou givest remember never,
- ‘ Of those thou dost receive, be mindful ever.
- ‘ Learn of thy self and Friend to overcome cross
- ‘ Fate,
- ‘ Age, Youth resembling, is a light Estate,
- ‘ Youth, Age resembling, is a greater weight.

His particular Sentence was, *To a surety, loss is near.*

Of his *Adversus*, Laertius mentions this as most eminent.

*Gold's Worth we by the Touchstone find,
Gold is the Touchstone of the Mind.*

^a He asked *Æsop* what *Jupiter* was doing, ^a Laert. who answered, pulling down the high, and raising the low.

CHAP. III.

His Death and Writings.

HE died (according to ^a *Hermippus*) at ^a Laert. *Pisa*, embracing his Son *Victor* in the Olympick Games, of the Castus, the weak- nels of his Age overcome with excess of Joy; all who were present at that great Assembly, at- tended on his Funerals, as is affirmed by ^a *Pliny* ^b Lib. 7. cap. and *Laertius*, who hath this Epigram upon him, ³².

*To the Illustrious Pollux Thanks I pay,
That Chilon's Son the Olive bore away.
The Father died o'rejoy'd his Child to see
So Crown'd: a happy Death! such befall me.*

Upon his Statue this Inscription.

*The birth of Chilon Warlike Sparta grac'd,
Who of the seven, in the first rank was plac'd.*

• He was short in Speech, whence *Arista*. ^a Laert. *goras* calls that manner of speaking *Chilonian*: ^a *Ausonius* also alludes hereto in the Speech he ^a *Lud. Sept. sap.* makes under his name.

• He writ Elegies extending almost to two ^a Laert. hundred Verses: there is likewise an Epistle of his extant to this effect.

Chilon to Periander.

YOU send me word of an Expedition you are preparing against Foreigners, intend- ing to go in Person with your Army: a Mo- narch, I think hath little safety even at home. That Tyrant I esteem happy who dies at home a natural Death.

PITTACUS

CHAPTER I.

Pittacus his Life.

[†] **PITTACUS** was of *Mitlene* (the chief City of *Lesbos*) Son of *Caicus*, * or (rather) *Hyrrbadius*, a *Thracian*, his Mother a *Lesbian*, born in the thirty second Olympiad.

[‡] *Laertius* saith he flourished in the forty second Olympiad; * at that time he gave testimony of his great courage and love to his Country, in killing (assisted by the Brethren of *Alcaeus* the Poet) *Melanchrus*, Tyrant of *Lesbos* and *Mitlene*.

* *Pittacus* grown eminent by this action, was by the *Mitlenians* made General, and sent with a Fleet against the Athenians, with whom they had a long contest concerning the

Achilleian Field; the ground of their difference this: * *Pisistratus* took *Sigeum* by force from the *Mitlenians*, and settled there (as King) *Hegesistratus* his natural Son, by an Argive Woman, who kept it, not without much dispute; for betwixt the *Mitlenians* and Athenians there was a long War, those sallying out of the *Achilleian Town*, those out of *Sigeum*: * those lay claim to the Town, as built by *Arobenactes* of *Mitlene*, of the Stones of old *Troy* (for the *Lesbians* challeng'd the greatest part of *Troas* as their Hereditary right, where they had built many Houses, some saith *Strabo*, standing at this Day, others demolished)

[†] *Laert.*

[‡] *Strabo.*

^a Herod. continues. demolished) ^c these opposed their claim, alleging the Æolians had no more right to this Ilian Country than themselves or any other of the Greeks, who assisted Menelaus in the recovery of Hellen.

^f Strab. Laert. ^e The Athenians sent thither as General, Phryno, a tall robust Person, who had been Victor in all the Olympick Exercises; perhaps the same whom Eusebius names in the thirty sixth Olympiad.

^g Strab. Laert. ^d Pittacus having been several times worsted in Battle, at last challeng'd Phryno to single Combat, and met him, being armed with the Weapons of a Fisherman, biding a Net under his Shield, wherewith catching Phryno suddenly, he slew him with his Trident and Dagger, and by his Death recovered the Field. From this stratagem of Pittacus, was derived the like kind of Fighting among the Roman Gladiators, called *Retiarii* (described by ^h Lipsius) as is expressly observed by Polyænus and Festus.

^x Polit. 2.12.

But this War ended not so; until at last both Parties referred themselves unto Periander, chusing him Umpire; he awarded that each side should keep what they were in possession of, whereby Sigeum fell to the Athenians. Demetrius argues Timæus of falsehood, for affirming Periander built Achilleum (a small Town, where was the Tomb of Achilles) in opposition to the Athenians, of Ilian Stones, and thereby to have aided Pittacus: but neither was it built of such Stones (saith Strabo) nor was Periander the founder: how could he be chose Arbitrator, whose Actions had declared him an Enemy?

Hereupon Pittacus was highly honoured by the Mitelenæans, who being infested by banished Persons, under the leading of Antimenides, and Alcæus the Poet) either in obligation to his merit, or confidence in his Equity, by their free Votes (though Alcæus deny it) inflated him in the Tyranny; with many Acclamations of Praise, and a great concourse of People (as is manifest from Alcæus, who for that reason reprehends them.) They also with general consent offered him great Gifts, and bad him take that Field which he recovered from the Citizens as much as he would. He darting his Spear, demanded only so much as that had passed over; which he dedicated to Apollo, called (even to the time of Plutarch, and Laertius) the Pittacæan Field. Socrates avers, he took part of it for himself, saying, The half was more than the whole. Thus he diverted his Mind from the Gift, conceiving it not fitting to diminish the glory of the Vertue, by the greatness of the Reward.

Being possessed of this Power, he shewed the moderation wherewith his Breast was furnish'd, towards Alcæus the Poet, who had behaved himself pertinaciously against him, with bitter hate and scurrilous wit (whereof see many instances in Laertius,) Pittacus only inform'd him how able he was to oppress him. During his Government, he made many Laws, one whereof is mentioned by Cicero, forbidding Any Man to go to the Funeral of such as he was not King to. Another by Aristotle, that whosoever being drunk, should strike any Man, should pay double as much as if he had been sober; or as Laertius delivers it, whosoever offended, being drunk, should pay a double forfeit; which he did to restrain the Mitelenæans from drunkenness,

because their Island abounded in Wine. His usual exercise, even whilst he was King, (as Clearchus affirms) was to grind Corn, esteeming it a healthful Exercise, much commending a Mill, that in so little room, it afforded exercise to many. There was a Song called for that reason *Εσθμύλιον*, of which Thales affirms he heard a She-slave in Lesbos sing the beginning as the ground, which was thus.

Grind, grind my Mill again;
For Pittacus that Lesbian King
To grind doth not disdain.

Being well in years, he was constrained to take upon himself the leading of an Army, whereupon he said, *It is hard to be good*; which Simonides mentions, saying,

Hard to be truly honest, this
The Pittacæan Sentence is.

Plato also remembers it in his *Protagoras* (where Simonides reproves Pittacus for saying, it is hard to continue good; which he affirms to be easie; but to become good, hard; wherein he differs from Laertius's expression of it.)

He continued in the Government of the Kingdom ten Years; Valerius Maximus saith, only as long as the War with the Athenians concerning Sigeum lasted, but afterwards as soon as Peace was obtained by Victory (having in this time settled the affairs of the Common-wealth) he laid it down, notwithstanding the Mitelenæans cried out to the contrary, lest he should continue Lord of the Citizens longer than the necessities of the Kingdom required, and lived ten years after a private Person.

He went to Sardis, at what time (as some say, though others apply it to Bias) Cræsus having made the Grecians in Asia tributary, had given order for the building of a Navy to invade the Islanders: as soon as he came thither, Cræsus asked him what News from Greece? He by his answer, diverted the King from going forward with his building Ships: the Islanders, saith he, have bought a world of Horses, intending an Expedition against Sardis; and Cræsus thinking he had spoken truth, answered, I wish the Gods would put it in their minds to come against the Lydians on Horse-back; he replied, It is not without reason, great King, that you wish and hope to catch the Islanders on Horse-back in the Continent; and what think you the Islanders wish more, than (hearing your preparation to set out a Navy against them) that they may catch the Lydians upon the Sea, and revenge the cause of those inland Grecians whom you have reduced to servitude. Cræsus much delighted with this Speech, and dissuaded (for it seemed to him he spoke very ingeniously) from building a navy, gave it over, and contracted amity with the Ionian Islands.

CHAP. II.

His moral Sentences Precepts, and Verses.

OF his Apothegms, Laertius recites these. The Gods themselves cannot resist necessity. Power shews the Man. Being on a time demanded what is best, he answered, To do the present well. To Cræsus, who asked which was the greatest Government? That of various Wood (saith he) meaning the Law (carved) in wooden

^a Pollux.
^b Plut. Sym.

^d Hence correct Suidas, who saith Simon.

^e Laert. 6.5.

^f Herod. 1. 27.

wooden Tables. To a *Phocæan*, who said, I must seek an honest Man: though you seek much, (saith he) you shall not find him. To some who demanded what was most pleasing, he answer'd, Time. He said it was the part of wise Men to foresee inconveniences, and prevent them before they came; of valiant Men, to order them well when they come.

† *Sympos. sept. sap.*

Add these from † *Plutarch*, That Prince is happy, who can make his Subject afraid not of him, but for him. That Common-wealth is best ordered, where the wicked have no Command, and the good have. That House is best ordered, which needs nothing either of ornament or necessity.

* *Athen. deipn. lib. 10.*

* He counselled *Periander* to shun drunkenness and excess in feasting, lest he should be known to be what he was, not what he seemed.

† *Laert.*

‡ To a young Man asking his advice concerning Marriage, what directions he gave, is thus express'd by *Callimachus*.

‘ An *Acarnean* Stranger *Pittacus*.
 ‘ *Hyrrbadius* Son of *Lesbos* question'd thus;
 ‘ Father, a double March is offered me;
 ‘ The birth and means of one with mine agree;
 ‘ The other far exceeds me, which is best?
 ‘ By your Advice my aim shall be address'd.
 ‘ Lifting his Staff, (his Ages sole defence)
 ‘ He pointing said, go fetch advice from thence;
 ‘ (There he esp'd some boys by chance at play,
 ‘ As they were whipping Tops along the way)
 ‘ Follow their steps saith he. When nigh he drew,
 ‘ He heard them say, an equal take to you;
 ‘ By which direction guided, he forsook
 ‘ The richer Fortune, and the equal took;
 ‘ Be you (as he) by this wise Counsel led,
 ‘ And take an equal to your Marriage-Bed.

From. *vinet.*

Whither *Æschylus* (as is observ'd by his Scholiast) alluded saying.

‘ Wife, truly wife was he
 ‘ Who first Sententiouly
 ‘ His Judgment thus express'd,
 ‘ An equal Match is best.

† *Stob. 28.*

His moral Precepts are thus collected by * *Demetrius Phalerens*, ‘ Know opportunity; what thou intendest, speak not before thou doest it, for being frustrate of thy hope, thou wilt be derided. Use thy Friends. What thou tak'st ill in thy Neighbour, do not thyself. Reproach not the unhappy, for the Hand of God is on them. Restore what is committed to thy Trust. Bear with thy Neighbour. Love thy Neighbour. Reproach not thy Friend, though he recede from thee a little; nor with well to thy Enemy; it is against Reason. It is hard to foresee the future, what is past is certain, what is to come obscure. The Earth is faithful, the Sea faithless; Gain insatiable. Acquire Honesty; seek Obsequiousness; love Discipline, Temperance, Prudence, Truth, Faith, Experience, Dexterity, Society, Diligence, Oeconomy, and Piety.

Ausonius cites these as his:

‘ None know to speak who know not to refrain,
 ‘ One good Man's praise 'fore many ill mens gain.
 ‘ He's mad who envies in the happy, pride;
 ‘ Or grief in the unhappy doth deride.

Who makes a Law must not that Law transgress:
 Purchase all Friends thou canst in happiness.
 And to the fewest trust in thy distress.

† Of his *Asubia*, these were most celebrated. † *Laert.*

Who hath a Quiver and a Bow,
 Against a wicked Man should go,
 Whose doubtful Tongue never express'd,
 The faithless meaning of his Breast.

His particular Sentence was, Know Opportunity.

CHAP. III.

His Death, Brother, Wife, Son, Writings.

* HE lived to a full Age, above Seventy Years, or (following the account of *Suidas* for his Birth) Eighty. † *Lucian* exceeds, who reckons him amongst those who lived one Hundred years; for he † died when *Aristomenes* was Archon, in the third Year of the fifty second Olympiad: Upon his Monument this Epitaph,

Weep Citizens, as sacred *Lesbos* weeps
 For *Pittacus*; this Tomb his Ashes keeps.

He had a Brother, who dying without Issue, his Estate devolved to *Pittacus*; whereupon, refusing the Wealth *Crasus* offered him, he said, he had more by half than he desired.

He Married a Wife of Birth higher than himself, Sister to *Draco*, Son of *Penthius*; she behaved her self Imperiously towards him; whereof * *Plutarch* gives this Instance, Having invited some Friends, she came in and overthrew the Table; he seeing his Guests troubled, said, ‘ Each of you hath some Misfortune, he is happiest who hath no more than this. *Laertius* saith, The Advice he gave concerning equal Marriage (Chap 2.) was out of resentment of his own Troubles.

* He had a Son named *Tyrrheus*, who at Cumæ sitting in a Barber's Shop (as was used amongst the Ancients, by such as loved to discourse of News) was casually killed by a Brasier with a Blow of a Hatchet; the Cumæans took the Offender and sent him to *Pittacus*; he being informed of the Accident, set him at liberty, saying, Pardon is better than Penitence.

Of his Writings *Laertius* mentions.

Asubia, already cited.

Elegies amounting to 600 Verses.

Of Laws in Prose; directed to his own Countrymen.

Epistles of which this is preserved;
Pittacus to *Crasus*.

‘ You command me to come to *Lydia* to behold your Wealth; without sight whereof I can easily believe the Son of *Alyattes*, to be the richest of Kings, and therefore need not in that respect go to *Sardis*; for I want not Gold, but have enough even for my Friends also; yet I will come to you to enjoy your Conversation as a Guest.

* There was another *Pittacus*, called the Lesser, a Law-giver; mentioned by *Phavorinus* and *Demetrius*.

BIAS.

CHAP. I.

Bias his Life.

* Laert.

* **B**IAS was of Priene, Son of Tutamis; some affirm he was rich, others that he had no Estate, but lived as an Inmate. *Satyrus* ranketh him first of the seven wise Men; the occasion whereby that Title was conferred on him, was this; he redeemed some Captive *Messenian* Virgins, brought them up as his Daughters, gave them Portions, and so sent them back to their Parents: A Tripod being afterwards found at *Athens* (as was related in the Life of *Thales*, the Place only different) with this Inscription in Gold, *To the Wise*. These Virgins (as *Satyrus* affirms) or (as *Phanodicus*) their Father came into the Congregation, and pronounced *Bias* Wise, declaring what he had done for them: Hereupon the Tripod was sent to him, which *Bias* holding, averred *Apollo* to be the most wise, and

and would not accept it; some affirm he dedicated it to *Hercules* at *Thebes*, as being descended from the *Theban* Colony, sent to *Priene*.

† *Laert.*

* *Laert.*

μήχελ καὶ ἀλό-
γων δια γίνε-
σθαι τὸν ἐνδ-
ναιαν read
ἐνδναιαν.

That he made good this attribute, there are many Instances; † *Alyattes* besieging *Priene*, *Bias* turned out of the Town two exceeding fat Mules, which coming to the Camp, *Cræsus* wondered to * see their Plenty extended to the very Beasts, and desirous of reconciliation, sent a Messenger to them. *Bias* causing many heaps of Sand to be made, and covered over with Wheat, shewed them to the Messengers, whereof *Alyattes* informed, was more eager of Peace than before, and sent immediately to desire *Bias* to come to him; but I (answered he) with *Alyattes* may feed on Onyons, meaning to Weep.

† *Herod. 2. 7.*

† Some ascribe it to *Bias*, the diversion of *Cræsus* his Expedition against the *Greek* Islands, by others imputed to *Pittacus* related in his Life.

* *Herod. 1. 170.*

* *Cyrus* having taken *Cræsus*, sent an Army against the *Grecians*; the *Ionians* much troubled, assembled at the *Panionium*, where *Bias* gave them Wise Advice, which had they followed (saith *Herodotus*) they might have been the happiest of all the *Greeks*: He counselled them to joyn together in one Fleet, to Sail to *Sardinia*, and there build one City common to all the *Ionians*; whereby they might preserve themselves from Bondage, happy in possessing an Island far greater than all the rest, and commanding them; but if they continued in *Ionia*, there was no apparent hope of Liberty. This Advice was justified, the *Ionians* being subdued.

† *Val. M. x. 7. 2.*

† *Bias* (his Country *Priene* invaded by Enemies, all, whom the Cruelty of War suffer'd to escape, flying away laden with the most precious of their Wealth) being demanded why he carried none of his Goods with him. I (saith he) carry my Goods with me: He bore them (adds *Valerius Maximus*) in his Breast, not to be seen by the Eye, but prised by the Soul; enclosed in the narrow dwelling of the Mind, not to be demolished by mortal hands, present with those who are settled, and not forsaking such as fly.

* *Plut. conv. sept. sap.*

* He refused not the amity of Kings, (as *Thales* did) particularly, that of *Amasis*, King of *Ægypt*, who sent him a Victim, commanding him to take from it the best and worst part. *Bias* sent him the Tongue, for which ingenuity he was much admired.

† *Plut. ibid.*

† Another question of *Amasis* he resolved, whilst he was at *Corinth* (invited thither with the rest of the wise Men by *Periander*) where *Niloxenus* brought him this Letter.

Amasis, King of *Egypt* saith thus to *Bias*, 'Wiseest of the *Greeks*: The King of *Æthiopia* contendeth with me for preheminance in Wisdom; master'd in other things, he in conclusion requires an absurd, strange thing, that I drink up the Sea; this Proposition if I resolve, I shall have many of his Towns and Cities; if I resolve not, I must lose all those which are about *Elephantina*. Ponder it, and send *Niloxenus* back with all speed; whatever we can do for your Friends and Country, shall not be wanting.

Having read the Letter, *Bias* with a short

pause, recollecting himself, and having whispered to *Cleobulus* who sat next him. 'What (saith he) *Naucratis*, *Amasis*, who commands so many Men, and possesseth so excellent a Country, will he for a few obscure contemptible Villages, drink up the Sea? *Bias* (saith *Niloxenus* smiling) consider, as if he meant to do it, how it might be effected. Bid the *Æthiopian* (replied *Bias*) withhold the Rivers from running into the Sea, until he hath drunk off that which is now Sea; for the Imposition concerns that only which is such at present, not what shall be hereafter. *Niloxenus* embraced him with Joy, the rest applauding his Solution.

CHAP. II.

His moral Sentences, Precepts, and Verses.

HIS Apothegms are thus delivered by *Laertius*, and others. 'He is unfortunate, who cannot bear misfortune. It is a disease of the mind to desire such things as cannot be obtain'd; and to be unmindful of the miseries of others. To one that ask'd what is hard, he answered, to bear courageously a change to the worse. Being at Sea in Company with wicked Men, who, a Storm arising, called upon the Gods; hold your Peace, saith he, lest they know you are here. To a wicked Man, enquiring what was Piety, he was silent, the other asking the reason of his silence: I answer not, saith he, because you enquire after that which nothing concerns you. Being demanded what is sweet to mankind, he answer'd, Hope. It is better to decide a difference betwixt our enemies than Friends, for one of the Friends will certainly become an Enemy, one of the Enemies, a Friend, being ask'd what a Man did with delight, he answered gain by Labour. We should so live, as though our life would be both long and short. So love, as if hereafter we might hate, conversing in Friendship with caution, remembering that it may possibly convert to Enmity.

* To one demanding whether he should take a wife, (he must be (saith he) either fair or foul; if fair, she will be common, if foul, a pennance. * *A. Gel. 5. 11.*

† That Tyrant shall gain most glory, who first himself obeys the Laws of his Country: That Common-wealth is best ordered, wherein every Man fears the Law more than a Tyrant. That Family is best ordered, where the Master behaves himself voluntarily within doors, as he doth without by constraint of the Law. † *Plut.*

* Those who busie themselves in vain knowledge, resemble an Owl, which seeth only in the night, but is blind in the light; so is their mind sharp-sighted in vanity, dark at the approach of true light. * *Stob. Sermon. 23.*

Ausonius hath these under his Name.

What is our chiefest good? A Conscience free.
Our greatest ill? Man's, Man's worst Enemy.
Poor? th' avaricious. Rich? who nought desires.
A Wives best dower? the same chaste life acquires.
Chaste? she, of whom report dare speak no ill.
Wise? who hath power to hurt, but wants the will.
A Fool? who wants the power, and yet would kill.

His

† Stob. Sermon.
28.

• Laert.

His moral Precepts, according to † *Demetrius Phalereus* these. 'Most Men are evil. (* His particular Sentence) Before you do any thing, behold your Face in a Glass; if it seem handfom, do handfom things; if deform. ed, supply the defects of Nature. Practise honesty. Undertake deliberately, but having once begun, go through. Abhor to speak hastily [Laer. It is madness.] lest thou sin, for repentance follows: Be neither simple nor subtle. Admit not imprudence. Love Prudence. Every where profess there are Gods. Weigh what is to be done. Hear much, speak seasonably. If poor, reprove not the Rich, unless great advantage may arise thereby. Praise not an unworthy person for his Wealth. Acquire by perswasion, not by violence. When thou dost good, impute it not to thy self, but the Gods. In thy Youth, gain Wealth, in thy Age, Wisdom. [Or as *Laertius*, from thy Youth to thy Age gain Wisdom, for it will be more sure to thee than all other Possessions] Preserve in thy actions Remembrance; in opportunity, Caution; in thy Manners, Ingenuity; in labour, Patience; in fear Wariness; in wealth, Love; in discourse, Perswasion; in silence, a Decorum; in Sentence, Justice; in boldness, Fortitude; in action, Power; in glory, Eminence; in thy Nature, Generosity.

• Laert.

† Of his *Adagia*, these were most esteem'd.

*To all the City where thou liv'st be kind,
They who most favour show, most favour find:
But Pride is often with Destruction joyn'd.*

And

*Strength is a Gift, which Nature's hand bestows.
Rhetorick and Policy the Wise Soul knows,
Riches a Present that from Fortune flows.*

CHAP. III.

His Death, and Writings.

* HE was much addicted to Pleading, very earnest therein, but always employed in just causes; which † *Demodocus* the *Alerian* im-
plies, saying *If thou chance to be a Judge, give Sentence on the Prienæan side; and Hipponax, to plead a Cause better than Bias the Prienæan.* And in that manner he died, being very old, as he was pleading, having ended his Speech he reposed his Head in the Bosom of his Sisters Son; his Adversary having ended his Defence; the Judges gave Sentence on *Bias's* Side; the Court dismiss'd, he was found dead in his Nephew's Bosom: The City bestowed a Magnificent Monument upon him, with this Inscription;

*Bias of Prienæan fam'd Descent
Lies here, Ionia's great Ornament.*

They also dedicated a Temple to him, called the *Tutmaian*.

Laertius bestows upon him this Epigram.

*Bias lies hidden here, whom Hermes led
To th'grave, when Age had Snow'd upon
his Head.*

*His Head, which (pleading for his Friend)
enclin'd*

Upon his Nephew to long Sleep resign'd.

He writ concerning *Ionia*, by what means it might be most happy (perhaps that Counsel already mentioned) Two Thousand Verses.

CLEOBULE

CHAP. I.

Cleobulus his Life, Death, and Writings.

* Laert.

† Suid.

* De or. delph.

* **CLEOBULUS** was of *Lindus*, (a City of *Rhodes*) or, according to *Duris*, of *Caria*, Son of *Evagoras*, lineally descended from *Hercules*; excellent both in Wisdom, outward Beauty, and † *Strength* beyond all those of his time; learned in the Philosophy of the *Egyptians*. That he was Tyrant of *Lindus*, is manifest from * *Plutarch*. * He re-edified the Temple of *Minerva*, founded by *Danaus*.

He had a Daughter *whom he named *Eumetis*, † *Plut. conviv. sept. sap.* but was called commonly from her Father *Cleobulina*. She composed verses and riddles, in Hexameters, famous for her Wisdom and Acuteness in those riddles, some of her questions having spread as far as *Egypt*, which she used jocularly, like Dice upon occasions, only contending with such as provoked her; she was also indued with an admirable height of Mind, and a Wit both Politick,

Politick, and full of humanity, causing her Father to govern his People with more mildness. *Cratinus* also mentions her in a Comedy named from her *Cleobula*, often cited by *Athenæus*.

† *Laert.* † He died full of Years, which extended to Seventy: His Tomb carried this Inscription,

*Wife Cleobulus's Death, the Lyndian Shoar,
To which his Birth was owing, doth deplore.*

* *Laert.* * He Composed Verses and Riddles to the number of three Thousand; of which was this Riddle concerning the Year, (by *Suidas* ascribed to his Daughter *Cleobulina*.)

*On Sire, twelve Sons, from every one a race
Of thirty Daughters with a double Face:
Their Looks are black, and white successively;
Immortal they are all, and yet all die.*

† *Laert.* † Some assert him the Author of this Epigram upon *Midas* (not *Homer*; who, as they account, lived long before *Midas*, though *Herodotus* otherwise.)

*A brazen Virgin stretcht on Midas Tomb,
To last whilst Water runs, and Trees shall bloom;
Whilst Sun and Moon dart their successive beams,
And the rough Sea supplied by gentle Streams.
I dwell upon this dismal Sepulchre,
To tell all those that pass, Midas lies here.*

There is likewise extant under his name this Epistle:

Cleobulus to Solon.

‘ **Y**OU have many Friends, and a Habitation every where; but I dare affirm, *Lindus* would be most pleasing to *Solon*, being governed by a Democracy; an Island where there is no fear of *Pisistrates*, thither your Friends will come to you from all parts.

CHAP. II.

His Moral Sentences, Precepts, and Verses.

† *Laert.* † OF his moral Sayings, are these: Employ thy self in something excellent. Be not vain and ungrateful. Bestow your Daughters, Virgins in Tears, Matrons in discretion: imply-

ing, that the Virgins also should be instructed, which the Greeks used not, the Romans brought them up in the Liberal Sciences. Do good to your Friend that he may be more your Friend, your Enemy that he may become your Friend: For we should beware of the Calumny of Friends; of the Treachery of Enemies: When any Man goeth forth, let him consider what he is to do; when he returns, examine what he hath done.

† A Prince may be happy, if he trust none that are about him. That Common-wealth is best ordered, wherein the Citizens fear Reproach more than Law. That Family is best, wherein more love than fear the Master. † *Plut. Symp. sept. sup.*

His Precepts thus collected by * *Demetrius* * *Stob. Serm. 28. Phalereus*: A mean is best. († His particular Sentence) To reverence thy Father is Duty. Take care of thy Body and Soul. Hear willingly, but trust not hastily. (Or as *Laertius*, 'tis better to Love to hear, than to love to speak.) It is better to know many things, (*Laertius*, to love knowledge) than to be ignorant of all. Teach your Tongue to speak well. It is proper to Vertue, and contrary to Vice, to hate Injustice. (*Laertius*, be a Friend to vertue, a Stranger to Vice.) Preserve thy Piety. Advise thy Countrymen what is best. Govern thy Tongue. (*Laertius* Pleasure.) Do nothing by Violence. Instruct thy Children. Pray to Fortune. Forego Enmity. The Enemy to thy Country, esteem thy own. Fight not, nor be kind to thy Wife in the presence of others, one argues folly, the other madness. Correct not your Servants when they are drunk, it shews as if you were drunk your self. Marry with your equal, for by matching into a higher Family, you procure Masters, not Kinsmen. Laugh not in compliance with him who derides others; for you will be hated by those he derides. Rich, be not exalted; Poor, be not dejected. (*Laertius* adds, Learn to bear the changes of Fortune.) † *Laert.*

Ausonius ascribes these to him,

*The more is in thy Power, desire the less;
Not to be envied is unhappiness.
None long in his impieties can thrive,
In others much; nought in thy self forgive.
All Men would spare the good, the bad cast down,
We share not in our Ancestors Renown:
But their inglorious Actions often own.*

Of his *Adagia* these were most noted.

Laert.

*By Ignorance most deeds are sway'd,
In many specious Words array'd;
But all things shall by Time be weigh'd.*

P E R I A N D E R

C H A P. I.

The Country, Ancestors, and Parents of Periander.

Periander was Son of *Cypselus* Tyrant of *Corinth*, his Mother *Cratea*, his Ancestors the *Heraclidae*, (* descended from *Hercules* and *Jardana*) Reigned Kings of *Lydia* five hundred and five years, the Son continually succeeding the Father for two and twenty Generations. The original of *Cypselus*, and the manner of his obtaining the Kingdom receive thus from † *Herodotus*.

When *Corinth* was governed by an Oligarchy, inhabited by the *Bacchiadae*, who never would marry out of their own Family, one of them (called *Amphion*) had a lame Daughter (by name *Labda*) whom when none of the *Bacchiadae* would take to Wife, *Eetion* married (Son of *Echetrates* of the *Betræan* tribe, but descended afar off from *Lapithe* and *Cenis*) having no Children, he consulted the *Delphian Oracle*

* *Laert.** *Herod. l. 7.*† *Lib. 5. 92.*

Oracle about it; as soon as he entred, the Prophetess spake thus to him.

*Eetion none will thee though great respect,
A stone from Labdas fruitful Womb expect,
Which shall the People Cause, Corinth Correct.*

This Oracle to *Eetion*, agreed with another delivered to the *Bacchiadae* (though by them not understood) to this effect.

*A Lyon by an Eagle shall be laid
Upon a Rock, fierce; making all afraid.
Corinthians, what I say consider well,
Who in tall Corinth and Pirene dwell.*

The *Bacchiadae* who could not comprehend the meaning of this Oracle, when they heard that to *Eetion*, understood their own by the affinity it had with the other; and thereupon secretly design'd amongst themselves to kill *Eetion's* Child. His Wife being delivered, they sent ten Men of their own to the tribe where-in *Eetion* dwelt, that they should murder the Infant; when they came to *Petra* to *Eetion's* House, they demanded the Child. *Labda* (not knowing their intent, but thinking they came to congratulate with the Father,) brings her Son, and gives him into the hands of one of them: they had agreed (upon the way) that he into whose hands the Child were delivered should dash out its brains against the ground, but by divine Providence, the Child smiling upon him to whom *Labda* had given it, he was moved therewith to such compassion, that he could not find in his heart to kill it, but delivered it to another, he to a third, until at last it past through the hands of all the ten; None of them having power to kill it, they restored it to the Mother. Then going forth and standing before the door, they began to find fault with one another, but chiefly with him who took the Child first, for not performing the agreement; after some debate, they agreed to go in all and be equal sharers in the murder; but it was decreed that *Eetion's* Child should be the oppressor of *Corinth*, for *Labda* standing at the door heard all their discourse, and fearing lest their minds changing, they should murder it, carried away the Child, and hid it in a measure of Corn (called *Cypselus*) a place which she conceived they could never search if they returned, and so it fell out: They came back and sought all about; when they could not find him, they agreed amongst themselves to tell those who sent them, they had done what they required, and returning home, did so. *Eetion's* Son growing up was called *Cypselus* from the danger he had escaped in the Corn-measure; when he came to Man's estate, he consulted with the *Delphian* Oracle, and received a doubtful answer, in confidence whereof he attempted *Corinth* and took it, the Oracle was this,

*Happy is Cypselus, who to my fane
This visit makes; he Corinth's Crown shall
gain;
He and his Sons (but not their Sons) shall
Reign,*

Being possessor of the Kingdom, he persecuted the *Corinthians*, depriving many of their Estates, more (by far) of their Lives; having reigned thirty years, he dyed and was succeeded by his Son *Periander*, whose Reign completed this Tyranny, which lasted according to *Aristotle* 73 years and 6 months: so that *Cypselus* began to Reign in the second year of the thirtieth Olympiad.

CHAP. II.

*The time of his Birth, his Reign, and the change
of his Disposition.*

P*eriander* (by computation from his death, which according to *Laertius* was in the eightieth year of his age, the last of the forty eighth Olympiad) was born in the last year of the twenty ninth Olympiad. His Reign (according to **Aristotle's* account, lasting forty four **Politic.* 5. years) begun in the fourth year of the thirty seventh Olympiad. *Suidas* saith, he succeeded in the Kingdom, †as being his Fathers eldest †*Excerpt.* Son, which *Plutarch* calls, a disease hereditary to *Nicol. Damasc.* him, || flourished in the thirty eight Olympiad. *Suid.* || *Conviv. sept.*

He * was at first of a mild gentle disposition, but afterwards grew very rigid upon this occasion. His Mother, whilst he was very young, kept him much in her company, when he grew more in years, fell in love with him; with time her passion encreased to such extremity, that she could no longer suppress it; assuming confidence, she told her Son, there was a beautiful Lady fallen in love with him, and advised him not to slight her affection. He answer'd, he would not transgress Law and Vertue, by touching a married Woman. His Mother pressed him with intreaties; at last he consented; she appointed a Night, advising him not to have any light in his Chamber, nor to constrain the Lady to speak, but to excuse her for modestie's sake. *Periander* engaged himself to do all she directed. She, attired as richly as she could, went to his Chamber, and departed again before day-break: On the morrow she enquired if he were pleased, and if the Lady should come again to him. *Periander* said, it was his chiefest desire, and that he affected her excessively, from that time she visited her Son often: he, at last, was moved with a great curiosity to know who she was, and solicited his Mother very importunately that he might have some discourse and acquaintance with her, seeing he was so much taken with love of her, affirming it was unreasonable, he should be denied the sight of one, with whom he had so often a nearer acquaintance. His Mother affirm'd it could not be done, in respect to the Modesty of the Lady. Hereupon he gave one of his Servants order to hide a light in his Chamber: she came as she used, and when she was asleep, *Periander* rose, took the light, and seeing it was his Mother, was about to have killed her, but withheld by some genius or apparition, forbore: From that time forward he was troubled in mind, grew cruel, and killed many of his Subjects. His Mother, much accusing her unhappy genius, slew her self.

self. *Laertius* saith, they were both conscious hereof, and that being discovered, he grew cruel to every one.

† *Herod.*

* *Laert.*

† In the beginning of his Reign he was much more merciful than his Father, but keeping correspondence by Messengers with *Thrasibulus* Tyrant of *Miletus*, (* to whom in times past he had been a Guest, before he arrived to the Government) he became at last much more bloody than his Father. He sent an express to *Thrasibulus*, to know what course he should take to settle himself, and to govern the City in the best manner. *Thrasibulus* led the Messenger out of the Town, and as they walked together in a Corn-field, question'd him concerning his coming from *Corinth*, and in the mean time lopped off all the heads of Corn that grew higher than the rest, and threw them away; in this manner he went over the whole field, not speaking one word to the Messenger, and so sent him home; where being returned, *Periander* greedily enquired what Instructions he had brought; he answered, *Thrasibulus* had given him none, and that he wondered he would send him to a Mad-man, who destroyed his own goods. *Periander* enquired what *Thrasibulus* did, and immediately apprehended that he advised him to put the most eminent in the City to death. *Laertius* recites a Letter to that effect, which, if not supposititious, must have been sent at another time after this Messenger departed.

Thrasibulus to Periander.

I Gave your Messenger no answer, but, carrying him into a field of Corn, lopped off with my sickle such Ears as grew higher than the rest, whilst he followed me; if you enquire, he will relate all to you that he hath heard or seen: Do you so likewise, if you mean to settle your self in the Government, take off the Heads of the chiefest Citizens, whether your professed Enemies, or others. A Tyrant must suspect every Friend.

* *Sept. Sup. conv.*

† *Laert.*

* *Suid.*

† *Excerpt. Nicol. Demasceen. and Suidas from him.*

* *Laert.*

† *Suid.*

* *Laert.*

* *Lib. I. 20.*

Though * *Plutarch* deny he followed this advice, *Herodotus* avers, that from thence forward *Periander* exercised all cruelty upon his Subjects, dispatching those that had escaped the Rigour and Persecutions of his Father. † He first appointed a guard of Halberdiers to secure his Person, * which consisted of three hundred, and converted the Government to a Tyranny († through his cruelty and violence) He forbade the Citizens to keep any Servants, or to be idle, always finding some employment for them: If any Man sat in the Forum, he was fined, for he feared lest they should plot against him. * The Citizens being desirous to live *εὖ αἰσέ* he would not suffer them; He was always in War, being of a martial disposition. † He made Ships with three banks of Oars, which he used in both Seas. He * attempted to dig the Isthmus off from the Continent.

Of his friendship and correspondence with *Thrasibulus*, * *Herodotus* gives another instance, affirming he sent to inform him of the Oracles answer to *Alyattes* King of *Lydia*, concerning the re edifying of the Temple of *Minerva*,

and advised him to provide before-hand for his own security.

* He made a vow, if he were victor in the Chariot-race at the Olympick Games, to erect a statue of Gold: He chanced to be victorious, and wanting Gold, beholding upon a Festival of that Country the Women richly adorned, he took off all their ornaments, and so sent them home. *Laert.*

CHAP. III.

Of his being placed in the number of the Seven Sages. His Sentences and Writings.

Periander (saith † *Plutarch*) being become † *Sept. Sup. conv.* a Tyrant by hereditary disease derived to him by his Father, endeavoured to purge himself thereof as much as possible, by using the sound conversation of good Persons, and invited Wise-men to come to him; † to which purpose † *Laert.* he sent this Epistle to those of *Greece*, at such time as they met at *Delphi*.

Periander to the Wise Men.

I Give Pythian and Apollo many thanks, that you being met together there, will also by my Letters be brought to *Corinth*, I will entertain you as you well know very kindly. I hear that last year you met at the Lydian Kings in *Sardis*: delay not now to come to me, Tyrant of *Corinth*, for the *Corinthians* will look kindly upon you, if you come to the House of *Periander*.

Upon this invitation they went to him, not seven, but twice as many, of whom was *Dioctes*, *Periander's* Friend, in whose name *Plutarch* makes a large description of their entertainment, which was not in the City, but at the Port *Lecheon*, in a great Hall, appropriated to solemn Feasts, joyning to the Temple of *Venus*, to whom he had not sacrificed since the unhappy death of his Mother until that time, the particulars of the Feast, by reason of the largeness of the Discourse, we refer to *Plutarch*.

He was also himself put into the number of these Wisemen, who, † *Plutarch* saith, were † *De Delphi.* originally but five, but that afterwards *Cleobulus* Tyrant of *Lindus*, and *Periander* Tyrant of *Corinth*, who had neither Vertue nor Wisdom, by the greatness of their Power, the multitude of their Friends, and the obligations they conferred upon those that adhered to them, forced a reputation, and thrust themselves violently into the usurped name of Wisemen; to which end, they spread abroad Sentences and remarkable Sayings throughout all *Greece*, the very same which others had said before, whereat the other first Sages were much displeased, yet would not discover or convince their vanity, nor have any publick Controversie about that title with Persons of so much Wealth and Power, but meeting together at *Delphi*, after some private debate, they consecrated there the Letter *E*, the fifth in the Alphabet, and in numeration, to testify to the God of that Temple they were no more than five, and that

that they rejected and excluded from their company, the sixth and the seventh, as having no right thereto.

* Suid.
† Protagor.
• Laert. Of those * who excluded him out of the number of the seven, some, (as † Plato) substitute in his room *Myso* : * others say there were two of this name, Cousins, one the Tyrant, the other of *Ambracia* : But *Aristotle* and others, assert him of *Corinth* to be the Wise, which Attribute seems to be conferred upon him, not in respect to his Actions, but moral Sayings and Writings, which were these.

‘Do nothing for gain, that is proper to Tradesmen. They who will rule safely, must be guarded with Love, not Arms. Being demanded why he continued King, because (saith he) it is dangerous willingly to refrain, or unwillingly to be deposed.

† Plut. sept. sap. conv. † When the other six had given their opinions concerning Tyranny (at the Feast to which he invited them, he being desired to add his, answered with a troubled countenance, *Enough has been said to deter any Man of sound Judgment from Rule*. When they had in like manner declared their Opinions, concerning a Common-wealth, he added, *The result of all which had been said, commended that Democracy most, which came nearest an Aristocracy*.

* Stob. 28.
† Stob. ibid.
* Laert. * Being demanded what was the greatest in the least, he answered, *a good mind in a humane body*.

His Precepts (according to † *Demetrius Phalerens*) were these, ‘*Consideration is all* (* which was his particular Sentence) *Quiet is good, Temerity dangerous. Gain fardid, the accusation of Nature. A Democracy is better than a Tyranny. Pleasures are mortal, Vertues Immortal. In good fortune be moderate, in bad prudent. It is better to die than to want. Study to be worthy of your Parents. Be praised Living, beautified dead. To your Friends in Prosperity and Adversity be the same. What thou hast promised amiss, perform not.* [Laert. keep thy word.] *Betray not Secrets. So reproach, as if thou shouldst e’re long be a Friend. Use new Diet, but old Laws. Punish those who have Sinned : Restrain those that are about to Sin. Conceal thy misfortune, that it may not glad thy Enemies.*

Ausonius ascribes these to him.

*Pleasure and Profit never disagree.
As more solicitous, more happy be.
'Tis ill to wish, but worse to fear to die,
With what Necessity enjoyns, comply.
If thou art fear'd of many, many fear.
Be not exalted when thy Fortune's clear.
Nor be dejected, if a storm appear.*

† Laert. † He writ two thousand Verses of Moral Instructions.

CHAP. IV.

The Story of Arion.

During the Feast we mentioned (by *Plutarch's* Account) or rather according to *Eusebius*, in the fortieth Olympiad, there hap-

pened a strange accident, which (because *Herodotus* calls it a Miracle shewed to *Periander*) we shall relate in his words.

† *Arion* the most famous Lutinist of that time, having lived a long time with *Periander*, took a Voyage to *Italy* and *Sicily*, there having gotten together much wealth, he designed to return to *Corinth* : at *Tarentum* he hired a *Corinthian* Vessel, confiding above any in *Corinthians* ; they, when they were at Sea, plotted to cast *Arion* over-board, that they might be Masters of his Wealth, which he understanding, offered to give them all so they would save his Life ; they refusing, bad him lay violent hands upon himself, if he would be buried in his own Country, otherwise to leap immediately into the Sea. *Arion* reduced to this extremity, intreated them to give him leave to put on his richest Ornaments, and so standing upon the Poop of the Ship, to play a Tune, promising, as soon as he had done, to deliver himself into their hands. The Men moved with a great desire to hear the most excellent Lutinist in the World, retired from the Poop to the middle of the Ship : He put on his best Ornaments, and standing upon the Poop, began that Tune which they call the Morning Hymn, as soon as he had ended it, he threw himself into the Sea, with his Ornaments and Lute ; the Ship sailed on to *Corinth*. It is reported, a Dolphin took him upon his Back, and carried him to *Tenarus*, where he landed, and took Shipping again for *Corinth* ; he arriv'd there in the same Habit, and related all that passed ; which *Periander* not believing, committed him to close Custody, not permitting him to go any whither, and in the mean time sent for the Mariners ; when they came, he asked them News of *Arion* : They answered, he was very well in *Italy*, and that they left him safe at *Tarentum* : Immediately *Arion* appeared, attired, as when he leaped out of the Ship, whereat they were so confounded, they could not say any thing in their own defence. This is attested both by the *Corinthians* and *Lesbians*. At *Tenarus* there is a little Image given as an Offering of a Man sitting upon a Dolphins Back : That *Periander* caused such a one to be made, is evident from this Epigram of *Bianor*.

*The Statue of Arion o're the main
Sailing upon a Dolphin's Back was carv'd
By Periander's Order. See, Men slain
By cruel Men, by Fishes kind preserv'd.*

CHAP. V.

Of his Wife.

† **H**IS Wife was named *Lyfis*, by him called *Melissa*, Daughter to *Procleus*, Tyrant of *Epidauris* and *Eristhenea*, the Daughter of *Aristocratis*, by the Sister of *Aristomedes*, which Persons ruled over the greatest part of *Arcadia*. * He fell in love with her seeing her in a *Peloponnesian* dress, in her Petticoat, without a Gown, giving drink to her Father's Workmen : * Long after killed her in his Fury,† † Laert.

fury, big with Child, with a Stool, or a blow of his Foot, being wrought upon by the accusations of his Concubines, whom he afterward burnt.

† Herod. 5.

† He sent one day to *Threspotos*, upon the River *Acheron*, to enquire by Necromancy concerning a *Depositum*. *Melissa* appearing, said, She would not tell them in what place it was laid, because she was cold and naked, the Cloths wherein she was buried doing her no good, for they were not burned; confirming the Truth whereof by *Periander's* putting bread into a cold Oven; which answer carried to *Periander*, made good the Suspicion that (**thro' excess of Love*) *νεκρὰ ἐξ ἔσθης Μελισσῆς ἐμύσθη*. Hereupon he caused Proclamation to be made, that all the *Corinthian* Women should come to *Juno's* Temple to celebrate a Festival, attired in their richest Ornaments: when they came, having placed a Guard of Soldiers in Ambush, he stripped them all, without any distinction (Free-women and Servants) of their Clothes, which he carried to *Melissa's* Grave, and having prayed, burnt them to her: This done, he sent Messengers to enquire the second time, to whom *Melissa's* Ghost appeared, and told them where the *Depositum* was laid.

* Suid.

CHAP. VI.

Of his Children.

† Herod. lib. 3.
49.

† HE had by *Melissa* two Sons, *Cypsalus* and *Lycophron*, the younger ingenious, the elder a Fool; he had likewise a Daughter; his elder Son at the time of his Mother's death was eighteen years old, the younger seventeen. These their Grandfather by the Mother's side *Procleus* (Tyrant of *Epidaurus*) sent for over to him, and loved them much, as in reason he ought, being the Children of his own Daughter; when he was to send them back, he said to them, Do you know Children who slew your Mother? The elder took no heed to that Speech, but *Lycophron* the younger was so troubled at it, that when he came to *Corinth*, he neither spoke to his Father, nor would make him any Answer, looking upon him as the Murderer of his Mother; whereat *Periander* at length became so incensed, that he turn'd him out of doors. He being gone, *Periander* question'd the elder what discourse his Grandfather had with him; he related to him how kindly he used him, but told nothing of that which *Procleus* had said to them at their departure, for he had not taken any notice of it; *Periander* said, it was not possible but that he should say something more, and pressed him more strictly; at last he calling it to mind, told him this also; which *Periander* resenting and not willing to use his Son more mildly, sent to the People with whom he lived in his ejection, forbidding them to receive him into any of their Houses. Turned out of that wherein he was, he sought to go into another, but was denied; *Periander* having threatened those that should entertain him, and commanded all to drive him away: expelled thence, he went to another of his acquaintance, who

knowing him the Son of *Periander*, entertain'd him, though with fear: At length *Periander* proclaimed, That whosoever received him into their House, or spoke to him, should pay what Fine to *Apollo* he should impose; from that time none durst venture to entertain him or speak to him; nor would he himself make trial of a thing which he knew to be desperate, but passed his time in the common Walks. Four days after, *Periander* seeing him poor and extenuated with Fasting, took Compassion of him, and laying aside his anger, drew nigh to him, and said, Son, which is better, to undergo what you now suffer, or by obeying your Father to enjoy my Wealth and Kingdom? You being my Son, and next Heir to the Kingdom of Fruitful *Corinth*, have made choice of the Life of a Vagabond, angrily opposing him whom you ought not to oppose; if any unhappiness beset you in those things whereof you suspect me, it beset me, and I have so much the greater share therein, in being the Instrument thereof; hear how much better it is to be envied than to be pitied, and what it is to be angry with our Parents or Betters. In these words *Periander* reprov'd his Son; who made him no other Answer, than That he ought to pay a Fine to the God for speaking to him. *Periander* perceiving the Evil of his Son to be incurable, removed him out of his sight, and sending him by Ship to *Corcyra*, of which he was also Tyrant: Having thus disposed of him, he made War with his Father-in-Law, *Procleus*, as the chief cause of all that happened.

Laertius mentions an Epistle which he sent him to this Effect:

Periander to Procleus.

We committed unwillingly that Crime upon your Daughter, but you, if willingly, you alienate my Sons Mind from me, you do unjustly; therefore either soften his Mind towards me, or I shall revenge this Injury; I have satisfied your Daughter by burning in her Honour the Garments of all the Women of Corinth.

† In fine he took *Epidaurus* and *Procleus* † Herod. *ibid.* therein, whom he preserved alive.

* In process of time *Periander* growing old, and knowing himself to be no longer fit for the charge of the Common-wealth, sent to *Corcyra* to invite *Lycophron* to the Government of the Kingdom; conceiving his eldest Son incapable of that Office by reason of his Stupidity. *Lycophron* would not vouchsafe so much as to speak to the Messenger. *Periander* (affectionate to him) sent the second time his Son's Sister, his own Daughter, hoping he would be sooner perswaded by her; she coming, said to him, Brother, had you rather the Kingdom should fall into the hands of others, and our Father's House be dispersed, than go Home and have it your self? Return to your own House, injure your self no longer; Obstinacy is an unhappy Inheritance: Cure not one Evil with another; many prefer Compliance before Justice; many in pursuit of their Mother's Right, lose their Father's Kingdom:

Kingdom; a Kingdom is a slippery thing, coveted by many; our Father is old and feeble, give not your own Goods to others. Thus she pleaded to him as her Father had instructed her; he answered he would never come to Corinth whilst his Father lived there: Which as soon as Periander understood, he sent a Messenger the third time, to let him know, he would remove to Corcyra, and to command him to come to Corinth to take the Government upon him; to this the Son assented. Periander prepared for Corcyra, his Son for Corinth: the People of Corcyra informed hereof, that Periander might not come into their Country, kill'd his Son: In revenge of which Fact Periander sent three hundred Boys of the chief of the Corcyreans to Sardis to Alyattes King of Lydia, there to be sold: The Corinthians who had charge of them, were driven upon Samos, the Samians understanding to what end they were sent to Sardis, advised them to take Sanctuary in the Temple of Diana, and would not suffer them, as being Suppliants to be pulled away: The Corinthians not permitting any Food to be given them, the Samians celebrated a Festival, which is observed (saith Herodotus) at this day; when Night was come, the Company of Youths and Maids danced whilst the Children were Praying, and in their dance, having made Cakes of Meal and Honey, flung them amongst the Children, whereby they were sustain'd alive; this they did so long till the Samians, who had charge of the Children, were fain to go away and leave them; then the Samians convey'd the Children home to Corcyra. * Antenor and

Dionysius affirm, the Gnidians came to Samos with a Fleet, drove away Periander's Guard from the Temple and carried the Children to Corcyra; for which reason the Corcyreans allowed the Gnidians many Honours and Immunities, which they gave not (even) to the Samians.

C H A P. VII.

His Death.

* EXcessive Melancholy (amidst these crosses) * Laert. occasioned his death, in the last year of the forty eighth Olympiad, the eightieth Year of his Age, being desirous none should know where he was buried, he thus contrived it. He commanded two Men to go to a certain place at night, and to kill whom they first met, and bury him. After them he sent four to kill and bury the two; after the four, more: They obeyed his order, the first killed him. The Corinthians erected for him an empty Monument with this Inscription.

Periander lies within Corinthian Ground,
For power and wisdom above all renown'd.

Laertius hath this Epigram upon him:

At whatsoev'r shall happen be not sad:
Alike for all that God dispenseth glad.
Wise Periander did through Grief expire,
Because events not join'd with his Desire.

* Plut. de mal.
† Sign. Herodot.

His Collection of

The Precepts of the seven Sophists.

Follow God. Obey the Law. Worship the Gods. Reverence thy Parents. Suffer for Justice. Understand what thou learnest. Know what thou hearest. Know thyself. About to Marry, chuse opportunity. Consider mortal things. When thou art a guest, acknowledge it. Respect Hospitality: Command thyself. Relieve thy Friends. Govern thy Anger. Exercise Prudence. Honour Providence. Use not Swearing. Love Friendship. Apply thyself to Discipline. Pursue Glory. Emulate Wisdom. Speak well of that which is good. Disparage none. Praise Vertue. Do what is just. Be kind to thy Friends. Revenge upon thy Enemies. Practise generosity. Abstain from evil. Be general. Keep what is thine. Refrain from what belongs to others. Speak words of good Omen. Hear all things. Gratifie thy Friend. Nothing too much. Husband time. Regard the future. Hate Injury. Have Respect to thy Servants. Instruct thy Children. If thou hast ought, gratifie others. Fear deceit.

Speak well of all. Be a lover of Wisdom. Judge according to Equity. What thou knowest, do. Abstain from Bloodshed. Wish things possible. Converse with the Wise. Examine Wits. What thou hast receiv'd, restore. Distrust none. Make use of Art. Deser not what thou intendest to give. Esteem Benefits. Envy none. Guard thyself. Approve hope. Hate Calumny. Possess justly. Reverence the good. Acknowledge thy Judge. Be moderate in Wedlock. Respect Fortune. Fly Engagements for any. Converse with all. Make use of thy like. Regulate Sumptuousness. Enjoy what thou possessest. Exercise Modesty. Return benefits. Pray for prosperity. Love Fortune. Hearing, see. Aim at things that may be acquired. Hate dissention. Abhor reproach. Curb thy Tongue. Repel Injury. Determine equally. Make use of thy Wealth. Examine without corruption. Blame the present. Speak knowing. Use no violence. Live pleasantly. Converse mildly. Go through thy Undertakings fearless. Be benign to all.

H

all.

† Stob.

all. Confide not in thy Children. Govern thy Tongue. Do well to thy self. Be affable. Answer seasonably. Labour with Equity. Do that whereof thou shalt not repent. When thou hast sinned be penitent. Confine thy Eye. Counsel profitably. Perfect quickly. Preserve amity. Be grateful. Observe Concord. Declare no Secret. Fear what is more Powerful. Pursue what is profitable. Wait for Opportunity. Dissolve Enmities. Expect Age. Boast not of Strength. Use to speak well. Fly Hatred. Possess Wealth justly. Forsake not Glory. Hate Malice. Be not weary of Learning. Hazard thy self prudently. What thou joyest in, quit not. Admire Oracles. Love those thou maintainest. Blame not the Absent. Reverence thy Elders. Teach those that are Younger. Confide not in Wealth. Stand in awe of thy self. Begin no Injury. Crown thy Ancestors. Die for thy Country. Oppugne not Life. Deride not the Dead. Condole with the Unhappy. Gratifie without Damage. Be not troubled upon every occasion. Let thy Children be by a Free-Woman. Promise none. Wrong not the Dead. Suffer as Mortal. Trust not Fortune. Be in Childhood modest, in Youth temperate, in Manhood just, in Old Age prudent. Die untroubled.

AUSONII LUDUS

Septem Sapientum.

THE PROLOGUE

TH E seven wise men, (that name Times
past applied
To them, nor hath Posterity deny'd)
Themselves this day unto your view
present.

Why dost thou blush Gown'd Roman? discontent
That such grave Men should on the Stage be
brought!

Is't shame to us? 'Twas none to *Athens* thought:
Whose Council-Chamber was their Theatre.
True; here for business several places are
Assign'd, the Cirque for meetings, Courts to take
Enrolments, *Forums* in which Pleas to make:
But in old *Athens*, and all *Greece* was known
No other place for Business but this one.

viz. the Theatre.

Which latter Luxury in *Rome* did raise,
The Edile heretofore did build for Plays
A Scaffold-Stage, no work of Carved Stone;
So *Gallius* and *Murena*, 'tis well known.
But after, when great Men not sparing Cost,
Thought it the highest Glory they could boast,
To build for Plays a Scene more eminent,
The Theatre grew to this vast extent;
That *Pompey*, *Balbus*, *Cesar* did enlarge;
Vying which should exceed for state and charge.

But to what end all this? we came not here
To tell you who first built the Theatre,
Forum, or City Gates, but t'usher in
Grave Sages, who by Gods approv'd have been.
Such as in pleasing and instructive Verse,
Their own Judicious Sentences rehearse,
Known to the Learned, and perhaps to you:
But if your Mem'ries cannot well renew
Things spoke so long since; the Comedian shall,
Who better than I knows them, tell you all.

Enter Comedian.

A Thenian *Solon*, Fame sings, wrote at *Delphis*
Γνώθι σεαυτὸν, whose sense *know thy self*, is:
But this to Spartan *Chilon* must assign.

Some question *Chilon*, whether this be thine,
τελὸς ὄρεν μακρὴ βίη, *The close*
Of a long Life regard: but must suppose
That *Solon* this to *Lydian Cræsus* spake.

From *Lesbian Pittacus* this Motto take,
Γινώσκω καὶ ἔν: that's *Know Time*: But he
By *καὶ ἔν* here means *opportunity*.

Οἱ πολλοὶ κακοὶ, *Bias* did proceed
From thee; that is, *Most Men are ill*. Take heed
You not mistake him; for by ill Men here
He means the ignorant: The next you hear
Is *Periander's* *Μελέτη τὸ πᾶν*,

That is, *Thought's All in All*; a Thoughtful Man!
But *Lyndian Cleobulus* does protest

Ἀεὶ δὲν Μέτрон; *Mean in all is best*.

Θαλὲς ἐγγυὰ πᾶσι δὲ ἄτη cries,

Upon a Surety present Damage lies.

But this, for those who gain by it to tell,
May chance displease: Now *Solon* comes, fare-
wel. *Exit*.

Enter Solon.

LO! *Solon* in his *Greeks* dress treads the Stage,
To whom (as of the seven the greatest Sage)
Fame gave the prize of Wisdom from the rest;
But Fame is not of Censure the strict Test.

Nor first nor last I take my self to be,

For their's no order in Equality.

Well did the *Delphick* Prophet sport with him
Who ask'd, which first of the Wise-men might
seem,

Saying; if on a Globe their names he writ,

None first or lowest he should find in it.

From midst of that learn'd Round come I,
that so

What once I spake to *Cræsus*, All here now
Might take as spoken to themselves; 'tis this:

ὄρεν τελὸς μακρὴ βίη, which is,

Mark th' end of a long Life; till when forbear

To say these wretched, or those happy are:

For All till then are in a doubtful state,

The proof of this we'll in few words relate.

Cræsus the King or Tyrant (choose you which)

O! *Lydia*, happy thought; and strangely rich;

Who to his Gods did Gold-wall'd Temples build,
Invites me o'er, I to his Summons yield.

His Royal Summons went to *Lydia*,

Willing his Subjects by our means might find

Their King improv'd, and better'd in his Mind.

He asks me whom I thought the happiest Man?

I said *Telamæ*, the *Athenian*,

Who his Life nobly for his Country gave?

He pishes at it, will another have.

I told him then *Aglæus*, who the Bounds

Ne'er pass'd in all his Life of his own Grounds.

Smiling, he says, What think you then of Me

Esteem'd the happiest in the whole World? We

Reply'd, his End could only make that known.

He takes this ill: I willing to be gone,

Kiss his hand, and so leave him: For some ends;

Mean time, 'gainst *Persia* he a War intends;

And all things ready, does in Person go.

How speeds? he's vanish'd, Prisoner to his Foe,

And ready now to yield his latest Breath,

(For by the Victor he was doom'd to death)

Upon the Euneal Pile rounded with Flames

And smok, he thus with a loud voice exclaims

O *Solon*! *Solon*! now I plainly see

Th'art a true Prophet! Thrice thus naming me;

Mov'd with which words, *Cyrus*, (the Conque-
rour)

Commands the Fire be quencht, which by a
flower

Of Rain then falling, happily was laid.

Thence to the King, by a choice Guard convey'd

And question'd who that *Solon* was? and why

He call'd so on his name? He, for reply,

In order all declares: Pity at this

The Heart of *Cyrus* moves; and *Cræsus* is

Receiv'd to Grace, who in a Princely Port

H 2

Liv'd

Liv'd after, honour'd in the *Perſian* Court.
Both Kings approv'd and prais'd me, but what I
Said then to one, let each Man here apply
As ſpoke r'himſelf, 'twas for that end I came.
Farewel: your liking let your Hands proclaim

Exit.

Enter Chilon.

MY Hips with fitting, Eyes with ſeeing ake,
Expecting when *Solon* an end would make.
How little and how long your Atticks prate!
Scarce in three hundred lines one word of
weight,
Or a grave Sentence, how he lookt on me
At going off? — Now *Spartan Chilon* ſee!
Who with *Laconian* Brevity commends
To you the *Knowledge of your ſelves*, kind Friends!
Γνώσι σεαυτῶν carv'd in a *Delphos* Fane.
'Tis a hard work, but recompenc'd with gain.
Try your own ſtrength; examine what 'tis you
Have done already, what you ought to do.
All Duties of our Life, as Modeſty,
Honour and Conſtancy included be
In this, and glory, which we yet deſpiſe.
Farewel, your claps I not reſpect nor prize.

[Exit.]

Enter Cleobulus.

I *Cleobulus*, though my Native Seat
Be a ſmall Iſle, am Author of a great
And glorious Sentence; *Μέτρον ἀεισόν*,
A mean is beſt: You Sirs that fit upon
The fourteen middle Benches next unto
Th' *Orcheſtra*, beſt may judge if this be true.
Your Nodd ſhews your aſſent: We thank you but
We ſhall proceed in order: Was it not
One *Aſer* (who a Man of your own Clime is)
That ſaid once in this place, *Ut ne quid Nimis*?
And hither does our *Μετὸν ἀγαν* aim.
The Dorick and the Latin mean the ſame.
In ſpeaking, being ſilent, or in Sleep,
In good Turns, or in Bad, a mean ſtill keep,
In ſtudy, or whatever you intend.
I've ſaid, and that I mean, I keep here end.

[Exit.]

Enter Thales.

I'M *Thales*, who maintain (as *Pindar* ſings)
Water to be the beſt and firſt of of things.
To whom by *Phœbus* Mandate, *Fishers* brought
A golden Tripod, which they fiſhing caught,
By him as Preſent to the wiſeſt meant.
Which I refus'd, and unto others ſent.
In Knowledge my Superiours as I thought.
From one to th'other of the Sages brought,
By them again return'd, to me it came,
Who to *Apollo* conſecrate the ſame.
For ſince to ſeek the Wiſeſt, he enjoind,
I judge no Man but God by that deſign'd.
Now on the Stage (as thoſe before) I come
T'aſſert the Truth of my own Axiom.
Perhaps by ſome'tmay be offensive thought:
But not by thoſe by ſad Experience taught.
'Εγὼ δὲ πείσῃμι ἢ ἀπὸ, ſay we,
Be Surety, and be ſure a loſer be.
A thouſand Inſtances I could produce
To prove Repentance is the only uſe
That can be made of it, but that we here
Examples by their Names to cite, forbear.

Make your own application, and conceive
The Damage, Men by this ſole Aſt receive.
Nor this our good Intention take amiſs,
You thatlike, Clap, you that diſlike it, Hiſ.

Enter Bias.

I Am *Prienean Bias*, who once taught
Οἱ πολλοὶ κακῶς, That moſt Men are naught.
I wiſh't had been unſpoke; for Truth gains Hate.
But by bad Men, I mean illiterate,
And thoſe who barbarouſly all Laws confound.
Religion, Juſtice; for within this Round
I ſee none but are good: believe all thoſe.
Whom I proclaim for bad among your Foes:
Yet there is none ſo partially apply'd
To Vice, but with the good will ſide,
Whether he truly be ſuch, or would fain
Of a good Man the Reputation gain:
The hated name of an ill Man all ſhun.
Then (moſt good Men) your praiſe, and I ha'
done.

Enter Pittacus.

I'M *Pittacus*, who once this Maxim penn'd,
Γίγνεται καὶ ἐλπίς, That's, Time apprehend.
But by Time we meant Time in Seafon, as
In tempore veni is your Roman Phraſe.
And your own Comick Poet *Terence*, he,
Chief of all things makes Opportunity,
Where *Dromo* comes unto *Antipbila*.
I'th' nick of Time; conſider what I ſay,
And mark how great an inconvenience
Moſt ſuffer through this want of Providence
But now 'tis more than time we ſhould be
gone;
Farewell, and give your Approbation.

Exit.

Enter Periander.

NOW on the Stage ſee *Periander* move!
He who once ſaid, and what he ſaid
will prove,
Μελέτη τὸ πᾶν, Thought is all in all.
Since him a perfect Agent we may call,
Who firſt conſiders what he undergoes;
For we ſhould ſtill forecaſt, as *Terence* ſhews,
Th'event of Buſineſs, whether good or bad,
E'r w'undertake it: where may beſt be had
Conveniency for Planting, where to Build,
When to wage War, and when to pitch a
Field:
Nor inconfiderately take in hand
Or great, or ſmall Things; for that makes a
ſtand
In the free progreſs of all new deſigns;
Like Conſultation; hence we ſee it clear,
Who uſe it not, by chance, not Counſel
ſteer,
But I retire, whiſt you with better Fate
Imploy your Thoughts how to uphold your
State.

A. N. A.

ANACHARSIS.

CHAP. I.

Anacharsis his Life and Writings.

† Lib. 4. 46.

These Nations (saith † Herodotus) which Border upon the Euxine Sea, are of all most Illiterate, the Scythians only excepted; we can alledge nothing relating to Learning of any People within the compass of that Sea, neither know we any Person Learned but the Scythians Anarchasis; * Amongst these, notwithstanding the roughness of their Education, (for they fed upon Mares Milk, and dwelt in Waggon) were some who far exceeded all in Justice.

* Strab. lib. 7.

† Laert.

* Plut. conviv. sep. Sup.

† Aelian. var. hist. lib. 5.

* Herod. 4. 46. † Laert.

* Lucian. Scyth.

Such was Anacharsis, † Son of Gnurus, Brother of Cadovides, King of Scythia; his Mother a Grecian, by which means he had the advantage of two Languages, but was owner of no other House than the Custom of that Country allow'd, a Chariot, whence * he compared his dwelling to that of the Sun, carry'd in that manner round the Heavens.

† The Scythians never Travel beyond their own Confines, but Anacharsis as a Person endu'd with more than ordinary Wisdom extended his Journey farther, * being sent by the King of Scythia to Greece. † He came to Athens in the first year of the 47th Olympiad, Euerates being Archon: and * first met with Toxaris one of his own Country, by whom, as the most compendious way to take a Survey of Athens and Greece, he was address'd to Solon: how Solon received and entertained him is already related in his Life: he instructed him in the best Disciplines, recommended him to the Favour of Noblest Persons, and sought all means of giving him Respect and Honour: Anacharsis admired his Wisdom, continually followed him, in a short space learnt all things of him, and was kindly received by every one for his sake; being (as Theoxenus attests) the only Stranger whom they incorporated into their City.

† Strab. lib. 7.

† Clem. Alex. Strom. 1.

† Clem. Alex. Strom. 5.

† Aelian. lib. 2.

† Athen. deipn. 10.

* Herod. 4. 75.

† Thus was he much Honoured by the Grecians for his Perfection, Wisdom, Temperance, wherein he excelled many of their Philosophers, whereupon they conferred the Attribute of Wise upon him, some accounting him one of the Seven: Periander invited him with the rest to Corinth, the Feast is largely described by Plutarch: There Anacharsis carrying with him Chaplets of Flowers, Ivy, and Laurel, Drunk, as the Scythians use, to great excess, * and required the Prize of Drinking to be given him, because he was first Drunk. In a Race (saith he) he wins who comes first at the Post, in Drinking, he who comes first to the End deserves the Reward.

† Having seen much of the World, and improved his knowledg, he returned to Scythia (as Lucian conjectures, not until Solon was dead) as he Sail'd along the Hellespont, he put in at Cyricum, and finding the People Celebrating a Festival to the

Mother of the Gods, with much splendor and magnificence; he made a Vow, if he got safe home, to Sacrifice in the same manner as he had seen those of Cyricum, and to institute a Virgil. When he came into Scythia, he withdrew himself privately to Hylæa, near the Achyllean course, a place abounding with Trees, and performed the Rites of the Goddess with a Timbrel (and Cymbal * about his Neck) A Scythian espying him, carried word to Saulius the King, who went immediately thither, and being an eye-witness thereof, shot him through with an Arrow († to punish his Effeminacy, and prevent the infection thereof in others) * And now if any enquire concerning Anacharsis, the Scythians deny they knew him, because he Travelled into Greece, and affected the Customs of that Country. As I am informed by Timæus, Tutor of Spargapithes, he was Uncle to Indathyrus, King of Scythia, Son of Gnurus, Son of Lycus, Son of Spargapithes: Now Anacharsis being of this Family, it is manifest he was † Slain by his Brother, (that his Brother was King of Scythia, and Slew him, is confirmed by Laertius, though he differ in the Name,) for Indathyrus was Son of Saulius, Saulius was he who slew Anacharsis, and consequently is the same whom Laertius calls Cadovides, adding, some report that he Shot him in Hunting; for being addicted to the Greek Customs, and endeavouring to alter the Laws of Scythia; whereupon he dying, said, he returned safe out of Greece, guarded by his own Wisdom, but was slain at home by the envy of others. Upon him Laertius hath this Epigram.

From Travel Anacharsis came at last,
And Scythia in a Grecian Mould was cast:
Whilst he was teaching how, by the Surprise
Of a wing'd Arrow carried to the Skies.

* There were many Statues erected in Honour of him by the Grecians, upon which was writ, Γάλατος, γαστρός αἰδιδίων κατέπε. * He was Temperate and Skilful in many things; He freely and largely discoursed of the manner of Diet and Medicine, which the Scythians used in curing the Sick. From the plain freedom he used in Speech, arose a Proverb, The Scythian Phrase. He writ eight hundred Verses of Orders for the Scythians and Greeks, concerning Frugal Living, and Martial Affairs. There are also two Epistles of his extent.

Anacharsis to Croesus.

King of the Lydians, I came into Greece to be informed of their Manners and Studies; I need not Money, it is enough if I can return into Scythia bettered: but I will come to Sardis, because I highly esteem your Favour.

* Anacharsis

(c) Laert. Suid.

(a) **M**Y Apparel is a Scythian Rug, my Shoes the hardness of my Feet, my Bed the Earth, my Sauce Hunger; I feed on Milk, Cheese, and Flesh: you may come to me as to one that's contented: But these gifts which you so much esteem, bestow either on your Citizens, or the immortal Gods.

(b) He is said to have Invented Tinder, (c) the Anchor, and the Potters Wheel; but this latter is by Strabo evinced clearly to be False, because mentioned by Homer, who lived long after him, Anacharsis being in the time of Crafus.

CHAP. VII.

His Apophthegms.

(d) Laert.

HIS Apophthegms are these, (d) He said a Vine bare three Grapes, the first of Pleasure, the second of Drunkenness, the third of Repentance. He wondred, that amongst the Greeks, Artists contended, and they who were no Artists determined. Being demanded by what means a Man might be brought not to love Wine, he said, by setting before his eyes the Actions of Drunken Persons. He wondred, the Grecians who punished Injuries by Law, rewarded the Athletæ at publick Exercises for beating one another. Being told a Ship is four inches thick, so far from Death, said he, are they who Sail. He said Oyl was a Receipt procuring Madness, because the Athletæ, the more they were anointed therewith, the more fierce they were against one another. How comes it, said he, that they who forbid lying, themselves lye openly, when they put off their Wares? He wondred that the Greeks in the beginning of a Feast drank in little Cups, and when they were full in great. (e) Being demanded (by Ardalus) whether there were any Flutes in Scythia, he answered, not so much as Vines (which (f) Aristotle calls a demonstration of, by the remote Cause) (g) Ardalus adding, are there not Gods amongst the Scythians? yes, reply'd he, which understand all Languages. (h) Being asked what Ship was safest, he answered, that which is in the Haven: He affirm'd the most remarkable

(e) Plut. con-
viv. sept. Sap.

viv. sept. Sap.
(h) Laert.

thing he had seen among the Grecians to be this, that they left the Smoak upon the Mountains, and carried the Wood into their Cities. Being demanded whether the number of the dead or the living were greatest; amongst which, saith he, do you account those who are at Sea? To an Athenian, who Reproached him for being a Scythian, my Country, (saith he) is a Disgrace to me, but you are a Disgrace to your Country. Being demanded what in Man is both Good and Bad, he answered the Tongue. He affirmed it is better to have one Friend worth much, than many worth nothing. He said the Forum was the proper place for Cheating and unjust Gain. To a young Man who Reproached him at a Feast; Youth, said he, if at these years you cannot bear Wine, when you grow old, you will not be able to bear Water.

(i) When he returned to Scythia, he told the King who sent him, the Greeks were basified in all kinds of Wisdom, except the Lacedæmonians, who only knew how to give and receive prudently. (i) Herod. 4.

(k) He said, the Greeks made no other use of Money but to account with it. (l) At a Publick Assembly in Athens, he said, he wondred, why in the Greek Convocations, Wise Men propounded Business, and Fools determin'd it. * That Prince is Happy who is Wise. That City is best, wherein (all things else being equal) Vertue hath the better Condition, Vice the worse. (k) Plut. de profect. virtut. sent. (l) Plut. vit. sol. * Plut. conv. Sap.

(m) To one, who, as they were Drinking, said, beholding his Wife, Anacharsis, you have Married one who is nothing Handsome: I am (answered he) of that Opinion also; but put less Water in my Wine, that I may make her handsome. (m) Strob. serm. 16.

Relating the Qualities of the Vine to the King of Scythia, and shewing him some slips thereof, he added, and by this time it would have reached into Scythia, if the Greeks did not every year cut off its Branches. * At a Feast, such being sent for, as might procure Mirth, he alone smiled not; afterwards, an Ape being brought in, he Laughed, saying, that Beast is Ridiculous by Nature, Man by Art and Study. * Athen. deipn. lib. 10. * Athen. deipn. lib. 14. * Clem. Alex. Strom. lib. 5. * Clem. Strom. 1.

Whilst he slept, he used κατέχειν τῇ αὐτῇ λαλῶν τὰ αἰσθητὰ τῇ δεξιᾷ δὲ τὸ σῶμα, implying that a Man ought to take great care to Govern both, but that it is harder to restrain our Pleasure than our Tongue. He said, that to him all the Grecians were Scythians.

MYSON.

MYSON was (according to Herippus) Son of Stremon, born at Chene, a Village either of Oetæa, or Lacedæmonia, his Father a Tyrant. Anacharsis demanding of the Oracle, if any were wiser, was answered (as was in the Life of Thales mentioned of Chilon.)

Oetæan Myson I declare
Wiser than those who Wisest are.

His Curiosity encreasing by this Answer, he went to the Village, and finding him fitting a Plough-share to the Plough, said, Myso, it is not yet time to Plough: But it is (answered he) to prepare. Others affirm the Oracle called him Etean, about which there is much difference: Parmenides saith, that Etea is a Lacedæmonian Village, whereof Myson was. Socrates, that he was Etean by his Father, Chenean by his Mother. Euthyphron, that he was a Cretan, Etea a City or Creet, Anaxilæus an Arcadian. Hipponax mentions him in these words

words. *And Myſo, whom Apollo declared the wiſeſt of all Men. Ariſtomenus* affirms he was of the ſame humour as *Timon* and *Apemantus*, a Man-hater. He retired from *Lacedæmon* into the Deſert, and was there ſurprized all alone; ſmiling, being demanded why he ſmiled, no Man being preſent, he answered, for that reaſon. *Ariſtoxenus* ſaith, he was of no ac-

count, becauſe not of the City, but of an obſcure Village; whence ſome aſcribe his ſayings to *Piſiſtratus*, but others reckon him one of the Seven; *Plato* puts him in the room of *Periander*. He ſaid, *we muſt not ſeek things from words, but words from things; things were not made for words, but words for things.* He died 97 years old.

E P I M E N I D E S.

E *Pimenides* is by all acknowledged a *Cretan* (though contrary to the Cuſtom of that Place he wore long Hair;) but in the Town where he was born they agree not. *Laertius* following the greater part of Writers, ſaith it was (a) *Cnoſſus*, *Strabo*, *Phæſtus*. There is no leſs difference about the names of his Parents; ſome call his Father *Phæſtius*, or *Phæſtus*, others *Dofiadæ*, his Mother *Blaſta*, others *Agafiarchus*; *Apollonius*, *Bolus*, *Laertius*, and *Suidas* name his Mother *Blaſta*, *Plutarch* (b) *Balta*, ſuppoſed a Nymph.

It is reported, that when he was a Youth, being ſent by his Father and Brethren to their Field to fetch home a Sheep to the City, Tyr'd with the Heat and Travel in ſearch thereof, he withdrew himſelf at Noon (or as *Apollonius*, at Night) from the Common Way into a private Cave, where he ſlept (according to (c) *Theopompus*) fifty ſeven years, according to (d) *Varro*, (e) *Plutarch*, and (f) *Tertullian*, fifty, (g) *Pauſanias* forty, in which Interval of Time, moſt of his Kindred died; at the end hereof awaking, he betook himſelf again to the ſearch of his Sheep, thinking it the ſame, or the next day to that wherein he lay down, and that he had ſlept but a little while; not finding it, he returned to the Field where he ſaw all things changed, and a Stranger in Poſſeſſion thereof: Thence to the City much amazed; going into his own Houſe, they queſtioned who he was; at laſt he met with his younger Brother, now grown old, by whom he was inform'd of all that paſſed, and the time of his abſence. *Plutarch* ſaith, he awaked an Old Man; (h) *Pliny* and *Laertius*, that he grew old in as many days as he had ſlept years: (i) ſome affirm he ſlept not, but retired a while, employing himſelf in cutting up Roots.

Many other Wonders are Reported of him; * ſome ſay, he received Food of the Nymphs, which he kept in an Oxes Hoof, and took thereof a little every day, requiring no other Suſtenance, never being ſeen to eat, (k) he often counterteited Reſurrection from Death to Life; his (l) Soul going out of his Body whenſoever he pleaſed, and returning again.

(m) He is reported to be the firſt that luſtrated Houſes and Fields, (n) which he performed by Verſe. To this end the *Athenians* in the forty ſixth Olympiad, viſited with a Plague, and

commanded by the Oracle to luſtrate the City, ſent *Nicias*, Son of *Niceratus* with a Ship to *Creet*, to deſire *Epimenides* to come to them, which he did, and there contracted acquaintance with *Solon*, whom he privately inſtructed, ſetting him in the way of making Laws. He reduced the Divine Rights to a leſſer Charge; he moderated the Mournings of the Citizens, he added ſome Sacrifices to the Ceremonies of Funerals, taking away Barbarous Cuſtoms which the Women uſed upon thoſe occaſions: and (which was of greateſt concernment) by Proſtitutions, Procurations, and Offerings, he Luſtrated and Expiated the City, rendring the People more obſequious to Juſtice and Unity, (o) and ſtaied the Peſtilence in this manner: He took Sheep, Black and White, and brought them into the *Areopagus*; there he let them looſe, to go whither they would, giving order to thoſe who followed them, that whenſoever any of them lay down, they ſhould Sacrifice in that place to the proper Deity, whereby the Plague ceaſed. Hence it is, that at this day, (ſaith *Laertius*) are to be ſeen in many *Athenian* Villages, Nameleſs Altars, Monuments of that Expiation. Some affirm he imputed it to the *Cylonian* Impiety (of which already in the Life of *Solon*) and allwaged it, by putting to Death two Young Men, *Cratinus* and *Cteſibius*.

(p) He is ſuppoſed firſt to have built Temples; one he Erected in *Athens* to the *Eumenides*; another he intended to Conſecrate to the Nymphs, but a voice from Heaven was heard in theſe words, *Epimenides, not to the Nymphs, but to Jupiter.*

(q) Beholding the Haven *Munychia*, he ſaid to thoſe who ſtood by, how blind is Man to the future! The *Athenians* would tear this Haven in pieces with their Teeth, if they foreſaw how much it will infeſt the City: This he foretold many years before it came to paſs, which was in the ſecond year of the 114 Olympiad, when *Antipater* put a Garriſon of *Macedonians* into the *Munychia*.

The *Athenians* being afraid of the *Persian* Navy, he told them, it would not Invade them for many years, and when it did, the *Persians* ſhould not effect the leaſt of their Hopes, but depart home with greater Loſs to themſelves than they had given their Adverſaries: which was fulfilled in the Fights at *Marathon* and *Salamis*.

Sol.

He foretold the *Lacedemonians* (and *Cretans* also) the Overthrow they should receive by the *Arcadians*, which hapned when *Euricrates* and *Archidamus* Reigned in *Lacedemon*.

These Predictions, (for which the (a) *Grecians* esteemed him (b) (Divine, beloved of the Gods, (c) and put him in the number of their Sophists; the (d) *Cretans*.) whose Prophet he is filed by (e) *St. Paul*) Sacrificed to him as a God) were either not known, or not credited by *Aristotle*, who avers, he used not to Prophecie of future things, but only such as were past and obscure.

For his Lustration of the City and other things he was much Honoured by the *Athenians*, who Offered him many Gifts, would have Rewarded him with a Talent, and appointed a Ship to Transport him back to *Creet*: he refused their Gifts and Money, nor would accept of any thing but a little Branch of Sacred Olive, out of the Tower, wherewith (having procured a League betwixt the *Cnossians* and *Athenians*) he returned home; and soon after died (f) 157 years old, or according to (g) others, 150, the *Cretans* say, he wanted but one of 300. *Xenophanes* affirms he heard him when he was 154 years of Age. His Body the *Lacedemonians* kept by the direction of the Oracle. It was taken up many years after, marked all over with Characters, whence arose a Proverb concerning abstruse things, the *Skin of Epimenides*; He called himself *Æacus*, others named him *Cures*.

He was a great * Poet, and writ many things in Verse; the Subject of his Writings were these.

Initiations, Austrations, and other obscure matters in Verse,

The Generation and Theogony of the Curetes and Coribantes, 5000 Verses.

The Building of Argo, and Expedition of Jason to Colchos, 6500 Verses.

Of Sacrifices, in prose.

Of the Cretan Common-wealth.

Of Minos and Radamanthus.

* *Of Oracles and Responses, out of which Saint Paul cites this Verse.*

Κρήτες ἀνὶ θεῶν, καὶ βέλαι, καὶ ἀργεῖς ὀργαί.

The Cretans are always Liars, Evil Beasts, Slow-bellies.

There is extant under his name (saith *Laertius*) an Epistle to *Solon* concerning the Orders of Government given by *Minos* to the *Cretans*: which *Demetrius* conceives of latter date, not written in the *Cretan*, but *Athenian* Language; but I have met with another to this effect.

Epimenides to Solon.

BE of Comfort Friend; for if *Pisistratus* were Ruler of *Athenians*, inured to Servitude, and void of Discipline, his way perhaps might continue for ever. But now he subjects not base People, but such as are mindful of *Solon's* instructions, who ashamed of their Bondage will not brook his Tyranny, And tho' he should settle himself in the Government unmoveable, yet I hope it will not devolve to his Children; for it is hard for free persons, brought up under excellent Laws, to suffer Bondage. As for you, wander not, but come to *Creet* to me, where you will find no Oppressive Monarch. If in Travelling up and down you should light upon some of his Friends, I fear you may suffer some Mischief.

(b) There were two more of this name, one a Genealogist: The other writ in the Dorick Dialect concerning *Rhodes*.

P H E R E C Y D E S.

Phercydes was of *Syrus* (one of the *Cyclades* near *Delus*) Son of *Badys*, or as others, *Babis*; Born according to *Suidas* in the 46 Olympiad; he lived in the time of *Alyattes* King of *Lydia*; contemporary with the seven Sophists by some accounted one of them. *Laertius* saith he was in the fifty ninth Olympiad (a) *Cicero* in the time of *Servius Tullus*.

(a) *Tusc. quest.*

(a) *Laert.*

(c) *Apollon.*

hist. comment.

cap. 5.

(d) *Laert.*

There are who affirm he heard *Pittacus*; others say he had no Master, but Procured and Studied by himself the abstruse Books of the *Phenicians*.

(b) Many strange things are related of him; (c) In *Syrus* being thirsty, he required Water of one of his Scholars, which (d) (being drawn out of a Well) he drank, and thereupon declared there would be an Earthquake within three days in that Island; which hapning as he foretold, gained him much Credit: though

ascribed by *Cicero* not to a Divine, but a Natural Cause.

(e) Again going to *Juno's* Temple in *Janus*, he beheld a Ship with full Sail entring the Harbour, he said to those that were present, it would never come into the Haven; whilst he was speaking, a Storm arose, and the Ship sunk in their fight.

(f) Going by *Messana* to *Olympia*, he advised *Perilaus*, at whose House he lay, to remove thence with all his Family; which he obeyed not: *Messana* was soon after taken.

(g) He bad the *Lacedemonians* not to esteem Gold or Silver. *Hercules* having so commanded him in a Dream, who appeared likewise to the Kings, and bad them obey *Phercydes*: this some ascribe to *Pythagoras*.

He held Opinions contrary to *Thales*, but (h) agreed with him in that of Water, that it is principal of all things. He said the Gods called a Table

Cicero. Tusc. Quæst. 1. Chiliad. Table *ἑωυτοῦ*. He first asserted the immortality of the Soul, according to some. *Tzetzes* affirms he was Master to *Thales*, but that suits not with their times: That he instructed *Pythagoras* is generally acknowledged.

Lact. The manner of his death is variously related. *Hermippus* saith, in a War betwixt the *Ephesians* and *Magnesiens*, he desirous the *Ephesians* might be Victors, demanded of one present, whence he was? Who answer'd of *Ephesus*: Draw me then, saith he, by the leggs into the *Magnesian* Territory, and bid your Countrymen, after they have gained the Battle, bury me. I am *Pherecydes*. This message he delivered; they overcame the *Magnesiens*, and finding *Pherecydes* dead, buried him honourably: Some affirm he went to *Delphi*, and threw himself from the *Corycean* Mountain; But the more general Opinion is, that he died most miserably, his whole body eaten up with Lice (*Pliny* saith, with Serpents which broke out of his Skin) whereby when his Face became deform'd, he avoided and refused the Sight of his Acquaintance; when any one came to visit him (as *Pythagoras* did) and demanded how he did, he putting out his Finger at the Key-Hole, consumed by his Disease, shewed them the condition of his whole Body: Saying *καὶ δὴ λᾶ*, the skin sheweth: Which words the Philosophers take in an ill Sense: The *Delians* affirm the God of that place sent this Disease to him out of anger, because he boasted much of his own wisdom to his Disciples, saying, if he should never Sacrifice to any God, he should lead a life no less pleasant than those that offered Hecatombs. *Pythagoras* buried him; his Tomb carried this Inscription

*Of wisdom I comprise the utmost bound;
Who further would be satisfied, must sound
Pythagoras, of Greeks the most renown'd.*

Some affirm he was the first that writ in Prose, which others ascribe to *Cadmus*. He writ

Heptamuchos or *Thocrasia*; perhaps the same with his *Theology*, ten Books containing the Origin and Succession of the Gods (if not mistaken for the *Theogony* of the Younger *Pherecydes*) an obscure dark work, the Allegories whereof *Isidore* cited by *Clemens Alexandrinus* conceives taken from the Prophecy of *Cham*.

Concerning this Book there is extant an Epistle under the name of *Pherecydes*, but may well be suspected to be spurious.

Pherecydes to Thales.

Well may you die whenever your fatal hour arrives; as soon as I receiv'd your Letter I fell Sick, was over-run with Lice, and had a Fever; whereupon I gave order to my Servants, that as soon as I was Buried they should carry the Book to you; if you, with the rest of the Wise Men approve it, publish it; if you approve it not, publish it not, for me it doth not please; there is no certainty in it: whatsoever the Theologist saith, you must understand otherwise; for I write in Fables, constrain'd by my Disease. I have not admitted of any Physician or Friend, but when they came to the door, and ask'd how it was with me, putting my Finger out at the Key-hole, I shewed them how desperate I was, and bespoke them to come on the Morrow to the Funeral of *Pherecydes*.

There was another of this name of the same Island, an Astrologer: There are more mentioned by *Suidas*.

THE HISTORY OF PHILOSOPHY.

The second Part,

Containing the *Ionick* Philosophers.

ANAXIMANDER.

CHAP. I.

Of his Life.

^a Laert. pref.

Philosophy had a twofold beginning, one from *Anaximander*, another from *Pythagoras*. *Anaximander* was Disciple to *Thales*, whence that Philosophy was called *Ionick*; *Thales* being an *Ionian*, for he was of *Miletus*. *Pythagoras* was Disciple to *Pherecydes*; that King of Philosophy called, from the Place where he taught, *Italic*. *Thales* was succeeded by *Anaximander*, *Anaximander* by *Anaximenes*, *Anaximenes* by *Anaxagoras*, *Anaxagoras* by *Archelaus*, in whom (as *Plutarch Laertius* and others affirm) it ended, *Socrates* (the Scholar of *Archelaus*) introducing Morality.

^b Cic. acad. quest. 4.

^c Suid.

^e 4.

^f Clem. Alex.

^g Strom. 1.

^h Laert.

Anaximander a *Miletian*, & Countryman, Companion and ^c Kinsman of *Thales*; was his Disciple also, and ^a Successor in the Propagation of his Doctrine; Son of *Praxiades* (corruptly called by ^e some *Praxidamus*) born the third Year of the 42d Olympiad. ^f He flourished most in the time of *Polycrates*, Tyrant of *Samos*.

ⁱ Suid.
^j Strab. lib. 1.

^k He demonstrated the Compendium of Geography; ^l being next *Homer*, the first Master of that Science; he first set forth a Geographical Table, of which *Laertius* is to be understood, who affirms, *He design'd the Circumference of the Sea and Land*.

^m Plin. 2. 8.

ⁿ Laert.

^o Suid.

^p Laert.

^q In the 50th Olympiad he found out the Obliquity of the Zodiack, that is (saith *Pliny*) *he opened the Gates of all things*. ^r He invented the *Gnomon*, and set up the first in an open place at *Lacedemon*. ^s He found out the *Æquinoctial Solstices* and *Horologies*; ^t He framed *Horoscopes* to denote the *Topicks* and *Æqui-*

noxes; whence ^m *Salmafius* conceives the use of his Dial was only to delineate the *Tropick* and *Equinoctial* points; that they did not serve to distinguish the hours or twelve parts of the day, he proveth, because the very name *ωε* in that sense or the division of the day into twelve equal parts, was not known a long time after.

ⁿ He advised the *Lacedæmonians* to quit their City and Houses, and to lie armed in the open Field, foretelling an Earth-quake which threw down the whole City, and tore away a piece of the Mountain *Taygetus*.

^o As he sung, the Boys used to deride him, whereupon he said, We must learn to sing better for the Boys.

Of his Auditors are remembered *Anaximenes* and *Parmenides*.

Of his Writings, these.

^p *Περὶ φύσεως*, *Of Nature*. This Treatise perhaps *Laertius* means, who saith he digested his Opinions into Commentaries, which Book ^q fell into the hands of *Apollodorus* the *Athenian*.

Γῆς περίοδος.

Περὶ τῶν ἀπλανῶν.

Of the Sphere, with other things.

He was, according to *Apollodorus* 64 years old the second year of the 58th Olympiad, and died soon after.

CHAP.

CHAP. II.

Of his Opinions.

Se^ct. 1. That Infinity is the principle of all things.

^a Acad. quest. 4. **T**hales (saith Cicero) * who held that all things consist of Water, could not perswade his Countryman and Companion Anaximander there-
^b De plac. phil. 1. to, for he asserted That Infinity is that whereof all things were made, or (according to ^b Plu-
^c Paven. ad tarch Laertius and ^c Justin Martyr, that it is Grac. the principle and Element of things (for these two he confounded, as was observed of his Master Thales) ^d but not declared what this in-
^d Laert. finity is, whether Air, Water, Earth, or any other Body, for which he was condemned by Plutarch.
^e Symplic. in That it is ^e one, infinite in magnitude (not Phys. 1. 2. number) whence ^f Aristotle reprehends him Phys. 1. 5. for imagining contrarieties can proceed from ^f Plut. plac. the same Principle. ^g That it is for that Reason Phil. 1. 3. is infinite, that it may not fail.
^g Laert. ^h That the parts thereof are changed; the h Cap. 6. whole is immutable. ⁱ (Simplicius saith movea-
ⁱ Cicero dead. ble) ^k That out of it all things proceed, and quest. 4. resolve into it.
^k Plut. plac. ^l That there are infinite Worlds generated which Phil. 1. 3. corrupt into that whereof they were generated, ^l Just. Mart. pa-
^{ren.}

Se^ct. 2. Of the Heavens.

¹ De nat. deor. 1. **H**IS Opinion (according to ¹ Cicero) was,
^m Plac. phil. that the Gods are native (having a be- 1 7. ginning) rising and setting by long Intervals, and that there are innumerable Worlds : This ^m Plu-
ⁿ Stob. tarch and Stobæus apply to the Heavens and Stars. But how can we (adds Cicero) under-
stand a God that is not Eternal. ⁿ That Heaven consists of cold and heat mixed.
That the Stars are globous instances consisting of Air full of Fire, respiring Flames at some certain
^o Stob. part : ^o mov'd by the Circles and Spheres where-
in they inhere ; which assertion Aristotle bor-
rowed from hence.
^p Stob. ^p That the Sun is seated highest, the Moon next, then the fixed Stars and Planets.
^q Plut. plac. That the Circle of the Sun, is ^q 28 times Phil 2. 20. (Theodoret saith 26) greater than the Earth, having a hollow Circle about it like a Chariot-
Wheel, full of Fire ; in one part whereof there is

a Mouth, at which the Fire is seen as out of the hole of a Flute, which is the Sun : equal in big-
^r Plut plac. ness with the Earth. Phil. 2. 21.

^s That the cause of the Sun's Eclipse is the ^s Laert. stopping that bole in the midst, out of which the Fire issues.

^t That the circle of the Moon is 29 times ^t Plut. plac. greater than the Earth, like a Chariot Wheel, ha- Phil. 2. 24. ving a hollow Orb, in the midst full of Fire (like ^{Stob.} the Sun) and oblique, breathing Fire out at one part as out of a Tunnel.

^u That the Eclipse of the Moon happens accor- ^u Plut. plac. ding to her Conversions, when the Mouth out of Phil. 2. 25. which the Fire issueth, is stopped.

^w That the Moon hath a light of her own : ^w Plut. plac. but very thin; ^x that she shineth in the Light she Phil. 2. 28. borroweth from the Sun; which two assertions ^x Laert. are so far ^y from being inconsistent, that it is the ^z As a Learned common opinion ^z both are true. Person conceives upon those words of Laert.

Se^ct 3. Of Meteors.

^b **T**hat wind is a fluxion of the air, when ^a See Erasmi. the most subtle and liquid parts thereof Reinholdus in Theoricis Py-
^c are either stirred or resolved by the Sun. bachii Pag.

^c That Thunders, Lightnings, Presters, and ^{164.} Whirl-winds are caused by the wind enclosed in ^b Plut. Plac. a thick Cloud, which by reason of its lightness Phil. 3. 7. breaketh forth violently ; the Rupture of the ^c Plut. plac. Cloud maketh a crack, and the divulsion by Phil. 3. 3. ^{Stob.} reason of the blackness causeth a flashing

Light. ^d Seneca more expressly, He ascribed all ^d Nat. quest: to wind. Thunder (saith he) is the sound of a 2. 18. breaking Cloud : Why unequal ? because the

breakings are unequal. Why doth it thunder in a clear day ? Because even then the wind breaks through the thick and dry air. Why sometimes doth it thunder and not lighten ? Because the thinner and weaker Spirit is able to make a flame but not a sound. What is Lightning ? The agitation of the Air severing it self, and rushing down, disclosing a faint Fire. What is Thunder ? The motion of a piercing thick spirit:

^e All things are so order'd, that some influence ^e Sen. nat: descend from the Æther upon inferiour things; so quest. 2. 19. Fire sounds, forc'd upon cold Clouds : When it breaks them it shines; the fewer Flames beget Lightnings, the greater, Thunder : A great part, the rest was altered from its natural kind by its excessive Heat.

^f That the first Creatures were bred in humi- ^f Plut. Plac. dity, and enclosed within sharp thorny Barks, ^g Phil. but as they grew older, they became drier, and Phil. at last the Bark being broken round about them, they lived some little time after it.

ANAXIMENES.

CHAP. I.

His Life.

^a Laert.
^b Simplic.
^c Cic. acad.
quæst. Plin. 2.
76.
^d Suid.

^e Laert.

^f Lib. 2.

ANaximenes, was a *Milesian*, Son of *Euristratus*, ^b Friend, ^c Disciple and Successor to *Anaximander*. According to *Eusebius* he flourished in the second year of the 56th Olympiad. ^d *Suidas* saith he liv'd in the 55th Olympiad at the taking of *Sardis* when *Cyrus* overthrew *Craesus*. So that the account of ^e *Apollodorus* (who affirms he was born in the 63d Olympiad) is corrupt. He heard also, as some affirm, *Parmenides*. He used the Ionick Dialect, plain, and incompofed. ^f *Pliny* calls him the Inventor of *Gnomonicks*; but perhaps it is a mistake for *Anaximander*. Of his auditors were *Anaxagoras* and *Diogenes Apollonites*. These two Epistles of his are preserved by *Laertius*.

Anaximenes to Pythagoras.

THales having lived happily even to old age, ended his days unfortunately. One night going out of his House (as he used) with his Maid, to contemplate the Stars, gazing, and not taking heed to the place, he lighted upon a precipice and fell down. This was the fate of the *Milesian* Astronomer. But let us who were his Auditors, preserve the Memory of the Person, and our Sons and Auditors after us. Let us still retain his Sayings, and begin all our Discourses with *Thales*.

Anaximenes to Pythagoras.

YOU are more advised than we, who leaving *Samos* for *Crotona* live there in quiet; the *Eacides* prove injurious to others, and the *Milesians* want not Tyrants of their own choosing. The King of *Media* is likewise terrible to us, but would not be so, should we pay him Tribute. The *Ionians* are resolved to war with the *Medes* for the general Liberty, and if they fight we have no hope of Safety. How then can *Anaximenes*, perplexed with fear of death and Slavery apply his Mind to Celestial Speculations? But you are coveted by the *Crotonians*, and all *Italians*; Auditors come to you as far as from *Sicily*.

CHAP. II.

His Opinions.

SECT. 1. That the Air is the Principle of all things.

HE held that the Air is the Principle of the Universe, of which all things are engendred, and into which they resolve; our Souls by which we live are Air, so Spirit and Air contain in being all

the World, for Spirit and Air are two names signifying one thing.

That ^a the Air is God, begotten, immense, ^a *Cic. de nat. de r. 1.* infinite, ever in motion; ^b but that those things ^b *Cic. acad. quæst. 4.* which arise out of it are finite, First is begotten, Earth, Water, Fire, then of these all things. That the Air is God understands of the faculties penetrating through the Elements or Bodies.

SECT. 2. Of the Heavens.

THAT ^c the outward Superficies of Heaven is ^c *Plut. plac. phil. 2. 11.* Earthly.

That the Stars are of a fiery Substance; invincible, Earthly Bodies intermixt with them; that they are inherent, as nails in Chrystal.

That ^d they are forced back by the thick resting Air, ^e and move not above (or under) but ^e *Plut. plac. phil. 2. 23.* about the Earth. ^f *Laert. Plut. plac. phil. 2. 19.*

^g That the Sun is flat as a plate, of fiery substance. ^g *Plut. plac. phil. 2. 19.*

That ^h the Signs of Summer and Winter come ^h *Plut. plac. phil. 2. 19.* not by the Moon, but by the Sun only.

That ⁱ the Sun is eclipsed when the Mouth ⁱ *Plut. plac. phil. 2. 24.* out of which issueth his heat, is closed.

That the Moon is likewise of a Fiery Nature. *Plut.*

That the Moon is eclipsed when the Mouth *Plut. plac. phil. 2. 29.* out of which issueth her heat, is closed.

SECT. 3. Of Meteors.

THAT the Clouds are made by condensation of *Plut. plac. phil. 3. 4.* Air, Rain by condensation of the Clouds, out of which it is squeezed; Snow of Rain congeal'd in falling, and Hail of the same, contracted by a cold Wind.

Concerning Thunder, Lightning, &c. To the assertion of *Anaximander* he added the comparison of the Sea, which being broken with Oars shineth.

That the Rainbow is made by reflection of the Sun-beams upon a thick Cloud, which, not *Plut. de plac. phil. 3. 5.* able to pierce it, are refracted upon it.

That Earthquakes proceed from the rarity and dryness of the Earth, one being caus'd by excessive heat, the other by excessive cold. Further explained by ⁱ *Aristotle* thus; He held that the Earth, *Plutarch de plac. 3. 15.* as well when it is moist as when it is dry, breaketh, and by these great pieces thereof which use to ^j *Senec. nat. quæst. 5. 10.* fall upon it, is shaken: Hence it is that Earthquakes happen either in droughts or great Rains: by droughts it is broken, and by great Showers excessively moistened parts likewise in sunder.

He called the contraction and Condensation *Plut. de of matter, cold; the laxation and rarity thereof, primo frig. heat; whence a Man breaths out of his Mouth both hot and cold; his breath compressed by his Lips, and condens'd is cold; but breathed forth with an open Mouth is hot by reason of the rarity.*

ANAXA-

ANAXAGORAS.

CHAP. I.

Anaxagoras's Country, time, and study of Philosophy.

Laert.

^a Plut. contra
usur. Lysand.
^b Tusc. quest. 5.
^c De orator. 3.

^d Hip. mai.

^e Laert.

^f Cicer. de nat.
deor. 1.

^g Laert.

ANaxagoras was of *Glazomenæ*, Son of *Hegesibulus* or *Eubulus*, born in the 70th Olympiad according to *Apollo-dorus*; in the first year thereof; Eminent for his noble birth and wealthy fortunes, but more for his magnanimous Contempt of them. ^a He left his Lands and Patrimony, (saith ^b *Cicero*.) to learn and obtain the Divine light of Philosophy: And ^c converted himself from civil Affairs to the knowledge of things. *Snidas* affirms he left his Grounds to Sheep and Camels to be eaten up: And therefore *Apollonius Tyaneus* said, he read Philosophy to Beasts rather than to Men. ^d *Plato* derides him for quitting his Estate; *Laertius* reports he assign'd it to his Friends; whereupon being by them accused of improvidence; why (answered he) *do not you take care of it?* To one who reproved him, as taking no care of his Country. *wrong me not*, saith he, *my greatest Care is my Country*, pointing to the Heavens. To another, asking for what end he was born, he answered, *to contemplate the Sun Moon, and Heavens*. ^e In fine, he withdrew himself to contemplation of natural Philosophy not regarding civil affairs. In this Study *Anaximenes* was his Master ^f from whom he received his Learning.

^g In the twentieth year of his Age the first of the 75th Olympiad, *Colliades* being Archon (whom *Laertius* corruptly calls *Callias*) at the time of *Xerxes's* Expedition into *Greece* he went to *Athens* to study Philosophy, where he continued thirty Years, and was honoured with the Title of *Nú̄s the Mind*, as being the first that added that principle to Matter; so *Amon*.

Where dwells fam'd Anaxagoras, the Mind,

For he that Agent first to matter join'd,
Which things confused orderly design'd.

^h Laert. perhaps
ἐπὶ τῇ πόλει
ἐν τῷ ἑσπέρῳ.

CHAP. II.

Of his Opinions.

Sect. 1. Of the first principles, and beginning of things.

HE held that the material principle of all things is one and many *ἑκατόμωρον* parts infinite, simular, and contrary, continuous to the touch, sustaining themselves, not contained by any other. His grounds these: First, because, according to the common Rule of natural Philosophers, of nothing proceeds nothing, it is not possible any thing can be made of that which is not; or that which hath a being can be resolved into that which hath none. Secondly, because contraries

ⁱ Plut. plac.

^j Phil. 1. 3.

^k Arist. Phys.

^l 3. 4.

^m Arist. phys.

ⁿ 3. 7.

are made mutually of each other, therefore they were in each other before; for if it be necessary, that whatsoever is made, be made of that which is, or is not, but that it should be made of that which is not impossible, wherein all agree that ever discoursed upon Nature, it follows necessarily, that they be made of things that are, and are within these very things, though by reason of their smallness, not discernable by us: Hence it is that they say, every thing is mixt with every thing; because they see any thing made of any thing: but things seem different, and are called divers in respect to one another, by reason that the multitude of Infinites which are within aboundeth in the Mixture, for the whole is neither quite white nor black, Flesh nor Bone, but every thing seemeth to be of the Nature of that whereof it hath most of simple Nourishment, as Bread, Water, ^k *Plut.* and the like, are bred the Hair, Veins, Arteries, Nerves, Bones, and other parts of the Body, all things are therefore in this food, as Nerves, Bones, and the like, discernable by Reason, though not by Sense: Of these Atomes the whole World consisteth, as Gold of Grains; ^l *Laert.* these homogeneal parts are the matter of all things, his Opinion is thus exprest by ^m *Lucre.* ⁿ *Lil. 1. 1115.*

Next *Anaxagoras* we must pursue,
And his *Homoiomeria* review;
A term that's nowhere mention'd but among
The Greeks, too copious for our narrow tongue;
Yet may the sense be in more words array'd;
The principle of all things, entrails made
Of smallest Entrails, bone of smallest bone,
Blood of small sanguine drops reduc'd to one;
Gold of small grains, earth of small Sands
compacted,
Small drops to Water, sparks to Fire contracted;
The like in every thing suppos'd, yet he
Nature asserted from all vacuum free;
And held that each corporeal Being might
Be subdivided into Infinite.

That ^a God is an infinite self-moving Mind ⁿ *Laert.* ^o *fals.* that this divine ^p infinite Mind not enclosed ^{rel. 1. 5.} in any Body, ^q is the efficient cause of all ^o *Cic. nat. deor.* things; out of the infinite matter consisting ^r of simular parts, every thing being made ^p *August. cir. del. 8. 2.* according to its Species by the divine Mind, who when all things were at first confusedly mingled together, came and reduced them to order.

Sect. 2. Of the Heavens.

That the higher parts of the World are full of Fire, the Power that is there be called *æther*, and that properly, saith *Aristotle*, for the Body, which is continually in quick motion, is conceived

Arist. Met. 1. 3.

ceived to be Divine by Nature, for that reason called *æther*, none of those that are here below being of that kind.

Plut. Plac. phil. 2. 13.

That "the ambient *æther* being of a Fiery Nature by the swiftness of its Motion, snatcheth up Stones from the Earth, which being set on Fire, become Stars, all carried from East to West.

Plut. plac. phil. 2. 16.

That "the Stars are impelled by the condensation of the Air about the Poles, which the Sun makes more strong by compressing.

Plut. plac. phil. 2. 23.

Achil. Tat. Isag. in Arat.

That the "Stars are Earthly, and that after the first Secretion of the Elements, the Fire separating it self, drew some parts of the Earth to its own Nature, and made them like Fire: whereupon he farther affirmed,

Plut. plac. phil. 2. 20.

"The Sun is a burning Plate or Stone, many times bigger than *Peloponnesus*, whose conversion is made by the repulse of the Northern Air, which he, by compressing, makes more strong.

Achil. Tat. Isag. in Arat.

Plut. plac. phil. 2. 21.

Plut. plac. phil. 2. 25.

Plut. plac. phil. 2. 30.

Laert.

In Cratyl.

That "the Moon is a dark Body, enlightened by the Sun, Habitable, having Plains, Hills and Waters; that "the inequality in her Face proceeds from a mixture, cold and Earthly, for there is Darknefs mixt with her Fiery Nature, whence she is called a Star, or false Light. "Plato saith, that the Moon was occasion of Dishonour to him, because he assumed the Original of this Opinion of her borrowing Light, to himself, whereas it was much more Ancient.

Plut. plac. phil. 3. 1.

That "the milky way is the shadow of the Earth upon that part of Heaven, when the Sun, being underneath, enlightens not all: Or as *Aristotle*, that the Milky way is the light of some Stars, for the Sun being under the Earth, looks not upon some Stars, the light of those on whom he looks is not seen, being swallowed up in his; the proper light of those which are hindered by the Earth from the Sun's illumination, is the *Galaxy*; *Laertius* saith, he held the *Galaxy* to be the reflection of the light of the Sun.

Seet. 3. Of Meteors.

Arist. Meteor. 1. 6.

That "Comets are the co-appearance of wandering Stars, which approach so near each other, as that they seem to touch one another: or as *Laertius*, "the concourse of Planets, emitting Flames.

That "falling Stars are shot down from the *æther*, as Sparkles, and therefore soon extinguished.

Laert.

Plut. plac. phil. 3. 5.

That "Thunder is the Collision of the Clouds, lightning their mutual attrition: or, as *Plutarch*, the Cold falling upon the Hot, or the *ætherial* upon the *aerial*, the noise which it makes is Thunder: of the blackness of the Clouds is caused Lightning, of the greatness of the light Thunderbolts, of the more corporeal Fire, whirl-winds, of the more Cloudy Prefers.

That "Lightning distills from the *æther*; and that from that great heat of Heaven many things fall down, which the Clouds preserve a long time enclosed.

Plut. plac. phil. 3. 5.

That "the Rain-bow is a refraction of the Sun's light upon a thick dark Cloud, opposite

to him as a Looking-glass, by the same reason (saith he) appeared chiefly in *Pontus*, two or more Suns.

That "Winds proceed from extenuation of the Air, by the Sun.

That "Earth-quakes are caused by the Air or *Æther*, which being of its own Nature apt to ascend, when it gets into the Vents and Caverns of the Earth, finding difficulty in the getting out, causeth that shaking; for the upper parts of the Earth contract themselves by the benefit of Rain, Nature having made the whole Body thereof alike, lax and spongy, the parts, as in a Ball, superior and inferior; the superior, that which is inhabited by us, the inferior, the other: This wind getting into the inferior parts, breaks the condensed Air, with the same force as we see Clouds broken, when, upon the collision of them, and motion of the agitated Air, Fire breaks forth: this Air falls upon that which is next, seeking to get out, and tears in pieces whatsoever it meets, untill through those narrow passages, it either finds a way to Heaven, or forceth one: which *Laertius* obscurely expresseth, the repulsion of the Air upon the Earth.

That "Snow is not white, but black, nor did it seem white to him, because he knew the Water whereof it is congealed to be black.

Cic. Acad. quest. 4.

Seet. 4. Of the Earth.

That "the beginning of Motion proceeding from the mind, the heavy Bodies obtained the lowest place, as the Earth; the light the highest, as the fire: those betwixt both, the middle, as the Air and Water: thus the Sea subsists upon the superficies of the Earth, which is flat, the Humidity being rarified by the Sun.

That "the primitive humidity being diffused, as a Pool was burned by the motion of the Sun about it, and the unctious part being exhaled, the remainder became Salt.

That "as soon as the World was made, and living Creatures produced out of the World, the World inclined of it self towards the South, according to Divine Providence; that some parts thereof might be Habitable, others not Habitable, by reason of the extremities of Heat and Cold.

That "the mixture of the Elements is by ap- position.

That "the inundation of *Nilus* is caused by the Snow of *Æthiopia*, which is dissolved in Summer, and congealed in Winter.

Seet. 5. Of Living Creatures.

That "Creatures were first Generated of Humidity, Calidity, and Earthly Matter; afterwards mutually of one another, Males on the right side, Females on the left.

That "the Soul is that which moveth, that it is aerial, and hath a Body of the nature of Air.

That

[†] Arist.

^b That there is a Death of the Soul likewise,
which is separation from the Body.

That all Animals have active Reason.

^c That Sleep is an Action of the Body, not
of the Soul.

^d That in the hand of Man consists all his
Skill.

^e That the Voice is made by the Wind,
hitting against firm resisting Air, returning
the counter-blow to our Ears, which is the
manner whereby also the repercussion of the
Air is formed, called Eccho.

[†] That the Gall is the cause of acute Dis-
eases, which overflowing, is dispersed into the
Lungs, Veins, and Cofts.

CHAP. III.

His Predictions.

SUidas faith, he foretold many things: of
those, two instances only have been hither-
to preserved. The first thus related by *Pliny*, *The*
Grecians celebrate Anaxagoras of the Clozome-
nian, and for foretelling by his Learning and Sci-
ence in the second year of the 78 Olympiad, on what
day a Stone would fall from the Sun, which hapned
in the day time in a part of Thrace at the River A-
gos, which Stone is at this day shewn, about the big-
ness of a Bean, of an adust colour, a Comet also
burning in those nights.

^{* Vit. Lysand.} ^{* Plutarch} adds, that it was in his time not
only shewn, but Reverenced by the *Peloponnesi-*
ans. *Eusebius* reckons the fall of this Stone up-
on the fourth of the 78. Olympiad, which is
two years after *Pliny's* Account of the Predicti-
on. *Silenus*, cited by *Laertius*, faith, it fell when
Dymilus was Archon, which if it be to be read
Dyphilus (for the other name is not to be found
near these times) will be the first year of the 84.
Olympiad. But the Marble at *Arundel House*
(graven about the 129. Olympiad, to be prefer-
red before any other Chronological Account)
expressly names the fall upon the 4th year, upon
the 77. Olympiad, when *Theogenides* was Ar-
chon, two years before. *Pliny* faith it was fore-
told. It was believed to have portended (as *Plu-*
tarch testifies) the great Defeat given to the *A-*
thentians by *Lysander* at the River *Agos* 62 years
after, viz. the 4th year of the 93d. Olympiad.

^{* Meteor. 1. 7.} Of the Wonder [†] *Aristotle* gives a very slight
account, affirming, 'it was a Stone snatched up
' by the Wind, and fell in the day time, a Co-
met hapning in those nights, which is dispro-
^{* Vit. Lysand.} ved by ^{* Plutarch}, who hath this large Dis-
course upon it: 'It is said that *Anaxagoras* did
' Prognosticate that one of the Bodies included
' the Heavens, it should be loosed by shaking,
' and fall to the Ground, the Stars are not in
' place where they were first created, they are
' heavy Bodies, of the Nature of Stone, shining
' by the reflection of the æther, being drawn up
' by force, and kept there by the violence of
' that circular motion, as at the beginning in the
' the first separation of things, cold and heavy
' they were restrained. There is another Opinion
' more probable which faith, those which we
' call falling Stars are not fluxions of the æther
' extinguishd in the Air almost as soon as lighted,
' nor inflammations or combustions of any part

of the Air, which by it spreadeth upwards, but
they are Coelestial Bodies failing of their re-
tention by the ordinary course of Heaven
thrown down, not upon the habitable Earth,
but into the Sea, which is the cause we do not
see them; yet the assertion of *Anaxagoras* is
confirmed by *Damachus*, who writeth in his
Book of Religion, that 75 days together be-
fore this Stone fell, they saw a great body of
Fire in the Air, like a Cloud enflamed, which
carried not in one place, but went and came,
uncertainly removing, from the driving where-
of issued flashes of Fire that fell in many pla-
ces like falling Stars; when this great Body of
Fire fell in that part of the Earth, the
Inhabitants emboldned, came to the place to
see what it was, and found no appearance of
fire, but a great Stone on the ground, nothing,
in comparison of that Body, of Fire. Herein
Damachus had need of favourable hearers: But
if what he faith be true, he confuteth those
Arguments who maintain it was a piece of a
Rock by the force of a boistrous Wind torn
from the top of a Mountain, and carried in the
Air so long as this Whirl-wind continued, but
so soon as that was laid, the Stone fell imme-
diately; unless this Lightning Body which ap-
peared so many days was fire indeed, which
coming to dissolve, and to be put out, did be-
get this violent Storm of force to tear off the
Stone, and cast it down.

This it is likely ^{* Charimander} meant, who ^{† Senec. nat.}
in his Book of Comets faith, *Anaxagoras* obser-
ved in the Heavens a great unaccustomed light
of the likeness of a huge Pillar, and that it shi-
ned for many days.

The other memorable Prediction of *Anaxago-*
ras was [†] of a Storm, which he signified by go-
ing to the Olympick Games, when the weather
was fair, in a shaggy Gown, the Rain pouring
down, all the *Grecians* (faith *Ælian*) saw and
gloried that he knew more Divinely than accor-
ding to Human Nature.

CHAP. IV.

His Scholars and Auditors.

THese are remembered as his Scholars and
Auditors.

^{* Pericles} Son of *Xantippus* being instructed ^{* Cicer.}
by *Anaxagoras*, could easily reduce the exercise
of his mind from secret abstrusive things to
publick popular causes: ^b *Pericles* much e-
steemed him, was by him instructed in Natural ^{b Plut. vit.}
Philosophy; and besides other Virtues, freed ^{Peric.}
from Superstitious fears arising from ignorance
of Physical Causes; whereof there is this in-
stance, the head of a Ram with but one horn
being brought to *Pericles*, was by the South-
sayers Interpreted prodigious: *Anaxagoras* o-
pening it, shewed that the Brain filled not its
natural place, but contracted by degrees in an
oval form toward that part where the horn grew.
Afterwards *Anaxagoras* neglected and decrepit
with age in a melancholy resentment thereof
lay down and coverd his face, resolving to
starve himself; which *Pericles* hearing, came
immediately to him, bewailing, not *Anaxagoras*,
but himself, who should lose so excellent a
Coun-

Counsellor: *Anaxagoras* uncovering his Face, said, They, *Pericles*, who would use a Lamp, must supply it with Oyl.

Archelaus, Son of *Apollodorus*, was Disciple to *Anaxagoras*, and, as *Laertius* affirms, called the Natural Philosopher for first bringing that kind of Learning to *Athens*; but now that consists with his Relation to *Anaxagoras*, who, as he acknowledgeth, Studied Natural Philosophy thirty years in *Athens*, *Casaubon* justly questions.

* His words (because never published) these:

ἡ ἀναξαγόρας
τὴν κλαζο-
μήνην τρε-
ψάντων δὲ
ἀρετῶν
ἀναξαγόρας
ἰδὼν ἑαυτὸν
τὰ δὲ εἶπε
ἡσυχάζειν
μετα

Euripides, * as the writer of his Life affirms, Son of *Mnesarchus*, born at the first time of *Xerxes's* Expedition into *Greece*, the same day that the *Grecians* overthrew the *Persians*, was first a Painter, then an Auditor of *Anaxagoras*; but seeing him Persecuted for his Opinions, lastly converted himself to Tragick Poesie.

Socrates, Son of *Sophoniscus*, was, according to *Aristoxenus*, an Auditor of *Anaxagoras* till he left the City, and thereupon apply'd himself to *Archelaus*, which *Porphyry* reckons above the 17th. year of his Age, or rather the nineteenth.

Democritus also is by some affirmed, being younger than *Anaxagoras* forty years, to have applied himself to him; but *Laertius* affirms he could not endure *Democritus*, and shunn'd his Conversation; *Phavorinus* likewise attests, that because he would not admit him, *Democritus* profess'd himself his Enemy, and denied his Opinions of the Sun and Moon, but said they were ancient, and that he stole them, as likewise his Description of the World, and the assertion concerning the Mind.

Metrodorus of *Lampsacum* is likewise mentioned by *Laertius* as friend to *Anaxagoras*.

CHAP. V.

Of his Trial, Death, Sentences, and Writings.

OF his Trial, faith *Laertius*, there are several Reports. *Sotion* in his Treatise of the Succession of Philosophers faith, he was accused by *Cleon* of Impiety, for asserting the Sun to be a burning Plate; but being defended by *Pericles* his Scholar, he was Fined five Talents and Banished.

Satyrus, that he was Cited to the Court by *Thucydides*, who was of the contrary Faction of *Pericles*, accused not only of Impiety, but of holding Intelligence with the *Persians*, and in his Absence Condemned to Death; when news was brought him at the same time both of the death of his Sons, which (according to *Ælian*) were two, all that he had, and his own Condemnation, of the latter, he said, Nature long since Condemned both them and me to Death. Of his

Sons * (with a calm Look) * You tell me nothing new or unexpected; I knew that I begat them mortal, which some ascribe to *Solon*, others to *Xenophon*; *Demetrius Phalereus* faith, he buried them with his own hands.

Hermippus, he was Imprison'd to be put to Death, but *Pericles* appearing before the Judges, asked if they knew any thing in his Life that they could accuse? to which they answered nothing; but I, faith he, am his Disciple, then be not transported by Calumnies to kill the Man, but believe me and set him at Liberty; so he

was dismissed, but not able to brook the disgrace, he killed himself.

Hieronymus faith, that *Pericles* brought him ^{Laert.} into the Court in poor Garments extenuated with Sickness, an Object fitter for Compassion than Justice. And thus much faith *Laertius* of his Trial.

Suidas, that he was cast into Prison by the *Athenians* for introducing a new Opinion concerning God, and Banish'd the City, tho' *Pericles* undertook to plead his Cause, and that going to *Lampsacum*, he there starved himself to Death.

Josephus, that the *Athenians* believing the Sun to be God, which he affirmed to be without Sense and Knowledge, he was by the Votes of a few of them Condemned to Death.

But if we credit ^{Vit. Pericl.} *Plutarch*, he was neither Condemned nor Accused but by *Pericles*, who feared the Ordinance of *Diopithes*, which Cited those which held Prophane or Sublime Opinions sent out of the City. * Yet elsewhere he confesseth he was accused. ^{De superst.}

His departure from *Athens* being thirty years after his coming thither, falls the third year of the eighty second Olympiad, the sixty third of his Age. Thence he went to *Lampsacum*, where he continued the rest of his Age, which extended to twenty two more, so little mindful of *Athens*, or of his Country, as to one, who told him that he was deprived of the *Athenians*; he answered, no; but they of me; and

to his Friends who, when he fell sick, asked if ^{Cic. Tusc. quest. 1.} he would be carried to *Glazomona* his Country; no, said he, there is no need, the way to the

Grave is alike every where. ^{Plut. in- strucl. Polit.} Before he died, the Magistrates of the City asked him if he would they should do any thing for him; he answered, that his only Request was, that the Boys might have leave to play yearly on that day of the Month, whereon he died; which Custom (faith *Laertius*) is continued to this time. Those of *Lampsacum* Buried him Magnificently, with this Epitaph.

*Here lies, who thro' the truest Paths did pass
O' th' World Celestial, Anaxagoras.*

Ælian mentions two Altars erected to him; one inscribed to the Mind, the other to Truth. *Laertius* concludes his Life with this Epigram.

*Fam'd Anaxagoras the Sun defin'd
A burning Plate, for which to die, design'd:
Sav'd by his Scholar Pericles; but he
* Abandon'd Life to seek Philosophy.* ^{* Ælian.}

† He is observed never to have been seen either to laugh or smile. ^{† Laert.}

* Being demanded if the Mountains of *Lampsacum* would in time become Sea; he answered, yes, if time fail not first. ^{* Laert.}

† Beholding the Tomb of *Mausolus*, he said, ^{† Laert.} a sumptuous Monument was a sign the substance was turned into Stone.

* He first affirmed the Poesie of *Homer* to consist of Vertue and Justice; to which *Metrodorus* added, that the Poet was skilful in Natural Philosophy. ^{* Laert.}

* He conceived that there were two Lessons of Death, the time before our Birth, and Sleep. ^{* Stob.}

Laertius

Laertius and Clemens Alexandrinus assert him first of the Philosophers that put forth a Book. He writ

Of Natural Philosophy, out of which Aristotle cites the fragments, *All these things were together*: which was the beginning of the Book: and, *To be such is to be changed.* ° Plato this, *the Mind is the disposer and cause of all things.* ° Athenæus this, *what is commonly called the Milk of the Hen, is the White of the Egg.* ° Plato Censures the Book as not using the Mind at all, nor assigning

any Cause of the Order of Things, but Aerial, Ætherial, and Aquatick Natures, and the like incredible things for Causes.

The Quadrature of the Circle; which Treatise, Plutarch saith, he Compos'd during his Imprisonment. De caul.

There were three more of the same Name; ° Laert. the first an Orator, follower of Isocrates: the second a Statuary, mentioned by Antigonius: the last a Grammarian, Scholar to Zenodotus.

ARCHELAUS.

ARCHELAUS was either an Athenian or a Milesian; his Father Apollodorus, or according to some, Mylon; he was Scholar to Anaxagoras, Master to Socrates. He first transferr'd Natural Philosophy out of Ionia to Athens (but how that can be, when Anaxagoras his Master taught there thirty years, Casaubon justly questions) and therefore was called *the Natural Philosopher*: In him Natural Philosophy ended, Socrates his Scholar introducing Morality; but he seems also to have touch'd Moral Philosophy, for he treated of Laws, of things Honest and Just; from whom Socrates receiving his Learning, because he encreased it, is therefore thought to have invented it; whereas as Gassendus observes, Moral Philosophy was far more Ancient, that being the principal ground of the Attribute of *Wise* conferred upon the Seven, whose Learning lay chiefly that way: but Socrates is called the Author thereof, because he first reduced it to a Science. Archelaus asserted,

That Principles of all things are twofold, one incorporeal, † the Mind, (not Maker of the World) the corporeal, infinite in number, and dissimilar * which is the Air, and its rarefaction and condensation, whereof one is Fire, the other Water.

That the Universe is infinite.

That the Causes of Generation are two; heat and cold.

That the Stars are burning Iron Plates.

That the Sun is the greatest of Stars.

That the Sea is made by percolation of the hollow parts of the Earth.

That living Creatures are Generated of Slime or warm Earth, emitting a milky kind of Slime like the Chile; that this humid matter being dissolved by the Fire, that of it which settles into a fiery substance is Earth, that which evaporates is Air.

That the Winds getting into the hollow places of the Earth, filling all the spaces, the Air condensed as much as possible, the Wind that comes next presseth the first, forcing and disturbing it by frequent impulsions. This Wind seeking a Room through the narrow places, endeavoureth to break Prison, whereby it happens the Wind struggling for Passage, that the Earth is moved. Sen. Nat. quest. 6. 12.

Of the definition of the Voice, by Plutarch attributed to Anaxagoras, Laertius makes Archelaus the Author, describing it a percussion of the Air.

That what is Just, or Dishonest is defined by Law, not by Nature.

† These five, Thales, Anaximander, Anaximenes, Anaxagoras, Archelaus, by continual Descent succeeding one another, compleat the Ionick Sect. Plut. Laert.

THE
HISTORY of PHILOSOPHY.

The Third Part.
Containing the Socratick Philosophers.

SOCRATES.

CHAP. I.

Socrates his Country, Parents, and time of Birth.

Lucit.

SOCRATES was by Country an *Athenian*, born at *Alopece*, a Town, according to *Suidas* and *Phavorinus*, belonging to the *Antiochian* Tribe. This was one of those small Villages scattered through *Attica*, before *Theseus* Reduc'd the People within the Walls of a City, which notwithstanding

notwithstanding his Decree, were not deserted, but continued and preserved by their Inhabitants.

His Parents were very mean; * *Sophroniscus* (an *Athenian*) his Father; * a Statuary, or Carver of Images in Stone; *Phanareta*, his Mother a Midwife, a Woman of a Bold, Generous and quick Spirit, as is implied by the Character * *Plato* gives her, (though wrested by * *Athenæus*) of which Professions of his Parents, he is * observed to have been so far from being ashamed, that he often took occasion to mention them.

Apollodorus, *Laertius* and *Suidas* affirm he was born in the fourth year of the seventy seventh Olympiad; which may likewise be collected from the Marble at *Arundel-House*, which saith, he died when *Laches* was *Archon*, and reckons seventy years of his Life, which was compleat, because * *Plato* says *παλει ἐς δυνάμει* and from * *Demetrius Phalereus* (who was himself *Archon* the fourth year of the hundred and seventeenth Olympiad) who saith, he died the first year of the ninety fifth Olympiad, when he had lived seventy years, the seventieth year inclusively upwards, is the fourth of the seventy seventh Olympiad, when *Apsephion*, (or, as some call him, *Aphepsion*) was *Archon*, of whose Name, in * *Diodorus Siculus*, no more

is left than * *φαιβ* which should be *ἀφαιβ* but hath been incuriously alter'd into *φαιβ* which if † *Meursius* had observed, he had not corrected *Laertius* without cause, nor he and *Allatius* followed the mistake of *Scaliger* (whom they term *Anonymus*) in placing *Aphepsion* in the fourth year of the seventy fourth Olympiad.

The day of *Socrates* Birth, was * according to *Apollodorus*, the sixth of the Month *Thargelion*, memorable (saith *Laertius*) for the birth of *Diāna*, according to the Traditions of the *Delians*, upon which day the *Athenians* did yearly illustrate their City. Many other good Fortunes happening to the *Athenians* upon this day are * Recorded by * *Ælian*. The day following, viz. the seventh of this Month was the Birth-day of *Plato*, both which were kept with much Solemnity by the *Greek* Philosophers (* even to the time of *Plotinus*) as is affirmed by * *Plutarch*, who thereupon observes it as the effect rather of Providence, than of Chance, that their Birth-days should be so near, and that of the Master precede the Scholars.

To accommodate this time with our Account, is neither easie nor certain, yet in respect it may give some satisfaction by way of conjecture, we shall found it upon these Hypotheses, taking that order of Months which *Petavius* gives.

1. That after the Olympiads, the beginning of the *Grecian* year was always on the first of *Hecatombæon*, and Olympick Games on the fifteenth.

2. That the Neomenia of *Hecatombæon*, did (at least in the times wherein we enquire) never precede the Solstice, being then about the Calends, or *pridie Calendarum Julii*, they supposing them in *octavis signorum*, it did not precede the ninth of *July*. This *postulatum*, tho' it be doubly question'd by *Petavius*, yet none of his Arguments pretend beyond *Meton's* time,

3. That upon that supposition, if *Scaliger* hath rightly order'd the Neomenia in his Olympick Period (against which *Petavius* brings no one sufficient Argument) and consequently the rest, the Olympick Period doth certainly exhibit the Neomenia of *Hecatombæon*. It is true, that *Petavius* disputes the Period of seventy six years, as having never been used till *Calippus* his time, but we take it here only proleptically, as the *Julian* year, to which we would accommodate it.

4. That this being after *Solon's* time, the Civil year was *Lunary* (and consisted of Months, which were alternately of twenty nine, and thirty days,) at *Athens*, though divers places of *Greece*, especially the more remote from thence, did not for a long time after part with their tricenary Months.

These things supposed the sixth of *Thargelion*, (will, according to the *Julian* Account, taken proleptically) fall upon *Tuesday* the twentieth of *May*: according to the *Gregorian*, upon *Tuesday* the thirtieth of *May*, in the year of the *Julian* Period 4247, before the Incarnation 467 years, the fourth year of the seventy seventh Olympiad, at which time *Socrates* was born.

CHAP. II.

His first Education.

Plutarch saith, * that as soon as he was born, * *Sophroniscus* his Father consulting the Oracle, was by it advis'd to suffer his Son to do what he pleas'd, never compelling him to do what he disliked, nor diverting him from that whereto he was enclined; to give thanks for him by Sacrifice to *Jupiter Agoræus* and the Muses; to be no farther solicitous for him, he had one guide of his Life within him, better than five hundred Masters

But his Father not observant of the Oracle's Direction, apply'd him to his own Trade of Carving Statues, contrary to his inclination, whereupon † some have argued him of Disobedience, reporting that often times, when his Father bad him work, he refused, and went away, following his own will.

His Father dying, left him (according to * *Libanius*) fourscore Minæ, which being entrusted with a Friend for Improvement, they miscarried. This Loss (though it were of all his Stock, and he thereby reduced to incredible Poverty) *Socrates* pass'd over with Silence, but was thereupon necessitated to continue his Trade for ordinary Subsistence. † This *Suidas* intimates when he saith he was first a Statuary. * *Duris*, † *Pausanias*, and the Scholiast of *Aristophanes* affirm three Statues of the Graces† clothed, (for so they were most anciently made, not naked) set up before the entrance into the Tower at *Athens*, were his Work. *Pausanias* implieth as much of a Statue of *Mercury* in the same place; which † *Pliny* seems not to have understood, who saith, they were made by a certain Person named *Socrates*, but not the Painter. Hence *Timon*.

* De Gen. Scet
† Aristoxenus
Apud Theodor.
de Græc. affect.
cur. lib. 12.

* Apol. Sec.

† Laert.

* Lib. 9.
† In nub.

† 36. 5.

*From these the Fluent Statuary came,
Honour'd through Greece, who did against the
Name
Of Orator Abusively declaim.*

But being naturally averse from this Profession, he only followed it when necessity enforced him: *Aristoxenus* saith, he wrought for Money, and laid up what he got till it came to a little Stock, which being spent, he betook himself again to the same course.

These intermissions of his Trade were bestowed upon Philosophy; whereunto he was naturally addicted, which being observed by *Crito* a Rich Philosopher of *Athens* † he took him from his Shop, being much in Love with his Candor and Ingenuity, and instructed, or rather gave him the means to be instructed by others; taking so * much care of him, that he never suffered him to want necessities. And though his Poverty were at first so great as to be brought by † some into a Proverb, yet he became at last, as * *Demetrius* affirms, Master of a House, and fourscore Minæ, which *Crito* put out to Interest: But his Mind (saith † *Libanius*) was raised far above his Fortune, and more to the advantage of his Country; not aiming at Wealth, or the acquisition thereof by sordid Arts, he considered that of all things which Man can call his, the Soul is the chief; that he only is truly happy, who purifies that from Vice; That the only means conducing thereto, is Wisdom, in pursuit whereof he neglected all other ways of Profit and Pleasure.

CHAP. III.

His Master.

THE first Master of *Socrates* was * *Anaxagoras*, whereby, amongst other Circumstances, it is demonstrable, that the account of *Laertius* is corrupt, *Anaxagoras* not dying in the seventy eighth, but eighty eighth Olympiad.

Aristoneus saith, that as soon as *Anaxagoras* left the City, he applied himself to † *Archelaus*, which, according to *Porphyrius*, was in the seventeenth year of his age. * Of him he was much beloved, and Travelled with him to *Samos*, to *Pytho*, and to the *Isthmus*.

He was Scholar likewise to *Damon*, whom *Plato* calls a most pleasing teacher of Musick, and all other things that he would teach himself, to young Men. *Damon* was Scholar to *Agathocles*, Master to *Pericles*, *Clinias* and others; intimate with *Prodicus*. He was Banished by the unjust † *Ostracism* of the *Athenians* for his excellence in Musick.

He heard also (* as he acknowledgeth) *Prodicus* the Sophist a *Cian*, whom *Eusebius* ranks in the eighty sixth Olympiad, contemporary with *Gorgias*, *Hippias*, and *Hippocrates* the Physician.

To these add *Diotyma* and *Aspasia*, Women excellently Learned, the first supposed to have been inspired with a Prophetical Spirit. By her he affirmed that he was instructed concerning Love, by Corporeal Beauty to find out that of the Soul; of the Angelical Mind, of God. See *Plato's Phædrus*, and that long Discourse in his Symposium upon this Subject, which *Socrates* confesseth to be owing to her.

Aspasia was a famous *Milesian* Woman, not only excellent her self in Rhetorick, but brought many Scholars to great Perfection in it, of whom were *Pericles* the *Athenian*, and († as himself acknowledgeth) *Socrates*.

* Of *Euenus* he learn'd Poetry, of *Ichomachus*, Husbandry, of † of *Theodorus* Geometry.

Aristagoras a *Melian*, is named likewise as his Master.

Last in his Catalogue is *Connus*, † *Nobilissimus* *fidicen*, as *Cicero* terms him, which Art *Socrates* learn'd of him in his * Old age, † for which the Boys derided *Connus*, and called him the Old Man's Master.

CHAP. IV.

Of his School and manner of Teaching.

THAT *Socrates* had a proper School, may be argued from † *Aristophanes*, who derides some particulars in it, and calls it his *Phronisterium*.

* *Plato* and *Phædrus* mention as places frequented by him and his Auditors, the *Academy*, *Lycaum*, and a pleasant Meadow without the City on the side of the River *Ilissus*, where grew a very fair Plain Tree. Thence, according to the Fable, *Boreas* snatch'd away *Orithia*, to whom, three Furlongs from thence was a Temple, and another to *Diana*.

* *Xenophon* affirms, he was continually abroad, that in the Morning he visited the places of publick walking and exercise; when it was full the Forum; and the rest of the day he sought out the most populous Meetings, where he Disputed openly for every one to hear that he would.

He did only teach, saith † *Plutarch*, when the Benches were prepar'd, and himself in the Chair, or in set hours of Reading and Discourse, or appointments of walking with his Friends, but even when he played, when he eat, or drank, when he was in the Camp or Market; finally, when he was in Prison; thus he made every place a School of Vertue.

His manner of Teaching was answerable to his Opinion, that the Soul pre-existent to the Body, in her first separate condition, endowed with perfect knowledge, by immersion into matter, became stupified, and in a manner lost, until awakened by discourse from sensible objects; whereby by degrees she recovers her first knowledge; for this reason he taught only by Irony and Induction: The first * *Quintilian* defines an absolute dissimulation of the Will more apparent than confess; so as in that, the words are different from the words, in this the Sense from the Speech, whilst the whole confirmation of the Cause, even the whole Life seems to carry an Irony, such was the Life of *Socrates*, who was for that reason called εἰρων, that is, one that personates an unlearned Man, and is an admirer of others as Wise. † In this Irony (saith *Cicero*) and Dissimulation he far exceeded all Men in pleasantness and urbanity; it is a very Elegant, sweet and facete kind speech; acute with Gravity, accommodated with Rhetorick, words, and pleasant speeches; * he detracted from himself in dispute, and attributed more to those he meant to confute, so, when he said, or thought another thing, he freely used that dissimulation which the Greeks call Irony; which *Annius* also saith, was in *Africanus*.

Induction

^a De invent. 1. *Induction is by a Cicero defined a manner of Discourse, which gains the assent of him with whom it is held, to things not doubtful, by which assents it causeth that he yield to a doubtful thing, by reason of the likeness it hath to those things whereunto he assented: This kind of Speech Socrates most used, because he would not himself use any argument of persuasion, but rather chose to work something out of that which he granted him with whom he disputed, which he, by reason of that which he already yielded unto, must necessarily approve; of which he gives a large example in Plato's ^b Meno. Thus, whosoever disputed with him of what subject soever, (^c his end being only to promote Vertue) was at last brought round about to give an account of his Life past and present, whereinto being once entred, he never gave him over till he had sufficiently examined those things, and never let them go (a Proteus like) till they came at last to themselves.*

For this reason ^c he used to say, his skill had some affinity with that of his Mother, he being like a Midwife, tho' barren (as he modestly affirms) in himself, endeavour'd with a particular gift in assisting others, to bring forth what they had within themselves; ^f and this was one reason why he refused to take Money, affirming that he knew nothing himself, and that ^g he was never Master to any.

These disputes of Socrates were committed to writing by his Scholars, wherein ^h Xenophon gave example to the rest, in doing it first, as also with most punctualness, as Plato with most Liberty, intermixing so much of his own, as it is not easie to distinguish the Master from the Scholar; ⁱ whence Socrates hearing him recite his *Lysis*, said, how many things doth this young Man feign of me? And ^k Xenophon denying Socrates ever disputed of Heaven, or of natural Causes, or the other Disciplines which the Greeks call *μαθηματικά*, saith, they, who ascribe such dissertations to him, lye falsely, wherein (as ^l A. Gellius observes,) he intends Plato, in whose Books Socrates discourseth of Natural Philosophy, Musick, and Geometry.

CHAP. V.

Of his Philosophy.

^a Histor. Eccles. 10. 36. **P**Orphyrius (who was so abusive, as ^a Nicephorus observes, that he traduced Socrates with no less bitterness, than as if he endeavour'd to out-do his accusers, Anytus and Melitus) affirms; ^b He was ingenious in nothing, unlearn'd in all, scarce able to write, which when upon any occasion he did, it was to derision, and that he could read no better than a stammering School-boy: To which we shall oppose these Authorities: Xenophon who attests he was excellent in all kinds of Learning, instanceth in Arithmetick, Geometry, and Astrology; Plato, in Natural Philosophy; Idomeneus, in Rhetorick: ^c Laertius in Medicine: In a word, Cicero avers, That by the testimony of learned Men, and the Judgment of all Greece, as well in Wisdom, acuteness, politeness and subtilty; as in elo-

quence variety, and copiousness, to whatsoever part he gave himself, he was without exception, Prince of all.

Having searched into all kinds of Science, he observed these inconveniences and imperfections: ^c First, That it was improper to leave those affairs which concern Mankind, to enquire into things without us. Secondly, That these things are above the reach of Man, whence are occasioned all disputes and oppositions, some acknowledging no God, others worshipping Stocks and Stones; some asserting one simple Being, others infinite; some that all things are moved, others, that all things are immoveable. And thirdly, that these things, if attained, could not be practised, for he who contemplating divine Mysteries, enquires by what necessity things were made, cannot himself make any thing, or upon occasion produce Winds, Water, Seasons, or the like.

Thus esteeming speculative knowledge as far only as it conduceth to practice, he cut off in all Sciences what he conceived of least use.

^a In *Arithmetick*, he approved only as much as was necessary. (^b Plato instanceth in Merchandise and Tacticks) but to proceed to useles operations he disallowed. In Geometry he allow'd that part which teacheth Measuring, as no less easie than useful; but to proceed to infinite propositions and demonstrations he disallow'd, as wholly unprofitable. In *Astrology* he approved the knowledge of the Stars, and observation of the Night, Months, and Seasons, as being easily learned, and very beneficial in Navigation, and to those who hunt by Night; but to examine the difference of Spheres, distance of Stars from the Earth, and their Circles, he dissuaded as useles.

^f Finally, Noting, how little advantage Speculation brought to the Life and Conversation of Mankind, he reduced her to action. He first, saith ^g Cicero, called Philosophy away from things involved by Nature in Secrecy, wherein, until his time all Philosophers had been employed, and brought her to common Life, to enquire of Vertues, and Vices, Good and Evil.

Man, who was the sole subject of his Philosophy, having a twofold relation of divine Speculation, and humane Conversation, his Doctrines were in the former respect *Metaphysical*, in the latter *Moral*.

SECT. I. *Metaphysicks.*

HIS Metaphysical Opinions are thus collected and abridged out of Plato, Xenophon, Plutarch, and others.

^a Philosophy is the way to true Happiness, the Offices whereof are two, to contemplate God, and to abstract the Soul from corporeal Sense.

^a There are three Principles of all things, God, Matter, and Ideas; God is the universal intellect; Matter the Subject of Generation and Corruption; Idea an incorporeal substance, the Intellect of God; God the Intellect of the World.

^a God is one, *τὸ δὲ αὐτὸ θεῶν θεῶν, αὐτὸ τὸ καλόν, αὐτὸ τὸ εὖ καὶ δίκαιον*; perfect in himself, giving

ing the being, and well-being of every Creature; what he is, (saith he) I know not, what he is not, I know.

* Xen. memor. i.

* That God, not chance, made the World and all Creatures, is demonstrable from the reasonable disposition of their parts, as well for use as defence; from their Care to preserve themselves, and continue their Species, that he particularly regards Man in his Body, from the excellent upright form thereof, from the gift of Speech, from allowance τὰς τῶν ἀφ' ὧν ἡδυνάς σωεχῶς παρέχειν in his Soul, from the excellency thereof above others; in both for divinations, predicting dangers; that he regards particulars; from his care of the whole Species; that he will reward such as please him, and punish such as displease him; from his Power to do it, from the belief he hath imprinted in a Man, that he will do it; profest by the most wise and civilized Cities and Ages; that he at once seeth all things, from the instances of the Eye, which at once over-runs many Miles; and of the Mind, which at once considereth things done in the most distant places. Finally, that he is such, and so great, that he at once sees all, hears all, is every where, and orders all. This is the sum of his Discourse with *Aristodemus*, to which we may annex what is cited under his name (if not mistaken) by *Stobæus*,

Care, if by Care ought may effected be;
If not, why car'st thou, when God cares for thee?

† Xen. memor. i. pag. 711.
* Xen. memor. 4.

† He held, that the Gods knew all things, said, done, or silently desired.

* That God takes care of all Creatures, is demonstrable from the benefits he gives them of Light, Water, and Fire, seasonable production of Fruits of the Earth, that he hath particular Care of Man, from the nourishment of all Plants, and Creatures for Man's Service, from their Subjection to Man, though they excused him never so much in Strength, from the variety of Mans Sense, accommodated to the variety of Objects, for necessity, use, and pleasure; from Reason, whereby he discoursed through reminiscence, from sensible Objects, from Speech, whereby he communicates all that he knows, gives Laws, and governs States; that God, notwithstanding he is invisible, hath a Being, from the instances of his Ministers, invisible also, as Thunder and Wind, from the Soul of Man which hath something with the divine nature in governing those that cannot see it. This is the effect of his discourse with *Euthydemus*.

Schol. Aristoph. in nub. p. 128.

The Soul is immortal, for what is always moveable is immortal; but that which moveth another, or is moved by another, hath a Cessation of Motion and Life.

Plat. phæd.

The Soul is præ-existent to the Body, endued with knowledge of eternal Ideas, which in her union to the Body she loseth, as stupified, until awakened by discourse from sensible Objects. Thus is all her Learning only reminiscence, a recovery of her first knowledge.

The Body being compounded, is dissolved by Death, the Soul being simple passeth into another Life, incapable of Corruption.

The Souls of Men are divine, to whom, *Cic. de amicis*, when they go out of the Body, the way of their return to Heaven is open, which to the best and most just is the most expedite.

The Souls of the good after Death, are in *Plat. phæd.* a happy Estate, united to God in a blessed inaccessible place; the bad, in convenient places, suffer condign Punishment; but to define what those Places are, is *hominis. vñ mñ Stob. Eth. 262.* whence being demanded what things were in the other World, he answered, neither was I ever there, nor ever did I speak with any that came from thence.

Sect. 2. Ethicks.

HIS Morals, consider a Man either as a single Person, or as the Father of a Family, or as a Member of the Commonwealth; In the first respect are his Ethicks, wherein such Sentences as have been preserved by *Xenophon*, *Diogenes*, *Laertius*, *Stobæus*, and others, are thus collected.

Of Virtue and Vice.

HE exhorted his Friends to endeavour to be the most wise and beneficial, *Xen. mem. i. p. 720.* cause, what wants reason, wants respect, as the Bodies of Dead Friends, and Hair, Nails, and the like, which are cut off and cast away.

To be employed is good and beneficial, to *Xen. mem. i. p. 720.* be idle, hurtful and evil: They that do good are employed, they that spend their time in vain Recreations, are idle.

He that hath most advantage by Gifts of *Xen. mem. 3. p. 778.* Nature, as well as he that hath least, must learn and meditate on those things wherein he would be excellent.

He only is idle who might be better employed. *Xen. mem. 3. p. 779.*

To do good, is the best course of Life, *Xen. mem. 3. p. 780.* therein fortune hath share.

They are best, and best pleasing to God, *Xen. mem. 3. p. 780.* who do any thing, with any Art or Calling; who followeth none, is useless to the Publick, and hated of God.

* He taught every where, That a just Man ** Clem. Alex. Strom. 2. 417.* and a happy were all one, and used to Curse him who first by opinion divided Honesty and Profit (which are coherent by Nature) *Cicer. de offic. 3. & de leg. 1.* as having done an impious act, for they are truly wicked who separate profitable and just, which depends on Law. The *Stoicks* have followed him so far, that whatsoever is honest, the same they esteem profitable.

He asked *Memnon*, a *Thessalian*, who thought *Plat. de amicis multis. p. 93.* himself very Learned, and that he had reached (as *Empedocles* saith) the top of Wisdom,

What is Vertue? He answered readily and boldly, that there is one Vertue of a Child, another of an old Man, one of a Man, another of a Woman, one of a Magistrate, another of a private Person, one of a Master, another of a Servant. Very good, replies *Socrates*: I ask for one vertue, and you give us a whole swarm; truly conceiving, that he knew not one Vertue, who named so many.

Being

Plut. de lib.
educ.

Being demanded by *Gorgias* 'if he accounted not the great King of *Persia* happy? I know not, answered he, how he is furnished with Learning and Vertue: as conceiving that true happiness consisteth in these two, not in the frail gifts of Fortune.

Laert.

Euripides in his *Auge* saying of Vertue; 'It is best carelessly to part with these, he rose up and went away, saying, 'It was ridiculous to seek a lost Servant, or to suffer Vertue so to go away.

Laert.

He said, 'he wondered at those who carve Images of Stone, that they take such care to make Stones resemble Men, whilst they neglect, and suffer themselves to resemble Stones.

What means
cure? means
is explained by
Aristotle, polit.
5. 3. & Physic.
5. 4.

He advised 'Young-Men to behold themselves every day in a Glass, that if they were beautiful, they might study to deserve it; if deformed to supply or hide it by Learning.

* Clem. Alex.
from 5.

He said, 'to begin well is not a small thing, but depending on a small Moment.

He said 'Vertue was the beauty, vice the deformity of the Soul.

† Num. in Greg.
Stellent.

† He said, 'outward Beauty was a sign of inward Beauty, and therefore chose such Auditors.

Stob. Ech.
from 1.
Stob. 13

'In the Life of Man, as in an Image, every part ought to be beautiful.

'Incense to God, Praise is due to Good Men.

Stob. 1.

'Who are undeservedly accused ought to be defended; who excel others in any good quality, to be praised.

Stob. 11

'A Horse is not known to be good by his Furniture, but qualities, a Man by his Mind, not Wealth.

Stob. 37.

'It is not possible to cover Fire with a Garment, sin with time.

Stob. 46.

Being demanded *who live without perturbation?* he answered, *They who are conscious to themselves of no Ill.*

Stob. 218.

To one who demanded *what Nobility is,* He answered, *A good temper of Soul and Body.*

Of Affections, Love, Envy, Grief, &c.

Xen. mem. 2.

That 'two Brothers God meant should be more helpful to each other than two Hands, Feet, Eyes, or whatsoever Nature hath formed; doubtless because if they love, they may at great distance mutually help one another is the scope of his Discourse with *Charmocrates*.

Xen. mem. 3.

That 'all things are good and fair to those things wherewith they agree, but ill and deformed in respect of those things, with which they agree not, is the conclusion of his second Discourse with *Aristippus*.

Xen. mem. 3.

'Envy is a grief, not at the adversity of Friends, nor the prosperity of Enemies, but at the prosperity of Friends; for many are so foolishly enclined as to malign those in good Fortune, whom in misfortune they pitied.

Stob. 1.

'A Ship ought not to trust to one Anchor, nor Life to one Hope.

Stob. 16.

'To ground Hopes on an ill Opinion is to trust a Ship to a slight Anchor.

'The beauty of Fame is blasted by Envy as by a Sickness. Stob. 139.

'Many adorn the Tombs of those, whom living, they persecuted with Envy. Stob. 139.

'Envy is the Saw of the Soul. Stob. 144.

'Nothing is pleasant or unpleasant by nature, but by custom. Stob. 215.

'Unseasonable Love is like Hate. Stob. 240.

Being demanded, 'what is grievous to the good, he answered, The prosperity of the Wicked.

Being demanded 'how a Man might live without Trouble, he answered, it was not possible but that he who lives in a City or a Family must sometimes be afflicted.

'Wicked Hopes, like ill guides, deceive a Man, and lead him into sin. Stob. 258.

'A Woman cannot conceive without a Man, nor a good hope produce any benefit without Labour. Stob. 261.

'Winter had need of Garments, old age of disengagement from grief. Stob. 269.

'In Life as in a Theatre, we should continue so long as the sight of things, and actions of Life seem delightful. Stob. 892.

'The mad should be bound, the ignorant instructed. Xen. mem. 1. p. 719.

That 'we should endeavour to shun the censorious, and to apply our selves to such as are candid, that we should undertake only such things as we can perform, and decline such as we cannot; That whensoever we undertake any thing, we should employ therein our utmost study and endeavour, is the sum of his advice to *Euthernus*. Xen. mem. 2.

He said, 'the office of a wise Man is to discern what is good and honest, and to shun that which is dishonest. Xen. mem. 3.

'They who know what they ought to do, and do it not, are not wise and temperate, but Fools and stupid. Xen. mem. 3.

'Justice and every other Vertue is Wisdom. Xen. mem. 3.

'To be ignorant of our selves, to seem to know those things whereof we are ignorant, is next to Madness. Xen. mem. 3.

That 'a Pious Person is rightly defined, such a one as knows what is Lawful as to the Gods, just, he that knows what is lawful to Men, that a Man is wise as far as he knows, that what is profitable is fair to that whereto it is profitable, that they who know how to use terrible things and dangerous are valiant, the contrary timorous, is the sum of his Discourse with *Euthidamus*. Xen. mem. 4.

He conceived 'the only wisdom of Man to consist in not thinking he understands those things which he doth not understand. Xen. mem. 4.

To one that complained he had not benefited himself by travel, and not without Reason, saith he, *because thou didst travel with thy self.* Senec. Epist. 103.

He affirmed 'There is but one good thing, Knowledge, one ill, Ignorance; but that Riches and Nobility had nothing in them of worth, but on the contrary all Evils. Laert.

'When a wise Man openeth his Mouth, his Vertues are as manifest, as Images in a Temple. Stob. 1.

'In Navigation we ought to be guided by the Pilot, in the course of Life, by those of better Judgment. Stob. 28. & 42.

Stob. 28. Being demanded what Wisdom was, he answered, *The composure of the Soul*; being demanded who were wise, they said he, *who do not easily err.*

Stob. 28. The Soul's Reason augmenteth it self as in a Play, the wisest, not the richest ought to bear the Prize.

Stob. 32. Fugitives fear though not pursued, Fools though not in Adversity, are troubled.

Stob. 32. Seeing a young Man rich, and unlearned, behold (saith he) a *Golden Slave.*

Stob. 32. The Luxurious is hardly cured in Sicknes, the Fool in Adversity.

Stob. 32. The Coward useth Arms against himself, the Fool Money.

Stob. 32. Achilles Armour fits not *Thersites*, nor the good habits of the Soul a Fool.

Stob. 87. Be not forward in Speech, for many times the Tongue hath cut off the Head.

Stob. 211. In War, Steel is better than Gold, in Life, wisdom excelleth wealth.

Of Piety and Obedience.

Xen. mem. 2. That the greatest of Vices is Ingratitude, of obligations that to Parents, that a disobedient Son the Gods will not bless, nor Men love, as doubting his return of either, knowing he doth it not where so much is due; is the sum of his Discourse with *Apiles.*

Xen. mem. 1. 722. 4. 804. Our Prayers should be for Blessings in general, for God knows best what is good for us; our offerings proportioned to our abilities, for he considers Integrity, not munificence.

Xen. mem. 1. 722. He said (with the *Pythian Oracle*) that the Gods are to be worshipped according to the Law of the City where a Man lives, they who do otherwise, he thought Superstitious and vain.

Xen. mem. 4. 803. The best way of worshiping God, is to do what he commands.

Stob. 43. Superstition is obedient to Pride, as its Parent.

Stob. 193. A harsh Father, like a severe Law, must notwithstanding be obeyed.

Stob. 201. The reproof of a Father is a kind Remedy; it brings more ease than pain,

Of Fortitude and Imbecillity.

Xen. mem. 1. That a Man ought to inure himself to voluntary labour and sufferance, so as what shall be imposed by Necessity, may appear in him not compulsive but free; that soft ways of living in Pleasures beget no good constitution of Body, nor knowledge of the mind; that tolerance raiseth us to high Attempts, is the effect of his Discourse with *Aristippus.*

Xen. mem. 3. To one who was fearful to go so far on foot as *Olympia*, he demonstrated (to make the journey seem easie) that it was no more than his daily walk within doors, if extended at length, would easily reach.

† Xen. mem. 3. † One that complained he was weary of a journey, He reproved him for being more weary than his Servant that followed him laden.

Plut. consol. ad Apollon. He said, Death resembled either a deep sleep, or a long journey out of our Native

Country, or an absolute annihilation of Soul and Body, examining all which he affirmed, Death to be in none of those respects Evil; as to the first, saith *Plutarch*, it is not ill with those that sleep, and we esteem that sleep sweetest which is deepest; and if we look on it as a Journey, it is rather a Blessing, for thereby we are freed from the slavery and affections of the Flesh which possess and infatuate the Mind; in the last respect, it makes us insensible of ill and pain, as well as of good and pleasure.

A Statue stands firm on its Base, a virtuous Man on firm resolutions. Stob. 1. 256.

Voluntary labours are delighted with assurance of Ease, Idleness, and transitory Pleasures beget neither a good constitution of Body, nor any good habit in the Soul. Stob. 5.

Being demanded, what is Strength? He answered, the motion of the Soul with the Body. Stob. 48.

Seeing the Gates of *Corinth* strongly barr'd, he asked, Dwell Women here? Stob. 49.

An honest Death is better than a dishonest Life. Stob. 269.

He used to say, Liberty is Sister to Sloth. *Ælian* var. instancing in the *Indians* and *Persians*, both lazy; the *Phrygians* and *Lydians* very indolent, as being under Servitude. Hist.

Of Temperance, Continence, and Contentedness.

HE advised to shun all occasions of incontinence, affirming that such as conversed much with fair Women could not easily be continent. Xen. mem. 1.

That the sight and kisses of the Fair, infuse a Poison more dangerous than that of Scorpions and Spiders, is the sum of his discourse to *Xenophon* and *Critobulus.* Xen. mem. 1.

That a free Man ought not to entertain a Servant addicted to Pleasures, that he which is slave to Pleasures, should pray to the Gods for better Masters, is the Conclusion of his discourse de continentia. Xen. mem. 1.

That Happiness consists not in Luxury and Pride, that to want nothing is Divine, to want the least next to divine, is the conclusion of his discourse with *Antipho.* Xen. mem. 1.

He advised such as could not easily abstain at Feasts, to take heed of such things as persuade those that are not hungry to eat, and those that are not thirsty to drink, for they destroyed the Appetite, the Head, and the Soul. He used to say merrily, *Circe* turned Men into Swine, by feasting them with such Meats; but that *Ulysses*, partly through *Minerva's* advice, partly through his own Temperance; refraining from such things, remained unchanged. Xen. mem. 3.

That health of Body ought diligently to be preserved, as that whereon all knowledge of the Soul depends, is sum of his discourse with *Epigenes.* Xen. mem. 3.

He advised one that complained he had no delight in his Meat, to refrain from Eating, whereby his diet would become more pleasant, cheap, and wholesome. Xen. mem. 3.

In the word *εὐμαρτυρία* (to feast) the particle *εὐ* implies, that we should eat only such things as

Xen. mem. 4. 'as will not hurt the Mind nor the Body, and are easie to be gotten.

'That only Temperate persons, that discern and choofe the best things, refraining from the worst; that by Temperance Men become the most Excellent, and most Happy, fittest for Discourse: is the summ of his Discourse with *Euthidemus*.

Plat. de anim. tranquil. Hearing one of his Friends say, 'this Town is exceeding dear, Chier Wine costs a Mina, Purple three, a pint of Honey five Denaries, he carried him to the Meal-men, here, saith he, a pint is sold for an Obolus; it is cheap living in this Town: then to those that sold Olives, a Choenix two Farthings; thence to the Frippery, a Suit ten Drachms; things are cheap in this Town.

Laert. 'He said, the Hungry wanted no Sauce, the Thirsty no choice of Wines.

Laert. 'He commended Quiet and Leisure above all things.

Laert. 'He said, they who buy early fruits at dear rates, believe they will not come in their due season.

Laert. Being asked what was a young man's Vertue, he answered, to do nothing too much.

Laert. Seeing one eat Broth very greedily, he said, 'which of you here present useth Bread for Broth, and Broth for Bread? Of which, see more at large, *Xenophon his Memorab. Lib.*

Ælian. var. hist. 9. One saying, that it was a great matter to abstain from what a Man desires, he answered, but it is much a greater not to desire at all.

Stob. 28. 'A clear Fire becomes the Chimney, Serenity the Mind.

Stob. 37. He said, 'We ought not to seek Pleasures in others, but in our selves, the Body being predisposed according as it ought.

Stob. 37. He said, 'It is the property of God to need nothing, to need least, nighest to God.

Stob. 37. Being demanded from what things we ought to refrain most, he answered, 'from Sordid Unjust Pleasures.

Stob. 37. 'Contentedness is like a short and pleasant way, it hath much Delight, little Toil.

Stob. 37. 'He that would see Virtue as his Country, must pass by Pleasures, as *Syrens*.

Stob. 40. Being demanded whom he thought Richest, he answered, him who is contented with least, for Content is the Riches of Nature.

Stob. 8. 4. Being demanded what Continnence is, he answered, 'Government of Corporeal Pleasures.

Stob. 87. 'He said the Wicked live to Eat, but the Good Eat to Live.

Stob. 183. When a Woman saith she Loveth thee, take heed of those words, more than when she Revileth thee.

Of Liberality, Prodigality, and Covetouness.

Xen. mem. 1. **H**E conceived, that they who took Money of any, owned them for their Masters in the meanest degree of Servitude.

Xen. mem. 1. That Wisdom is Prostituted as well as Beauty, by taking Money for it; that he who meets with an Ingenious Person, ought to acquaint him with all the Good he can, gratis, whereby he acquires

a Friend, and doth the part of a good Member of a Commonwealth; is the summ of this second discourse with Antipho.

He said, if a Rich Man be proud of his Wealth, that he could not Praise him till he knew how he would imploy it.

None can safely manage a Horse without a Bitt, nor Riches without Reason.

He compared Covetous Persons to Birds, one devoureth whatever it meets till it Choaks it self, the rest falling upon what the first test, are one after another choaked also.

The Wealth of Covetous Persons is like the Sun after he is Set, delights none.

He that gives to a Rich Man, throws Water into the Sea.

The Life of a Covetous Person is like the Feasts made for the Dead, he bath all, but enjoys nothing.

He compared the Wealth of Prodigals to Trees, growing on a Precipice: for these none are the better, but Kites and Crows; for these only Harlots and Flatterers.

Being demanded who were Covetous, he answered, such as seek after Sordid Gain, and neglect their necessary Friends.

Wine changeth with the Vessel, Riches follow the Manners of the Owner.

Of Magnanimity and Pride.

TO one angry for having Saluted a Man that returned not his Salutation; it is Ridiculous saith he, if you are not angry with every one you meet of worse Shape or Form than your self, to be angry with any for having less Manners.

Pride, like an ill Potter, or Statuary, represents the Forms of things inverted.

Wind puffs up empty Bladders, Opinion Fools. To be exalted with good Fortune, is to run in a slippery way.

Of Patience.

THERE is less danger in drinking intemperately of Troubled Water, than with a Troubled Mind full of Wrath, before it be allayed and Purified, to satisfy thy Anger in the Punishment of a Kinsman or Country-man.

If every one should bring his Misfortunes into the Publick Stock to be shar'd alike amongst all men, the greater part of those that now complain so much, would be contented and glad to keep their own.

It is all one if a Man being overcome in any gymnick Sports should sue his Adversary, as for a Man over-master'd by Fortune to accuse her; not knowing upon what conditions we entered into the contests of Life.

Of Veracity and Flattery.

THERE is no better way to Glory than to endeavour to be good, as well as to seem such.

The kindness of Flatterers is chased away by Adversity.

- Stob. 64. ' Hunters take Hares with Hounds, many take
' Fools with their own Praises.
- Stob. 64. ' Wolves resemble Dogs, and Flatterers Friends,
' but their aims are quite contrary.
- Stob. 64. ' Flattery is like a painted Armour, only for
' shew, not use.
- Stob. 69. ' Think not those Faithful who Praise all thy
' Words and Actions, but those who Reprove
thy Faults.
- Stob. 71. ' Suffer not a Talker and Slanderer for he tells
' not thee any thing out of good will; but as
' he discourseth the secrets of others so will be
' thine to others.
- Stob. 114. ' Good Men must let the World see that their
' Manners are more firm than an Oath.

Of Urbanity and Conversation.

- Plut. de sanit. **A** Little Hall will serve to dance in, and
tued. ' every place and posture to speak.
- Stob. 37. ' Wind kindles Fire, Conversation, Love.
- Stob. 67. ' Freedom of Discourse like the seasons of the
year, is best in its proper time.
- Stob. 134. ' It is Arrogance to speak all, and to be un-
willing to hear any thing.
- Stob. 296. ' Converse at distance, and softly with those
that are in Authority.

Of Justice.

- Xen. mem. 4. **T**hat the Gods prescribe just things by Law,
and that Just and Lawful is to them the
' same thing, is the summ of his Discourse with
' Hippias.
- Stob. 52. ' They who convert goods ill gotten to good
' uses in a Common-wealth, do like those who
' who make Religious use of Sacrilege.

Of Friendship.

- Xen. mem. 2. **T**hat a Discreet Vertuous Friend is of all
' Possessions the most Fertile, and ought
' chiefly to be regarded, is the scope of his dis-
' course, *de amicitia*.
- Xen. mem. 2. ' That every Man should examine himself
' of what value he is to his friend, and endeavour
' to be of the most worth he can to him, is the
' effect of his Discourse with *Antisthenes*.
- Xen. mem. 2. ' That Wicked Men cannot be Friends, either
' amongst themselves; or with the good: That
' the way to procure friends is first, to endea-
' vour to be good, wherein he would seem
' good; that all virtues may be augmented by
' Study and Learning, is the scope of his dis-
' course with *Critobulus*.
- Xen. mem. 2. ' That we ought to our utmost Abilities to
' relieve the Necessities of our Friends, is the ef-
' fect of his Discourse with *Aristarchus*.
- Plut. de frat. **H**e said, he had rather have *Darius* to his
amre. ' Friend, than his *Darius*, a Coyn so named
' from him.
- Laert. ' He wondred that every Man kept an inven-
' tory of his Goods, none of his Friends.
- Stob. 213. ' They who violate Friendship, though they
' escape the Punishment of their Friends, shall
' not escape the Vengeance of God.
- Stob. 213. ' They who forsake their own Brethren
' to seek out other Friends, are like those who

let their own Grounds lie Fallow to till ano-
thers.

- ' and sound Sense.

Sect. 3. Oeconomicks.

IN the second respect are his Oeconomicks,
which he learned of *Ischomachus*, by *Xenophon*
expresly delivered in a Treatise upon that Sub-
ject, to which add these few Sentences.

- ' So contrive the Building of your House, as Xen. mem. 3.
- ' that those parts which are towards the South
' may be highest, that the Winter Sun be not
' excluded: those toward the North lowest;
' that they may be less subject to the Wind; In
' fine, so order it that a Man may live in every
' Quarter thereof with most Delight and Safety:
' Pictures and Colours take away more Pleasant-
' ness than they afford.

To one who beat his Servant for being Glut-
tonous, Covetous, and Idle, he said, *did you at* Xen. mem. 3.
any time consider whether you deserve not more p. 7. 88. *see*

Laert.

To one that asked his advice about taking a Stob. 183.

Wife, *whether you do or not*, faith he, *you will*
repent it.

To others that asked his Opinion concerning Stob. 183.

Marriage, he said, *As Fishes in a Net would fain*
get out, and those without would get in, take heed
young Men it be not so with you.

Men must obey the Laws of their Countrey, Stob. 193.
Wives their Husbands.

Sect. 4. Politicks.

IN the 3d. Respect are his Politicks, which
Hesychius Illustrius makes to be the same
which *Plato* hath delivered under this name,
where you may have them though disguised
with the Language and Additions of *Plato*, to
which may be annexed those Sentences of his
in that kind out of *Xenophon*, *Stobaeus*, and
others,

- ' They who cannot upon occasion be use- Xen. mem. 1.
- ' ful either to an Army, a City, or a Common-
' wealth; yet have Confidence of themselves,
' ought, though never so Rich, to be under re-
' straint.

' *Antipho* demanding how he might make Xen. mem. 1.

' others skilful in Politicks whilst himself med-
' led not therein, altho' he knew that he could
' manage them, which way faith he? *Antipho*.

' I do most act the business of the Common-
' wealth, if I practise it only, or if I endeavour
' to make many able to act therein.

' That place is fittest for Temples and Altars Xen. mem. 1.

' which is most open, and yet retired; for it is
' fitting that they who pray, see, and no less fit-
' ting that they come thither pure.

They

Xen. mem. 3. 779. ' They are not Kings, who are in Possession of a Throne, or come unjustly by it; but they who know how to Govern.

Xen. mem. 4. 813. ' A King is a Ruler of willing Subjects according to the Laws, a Tyrant is a Ruler of Subjects against their Will, not according to the Laws, but Arbitrary; an Aristocracy is that Government wherein the Magistrates are.

Xen. mem. 4. ' The Offices of a good Citizen are in Peace, to enrich the Common-wealth, in War to Subdue the Enemies thereof, in Embassie to make Friends of Foes, in Sedition to appease the People by Eloquence.

Laert. ' Of Common People he said, they were as if a Man should except against one piece of bad Money, and accept a great sum of the same.

Clem. Alex. Strom. 4. ' He said, the Law was not made for the good. Deserving Persons ought to be sharers in the good Fortunes of the Common-wealth.

Stob. 141. Being demanded What City is strongest? he said, that which hath good Men.

Stob. 141. Being demanded what City is best Ordered? he said, that wherein the Magistrates friendly agree.

Stob. 141. Being demanded what City was best? he said, that wherein are proposed most Rewards of Virtue.

Stob. 141. Being demanded what City lives best? he said, that which liveth according to Law, and punisheth the unjust.

CHAP. VI.

Of his Demon.

Sup. cap. 2. ' That Socrates had an attendant Spirit (meant as Plutarch conceives by the Oracles answer to his Father) which diverted him from Dangers, is impugned by Athenæus, not without much prejudice, which the bitterness of the Discourse Betrays. Souls that are not candid, and think ill of the Best, faith Origen, never refrain from Calumny, seeing that they mock even the Genius of Socrates as a feigned thing. On the contrary, we have the Testimony of Plato, Xenophon and Antisthenes contemporary with him, confirmed by Laertius, Plutarch, Maximus, Tyrius, Dion, Chrysostomus, Cicero, Apuleius by Fathers, Tertullian, Origen, Clemens Alexandrinus and others, whereof a great many instances (as Cicero faith) were Collected by Antipater: these only preserv'd by other Authors.

Plut. de Gen. Socr. ' Theocritus going to consult Euthyphron a Sooth-sayer, found him with much Company walking in the Streets, amongst whom were Simius and Socrates, who was very busie, asking him many questions. In the midst of his Discourse he made a sudden stop, and after some pause, turned back and went down another Street, calling out to the rest of the Company to return and follow him, as being warned by the Demon. The greater part did so, the rest went forward, on purpose to confute the Demon, and drew along with them one Charillus that played on the Flute; but in the way, which was so narrow, as not to give them room to pass by, they were met, and overturned in the Dirt by a great herd of Swine; by repetition of which accident, Charillus often afterwards defended the Demon.

Nor did the advice of this Spiritual Attendant only respect the good of Socrates, but extended to such friends as conversed with him, whereof himself gives these instances.

Charmides Son of Glauco, going to Exercise in the Nemean Race, as he was discoursing with Socrates, was by him upon notice of the Voice dissuaded from going, to which he answered, that perhaps the Voice meant that he should not get the Victory, but, faith he, however, I shall advantage my self by exercising at this time; which said, he went to the Games; where he met with some accident, which tho' it be not related, is acknowledged to have justifi'd the counsel given him by the Demon.

Timarchus and Philemon Son of Philemonides having Plotted together to Murder Nicias, Son of Hircoscomander, were at the same time drinking with Socrates. Timarchus with intention to execute what they had determined, offer'd to rise from the Table, saying to Socrates, well Socrates, drink you on, I will but step a little way and return immediately. Rise not, said Socrates, (hearing the Demon as soon as he spake) for the Demon hath given me the accustomed Sign; whereupon he sat still, presently after he offered again to be gone; Socrates hearing the Voice, withheld him. At last, as Socrates was diverted by something, and did not mind him, he stole away, and committed the Murder, for which being brought to Execution, his last words to his Brother Clitomachus were, that he was come to that untimely end for not obeying Socrates.

Another time, seeing his friend Crito's Eye ty'd up, he ask'd him the reason, who answering, that as he walk'd in the field, one pulling a Bough, it gave a jerk back, and hit him in the eye; then you did not take my advice, replies Socrates, for I call'd you back making use, as I have accustomed, of divine presage.

That it had likewise a great influence upon the Souls of those who conversed with him, and lived with him, a he alledgeath as Examples Aristides Son of Lysimachus, and Thucydides Son of Melissus. The first leaving Socrates to go to the Wars, lost, with his Company, the habit of Learning, which he acknowledged to have gained, not by any verbal instructions, of which he had none from him, but by being near him, seeing him, and sitting in the same Room with him. The second as easily, by the same means attained the same habit.

And not only to particular persons, but to general Affairs did these Predictions extend: He foretold some Friends the defeat of the Athenian Army in Sicily, as is attested by Plutarch, and mentioned by himself in Plato, where he gives another fair Example, or rather Trial of the Truth of the Demon's Predictions, speaking of a business, whereof the event was at that time doubtful: e You will hear, faith he, from many in Sicily, to whom it is known what I foretold concerning the destruction of the Army, and we may now have an experiment if the Demon speak true. Samionus, Son of Calus, is gone in an expedition, the sign came to me: he goes with Thrasyllus to War against Ephesus and Ionia: my Opinion is, that he will either be slain, or at least in much danger, I greatly fear the whole design. These are his words in Plato, deliver'd before the event of that Action, which fell out according to his prediction; g for Thrasyllus was repuls'd and beaten by the Ephesi-

the Athenians put to flight with the loss of four hundred Men; of which Victory the Ephesians erected two Trophies: This was in the one and twentieth year of the Peloponnesian War.

We have alledged the Universal Consent of Authors, that Socrates had such a Spiritual attendant; yet is there some disagreement concerning the name, more concerning the nature of it.

It is commonly named his *Dæmon*, by which Title, he himself owned it: Plato sometimes calls it his Guardian, *Apuleius* his God, because (saith Saint * *Augustine*) the name of *Dæmon* at last grew odious. But we must observe, that he did not account it a God, but sent from God, and in that sense affirmed the Signs to come from God, to wit, by Mediation of this Spirit. This, besides other places, we may argue from his first Epistle, where he speaks of the Sign it self; he useth the word *Dæmon*, when of the advice, whereof that sign was the instrument, he names God. Thus are we to understand these, and all other places of the same nature in Plato, where Socrates speaking of the *Dæmon*, saith, if it please God, you shall learn much, and the Sign from God did not offer to stay me.

As for the Sign or manner of the Prediction, † some affirm it was by Sneezing, either of himself or others; if any chanced to Sneeze standing before him, behind him, or on his right hand, he went immediately about that which he intended; if on the left hand, he refrained or desisted: if he sneezed himself before the enterprise, it was applause, if in the Action, dissuasive. There needs not much Argument to prove this Opinion. If this sternutation proceeded either from Chance, or his natural Constitution, it could not have that provident supernatural effect; if it proceeded from some more excellent outward cause, we recur to the Genius.

Others confine this Prescience within the Soul of Socrates himself, that he said, his Genius advised him, they interpret it, as we usually say, his mind gave him, or so inclined him: In this Sense indeed *Dæmon* is not seldom taken; but this is inconsistent with the Description which Socrates gives of a Voice and Signs *ab exteriore*, besides, this Knowledge is not above Humane Nature.

Plutarch having exploded the Opinion of *Terpsion* concerning Sneezing, conjectured first, that it might be some Apparition; but at last concludes, that it was his Observation of some inarticulate unaccustomed sound, (or voice) conveyed to him by some extraordinary way, as we see in Dreams. This avoids not the inconvenience of the former; if Socrates did first of himself interpret this Sound, it is the same with the last Opinion, that his Soul had a Prophetick Inspiration, if by any help, it will come at last to the Genius.

Some conceive it to be one of those Spirits which have a particular care of Men; which *Maximus Tyrius*, and *Apuleius* describe in such manner, that they want only the name of a good Angel.

But there want not those who give it that appellation: * *Lactantius* having proved that God sends Angels to Guard Mankind, adds, and Socrates affirmed that there was a *Dæmon*

constantly near him, which kept him company from a Child, by whose Beck and Instruction he guided his Life. *Eusebius* upon these words of the Psalmist, He hath given his Angels charge over thee, that they should keep thee in all thy ways. We learn out of Scripture (saith he) that every Man hath a Guardian appointed him from above; and Plato doubteth not to write in this manner: All Souls having chosen a condition of Living, they proceed in order thereto, being moved by the *Dæmon*, which is proper to every one, and is sent along with them to preserve them in this Life, and to perfect those things whereof they have made choice. And immediately after; You may believe, saith he, that Socrates meant this, when he often affirmed that he was Governed by a *Dæmon*. More plainly † *Eugubinus*, the *Dæmon* of Socrates, saith he, mentioned so often by Plato (seeing that Socrates was a good Man, and exhorted all Men to Virtue, and by the *Dæmon* was always excited to that which was good) may perhaps not unjustly be thought his Angel, as that which appeared to Baalam the Prophet, and diverted him from his wickedness. * But *Ficinus* expressly; if you are not pleased, saith he, speaking of this Spirit, to call the familiar Guide of a Man his Spirit, call it if you please, his good Angel.

The chiefest Argument of * *Collius*, who opposeth this Opinion, and endeavours to prove it was an evil Spirit, is, that the *Dæmon* never dissuaded or diverted from Vice, but only from outward Danger, whereas the contrary is evident enough from the foregoing Story of *Timarchus* and *Philemon*.

True it is, that the advice of the *Dæmon* was always dissuasive, never, * as *Cicero* saith, impulsive, often coercive. *Apuleius* flatters Socrates with this Reason; Socrates, saith he, as being a Man Absolute and Perfect of himself, ready in all Offices that concerned him, never needed any exhorter, but sometimes a prohibitor, if it hapned there were any danger in that which he went about, that being forewarned he might take heed, and decline the undertaking for that time; which afterwards he might re-assume, or attempt some other way.

CHAP. VII.

His Military Actions.

† IT is observed by many, that Socrates little affected Travel, his Life being wholly spent at home, saving when he went out in Military Service.

In the second year of the eighty sixth Olympiad broke forth a War, the greatest that ever hapned amongst the Grecians, betwixt the Lacedemonians and the Athenians; the Occasions and Pretexts of it arising from the Controversies of the Athenians with the Corinthians, concerning *Corcyra*, and *Polydæa*, both which being Revolted from the Athenians, to whom they had been Tributary, sought for Aid from the Lacedemonians, who sent Forces to the Relief of *Polydæa*.

* De civ. dei. 8. 4.

† Plutarch. de gen. Socr.

† De perem. philo. 25.

* Argum. ad Apol. Sec.

* De anim. p. 5. 14.

* De divinat. 1.

† Laert.

* De Orig. error. 2. 15.

In this War was Socrates thrice Personally engaged; first at the Siege of Polydea, in the year of the Olympiad, against which the Athenians sent one thousand six hundred choice Men of Arms, under the Conduct of Phormis, who Besieged it from the Sea by his Gallies, and on the Land side by a Wall: amongst these were Socrates and Alcibiades: Laertius saith, they were on the Sea side, and that there was no means to come on the Land side further: * Plato, that they Served both on Foot, which disagrees not with the other; for there was not any Set Battle during all the time of the Siege, only Sallies and Skirmishes. Here Alcibiades his Comrade, attests, Socrates went all Soldiers, in hardiness; and if at any time, saith he, as it often happens in War, the Provisions failed, there was none could bear the want of Meat and Drink like him, yet on the other side in times of Feasting, he only seem'd to enjoy them, and though of himself he would not Drink, yet being invited, he far out-drunk all others, and which is strangest of all, never any Man saw him Drunk. The Excesses of Cold in the Winter, which in that Country are extraordinary, he as wonderfully endur'd, when the Frost was so sharp, that very few durst go out of their Tents, and those wrapping their Legs and Thighs in Skins, and Furs, he went along with them, having no more Cloaths than those he usually wore. He walked bare-footed upon the Ice with less tenderness than others in Shoes, to the wonder of the Soldiers, who thought themselves Reproached by his hardiness. His Contemplative Rapture at the same time was no less worthy Admiration; he fell into a deep Contemplation one Morning, and continued all the while standing in the same Posture; at Noon it was taken notice of by the Souldiers, who told it from one another, that Socrates had stood still in the same place all that Morning: in the Evening some Ionian Souldiers wrapping themselves warm, came and lay down by him in the open Field, to watch if he would continue all night in the same Posture, which he did, untill the Morning, and as soon as the Sun arose, Saluted it, and retired. Of these kind of Raptures A. Gellius saith he had many. We must not omit how he behaved himself there in Fight; seeing his friend Alcibiades deeply engaged, and much wounded, he stepped before him, defended him and his Arms from the Enemy, and brought him safely off. Nor was his Modesty inferiour to his Love or Courage, for whereas after the Battel, the Generals were to bestow an Honourable Reward upon him that had fought best, the Judges assigned it, to Socrates, he declined it, and by his earnest intercession, procured that it might be conferred upon Alcibiades.

The second Action of Socrates was in the first year of the eighty ninth Olympiad at Delium, a Town in Boetia, which the Athenians took. The Boetians (saith Thucydides,) Led by Pagonidas, followed them, and bid them Battel, the left Wing of the Boetians, to the very middle of the Army was overthrown by the Athenians, and fled to the other parts, where they were yet in fight; but the Right had the better of the Athenians, and by little and little forced them to give ground, and followed them from the very first. Pagonidas, whilst the left Wing of his Army was in

Distress, sent two Companies of Horse secretly about the Hill, whereby that Wing of the Athenians which was Victorious, apprehending upon their sudden appearing that they had been a fresh Army, was put into a Fright, and the whole Army of the Athenians, now doubly terrified by this Accident, and by the Thebans that continually won Ground, and broke their Ranks, betook themselves to Flight, some fled towards Delium and the Sea, others the Mountain Parnes, and others other ways, as to each appeared hope of Safety. The Boetians, especially their Horse, and those Locrians that came in after the Enemy was Defeated, followed, killing them. Socrates in this Engagement behaved himself with his accustomed Valour (so well, that Laches confesseth, if the rest had fought like him, they had not lost the day) and care of his Friends; for seeing Xenophon unhorsed in the Flight, and thrown down on the ground (himself likewise having his Horse slain under him, fought on foot) he took him upon his Shoulders, and carried him many a stadia, and defended him till they gave over the Pursuit. And being thus at the loss of the day, with others dispersed in Flight (amongst whom was Laches the Archon, and Alcibiades) in the constant slowness of his Retreat expressed a Courage far above Laches, frequently looking back and round about, as greedy to be Revenged of the Enemy, if any should pursue them; which was the means that brought him off more safely, for they who express least fear in their Retreat, are less Subject to be Assaulted, than such as repose their confidence in flying.

As they came to a way that was divided into two, Socrates made a Stand, and advised those that were with him not to take that way which they were going into, along the Mountain Parnes, but the other by the way Retire, for, saith he, I heard the Demon's Voice. The greater part were Angry, as it he had trifled at a time so serious; some few were perswaded to go along, amongst whom were Laches and Alcibiades, and got safely home; the rest were met by some Horsemen, who returning from the Pursuit, fell upon them; they at first resisted, but at last enclosed by the Enemy who exceeded them in number; they gave back, and were in the end oppressed, and all kill'd, except one who by the help of his Shield getting away, brought the news to Athens, and Pyrilampes Son of Antiphon, who being wounded by a Javelin, was taken Prisoner; and when he heard by those that were sent from Athens to Thebes to treat of Peace, that Socrates and the rest with him got safe home; he openly profess'd to the Thebans, that Socrates had often called him and others of his company back, who not following the advice of his Genius were slain.

The last Military Engagement was the same year at Amphipolis, which was then taken by Brasidas the Lacedemonian General.

CHAP. IX.

How he carried himself in the Democracy, and the Oligarchy.

*S*ocrates forbore to accept any Office in the Common-wealth, (except in his latter years that of Senator) either (as * *Ælian* faith) because he saw the *Athenian* Government, though under the form of a Democracy, was yet nearer to a Tyranny or Monarchy, or† as himself professeth, being dissuaded by his Genius from meddling in publick affairs, which Advice was his Preservation, being too honest to comply with the Injustices of the Commonwealth, and to oppose them was extremely dangerous, as he found experimentally in that short time.

* He was chosen to the Senate for the *Antiochian* Tribe, whereunto († as we have said) *Alopece* the Town where he was born belonged, † *Plat. Apol.* and in order thereto took the Oath which *Solon* appointed to be given to every Senator, to give Sentence according to the Laws, not biassed either by favour, hatred, or any other Pretext: In the third year of the 93d Olympiad († the preheminance coming in course to the *Antiochian* Tribe, and *Socrates* thereupon becoming President of the People) he had this occasion of manifesting his Constancy. * There hapned a Sea-fight between the *Athenians* and the *Lacedæmonians* at *Arginusæ*: The *Athenian* Commanders were ten; the *Lacedæmonians* Commander in chief, *Callicratidas*; the *Lacedæmonians* were overthrown, their Admiral sunk; the *Athenians* went back to *Arginusæ* with the loss of twenty five Ships, and all the Men in them except some few that escaped to Land; the ten Commanders ordered *Theramenes* and *Thrasibulus* (Captains of the Gallies) to look out after the Vessels that were Shipwrackt, which as they were going to do, a sudden Tempest arose and hindred them; six of those Commanders returned to *Athens*, where they no sooner came, but upon the Account they gave of the Fight, the Senate committed them to Prison; *Theramenes* was their Accuser, who urg'd that they might be questioned for not relieving those that were lost by Shipwrack; the Commanders justly answer'd, that they had given order for their Relief, and that *Theramenes* and *Thrasibulus*, on whom that Charge was imposed, were (if any) to be condemned; but that they would not retort the Fault on their accusers, for the Tempest sufficiently excused them. This satisfied the Senate for that time, but at the next feast being the *Apaturia*, some Friends of *Theramenes*, by his instigation shaving their Hair, and putting on Mourning Apparel, pretending to be Kinsmen of those that were drowned, came in that habit to the Senate, and causing the Charge against the ten Commanders to be renewed, so much incensed the People, that they by menaces contrary to all Law, enforced the Senate to condemn them. *Socrates* being ordered to write the decree against them, avoided it by pretending he could not write, and knew not the Form, which occasioned Laughter in the Senate (and perhaps

that Asperision of *Porphyrius*, that he was scarce able to Write, which when he did, it was to Derision) but the true reason is by *Athenaus* acknowledged to be his constant fortitude, in that he would not violate the Laws of the Common-wealth contrary to the Oath he had taken, * to which he took more heed than † *Xenoph. mem. mor. i.* to the violence wherewith he was threatned; for when the Senate proceeded to their condemnation, * he alone opposed it with his suffrage, whereupon many Orators prepared to accuse him, and the People cried out with loud Clamours, that he might be brought to answer for it: But he chose rather to hazard himself for Law and Justice, than through fear of Imprisonment and Death to consent to injustice, as the death of these Men was afterwards known to be, even to the *Athenians* themselves: and was soon after punished in *Theramenes* by the like, wherein *Socrates* gave the same Testimony of his Courage upon this occasion.

Athens after a long War with the *Lacedæmonians* of 27 years, being taken at last by *Lyfander*, the *Lacedæmonian* General in the first year of the 94th Olympiad, there grew some debate concerning the alteration of the Government, from a Democracy to an Oligarchy; *Theramenes* stood for the continuance of the Democracy, but being overswayed by the power and threats of *Lyfander*; yielded to the constitution of thirty Persons, † by title Governours, in effect Tyrants, of which number was *Theramenes* (whom they took, in regard of his known Moderation and Equity, to bridle the Rapine and Avarice of others) *Critias* (first a Friend, but now a great Enemy to *Socrates* for reproving his love of *Euridamus*) *Charicles* and others, whose names are set down by *Xenophon*, as are also their murders, unjust Sequestrations of Lands, and confiscations of Goods; they began with punishment of the worst Persons, proceeded to the richest, and ended with the best. Never (faith *Seneca*) was any City more miserable; 1300. (*Æschines* faith, 1500.) of the best Persons they put to death without any legal Tryal, nor was their Fury thereby asswaged, but more exasperated; that City where was the *Areopagus*, the most Religious Court of Judicature, where the Senate and People like the Senate used to assemble, was daily made a sad Colledge of Executioners, an unhappy Court too narrow for the Tyrants without rest from Oppression, without hope of Liberty or Remedy. All fled the City but *Socrates*, who all this while set not his Foot out at the Gates; he was continually amongst the People, comforted the lamenting Fathers, encouraged those that despaired of the State; reproached the Rich, that had lived in fear to lose their Wealth, the late repentance of their dangerous avarice, and to those that would imitate him, gave great Examples, whilst he walked free amidst the thirty Oppressors.

Theramenes opposing this cruelty and Injustice, was accused by *Critias* for betraying the trust of the Common-wealth, whereof he acquitted himself to the satisfaction of the Senate; but *Critias* and his Faction, fearing he might overthrow the Oligarchy, seized upon him with a Troop of Soldiers; *Theramenes* run to the Altar,

tar, but being dragged from thence by the Officers, he behaved himself like (saith Diodorus) the Disciple of Socrates; the People pitied him, but none of them durst offer to help him, because he was compass'd in by the Soldiers, except Socrates and two of his companions, who ran to him and endeavoured to rescue him out of the hands of the Officers; Theramenes desired them to forbear, telling them that he much loved and commended their Kindness and Verrue, but that it would be the greatest misfortune he could have, if their love to him should occasion their deaths; whereupon Socrates and his Companions seeing none come in to join with them in his Aid, and that the contrar Party was too strong for them, gave over: Theramenes was carried to Prison, and there (being sentenced to drink Hemlock) died.

These outrages of the thirty Tyrants Socrates did not forbear to censure: || Seeing many eminent Persons put to death, and the rich circumvented and betray'd to excessive punishments, he said to Antisthenes, Dost it repent thee that we have done nothing in our whole lives great and remarkable, as those Monarchs who are described in Tragedies, Atreus's, Thyestes's, Agamemnon's and Egisthus's? They are in those Plays beheaded, feasted with their own Flesh, and generally destroyed; but no Poet was ever so bold and impudent as to bring a Hog killed upon the Stage.

† To another, who murmured because he was not looked upon since they began to rule, Are you sorry for it, said he? He said likewise, * that it were strange if a Neatherd who diminished and impoverished his herd, should not confess himself an ill Neatherd, but more strange that one who being set over the City, made the Citizens worse, and their number less, should not confess himself an ill Governour. This came to their Knowledge, whereupon Critias and Charicles sent for him, and forbade him strictly to teach or discourse with any of the young Men. Socrates asked them if in acts of prohibition he might be permitted to question what he understood not, which they granting; Then (continues he) I am ready to obey the Laws, but lest I transgress them thro' Ignorance, I desire to be informed, whether when you forbid me the act of Speaking, this act be to be understood of things spoken rightly or not rightly; if of the first, I must abstain from speaking what is right; if of the Second, I must take care to speak nothing but what is right. Hereupon Charicles being displeased, said, Since you understood not that, Socrates, we command you what is easier to be understood, that hence-forward you speak not at all with any of the Young Men; To take away all ambiguity, replies Socrates, that I may not exceed my limitation; let me know expressly at what years you call a Young Man: So long, saith Charicles, as he is incapable of being Senatour, and hath not attained to the height of his Judgment; you are not to speak with any under thirty; May I not buy, answers Socrates, of any under that age, nor ask them the price of any thing? That you may, saith Charicles, but your custom is to ask questions of things which you know very well; forbear those: And shall I not then, replies Socrates, make answer if any one ask me where Charicles dwells, or where Critias is? To such questions, saith Charicles, you

may. You must (continues Critias) refrain from the Artificers, whose Ears you have sufficiently gratified with your impertinent Discourse; I must then abstain (saith Socrates) from Justice, Piety, and the like; even from the very Neatherds, replies Charicles, which unless you do, take heed your Herd come not short home.

This ill will and jealousy which they had conceived against Socrates was increased by the secret departure of some Friends of his out of the City, which was reported to be done by his contrivement, to give intelligence to the Thebans: nor was that suspicion without reason; as is manifest by his last Epistle: Hereupon they summoned him into the Court, where some Complaints were brought against him, of which having acquitted himself, they (to get a better Cause of quarrel against him) gave order to him and four more to go to the Pyraum, and to apprehend Leon, whom they meant to put to Death, that they might possess his Estate: But Socrates refused, adding, that he would never willingly assist an unjust act; whereupon Charicles said, Dost thou think Socrates, to talk thus peremptorily, and not to suffer? A thousand ills answered Socrates, but none so grievous as to do unjustly. Charicles made no reply, nor any of the rest; the other four went for Leon, Socrates directly to his House; but from thenceforward, the Jealousie they had of him was so much increased, that * if their Power had not been soon dissolved, they would have gone near to have taken away his Life.

C H A P. XI.

His falling out with the Sophists, and with Anytus.

THE Sophists Masters of Language in those times, saith † Cicero (whereof was Gorgias † Liban. of Leontium, Thrasimachus of Chalcedon, Protagoras of Abdera, Prodicus a Cian, Hippias an Elian, and many others) profess in Arrogant Words to teach, how an inferiour Cause (such was their Phrase) might by Speaking, be made Superiour, * and used a sweet fluent kind of Rhetorick, argute in Sentence, lofty in words, fitter for Ostentation than pleading, for the Schools and Academies, rather than the Forum, were so highly esteemed, that † whereforever they came, they could persuade the young Men to forsake all other Conversation for theirs. * These Socrates opposed, and often by his subtilty of disputing, refelling their Principles, † with his accustomed Interrogatories, demonstrated that they were indeed much beneath the Esteem they had gained, that they themselves understood nothing of that which they undertook to teach others; he withdrew the young Men from their empty Conversation: These, who till then had been looked upon as Angels for Wit and Eloquence, he proved to be vain affecters of Words, ignorant of those things which they professed, and had more need to give Men to be taught, than to take (as they used) Money for Teaching. The Athenians taken with these Reproofs which Socrates gave them, derided them, and excited their Children to the study of solid Vertue.

* Cic. Burt.

† Liban. Apol.

Another quarrel *Socrates* had of long continuance, for it was the occasion of his Death, but begun many years before, with *Anytus* an Orator by Profession, privately maintained and enriched by Leather-sellers: He had put two of his Sons to *Socrates* to be taught, but not being pleased, that whilst they were in that way, they had not learn'd so much, as to be able thereby to get their living; he took them from *Socrates*, and put them to that trade which himself was ashamed to own; wherewith *Socrates* being much displeased in respect of the two Youths, whose Ruin he presaged, (and truly, for they fell afterwards into Debaucheries which occasioned it) spared not to reproach *Anytus* in discoursing to his Scholars, * telling them, ' That the Trade of dressing Leather ' was not fit to be spoken of amongst young ' Men; for they who benefit themselves by ' any Art, cherish and profess it, as *Acumenus* ' *Phylick*, *Damon* and *Connus* Musick; even *A-* ' *nytus*, whilst his Sons were his Scholars, was ' not ashamed of that which they learned, ' though it were not sufficient to maintain ' them by pleading; but for himself, he gloried ' that he walkt invisible with *Pluto's* Helmet, or ' *Gyges's* Ring, concealing from the People the ' true means of his subsistence, which indeed ' was by dressing Leather, which was not just; ' to be ashamed of the Trade, and not of the ' Profit; for he ought to own this, or to disclaim ' that.

* *Socratic.*
Epist. 14.

* *Var. hist.*

' *Anytus* (saith * *Ælian*) to answer this re- ' proach, studied all occasions and ways of re- ' venge; but feared the *Athenians*, doubting if ' he should accuse *Socrates*, how they would ' take it, his name being in high esteem for ' many respects, chiefly for opposing the *Sophists*, ' who neither taught nor knew any solid Learn- ' ing. He † advised with *Melitus*, a young ' Man, an Orator, unknown to *Socrates*, describ'd ' by * *Plato*, with long plain Hair, a high Nose, ' and a thin Beard, one that for a Drachm ' might be bought into any thing, by whose ' Counsel * ' He begins by making trial in lesser ' things, to sound how the *Athenians* would en- ' tertain a charge against his Life; for to have ' accused him upon the very first, he conceived ' unsafe, as well for the reason already menti- ' oned, as lest the Friends and followers of *So-* ' *crates* should divert the anger of the Judges ' upon himself, for falsely accusing a Person so ' far from being guilty of any wrong to the ' State, that he was the only ornament thereof. ' To this end he suborns *Aristophanes*, a Co- ' mick Poet, whose only business was to raise ' mirth, to bring *Socrates* upon the Stage, tax- ' ing him with Crimes which most Men knew ' him free from, impertinent Discourse, making ' an ill Cause by Argument seem good, intro- ' ducing new and strange Deities, whilst him- ' self believed and revered none; hereby ' to insinuate an ill opinion of him, even into ' those who most frequented him. *Aristophanes* ' taking this Theme, interweaves it with much ' abusive Mirth; the best of the *Grecians* was ' his Subject, not *Cleon*, the *Lacedæmonians*, the ' *Thebans*, or *Pericles* himself, but a Person dear ' to all the Gods, especially *Apollo*. At first ' (by reason of the novelty of the thing, the

† *Schol. Ari-*
stoph.
* *Lib. in.*

* *Ælian.*

unusual personating of *Socrates* upon the Stage) ' the *Athenians*, who expected nothing less, were ' struck with wonder: Then, (being naturally ' envious, apt to detract from the best Persons, ' not only of such as bore Office in the Com- ' mon-wealth, but any that were eminent for ' Learning and Vertue) they began to be taken ' with the *Clouds*, (so was the Play named) ' and cried up the Actor that personated *So-* ' *crates* with more applause than ever any be- ' fore, giving him with many shouts the Victo- ' ry, and sending word to the Judges, that they ' should set down no name but that of *Aristo-* ' *phanes*. *Socrates* came seldom to the Theatre, ' unless when *Euripides* contested with any new ' Tragedian, there, or in the *Pyraum*, then he ' went, for he affected the Wisdom, Goodness, ' and sweetness of his Verse; sometimes *Al-* ' *cibiades* and *Critias* would invite him to a Co- ' medy, and in a manner compel him; for he ' was so far from esteeming Comedians, that ' he contemn'd them as lying, abusive, and un- ' profitable; whereat they were much displeas- ' ed: These (with other things suggested by ' *Anytus* and *Melitus*) were the ground of *Ari-* ' *stophanes* his Comedy, who, it is likely, got a ' great sum of Money by it, they being eager ' in prosecution of their design, and he prepa- ' red by want, and malice, to receive their im- ' pression: In fine, the Play got extraordinary ' Credit, that of *Cratinus* being verified,

The Theatre was then
Fill'd with malicious Men.

' It being at that time the Feast of *Bacchus*, ' a multitude of *Grecians* went to see the Play: ' *Socrates* being personated on the Stage and of- ' ten nam'd, (nor was it much the Players should ' represent him, for the Potters frequently did ' it upon their Stone Jugs) the Strangers that ' were present (not knowing whom the Co- ' medy abused) raised a hum and whisper, ' every one asking who that *Socrates* was? which ' he observing (for he came not thither by ' chance, but because he knew himself should be ' abused in the Play, had chosen the most ' conspicuous Seat in the Theatre) to put the ' Strangers out of doubt, he rose up, and all ' the while the Play lasted, continued in that ' Posture, (* Laughing) † one that was present * *Ælian. var.* ' asked him if it did not vex him to see him- *hist. 5.* ' self brought upon the Stage? Not at all, (an- *† Plat. de cir-* ' swered he) *methinks I am at a Feast where cand. lib.* ' every one enjoys me. * This Comedy was first act- * *Schol. Ari-* ' ed when *Isarchus* was Archon, *Cratinus* Victor *stoph.* ' in the first year of the eighty ninth Olympiad: ' *Aristophanes* being by some reprehended for it, ' to vindicate himself, caused it to be acted a- ' gain the Year following, *Amintas* being Archon, ' but with worse order than at first.

* *Amipsias* also (another Comick Poet) de- * *Laert.* ' rided him thus in *Tribone*.

O *Socrates*, the best of few, the vaineſt
Of many Men; and art thou come amongst us?
Where is thy Gown? Did not this great mis-
fortune
Befal thee by the Leather-dreſſer's help?

CHAP. X.

His Trial.

* **M**Any years past since the first falling out betwixt *Socrates* and *Anytus*, during which time one continued openly reproving the other, secretly undermining, until at length *Anytus* seeing the time fute with his design, procured *Melitus* to prefer a Bill against him to the Senate in these terms.

Melitus Son of *Melitus*, a *Pythean*, accuseth *Socrates* Son of *Sophoniscus* an *Alopecian*. *Socrates* violates the Law, not believing the Deities which this City believeth, but introducing other new Gods. He violates the Law likewise in corrupting Youth; the punishment Death.

This Bill being preferred upon Oath (*Plato* † *ἀστυμαχία*) *Crito* became bound to the Judges for his appearance at the day of Trial. * Soon after *Anytus* sent privately to him, desiring him to forbear the mention of his Trade, and assuring him that he would thereupon withdraw his Action; but *Socrates* return'd him answer, that he would never forbear speaking truth as long as he lived, that he would always use the same speeches concerning him; that his accusation was not of force enough to make him refrain from speaking those things which he thought himself before obliged to say.

* The interval of time betwixt his accusation and trial, he employed in his usual Philosophical exercises, not taking any care to provide his defence, for which being observed and questioned by *Hermogenes*, Son of *Hipponicus*, 'I provide Apology enough (saith he) in considering and pursuing the constant course of my life; *Hermogenes* demanding how that could be? because (saith he) I never did any unjust act, which I conceive the best Apology: But we often see Judges (saith *Hermogenes*) oversway'd by Rhetorick, to condemn the innocent, and acquit the guilty: The truth is, (replied *Socrates*) going about to make my Apology, I was twice withheld by the *Dæmon*; whereat *Hermogenes* wondring, Is it strange (continues he) that God should think it fit for me to dye at this time? hitherto no Man hath lived more uprightly; which as it is now my greatest comfort, so it was the greatest delight to my self and Friends; if I live longer, I know I must undergo what is proper to old Age, defects of hearing and sight, slowness to apprehend, aptness to forget, how can I then be pleas'd to live longer and grow worse: It is likely God in his love to me hath ordained that I should die in the most convenient Age, and by the gentlest means; for if I die by Sentence, I am allowed the benefit of the most easie kind of death; I shall give my Friends the least trouble, I shall do nothing unseemly before those that are present, and shall depart sound in Body and Soul; is not this very desirable? God with much reason forbids me to make any defence: If I could effect it, I should only stay longer to be taken away by the torment of Diseases, and imperfections of Age, which truly *Hermogenes* I desire not; If when I give an account of my actions towards God and Men, the Judges think fit to Condemn me; I will rather

chuse to die than beg of them a Life worse than Death. Other Friends used the same perswasions to him with assurance of Victory. † *Lyfias* † *Cicer. de O. nat. 1. Laert.* an excellent Orator, offered him an Oration, which he had written in his defence, desiring him if he thought good to make use of it at his Tryal; *Socrates* perused it, and told him, that it was a good one, but not fit for him. *Lyfias* asking how that could be? Why (saith he) may not a Garment or Shooes be rich, yet not fit for me? If you should bring me *Sicionian* Shooes, I would not wear them though they were fit for my feet, because they are effeminate: He conceived the Oration to be ingenious and eloquent, but not stout and manly; * for * *Plut.* though it were very bitter against the Judges, yet † was it more Rhetorical than became a † *Laert.* Philosopher.

The day of Tryal being come, * *Anytus*, *Lyco*, * *Plat. Apol.* and *Melitus* prepared to accuse him, one in behalf of the People, the second of the Orators, the last of the Poets: *Melitus* first went up into the Chair proper for that purpose, and there spoke an Oration which was in it self mean enough, but withal delivered so unhappily and School-boy like, that sometimes he was out with fear, and turned about to be prompted like a Player, enough to beget Laughter even in those that were most concerned in so serious a cause: Part of the effect whereof seems to be the same which is thus by *Xenophon* dispersedly deliver'd, some particulars whereof are confirmed by *Libanius*.

'That *Socrates* perswaded his Auditors to contemn the receiv'd Laws, saying it was fit only for Fools to be governed by a Bean, (meaning the suffrages of the Senate so gathered.)

'That he was intimately conversant with *Critias* and *Alcibiades*, one most Covetous and Violent in the Oligarchy, the other Ambitious of Tyranny.

'That he taught Disrespect and Disobedience to Parents, telling his Scholars he would make them wiser than their Fathers, and that it was Lawful for any one to bind his Father if he were mad, and for those that were the more Wise, to do as much as those that were less Wise.

'That he taught also disrespect of all other Kinsmen, saying they were not useful to the Sick, or to the accused, the first being in more need of a Physician, the latter of an Orator; that the good will of unable Friends was nothing worth, that only the most knowing persons were most worthy of Honour; by which means he would arrogate all respect to himself.

'That he selected out of the Poets some ill Places, and perverted others that were not so, to excite his Friends to impious actions; as that of *Hesiod*,

*There is no work pursued Shame:
'Tis Idleness that merits blame.*

'He expounded, as if the Poet meant all acts might be committed for gain.

'That he often repeated and mis-interpreted these words of *Homer*, as if the Poet allowed the Poor to be beaten.

by memor. 4.

*When he a Prince, or some great Person meets,
Such with soft language kindly thus he greets ;
Happy above the reach of fear are you ;
Sit down, and bid your followers do so too.
But of the lower sort when any speaks,
Fort to these words with blows his anger breaks,
Be quiet ; to thy betters wretch submit ;
For action and advice alike unfit.*

* Liban. Apol.

Melitus (his Oration ended) came down ;
* next him came *Anytus* with a long malicious
speech, and last of all *Lycus* with all the Artifice
of Rhetorick concluded the accusation.

† Cic. Tusc.
quest. 1.

Socrates † would not (as was the Custom)
procure an Advocate to plead for him ; all the
while his Accusers were speaking, he seemed
to employ his Mind about nothing less : as
soon as they had done, he went up into the Chair,
(* in which action he observed that the *Dæmon*
did not withhold him) and with † an angry
smile begun this * unpremeditated answer, † not
as a Suppliant, or guilty Person, but as if Master
of the Judges themselves, with a free contumacy
proceeding not from Pride, but the greatness
of his Mind.

† Cic. Tusc.
quest. 1.

* Xenoph.

* But I wonder first (*Athenians*) how *Me-
litus* came by this knowledge, that (as he saith)
I do not worship those Gods the City wor-
ships ? Others have seen me, (and so might
Melitus if he had pleas'd) Sacrifice at common
Festivals on the Publick Altars ; How do I
introduce new Deities when I profess to be di-
rected in all my actions by the Voice of God ?
They who observe the Notes of Birds, or an-
swers of Men, are guided by the voice : None
doubts of Thunder whether it be loud or ora-
culous ; Doth not the Priestess on the Tripod
convey to us by voice what the God delivers
to her ? and that he foreknows events, commu-
nating them to whom pleaseth him, all Men
(as well as I) believe and profess : Others call
those that foretel Events, Augurs, Sooth-
sayers, and Diviners, I the *Dæmon*, and (I
conceive) more religiously than they who af-
cribe a divine power to Birds : That I am no
Impostor herein, many can attest who have af-
fected my Advice, and never found it fail. Here
there arose a murmur in the Senate, some not
believing, others envying what he said, that
he should surpass them in such a particular
favour of the Deity : Let such as are incre-
dulous hear this also to confirm their Opinion
that I am not favour'd of the Gods ; when
Chærophon in the presence of many witnesses,
question'd the *Delphian* Oracle concerning me,
Apollo answered, that no Man was more free,
more just, or more wise ; (here another mur-
mur arose amongst the Judges : he proceeded)
Yet the same God said more of *Lycurgus* the
Lacedæmonian Law-giver, that he knew not
whether to call him a God or a Man ; me he
compared not with the Gods, though he gave
me the priority amongst Men. But trust not
the God herein, consider me exactly your
selves ; whom know you less a Servant to
corporeal pleasures ? whom more free ? I accept
not either rewards or gifts ; who more just than
he who so conforms himself to the present time,
as he needs not the help of any other ; who

will say he deserves not the title of wise,
who since he was able, never desisted to learn
by enquiry all good possible : and that I took
not this pains in vain, is evident in that, many
Citizens and strangers studious of Virtue, pre-
fer my Conversation above all others : What
is the reason that tho' all Men know I have
no Wealth to requite them, so many desire
to oblige me by gifts ? That I require no re-
turn from any, yet engage so many ? That
when the City being besieged, every one lament-
ed his condition, I was no more mov'd than when
it was most flourishing ? That whilst others
lay out Money on outward things to please
themselves, I furnish my self from within, my
self with things that please me better ? If none
can disprove what I have said, deserve I not
the commendations both of Gods and Men ?
And yet you *Melitus* pretend that with these
Instructions I corrupt Youth ; Every one knows
what it is to corrupt Youth : Can you name
but one that I of Religious have made Impi-
ous, of modest, impudent, of frugal, prodigal,
of sober, debauch'd, of hardy effeminate, or
the like ? But I know those, answered *Meli-
tus*, whom you have perswaded to be more
obedient to you than to their own Parents :
That as far as concerns Instruction, replied
Socrates, I confess this they know to be my
proper Care : For their Health Men obey
Physicians before their Parents, in Law-suits
Counsellors before their Kindred ; Do you
not in War prefer the most experienc'd Soldi-
ers to command before your own Allies ? Yes,
answers *Melitus*, 'tis fit we should ; and do
you think it reason, then, replies *Socrates*, if
others are prefer'd for such things as they are
excellent in, that because in the opinion of
some, I have an advantage beyond others in
educating Youth, which is the greatest Be-
nefit amongst Men, I ought therefore to die. †
Anytus and *Melitus* (saith he, addressing him-
self to the Judges) may procure my Death,
hurt me they cannot : * To fear death is to
seem wise, and not to be so ; for it is to pre-
tend to understand that which we understand
not : No Man knows what death is, whether
it be not the greatest happiness that can arrive
to a Man, and yet all fear and shun it as if they
were sure it were the greatest Misfortune.

This and more (saith *Xenophon*) was said both
by himself and his Friends, but the Judges were
so little pleas'd with his unusual manner of
pleading, that † as *Plato* went up into the
Chair, and began a Speech in these words,
*Though I, Athenians, am the youngest of those that
come up in this place, they all cried out, of those
that go down, which he thereupon was constrain'd
to do, and they proceeding to Vote, Socrates was
cast by 281 voices ; it was the custom of Athens,
as Cicero observes, when any one was cast, if the
Fault were not capital, to impose a pecuniary
mult ; when the Judges had voted in that man-
ner, the guilty Person was asked the highest rate
whereat he estimated his offence ; the Judges
willing to favour *Socrates*, propounded that
demand to him, He answered 25 (or as *Eubul-
ides* saith, 100 Drachms, nor would he suffer
his Friends, † *Plato*, *Crito*, *Critobulus*, and *Apol-
lodoris* (who desired him to estimate it at 50. †*

mine, promising to undertake the sum) to pay any thing for him, saying, That to pay a Penalty, was to own an offence, and telling the Judges that (for what he stood accused) he deserved the highest honours and rewards, and daily Sustenance at the publick charge out of the *Prytaneum*, which was the greatest honour that was amongst the *Grecians*; with this answer the Judges were so exasperated, that they Condemned him to Death by eighty Votes more.

* Xen. Apol.

* The Sentence being past, he could not forbear smiling, and turning to his Friends, saith thus, They who have suborned false Witnesses against me, and they who have born such Testimonies, are doubtless, conscious to themselves of great Impiety and Injustice; but as for me, what should more deject me now than before I was Condemned, being nothing the more guilty; they could not prove I named any new Gods for *Jupiter*, *Juno*, and the rest, or swore by such: How did I corrupt young Men by innuring them to sufferance and frugality? Of capital offences, as Sacrilege, Theft, and Treason, my very Adversaries acquit me; which makes me wonder how I come to be condemned to dye; yet that I dye unjustly will not trouble me, it is not a reproach to me, but to those who Condemned me; I am much satisfied with the example of *Palamedes*, who suffered Death in the like manner; he is much more commended than *Ulysses* the procurer of his Death; I know both future and past times will witness, I never hurt or injured any, but on the contrary have advantaged all that conversed with me to my utmost Ability, communicating what good I could, gratis. This said, he went away, his carriage answerable to his words, his Eyes, Gesture, and Gait expressing much chearfulness.

CHAP. XI.

His Imprisonment.

† Confol. ad Helv.

† Maxim. Tyr.

† Xen. memor.

† Plut. Phaed.

SOcrates (saith † *Seneca*) with the same resolved Look, wherewith he singly opposed the thirty Tyrants entred the Prison, and took away all ignominy from the place, which could not be a Prison whilst he was there: Here (*being fetter'd by the eleven Officers) he continued † thirty days after he was Condemned upon this occasion: * The Ship which carried *Theseus* and fourteen more Persons into *Creet*; he vowed if they got safe home (as it fortunately did) to dedicate to *Apollo*, and to send it every year with a Present to *Delos*, which Custom the *Athenians* religiously observed; before the Solemnity, they used to lustrate their City, and all Condemned Persons were reprieved till it retured from *Delos*, which sometimes, the Wind not serving, was a long time. The Priest of *Apollo* began the Solemnity, by Crowning the Poop of the Ship, which happening the day before *Socrates* was Condemned, occasioned his lying in Prison so long after.

In this Interval he was visited by his Friend, with whom he past the time indisput: after his usual manner: he was often solicited by them to an escape, some of them offered to carry him away by force, which he not only refused, but derided, asking, If they knew any place out of *Attica*, whither Death could not come? * *Crito*, two days before his death, came very early in the Morning to him to the same purpose, having by his frequent Visits and Gifts gained some Interest in the Jailour, but finding him asleep, sat still by him, admiring in the soundness of his Sleep, the happy equality of his Mind; as soon as he waked, he told him that he came to bring sad News, if not such to him, yet to all his Friends, that the Ship would certainly be at home to morrow at furthest (some that came from *Sunium* affirming they had left it there) but that in all likelyhood it would come that day, and he should dye the next. In good time be it, answered *Socrates*, but I do not believe it will come to day; for the day following I must dye, as they say, who have the Power in their Hands; but that I shall not dye to Morrow, but the day after, I guess by a Dream I had this Night, that a Woman very beautiful, in a white Garment, saluted me by my Name, saying.

*Thou, ere three days are told,
Rich Phithya shalt behold.*

(The same relation, according to *Lucretius*, he made to *Æschines*) this occasion *Crito* took to perswade him to save himself, which he prest with many arguments; 'That his Friends would be accused of Covetousness, as more desirous to spare their Wealth, than to redeem him; that it might be effected with little trouble and expence to them who were provided for it; that himself was rich enough to do it, or if not, *Simmias*, *Cebes*, and others would joyn with him; 'That he ought not voluntarily to thrust himself into destruction, when he might avoid it; that he should leave his Children in an uncertain mean Estate; that it would not be construed Constancy, but want of Courage. Consider well these reasons saith he, or rather (for it is now no time to stand considering) be perswaded, what is to be done, must be done this Night, or it will be too late. *Socrates* answered, that his chearful readiness to relieve him was much to be esteemed, if agreeable to Justice, otherwise, the less just, the more blameable: That opinion and censure ought not to be regarded, but Truth and Equity; that wrong must not be requited with wrong; that Faith should be kept more strictly with a City than with private Persons; that he had voluntarily subjected himself to the Laws of his Country, by living under their Government, and to Violate them at last, were great injustice: That by breaking Prison, he should not only draw his Friends into many Inconveniences, but himself also into many Dangers, only to live and dye in Exile; that in such a condition, he should be nothing more capable to bring up his Children

'dren well, but dying honestly, his Friends would take the more care of them: That whatsoever inconvenience might ensue, nothing was to be preferred before Justice; that if he should escape by Treachery, the remainder of his Life would be never the more happy, nor himself after Death better entertain'd in the next World. These things (saith he) I hear like the *Corybantian* Pipes, the sound of these Words makes me deaf to every thing else; therefore whatever you shall say to the contrary, will be to no purpose; but if you have any other Business, speak. *Crito* answering, he had not any else; as for this then (concludes he) speak no more of it, let us go the way which God points out to us.

CHAP. XII.

The time and manner of his Death.

THE time of *Socrates's* Death is formerly touched; the Marble at *Arundel-House*, saith he, died when *Laches* was Archon, aged seventy years, which (according to *Plato*) were compleat, for he saith *πλέω ἐβδομήκοντα*. * *Demetrius Phalerius* saith, he died the first year of the ninety fifth Olympiad, having lived Seventy Years. † *Diodorus Siculus* avers, it was done in that Year, *Laches* being Archon.

Although there be not any thing in the Greek Story settled by better Authority, than the Years of *Socrates*; *Leo Allatius* with much Confidence, and little Reason, controverts the received Chronology of his Life and Death, the occasion is this; the fourteenth of the *Socratick* Epistles published by him, mentioneth an Oration of *Polycrates*, as spoken at the Arraignment of *Socrates*; but the Walls of *Athens* repaired by *Conon* six Years after the Death of *Socrates*, being spoken of in that Oration, the Epistle is thereby rendred suspicious, the Truth seems to be this: After the death of *Socrates*, it became an ordinary Theme in the Schools of Rhetorick (which was at that time much studied at *Athens*) to speak for and against *Socrates*. *Polycrates*, a Sophister, to exercise his wit, wrote an Invektive: *Lysius*, a famous Orator, who died about the hundredth Olympiad, had written (as we have already said) an Apologetick, which is by the Scholiast of *Aristides* cited in answer to *Polycrates*. Apologies were in like manner written by *Plato*, * *Xenophon*, and (long after by) *Libanius*; although *Isocrates* admonished *Polycrates* of certain Errors in his Oration against *Socrates*, yet the Anachronism continued, for Chronology was not yet studied in *Athens*; and thence it is that *Plato* himself is in that respect so much reprehended by *Athenæus*, *Aristides*, *Macrobius*, and others: The Writer of the *Socratical* Epistle admits *Polycrates* as the Accuser at the Trial, and the Oration as then, and there spoken, so also doth *Hermippus* whom *Laertius* cites to the same Effect; but *Phavorinus*, a Critick of later times, when Chronology was more exact, detects the Error by Computation of

times: *Allatius* will by no means have the criticism of *Phavorinus* allowed, and labours to introduce an uncertainty of the time, to the end he may persuade that *Socrates* lived beyond the reparation of the Walls of *Athens*: the great Engine wherewith he labours to demolish all that hath been asserted by the Ancients, is the Testimony of *Suidas*, who (I know not upon what Authority) saith, he lived Eighty Years: His smaller Artillery are the groundless emendation of *Meursius*, and the mistake of *Scaliger* before noted; the absurd Metachronism of the *Chronicum Alexandrinum*, which makes *Socrates* die in the one hundred and fourth Olympiad, and in the ninetyeth Year of his Age; the anistoresie of the unknown Writers of *Aristotle's* Life, who supposeth him in the seventeenth Year of his Age, to have heard *Socrates* three Years, and which is most ridiculous, the notorious Anachronisms of *Plato* must serve as irrefragable Arguments to impugn the Truth. With these proofs in the Sophistical disguise of a Dialogue, he endeavours to puzzle the unwary Reader.

The manner of his Death receive from *Plato* in the Person of *Phædo* an Eye-witness; 'Every day (saith he) I went with other Friends of his to visit him; we met in the Court where he was tried, it being near the Prison; where we entertained our selves with discourse till the Prison was opened, then went in unto him and spent many times the whole day with him. But that day we met sooner than ordinary, for the Evening before as we came out of the Prison, we heard the Ship was come from *Delos*, and thereupon we appointed to meet early the next Morning at the usual place, where being come, the Porter came out to us, and told us that we must stay a while before we could be admitted, for the eleven Officers were there taking off his Fetters, having brought him word that he must die to day: Not long after he came out again, and told us we might go in, where when we came, we found *Socrates's* Fetters newly taken off, and *Xantippe* sitting by him with a Child in her Arms: She as soon as she saw us, burst forth into Tears, and cried out, Ah, *Socrates*, this is the last time thy Friends shall ever speak to thee, or thou to them. *Crito* (saith *Socrates*, addressing himself to him) let some body carry her home; whereupon some of *Crito's* servants led her away exclaiming, and beating her Breast. *Socrates* who was sitting up on the Bed, drew up his Leg and rubbed it, saying the whilst, How strange a thing, Friends, is that which Men call Pleasure, how near a Kin to Pain, to which it seems so contrary? They arrive not indeed together, but he that takes one, is immediately overtaken by the other, as if they were tied together: If *Æsop* had observed this, certainly he would have made some Fable of it, as if God willing to compose their difference, had joined them by the end, not being able to make them absolutely one; so that whosoever hath one, must straight have the other also; as it happens to me at this time, the Pain my Fetters

* *Laert.*† *Laert.** *Memorab. lib. 1.*

' Fetters even now gave me, is now turned to
 ' a kind of Pleasure, and tickles me. You have
 ' opportunely (said *Cebes*) put me in mind to
 ' ask, why since your Imprisonment (which
 ' you never did before) you have writ Po-
 ' ems, a Hymn to *Apollo*, and *Æsop's* Fables
 ' rendred into Verse; many have questioned
 ' me about it, particularly *Euenus*; if he repeat
 ' this demand, what answer shall I give him?
 ' Tell him (answers *Socrates*) that truly I did
 ' it not to contend with him and his Verses,
 ' but to comply with a Dream (which I have
 ' had more than once) enjoyning me to pra-
 ' ctise Musick; in obedience whereunto I first
 ' made Verses in honour of the God whose
 ' Feast this was; Then, conceiving it essential
 ' to a Poet to write Fictions, which of my self,
 ' I use not, I made use of some of *Æsop's*,
 ' which I had in memory, as they first came
 ' into fancy; tell *Euenus* this, and bid him from
 ' me farewell, and if he be wise, follow me, for
 ' it seems I must go hence to day, the *Athenians*
 ' have so ordered it. What is that, said *Simmi-
 ' as*, which you bid *Euenus* do? I have often con-
 ' versed with him, but as far as I understand
 ' him, he will not be at all ready to be rul'd by
 ' you; what, saith he, is he not a Philoso-
 ' pher? He seems so, answers *Simmi-
 ' as*; then he will (replied *Socrates*) and so will all
 ' who deserve that name; but perhaps he will
 ' not lay violent hands upon himself, that is
 ' not Lawful: And as he was speaking thus, he
 ' set down his Leg again to the Ground, and
 ' sitting so, continued all the rest of the di-
 ' spute. Then *Cebes* asking why, how it could
 ' be that it should be prohibited to ones self,
 ' yet that a Philosopher ought to desire to
 ' follow a dying Person? He answered, Men
 ' are the Possessions of God, would you not be
 ' angry if your Slave should kill himself against
 ' your will, and if it were in your Power pu-
 ' nish him? We must expect a Summons from
 ' God, an inevitable necessity (such as I have
 ' at this time) to take us hence. This is truth,
 ' replied *Cebes*, but what you asserted even
 ' now is inconsistent with it; God taking care
 ' of us as his Possessions, can a wise Man de-
 ' sire to be out of his Protection? He cannot
 ' think to mend his condition by freeing himself
 ' from so excellent a Government. *Socrates*
 ' seemed much pleased with the subtlety of
 ' *Cebes*, and turning to us said, *Cebes* is always
 ' inquisitive, nor will easily admit any thing:
 ' To me, said *Simmi-
 ' as*, what he hath said seems
 ' reason, how can wise Men endure, much
 ' less endeavour to part with those that are so
 ' much better than themselves? But *Cebes* here-
 ' in reflects upon you, who are so ready to
 ' leave us, and the Gods whom you acknow-
 ' ledge good Governours: You say well, an-
 ' swers *Socrates*, I suppose you would have
 ' me answer as in a Court of Judicature; by all
 ' means, saith *Simmi-
 ' as*; well then, replies he,
 ' I will endeavour to defend my self better a-
 ' gainst you than I did before the Judges: Tru-
 ' ly did I not believe I should go to just gods,
 ' and to Men better than any living, I were
 ' inexcusable for contemning Death; but I am
 ' sure to go to the Gods, very good Masters,
 ' and hope to meet with good Men, and am

' of good Courage, hoping that something of
 ' Man subsists after Death, and that it is then
 ' much better with the good than with the
 ' bad. Here *Crito* interrupting him, told him
 ' that he who was to administer the Poison,
 ' advised him to speak little, and not heat him-
 ' self with dispute, for it agreed not with that
 ' kind of Poison, which some neglecting,
 ' had been constrained to take it two or three
 ' times: Mind him not, said *Socrates*, let him
 ' provide as much as may serve twice or thrice,
 ' if need be. Then he proceeded in a large
 ' Discourse to declare that the chief office of
 ' a Philosopher is to meditate on Death; there-
 ' fore he ought not to fear the approach of
 ' it; That as Death is the Solution of the Soul
 ' from the Body, so is it the office of a Philo-
 ' sopher to free the Soul from Corporeal
 ' Affections; That if we understand the bet-
 ' ter, the more the Soul is disengaged from
 ' Sense, we shall understand most perfectly
 ' when she is wholly freed from the Body by
 ' Death, which Perfection of Knowledge is the
 ' sole end of Philosophy.

This part of the Discourse ended, *Cebes* oc-
 casions the renewing of it by the desiring him
 to prove the immortality of the Soul, which
 he doth first from the necessary succession of
 Generation and Corruption as contraries, the
 ground of the *Pythagorean* Transmigration; next
 from the Soul's manner of reasoning, which
 being only by reminiscence argues it had a
 Being before the Body (when it had perfect
 knowledge of those Ideas which upon occasi-
 on of sensible objects it recovers) and conse-
 quently shall subsist after it; much more is
 spoken by *Plato* under his name, whereof al-
 most all is manifestly *Plato's* own, nor is it
 possible to select that which is not from the
 rest; the conclusion of his Discourse (as con-
 tracted by *Cicero*) was, ' That there are two *Tisc. quest. p. 8.*
 ' ways, and a twofold course of Souls when ^{127.}
 ' they go out of the Body: For such as have
 ' defiled themselves with humane Vices given
 ' over to Pleasures wherewith they are blind-
 ' ed, according as they are polluted with do-
 ' mestick Sins, or have used inexpressible deceits
 ' to wrong the Publick, take a by-way seclu-
 ' ded from the Counsel of the Gods: But they
 ' who have preserved themselves intire and
 ' chaste from the least Contagion of their Bodies;
 ' having always withdrawn themselves from
 ' them, and in humane flesh imitated the Lives
 ' of Gods, find a ready way open for them,
 ' leading them to those from whom they came:
 ' and as Swans are (not without reason) sa-
 ' cred to *Apollo*, because they seem to have
 ' learnt Divination from him, whereby foresee-
 ' ing the good that is in Death, they dye with
 ' Songs and delight; so ought all good and
 ' knowing Persons to do: * Let every one *Plat.*
 ' therefore prepare for this Journey against the
 ' time that Fate shall call him away; You *Sim-
 ' mias*, *Cebes*, and the rest here present shall go
 ' at your appointed Hour, me Fate now sum-
 ' mons (as the Tragedian saith) and perhaps
 ' it is time that I go into the Bath, for I think
 ' it best to wash before I take the Poison, that
 ' I may save the Women the Labour of washing
 ' me when I am dead.

When

When he had made an end of speaking, Crito asked him what Directions he would leave concerning his Sons and other Affairs. and if they could do any thing that might be acceptable to him? I desire no more (saith he) than what I have often told you, if you take care of your selves, whatsoever you do will be acceptable to me and mine, though you promise nothing; if you neglect your selves and Vertue, you can do nothing acceptable to us, though you promise never so much; that, answered Crito, we shall observe; but how will you be Buried? as you think good, saith he, if you can catch me, and that I give you not the slip, then with a Smile applying himself to us, I cannot perswade Crito, saith he, that I am any thing more than the Carcass you will anon behold, and therefore he takes this care for my Enterrment; it seems that what even now I told him that as soon as I have taken the Poison, I shall go to the Joys of the Blessed, hath been to little purpose; he was my Bail, bound to the Judges for my Appearance, you must now be my Sureties to him that I am departed; let him not say that Socrates is carried to the Grave, or laid under Ground, for know, dear Crito, such a mistake were a wrong to my Soul; be not dejected, tell the World my Body only is Buried, and that after what manner thou pleasest. This said, he arose and retired into an inward Room, taking Crito with him, leaving us discoursing upon our own Misery, shortly to be deprived like Orphans of so dear a Father. After his Bathing, came his Wife and the other Women of his Family with his Sons, two of them Children, one a Youth; when he had taken Order with these about his Domestick Affairs, he dismiss'd them and came out to us.

It was now Sun-set (for he had staid long within) when the Officer entred, and after a little pause said, I have not, Socrates, observ'd that Carriage in you which I have found in others, but as I thought you the most generous the mildest and best of all Men that ever came into this place, so I now see you hate me, not for that whereof others are the cause: you know the Message I bring, farewell; bear what you cannot remedy: with that he departed weeping, and fare thee well, (said Socrates) I will: how Civil is this Man? I found him the same all the time of my Imprisonment, he would often Visit me, Discourse with me, used me always Courteously, and now see how kindly he weeps for me; but come, Crito, let us do as he bids us, if the Poison be ready, let it be brought in; the Sun is yet scarce Set, answers Crito: others take it late after a plentiful Supper and full Cups; make not so much haste, there is time enough; he replies, they who do so think they gain time, but what shall I gain by drinking it late? only deceive my self as coverous of life, and sparing of that which is no longer mine; pray let it be as I say; then Crito sent one of the Attendants, who immediately returned, and with him the Man that was to administer the Poison, bringing a Cup in his hand, to whom Socrates, prethee honest friend (for thou art well vers'd in these busi-

nesses) what must I do? nothing, said he, but as soon as you have drunk, walk till you find your Legs begin to fail, then lie down, and in so saying, he gave him the Cup, Socrates took it chearfully, not changing either Countenance or Colour, and looking pleasantly upon him, demanded whether he might spill any of it in libation, who answered, he had made no more than would just serve; yet, saith Socrates, I may pray to God, and will, that my passage hence may be happy, which I beseech him to grant, and in the same instant drank it off easily without any disturbance; many of us who till now had refrained from Tears, when we saw him put the Cup to his Mouth and drink off the Poison, were not able to contain any longer; which Socrates observing, friend, (saith he) what mean you? for this reason I sent away the Women lest they should be so unquiet: I have heard we should die with gratulation and applause, be quiet then and take it patiently; These words made us with shame suppress our Tears; when he had walked a while, perceiving his Legs to fail, he lay down on his back as the Executioner directed him, who looking on his feet pinched them hard, asked him if he felt it, he answered no, he did the like to his legs, and shewing us how every part successively grew cold and stiff, told us when that chilnel's came at his heart he would die; not long after he spake these his last words, O Crito, I owe Æsculapius a Cock, pay it, neglect it not. It shall be done, saith Crito; will you have any thing else? He made no answer, lay still a while, then stretch'd himself forth; with that the Executioner uncovered him, his Eyes were set, Crito closed them. This (saith Plato) was the end of the best, the wisest, and most just of Men: A Story, which Cicero professeth, he never read without Tears.

Aristotle saith, that a *Magus* coming from Syria to Athens, not only reprehended Socrates for many things, but foretold him also that he should die a violent Death. Laertius closeth his Life with this Epigram,

*Drink Socrates with Jove, next whom enthron'd,
By Gods, and Wisdom's self as wisest own'd.
Thee, the Athenians gave a Pois'nous draught,
But first the same they from thy Lips had quast*

CHAP. XIV.

What hapned after his Death.

HE was Buried with Tears and much Solemnity, (contrary to his own direction) by his Friends, amongst whom † the excessive † *Plut. de vit. mor.* Grief of Plato is observed by *Plutarch*, and the Mourning Habit of *Isocrates*: As soon as they had performed that last Service, fearing the Cruelty of the Tyrants, they stole out of the City, the greater part to *Megara* to *Euclid*, where they were kindly received, † the rest to † *Liban.* other Parts.

Soon

† *Socrat. Epist.* † Soon after, a *Lacedæmonian* Youth, who had never more acquaintance with *Socrates* than what Fame gave him, took a Journey to *Athens*, intending to become his Disciple; being come as far as the City Gates, and ready to enter, with Joy; to be so near the end at which he aimed, instead of *Socrates*, he meets there the news of his Death, whereat he was so troubled, that he would not go within the City Gates, but enquiring the place where he was Buried, went thither, and breaks forth into a Passionate Discourse, accompanied with many tears, to the enclosed dead Body; when night was come, he fell asleep upon the Sepulchre; the next Morning, affectionately kissing the Dust that lay upon it, and with much Passion taking leave of the place, he returned to *Megara*.

Suidas tells a like Story, (for that there were more examples than one in this kind, *Libanius* implies) of a *Chian* named *Cyrus*, who coming to *Athens* to hear *Socrates*, went to his Tomb, and slept there, to whom *Socrates* appeared in a Dream, and Discoursed with him; with which only satisfaction he went directly home again.

† *Socrat. Epist.* † By these Accidents the *Athenians* were awakened into a Sense of their Injustice, considering they were obnoxious to the Censure of the *Lacedæmonians* by extraordinary Crimes, whose Children were so Affectionate to the Philosophers whom they had Murdered, as to take such long Journeys to see *Socrates*, whom they would not keep when he was with them; hereat they became so exasperated, that they were ready to tear those wicked Men that were the occasion of his Death piecemeal with their Teeth, the whole City cried out, they disclaimed the Act, and that the Authors thereof ought to be put to Death, † *Antisthenes* furthered their Rage by this means, Some young Men of *Pontus* invited to *Athens* by the Fame of *Socrates*, met with *Antisthenes*, who carried them to *Anytus*, telling them he was much wiser than *Socrates*; whereupon those that were present, with much Indignation, turned *Anytus* out of the City: thence he went to *Heraclea*, where some say the Citizens also Expelled him, * others that they Stoned him to Death: *Melitus* was by the *Athenians* Condemned and put to Death * others affirm the like of all his Accusers without Tryal, † *Plutarch*, that they so much hated them, as they would not suffer them to kindle fire at their Houses, they would not answer them any question, they would not wash with them, but threw away the water they had touched as impure, until unable to brook this Hatred, they hanged themselves.

In further Testimony of their Penitence, they called home his Friends to their former Liberty of Meeting, they forbid publick Spectacles of Games and wrestling for a time, they caused his Statue, made in Brass by *Lysippus*, to be set up in the *Pompeum*, and (a Plague ensuing, which they imputed to the injustice of this Act) they made an Order that, that no Man should mention *Socrates* publicly; or on the Theatre; that so they might forget what they had done: *Euripides* (restrained by this Order from doing it directly) Reproached them overily in a Tragedy, named *Palamedes* (in whom he alluded to *Socrates*) particularly in these Verses.

A Philomela ne'r Mischief knew,
Is Slain, alas! is Slain by you.*

At which words, all the Spectators understanding they were meant of *Socrates*, fell a weeping.

The Death of this sole Person (saith † *Euandrus*) brought a general Calamity upon the City; for it may easily be Collected by Computation of Times, that from thenceforward the *Athenians* did nothing Considerable, but the City by degrees Decayed, and with it all Greece.

CHAP. XV.

Of his Person and Vertues.

AS to his Person, he was a very unhand-
some, of a Melancholy Complexion, Bald, a flat Nose, Eyes sticking out, a severe down-cast look, difficult in Speech, and a too concise, his Language rough and careless, but more efficacious than all the Eloquence of *Theophrastus*, *Pericles*, or any other; so acute, that he could maintain either side in any Question, therefore is Reproached by *Aristophanes*, as having two Languages, whereof one was to defend Wrong; fervent in Dispute, often so Transported, that he would Beat himself, and Tear his Beard, to the Derision of the standers by, which he took quietly: Patient to be redargued; sometimes he covered his Face in Discourse, that he might not be Diverted by any Object of Sight: his Constitution strong and hardy, which he preserved such, by taking diligent care of his Health; well bearing Cold, Hunger, and upon occasion, Excess, of Wine without disturbance: his Habit the same in Winter as in Summer, having but one Garment a year; (k) no Shooes, his Diet sparing. In fine, his countenance promised so little, that (l) *Zopyrus* a Physiognomist who undertook to discover the dispositions of Men by their looks said he was stupid, because there were obstructions in his jugular parts; adding, he was given to Women and many other vices; whereat *Alcibiades*, and other friends of his that were present, knowing him free from those imputations, fell laughing; but *Socrates* justified his skill, answering, he was by nature prone to those vices, but suppressed his inclinations by reason, whence (m) *Alcibiades* used to say, he resembled the image of *Silenus* ((n) as he did indeed in his countenance, baldness, and flat nose) carved on the outside of little Boxes, sitting, and playing on a Pipe; for as those Boxes within held images of the Gods, so was he adorned with chastity, integrity, and all inward beauty, ravished, as † *Plutarch* saith, with a Divine Zeal to Vertue, in all kinds whereof *Xenophon*, *Laertius* and others, assert these Instances.

He was so wise, that he never erre'd in judging betwixt better and worse, nor thereto needed any other help: Yet he constantly professed, that he only knew, that he knew nothing: for which Reason he was by the Oracle of *Apollo* at *Delphi*, declared of all Men the most Wise

in

in this manner to *Charephon*, many witnesses being present ;

* Schol. Aristoph.

* *Wise* Sophocles, *wiser* Euripides,
But *wisest* of all Men is Socrates.

* Academ. quest. 1.

* *Apollo* (saith *Cicero*) conceiving the only wisdom of Mankind to consist in not thinking themselves to know those things whereof they are ignorant. * This Oracle, though he were nothing exalted with it himself, procured him much envy.

* Laert.

* Xen. memor. 4. pag. 818.

* Xen. mem. 1. p. 710.

* Plut. Philib.

* Suid.

* He was so Religious, that he never did any thing, without advising, first with the Gods, * never was known to attempt or speak any Impiety.

* Schol. Aristoph.

* He bare a Reverence to the Gods, not Humane, but such as transcended the greatest Fear : y Some say it was out of his great Reverence to the Divinity that he used to Swear by a * (Cock) a Dog, and a Plain Tree, (under which they used to sit) though it were interpreted Atheism.

* Laert.

* He was Constant, and a lover of the Publick Good, as appears in his acquitting the ten Captains, in his denying thirty Tyrants to fetch Leon in, his refusing to escape out of Prison, and Reproving such as grieved for his Death. * Xantippe used to say, that when the State was oppressed with a thousand Miseries, he always went abroad and came home with the same look, * never more chearful, or more troubled, for he bore a mind smooth and chearful upon all occasions, far remote from Grief, and above all fear: In his declining Age, falling sick, he was asked by one that came to visit him, how he did? very well (saith he) either way, if I live, I shall have more Emulation, if I die, more Praise.

* Elia. Cic. Tusc. quest. 3. Offic. 1.

* Plin. 7. 19.

* He was so Temperate, that he never preferred that which is pleasant before that which is wholesome. He never did eat more than Appetite (which was his Sauce) made delightful; all drink was pleasing to him, because he never drank but when he was thirsty, and then with such Temperate Caution, that * he poured out the first draught of Water upon the Ground, and if he were at any time invited to a Feast, he, which to others is very difficult, with much ease took care not to eat more than consisted with his health, * whereof he was very careful, because the Exercises of the Soul depend thereon, and in order thereto, used to walk constantly before Meals, whereupon being asked by one that observed it, what he did? I get Broth, saith he, for my Supper. To this Temperance it is imputed, though * Athens were often in his time visited with the Pestilence, he alone escaped it.

* Xenoph. mem. 4. 818.

* He was so frugal, that how little soever he had, it was always enough. * Wanting the means to live splendidly, he taught not anxiously how to acquire more, but how to accommodate his manner of Life to that which he had, * wherewith he was so contented, that he affirmed himself to come nearest the Gods, because he wanted least. Seeing the great variety of things exposed to Sale, he would say to himself, how many things there are that I need not; and often had in his Mouth these Verses.

* Plut.

* Xen. mem. 1. p. 712.

* Elia. 13.

* Xenoph. mem. 711.

* Liban. 1.

* Laert.

* He was so frugal, that how little soever he had, it was always enough. * Wanting the means to live splendidly, he taught not anxiously how to acquire more, but how to accommodate his manner of Life to that which he had, * wherewith he was so contented, that he affirmed himself to come nearest the Gods, because he wanted least. Seeing the great variety of things exposed to Sale, he would say to himself, how many things there are that I need not; and often had in his Mouth these Verses.

*Purple, which Gold and Gems adorn,
Is by Tragedians to be worn.*

Alcibiades ambitiously munificent, sent him *Ælian*. 9. many great Presents; *Xantippe* admiring their value, desired him to accept them: We, (answered *Socrates*) will contest in Liberality with *Alcibiades*, not accepting, by a kind of munificence what he hath sent us.

* To the same, who offered him a large plot of Ground to Build an House upon: And if I wanted shoes, (saith he) would you give me Leather to make them? but deserve I not to be derided if I accepted it?

* He flighted *Archelaus* King of Macedonia, and *Scopas*, Son of *Cranonias*, and *Eurilocus*, Son of *Larissus*, not accepting their Money, nor going to them. *Archelaus* lending to him to desire his Company; he said, he would not go to one, from whom he should receive benefits, which he could not equal with return. * To *Perdiccas*, who demanded why he would not come to him, he answered, lest I die the most ignoble Death; that is, lest I receive a Benefit which I cannot requite. *Laert.*

Coming home late one night from a Feast, some wild young men knowing of his return, lay in wait for him, attired like Furies, with Vizards and Torches, whereby they used to fright such as they met; *Socrates* as soon as he saw them, nothing troubled, made a stand, and fell to questioning them, according to his usual manner, as if he had been in the *Lycæum*, or *Academy*. *Ælian*. 6.

* He despised those that Cavilled at him. * Being told that such an one had reviled him behind his back: Let him beat me, saith he, whilst I am not by: And that another spoke ill of him: He hath not yet learnt, said he, to speak well. *Laert.* *Stob.* 711. *Laert.*

* Being kicked by an insolent young fellow, and seeing those that were with him much incensed, ready to pursue him; he said, what if an Ass kick me, would you have me kick again, or sue him? but the Fellow escaped not unpunished, for every one Reproached him for this Insolence, and called him the Reviler, so that at last for Vexation, he Hanged himself. *Plut.* de educ. liber.

Another striking him a Box on the Ear, he said no more, but that it was hard a Man knew not when to go abroad with a Helmet. *Seneca de ira.*

Another fell upon him with much Violence, which he endured without the least disturbance, suffering him to vent his Anger, which he did so long, till he made his Face all swelled and bruised. *D. Basil.*

Whensoever he perceived himself to grow incensed with any of his Friends, *Plut.* de int. cohib.

*Before the Storm arose,
He to the Harbour goes.*

He used to moderate his Voice, to look finislingly and moderately upon them, reserving himself untainted with Passion, by recourse to the contrary.

* He taught not such as conversed with him to be Covetous, for he took no Money of his Scholars, therein expressing his own Liberality. *Xenoph. mem. pag. 7.*

Hunger

* *Laert.* *Hunger or Want could never force him to flatter any:* Yet was he very complaisant and facetious in Company: as he one day openly at Dinner reproved one of his Friends something harshly, *Plato* said to him, had not this been better told in private? *Socrates* immediately answered, and had not you done better, if you had told me so in private? being demanded what Countryman he was? He answered, neither of *Athens*, nor *Greece*, but of the World. Sometimes he would Feast in a fine Robe, as *Plato* describes him, and when the time allowed, learned to Sing, saying, it was no shame to learn any thing which one knew not: He also Danced every day, conceiving that Exercise healthful; nor was he ashamed to play with little Children.

* *Plut. de exul.* * He was so just, that he never in the least wronged any Man, but on the contrary, benefited all such as conversed with him, as much as he could.

* *Senec. de tranquill.* * *Xenoph. memor. 4. p. 818.* * *Quintil. 8.4.* * His Continnence was Invincible: He despised the Beauty of *Alcibiades*, derided *Theodora* and *Caliste*, two eminent Courtezans of that time.

* *Xen. memor. 1. p. 731.* y He took great delight in the Conversation of good Men; to such he communicated whatsoever he knew; with them he studied the writings of the ancient wise men, selecting what was good out of them, (which confirms what was said before in the life of *Solon*, that Moral Philosophy was commenced by the Sophy) and esteemed this mutual friendship which he contracted with them above all Treasure. z Towards this his outward endeavour was so affected and desired by them, as much as he affected and desired them.

* *Xenoph. mem. 2. p. 752.*

C H A P. XVI.

His Wives and Children.

HE had two Wives, the first *Xantippe*, a Citizens Daughter of *Athens*, as *Theodoret* affirms, who adds, that she was Dishonest before he Married her, even with himself, besides others: *Athenaeus* also saith, that after he was Married, he lent her to a Friend, and that *Alcibiades* lay with her: But *Aristoxenus*, and *Porphyrius*, from whom these Aspersions are derived, have been noted of too much malignity, to be of any Authority.

She was (according to the Character * *A. Gellius* gives her) Curst, Froward, Chiding and Scolding always both day and night, b and for that reason he chose her, as he professes to *Antisthenes*, from observing, that they who would be excellent in Horsemanship, chose the roughest Horses, knowing, if they are able to manage them, they may easily Rule others: He, desirous to use much conversation with Men, took her to Wife, knowing, if he could bear with her, he might easily converse with all Men. To *Alcibiades*, who said, her Scolding was intolerable, he professes it was nothing to him, being used to it, like such as live in the continual noise of a Mill: Besides, saith he, cannot you endure the cackling of Hens? but they, answered *Alcibiades*, bring me Eggs and Chickens: and my *Xantippe*, replies *Socrates*, Children.

Of her Impatience, and his Sufferance, there are several instances; c one day before some of

his Friends, she fell into the usual Extravagancies of her Passion, whereupon he not answering any thing, went forth with them, but was no sooner out at the door, when she running up into the Chamber, threw down Water upon his head, whereat turning to his Friends, did I not tell you saith he, that after so much Thunder we should have Rain?

d Another time she pull'd his Cloak off from his Shoulders in the open Forum; some friends present counselled him to beat her: Yes, saith he, that whilst we two fight, you may all stand by, and cry, well done *Socrates*, to him *Xantippe*.

To some other Story of the same kind, * *An. Lib. 2. 16.* *Ioninus* alludes in these words: how *Socrates* looked when he was fain to gird himself with a Skin, *Xantippe* having taken his Cloaths away, and carried them forth with her, and what he said to his Friends, who out of a modest respectfulness, went back, seeing him so attired.

Having brought *Euthydemus* from the *Palæstra* to Dine with him, *Xantippe* running to the Table, Angry, overturned it; *Euthydemus* much troubled, rose up, and would have gone away, when *Socrates*: did not a Hen the other day saith he, the very same thing at your House, yet I was not angry thereat?

Alcibiades having sent him a curious March-pane, *Xantippe* (furiously, as her Manner was) threw it out of the Basket, and trod upon it, whereat *Socrates* laughing, and shall not you (saith he) lose your share in it?

Another time she offered to go to a publick Show, attired undecently; take heed, said he, you be not rather the Spectacle than the Spectator.

With reason thereof he said, I had three Evils, Grammar, Poessie, and an ill Wife; two I have shaken off, but my ill Wife I cannot.

His other Wife was named *Myrto*, f Niece to *Lyfimachus* Daughter of *Aristides*, not the Just, as *Laertius*, and from him *Suidas* affirms, but another of that name, the third from him, as is observed by *Athenaeus*, for the two Daughters of *Aristides* the Just, could not but be of great Age before the 77th Olympiad, wherein *Socrates* was born, long before which time *Aristides* died an Old Man in Exile; for that *Themistocles* died the second year of the 77th Olympiad is certain, and as *Æmilius Probus* affirms, *Aristides* died four years before *Themistocles* was Banished *Athens*, hereupon *Plutarch* more cautiously calls her not the Daughter, but Niece of *Aristides*.

Some, because *Xantippe* (as is manifest from *Plato*) out-lived him, believe he was first Married to *Myrto*, but that he had both these Wives at the same time, which is attested by *Demetrius Phalereus*, *Aristoxenus* (to whom *Athenaeus* saith, that *Aristotle* gave the ground) *Calisthenes* and *Porphyrius*: whence *Aristippus* * in his Epistle to his Daughter *Myrto*, advised her to go to *Athens*, and above all to honour *Xantippe* and *Myrto*, and to live with them as he with *Socrates*.

The occasion, whereupon the *Athenians*, who from the time of *Cecrops* had strictly observed single Marriage, allowed bigamy, in the time of *Socrates*, was this; In the second year of the 87 Olympiad, and the third of the 88. *Athens*

was Visited extreamly with the Pestilence, which attended by War and Famine, occasioned so great a scarcity of Men, that they made an Edict it might be Lawful for any that would to take two Wives. *Euripides* made use of this Indulgence, and that *Socrates* also did so, is attested by *Satyrus* the peripatetick, and *Hieronymus* the Rhodian, who Recorded the Order; to which *Athenæus* imputes the silence of the Comic Poets in this particular, who omitted no grounds of Reproach. *Plutarch* implies, that he took her out of Charity, for she was a Widow (without any Portion or Dowry) extreamly in want.

^g *Laert.*

^h *Theodoret.*

ⁱ *Porphyrus* reports, that when these two (*Xantippe* and *Myrto*) quarrell'd, they would at last fall both upon *Socrates*, and beat him, because he stood by and never parted them, but laughed as well when they fought with him, as with one another.

By *Xantippe* he had a Son, named *Lamprocles*, who could not brook her impatience so well as his Father, and being vex'd by her into Disobedience, was reclaim'd by *Socrates*; he died young, as may be gathered from *Plutarch*, who saith, *Timarchus* of *Charonea*, dying very young, desired earnestly of *Socrates* that he might be Buried near his Son *Lamprocles*, who died but few days before, being his dear Friend, and of the same Age. It appears from *Plato*, that he had more Sons by her, for in his *Apology* he mentions three, two grown Men, the other a Child, which seems to be the same, brought by *Xantippe* to him in Prison the day of his Death, and as *Plutarch* describes it, held in her Lap.

By *Myrto* he had two Sons: the eldest *Sophroniscus*, the youngest *Menedemus*, or *Menexenus*, tho' some say he had *Menedemus* by *Xantippe*.

C H A P. XVII.

His Scholars and Auditors.

^a *De Orator.*
^{lib.} 3.

WHereas (saith *Cicero*) many springing from *Socrates* by reason, that out of his several various Disputes diffused every where, one laid hold of one thing, another of another; there were some, as it were, so many several Families differing amongst themselves, much disjoyned and disagreeing; yet all these Philosophers would be called, and conceived themselves to be Socraticks: Of these were.

Plato, from whom came *Aristotle* and *Xenocrates*, the first taking the name of Peripatetick, the other of Academic.

Antisthenes, who chiefly affected the Patience and Hardiness in *Socrates* his discourse, from whom came first the Cynicks, then the Stoicks.

Aristippus, who was more delighted with his more voluptuous disputations, from him sprung the Cyrenaick Philosophy.

Others there were who likewise called themselves Socraticks, but their Sects by the strength and Arguments of the former are broken and quite extinct: such were

Phædo, an Elean, who instituted a particular School, from him called Eliack, which afterwards was called Eretriack, from *Menedemus*, who taught at Eretria, from him *Pyrrho*, thence the Pyrrhonians.

Euclid of *Megara*, institutor of the Megarick School, so named from *Clinomachus* his Disciple called the Dialectick, ending in *Zeno* the Citian, who introduced the Stoick.

The Herillians are named also, as a Scot that would be called Socratick. To these recited by *Cicero*, *Suidas* adds

Bryso of *Heraclea*, who together with *Euclid* invented disputative Logick.

Theodorus surnamed the Atheist, who invented a peculiar Sect called *Theodorean*, the Opinion which he taught was ἀδιαφορία, indifference.

Other Disciples of *Socrates* there were, who followed his Philosophy, not appropriating out of it any particular Sect, and therefore most properly deserve the Title of Socraticks, such are *Crito*, *Chærephon*, *Xenophon*, *Æschines*, *Simias*, *Cebes*, *Glauco*, and *Terpsion*.

The last kind of his Auditors were those who made no profession of Philosophy, of whom were

Critias and *Alcibiades*, who afterwards proved the most Ambitious Spirits of the Athenians, but it was discovered in neither whilst they conversed with *Socrates*, either that their youth was not capable of expressing their Vice, or that they cunningly complied (as *Xenophon* conjectures) with *Socrates*, in hopes of being by his conversation enabled to manage their former designs, which as soon as they attempted they left off their Friendship with *Socrates*. *Critias* fell from him and converted his affection into hate, because he reproved his Love to *Euthydemus*; *Alcibiades* naturally dissolute, was reclaimed by *Socrates*, and continued such whilst he conversed with him, He was of Form so exquisite as gave occasion to some to calumniate the friendship betwixt him and *Socrates*, to which effect *Aristoxenus* is cited by *Laertius* and *Athenæus*, and some verses of *Aspasia* by the latter; his Vindication we refer to *Plato* and *Xenophon*.

Of *Socrates* his Instructions to *Alcibiades* there are these instances.

^b He told him he was nothing of what a Man ought to be, that he had no advantage by the greatness of his Birth above an ordinary Porter; whereat *Alcibiades* much troubled, with tears besought him to instruct him in Virtue, and to reform his Vices.

^c Perceiving *Alcibiades* to be exceeding proud of his Riches and Lands, he shewed him a Map of the World, and bad him find *Attica* therein, which done, he desired that he would shew him his own Lands, he answered, that they were not there. Do you boast, replies *Socrates*, of that which you see is no (considerable) part of the Earth?

^d *Alcibiades* being by reason of his youth bashful and fearful to make an Oration to the People, *Socrates* thus encouraged him, Do you not esteem (saith he) that Shoemaker (naming him) an inconsiderable Fellow? *Alcibiades* assenting; and so likewise (continues he) that Crier and that Tent-maker. *Alcibiades* granting this, doth not, saith he, the Athenian Commonwealth consist of these? if you condemn them single, fear them not in an Assembly. To these add

^e The four Sons of *Crito* the Philosopher; the eldest *Critobulus* exceeding handsome and rich, but by *Socrates* (who valued his own Estate at five minæ) demonstrated to be poorer than himself. The

CHAP. XVII.

His Writings.

They who affirm that *Socrates* writ nothing (as *Cicero*, *Plutarch*, *Dion*, *Chrysostom*, *Aristides*, *Origen*, and others) mean in respect to his Philosophy, in which kind he never wrote any thing himself, but what he discoursed was committed to writing by *Xenophon*, *Plato* and others of his Scholars. Hence the Works of *Plato* (particularly *Phædo*) went under the name of *Socrates*, and are so cited by *Aristotle*; But that some things were written by *Socrates* himself, is evident from those who affirm.

c He writ, together with Euripides, and aided him in making Tragedies, whence *Mnesilochus*,

The Phrygians is *Euripides* new Play.

But Socrates gave it the best Array.

And again, *Euripides* is flatter'd by *Socrates* and *Callias*.

Now thou with Pride and Self-conceit o'erflow'st; But all the cause to Socrates thou owe'st.

Hither refer we that of *d Cicero*, who saith, *d Tusc.* when *Euripides* made his Play *Orestes*, *Socrates* revoked the three first Verses. He writ also some Fables of *Æsop* in Verse, not very Elegant, mentioned by *Plato*, *Plutarch* and *Laertius*, beginning thus:

To those who dwell in Corinth, Æsop said, Virtue with Vulgar Wisdom be not weigh'd.

A Pean or Hymn in honour of Apol. and Diana: One that went under his name beginning thus.

Dælian Apollo, and thou fair, Diana, hail; immortal pair.

is by *Dionysidorus* denied to be his: This is mentioned also by *Plato*, to which some add

The Encomium of Gryllus Son of *Xenophon*, slain in the *Mantinean* Fight, which the disagreement of times will not allow; more certain it is he framed

f Dialogues, which he gave to *Æschines*; seeing him in want, that he might get Money by them; to these add

Epistles, some whereof are published by *Leo Allatus*; that he writ more is implied by *Arrian* and *Atheneus*.

Epistle I.

ὁ Ἀλλὰ τῶν
 μὲν ἐτέρων
 ἔχειν τὴν αἰ-

You offer part of your Kingdom, and invite me to it, not as to a changed Government, but to Rule both your Subjects and your self: but I confess, I have not learned to Command, and would no more undertake to Rule, not knowing how, than to play at Dice, having never been taught: And doubtless if other Men were of the same mind, there would be fewer troubles in life; whereas now the confidence of such as are ignorant, undertaking things they do not understand, occasions these many disturbances: hence is it, they make Fortune greater than she is, and by their own Folly, increase her Power. Besides, I am not Ignorant, that a King ought to be more Honoured and Admired than a private Person, and as I would not undertake to be a Horseman having no skill in Horsemanship, but had much rather be a Footman, tho' the

the charge be less honourable: the same is my Opinion as touching Kings and private Persons, nor puffed up by Ambition will I desire more glorious Afflictions: they who invented the Fable of *Bellerophon* seemed to imply something to this purpose, for he was oppressed with misfortunes, not because he sought to rise higher in place, but for aiming at things above him, and being thrown down from his hopes, led the rest of his life poorly and ignominiously, driven by mocks out of Cities into the Wilderness, and shunning pathways, not what we commonly call so, but the freedom, wherewith every one orders his life. But let this be taken how the Poets please, my resolution you now hear again, that I will not change this place for that, I conceiving this fittest for me: nor is God willing I should, who hath been ever untill now, my Counsellor and Guide.

Epist. II.

YOU are not ignorant how great esteem we have of *Charephon*, who being chosen Ambassador by the City to the *Peloponnesians*, will perhaps come to you; a Philosopher is entertained with small trouble, but the Journey is dangerous, especially because of the tumults that are there at this time, from which, if thou protect him, thou wilt preserve our friend and infinitely engage us.

Epist. III.

A Neso of *Amphipolis* was commended to me at *Potidea*, he is now coming to *Athens*, being thrown out of his House by the People; for at present, Affairs are much Embroiled and Clouded there, but I believe within a little while they will clear up. In assisting him, you will oblige a deserving person, and benefit both the Cities, *Amphipolis*, lest by Rebelling it incur irremediable danger: Ours, lest we be involved in their troubles as at this present we are reduced almost to extremity for *Potidea*.

Epist. IV.

MEETING with *Critobulus*, I perswaded him to study Philosophy, but I think he is of another mind, and more addicted to affairs of State, in which he intends to make choice of the fittest method, and best instructor, for the most excellent sojourn now in *Athens*, and with many of them we are intimate. Thus much concerning him; as for us, *Xantippe* and the Children are well, and I continue to do, as when you were with me.

Epist. V.

WE hear you are at *Thebes*, and *Proxenus* gone into *Asia*, to take part with *Cyrus*; whether your designs will prosper God knows, they are here condemned by many, for it is conceived unfit the *Athenians* should assist *Cyrus*, through whose means they were deprived of Command by the *Lacedemonians* and fight for him, who fought against them. It is not therefore strange if the State being altered, some be ready of themselves to accuse you of temporising, and the better your success is, the greater will be their Calumnies; for I am well acquainted with the dispositions of some: but since we have undertaken this, let us prove our selves honest men, and call to mind what we use to say of Virtue, accounting this one of the best sentences of the Poet, Our Fathers house must not be discredited. Know therefore, that to War,

these two are requisite, Courage and Bounty; for this we are loved of our Friends; for that, feared of our Enemies: of both, thou hast domestic precedents.

Epist. VI.

I Have taken such care of your Strangers as you desired, and retained one to plead their cause before the People, *n* a Friend of ours, who pro-^{n Perhaps} fess himself the readier to undertake it, out of his desire to serve thee. *Lyfias*.

As for that which you write in jest concerning wealth, and such as are solicitous for it, perhaps it is not unreasonable. First, because whilst others Studie to be Rich, I choose to live meanly. Then though I might receive many Gifts and Legacies from living and dead friends; yet I freely disclaim them, and for a man thus inclined, to be by others judged mad, is nothing strange: But we must examine not this only, but the rest of our life; and since we disagree in the use, no wonder that we differ in the acquisition of *o* Riches; my Diet is very sparing, my Habit the same in Winter as in Summer: I never wear shoes, I am not taken with Popular Applause, but with the study of Wisdom and Integrity. But they who are intemperate, Luxurious in Meat, not every year, but every day putting on new Apparel, are transported with unlawful delights, and as they who lose their natural Complexion have recourse to Paint. So these losing the true glory of Virtue which every one ought to have, flie to that which depends upon Complaisance with others, courting vulgar Applause with Largeſſes and Feasts. Hence I suppose it comes, that they need much Wealth; They themselves cannot live upon a little, nor will others admit them into their Society, unless they receive a Salary for commending them.

But my life is well as to both these: I will not deny but in some things I may fail, I know that wisest Men prefer those, most Men these; Reflecting sometimes within my self upon God; I find that he exceeds us, in that he hath need of nothing; it is the property of a most excellent Nature not to want any thing, and to comprehend within himself all that he enjoys. Thus is he wiser than others, who imitates the most Wise, *p* and Happier, who resembles the most Happy. If Riches could do this, Riches were to be preferred; but since Vertue only can obtain it, it were folly to forsake the real good to pursue the seeming. Hence I cannot easily be perswaded but that my Condition is better than theirs.

q As for Children, who as you say ought to be provided for, the care that I take for them, all Men may see, I know but one ground of happiness, Wisdom. The Fool who reposeth his trust in Gold, possesseth not that which he hath, and is withal so much more miserable than others, in that they who are oppressed with poverty may grow Wise hereafter. But he out of an Opinion of his own Happiness, neglecting true Gain is, corrupted with Plenty. Besides that he never yet obtained Man's essential good, is deprived of hope thereof for the future. Nor is it possible that such a Man can go on securely to Virtue, who is entangled in the flatteries of those who are Masters in all insinuating Arts, and in the Charms of Pleasures which glide into the Soul through every Sense,

and drive out all wile and sound Judgment. How then can he choofe but give his his Children occasion of Folly rather than Instruction, who not only in words but actions expreffeth that in thefe things he hath placed his hope, who not proving good, their Subfiftence fails, and they die miserably for want of Food: Juftly punifhed for their Idleneſs; Parents are by Law enjoyned to bring up their Children till they are Men. But you, perhaps ſome Citizen may ſay to his Sons greedy to inherit, ſpare me not dying, and whiſt you live relie for maintenance upon me, tho' dead not aſham'd to lead a life more lazy than death; you expect that my fortunes ſhould extend to others even after my deceaſe, but your own are not competent for your ſelves whiſt you are yet alive. Such rough Speeches happily he will uſe to his Children, taking the liberty both of a Father and a Patriot. My Fortunes in the eſtimate of other Men are mean, but in the effect nothing inferiour to the Rich. I will not leave my Children Money, but a more honourable Heritage, diſcreet Friends, whom as long as they keep they can want as neceſſaries, and if they uſe them ill, doubtleſs they would uſe their Money worſe.

But if to you, who know the negligence of Friends, I ſeem to give ill advice; I anſwer, that all Men are not alike affected to their Friends, for ſome take care of them after they are dead, and it is likely that ours are not of a neglectful humour, but pleas'd with the paſt advantage they have received by us, no leſs than with the preſent of a ſhort benefit, the requital is ſhort; laſting benefits produce a return equal to their profit, and I foreſee that what is mine, will hereafter appear more gracious to my Friends, and therefore I exact no rewards of them. I account nothing of equal value in exchange with Philoſophy but Friendſhip, nor like the Sophiſts, have I any diffidence of thoſe things that are mine, for being old they renew, and in their decaying age flouriſh, which makes them more acceptable to the Diſciples, and their Father more eſteemed; Living he obtains honour, dead is thought worthy of memory, and if he leave a Kinfman behind him, they will reſpect him like his Nephews, and Brethren, and ſhew him all kindneſs, as being allied to him by more than a natural affinity; neither if they would, can they neglect him in miſfortunes; no more than we can flight them, who are near to us in Blood; for affinity in Soul forceth them to relieve the Son of the dead as if he were their own Brother; when they call to mind his Father, whoſe diſhonour they account their own.

Now judge if I order my affairs ill, or take no care for my Children, ſo as when I die they ſhall be deſtitute of neceſſaries, who leave them not wealth, but ſuch Guardians as will have a care of them and Wealth. No Hiſtory makes mention of any Man that hath been made better by riches; a tried Friend in this is to be preferred before tried Gold, that he is not beneficial to every one who deſires him, but to thoſe he loves beſt. Nor does he ſupply only the neceſſities of Life, but is ſerviceable as well to the Soul of him that hath him, and is moſt conducing to vertue, without which nothing profit-

eth; but we will conſider more exactly upon theſe things when we meet; thus much may ſerve as a curſory anſwer to your demand.

Epist. VII.

I wonder not at what you write; that you do I ſuſpect the thirty continue the ſame mind to us ſince your departure, which they had when you were here. As ſoon as you were gone, they began to have a Jealouſie of me, and there paſt amongſt them a murmur that theſe things were not done without *Socrates*; within few days they cited me to the Court, where ſome complaints were preferred againſt me, and when I defended my ſelf, they commanded me to go to the *Pyraum* to apprehend *Leon*, their intention was to put him to death, that they might enjoy his Eſtate; and make me partner in their Injuſtice; when I reſuſed, and ſaid ſomething to this effect that I would never willingly ſubſcribe to an unjuſt act; *Charicles* was preſent, and inwardly vext, *Socrates*, ſaith he, doſt thou think to talk thus peremptorily, and not ſuffer ten thouſand Ills? *Charicles*, ſaid I, but none ſo hainous as to do unjuſtly. He anſwered not a word, nor any of the reſt, but ever ſince they have liked me the worſe.

As for you, ſome were then preſent, reported that your affairs ſucceed to your wiſh, that the *Thebans* in your Exile received you kindly, and will aſſiſt your return to their utmoſt. Some were troubled at this News, and the more becauſe it leſſened their hopes of ſupply from *Lacedemon*, for they who came along with the Ambaſſadors, affirmed, that the *Lacedemonians* were engaged in a great War, and the *Ephori* hearing of theſe Troubles, were diſcontented, and ſaid, that the *Lacedemonians* had not intruſted them with the City to ſee it deſtroy'd; for if they would have done ſo, it were moſt eaſie for them who had the Command, being withal inſtigated thereunto by the *Corinthians* and *Thebans*, and that the City might be better governed under an *Oligarchy* than a *Democracy*. If all this be true, and your affairs ſucceed as they report, there is great liklyhood that upon your coming in with the *Thebans*, the *Lacedemonians* not aiding theſe, all things here may be eaſily compoſed. Beſides, many of the Natives who now are quiet through Fear, if they perceived never ſo little that you were firm, will readily forſake this Party, becauſe in this government of the City nothing is left them entire but through many and continual Enormities all is in Confuſion; the greater part is revolted as well as you, the reſt if they had the leaſt encouragement from abroad would ſuffer the ſame that you have. So that if no other, yet this Example would manifeſt that the greateſt unhappineſs of Cities is the wickedneſs of their Rulers, for they are ſo blinded with ſelf-intereſt, that they will not deſiſt, tho' they ſee all things go to ruin, but with what they firſt troubled, think to ſettle affairs, continuing Banifhments, Sequeſtrations, and unjuſt deaths; not conſidering he is an ill Phyſician who preſcribes for a Remedy the cauſe of the Diſeaſe. But thoſe are incurable; you ſhall do well to have a care of your ſelf, for all that are here have but this hope left, if you act wiſely, to be freed from a heavy and grievous Tyranny.

THE
CLOUDS

OF

ARISTOPHANES:

Added (not as a Comical Divertisement for the Reader, who can expect little in that kind from a Subject so antient, and particular, but) as a necessary supplement to the Life of Socrates.

ACT I. SCENE I.

Strepsiades, Phidippides, Servant.

Streps. **O** H, oh,
Great *Jove*, how long a night
is this, how endless!
Will't ne'r be Day? I heard

the Cock again,

Yet still my Servants snore; 'tis but of late
They durst do thus: a curse o'this War that
awes me,

And will not suffer me to beat the Rogues.
My good Son sleeps too, wrapt o're Head and
Ears:

Well, let me try to bear them company;
Alas, I cannot, so perplext and tortur'd
With charges, Bills for Horse-meat, Interest:

All for this hopeful Son, who in's curl'd locks,
Aids matches, keeps his Coach, and dreams of
Horses,

Whilst I (unhappy!) see th' unwelcome Moon
Bring on the Quarter-Day, and threaten Use-
Money.

Boy, snuff the Light, bring my Account-book
hither,

That I may sum my Debts and Interest:
Let's see, twelve Pound to *Pasia*, ha! twelve
Pound

To *Pasia*, how laid out? to buy ^b *Coppatia*;
Would I had paid this Eye for him.

Phid. Hold *Philo*,

You'r out of the way, begin again.

Streps. Ay, this,

This is the misery that ruins me;
His very Sleeps are taken up with Horses.

Phid. How many courses will the manage
hold?

Streps. Many a weary course thou lead'st thy
Father:

But how much more owe I than this to *Pasia*?

Three pound t' *Aminias* for Chariot Wheels.

Phid. Go Sirrah, take that Horse and turn
him out.

Streps. Ay, thou hast turn'd me out of all
my means.

Charges at Law will Eat me up, my Credi-
tors

Threaten to sue me to an Execution.

Phid. Why do you wake all Night, and toss
so, Father?

Streps. I cannot sleep, the Scrivener doth so
bite me.

Phid. Yet let me rest a little longer.

Streps. Do so.

All these will one day light upon thy head,
Curs'd be the hour when I first saw thy Mo-
ther,

I liv'd before most sweetly in the Country,
Well stockt with Sheep and Bees, Olives and
Grapes,

Till from the *Megaclean* house took I
This Niece of *Megacles* out of the City,
Well fashion'd, highly bred, and richly Cloath-
ed;

We Married, as I said, and lay together:
I smelling strong of Drugs and greasie Wool;
But she of Unguents, *Crocus*, wanton Kisses,
Of vain expence, dainties and Luxury;

I will not tell the idle Life she led,
And yet she spun, that I have often told her,
Shewing this Coat, you spin a fair thread,

Woman.

Serv. Sir all the Oyl i'th' Lamp is wasted.

Streps. Ha?

Why didst thou put in such a drunken Wick?
If thou wert near me I would beat thee.

Serv. Why Sir?

Streps.

The Atheni-
ans in time of
War with the
Lacedaemonians
made an
Edict, that no
Man should
beat his Ser-
vants, lest
they should
go over to the
Enemy. *Schol.*

b Their
Horses were
named from
the marks
they had, if
a K, *Copatia*;
if an S,
Samphoras.
Schol.

σπαδάων λίαν
τρυφῶν καὶ
σπαλαῶν.
Sch. M. S.

Streps. Because the Wiek is thicker than the Oyl.

Well, my good Wife, and I betwixt us got At last this Son; about his name we differ'd; Shee'd have it something that belong'd to Horfes,

Callippides, Xantippus, or Charippus;

I from his Grandfather; *Phidonides.*

Long time we wrangled thus, at last agreed He should be called *Phidippides*; this Son She takes, and stroaking kindly, thus instructs him,

'When thou art grown a Man, frequent the City,

'Follow the fashion, keep a Coach and Horfes,

'Like *Megacles* thy Uncle. No, said I,

'Go in a homely Coat, and drive thy Goats

'Into *Phelleus*, as thy Father doth.

But my advice prevailed so little on him,

That now he wastes my means in keeping Horfes,

Which all this night I have been thinking how

To remedy, and now have found the way;

To which could I perswade him, I were happy.

Phidippides, Phidippides,

Phid. Your Will Sir.

Streps. Kiss me, give me thy Hand.

Phid. Here, Sir.

Streps. Dost love me?

Phid. By *Neptune* God of Horfes.

Streps. Do not name

That God, for 'tis from him springs all my

'Sorrow.

But if thou lov'st me truly, heartily.

O Son, be rul'd.

Phid. In what should I be rul'd?

Streps. Change without more delay thy course of Life,

And do as I would have thee.

Phid. What is that?

Streps. But wilt thou do it?

Phid. Yes by *Bacchus* will I.

Streps. Come hither then, see'st thou that little door?

That is the *Phrontisterium* of wise Souls,

Of learned Men, that tell us Heaven's an Oven,

And we the Coals inclosed in the wide Arch:

They, if we give 'em but a little Money,

Will teach us to gain all causes, right or wrong.

Phid. Who can these be?

Streps. Their names I know not; good

They are, and busied in continual Study.

Phid. Oh now I know the Wretches that you mean,

The meager, wan, proud, bare-foot, begging Fellows,

Whose evil Genius's are *Socrates*

And *Charephon*.

Streps. Peace, talk no more so idly;

If you'll obey a Father, let me see you

Give o're your Horfes and turn one of these.

Phid. Not I, by *Bacchus*, no though you should tempt me

With all *Legoras's* Breed of Racers.

Streps. Dear Son be rul'd and learn.

Phid. What should I learn?

Streps. 'Tis said they have two tongues, and one of them

Able to prove any injustice reason;

Couldst thou but learn that Language, we were made,

And might dispute our stubborn Creditors

Out of the debts I have incurr'd for thee;

They get not then a penny more than words.

Phid. I cannot do't, were I so lean and pale, I durst not look a Jockey in the Face.

Streps. By *Ceres* then you stay with me no longer.

You, nor your Coach-Horse, nor your *Samphoras*.

But all together pack out of my doors.

My Uncle *Megacles* will neither see

Me nor my Horfes want, so long I care not.

Exit.

SCENE II.

Strepsiades, Scholar.

Streps. Though I have faild, I'll not give over thus,

But say my Prayers, and go my self to School

To learn this Art: But how can I, by Age

Dull and forgetful, reach such subtleties?

Yet on I will, why should I doubt? Ho, Friend.

Schol. A mischief on you, who's that knocks at Door?

Streps. *Strepsiades, Coccinnian Phedo's* Son.

Schol. 'Twas rudely done to knock so hard, y'have made

My labouring Brain miscarry of a Notion.

Streps. Forgive me, I was bred far off i'th' Country:

But pray what Notion was't that prov'd Abortive?

Schol. 'Tis Lawful to discover that to none But Fellow-Scholars.

Streps. Then you may tell me,

For I come hither to be one of you.

Schol. I will; so will value't as a Mystery.

Socrates t'other day asked *Charephon*

How many of her feet a Flea could leap,

For one by chance had bit *Charephon's* Eye-brow,

And leapt from thence upon the Head of *Socrates*.

Streps. How could he measure this?

Schol. Most dexterously.

Both Feet o'th' Flea he dipt in melting wax,

Which strait congeals to Shooes; these he plucks off,

And with them more exactly measures it.

Streps. Great *Jupiter*, how subtle are these Wits!

Schol. If you should hear their other Speculations.

You would say so indeed.

Streps. Pray what was that?

Schol. This *Charephon* the *Sphettian* ask'd him once,

If a Gnat sounded from her Mouth or Tail.

Streps. And what said he?

Schol. It had a strait thin Gut,

At end of it a Bladder, into which

The Air being forc'd, sounded in breaking forth.

Streps. Then I perceive that a Gnat's Tail's a Trumpet;

How blest is this Anatomist of Gnats!

Sure he can hide himself from purblind justice,

That knows so well these dark intestine ways.

Why should we cry up *Tbales* any longer?

Come

a A stony Craggy place in Attica, in such Goats delight most.

Soli M. S.

ε'εν ὃ δ' ἀν-
λονόη καὶ ἡ-
μενοι φροντί-
ζουσι περὶ
θεῶν καὶ με-
γάλων πραγ-
μάτων.

Schol. M. S.

ε' ἀριστος
ἵπποτροφος.

Schol. M. S.

The School
covered;
Scholars
several po-
sures: Socr-
hanging in
Basket.
Siddlib.
Come open me your *Phrontisterium*
And quickly let me see this *Socrates*,
I long t'ong to learn, open the Door — * O *Her-
cules*,

What strange Beasts have we here ?

Schol. Why do you wonder ?

Whom do they look like think you ?

Strepf. Like the poor

Lacedemonian Captives ta'n at † *Pylus*.

Why look they so intently on the Ground ?

These seek out things that appertain to Earth !

Oh they seek Leeks ; trouble your selves no
more, Friends,

For I know better where are good and great ones.

Schol. Come let's go in.

Strepf. Let's stay a little while and talk with 'em.

Schol. No, no, they cannot long endure the air.

Strepf. What's this, for Heavens sake say ?

Schol. This is Astronomy.

Strepf. And this ?

Schol. Geometry.

Strepf. But what is it good for ?

Schol. To measure Land.

Strepf. What, Arable, or Pasture ?

Schol. No, the whole Earth.

Strepf. A pretty Jest indeed.

That were a mighty help to Husbandmen.

Schol. Here's all the World, and this is *Athens*.

Strepf. How ?

I'll scarce believe that ; what's become o'th'
Judges ?

Where the *Cicynnians* my Country-men ?

Schol. Here ; this *Eubaea* ; see how far 'tis
stretch'd.

Strepf. Ay, almost stretcht in pieces betwixt us,
And *Pericles* ; and where is *Lacedemon* ?

Schol. Here.

Strepf. 'Tis too nigh us, why with all your
Skill

Do you not help to thrust it farther off ?

Schol. It is not possible.

Strepf. No ? you will rue it then.

But what Man's that hangs yonder in the
Basket ?

Schol. That's he ?

Strepf. He, what he ?

Schol. *Socrates*.

Strepf. How, *Socrates* ?

Call him.

Schol. Call him your self, I'm not at leisure.

SCENE III.

Strepfades, Socrates.

Strepf. **H**O *Socrates*.

Socr. * Why dost thou call me
mortal ?

Strepf. First I would gladly know what thou
dost there ?

Socr. I walk i'th' Air, and gaze upon the Sun.

Strepf. Why in a Basket dost thou view the
Gods,

Not from the Ground ?

Strepf. I could not elevate.

My thoughts to contemplation of these My-
steries,

Unless my Intellect were thus suspended,

Where my thin thoughts melt into Air (their
likeness)

Stood I upon the ground, I should find nothing,

Though I sought ne'er so strictly up and down,
For the magnetick vertue of the Earth
Would draw away the humour of my Brain,
Just as we see in Nose-smart.

Strepf. How, how's that ?

Doth the Brain draw the humour out of Nose-
smart ?

Come down, sweet *Socrates*, and teach me
quickly

The knowledge of those things for which I came.

Socr. What camest thou for ?

Strepf. To learn the Art of Speaking.

With debts and usury I'm torn in pieces,

Tost up and down, forc'd to pawn all my Goods.

Socr. On what occasion did you run in debt ?

Strepf. By Horses eaten into this consumption;
And I would learn of you other Language

Which teacheth Men to pay nothing : for which

By all the Gods I'll give you what you'll ask.

Socr. By all what Gods ? we do not here allow
Those Gods the City worships.

Strepf. How then swear you,

By Copper Farthings like the *Byzantines* ?

Socr. Wouldst thou be skilful in Divine
affairs ?

Strepf. By *Jove* (if any such there be) I wou'd.

Socr. You must be then acquainted with the
Clouds.

Our reverend Goddesses.

Strepf. With all my heart.

Socr. Sit down upon this Couch then.

Strepf. Well.

Socr. Now take

This Garland.

Strepf. Why a Garland ? alas, *Socrates*,
D'ye mean (like *Athamas*) to Sacrifice me ?

Socr. No, these are Rites that every one per-
forms

At his admission.

Strepf. But what shall I gain by't ?

Socr. Thou shalt be made most voluble in
Speech,

A very Rattle, bolting words words as fine
as Flower.

Strepf. Th'art right by *Jove*, I shall be pow-
dered.

Socr. Silence, old man, and listen to our Prayer.

'Great King, unbounded Air, whose Arms are
'hurl'd

'About the surface of this pendant World,

'Bright *Æther*, reverend Clouds, that from
your Sphear

'Thunder and Lightning dart, rise and appear.

Strepf. Not yet, not yet, till I have wrapt
my self

Close in my Cloak, lest I be wet : twas ill
That I forgot to bring my Riding-hood.

Socr. 'Your power great Clouds, make to
'this Suppliant known

'Whether now seated on *Olympus* Throne,

'Or whether you your secret Revels keep

'In the wide Gardens of your Sire the Deep :

'Or of his flowing Chrystal seven mouth'd *Nile*,

'In golden Ewers wantonly beguile :

'Or in *Mauritian* Marshes keep your Court ;

'Or on the snowy top of *Mimas* sport.

'Come, to our fervent Vows propitious be,

'Grace with your Presence our Solemnity.

'We humid fleeting Deities,

'The bright unbounded Clouds thus rise

O

'From

Chorus from
Clouds:

From our old Sire, the grumbling Flood,
Above the tallest Hill or Wood,
To those high Watch-Towers, whence we may
The hollowed fruitful ground survey;
Rivers that in soft murmurs glide,
And the loud Seas rebellious tide;
From thence Heavens restless Eye displays
The splendour of his glorious rays,
Chafing all dusty mists, that we
In shapes divine may Mortals see.

Socr. Thanks reverend Clouds for favouring
thus our Prayer.

Did you not hear 'em speak in Thunder to us?

Strepf. Great Clouds I worship too, but am
so frightened,

I scarce can hold from answering your Thunder.

Socr. Jest not profanely in such sacred Rites:
Peace, for the swarm of Gods come sing-
ing.

Chor. 'Come Virgin Mistresses of showers,

'Let's visit *Pallas* pregnant Bowers,

'The far renown'd *Cecropian* Plain

'Where shines the * *Eleusinian* Fane,

'Where are the most retir'd aboads,

'Statues and Temples of the Gods:

'Where Altars blaze with Incense, where

'The Holy-day lasts all the Year;

'Where the brisk Graces every Spring,

'And Youths with Virgins Dance and Sing.

Strepf. Tell me good *Socrates*, what things
are these

That speak so finely? Are they Ladies?

Socr. No,

They're *Clouds*, the Deities of Idle Men;

From these we have our Sense, Discourse, and

Reason,

Our high Capricio's, and elaborate whimsies.

Strepf. My Soul, my thought did leap, while
they were speaking,

And now most subtly would dispute of smok,

Sharply confute opinion with opinion:

Oh how I long to see them once again.

Socr. Look yonder, towards *Parnes*, look how
gently

They glide to Earth.

Strepf. Where? shew me.

Socr. See in Shoals

They creep into the Caverns of the Mountain.

Strepf. What things are these? I cannot yet
behold 'em,

Socr. There in the Entrance, look.

Strepf. Yet I scarce see them.

Socr. Either thou seest them now, or thou
art blind.

Strepf. I do by *Jove*, great Clouds, for you
hold all!

Socr. Didst thou not know these Deities be-
fore?

Strepf. Nor I, I thought them only mists
and vapours.

Socr. Thou knewest not then those who
maintain the Sophists.

Strepf. If these be Clouds, how comes it
that they look

Like Women? For the Clouds have no such
Shape.

Socr. No, what shape have they then?

Strepf. I know not justly;

They look like flying Fleeces, but by *Jove*,
Nothing at all like Women; these have Noses.

Socr. * Answer to what I ask.

Strepf. Ask me quickly.

Socr. Didst ere behold a Cloud shap'd like a

Centaur,

A Leopard, Bull, or Wolf?

Strepf. I have, what then?

Socr. The Clouds can take what form they

list, as when

They see a hairy Fellow curl'd like *Clitus*.

They mock his madness in a Centaur's shape.

Strepf. And when they see one that defrauds

or plunders

The Commonwealth, like *Sinon*, what then
do they?

Socr. They do resemble him, turn ravenous

Wolves,

This was the reason yesterday, when they

Beheld * *Cleonymus*, they fled like Deer:

And seeing † *Clithenes*, are now turn'd Women.

Strepf. Great Queens, if you are design'd to

speak to Mortals,

Make me acquainted with your rumbling voice.

Chor. 'All hail old Man, who dost on Wis-
dom prey,

'And thou the Priest of subtle trifles say,

'What wouldst thou have with us, to none
but thee,

'Of all the Meteor Sophists thus stoop we;

'Save *Prodicus*, to him as grave and wise,

'To thee, because thou walk'st upright, thy
Eyes

'Rowling on every side, thy look severe

'And barefoot many miseries dost bear.

Strepf. Good Heavens, what voice is this,
how strange and stately?

Socr. These are our Goddeses, the rest are

toys.

Strepf. Is then Olympian *Jove* no Deity?

Socr. What *Jove*, There's no such thing;
meer fancy.

Strepf. How?

Whence then proceeds all * Rain?

Socr. Only from these.

Didst thou ere see a shower without them? take

The Clouds away, and Heaven must rain fair

Weather.

Strepf. By *Phæbus* thou hast clear'd it well;

till now

I thought *Jove* made Water through a sieve.

But whence comes Thunder? when I'm sick,
that frights me.

These thunder as they tumble up and down.

How can that be?

Socr. † When they are full of water,

By their own weight driven upon one another,
They roar and break.

Strepf. But who is it that drives them,

Is not that *Jove*?

Socr. No, an ætherial Whirlwind.

Strepf. A Whirlwind, hum! I knew not
that till now.

But whence comes Lightning then, that glittering
Fire

Which terrifies and burns us? *Jupiter*

Useth to dart this down on Perjur'd Men.

Socr. And how (thou plegmatick dull Sa-
turnine,)

If darted on the Perjur'd, how comes *Sinon*,
Theorus, and *Cleonymus* to scape it?

No, his own Temple, or the *Samian* Promontory,
Or

* *μυστῶν δυνάμεις* at *Eleusis* in *Attica* were celebrated the mysteries of *Ceres*, to which *Athenians* only were admitted, not strangers; if any one discovered them to a Person not initiated, they were both put to Death.
Schol. M. S.

* The *Socratic* way of dispute by Question.

* Coward.
† Effeminately attired.

* VWhereof *Jupiter* was the particular Deity; whence *ὀμβροποιός*.

† Deriding *Socrates* as ignorant in Natural Philosophy.

Or sturdy Oaks he strikes, did they e'r wrong him ?

Did the Oak e'r forswear it self?

Streps. I know not :

That which you say seems reason ; but what then

Is Lightning ?

Socr. When the winds are shut up close,
They swell the Clouds like Bladders, and at last

Break out with violence and horrid noises ;

And by contrition kindle one another.

But thou who searchest amongst us for wisdom

How happy wilt thou be above all *Grecians*

If thou conceive well, and remember, and

Canst suffer much, and never wilt be tired

Standing or walking, nor have sense of Frost,

Nor care for dining, and refrain from Wine,

From exercises, and all other toys.

Streps. O for a solid Soul restless with cares.

Sparing, self-torturing, one that can feast

Upon a dish of Herbs, you never could

Be better fitted ; a meer Anvil I.

Socr. Dost thou believe no God but those we teach?

The Chaos, Clouds and Tongue, only these three.

Streps. I'll not so much as speak of any other,
Much less bestow an Offering on their Altars.

Chor. ' Say boldly then, say what is thy request,

' For if thou honour us thou shalt be blest.

Streps. Great Queens I sue for a small matter, that

I may out-talk all *Greeks* a hundred Furlongs.

Chor. ' To thee alone this gift we will allow,

' None speak such mighty Sentences as Thou.

Streps. I do not care for mighty sentences,

But subtle ones to cheat my Creditors.

Chor. ' It is not much thou askest, and shalt obtain it,

' Learn of our Ministers and thou shalt gain it.

Streps. I shall, relying on your promise ; forc'd

By want, *Goppatia* and a luckless match.

Now let 'em use me as they list, beat, starve me,

Burn, freeze, or flea me, so I escape my debts :

I care not though Men call me Impudent,

Smooth-tongu'd, audacious, petulant, abominable,

Forger of words and lies, contentious Barretour,

Old, winding, bragging, testy, crafty Fox.

Socr. Said like a Man of Courage : if thou Learn

Of me, thy fame shall spread wide as the Heavens.

Streps. What shall I do ?

Socr. Thou shalt spend all thy time

With me ! a Life the happiest in the World.

Streps. I long to see that day.

Socr. Thy door shall always

Be throng'd with Clients that will come to thee

For Counsel, and discourse of Cases worth The wealth of Kingdoms, to thy hearts desire.

Chor. ' Try this old Man ; first see if he be ' fit ;

' Put him to th'test, and sound the depth of swit.

Socr. Come tell me now your disposition,
That when I know it I may fit my Machines Accordingly.

Streps. You will not undermine me.

Socr. No, I would know if you have any memory.

Streps. Yes, when another owes me any thing, I can remember very well, but what

I owe my self, I'm ready to forget.

Socr. Hast thou a natural faculty in speaking ?

Streps. No, I can mar words sooner far than make 'em.

Socr. How wilt thou learn then ?

Streps. Fear me not, I tell you Well, when I make some Learned deep Discourse.

Socr. † You must be sure to catch't up presently. † As the Scholars of *Socrates* used, especially *Xenophon* and *Plato*.

Streps. What, must I snap at Learning like a Dog ?

Socr. This is a very Fool, an unknown Clown ; I am afraid old Man thou wilt need whipping.

What if thou shouldst be beaten ?

Streps. Then I am beaten.

Socr. But what wouldst do ?

Streps. I would take witness on't And sue them on an Action of Battery.

Socr. Off with your Cloak.

Streps. Why, how have I offended ?

Socr. No ; but our Orders admit none but naked.

Streps. I came not hither to steal any thing.

Socr. Down with your Cloak, why dost thou trifle ?

Streps. Now

Tell me if I prove apt and diligent,

Of all your Scholars who shall I come nighest ?

Socr. Thou mayst perhaps be like our *Cherephon*.

Streps. Alas, alas ! what an Anatomy ?

Socr. No, no : But if thou wilt be anything Follow me without more delay.

Streps. I want

A Cake for your *Cerberus* ; I go methinks As if 'twere into the *Trophonian Cave*.

Socr. On, on, why stayest thou gazing at the door ?

Chor. ' Go, for thy courage blest whose aged mind

' To wisdom soars ; and leaves the young behind.

ACT II.

Socrates, Strepsiades.

Socr. **B**Y Chaos, and this Air I breath, I never Met any thing so stupid as this fellow

So clownish and oblivious ; easie toys

He learns not half so fast as he forgets 'em ;

I'll call him forth ; what, ho *Strepsiades* ;

Come out and bring your Bed along with you ;

Streps. The fleas will hardly let me bring my self.

Socr. Quick, down with't there ; and mark what I say to you.

Streps. I am ready.

Socr. What have you most mind to learn ;

Measures, or Verse, or Rhyme ?

Streps. By all means Measures ;

For I was cheated by a Meal-man lately
Two pecks.

Socr. That's not the thing that I demand;
I'de know which you conceive the fairest mea-
sure,

The *Trimeter*, or the *Tetrameter*.

Streps. The fairest measure in my mind is a
Bushel.

Socr. 'Tis nothing that you say.

Streps. What will you lay

That your *Tetrameter* holds not a Bushel?

Socr. Away, away, how dull thou art, and
blockish.

But thou wilt be perhaps more apt at Rhime.

Streps. What help can Rhimes afford me in
my meal?

Socr. First, they will make thee pleasant in all
Company.

Then thou shalt know which suits with Ana-
pæstick,

And which with Dactyles.

Streps. Dactyles? I know that sure.

Socr. Why what's a Dactyle.

Streps. What, but this same Finger,
T'has been a Dactyle ere since I was Child.

Socr. Th'art an unprofitable Dunce.

Streps. I care not

For learning these devices.

Socr. What then wouldst thou?

Streps. That, unjust and cheating Sophistry.

Socr. But there are things that must be learnt
before

You come to that; what Creatures are there
Masculine?

Streps. Sure I know that, or I were mad indeed.

A Ram, a Bull, a Goat, a Dog, a Pigeon.

Socr. * See how thou err'st, that call'st both
Male and Female

A Pigeon.

Streps. Right by *Neptune*, how then must I?

Socr. Call this a Cock-pigeon, and that a Hen.

Streps. A Pigeon, Cock and Hen, ha! by this
Air,

For this sole document, I will replenish
Your † *Cardopus*, with meal.

Socr. Again th'art wrong;

Thou call'st it *Cardopus*, but 'tis *hec Cardopus*,
And therefore henceforth call it *Cardopa*.

Next it is fit you know which names are Mas-
culine,

And which are Feminine.

Streps. I know well which
Are feminine I'm sure.

Socr. Let's hear.

Streps. *Philina*,

Cletagora, *Demetria*, and *Lysinna*

Socr. And which are Masculine?

Streps. A World, *Philoxenus*,
Melesias, and *Aminias*.

Socr. Thou art out.

Streps. Are not these Masculine with you?

Socr. * By no means.

How if you saw *Amyrias*, would you call him?

Streps. *Amyria*, ho!

Socr. What, make a Woman of him?

Streps. And reason good, h'has thrown a-
way his Arms,

And will not fight. But to what purpose
learn I

These common trifles?

Socr. Not so common neither,
But come, lie down.

Streps. What must I do?

Socr. Consider

Within your self the business that concerns
you.

Streps. Not in this Bed, I thank you, if I must
Lie down, I'll meditate upon the Ground.

Socr. But here's no room besides.

Streps. Wretch that I am.

How shall I be tormented with these fleas!

Socr. Now think into the depth of thy affairs,
Try every turn and winding, every double;
And if you stick at any thing: giv't ore,
And to some other; but be sure you sleep
not.

Streps. Oh, oh.

Socr. How now, the matter?

Streps. I am kill'd

By these Blood-suckers, these *Corinthians*.

Socr. Do not torment your self.

Streps. How can I choose

When I have neither money left, nor colour,
Scarce Life, no Shooes, grown almost to a
Ghost with watching?

Socr. Now what think y'on, nothing?

Streps. Yes

By *Neptune*.

Socr. What?

Streps. I'm thinking if the Fleas

Will leave a piece of me or not.

Socr. Death on thee.

Streps. You might have spar'd your Curse,
I'm dead already.

Socr. Fy, fy, you must not be so tender, ** So *Socrates*
cover

Your Face, and study for some subtle cheat.

Streps. Would I could learn to cheat these
wicked Fleas.

Socr. Let's see, what does he? what asleep,
ha'ye thought

Of nothing yet?

Streps. What would you have me think on?

Socr. What would you learn?

Streps. I have told you that already

A thousand times; I'de learn to pay no Use-
Money.

Socr. Come then, cover your self, and sub-
tilize

Your thoughts, Dissect your Business into
Atomes.

Streps. Alas!

Socr. Lye still, and if you stick at any thing,
Pass by it a while, and come to it again.

Streps. Ho, my dear *Socrates*.

Socr. What is't old Man?

Streps. I have found out what will do it.

Socr. As how.

Streps. First tell me

Where I may meet with some *Thessalian* witch;
For I would steal the Moon one of these nights,

And having got her, lock her in a Chest

As charily as I would keep a Glass.

Socr. What wilt thou get by that?

Streps. What, if the Moon

Ne'r rise again, I'm bound to pay no use.

Socr. How so?

Streps. 'Cause use you know is paid by th'
Month.

Socr.

* Deriding *Soc-
rates* as Igno-
rant in Gram-
mar.

† A meal-
trough, the
Greek word
hath a mascu-
line termina-
tion but femi-
nine Article.

* Effeminate
Cowards.

** So *Socrates*
disputes in
*Plato's Phe-
drus*, that ex-
terior Ob-
jects might not
divert him;
which *Aristo-
phanes* here
derides.

Socr. 'Tis well, but I'll propound another
Business;

Suppose that you were tied upon a Statute
To pay five Talents, could you raise Figures?

Streps. I know not, but I'll try.

Socr. You must not limit

Your thoughts so narrowly within your self,
But like a Beetle fetter'd in a thread,
Allow them play, and flutter in the Air.

Streps. I ha't, I ha't, the rarest way to cancel
A deed, as you'l confess when you have heard it.

Socr. What is't?

Streps. Did you nere see at any Grocers
A clear transparent stone, with which they use
To kindle fire?

Socr. You mean a Burning-glass.

Streps. The very same.

Socr. What wouldst thou do with it?

Streps. Whilst that the Scrivener writes the
deed, d'ye mark,
Thus standing by him with my Burning-glass
Against the Sun, I'll burn out every letter.

Socr. Wisely, by all the Graces.

Streps. How I long

To cancel thus a bond of fifty pound.

Socr. 'Tis well, now tell me if thy adversary
Sue thee, and thou art like to be overthrown
For want of witnesses, how wilt thou void
His suit?

Streps. Most easily:

Socr. Which way?

Streps. Before

It comes to Judgment, I would hang my self.

Socr. Pish, thou sayst nothing.

Streps. Yes by *Jove* there's none
will prosecute a Suit against the Dead.

Socr. Away, thou fool'st, I'll teach no more.

Streps. Dear *Socrates*
Why?

Socr. Thou forget'st as fast as thou canst learn.
Tell me the first thing thou wert taught to day.

Streps. The first; stay let me see; the first
thing say you?

How call you that we use to put our Meal in?
Wretch I have forgot it!

Socr. See, deservest thou not
Forgetful to be punisht for a Dunce.

Streps. Alas what shall I do? for if I learn
not

The cheating language, I'm quite undone?
Good Clouds advise me what course I shall
take.

Cho. 'If an ingenious Son thou hast at home,
'Thou hadst best send him hither in thy room.

Streps. I have a Son, and he's ingenious too;
But will not learn, the more my misery.

Cho. And wilt thou suffer it?

Streps. Of a promising person
His Mother is a Woman of great Spirit:
Once more I'll try; if he refuse, Ill make
No more ado but turn him out of doors;
Stay but a while, I'll be quickly back.

A C T. III.

Strepsiades, Phidippides, Socrates.

Streps. **N**OW by the Clouds thou stais't
no longer here?
Hence, and go feed in *Megacles* his Stable.

Phid. Alas what fury hath posselt you Father?
By *Jove* I think you are besides your self.

Streps. See, see, he swears by *Jove*, art thou
not mad

At these years to believe there is a *Jove*?

Phid. Is truth to be derided?

Streps. Well, I see

Th'art still a Child, and creditest old wives
Tales.

Come, and I will tell thee what shall make thee
A Man, so you be sure to tell it no body.

Phid. Pretty; what is it?

Streps. Thou swor'st e'n now by *Jove*.

Phid. I did so.

Streps. See how good it is to learn;
There's no such thing as *Jove*.

Phid. What then?

Streps. A Whirl-wind

Hath blown *Jove* quite away, and rules all
Heaven.

Phid. What fooleries are these?

Streps. They are serious truth, Son.

Phid. Who tells you so?

Streps. Our *Socrates* the * Melian,
And *Charephon*, that trace the steps of Fleas.

Phid. How are you grown to such a height
of Madness

As to believe such Melancholy Dreamers?

Streps. Good words: Defame not Men of
such deep Wisdom

And subtle Spirits; these live sparingly,

Are never at the charges of a Barber,

Unguents, or Baths, whereas thou wastest my
means

As freely as if I were dead already.

Come then, and be their Scholar in my
room.

Phid. What can be learnt that's good of such
as they are?

Streps. All things that are accounted wisdom,
Boy;

And first to know thy self, and what a dunce
Thou art, how blockish rustick, and forgetful.

But stay a little, cover thy face a while.

Phid. Alas! my Father's mad, what shall I do,

Accuse him to the Court of Folly, or

Bespeak a Coffin for him, for he talks

Idly, as he were drawing on?

Streps. Come on now.

Lets see, what's that?

Phid. A Pigeon.

Streps. Good; and that?

Phid. A Pigeon.

Streps. Both the same? ridiculous.

Take heed you make not such mistakes here-
after.

This you must call a Cock, and that a Hen.

Phid. A Hen? Is this the goodly learning,
Father,

You got since your admission amongst these
Earth-worms?

Streps. This and a great deal more; but be-
ing old,

I soon forget what I am taught.

Phid. I think

'Twas want of Memory made you lose your
Cloak.

Streps. No, 'tis hung up upon the Arts and Sci-
ences.

Phid. And

* As if he
should say, the
Atheist: for
the Melians
were infamous
for Atheism
from Diagoras
who profess
it: *Socrates*
was Scholar
to *Aristagoras* a
Melian. See
Chap. 3.

Phid. And where your Shooes?

Streps. Lost for the common good,
Like *Pericles*: But let's be gone, and see
You learn to obey me, and to wrong all else.
Remember that I bought thee, when thou wert
But six years old, a little Cart to play with.

Phid. Alas you'll be the first that will re-
pent this.

Streps. Take you no care for that, do as I
bid you.

Ho, *Socrates*, I've brought my Son at last,
Though much against his Will.

Socr. Ay, that's because
He's rude, untaught, a Child of Ignorance,
And unaquainted with our hungry Baskets.

Phid. Go hang your self in one of them.

Streps. How Impudence! dost thou talk thus
to thy Master?

Socr. So go hang, with what a seeming grace
was that pronounc'd!

How do you think that he should ever learn
To overthrow a nimble Adversary,
Or win a Judge's Heart with Rhetorick?

Streps. Fear not, but teach him; he's ingenious
By nature; for when he was but a little one,
He'd build you Houses, and make Leather
Coaches,

And Ships, and cut Frogs out of Apple parings.
What's your Opinion then? Do you not think
He's capable to learn both Languages?

Or if not both, be sure he learn the worse.

Socr. Well, we shall try what may be done
with him.

Streps. Farewell, and so remember that in
all I say that's just, you learn to contradict me.

A C T. III.

SCENE I. *Strepsiades.*

* From the
twentieth day
of the month
they reckoned
backward, see
the life of So-
lon. Chap.

second! hum;
The most abhor'd and dreadful day's at hand,
The old and new; all I owe Money to
Threaten to sue, and vow my utter ruin;
Yet I require nothing but what is just reason:
My friend forbear me till some other time;
But they all answer me, words are no payment,
Reville me, swear they'll put their Bonds in
suit,
And let'em, what care I, so my *Phidippides*
Have learnt the art of cheating: I shall know
straight;
It is but knocking at the School; ho Son!

SCENE II. *Strepsiades, Socrates.*

Socr. Save you, *Strepsiades*.

Streps. The like to you.

† Such gifts
Socrates some-

ed, though
not money. See
Chap.

† First take this Bag of Meal, for it is fit
We pay our duty to our reverend Master.
Now tell me, has my Son attain'd the Art
For which I plac'd him with you?

Socr. Yes exactly.

Streps. Thanks to Deceit, the Queen that
governs all things.

Socr. Now you may overthrow all Adver-
saries.

Streps. What though a Witness swear that I
have borrowed.

Socr. Ay, though a thousand swear it.

Streps. Id. Id.

Triumph my Boys, woe to you Money-mon-
gers,

You and your Bonds, your use on use may hang
now,

You'll trouble me no more! O what a Son
Have I, that fenceth with a two-edg'd Tongue,
My Houses Prop, and Guardian, my Foes ter-
rour,

Quickly come forth, and meet my glad Em-
braces,

Come forth and hear thy Father.

Socr. See the Man.

Streps. O my dear Boy!

Socr. Away, and take him with you.

SCENE III.

Strepsiades, Phidippides.

Streps. **I**O my Son! O how I joy to see
Thy chang'd Complexion! Thou
look'st now methinks

As thou wert inspir'd with contraction,
I read cross questions in thy very Face,
Thy very Eyes methinks say, how, how's that?
Thou canst perfwade the World that thou art
wrong'd,

When thou art, he that does the wrong. I see't,
I plainly see't; a very Attick mine;
Now let it be thy study to recover
Him, whom thou almost hast undone.

Phid. Why, what
Is't that you fear?

Streps. The old and the new day.

Phid. Can one and the same day be old and
new?

Streps. I know that: I'm sure my Creditors
By joint-consent that day threaten to sue me.

Phid. They'll lose by it if they do: For,
'tis impossible

To make two days of one.

Streps. How is't impossible?

Phid. As for a Woman to be old and young
At once.

Streps. But Law has so determin'd it

Phid. But these Men know not what the
Law doth mean.

Streps. Why what's the meaning of it.

† *Phid.* Antient *Solon*.

Was naturally a Lover of the People.

Streps. What's that to this?

Phid. He did appoint two days,

The last day of the old month for citation,
The first o'th' new for payment of the Money.

Streps. But why the last day for citations?

Phid. That

The debtor having thus one day of warning
Might fly and shun the trouble of the next.

Socr. Why do the Magistrates then take all
forfeits

Upon the old and new day?

Phid. They are hungry.

And taste their Meat before they should fall to.

Streps. Io, Ye fools that sit still and do no-
thing,

We that are wise and quick have done the bu-
siness;

Ye Blocks, ye Stones, ye Sheep, ye empty
Bubbles; Let

† See the life
of *Solon*. Chap.

Let me congratulate this Son of mine,

SECT. 4. *Pasias, Strepsiades, Witnesses.*

Pas. **A**ND must a Man be outed of his own thus?

Better take any course than suffer this.
You must assist me in this business neighbour,
That I may call my debtor to account;
There's one Friend made a Foe; yet I'll not shame
My Country, ere I do it, I'll give him warning.

Strepsiades.

Streps. How now, what would you have?

Pas. The old and new day's come.

Streps. Bear witness Friend,
He nam'd two days. What sum is't you demand?

Pas. Twelve pounds you borrow'd when you bought your Son

A Race-horse; with the Interest.

Streps. A Race-horse!

You know I neer car'd for em in my Life.

Pas. And swor'ft by *Jove* and all the Gods to pay it.

Streps. By *Jove*? 'twas then before my Son had learnt

The all-convincing Speech.

Pas. You'll not deny it.

Streps. What have I got but that for all this Learning?

Pas. Dar'ft thou deny it, if I should put thee to

Thy Oath, and make thee call the Gods to witness it?

Streps. What Gods d'ye mean?

Pas. *Jove*, *Mercury*, and *Neptune*.

Streps. By *Jove*? Yes that I will I hold thee three-pence.

Pas. Curse on thee for this Impudence.

Streps. If thou wert rubbed with Salt, 'twould make thy Wit the quicker,

Pas. D'ye Laugh at me?

Streps. Thou wilt take up six Bushels.

Pas. So help me *Jupiter*, and all the Gods, I will be even with you for this scorn.

Streps. I'm extreamly taken with your Gods,

And this same *Jupiter* you swear by, they are excellent Pastime to a knowing Man.

Pas. Well, you will one day answer for these words.

But tell me whether I shall have my Money Or not, give me my Answer, and I am gone.

Streps. Stay, but a little, I will answer presently,

And plainly.

Pas. Sure he's gone to fetch the Money.

Streps. Where is the Man that comes to ask me Money?

Tell me, what's this?

Pas. That which it is, a *Cardopus*.

Streps. You ask for Money, and so very a Dunce!

I'll never whilst I live pay him a Penny,

That calls a *Cardopa* a *Cardopus*.

Pas. You will not pay then?

Streps. Not for ought I know:

You'll itay no longer, pray about your Business.

Pas. Yes I'll be gone, but in the mean time know

I'll have my Money, if I live this day.

Streps. You may chance go without it; yet I'm sorry

You should be punish'd so for a mistake,

For saying *Cardopus* for *Cardopa*.

SCENE VIII.

Amynt. That which he borrowed of me. Answer:

Streps. Then I perceive you're in a sad condition.

Amynt. I had a scurvy fall driving my Horses.

Streps. Thou dost but jest, 'twas driving an

Ass rather.

Amynt. I do not jest when I demand my

Money.

Streps. Upon my word thou art not right.

Amynt. How so?

Streps. Thy Brain methinks is troubled.

Amynt. Either pay me

My Money strait, or I will trouble you.

Streps. Tell me, Doth *Jove* beget and send

down Rain,

Or doth the Sun exhale it from the Sea?

Amynt. I neither know nor care.

Streps. What? are you fit

To receive Money, and so ignorant

Of these sublime and subtle Mysteries?

Amynt. Well, if you cannot let me have the

Principal,

Pay me the Interest.

Streps. Interest, what kind

Of Creature's that?

Amynt. What, but the increase of Money

By Months and Days, as time runs on.

Streps. 'Tis well.

And do you think the Sea is fuller now

Than 'twas at first?

Amynt. No, not a drop, it is

Not fit it should.

Streps. The Sea by your Confession

Is nothing grown; then with what Conscience

Can

Can you desire your Money should encrease.
Go get you from my Doors, fetch me a whip
there.

Witn. Well, I'll bear witness for him.

Streps. Why d'ye not go, will you move
* *Samphoras*?

Amyr. Is not this riotous?

Streps. Will you be gone?

Or shall I lead you in a Chain, and make you
Shew tricks? If you stay but a little longer,
I'll send you, and your Cart and Horses packing.

Chor. Now observe what it is to bend

' Studies to an evil end.

' This old Man, that is intent

' Creditors to Circumvent,

' Foolishly himself hath crost,

' And will find so to his cost;

' That in this false Art his Son

' Hath attain'd perfection:

' Justice cunning to refute,

' That at last he'll wish him mute.

ACT V.

SCENE I.

Strepsades, Phidippides.

Streps. O Neighbours, Kinsmen, Country-
men, help, help,

I'm beat, all, all over, oh my head, my back!
Thou strik'st thy Father, Rogue.

Phid. I do so, Father.

Streps. See, see, he stands in it too.

Phid. I do indeed.

Streps. Thief, Villain, Parricide.

Phid. More I beseech you,

I am much taken with these pretty Titles.

Streps. Rascal.

Phid. Pray stick me fuller of these Roses:

Streps. Dost beat thy Father?

Phid. Yes by *Jove*, and justly.

Streps. Oh Rogue, what Justice can there
be in that?

Phid. I will demonstrate it by Argument.

Streps. By Argument?

Phid. Most easily, which Language shall I
dispute in?

Streps. Language?

Phid. Yes, the greater

Or lesser?

Streps. I have bred thee well indeed
If thou canst make this good, that any Son
May beat his Father.

Phid. You'll confess as much
If I so prove it, that you cannot answer it.

Streps. Well, I will hear for once what you
can say.

SCENE II.

Chorus, Streps. Phidip.

Chor. O LD Man, it much concerns you to
confute

' Your Son, whose confidence appears to suit
' With a just cause; how happen'd this dispute?

Streps. I shall relate it from the first; as soon
As we had dined, I took a Lute and bid him
Sing the Ship-shearing of *Simonides*:

He told me 'twas an old and ugly Fashion
To sing at dinner like a Miller's Wife.

Phid. And was not this sufficient to deserve
A beating; when you'd make Men chirp like
† Grass-hoppers?

Streps. Just so he said within; and added that
Simonides was an unpleasant Poet.

I must confess I hardly could forbear him;
But then I bid him take a Myrtle-branch
And act some piece of *Æschylus*: That *Æschylus*,
Said he, is of all Poets the absurdest,
The hardest, most disorderly, and bombast.
Did not my heart pant at this Language think
you?

Yet I repress it; then said I, rehearse
A learned Speech out of some modern wit;
He straight repeats out of *Euripides*
A tedious long Oration, how the Brother
(Good Heavens) did violate the Sister's Bed.
Here I confess I could contain no longer
But chid him sharply; to dispute we went,
Words upon words, till he at last to blows,
To strike, to pull, to tear me.

Phid. And not justly?
You that would discommend *Euripides*,
The wisest of all Poets.

Streps. Wisest? ah
What did I say? I shall be beat again.

Phid. By *Jove* and you deserve it,

Streps. How, deserve it?
Ungrateful Wretch, have I not brought thee up
Fed, and maintain'd thee from a little one,
Supplied thy wants? How then can I deserve it?

Chor. ' Now I believe each youthful breast
' With expectation possest,
' That if the Glory of the Day
' Be from the Plaintiff born away,
' By this Example they may all
' Upon the Old Men heavy fall;
' What you have done with utmost art,
' To justify is now your part.

Phid. How sweet it is to study, sage new things;
And to condemn all fundamental Laws!
When I applied my mind to Horse-courting
I could not speak three words but I was out;
Now since I gave it ore, I am acquainted
With ponderous Sentences, and subtle Reasons,
Able to prove I ought to beat my Father.

Streps. Nay, follow Racing still, for I had
rather

Maintain thy Horses, than be beaten thus.

Phid. I will begin where you did interrupt me,
And first will ask, Did you not beat me when
I was a Child?

Streps. But that was out of Love.

Phid. 'Tis very right, tell me then, ought not I
To recompence your Love with equal Love?

If to be beaten be to be belov'd,
Why should I suffer stripes, and you have none?
I am by nature born as free as you;
Nor is it fit the Sons should be chastiz'd,
And not their Parents.

Streps. Why?

Phid. You urge the Law,
That doth allow all Children to be beaten:
To which I answer, old Men are twice Children,
And therefore ought when they offend, be
punished

As well as we.

Streps. But there's no Law that says

The

* The Horse's
name which
he bought of
him.

At Noon.
Virg. ecl. 2.

The Parents should be punished.

Phid. Was not he
Who made that Law a Man as you and I?
He form'd a Law, which all the old Men fol-
low'd.

Why may not I as well prescribe another,
And all the young Men follow my advice?
But all the Blows before this Law was made
Must be forgiven without all dispute.
Besides, mark how the Cocks and other crea-
tures

Fight with their Sires, who differ not at all
From us, save only that they make no Laws.

Strepf. Why then if you will imitate the
Cocks,

Do you not dine upon a Dunghil, and
Lodge in a Hen-roost?

Phid. 'Tis not all one case,
Our *Socrates* doth not approve so far.

Strepf. Approve not then their fighting, but
in this

Thou pleadest against thy self.

Phid. How so?

Strepf. Because

Th'authority I exercise ore thee
Will be thine own, when ere thou hast a Son.

Phid. But if I nere have any, then I never
Shall have Authority, and you will go
To th' Grave deriding me.

Strepf. 'Tis too much reason.

Phid. Hear now another Argument.

Strepf. I'm lost.

Phid. And then perhaps you'll take the blows
I give you
Not half so ill.

Strepf. What good shall I get by them?

Phid. I'll beat my Mother too.

Strepf. What sayst thou?

Why this is worse than t'other.

Phid. What if I

Prove by the second Language that I ought?

Strepf. Why then you will have nothing
more to do.

But prove that you, and your wife *Socrates*,
And wiser Language may hang all together.
O Clouds, all this I suffer through your means,
For I in you wholly repos'd my trust.

Chor. 'Thy self art Author of this misery,
'Because to ill thou didst thy mind apply.

Strepf. Why did you then give me no war-
ning of it?

You know I was a rude and aged Man.

Chor. 'This is our Custom whensoe'r we find
'Any to malice or deceit inclin'd,
'Into some dreadful mischief such we thrust,
'That they may fear the Gods, and learn what's
'just.

Strepf. Alas, this is a mischief, and a just one,
For ought I not, when I had borrowed Money,
To seek out ways t'avoid restoring it.
Come then my Son, let's be reveng'd
Upon that wicked *Socrates* and *Cherophon*,
Who have abus'd us both.

Phid. I will not wrong
My Masters.

Strepf. Reverence Celestial *Jove*.

Phid. Celestial *Jove*, see how you rave
now. Father:

There's no such thing as *Jove*.

Strepf. There is.

Phid. * A Whirle-wind

* Act. III.

Hath blown *Jove* quite away, and rules all
Heaven.

Strepf. No Son, he's not expell'd, I was
but fool'd

To worship in his room a fictile Deity.

Phid. Nay if you will needs be mad, be mad
alone.

SCENE III.

Strepfiades.

Strepf. **M**AD that I was to trust in *Socra-
tes*, and cast off all our Gods;
good *Mercury*;

Be not displeas'd, or punish, but forgive me,
That took such pains, and studied to talk idly,
And tell me what I'd best do with these Fel-
lows,

Sue them or punish 'em some other way —
Th'art in the right, I will not sue them then,
But as thou bidst me, set their Nest on Fire;
Come *Xanthias*, come, a Fork and a Ladder
quickly.

Get up and pluck the House about their Ears,
Quick if thou lovest thy Master; one of you
Go light a Torch, and bring it hither strait
Proud as they are I mean to bring 'em lower

SCENE IV.

Scholar, Strepfiades, Socrates, Cherophon.

Schol. **O**H, oh!

Strepf. Torch to thy work; set
Fire apace.

Schol. What art thou doing, Man?

Strepf. That which I am doing;
Disputing somewhat hotly with your School
here.

Schol. Alas, who's this that sets our
House on Fire?

Strepf. He whom you coufen'd of his Cloak.

Schol. Thou kill'st;

Thou kill'st us, Man.

Strepf. That is the thing I mean,
If my Fork hold, and Ladder do not fail me.

Socr. How now, what do you make on our
House-ridge.

Strepf. † I walk in the Air and gaze upon the
Sun.

† Act II.
Scene III.

Socr. Alas I'm choak'd.

Strepf. Why dost thou scorn the Gods
then?

Cher. Oh me, I burn;

Strepf. Now you may calculate
The motions of the Moon; tear, pluck, beat;
burn 'em.

For many reasons they deserve the Flame,
But most because they did the Gods disclaim;

XENOPHON.

CHAP. I.

Xenophon, his Country, Parents, and following of Socrates.

Laert.

Laert.

De Longev.

** Animadv. 5.
12.*

Xenophon was an Athenian, Son of Gryllus, of the Erchiean Tribe: the time of his birth is no where expressly delivered: * *Stesiclides* affirms he died the first year of the one hundred and fifth Olympiad. † *Lucian* that he outlived ninety Years: whence it is evident he was born at or before the first year of the Eighty second Olympiad, which if the learned *Casaubon* had observed, he had not * altered *Athenæus* upon sup-

position, that he was but ten years old, the 4th year of the eighty ninth Olympiad (the time of his *Symposium*) whereas he was then no less than thirty six years of age. *Laertius* saith, he flourished the fourth year of the ninety fourth Olympiad. (*Suidas* reads of the ninety eight) Or, according to others, that he flourished in the eighty ninth Olympiad with the rest of the Socratick Philosophers; of whom he became one upon this Accident.

* Meeting

† Laert.

† Meeting *Socrates* in a narrow Lane, he stopt him with his Staff, and asked him where all kind of Meats were to be sold; to which *Socrates* made a serious Answer: And then demanded of him, where it was that Men were made good and virtuous? whereat *Xenophon* pausing, follow me then, saith he; and learn; from thence forward he became a Disciple of *Socrates*.

In the time of that great War betwixt the *Lacedæmonians* and *Athenians*, called the *Peloponnesian War* (the natural forwardness of his Spirit, being perhaps excited by the example of his Master *Socrates*) he was personally engaged in the fight before *Delium*, the first year of the 80th Olympiad, wherein the *Bæotians* overcame the *Athenians*; in which defeat * *Xenophon* in the flight, unhorsed and thrown down, *Socrates* (who his Horse being likewise slain under him, fought on foot) took him upon his Shoulders, and carried him many furlongs, until the Enemy gave over the pursuit. This was the first essay of his Military Profession, which he afterward resumed upon this occasion.

CHAP. II.

Upon what occasion he follow'd *Cyrus* into Asia.

† *Artaxerxes* succeeded *Darius* his Father, in the Kingdom of *Persia*, *Cyrus* his younger Brother having been sent for out of his Government of *Lydia* upon his Father's sickness, which is that first ἀνάστασις: plac'd by the *Arundelian* stone in the second year of the 93d Olympiad (confounded by * a Learned Person with the latter, six years after) was imprison'd by his Brother upon the accusation of *Tissaphernes*, but released by the mediation of his Mother *Parysatis*. Being return'd to his Government, he used all secret means to strengthen himself. The *Ionian* Cities were deliver'd to *Tissaphernes* by *Artaxerxes*, but revolted to him, all except *Mylæus*. His Pretences for levying Forces were, the Garrisoning of those Cities, and his opposing *Tissaphernes*: *Clearchus* likewise rais'd for him many in *Chersonesus*, upon pretence of warring against the *Thracians*. He privately also kept an Army on foot in *Thessaly* under *Aristippus*: and *Proxenus* of *Bæotia* brought him Forces as against the *Pisidians*; this *Proxenus* (who had been Scholar to *Gorgias* the *Leontine*, and † guest to *Xenophon*) sent to invite him to *Cyrus*, assuring him he should be of more esteem with him than of his own Country: *Xenophon* consulted with *Socrates* about this Letter, who doubting that if he took part with *Cyrus*, the *Athenians* should be displeased with him (*Cyrus* having before aided the *Lacedæmonians* against them) counsell'd him to ask the advice of the *Delphian* Oracle, *Xenophon* went thither, and demanded of *Apollo* to which of the Gods he should address his vows, and sacrifice for the good success of his intended Journey. He was answered, that he should sacrifice to those Gods to whom it was due: Returning to *Athens*, he imparted this Oracle to *Socrates*, who blam'd him, because he had not demanded whether it was best to stay or no, but (as already determin'd to go) how he might best perform his journey; Nevertheless

(saith he) since you have so propos'd your demand, you must do as the Gods command: *Xenophon* having sacrificed according to the Oracles Direction, took Shipping, and at *Sardis* found *Proxenus* and *Cyrus* ready for their expedition into *Asia*, and was immediately recommended to *Cyrus*, being by both earnestly intreated to stay: He continued with him, not in any command, but as a Volunteer. In which condition he did not any thing misbecoming a Soldier, whereupon he was in the number of those whom *Cyrus* esteem'd most.

* *Cyrus* having drawn all his Forces together, march'd up and gave Battle to *Artaxerxes* (in the beginning of the fourth Year of the ninety fourth Olympiad, when *Zenonetus* was *Archon*) at *Cunaxa*, five hundred *Stadia* from *Babylon*, by the River *Euphrates*. Whilst he was viewing both Armies, he told *Xenophon*, who rode up to him, that the Sacrifices were auspicious; then *Xenophon* gave him the *Grecians* word, *Fu-piter the Preserver*. The *Greeks* prevail'd against *Tissaphernes*, but *Cyrus* assaulting, the King was thro' his too much forwardness, slain; the *Grecians* thinking themselves Masters of the Field, and *Cyrus* to be alive, return'd to their Camp, which they found rifled by the Enemy.

* The next day the King sending *Phalinus* to them to deliver their Arms, *Xenophon* answer'd That they had nothing left but their Arms and Valour; as long as they kept their Arms, they might use their Valour, surrendering them; they were not Masters of themselves: It were Indiscretion (saith he) to surrender what we have left, since thereby perhaps we may make our selves Masters of what you have. *Phalinus* smiling, reply'd, Young Man, you look and speak like a Philosopher; but assure your self your Valour will not overmaster the King's Power. *Clearchus* returned this Answer for the whole Army, 'If we be esteem'd friends, it will be better for him that we are arm'd, if Enemies, better for our selves. *Tissaphernes* having made a Truce with *Clearchus*, perfidiously got him with four other Commanders, *Proxenus*, *Mcnon*, († with whom *Xenophon* had particular Enmity) *Agias*, and *Socrates*, twenty Captains of Cohorts, and two hundred common Soldiers into his Power; and delivering them up to the King, they were beheaded. The *Greeks* being summon'd to lay down their Arms, pretending that *Clearchus* was executed for Treason discovered by *Mcnon* and *Proxenus*, who were very highly rewarded. *Xenophon* required to have them sent who were fittest to direct them, being Friends to both; whereto the *Persians* not able to answer, departed.

CHAP. III.

How he brought off the *Grecians* Army.

* THE *Greeks* finding themselves in such a strait, were in despair ever to see their Country again. *Xenophon* calling together the Officers of *Proxenus*, told them, 'They were not to expect any Mercy from the King, who had shewn none to the body of his dead Brother, having fastned his head and hand to

‘ a Gibbet, and that they must resolve to put
 ‘ their safety in their Arms. *Apollonides* a *Bæ-*
otian alledg’d, that there was no means of safety
 but in the King’s Favour; and began to reckon
 the dangers wherewith they were surrounded.
Xenophon answered, ‘ That when upon the death
 ‘ of *Cyrus*, they marched up to the King’s
 ‘ Armies, he laboured for a cessation, but when
 ‘ their Captains went to him unarm’d; he abu-
 ‘ sed them; and that *Apollonides* deserved to be
 ‘ cashiered, as the dishonour of his Nation,
Agasthias replied, (which words *Laertius* as-
 cribes to *Xenophon*) ‘ he was an inconsidera-
 ‘ ble Fellow, whose Ears were bored as the
 ‘ Slaves of *Lydia*: So they turned him out.
 Having called together all the Commanders,
Xenophon advised them to choose new in the
 room of those that were lost, of whom he was
 elected in the place of *Proxenus*: Hereupon he
 put on his richest habit, as fittest either for death
 or victory, for his † greatest delight was in fair
 polished arms, affirming, that if he overcame,
 he deserved such; if he were overcome, and
 died in the Field, they would decently
 express his Quality, and were the fittest Se-
 pulchral Ornaments of a Valiant Man. His
 Shield was of *Argos*, his Breast-plate of *At-*
tica, his Helmet of *Bæotia*, his Horse of
Epidaurium; whereby *Ælian* argued the E-
 legance of the Person, in choosing such things
 as were fair, and esteeming him worthy of
 such. Thus adorned, he made an Orati-
 on to the Army, advising them (from the
 Examples of their late Commanders) not to
 trust the Enemy, but in order to their return,
 to burn their Carriages and Tents: This ad-
 vice was put in Execution; *Cherisophus* a *La-*
cedæmonian, had charge of the Van, *Xenophon*
 of the Reer, chosen (saith *Chio*) as well for his
 Courage as Wisdom, being in both excellent:
 betwixt these two there grew so great a friend-
 ship, that in all the time of the Retreat,
 they never had but one difference; their March
 was directed towards the heads of those great
 Rivers which lay in their way, that they might
 pass them where they were fordable; having
 crossed the River *Zathe*, *Mithridates* came up
 to them, and galled the Reer with Shot, which
 the *Greeks* not able to requite, *Xenophon* provi-
 ded two hundred Slings, and finding fifty Hor-
 ses fit for Service, employed among the Carri-
 ages, mounted Men upon them, whereby ha-
 ving frustrated the second attempt of *Mithrida-*
tes, they march’d to *Larissa*, seated upon *Tygris*,
 thence to *Mispila*; in their march from thence,
Tissaphernes overtook them with a great Army,
 but was twice worsted; whereupon (as the
 securest Course) he seized on a Mountain un-
 der which they must of necessity pass; *Xenophon*
 with a Party gained by another way the top
 of that Mountain, not without much difficulty
 of passage and trouble; and to animate his
 Soldiers, one of them, named *Soteridas*, mur-
 mured that he was on Horseback, whereas
 himself marched on Foot, oppressed with the
 weight of his Shield; which *Xenophon* hearing,
 alighted, took his Shield from him, and thrust-
 ing him out of his Rank, marched (notwith-
 standing he had also a Horse-man’s Cuirass) in
 his room: But the Soldiers beat and revi-

led *Soteridas*, till they constrained him to take
 again his Shield and place. When they had
 gained the top, the Enemy, being prevented,
 fled, and set fire on the Villages. * The Gre- * *Xenophon*
cians (intercepted by the River *Tygris*) marched lib. 4.
 over the Mountains into the Country of the
Carduchi, a People Enemy to the *Persians*, rough
 and Warlike, from whom they found such
 Opposition, that in seven days March through
 their Country, they were put to continual fights,
 and suffered more distresses than the *Persian* had
 put them to. Forging the River *Kentrites*,
 which bounds that Country, they passed into
Armenia, where having put to flight some troops
 of Horse, raised by the King’s Deputies in these
 Parts to oppose their passage, they marched
 without disturbance to the Heads of *Tygris*,
 which they passed; thence to the River of
Teleboa in *West Armenia*, molested with extream
 Snows, losing many by extremity of cold, till
 they came to the River *Phasis*, near which liv’d
 the *Phasiani*, *Tacchi*, and the *Chalybes*; the
Tacchi, into whose Country they first came,
 conveying their Provisions into strong holds, re-
 duced the *Greeks* to great want, until with
 much Pains they forced one of them, where
 they took as much Cattle as maintained them
 in their Passage through the Country of the
Chalybes, a stout Nation, of whom they could
 get nothing but blows: Thence they marched
 to the River *Harpasus*, so to the *Scythidi*, where
 the Lord of *Gymnias*, a Town in those Parts led
 them through the Enemies Country (which he
 willed them to burn as they went) to the
 Mountain *Theches*, from whence they might be-
 hold the Sea, to the great Joy of the Soldiers.
 Passing friendly through the Country of the *Ma-*
crones, to the *Colchian* Mountains, discomfiting
 the *Colchi*, who opposed them, they arrived at
Trapezond, a City upon the *Euxine* Sea, where
 was a *Greek Colony*; here they sacrificed and ce-
 lebrated Games: † *Cherisophus* they sent to *Ana-* † *Xenophon*
xibius, the *Lacedæmonian* Admiral, (with whom lib. 5.
 he was intimate) to procure Ships for their trans-
 portation home. Whilst they stayed in expecta-
 tion of his return, they maintained themselves
 by Incursions upon the *Colchi*, and *Drylani*; but
 he not coming, and their Provision failing, *Xeno-*
phon perswaded the Cities adjoining to clear
 them a passage by Land, which they took to
Cerusus, a *Greek* City, where mustering their
 Men, they found but eight thousand six hun-
 dred left of ten thousand that went up with
Cyrus, the rest consum’d by Enemies, Snow,
 Sicknefs: They shared the Money that had been
 made by the sale of Captives, reserving a tenth
 for an Offering to *Apollo*, and *Diana*: *Xenophon*
 preserved his to be disposed at *Delphi* and *Ephe-*
sus. From *Cerusus* they passed through the Coun-
 try of the *Mosynæci*, a barbarous People, divided
 into Factions; the stronger part despising their
 Friendship, they joyned with the weaker, whom
 they left Masters of all: Then they marched
 to the *Chalybes*, thence to the *Tibarenes*, passing
 quietly through their Country to *Cotiora*, a
Greek Town and Colony of the *Sinopians*. Thus
 far the Army marched on Foot; the distance
 of the place where they fought with *Artaxerxes*
 to *Cotiora*, being one hundred twenty two En-
 campings, six hundred twenty parasangs, ten
 thousand

† *Ælian*. var.
 hist. 3. 24.

thousand eight hundred twenty furlongs, the time eight Months.

Those of *Cotyora* refusing to afford them a Market, or entertainment for their Sick, they entred the Town by force, and took Provision, partly out of *Paphlagonia*; partly out of the Territory of the *Cotonytes*; whereupon the City of *Sinope*, to which *Cotyora* was tributary, sent Ambassadors to them, complaining of this dealing, and threatening to join with *Corylas* and the *Paphlagonians*; whereto *Xenophon* answered, *That they feared not, if need were, to War against them both, but could, if they pleased, gain the Friendship of Corylas and the Paphlagonians as well as they.* Upon which Answer, the Ambassadors growing calm, promised them all Friendship from the State of *Sinope*, and to assist them with Shipping for the whole Army, it being impossible to go by Land, by reason of the Rivers *Thermodon*, *Halys*, *Iris*, and *Parthenius*.

Xenophon had designed to plant a Colony there, but his intention being divulged by *Silanus*, a Sooth-sayer, those of *Sinope* and *Heraclea*, sent to the *Grecians*, promising them not only a sufficient Fleet, but desiring under-hand *Timasion*, a Greek Commander to promise the Army a good Sum of Money to convey them to *Troas*; which offers *Xenophon* (who only desired the common good) perswaded them to accept; and to engage mutually, not to forsake one another till they were all in safety: Those of *Heraclea* sent Shipping, but not the Money; whereupon *Timasion* and other Commanders fearing the Soldiers, desired *Xenophon* the Army might go to *Phasis*, which he refused, but thereby was occasioned a suspicion that he should Plot to deceive the Army, and to bring them back to *Phasis*, whereof he acquitted himself. Here a general Inquisition was made of all offences since the death of *Cyrus*, and they were punished; some accused *Xenophon* for beating them, all which proved for just causes, one for offering to bury his sick Companion alive; some for forsaking their Ranks; others for lying on the Ground in the Snow, or lingering behind. Thus were all things quietly settled.

C H A P. IV.

End of the Retreat.

Xenoph. lib. 6. **T**H E *Greeks*, as soon as their Fleet was ready, set sail for *Harmond*, the Port of *Sinope*, when *Chirisophus* met them with some Gallies, from *Anaxibius*, who promised them pay as soon as they should come into *Greece*. The Army desirous of a General, intreated *Xenophon* (with extraordinary Testimony of affection) to accept that Command: *Xenophon* refused, either dissuaded by inauspicious Sacrifice, or unwilling to displease the *Lacedæmonians*, in putting by *Chirisophus*, who was thereupon chosen, but soon after deposed, for refusing to extort a great Sum from *Heraclea*, a Greek City, their Friends: *Xenophon* also denying to be employed therein, the Army thereupon became divided; they chose ten Captains out of them-

selves; with *Chirisophus* remained two thousand one hundred, with *Xenophon* two thousand foot, and forty Horse; *Chirisophus* went by land to meet *Cleander* Governour of *Byzantium*, at the Mouth of the River *Calphas*, leaving such Shipping as he had to *Xenophon*, who landing in the Confines of *Thrace*, and of the *Heraclean* Country, marched quietly through the midst of the Land: The Mutineers landing at *Calphas*, surpris'd and spoiled the Country thereabout; the *Thracians* rising up against them, cut off two Regiments, and besieged the Hill where the rest encamped. *Xenophon* on the way, being inform'd of the desperate condition of these *Greeks*, went directly to the place, setting on fire as he went all that was combustible; the Enemy fearing to be set upon in the Night, stole away, as did the *Greeks* also, whom *Xenophon* overtaking in the way to the Port of *Calphas*, they embrac'd him with great Joy, and arriving at the Haven, made a Decree that it should be Death for any man to propound to divide the Army, and that they should depart the Country in their first order. The former Commanders being restored in the room of *Chirisophus*, who died, they substituted *Neon*, who going forth with two thousand Men to Pillage the Country, was discomfited by *Pharnabazus*, Lieutenant to the King of *Persia*, and lost five hundred Men; the rest rescued by *Xenophon*, the Army by his encouragement marched through a large Forrest defeating *Pharnabazus*, who oppos'd their Passage there. *Cleander* came over to them, and having express'd much kindness to *Xenophon*, and contracted Hospitality with him, departed. The Army marched through *Bythinia* to *Chrysopolis*, in the Territories of *Chalcedon*.^{*} Thence *Anaxibius* the *Lacedæmonian* Admiral transported them to *Byzantium*, where he had promised they should as soon as they arriv'd, receive Pay, without which he sent them out of the City, whereat the Soldiers incens'd, returned and entred the City by force, intending to spoil it: But *Xenophon* thrusting himself amongst the Crowd, dissuaded them, and appeas'd the Tumult, as is particularly attested by † *Chio*, an Eye-witness.^{† In Epistola ad Metridem;} By this means they were brought to depart the City quietly, which as soon as they had done, *Xenophon* desirous to go home, took leave of the Army, and returned to *Byzantium* with *Cleander*. *Anaxibius* being put out of the Admiralship, and thereupon slighted by *Pharnabazus* (at whose Instigation he had treated the *Greeks* so hardly) desired *Xenophon* to return to the Army to lead 'em to *Perinthus*, whence they should be transported into *Asia*; the Army received him with much Joy: When they came to *Perinthus*, *Aristarchus* the Governour would not suffer them to be Transported: *Seuthes* King of *Thrace* had invited them to aid him against *Medocus*, Usurper of his Kingdom, with large offers of Money to every Soldier, of his Daughter to *Xenophon*: To him therefore, not knowing where to winter, they went. At Supper every one (according to the custom) drank to the King, and made him a Present: *Xenophon*, who sat next him, rising up, and taking the Cup, told him he gave him himself and all his Companions to be his faithful Friends, and ready Servants

* Servants in the recovery of his Kingdom :
 * Herein their Assistance did much advantage
Scntbes : The Army wanting Pay, *Xenophon* re-
 proved *Heracides* for not taking order about it ;
 who thereupon endeavoured to work him out
 of Favour with *Scntbes*, to whom he brought
 the rest of the Commanders, counselling them
 to say, that if need were, they could lead the
 Army upon Service as well as *Xenophon* ; but
 they jointly protested unto *Scntbes*, they would
 not serve at all without him. So he sent for *Xeno-*
phon also, and being agreed to proceed, they mar-
 ched towards the Country of the *Melinophagi*, as
 far as *Salmydesson* : which Places having reduc'd,
 they returned to the Plains of *Selybria*, thither
 came *Chaminus* a *Lacedæmonian*, *Polinicus* sent
 from *Thymbro*, who told them that the *Lacedæ-*
monians had designed War against *Tissaphernes*,
 the charge thereof was committed to *Thymbro*,
 who desir'd this Army of *Greeks* to assist them,
 promising them good Pay. *Scntbes* willingly
 yielded the Army into their Hands, they sent *Xe-*
nophon to demand their Arrears, which not with-
 out much importunity he obtained. Thence they
 failed to *Lampsacus*, where *Euclides* a Soothsay-
 er of *Xenophon's* acquaintance ask'd him, how
 much Gold he had brought ? *Xenophon* protested
 he had not enough to carry him Home,
 but that he sold his Horse and other things
 which he had about him. The next day they
 marched to *Ophrynium*, whither came *Brito* and
Euclides to pay the Army, they being *Xenophon's*
 Friends, restored (refusing the price of Redemp-
 tion) his Horse which he much lov'd, and
 had pawned at *Lampsacus*. Then Marching
 forward by *Attramyttium*, and *Kertonium*, not
 far from *Atarna*, to the Plain of *Caicus*, they
 reacht *Pergamus*, a City of *Lydia*. Here *Hellas*,
 Wife of *Gongylus* an *Eretrian*, Mother of *Gorgi-*
on, and *Gongylus* entertain'd *Xenophon* : By her
 Information *Xenophon* surpris'd *Asidates* a rich
Persian, with his Wife and Children, and all his
 Goods : Returning to *Pergamus*, the *Lacedæmo-*
nians, Captains and Soldiers, by agreement gave
 him also an extraordinary share of Horses, Oxen,
 and other things ; then came *Thymbro*, and ta-
 king the Army, joyn'd it to the rest of the *Gre-*
cian Forces, wherewith he made a War against
Tissaphernes.

Of the King's Provinces, through which they
 passed, the Governours were these ; *Artimas*
 of *Lydia*, *Artacamus* of *Phrygia*, *Mithridates* of
Laconia, and *Cappadocia* ; of *Cicilia*, * *Syennesis* ;
 of *Phœnicia* and *Arabia*, *Dernes* ; of *Syria* and
Assyria, *Belesis* : Of *Babylonia*, *Roparas* : of *Media*,
Arbacas, of the *Phasian* and *Hesperita*, *Teriba-*
zus, the *Carduchi*, *Chalybes*, *Chaldeans*, *Macrones*,
Colchi, *Mosynæchi*, *Cæti*, and *Tibareni*, are free
 Nations ; *Paphlagonia*, governed by *Corylas*, the
Bithynians by *Pharnabazus*, the *European Thra-*
cians by *Scntbes* : The total number of the Ascent
 and Descent is two hundred and fifteen encamp-
 ings, one thousand one hundred and fifty para-
 fangs, thirty four thousand two hundred fifty five
 Furlongs ; the time of the Ascent and De-
 scent one Year and three Months.

C H A P. V.

His following of Agesilaus, and Banishment.

* **A**fter this Expedition the defeat in Pontus, * *Laert.*
 and breach of promise of *Scntbes* King of
 the *Odrysians*, *Xenophon* went into *Asia* with *A-*
gesilaus King of the *Lacedæmonians*, to whom he
 deliver'd for a sum of money the Soldiers of *Cyrus*,
 and beloved infinitely, *etc.* *πρεσβυλὸς* : *Æmilius* *Pro-*
bus faith, he conversed intimately with him : *Ci-*
cero, that he instructed him. *Plutarch* affirms, that
 by his advice *Agesilaus* sent his Sons to be Educa-
 ted at *Sparta*, to learn and art them, which none
 was more excellent, how to obey and command. *A-*
gesilaus passed into *Asia*, the first year of the 96th
 Olympiad ; he warr'd successfully with the *Per-*
sian, but the year following was call'd home by
 the *Lacedæmonians* to help his Country invaded
 by the *Thebans*, and their Allies, whom the *Per-*
sian had corrupted, thereby to withdraw the War
 out of his Country. *Xenophon* in his returning
 with *Agesilaus* out of *Asia* into *Bœotia*, apprehen-
 ding the danger of the War they were entering in-
 to, when he came to *Ephesus* left one half of the
 Gold † which he had reserved for an offering out
 of his share (of the Money which the Army divi-
 ded at *Ceræsum* in their return from the expedi-
 tion of *Cyrus*) with *Megabyzus*, *Diana's* Priest, wil-
 ling that if he escaped the danger of that War, it
 should be restored to him, if he miscarried, con-
 secrated to *Diana*, and either made into an
 Image dedicated to the Goddess, or disposed
 some way that he should conceive most accepta-
 ble to her : The other half he sent an offering to
 the *Athenian* treasury at *Delphi*, inscribing there-
 on both his own name and that of *Proxenus*,
 his Predecessor in the command of that Regi-
 ment. *Agesilaus* returning, wasted *Bœotia*, and
 overcame the *Thebans* and their Allies in a
 great Battle at *Coronea* † particularly describ'd
 by *Xenophon*, who was there present. * *Xenoph. lib. 5.*

During the absence of *Xenophon* out of his own
 Country, the *Athenians* (because he took part
 against the King of *Persia*, their Friend, and fol-
 lowed *Cyrus*, who had assisted the *Lacedæmonians*
 against them, * supplying *Lyfander* their Ge-
 neral with Money for a Navy) proclaimed a
 decree of Banishment against him : † *Ister* faith, † *Laert.*
 he was banished by the decree of *Eubulus*, and
 called home by the same : *Laertius*, that he
 was banished for *Laconism*, upon his going to
Agesilaus ; Some place this Decree in the third
 year of the 96th Olympiad, but the writer of the
 History of *Cyrus* his Expedition implieth, that it
 was before his first return out of *Asia*, affirming
 that before the delivery of the Army to *Thymbro*,
Xenophon ignorant of this Decree, intended to
 have gone home.

C H A P. VI.

How he lived at Scilluns, and at Corinth.

THE *Lacedæmonians* to requite him for
 suffering in their cause, maintained him
 at the publick charge, and chafing *Scilluns*
 of the *Eleans*, built a Town there, and be-
 stowed

flowed a fair house and land upon *Xenophon*, whereupon he left *Agésilas*, and went thither, carrying with him his Wife named *Philestia*, and his two Sons, which he had by * her, *Diodorus* and *Gryllus*, called the *Dioscory*. † Thither *Pelopidas* a Spartan, sent him Captives for Slaves from *Dardanus* for a Present, to dispose of them as should please him.

Scillus was near *Olympia*, eminent for celebration of the Games, which *Megabyzus* coming to see, restor'd to *Xenophon* the Money which he had left in his Custody, wherewith * by advice of the Oracle he purchased a portion of Land, and consecrated it to *Diana*, in a place designed by *Apollo*, through which ran the River *Selinus*, of the same name with that at *Ephesus*, running by *Diana's* Temple; the River was stored as well with shell-Fish as others, the Land with all kind of Beasts for game; he built also a Temple, and after with the consecrated Money offering the Tythes of the fruits of the Land to *Diana*, all the Citizens and Neighbours, Men and Women, were invited to the Feast, where they had from the Goddesses allowance, Bread, Wine, and part of the Flesh of such Beasts as were either taken out of the consecrated ground, and sacrificed, or killed in hunting with the Sons of *Xenophon* and other Citizens, exercised against the time of the Feast out of the sacred ground; and out of *Phaloe*. were taken wild Boars, Goats, and Staggs; the place lies in the way betwixt *Lacedæmonia* and *Olympia*, twenty *Stadia* from the Temple of *Olympian Jupiter*. In the sacred ground were woods and hills, stored with Trees sufficient to maintain Swine, Goats and Sheep, whereby the Beasts of carriage of such Merchants as come to the Feast are maintained plentifully: About the Temple a Grove of Fruit-trees of all sorts. The Temple was an imitation in little of that at *Ephesus*: An Image of Cypress here resembling that of Gold there: A Pillar near the Temple bare this inscription, GROUND SACRED TO DIANA. HE WHO POSSESSETH IT LET HIM PAY THE TYTHE OF HIS YEARLY ENCREASE, AND WITH THE SURPLUSAGE MAINTAIN THE TEMPLE, IF HE NEGLECT, THE GODDESS WILL TAKE ORDER FOR IT. † At this place of retirement *Xenophon* employed his time in Hunting, and writing Histories, inviting his Friends thither, * of whom amongst others came *Phado*, and *Aristippus*, much delighted with the Situation, building, and Trees planted by the hand of the owner.

† At length a War arising betwixt the *Eleans* and *Lacedæmonians*, the *Elians* invaded *Scillus* with a great Army, and before the *Lacedæmonians* came to their relief, seized on the house and lands of *Xenophon*; his Sons with some few Servants got away privately to *Lepreum*; *Xenophon* first to *Elis*, then to *Lepreum* to his Sons, and lastly with them to *Corinth*, where he took a house, and continued the rest of his life. During this time the *Argives*, *Arcadians*, and *Thebans*, jointly opposed the *Lacedæmonians*, and had almost oppressed them, when the *Athenians* made a publick decree (* mention'd by *Xenophon*) to succour them; *Xenophon* sent his Sons upon the expedition to *Athens* to fight for

the *Lacedæmonians*; for (as *Diocles* affirms) they had been educated at *Sparta*, in the discipline of that Place.

This enmity ended in a great Battle at *Mantineia* in the 2d Year of the hundred and fourth Olympiad: *Diodorus* without acting any thing memorable, gave off safe, and had afterwards a Son of his Brother's Name. *Gryllus* was rank'd opposite to the *Theban* Horsemen: The *Thebans* having by the valour of their General *Epaminondas* got the better of the day, a resolute company of *Spartan* Horsemen broke in upon him, of whom was *Gryllus*, who slew *Epaminondas* with his own Hand, as *Pausanias* affirms to have been attested both by the *Athenians*, and the *Thebans*, adding, that he had seen at *Athens* a picture of the Battle at *Mantineia*, confirming the same; and that at *Mantineia* was erected a Pillar with the Statue of *Gryllus* on horse-back. In this noble action *Gryllus* lost his life, the news of whose death came to *Xenophon* at *Corinth*, as he was Sacrificing, crown'd with a Garland; as soon as he heard his Son was slain, he took off his Garland and laid it aside; then demanding after what manner he died, it was answered, fighting stoutly in the midst of his Enemies, of whom having slain many, he fell at last himself: Hereupon *Xenophon* took again his Garland, and putting it upon his Head, proceeded to Sacrifice, not so much as shedding one tear, only saying, *I knew that I had begot a Mortal*; † and calling the Gods to whom he sacrific'd, to witness, that the vertue of his Son gave him more content, than his death sorrow. * Innumerable were the Epitaphs and Encomiums that were written upon *Gryllus* to please *Xenophon*, whence may be collected in how great esteem he was.

That he made a visit to *Dionysius* Tyrant of *Sicily* (but at what time is uncertain) is implied by † *Athenæus*, who relateth, that being at a Feast of his, compelled by the Cup-bearer to drink, he called the Tyrant by Name: *What is the matter Dionysius, (saith he) your Cook, though excellent in that Art, doth not enforce us to eat against our Inclination?*

CHAP. VII.

His Death, Person, Vertues.

Xenophon being * full of years (which according to † *Lucian* exceeded ninety) died at † *Corinth*, in the first of the hundred and fifth Olympiad, *Callidemus*, or *Callimedes* being Archon, at what time *Philip*, Son of *Amintus*, began his Reign in *Macedonia*. He had an ingenious modest look, long, thick Hair, handsome (to use the words of *Laertius*) beyond expression, Adroit in everything, particularly addicted to Horses and hunting, skilful in Tactics, as his Writings attest; devout, a great lover of Sacrifices, skilful in interpreting them; an exact imitator of Socrates, temperate, as appears from his saying, that * It is pleasant hungry, to eat Herbs; thirsty, to drink Water. So candid and ingenious, that * when he might have stolen the Writings of *Thucydides*, which lay concealed, he chose rather to publish them with Honour.

** Proem.* In a word, he was a person every way absolute, as well for action, as contemplation. Xenophon (saith ** Eunapius*) was the only Man of all the Philosophers who adorn'd Philosophy with his words and actions; he describes Moral Vertue in his discourses and writings: In his actions he was singular; as to his conduct, a most excellent General. Alexander had not been great, if Xenophon had not said, even the perfunctory actions of valiant Persons ought to be recorded.

† Laert. † He was the first that committed the disputes of Socrates his Master, to writing, and that with much Fidelity, not inserting excursions of his own, as Plato did, whom for that reason, as ** A. Gellius* observes, he argueth of Falshood; that there was a great enmity betwixt these two is affirmed by the same Author, who, as a proof thereof alledgeth, that neither of them names the other in any of their writings: *† Vossius* only observes, that Xenophon mentions Plato once in his *ἀπομνημονεύματα*, overseen by *A. Gellius*. This enmity is further acknowledged by *† Athenæus* and *Laertius*, confirmed by the Epistle of Xenophon to *Æschines*, wherein he condemns Plato, that not being satisfied with the Doctrine of Socrates, he went to the Pythagoreans in Italy, and to the Egyptian Priests; arguments of a mind not constant to Socrates. That he was at difference with ** Aristippus* also, argued from his Writings.

† Laert. vit. Aristipp.

Laertius hath two Epigrams concerning him, the first upon his going with Cyrus into upper Asia

Great Xenophon at once made two ascents,
To Asia in Person, and to Heaven by fame:
His stile and action (rising Monuments)
Lay to Socratick Wisdom equal claim.

The other upon his Banishment.

Thou the Cecropians, noble Xenophon;
Banish't their Land 'cause Cyrus thou didst aid;
But strangers prov'd far kinder than thy own:
What Athens ow'd thee, was by Corinth paid.

Laertius reckons seven Xenophons, this the first, the second an Athenian, Brother to *Nicostratus*, Author of the *Theses*; besides many other things, he writ the lives of *Pelopidas* and *Epaminondas*; the third, a Physician of *Coos*; the fourth, writer of the History of *Hannibal*: The fifth, writer of fabulous Monsters: the sixth, of *Paros* a Statuary: the seventh, an old Comick Poet: *Suidas* reckons three more; one of *Antioch*, the second of *Ephesus*, the third of *Cyprus*; Historians, or rather writers of Romances; that of the first called *Babylonica*, of the second *Ephesica* in ten Books; of the third *Cypriaca*: The Story of *Cynarus*, *Myrrha*, and *Adonis*.

CHAP. VIII.

His Writings.

Dionysius Halicarnassensis saith, that Xenophon was a studious Æmulator of *Herodotus*, both in words and language: His stile (accor-

ding to *Cicero*) ** soft and † sweet* (melle dulcior) far differing from the noise of Orators in the Forum: In his voice, ** the Muses seem to speak*, whence he was firnamed the Attick Muse; or according to others, the Attick Bee, a title formerly conferred on *† Sophocles*. His stile and manner of writing is at large discoursed upon by *Aristides Adrianensis* in an express Tract, erroneously ascribed to *Hermogenes*.

The Books of Xenophon (which ** Scipio Africanus* had always in his hand, and *† Cicero* adviseth to read, as very profitable in many things) were (as reckoned by *Laertius*) forty, which several Persons distinguish severally; the general titles these

Κύρου παιδεία; the life and discipline of Cyrus (as *Cicero* renders it) in eight Books, written non ad historię fidem (though ** Diodorus Siculus* seems to take it in that quality) sed ad effigiem justı imperii; not as a faithful History, but the description of an exalt Prince: Whence *† Ausonius* saith, in relating the vertues of Cyrus, he hath given rather a wish than a History, describing, not what he was, but what he ought to have been *Κύρου ἀνάβασις*; the going up of Cyrus the younger into Asia, in seven Books; each of which (as *Laertius* observes) hath a Proem, the whole none: *Masius* suspects that Xenophon was not the Author of this Book; the Bishop of ** Ar-mach* ascribes it to *Themistogenes*, though own'd as Xenophon, by *Plutarch*, *Cicero*, *Dionysius Halicarnassensis*, *Hermogenes*, *Laertius*, *Athenæus*, and others.

Ἑλληνικά; the Greek History, in seven Books, continuing where *Thucydides* left; the same was done by *Theopompus*, but he went no further than sixteen Years, Xenophon to forty eight.

Agésilæus, of which piece *Cicero* saith, that *Agésilæus* would not suffer his Picture or Statue to be made, this Book alone surpasseth all Pictures or Images in his Praise.

The Republick of the Lacedæmonians, and the Republick of the Athenians, which *Demetrius* *† Laert.* denieth to be Xenophon's.

The defence of Socrates, and the memorials of Socrates, which perhaps is that History of Philosophers mentioned by *Suidas*.

Oeconomicks, the last Book of the memorable discourses, wherewith ** Cicero* was so much delighted, that in his younger years he translated it. *Offic. 2.*

Symposium, accommodated to the fourth year of the eighty ninth Olympiad, for which reason reprehended by *Athenæus*, as erroneous in Chronology; vindicated by the learned *Casaubon*.

Hiero, Or, of a Kingdom.
The accounts of Revenues.
Of Horses.
Of Horsemanship.
Of Hunting,
Epistles.

Besides these which are extant, Xenophon seems to have written other things; ** Valerius Maximus* and *† Pliny* cite his *Periplus*. *• 8. 13. † 7. 48.*

There is a Treatise of *Æquivokes* under Xenophon's name, but made and imposed upon the World by *Annius*.

XENOPHON.

Xenophons Epistles.

To *Æschines*.

Epist. I.

Meeting with *Hermogenes*, amongst other things I asked him what Philosophy you followed, he answered, the same as *Socrates*. For this inclination I admired you, when you lived at *Athens*, and now continue the same admiration for your Constancy above other Students of Wisdom; the greatest Argument to me of, your Virtue, is your being taken with that Man, if we may call the Life of *Socrates* Mortal. That there are Divine Beings over us, all know: We Worship them as exceeding us in Power; what they are is neither easie to find, nor lawful to enquire. It concerns not Servants to examine the Nature and Actions of their Masters, their Duty is only to Obey them; and which is most considerable, the more admiration they deserve who busie themselves in those things which belong to Man; the more trouble this brings them, who affect Glory in vain unseasonable Objects: For when (*Æschines*) did any Man hear *Socrates* discourse of the Heavens, or advise his Scholars to Mathematical Demonstrations? we know he understood Musick no farther than the Ear: But was always discoursing to his Friends of something excellent; what is Fortitude and Justice and other Virtues. These he called the proper good of Mankind; other things he said Men could not arrive at; or they were of kin to Fables, such ridiculous things as are taught by the supercilious Professors of Wisdom. Nor did he only teach this; his practice was answerable; of which I have written at large elsewhere, what I hope will not be unpleasing to you, (though you know it already) to peruse. Let * those who are not satisfied with what *Socrates* delivered, give over upon this conviction, or confine themselves to what is probable. Living, he was attested wise by the Deity; Dead, his Murderers could find no expiation by Repentance: But these extraordinary persons affect *Ægypt* and the prodigious Learning of *Pythagoras*, which unnecessary Study argueth them of Inconstancy towards *Socrates*, as doth also their Love of Tyrants, and preferring the Luxury of a *Sicilian* Table before a frugal Life.

To *Crito*. Epist. II.

S*ocrates* often told us, that they who provide much Wealth for their Children, but neglected to improve them by Virtue, do like those that feed their Horses high, and never train them to the Manage: by this means their Horses are the better in Case, but the worse for Service; whereas the commendations of a Horse consists not in his being fat, but serviceable in War. In the same kind err they who purchase Lands for their Children, but neglect their Persons; their Possessions will be of great value, themselves of none, whereas the owner ought to be

more honourable than his Estate. Whosoever therefore breeds his Son well, though he leave him little, gives him much: It is the Mind which makes him great or small: whatsoever they have, to the good seems sufficient, to the rude too little. You leave your Children no more than necessity requires, which they being well educated, will esteem plentiful. The Ignorant though free from present trouble, have nothing the less fear for the future:

To *Sotira*. Epist. III.

Death in my Opinion is neither good nor ill; but the end of the Life, not alike to all, for as stronger or weaker from their Birth, their years are unequal; sometimes Death is hastned by good or evil causes: and again: * neither is it fitting to grieve so much for Death, knowing that Birth is the beginning of Man's Pilgrimage, Death the end. He died as all Men (though never so unwilling) must do: but to die well, is the part of a willing and well educated person. Happy was *Gryllus*, and whosoever else chooseth not the longest life, but the most virtuous: though his (it pleased God) was short.

To *Lamprocles*. Epist. IV.

YOU must first approve the excellent assertion of *Socrates*, that Riches are to be measured by their use. He called not large Possessions Riches, but so much only as is necessary: in the judgment whereof he advised us not be deceived, these he called truly rich, the rest poor, labouring under an incurable poverty of mind, not estate.

* Epist. V.

* Epist. Sotira tick 18.

THEY who + write in praise of my Son *Gryllus*, did as they ought: and you likewise do well in writing to us the actions of *Socrates*; we ought not only to endeavour to be good our selves, but to praise him who lived chastly, piously, and justly, and to blame Fortune, and those who plotted against him, who ere long will receive the punishment thereof. The *Lacedæmonians* are much incensed at it, (for the ill news is come hither already) and reproach our People, saying, they are mad again, in that they could be wrought upon to put him to death whom *Pythia* declared the wisest of Men: If any of *Socrates*'s Friends want those things which I sent, give me notice, and I will help them, for it is just and honest: you do well in keeping *Æschines* with you, as you send me word. I have a design to collect the Sayings and Actions of *Socrates*, which will be his best Apology, both now and for the future, not in the Court where the *Athenians* are Judges, but to all who consider the Virtue of the Man. If we should not write this freely, it were a sin against Friendship, and the Truth. Even now there

* Meaning Plato, who added much of his own to the discourses of *Socrates*, and went to *Ægypt*, Italy, and Sicily.

Stob. form. 201.

+ *Allatius* o. therwise.

there fell into my hands a Piece of *Plato's* to that effect, wherein is the name of *Socrates*, and some Discourses of his not unpleasant. But we must profess that we heard not, nor can commit to writing any in that kind, for we are not Poets as he is, though he renounce Poetry; for amidst his entertainments with beautiful persons, he affirmed that there was not any Poem of his extant, but one of *Socrates*, young and handsome. Farewell, both, dearest to me.

Epist. VI.

Epist. Socr. 21.

INtending to celebrate the Feast of *Diana*, to whom we have erected a Temple, we sent to invite you hither; if all of you would come, it were much the best, otherwise, if you send such as you can conveniently spare to assist at our Sacrifice, you will do us a favour. *Aristippus* was here, (and before him) *Phædo*, who were much pleased with the Situation and Structure, but above all, with the Plantation which I have made with mine own hands. The place is stored with Beasts convenient for hunting, which the Goddess affects; let us rejoice and give thanks to her who preserved me from the King of the *Barbarians*, and afterwards in *Pontus* and *Thrace* from greater evils, even when we thought we were out of the Enemies reach. Though you come not, yet am I obliged to write to you. I have composed some Memorials of *Socrates*, when they are perfect you shall have them. *Aristippus* and *Phædo* did not disapprove of them; salute in my name *Simon* the Leather-dresser, and commend him that he continueth *Socratick* Discourses, not diverted by Want, or his Trade, from Philosophy, as some others, who decline to know and admire such discourses and their effects.

Epist. VII.

Epist. Socr. 19

COME to us dear friend, for we have now finished the Temple of *Diana*, a Magnificent Structure, the place set with Trees, and consecrated, what remains will be sufficient to maintain us; for as *Socrates* said, if they are not fit for us, we will fit our selves to them; I write to *Gryllus* my Son and your Friend, to supply your occasions; I write to *Gryllus*, because, of a little one you have profess'd a kindness for him.

To *Xantippe*. Epist. VIII.

† Epist. Socr. 21.

TO *Euphron* of *Megara* I delivered six measures of Meal, eight Drachms, and a new Rayment for your use this Winter: accept

them, and know, that *Euclid* and *Terpsion* are exceeding good, honest persons, very affectionate to you and *Socrates*; if your Sons have a desire to come to me, hinder them not, for the Journey to *Megara* is neither long nor incommodious: Pray forbear to weep any more, it may do hurt, but cannot help. Remember what *Socrates* said, follow his Practice and Precepts; in grieving you will but wrong your self and Children; they are the young ones of *Socrates*, whom we are obliged not only to maintain, but to preserve our selves for their sakes: lest, if you or I, or any other, who after the death of *Socrates* ought to look to his Children, should fail, they might want a Guardian to maintain and protect them. I studie to live for them, which you will not do unless you cherish your self. Grief is one of those things which are opposite to Life, for by it the Living are prejudiced. *Apollodorus* † firnamed *the soft*, and *Dion* praise you, that you will accept nothing from any, professing you are Rich; it is well done, for as long as I and other friends are able to maintain you, you shall need none else. Be of good courage, *Xantippe*, lose nothing of *Socrates*, knowing how great that Man was, think upon his Life, not upon his Death: yet that to those who consider it will appear noble and excellent, Farewel.

To *Cebes* and *Simmius*. Epist. IX.

IT is commonly said, nothing is Richer than a poor Man. This I find true in my self, who have not so much, but whilst you my friends take care of me, seem to possess much: and it is well done of you to supply me as often as I write: As concerning my Commentaries, there is none of them but I fear should be seen by any in my absence, as I profess in your hearing, at the house where *Euclid* lay. I know dear friends a writing once communicated to many is irrecoverable. *Plato*, though absent, is much admired throughout *Italy* and *Sicily* for his Treatises; but we cannot be perswaded they deserve any Study: I am not only careful of losing the honour due to Learning, but tender also of *Socrates*, lest his Vertue should incur any prejudice by my ill relation of it. I conceive it the same thing to caluminate, or not praise to the full those of whom we write: This is my fear (*Cebes* and *Simmius*) at present, until my Judgment shall be otherwise informed. Fare ye well.

† The reason manifest from *Xenophon* and *Laertius*, who describe him such: *Xenophon* calls him *εὐνός*, *Apolog. Socr.* in all things but his affection to *Socrates*. *Leo Allatius* is much perplexed concerning this appellation.

Epist. Socr. 21.

ÆSCHINES.

CHAP. I.

His Life.

ÆSCHINES was Son of *Charinus* *ἄλλαντοποιεῖ*, or as *Plato* and others, of *Lyfanius*, an *Athenian*, of the *Sphet-tian* Tribe: He was from his child-

hood very industrious; addressing himself to *Socrates*, he said to him, I am poor, and have nothing to give you but my self: Do you not know, answered *Socrates*, that you have made me a Rich Present? He was the most diligent of all his Scholars, and never quitted him; whereupon *Socrates* said, that he only, *ὁ ἄλλαντοποιεῖ* valued him: He was not beloved of *Plato*, nor *Aristippus*: *Idomeneus* saith, it was he who counselled *Socrates* to escape out of Prison, which *Plato* ascribes to *Crito*. Being very poor, *Socrates* bad him take some of his Dialogues and make Money of them, which *Aristippus* suspecting when he read them at *Megara*, derided him, saying, how came you by these, Plagiary? Another time † *Aristippus* falling out with him, was questioned what became of his friendship, he answered, it is asleep, but I will wake it; and meeting with *Æschines*, do I seem so inconsiderable to you, said he, and unfortunate, as not to deserve Correction? It is no wonder, answers *Æschines*, if your nature exceeding mine in every thing, find out first what is expedient. * Instigated by Poverty, he went to *Sicily*, to *Dionysius* the Tyrant, at what time *Plato*, and *Aristippus* were there: *Plato* being out of favour with the Tyrant, took occasion, by presenting *Æschines*, to ingratiate himself: † He desired he might be admitted to speak with him, which the Tyrant granted, supposing he would alledge something in defence of himself: as soon as he came into his Presence, he began thus: If you knew, *Dionysius*, of any that came with a hostile intent to do you hurt, tho' he sail'd of the occasion, would you suffer him to depart unpunished? nothing less, answered *Dionysius*: for not only the ill actions, but designs of enemies deserve to be chastized. Then (replies *Plato*) if any Man should come hither out of an intent to do you a good office, and you not give him leave, ought you to neglect and despise him? *Dionysius* demanded who he meant: *Æschines* (said he) a Person of as great integrity as any of *Socrates* his friends, able to reform those with whom he converseth, who having undertaken a great voyage by Sea to come hither, and discourse Philosophically with you, is neglected. *Dionysius* was so pleased at this, that he embraced *Plato*, admiring his candor and greatness of Spirit, and entertained *Æschines* bountifully and magnificently. Thus *Plutarch*, but *Laertius* saith, that *Æschines* coming thither, was despised by *Plato*, and recommended by *Aristippus*; the latter, the Socratic Epistle confirms: to *Dionysius* he imparted some Dialogues, and was gratified by him, with whom he lived untill he was deposed, and *Dion* brought into the Kingdom; then returned to *Athens*, where not daring to profess his Philosophy, because the names of *Plato* and *Aristippus* were so great, he taught and * took Money pri-

vately, at last apply'd himself to framing Orations for the Forum, in which, *Timon* saith, he was very perswasive: *Lyfius* wrote one Oration in answer to him, intituled, *περὶ συκοφαντίας*, according to *Athenæus*, *ὡς Αἰχινὸς τὸν Σωκράτην χεῖρας*, wherein he asperseth him for many things, which are not any way probable, as (besides patronising an unjust cause, and borrowing without intent to restore) for pretending to sell Unguents contrary to the Laws of *Solon*, and precepts of *Socrates*, and for injuring *Hermæus* his Wife and Children; see *Athenæus*. *Aristotle* surnamed *ὁ Μῦθος* was his intimate friend. *Laertius* reckons eight of this name; the first, this *Æschines* the Philosopher; the second wrote of Rhetorick, the third an Orator, contemporary with *Demosthenes*, the fourth an *Arcadian*, Scholar to *Iso-crates*, the fifth of *Mitilene*, surnamed *Rhetoromastix*, the sixth a *Neopolitan*, an *Academicke* Philosopher, Disciple to *Melanthius* a *Rhodian*; the seventh a *Milesian*, who wrote *Politicks*, friend to *Cicero*, the eighth a Statuary.

CHAP. II.

His Writings.

HE wrote Dialogues, Orations, and Epistles by the first *Athenæus* affirms, he gained a great esteem of Temperance, Humanity, and Integrity: *Menedemus* accuseth him of owning many Dialogues of *Socrates*, which he had of *Xantippe*; *Panetius* believes them to be his own, not counterfeit: those (saith *Laertius*) which express the Socratic habit, are seven; the first, *Miltiades*, written in a lower style: the second, *Callias*, wherein he is blamed by *Athenæus* for treating of the enmity betwixt *Callias* and his Fathers, and for deriding *Anaxagoras* and *Prodicus* in their Scholars *Theramenus*, *Philoxenus*, and *Ariphrades*. The third, *Rhion*, the fourth, *Aspasia*, cited by *Athenæus* and *Harpocration*, the fifth *Alcibiades*, cited also by * *Athenæus*, the sixth *Axiochus*, wherein (saith † *Athenæus*) † he traduceth *Alcibiades* as given to Wine and Women; which particular not being to be found in that *Axiochus* extant amongst the spurious Platonick Dialogues, argues contrary to the Opinion of *Vossius*) that it is not the same. The last, *Telauges*, the scope whereof was a Satyrical derision of the Vices of that Person, as appeareth from *Demetrius Phalereus*, and * *Athenæus*.

† There were seven other Dialogues, stiled *ἀνεφαλοῖ*, which went under the name of *Æschines*, very loose, and not expressing enough the Socratick Severity; whence *Pisistratus* the *Athenian* denied that they were his, and *Perseus* saith, the greatest part were written by *Pasiphaon* of *Eretria*, falsely mingled with the Dialogues of *Æschines*: their names (according to *Suidas*) *Phædon*, *Polyæus*, *Dracon*, *Erixius*, (perhaps that which is extant) of *Vertue*, *Pisistratus*, the *Scythians*.

* His Orations gave full testimony of his perfection in Rhetorick, in confirmation whereof,

° Epist. 23.

Of his Epistles, one to Dionysius the Tyrant is mentioned by Lacritius, as extant in his time: another there is under his name amongst the

* Socratick Epistles in these words;

As soon as I arrived at Syracuse Aristippus met me in the Forum, and taking me by the hand, carried me immediately to Dionysius, to whom he said, Dionysius, if a Man should come hither to insinuate folly into you, did he not aim at your hurt? to which Dionysius consenting, what then, continues Aristippus, would you do to him? the worst, answers Dionysius, that could be: But if any one, saith he, should come to improve you in wisdom, did he not aim at your good? which Dionysius acknowledging: behold then (continues he) Alcibiades, one of Socrates's Disciples, come hither to instruct you, he aims at your good, therefore on him confer the benefits you confess due to such. Dionysius (said I, interrupting him,) Aristippus expresseth an admirable Friendship in this address, but we are owners only of so much wisdom as restrains us from abusing those with whom we converse. Dionysius hereat pleased, commended Aristippus, and promised to make good what he had confessed due to me: He heard our Alcibiades, and delighted it seems therewith, desired if we had any other Dialogues, that we would send them to him, which we promised to do, and therefore dear friends we intend to be shortly with you. Whilst I read, Plato was present (which I had almost forgot to tell you) and whispered something in my behalf privately to Dionysius, by reason of Aristippus; for as soon as he was gone out, he told me that he never spoke freely when that Man (naming Aristippus) was present, but for what I said to Dionysius concerning you, I refer my self to him: The next day Dionysius in the Garden confirmed his speech as said of me, with many sportive sayings (for they were no better) I advised Aristippus and Plato to cease their emulation, because of their general fame; for we shall be most ridiculous, if our Actions correspond not with our Profession.

C R I T O.

α Suid.

° Xen.

C R I T O was an Athenian† Scholar to Socrates: whom he loved so entirely that he never suffered him to want necessaries, of which more hath been said in the Life of Socrates: * Being much troubled and sued by those who had not received any injury from him, but abus'd the quietness of his disposition, which would sooner part with Money upon no ground than go to Law, Socrates advised him to entertain one of the same busie, troublesome humour, to keep off the rest; Crito in pursuit of this Counsel made choice of Archidamus, an excellent Lawyer, but poor, who being obliged by his gifts and kindness, persecuted eagerly all such as molested not him only, but any of his friends: Crito wrote seventeen Dialogues comprised in one volumn, thus reckon'd by Laertius. That the good are not made such by Learning. Of having most. What is expedient, or the Politician. Of Honesty, of Wick- edness, of Security, of Law, of Divinity, of Arts, of Conversation, of Wisdom; Protagoras or the Politick, of Letters, of Poetry, of what is Honest,

of Learning, of Knowing or Science, what it is to know. He writ also an Apology for Socrates.

† He had four Sons, Critobulus, Hermogenes, † Suid. Epigenes, and Ctesippus, all Auditors of Socrates; of whom already.

* Suidas reckons three more of this name: * Laert. One wrote Getic Stories; the second was of Pieria a City in Macedonia; the third of Naxos, both Historians.

S I M O N.

S I M O N was an Athenian, a Leather-dresser. Socrates coming to his Shop, and disputing there, he committed to writing all that he remembered thereof, whence his Dialogues were called σκωτικοί. They were three and thirty, all in one Volumn: Of Gods, of Good, of Honest, what is Honest. Of Just, the first; the second of Virtue, that it cannot be taught. Of Fortitude, the first, second, third; Of Law, of Popularity, of Honour, of Poetry, of Health, of Love, of Philosophy, of Knowledge, of Musick, of Poetry: what is Honest. Of Doctrine, of of Disputation, of Judgment, of that which is, of Number, of Diligence, of Labour of Avarice, of Boasting, of Honesty, or according to others, of Counsel, of Discourse, of Expedients, of doing ill. He is reported the first that used the Socratick Discourses. Pericles promising that if he would come to him, he should want nothing, he answered, that he would not sell his freedom of Speech. There is extant amongst the Socratick Epistles, this under his name, as in answer to Aristippus.

I hear that you * deride our Learning to Dionysius: I confess I am a Leather-dresser, and work upon that Trade to the † reproof of indiscreet Persons, who think to follow Socrates, yet live Luxuriously. As for your Children, Antisthenes will correct them, to whom you writ scoffing at my manner of Life: But of this mirth enough, only be mindful of me and of thirst: These conduce much to the wise.

* Perhaps τανδάλιον rather than μάζω. † vs. δειλόν, which Allatius renders infirm. Eionem.

G L A U C O.

G L A U C O was an Athenian: he writ nine Dialogues, comprised in one Book: Phidylus, Euripides, Amyntichus, Eutibias, Lysitides, Aristophanes, Ephalus, Anaxiphemus, Menexenus. There are two and thirty more falsely ascribed to him.

Laert.

S I M M I A S.

† Simmias was a Theban, he writ three and twenty Dialogues in one Book: Of Wisdom, of Ratiocination, of Musick, of Verse, of Fortitude, of Philosophy, of Truth, of Letters, of Doctrine, of Art, of Conduct, of Decency, of what is to be chosen, and what to be shunned: of Friendship, of Knowledge, of the Soul, of well-living, of Possibility, of Wealth, of Life, what is Honest, of Industry, of Love.

† Laert.

C E B E S.

* Cebes was of Thebes, a Philosopher, Disciple to Socrates: He writ three Dialogues, The Tablet (which is extant) the seventh. Phrynichus, he writ also an Infernal Narrative, and other things. These are the Philosophers who did not distract the Doctrine of their Master into Sects, in which respect they may more properly be termed Socratic, tho' the rest also assume that Title.

* Laert.

THE

THE HISTORY OF THE ROMAN EMPIRE, FROM THE DEATH OF JULIUS CAESAR TO THE FALL OF THE EMPIRE, UNDER THE REIGN OF THEodosius the Great.

THE
HISTORY of PHILOSOPHY.

The Fourth Part.

Containing the Cyrenaick, Megarick, Eleack, Eretriack Sects.

ARISTIPPVS.

THE CYRENAICK SECT.
CHAP. I.

Aristippus, his Country and Parents.

THE estimation which Philosophers had time caused it exceedingly to multiply, whilst daily gain'd among the Grecians about this every Professor ambitious to be held wiser

wiser than his Master, and teaching something new, desired to have the Honour to be Author of a Sect.

The Succession of the Ionick Philosophy, which before Socrates was single: after him was divided into many Schools, whereof some were but of short continuance, others had longer succession. Of the less durable were the

{ Cyrenaick.
Megarick,
Eleack,
Eretriack.

so called from the places where the Professors flourished. Others of longer Succession; the

Academick, } out of which came the { Peripatetic.
Cynick, } Stoick.

We shall first dispatch those which were of shortest continuance, whether that they were founded upon less Reason, and were in short time broken, as * Cicero saith, and quite extinct by the strength and Arguments of the others; or that being instituted and founded in more obscure parts; they were not so lasting as those which were profess'd in the most flourishing City so Athens.

Aristippus a Disciple of Socrates, after his death, returned home into his Country at Cyrene in Africa, from whence the Doctrine which his Scholars retained had the name of Cyrenaick. † He was Son of Arétades, * Cyrene.

CHAP. II.

How he went to Athens, and heard Socrates.

FROM Cyrene Aristippus went first to Athens, invited by the fame of † Socrates, concerning whom he fell into discourse with Ischomachus, meeting him casually at the Olympick Games, and enquiring what disputes they were wherewith Socrates prevailed so much upon the young Men, he receiv'd from him some little seeds and scatterings thereof, wherewith he was so passionately affected, that he grew pale and lean, till, to assuage his fervent thirst, he took a Voyage to Athens, and there drunk at the Fountain, satisfying himself with the Person, his discourse and Philosophy, the end whereof was to know our evils, and to acquit our selves of them. * Aristotle said, Philosophy doth harm to those who misinterpret things well said. Aristippus † chiefly delighted with the more voluptuous disputes of Socrates, asserted Pleasure to be the ultimate end wherein all happiness doth consist. * His Life was agreeable to the Opinion, which he employed in Luxury, sweet Unguents, rich Garments, Wine and Women; maintain'd by a course as different from the Precepts and Practice of Socrates as the things themselves were. For, notwithstanding he had a good Estate (and three Country Seats) † he first of the Socratick Disciples took Money for Teaching. Which Socrates observing, asked him how he came to have so much? he reply'd, how came you to have so little?

A further dislike of this course Socrates expressed, when Aristippus sending him twenty minæ, he returned it, saying, his Dæmon would not suffer him to take it.

CHAP. III.

How he went to Ægina.

LEAVING Socrates, * he went to Ægina, where he lived with more freedom and Luxury ^{12.} than before: Socrates sent exhortations to reclaim him, frequent but fruitless, and to the same end published that discourse which we find in Xenophon. Here he became acquainted with Laïs the famous Corinthian Courtesan, † † Athen. deipn. who came thither yearly at the Feast of Neptune, ^{12.} and was as constantly frequented by Aristippus, for whose sake * Hermestianax saith, he took a Voyage to Corinth (mentioned among his Apo- ^{13.} thegms.)

To Corinth Love the Cyrenean led,
Where he enjoyed Thessalian Laïs bed;

No Art the subtil Aristippus knew
By which the power of Love he might eschew.

† Whilst he was upon his Voyage to Corinth, † Laert. a great Tempest arose, whereat he was much troubled: one of the Passengers saying unto him, we ordinary people are not afraid, but you Philosophers fear (or as * Ælian, are you afraid like other people?) † our Souls, answered he, are not of equal value, * you hazard a wicked and unhappy life, † I Felicity and Beatitude. † A. Gel. 19.1. Ælian. lib.

† To those who blamed him for frequenting Laïs, I possess her, saith he, not she me: * Laïs in emulation of Phryne gave admittance to all sorts of People, Rich and Poor, whereupon Aristippus reprehended by his Servant for bestowing so much on her, who entertained Diogenes the Cynick gratis, I give her Money, saith he, that I may enjoy her, not that others may not. * Diogenes reproached him for frequenting the company of Laïs, saying, Aristippus, you and I converse with the same Woman, either give over, or be like a Cynic: Do you think it absurd, saith he, to dwell in a House, wherein others lived before, or to Sail in a Ship that hath carried other Passengers? It is no more absurd to affect a Woman whom others have enjoyed.

At Ægina he continued till the death of Socrates, as (besides the testimony of † Plato) appeareth by this * Epistle of his written upon that occasion. † Athen. deipn. In Phædona. † Socratic. Epist. 16.

Of the death of Socrates, I and Cleombrotus have received information, and that when I might have escaped from the eleven Officers, he said he would not, unless he was acquitted by Law; for that were as much as in him lay to betray his Country. My Opinion is, he being unjustly committed, he might have got his Liberty any way, conceiving that all which he could do ill or inconsiderately must be just. From whence again I blame him not, as if he had done ill even in this. You write me word that all the friends and Disciples of Socrates have left Athens, out of fear the like should befall any of you; it is well done; and we being at present at Ægina will

will continue here a while, then come to you, and wherein we are able, serve you.

CHAP. IV.

His Institution of a Sect.

Aristippus returning at length to his own Country, Cyrene, professed Philosophy there, and Instituted a Sect called * Cyrenaick from the place, by some † Hedonick, or voluptuous from the Doctrine. a They who followed the Institution of Aristippus, and were called Cyrenaick, held thus,

They rejected Physick and natural disquisitions from the seeming incomprehensibility thereof. Logick they handled because of its great usefulness. But Meleager and Clitomachus affirm they despised both Physick and Dialectick alike, as unuseful; for that without these, a Man who hath learned what things are good, what evil, and able to discourse well, and to shake off Superstition and the fear of Death.

Sect. 1. Of Judgment and Judicatories.

They held that the Senses inform not always truly, that nothing extrinsecal can be perceived, those things only can be perceived, which are felt by inward touch, as grief and pleasure, neither know we what colour any thing is, nor what sound it makes, but only that we feel our selves affected after such a manner; that passions are comprehensive, that objects not comprehensive. That nothing judgeth but by interior promotion, and the judgment of true and false consists of inward touch.

Sextus Empericus more fully. They assert that Passions or Affections are the Judges and the only things that may comprehend, and not fallacious, but of those things which cause Passions, there is nothing which is comprehensible, or that may not deceive us. For, that we are made white, or affected with sweet, may be said expressly and firmly, but that the thing which causeth this affection is white or sweet, cannot in like manner be asserted. For it is possible that we be affected with whiteness from a thing that is not white, and with sweetness from a thing that is not sweet; as to him who is dim-sighted or hath the yellow-jaundice, all things seem yellow to one, dusky to the other, and he who pincheth his eye, thinketh he sees things double; he who is mad fancies two Thebes's, two Suns, in all these, they that are so affected, to wit, with yellowness or duskyhness, or duplicity, is true, but that the thing which moveth them is yellow or dusky, or double, is conceived to be false: so it is most consonant to reason, that we comprehend nothing more than our own passions. For we must hold that the things seen are either the passions themselves, or the causes of those passions; if we say our passions are the things seen, we must likewise affirm all things seen, to be true and comprehensive: if we say the things seen are the causes of those passions, we must confess all things seen to be false and incomprehensible. For that Passion which hapneth to us, sheweth us its self and nothing more, so that to speak truly, the Passion or Affection it self is the only thing that is apparent to us, and for that rea-

son, in their proper affections none err, but in the external object, all. The first are comprehensive, the second incomprehensive, the Soul being weak in the discernment thereof, by reason of places, intervals, motions, mutations, and many other causes.

Hence they assert, that there is not in man any one common thing which judgeth, but they impose common names on the judgments; all commonly name white and sweet, but something common that is white and sweet they have not, for every Man apprehends his own affection. Now whether the same affection hapneth to any one, and to him that is next him from white, neither is he able to say, as not receiving the affection of the other, neither can the other that is next him say, as not receiving his affection. There being therefore no common affection in us, it were a rash thing to assert, that whatsoever seemeth such to me, seemeth also such to him that is next me; for perhaps my constitution is such as to be whitened from that which externally incurreth, another hath his Sense so ordered, as that he is affected otherwise. That therefore which is seen and appeareth is not common.

That by reason of the differing constitutions of the sense we are not moved alike nor in the same manner, is manifest from those who have the Jaundice, and those that are Pur-blind, and those that are affected according to Nature. For as from the same object, some are so affected as to be Black, others Red, others White: so is it likewise consonant to Reason, that they who are affected according to Nature, by reason of the different constitution of Senses, are not moved alike by the same things, but one way the White, another way the Black, another way he whose eyes are Blue, another way he whose eyes are black, whence we impose common names on things, having our selves proper and particular affections.

Sect. 2. Of the End, or chief Good.

TO these assertions (continueth Sextus Empericus) concerning the Judicatories, agreeth what they assert concerning Ends.

Of affections, some are pleasant, some harsh and troublesome, some mean: the harsh and troublesome are ill, whose end is grief; the pleasant, good, whose end, which cannot be deceived, is pleasure: the mean are neither good nor ill, whose end is neither good nor ill, which is an affection between pleasure and grief. Affections therefore are the judges and ends of all things, and we live, say they, observing evidence and linking, evidence in the rest of the affections, linking in pleasure.

Laertius saith, they assert two passions or affections, Grief and Pleasure: Pleasure, a soft smooth motion, Grief, a harsh motion. One Pleasure differeth not from another Pleasure, nor is one Pleasure sweeter than another Pleasure: this Pleasure is coveted by all living creatures, the other shunned.

They assert coporeal pleasure to be our ultimate end, as Panetius saith in his Book of Sects, not catastematick, permanent pleasure, which consisteth in privation of Grief and a quiet void of all disturbance, which Epicurus held.

The

* Laert.
† Galen. Hist. Phil.
a Laert.

b Laert.
c Cicer. Acad. Quest. li. 4.

c Laert.
Cic.

c Laert.

The *End* differeth from *Beatitude*, for the *End* is some *particular* pleasure: *Beatitude* is that which consisteth of *all* particular pleasures, wherein are included both the *past* and *future*. Again, *particular* pleasure is expetible *in it self*, *Felicity*, *not* in it self, but for particular pleasures.

That Pleasure is our chief end is manifest, in that from our first infancy, without any instruction of others, we naturally aim thereat, and having obtained it, seek nothing else. Moreover, we avoid not any thing so much as its contrary, grief.

Pleasure is good, though proceeding from the most sordid dishonest thing, as *Hippobolus* in his Book of *Sects*: for, although the action be dishonest, yet the pleasure thereof is expetible in it self, and good.

Indolence, which *Epicurus* held, they esteem not pleasure, nor want of pleasure, grief, for both these consist in motion, but indolence and want of pleasure consists not in Motion, for Indolence is like the state of a sleeping Man.

They hold, that some Men may not desire pleasure, through perversity of mind.

All Spiritual Pleasures and Pains arise not from corporeal pleasures and pains: for from the simple prosperity of our Country or our self, we are affected with Joy.

But neither the remembrance of past goods, nor expectation of future compleat pleasure, as *Epicurus* thought, for by time and expectation the motion of the Soul is dissolved. † Pleasure, according to *Aristippus*, is *μὴνέσθαι*, consisteth only in one part of time, the present: for the remembrance of past pleasures, or expectation of the future, is vain and frivolous, and nothing appertaineth to *Beatitude*: but that only is good which is present. With those pleasures which he received heretofore, or shall receive hereafter, *Aristippus* said, he was nothing at all moved, the first being gone, the other not yet come, and what it will prove when it is come, is uncertain. Hence * he argued, that Men ought not to be solicitous either about things past or future, and that not to be troubled at such things is a sign of a constant clear Spirit. He also advised to take care only for the present day, and in that day, only of the present part thereof, wherein something was done or thought: for he said, the present is only in our power, not the past or future, the one being gone, the other uncertain whether ever it will come.

Neither do pleasures consist merely in simple sight or hearing, for we hear with delight those who counterfeit Lamentation, and those who lament truly, we hear with displeasure. This privation of Pleasure and Grief they called *mean states*.

The Pleasures of the Body are much better than those of the Soul, and the Pains or Grievs thereof much worse; for which reason those who offend actually, are most grievously punished.

To grieve is more unnatural to us, to delight, more natural: for which reason, much more care is requisite for the ordering of one than of the other, yet, many times we reject things which effect pleasure, as being grievous,

so that the concurrence of Pleasures which effecteth *Beatitude*, is very difficult.

Moreover they hold, that every wise Man doth not live pleasantly, nor every wicked Man unpleasantly, but so for the most part: for it is enough that a Man be affected and reduced by incidence of one single pleasure.

They held, that † Grief is the greatest ill; † *Cic. Tull.* that Grief is not effected by every ill, but by the *quæst.* 4. unexpected and unforeseen: that one Man is more grieved than another.

They assert, that Riches are efficient causes of pleasure, yet not expetible in themselves.

Sect. 3. Of Virtue.

* ALL good consisteth in *Pleasure*, Virtue: it self is only laudable, as being an efficient cause of Pleasure. † *Cic. de Offic.* 3.

† Nothing is just, honest, or dishonest by *Nature*, but by *Law* and *Custom*: yet a good Man will do nothing that is evil, because of the censure or esteem which would fall upon his actions, and * that such a one is wise. † *Laert.*

Prudence is a good, yet not expetible in it self, but for the sake of those things which proceed from it. † *So Casaubon* reads, but doubtless there is a defect in the Text.

A Friend is to be embraced for the use we may have of him, as the Body cherisheth every part thereof as long as it remaineth sound.

Of Virtues, some are in the *unwise*.

Corporeal exercise conduceth to the acquisition of Virtue.

A wise Man is not subject to *Envy*, *Love*, or *Superstition*, for all these proceed from the vanity of *Opinion*: but he is subject to *Grief* or *Fear*, as being *Natural* accidents.

CHAP. V.

How he went to Dionysius his Court.

ABOUT this time *Dionysius*, the *Sicilian* Tyrant flourished, * to whom resorted many Philosophers, amongst the rest *Aristippus*. † *Philosfr. vit. Apol.* *Aristippus* invited by his Sumptuous Magnificence. † *Laert.* *Dionysius* asked him the reason of his coming: he answered, *To give what I have, and to receive what I have not*, or, as others, *when I wanted wisdom, I went to Socrates, now I want Money, I come to you*. He soon insinuated into the favour of *Dionysius*, for he could conform himself to every place, time, and person, act any part, construe whatsoever hapned to the best: and thus enjoying present Pleasure, never troubled himself for the absent. As *Horace*.

*Every Condition, Habit, and Event,
With Aristippus suits with all Content.*

Of his Compliance with *Dionysius's* Humour there are these Instances. † *Dionysius* at a Feast † *Laert.* commanded; that all should put on Purple Robes: *Plato* refused, saying,

I will

† *Athen. deipn.* 12.

* *Æl. var. Hist.* lib. 14. 6.

*I will not with a formal Robe disgrace,
My self; who am a Man of manly Race.*

But *Aristippus* took it, and beginning to Dance, said,

*If it come pure, a mirthful Feast
Never corrupts a modest Breast.*

* *Laert.*

* Another time suing to *Dionysius* in the behalf of his Friend, he would not hear him; at last he threw himself at his feet, and his Petition was granted; for which being reprehended, *Blame not me, saith he, but Dionysius, whose ears are in his feet.*

† *Laert.*

† *Dionysius* shewed him three Courtezans, bidding him take his choice: he leading them all three away, said, *Paris was punished for preferring one before the other two.* * But, having brought them to the door, he dismissed them, as ready to condemn as accept: whereupon *Strato* (or as others *Plato*) told him, *You only can wear old Garments and Rags*, for which likewise they admired him that he would wear a threadbare, and a rich *Milesian* Cloak with equal decorum, accommodating himself to both.

When *Dionysius* did spit upon him, he took it patiently: for which being reproved, *Fishermen* said he, *suffer themselves to be wet all over that they may catch [κώδιον] a Gudgeon, and shall I be troubled at a little Spittle, who mean to take * βλένον?*

* Which being pronounced is equivocal; for, βλένῳ signifieth a Fish like a Gudgeon, and βλήνῳ a Tyrant: as I find in a M.S. Lexicon communicated by my learned friend Mr. John Pearson, βλήνῳ ὁ τύραννος, βλένῳ ὁ ἰχθύς; and again, βαυονίχῳ ὁ κῆ κλίνῳ (read βλίνῳ) ὁ ἀπὸ πλάσι κωβίω, confirmed by *Athenaus*, deipn. 7. 10.

† *Laert.*

† He begged Money of *Dionysius*, who said to him, you told me a wise man wanted nothing: give me, and we will talk of this afterward. When *Dionysius* had given it him, Now, saith he, you see I do not want.

By this complaisance he gained so much upon *Dionysius*, that he had a greater esteem for him than all the rest of the Philosophers, tho' sometimes he spoke so freely to *Dionysius*, that he incur'd his displeasure.

* *Laert.*

* To *Dionysius* asking why Philosophers haunted the Gates of Rich Men, but Rich Men not those of Philosophers: Because, saith he, the one knows what he wants, the other not.

† *Laert.*

† To *Dionysius*, urging him to treat of Philosophy: *It is ridiculous*, saith he, *if you learn of me what it is, to teach me when it should be said.* Whereat *Dionysius* displeased, bad him take the lowest place, which he did quietly, saying, *You have a mind to make this Seat more Honourable.* * The next day the Tyrant asked him what he thought of that place wherein he then sat, in respect of that wherein he sat the night before? He answered, they were alike to him: to day, saith he, because I left it, it is contemned, what yesterday was esteemed the most Honourable, that where I sit to day esteemed most honourable, which yesterday, without me was, was accounted the lowest.

* *Athen. deipn.* 12. citing *Hegesander.*

† Being asked why *Dionysius* fell out with † *Laert* him, he answered, for the same reason he falleth out with others.

* *Dionysius's* saying, (out of *Sophocles* as *Plut.* * *Laert.* *tarch* affirms, who ascribes this to *Zeno*.)

*Who e'er goes to a Tyrant, be
A Servant is, tho' he came free.*

He immediately answered,

No Servant is if he came free.

Dionysius offering *Plato* a great sum of Money, which he refused: *Aristippus* being at the same time in the Court of *Dionysius*, said, *Dionysius* bestows his Liberality upon good grounds, to us who ask much, he giveth little, to *Plato*, who requireth nothing, he offereth much.

† Another time *Helicon* of *Cyzicus*, one of † *Plut. vit. Dion.* *Plato's* Friends, having foretold an Eclipse of the Sun, which when it fell out accordingly, he was much honoured for it: *Aristippus* jesting with other Philosophers, said, he could foretell a stranger thing: they demanding what it was: I prognosticate, saith he, that *Plato* and *Dionysius* will ere long be at variance, and so it happened.

CHAP. VI.

His Æmulators.

THIS favour which he found with *Dionysius*, was perhaps the occasion, for which he was maligned by the rest of the Philosophers, amongst whom was,

* *Xenophon*, who out of ill will to him, published the † discourse between him and *Socrates* † *Laert.* *Memorab. lib. 2.* about Pleasure.

† *Plato* likewise, through the same disaffection tacitly reprehends him, in *Phædone*, for being in *Ægina* at the time of *Socrates* his Death. † *Plato* being in *Dionysius* his Court, when he was there, reproved his sumptuous life: Whereupon *Aristippus* asked him, whether he thought *Dionysius* a good Man or not: *Plato* affirmed, he thought him good: Yet he, reply'd *Aristippus*, liveth much more sumptuously; therefore it is not incompatible with goodness.

† *Phædo* likewise seemed to deride him, demanding who it was that smell'd so strong of Unguents: It is I, unhappy Man that I am, answered *Aristippus*, and the *Persian* King, who is more unhappy than I. But as other things are not the worse for this, neither is a Man. * A † *Laert.* *Senec. de benef. Clem. Alex.* Curse on those effeminate Persons who brought a Scandal upon so good a thing.

† *Æschines* also and he were sometimes at difference: Once, after some falling out betwixt them, *Aristippus* said to him, shall we not be Friends, shall we not give over Fooling? Or, do you expect some Body should kick us into kindness? Willingly, answered *Æschines*. Now, saith *Aristippus*, remember, that though I am the Elder, yet I yielded first. *Æschines* reply'd, and justly, for you are better than I; I begun the enmity, you the reconciliation.

* *Plutarch*

De ira cohib. * Plutarch relates it thus; being fallen out with Æschines, he met one who asked him, *Where is now your old Friendship, Aristippus? It is asleep,* faith he; *but I will awake it:* and going straight to Æschines, *Am I so unhappy,* faith he, *and so inconsiderable in your esteem, as not to deserve Correction?* Æschines answered, *It is nothing strange, that exceeding by Nature in all things, you should first know what is fit to be done.*

Antisthenes is to be numbred also amongst those, who were displeased at his manner of Life, as appeareth by an Epistle of his to that effect, extant amongst the Socratick Epistles, to which Aristippus returned this Answer.

† Aristippus to Antisthenes.

† Socratick Epist. 9.
* Ironically answering a former letter of Antisthenes.

WE are, Aristippus, unhappy beyond measure; how can we be otherwise, living with a Tyrant, daily eating and drinking deliciously, perfumed with choicest Unguents, attired in rich loose Garments brought from Tarentum: And none will deliver me from the cruelty of Dionysius, who detains me, not as a rude person, but one that is versed in Socratick learning; supplying me (as I said) with Meat, Unguents, Garments, and the like; fearing neither the judgments of Gods nor Men. And now the misfortune is much increased; He hath bestowed on me three Sicilian Virgins of extraordinary beauty, and many Utenils of Silver; and when this Man will give over doing such things I know not, you do well therefore to be concerned for the miseries of others; in the requital whereof I rejoice in your happiness, and return you thanks; Farewel.

† For *χρημαστος* reading *χρημαστος* instead of *χρημαστος*, as *χρημα* the last word of the following Epistle, *χρημαστος*, Sceptic.
* make a point at *χρημαστος*, and read *χρημαστος* *δὲ ἐλεονύκτες* *μὲν περὶ βλάττωσιν*, Dorice; a ridiculous and acute Irony; for *περὶ βλάττωσιν* signifieth to look on a thing with admiration, which is not proper to Compassion.
† Read *τὰς δὲ μαυίας τρεῖς*, as *ἐμάνω*, Perhaps.

The Figs which you have, lay up against winter, and the Cretan meal, for these things seem to be better than riches; wash and drink of the fountain of Enneacrinus; wear the same Garment in winter as in summer, and that sordid, as becomes a free person living under the Athenian Democracy: As for me, I knew as soon as I came into the City and I-land govern'd by a Monarch, I should suffer those ills of which you write to me; Now the Syracusians, Agrigentines, Geloans, and the rest of the Sicilians * compassionately admire me; but † for my madness in coming inconsiderately to these unseemly things, I wish this curse to fall upon me, that I may never be quit of these evils; * because being of years of discretion, and pretending to wisdom, I would not undergo hunger and cold, nor contemn glory, nor wear a long beard; I will send you some great white Lupines to eat, after you have acted Hercules to the Boys; of which things it is reported you esteem it not absurd to discourse and write: But if any man should speak of Lupines to Dionysius, I think it were against the rules of Tyranny: Of the rest, go and discourse with Simon the Leather-dresser; than whom you esteem nothing more wise; for I am not allowed familiarity with Artificers, because I live under obedience to others.

Notwithstanding this jarring betwixt them, Aristippus was nothing backward in employing the Interest he had at Court, for some friends of Antisthenes, to preserve them from death; as this Letter of his to Antisthenes doth manifest.

† The Locrian young Men of whom you write to

me, will be set at liberty, neither put to death, nor fined, though they were very near death. * Let not Antisthenes know I have saved his Friends, for he loves not to converse with Tyrants, but with Mealmen and Victuallers, such as sell Meat and Drink at Athens without fraud, and such as sell thick Cloaths in cold weather, and such as serve † Simon, these are not Riches.

Diogenes followed the example of his Master Antisthenes in deriding Aristippus, * calling him the Court-Spaniel. As Aristippus passed by, Diogenes busied about washing Herbs, called to him, saying, *If you had learned to do thus, you needed not have followed the Courts of Princes; and you, said he, if you had known how to converse with Men, needed not to have washed Herbs;* thus expressed by † Horace.

* The Letter seems to be written to Antisthenes; and this meant ironically.
† The Leather-dresser.

Laert.

† Epist. i. 17.

Diog. On herbs if Aristippus could have din'd, The Company of Kings he had declin'd.

Arist. He who derides me, had he wit to use The Company of Kings, would herbs refuse.

Imine own Jester; thou the Peoples art,
My choice is of the better, nobler part,
I by a King maintain'd, on Horseback ride,
Thou by the meanest people art supply'd,
Than those that do maintain thee thou art iess;
Yet to want nothing vainly dost profess.

* Theodorus in his Book of Sects, reproached Aristippus, and Alexis the Comick Poet, in his *Galatea* bringeth in a Servant speaking thus of one of his Disciples;

Laert.
† Athen. Deipn.

My Master young on Rhetorick first intent,
Next to Philosophy his Study bent:
A Cyrenæan liv'd at Athens then,
Nam'd Aristippus, justly first of Men,
Esteem'd for subtlety and Luxury,
A Talent him my Master gave to be
His Scholar, but of Arts he none was taught;
Save only Cookery; that away he brought.

CHAP. VI.

His Apothegms.

OF Apothegms (in * which kind he was conceived to have an acuteness beyond all the other Philosophers,) these are remembred.

† He once gave fifty drachms for a Partridge, for which being reproved by another; you would have given a Penny for it, faith he, which the other granting; so much, faith he, are fifty drachms to me.

Being demanded what was the greatest benefit he had received by Philosophy; he answered, *To converse freely with all Men.*

Being reproached for living high; if Magnificence were a Sin, faith he, it would not be practised upon days of Festival to the Gods.

To one who asked wherein Philosophers excelled other Men; *Though all Laws were abolished,* faith he, *we should lead the same Lives.*

Being demanded how the Learned differ from the unlearned, he answered, *as Horses unbacked from such as are well managed.*

Going into the house of a Courtezan, a young Man of the Company blushed, to whom he said,

S

said,

Socratick Epist. 11.

*I will not with a formal Robe disgrace,
My self, who am a Man of manly Race.*

But *Aristippus* took it, and beginning to Dance, said,

*If it come pure, a mirthful Feast
Never corrupts a modest Breast.*

* *Laert.*

* Another time suing to *Dionysius* in the behalf of his Friend, he would not hear him; at last he threw himself at his feet, and his Petition was granted; for which being reprehended, *Blame not me, saith he, but Dionysius, whose ears are in his feet.*

me, will be set at liberty, neither put to death, nor fined, though they were very near death. * Let not Antisthenes know I have saved his Friends, for he loves not to converse with Tyrants, but with Mealmen and Victuallers, such as sell Meat and Drink at Athens without fraud, and such as sell thick Cloaths in cold weather, and such as serve † Simon, these are not Riches.

Diogenes followed the example of his Master Antisthenes in deriding Aristippus, * calling him the Court-Spaniel. As Aristippus passed by, Diogenes busied about washing Herbs, called to him, saying, *If you had learned to do thus, you needed not have followed the Courts of Princes; and you,* said he, *if you had known how to converse with Men, needed not to have washed Herbs;* thus expressed by † Horace.

* The Letter seems to be written to Antisthenes; and this meant ironically.
† The Leather-dresser.

† Epist. i. 17.

Diog. On herbs if Aristippus could have din'd, The Company of Kings he had declin'd.

Arist. He who derides me, had he wit to use The Company of Kings, would herbs refuse.

*I mine own Jester; thou the Peoples art,
My choice is of the better, nobler part,
I by a King maintain'd, on Horseback ride,
Thou by the meanest people art supply'd,
Than those that do maintain thee thou art less;
Yet to want nothing vainly dost profess.*

* Theodorus in his Book of Sects, reproached Aristippus, and Alexis the Comick Poet, in his *Galatea* bringeth in a Servant speaking thus of one of his Disciples;

*My Master young on Rhetorick first intent,
Next to Philosophy his Study bent:
A Cyrenæan liv'd at Athens then,
Nam'd Aristippus, justly first of Men,
Esteem'd for subtlety and Luxury,
A Talent him my Master gave to be
His Scholar, but of Arts he none was taught,
Save only Cookery; that away he brought.*

CHAP. VI.

His Apothegms.

OF Apothegms (in * which kind he was conceived to have an acuteness beyond all the other Philosophers,) these are remembred.

† He once gave fifty drachms for a Partridge, for which being reproved by another; you would have given a Penny for it, faith he, which the other granting; so much, faith he, are fifty drachms to me.

Being demanded what was the greatest benefit he had received by Philosophy; he answered, *To converse freely with all Men.*

Being reproached for living high; if Magnificence were a Sin, faith he, it would not be praised upon days of Festival to the Gods.

To one who asked wherein Philosophers excelled other Men; *Though all Laws were abolished,* faith he, *we should lead the same Lives.*

Being demanded how the Learned differ from the unlearned, he answered, *as Horses unbuckled from such as are well managed.*

Going into the house of a Courtezana, a young Man of the Company blushed, to whom he said,

S

said,

Socratick.
Epist. 11.

said, *It is not ill to go in, but not to be able to come out.*

To one who desired him to resolve a Riddle, Thou fool, saith he, *why wouldst thou have me resolve that which unresolved finds us such entertainment?*

He said, *it is better to be a Beggar than unlearned, for one wants only Riches, the other Humanity.*

Being reviled, he went aloof off; he that reviled, asked why he fled; *Because saith he, to speak ill is in your power, not to hear is in mine.*

One saying, he saw Philosophers at the gates of rich Men, and Physicians, saith he, *at the gates of the Sick; but no Man would for that reason choose to be sick rather than a Physician.*

To one who boasted he learned much; *As they, saith he, who eat and exercise much, are not better than those who eat only to satisfy Nature, neither are they Learned who make large, but profitable Collections.*

An Oratour pleading for him, and gaining the Cause, asked him, *What are you the better for Socrates? So much, saith he, as that I make good those things which you alledged in my defence.*

He instructed his Daughter *Arete* to condemn all that is too much.

To one who demanded what his Son would be the better for Learning; *If in nothing else, in this, saith he, that in the Theatre one stone shall not sit upon another.*

Of one who would have preferred his Son to him, he demanded 500 Drachms, *For so much, saith the other, I can buy a Slave; Do so, answered he, and then you will have two (your Son, and him you buy.)*

He said he took money of his friends, not to make use of it himself, but to let them know the right use of it.

Being reproached for entertaining an Oratour to plead his Cause; *and when I would feast, saith he, I hire a Cook.*

To one who boasted of his swimming, *Are not you ashamed, saith he, to glory in the property of a Dolphin.*

Being demanded wherein the Learned differ'd from the Unlearn'd; *Send them naked to strangers, saith he, and you shall see.*

To one who boasted he could drink much without being drunk; *So, saith he, can a Mule.*

Being blam'd that he took Money being the Disciple of Socrates, and justly, saith he, *For Socrates, when they sent him Wheat and Wine, took a little for his present use, and sent back the rest, the chief of all the Athenians were his Purveyors, mine Eutichydes, a mercenary Servant.*

Being reprov'd by Plato for buying a great quantity of Fish; *They cost me, saith he, but an Obolus, would not you have given so much for them? To which Plato assenting, It is not that I am profuse then, saith he, but that you are covetous.*

Simon Pantler to Dionysius; a Phrygian; a Man of ill conditions, brought him to his house paved curiously with marble; *Aristippus spits in his face, whereat the other growing angry, I could not find, saith he, a fitter place.*

Being demanded how Socrates died; *As I would wish to do, saith he.*

Polyxenus the Sophist coming to his house, and seeing there Women and a great feast, reproved

him. *Aristippus gave him way, and after a little pause, will you dine with me, saith he? whereto he consenting: Why then, continues he, do you reprove me? 'Tis not the feast, but the cost which you condemn.*

His Servant being upon a Journey, weary with carrying of Money; *Throw away, saith he, what is too much, and carry as much as you can.*

† *He had his slaves away his Money throw, Because ore-charg'd with weight they went too slow.* † Hor. it. Sat. 2. 3.

* Being at Sea, and understanding the owners of the Vessel were Pyrates, he took his Money and counted it, then let it fall into the Sea, as unwillingly, and sighed: Some affirm, that he said, *It is better these Perish for Aristippus, than Aristippus for them.* * Laert. Cic. de invent.

He reproved Men for looking upon Goods exposed to sale, and taking no care to furnish their Minds; others ascribe this to Diogenes.

Living in Asia, he was seized by Antaphernes the King's Lieutenant, whereupon one saying to him, and where is now your confidence? When, said he, you fool, should I be confident, if not now, when I shall meet with Antaphernes.

Those who forsook Philosophy, to apply themselves to Mechanical Sciences, he compar'd to the Suitors of Penelope, *they could get the good wills of Melantho, Polydora, and others of the Servants, but could not obtain the Mistress in marriage.* Not unlike is that of Aristo, who said, that Ulysses, when he went to Hell, saw all the Dead, and spoke to them, but could not come so much as to the Sight of the Queen.

Being demanded what Boys ought to learn; *That, saith he, which they ought to practise when they are Men.*

To one who accused him for going from Socrates to Dionysius: To Socrates, saith he, I went for παιδεία, Education; to Dionysius for παιδεία, Recreation.

To a Courtezan who told him she was with Child by him: *You know that no more, said he, than if passing through a Bush, you should say this Thorn pricked you.*

To one who blamed him, that he took Money of Dionysius, Plato a Book; he answer'd, *I want Money, Plato Books.*

† Having lost a great Farm, he said to one, who seemed excessively to compassionate his loss, *You have but one field, I have three left; why should not I rather grieve for you? It is madness (adds Plutarch) to lament for what is lost, and not rejoice for what is left.* † Plut. de tranquill. anim.

* When one told him, the Land is lost for your sake; *Better, saith he, is it that the Land be lost for me, than I for the Land.* * Stob. Ethic. 3.

† Seeing one angry vent his Passion in words; *Let us not, saith he, suit words to our anger, but appease our anger with words.* † Stob. Ethic. 99.

* Seeing a little Woman exceeding fair; *This, saith he, is a little Evil, but a great Beauty.* * Stob. Ethic. 128. They who invert these words, and read, a little fair one, but great evil, mistake the meaning of Aristippus, who plays upon that ordinary Saying, applying the inversion to his own luxurious humour.

† To one, who demanded his advice whether he should Marry or no: He said no, *If you take a fair Wife, saith he, she will be common, if foul, a fury.* † Stob. Ethic. 185. * He

* Stob. Eth.
210.

* He used to advise young Men to carry such Provision, as in a Ship-wrack they might swim away withal.

† Stob. Eth.
229.

† As a Shooe that is too big is unfit for use, so is a great estate; the bigness of the Shooe troubles the wearer; Wealth may be used upon occasion either wholly, or in part.

CHAP. VIII.

His Writings.

* Laert.

* Some affirm (of whom is Socrates) that he wrote nothing at all: others that he wrote, *The Libyan History*, three Books dedicated to Dionysius.

Dialogues twenty five (or rather twenty three; for the number seems corrupt) in one Book; some in the Attick Dialect, others in the Dorick: their Titles these: 1. *Artabazus*. 2. *To the ship-wracked*. 3. *To Exiles*. 4. *To a poor man*. 5. *To Lais*. 6. *To Porus*. 7. *To Lais concerning a Looking-glass*. 8. *Hermias*. 9. *The Dream*. 10. *To the Cup-bearer*. 11. *Philomelus*. 12. *To Servants*. 13. *To those who reproved him for using old wine, and common Women*. 14. *To those who reproved him for feasting*. 15. *An epistle to Arete*. 16. *To the Olympick exerciser*. 17. *An Interrogation*. 18. *Another Interrogation*. 19. *† A Chria to Dionysius*. 20. *Another on an Image*. 21. *Another on Dionysius's Daughters*. 22. *To one who conceived himself dishonoured*. 23. *To one who endeavoured to give advice*.

† A Chria is a short commendation, aptly relating the speech or action of some Person. The third of these (viz. to Dionysius's Daughter) Vossius inserts amongst the Greek Histories; if that were Historical, it is likely this to Dionysius was of the same Nature.

Exercitations six Books.

* Laert.

* Of Pleasure mentioned by Laertius in the Life of Epicurus.

Of *Physiology*, out of which Laertius cites, that Pythagoras was so named, because he spake no less truth than Pythius.

† Laert. in vit. Emped. Periand. Aristot. &c.

Of the *Luxury of the Antients*, four Books, containing examples of those who indulged to love and pleasure; as, the love of † Empedocles to Pausanias, in the first Book; of Cratea to her Son Periander, of Aristotle to the Concubine of Hermias in the fourth, of Socrates to Alcibiades, Xenophon to Clineas, Plato to Aster, Xenocrates to Ptolema. But, these latter instances shew, that these Books were not writ by this Aristippus.

Epistles, four are extant under his name, in the *Socratic Collection*, put forth by Leo Allatius.

* Laert.

* Socion and Panetius reckon his Treatises thus,

Of Discipline.
Of Vertue, an Exhortation.
Artabazus.
The Shipwrack.
The Banish'd.
Exercitations six.
Chria three.
To Lais.
To Porus.
To Socrates.
Of Fortune.

CHAP. IX.

His Death.

HAVING lived long with Dionysius, at last his Daughter Arete sent to him, to desire him that he would come to Cyrene to her, to order her Affairs; for, that she was in danger of oppression by the Magistrates. Aristippus hereupon took leave of Dionysius, and being on his Voyage, fell Sick by the way, and was forced to put in at Lipara, an Æolian Island, where he dyed, as may be gathered from this Epistle, which he then sent to his Daughter.

† Aristippus to * Arete.

† acc. Epist.

* S. supplied by Leo Allatius.

I Received your Letter by Teleus, wherein you desire me to make all possible haste to Cyrene, because your business with the Prefects goeth not to your Mind, and your Husband is unfit to manage your domestick affairs, by reason of his bashfulness, and being accustomed to a retired life, remote from the publick. Wherefore as soon as I get leave of Dionysius, I sail'd towards you, and being upon my journey, fell sick by the way at Lipara, where the friends of Sonicus provide carefully for me, with such humanity, as is needful for one near death. As for your demand, what respect you should give those whom I manumised, who profess they will never desert Aristippus whilst they have Strength; but, ever serve him and you; trust them in all things; they have learned from me not to be false. For your self, I advise you to apply your self to the Magistrates, which counsel will profit you, if you affect not rather to have much: You will live most at ease, if you content excess; for, they cannot be so unjust as to leave you in want. You have two Orchards left sufficient to maintain you plentifully: and that possession in Bericia, if alone left you, were sufficient to supply you fully. I do not counsel you to neglect small things; but, not to be troubled for small things, since vexation is not good even for great. If when I am dead, you want my advice for the education of young Aristippus, go to Athens, and above all, esteem Xantippe, and Myrto, who have often spoke to me to bring you to the Eleusinian Festivals. Whilst you lead this pleasant life with these, let the Cyrenæan Prefects be as unjust as they please, in your natural † end they cannot prejudice you. Endeavour to live with Xantippe and Myrto, as I did heretofore with Socrates, composing your self to their Conversation; for, Pride is not proper in that place. If * Tyrocles, the Son of Socrates, who lived with me at Megara, come to Cyrene, it will be well done to supply him, and to respect as your own Son. If you will not nurse a Daughter, because of the great trouble it gives you, send for the Daughter of Eubois, to whom you have heretofore expressed so much kindness, and nam'd after my Mother, and I have also often called her my friend. Above all, take care of little Aristippus, that he may be worthy of us, and of Philosophy: for this I leave him as his true Inheritance, the rest of his estate finds the Cyrenæan Magistrates adversaries. But you writ me not word that any offered to take that away from you. Rejoice dear Daughter, in the possession of those Riches which are in your power, and make your son possess 'em likewise: I wish he were my son; but, being disappointed of that hope, I depart with this assurance,

* Leo Allatius reads Lamprocles; but, that cannot be; for Lamprocles was dead long before; See Life Socratic. Chap. 16.

said, *It is not ill to go in, but not to be able to come out.*

To one who desired him to resolve a Riddle, Thou fool, saith he, *why wouldst thou have me resolve that which unresolved finds us such entertainment?*

assurance, that you will lead him in the paths trodden by good Men. Farewell, and grieve not for us.

* Of his Children, besides this Arete his Daughter, whom he educated in Philosophy, is remembred also a Son, whom for his stupidity he disinherited, and turned out of doors; for which being reproved by his Wife, who alledged, that he came from himself; he, spitting said, *This comes from me too, but profiteth me nothing.* Or, as Laertius. *We cast τὸ φλέγμα καὶ τὰς φθέγγας, all unnecessary things as far as we can from us.*

Arete had a Son named from his Grandfather Aristippus, and from his Mothers instructing him in Philosophy, surnam'd *μυσηοδιδασκῆς*.

Besides these two (Aristippus the Grandfather and the Grandson) Laertius reckons two more of the same name: One writ the History of Arcadia: the Other was of the new Academy.

CHAP. IX.

His Disciples and Successors.

OF the Auditors of Aristippus, besides his Daughter Arete, (whom he taught with much care, and brought up to great Perfection in Philosophy) are remembred Æthiops of Ptolomais, and Antipater of Cyrene.

Arete communicated the Philosophy she received from her Father, to her Son Aristippus the younger: Aristippus transmitted it to Theodorus the Atheist, who instituted a Sect, call'd Theodorean.

Antipater communicated the Philosophy of Aristippus to Epitimides his Disciple; Epitimides to Parabates; Parabates to Hegesias and Anniceris; these two last last improving it by some additions of their own, obtained the honour each of them, to have a Sect named after them, Hegesiack and Annicerick.

H E G E S I A S.

CHAP. I.

His Life.

HEGESIAS, Disciple to Parabates, was surnamed *παιθιδάμος*, Death's Oratour, from a † Book he writ, entituled *Αποκαταστάσις*, upon occasion of one who had famished himself nigh to death, but was call'd back to life by his Friends, in answer to whom, he in this Book demonstrated that death takes us away from ill things, not from good, and reckoned up the incommodities of Life, and represented the Evils thereof* with so much Rhetorick, that the sad Impression thereof penetrated so far into the breasts of many hearers, that it begot in them a desire of dying voluntarily, and many laid violent hands upon themselves. Whereupon he was prohibited by Ptolomy the King to discourse any more upon this Subject in the Schools.

CHAP. II.

His Philosophy.

HIS Disciples were from him called Hegesians. They held the same chief good and Evil with the Cyreneans; further asserting,

That Kindness, Friendship, and Benevolence are in themselves nothing; not expetible, but in respect of those Benefits which cannot consist without those Persons.

That Perfect Felicity is absolutely impossible, because the Body is disordered by many troubles,

in which the Soul shares, and most of those things which we hope are prevented by chance.

That Life and Death are in our choice.

That nothing is by Nature pleasant or unpleasant, but by the rarity and unusualness of things, or satiety; some are delighted therewith, others not.

That Poverty and Wealth confer nothing to Pleasure, neither are the rich poor affected with Pleasure several ways. Servitude and Liberty, Nobility and Meanness, Glory and ignominy, differ nothing in this respect.

That to live is advantageous for a Fool, indifferent to a Wise Man.

That a Wise Man ought to do all things in consideration of himself, and prefer none before himself, for though possibly, he may receive benefits from others very great in outward appearance; yet are they nothing in comparison of those which he dispenseth.

That Sense confers nothing to certain knowledge, for all act by the rules of their own reason.

That Offences ought to be pardoned, for no Man offends willingly, but compell'd by some affection.

That we should hate no Man, but instruct him better.

That a wise Man should not insist so much upon choice of good things, as upon evil, making it his scope and end to live neither in Labour nor Grief; which they do, who are inclined neither way to the objects of Pleasure.

ANNICERIS.

CHAPTER I.

His Life.

* **A**NNICERIS was of Cyrene, Disciple to *Parabates*. *Suidas* saith, he was an *Epicurean*, and that he lived in the time of *Alexander*.
 † He was excellent in Charriot-Racing, of which one day he gave a Testimony before *Plato*, and drove many Courses round the Academy, so exactly, that his Wheels never went out of the Track, to the admiration of all that were present, except *Plato*, who reprehended his too much industry, saying, It was not possible but that he who employed so much Pains about things of no value, must neglect those of greater concernment, which are truly worth admiration.
 * When *Plato*, by the command of *Dionysius*, was sold as a Slave in *Ægina*, *Anniceris* fortun'd to be present, who redeemed him for twenty, or according to others, thirty, *Minae*, and sent him to *Athens* to his Friends, who presently returned the Money to *Anniceris*, but he refused it, saying, They were not the only Persons that deserved to take care of *Plato*.
 † He had a Brother named *Nicoteles*, a Philosopher; he had likewise the famous *Pesidonium* to be his Disciple.

CHAPTER II.

His Philosophy.

HIS Disciples were called *Annicerians*; † they as the rest placed all good in pleasure, and conceived Vertue to be only commendable as far as it produced pleasure. * They agreed in all things with the *Hegeians*, but they abolished not Friendship, good-will, duty to Parents, and actions done for our Country. They held,
 That although a Wise Man suffer trouble for those things, yet he will lead a Life, nothing the less happy, tho' he enjoy but few Pleasures.
 That the felicity of a Friend is not expetible in it self; for to agree in Judgment with another, or to be raised above, and fortified against the general Opinion, is not enough to satisfy reason, but we must accustom our selves to the best things, because of our innate vicious Inclinations.
 That a Friend is not to be entertained out of useful or necessary Ends, nor when such fail, is to be cast off, but out of an intimate good will, for which we must also undergo trouble. For though they placed (as the rest) the chief end and good in Pleasure, and professed to be grieved at the loss thereof, yet they affirm that we ought to undergo voluntarily labours, out of Love to a Friend.

THEODORUS.

CHAPTER I.

His Life.

* **T**HEODORUS heard *Anniceris*, *Dionysius* the Logician, *Zeno* the † *Cittian*, and *Pyrrho* the *Ephectick*. He was called the *Atheist*, because * he held there was no God, and wrote a Treatise (Suidas saith many) wherein he endeavoured to refel all Arguments to the contrary, out of which *Epicurus* borrowed much. Afterwards was abusively called *Θεός*, upon occasion of a Dispute with *Stilpo*, to this Effect. Do you believe, saith *Stilpo*, you are whatsoever you affirm your self to be? *Theodorus* granting; Then, continues *Stilpo*, if you should say you were a God, were you so? To which *Theodorus* assenting, *Stilpo* replied; Then impious Man, you are a Bird, or any thing else by the same Reason.
 He was ejected out of *Cyrene* by the Citizens, whereupon he said pleasantly; You do not well, *Cyreneans*, to thrust me out of *Lybia* into *Greece*. Thence he went to *Athens*, where he should have been cited to the Court of *Areopagus*, and lost his Life; but that he was freed by *Demetrius Phalereus*. Being likewise banished

banished thence, he went to Ptolomy the Son of Lagus, with whom he lived, and was by him sent on Embassy to Lysimachus, to whom speaking Atheistically; Lysimachus said, Are not you that Theodorus that was banished Athens? He answered, It is true, the Athenians when they could bear me no longer, as Semele Bacchus, cast me out. Lysimachus replied, See that you come no more to me. No, answered he, unless Ptolomy send me. Mythro Son of Lysimachus being present, said, You seem not only ignorant of the Gods but of Kings. How saith he, Am I ignorant of the Gods, who believe you an Enemy to them? Lysimachus threatened him with Death; * You glory,

* Sen. de tranq. anim. 6. Cic. Tusc. qu. 1. Plut. an. vitios. ad infel. suff.

saith he in a great matter, a Cantharides can do as much. Or as Stobæus, I knew not that you had not the power of a King but of Poison. Hereat incensed, he commanded he should be crucified. Threaten, saith he, those things I pray to your purple Nobles; it is all oe to Theodorus whether he rot above, or under Ground.

Finally he went to Cyrene, and lived with Marius in much repute, in that City out of which he was first ejected.

Disputing with Euryclides a Priest, he ask'd, what persons those were who defile mysteries: Euryclides answered, Those who communicate them to persons not initiated. Then, replied he, you do impiously, in declaring them to such.

What others ascribe to Aristippus and Diogenes, some attribute to Theodorus and Metrocleus, a Cynick, who saying, You would not want Disciples if you washed Herbs: Theodorus answered, Neither would you wash Herbs, if you knew how to converse with Men.

He said of Hipparchia the Wife of Crates; This is she who hath given over the Shuttle to put on a Cloak.

CHAP. II.

His Philosophy.

HE taught all manner of Learning, and instituted a Sect, called Throdorean.† He asserted Indifference, that there is no difference of things.

* That our end, or chief good and greatest ill, are joy and sorrow; one consisting in Prudence, the other in Imprudence.

That Prudence and Justice are good things, the contrary Habits ill, the mean, pleasure and grief.

He took away Friendship, because it is neither in fools nor wise Men; those being incapable to make use of it, the thing it self vanisheth; these not needing it, as being sufficient to themselves.

That it is reasonable that a Wise Man expose not himself to danger for his Country; Wisdom ought not to be lost for the preservation of Fools.

That the World is our Country.

That a Man upon occasion may commit Theft, Adultery, and Sacrilege, there being nothing in these naturally evil, if that Opinion were taken away which is built upon the agreement of fools.

That a wise Man may publickly without shame ἐκούεινται ξενίζουσι.

He used such Inductions as these: Is not a Woman that is skilful in Grammar, profitable in that respect as a Grammarian? Yea. Is not the same of a Youth? Yes. Is not a beautiful Woman then profitable, as being handsome? Yes: Then she who makes right use of it doth not amiss. In these kinds of Questions he was very subtle.

CHAP. III.

His Death, Writings, &c.

AMPHICRATES saith, that he was condemned by the Law for Atheism, and drunk Hemlock. Laert.

He wrote, besides that which appertained to his Sect, many other things.

Laertius reckons twenty of this name: The first a Samian, Son of Rhæcus, who advised to lay the Foundation of the Temple at Ephesus, upon Embers: For, the place being wet, he said, that Coals, when they forsake the nature of Wood, acquire a solidity not to be violated by Moisture.

The second of Cyrene, a Geometrician, whose Disciple Plato was.

The third this Philosopher.

The fourth writ of exercising the Voice, a famous Book.

The fifth writ of Law-givers, beginning with Terpander.

The sixth a Stoick.

The seventh writ the Roman History.

The eighth a Syracusan, writ Tactics.

The ninth a Byzantine, a Sophist, * eminent * Suid. for Civil Pleas.

The tenth of the same Country, mention'd by Aristotle in his Epitome of Oratours.

The eleventh of Thebes, a Statuary.

The twelfth a Painter, mentioned by Polemon.

The thirteenth of Athens, a Painter, of whom writes Menodotus.

The fourteenth of Ephesus, a Painter, of whom Theophanes in his Treatise of Painting.

The fifteenth a Poet, who wrote Epigrams.

The sixteenth wrote of Poets.

The seventeenth a Physician, Disciple to Athenæus.

The eighteenth of Chios, a Stoick.

The nineteenth of Miletus, a Stoick.

The twentieth a Tragick Poet.

B I O N.

C H A P. I.

Bion His Life.

* **O**F the *Thodorean* Sect was *BION*, a *Boristhenite*. What his Parents were, and what his Employments, he diverting himself to Philosophy, related to *Antigonus*, King of *Macedonia*, in this manner. *Antigonus* asked

Whence art thou? Who thy Parents? What thy Town? *Bion* perceiving himself to be reproached, answered thus, My Father was a Freeman, τῷ ἀγκῶν ἀπομυσθόμενος, implying he was a seller of Salt-Fish, a *Boristhenite*; he had not a Face, but instead thereof a Brand-mark, which declared the ill disposition of the owner: My Mother he married out of a common Brothel-house; [† a *Lacedæmonian Curtezian*, named *Olympia*,] being such a Woman as such a Man could get. My Father for couzening the State, was sold, and all our Family for Slaves. I being a young likely Youth, was bought by an Oratour, who died, and left me all he had. I tore and burnt his Papers, went to *Athens*, and there applied myself to Philosophy.

This is the Blood and Race I boast to own. Thus much concerning my self: Let *Perseus* therefore, and *Philonides* forbear to enquire after these things, and look you upon me, as I am in my self. You do not use, O King, when you send for Archers, to enquire of what Parentage they are; but, set them up a mark to shoot at: Even so of Friends, you should not examine whence, but what they are.

Bion indeed, setting this aside, was of a versatile wit, a subtle Sophist, and gave many furtherances to the Exercisers of Philosophy: In some things he was —

He first heard *Crates* the Academick; but, despising that Sect, took a sordid Cloak and Scrip, and became a *Cynick*: To which *Lærtius* ascribes his constancy, expert of perturbation. Then he followed *Theodorus* the Atheist, who profess all manner of Learning; to whose Opinions he addicted himself, and was called a *Thodorean*: Afterwards he heard *Theophrastus* the *Peripatetick*.

C H A P. II.

His Apothegms.

HE left many Memorials, and profitable Apothegms; as, being reproved for not endeavouring to catch a young Man; New Cheese, saith he, will not stick to the Hook.

Being demanded what Man is most perplexed? He, saith he, who aims at the highest Content.

To one who asked his Advice whether he should Marry or not, (for this some ascribe to *Bion*, which *A. Gellius* to *Bias*, the mistake perhaps grounded upon the nearness of their Names) he answered, If you take a foul Wife, she will be a Torment; if a fair, Common.

He said, That Age is the Haven to which all Ills have recourse; That Glory is the Mother of years; that beauty is a good which concerns others, not our selves; that riches are the sinews of things.

To one who had consumed his Patrimony, Earth, saith he, devoured *Amphiaraus*, but you devour Earth.

He said, It is a great ill, not to be able to bear ill.

He reproved those who burn Men, as having no Sense, and again burn them as having Sense.

He used to say, It is better to yield our own Youth and Beauty to others, than to attempt anothers; for he that doth so, injures both his Body and Soul.

He vilified *Socrates*, saying, if he could enjoy *Alcibiades*, and did not, he was a Fool; if he could not, he did no great matter.

He said the way to the next World is easie, for we find it blindfold.

He condemned *Alcibiades*, saying, When he was a Boy, he drew away Husbands from their Wives, when a Man, Wives from their Husbands.

At *Rhodes*, whilst the *Athenians* exercised Rhetorick, he taught Philosophy; for which being reproved, I bought Wheat, saith he, and shall I sell Barley?

He said, they who are punished below would be more tormented if they carried Water in whole Vessels, than in Vessels full of holes.

One that was extremely talkative, desiring his assistance in a business, I will do what I can for you, saith he, if you send a Messenger to me, and come not your self.

Travelling with very ill Company, they fell amongst Thieves; We shall be undone, saith he, unless we be known.

He said, Arrogance is the obstruction of Virtue.

Of a rich Man covetous, He hath not Money, saith he, but Money him.

He said, Covetous Persons keep their wealth so strictly, that they have no more use of their own than of anothers.

He said, When we are young, we use Courage, when old, Wisdom. Wisdom excels other Vertues, as the Sight the other Senses.

He said, No Man should be reproached for old Age, that being a Condition all pray they may arrive at.

To

banished thence, he went to Ptolomy the Son of Lagus, with whom he lived, and was by him sent on Embassy to Lysimachus, to whom speaking Atheistically; Lysimachus said, *Are not you that Theodorus that was banished Athens?* He answered, *It is true, the Athenians when they could bear me no longer, as Semele Bacchus, cast me out.* Lysimachus replied, *See that you come no more to me.* No, answered he, *unless Ptolomy send me.* My thro Son of Lysimachus being present, said, *You seem not only ignorant of the Gods but of Kings.* How saith he, *Am I ignorant of the Gods, who believe you an Enemy to them?* Lysimachus threatened him with Death; * You glory,

* Sen. de tranq. anim. 6. Cic. Tusc. qu. 1. Plut. an. vitios. ad infel. suff.

saith he in a great matter, a Cantharides can do as much. Or as Stobæus, *I know not that you had not the power of a King but of Poison.* Hereat incensed, he commanded he should be crucified. Threaten, saith he, *those things I pray to your purple Nobles; it is all oe to Theodorus whether he rot above, or under Ground.*

Finally he went to Cyrene, and lived with Marius in much repute, in that City out of which he was first ejected.

Disputing with Euryclides a Priest, he ask'd, what persons those were who defile mysteries: Euryclides answered, *Those who communicate them to persons not initiated.* Then, replied he, *you do impiously, in declaring them to such.*

What others ascribe to Aristippus and Diogenes, some attribute to Theodorus and Metecleus, a Cynick, who saying, *You would not want Disciples if you washed Herbs:* Theodorus answered, *Neither would you wash Herbs, if you knew how to converse with Men.*

He said of Hipparchia the Wife of Crates; *This is she who hath given over the Shuttle to put on a Cloak.*

CHAP. II.

His Philosophy.

† Suid. in Scrat.

HE taught all manner of Learning, and instituted a Sect, called *Theodorean*.† He asserted Indifference, that there is no difference of things.

* Laert.

* That our end, or chief good and greatest ill, are joy and sorrow; one consisting in Prudence, the other in Imprudence.

That Prudence and Justice are good things, the contrary Habits ill, the mean, pleasure and grief.

He took away Friendship, because it is neither in fools nor wise Men; those being incapable to make use of it, the thing it self vanishes; these not needing it, as being sufficient to themselves.

Bion His Life.

Laert. **O**F the *Theodorean* Sect was BION, a *Boristhenite*. What his Parents were, and what his Employments, he diverting himself to Philosophy, related to *Antigonus*, King of *Macedonia*, in this manner. *Antigonus* asked

Whence art thou? Who thy Parents? What thy Town? Bion perceiving himself to be reproached, answered thus, My Father was a Freeman, τῷ ἀγνώμῃ ἀπομυστομένη, implying he was a seller of Salt-Fish, a *Boristhenite*; he had not a Face, but instead thereof a Brand-mark, which declared the ill disposition of the owner: My Mother he married out of a common Brothel-house; [† a *Lacedæmonian Curtesan*, named *Olympia*,] being such a Woman as such a Man could get. My Father for couzening the State, was sold, and all our Family for Slaves. I being a young likely Youth, was bought by an Oratour, who died, and left me all he had. I tore and burnt his Papers, went to *Athens*, and there applied myself to Philosophy.

Athen. deipn. *This is the Blood and Race I boast to own.* Thus much concerning my self: Let *Perseus* therefore, and *Philonides* forbear to enquire after these things, and look you upon me, as I am in my self. You do not use, O King, when you send for Archers, to enquire of what Parentage they are; but, set them up a mark to shoot at: Even so of Friends you should not examine whence, but what they are.

Bion indeed, setting this aside, was of a versatile wit, a subtle Sophist, and gave many furtherances to the Exercisers of Philosophy: In some things he was ———

He first heard *Crates* the Academick; but, despising that Sect, took a fordid Cloak and Scrip, and became a *Cynick*: To which *Laertius* ascribes his constancy, expert of perturbation. Then he followed *Theodorus* the Atheist, who profest all manner of Learning; to whose Opinions he addicted himself, and was called a *Theodorean*: Afterwards he heard *Theophrastus* the *Peripatetick*.

C H A P. II.

His Apothegms.

HE left many Memorials, and profitable Apothegms; as, being reproved for not endeavouring to catch a young Man; New Cheese, saith he, will not stick to the Hook.

Being demanded what Man is most perplexed? He, saith he, who aims at the highest Content.

To one who asked his Advice whether he should Marry or not, (for this some ascribe to Bion, which *A. Gellius* to *Bias*, the mistake perhaps grounded upon the nearness of their Names) he answered, If you take a foul Wife, she will be a Torment; if a fair, Common.

He said, *That Age is the Haven to which all Ills have recourse; That Glory is the Mother of years; that beauty is a good which concerns others, not our selves; that riches are the sinews of things.*

To one who had consumed his Patrimony, Earth, saith he, devoured *Amphiaraus*, but you devour Earth.

He said, *It is a great ill, not to be able to bear ill.*

He reproved those who burn Men, as having no Sense, and again burn them as having Sense.

He used to say, It is better to yield our own Youth and Beauty to others, than to attempt anothers; for he that doth so, injures both his Body and Soul.

He vilified *Socrates*, saying, if he could enjoy *Alcibiades*, and did not, he was a Fool; if he could not, he did no great matter.

He said the way to the next World is casie, for we find it blindfold.

He condemned *Alcibiades*, saying, When he was a Boy, he drew away Husbands from their Wives, when a Man, Wives from their Husbands.

At *Rhodes*, whilst the *Athenians* exercised Rhetorick, he taught Philosophy; for which being reproved, I bought Wheat, saith he, and shall I sell Barley?

He said, they who are punished below would be more tormented if they carried Water in whole Vessels, than in Vessels full of holes.

One that was extreamly talkative, desiring his assistance in a business, I will do what I can for you, saith he, if you send a Messenger to me, and come not your self.

Travelling with very ill Company, they fell amongst Thieves; We shall be undone, saith he, unless we be known.

He said, Arrogance is the obstruction of Vertue.

Of a rich Man covetous, He hath not Money, saith he, but Money him.

He said, Covetous Persons keep their wealth so strictly, that they have no more use of their own than of anothers.

He said, When we are young, we use Courage, when old, Wisdom. Wisdom excels other Vertues, as the Sight the other Senses.

He said, No Man should be reproached for old Age, that being a Condition all pray they may arrive at.

To

To an envious Man said, I know not faith he,
whether some ill hath befall'n you, or some
good another.

He said, Impiety is an ill companion to bold
Language:

*For though his Speech be free,
To Bondage yield must be.*

That Friends whatsoever they prove ought
to be retain'd: Lest we seem to have conversed
with wicked Persons, or to thun good.

Being demanded if there were any Gods, he
said, *Old man, wilt thou not drive this croud away.*

He conceived that he might make a Field
fertile sooner by praising than by manuring it.

He said, They who love to be flattered, are
like Pots carried by the Ear.

To one who asked him what folly is, he said,
the obstruction of Knowledge.

He said, good Men, though Slaves, are free,
but wicked Men though free, are Slaves to ma-
ny Pleasures.

He said, Grammarians whilst they enquire
after the Errors of *Ulysses*, mind not their own,
nor see that they themselves go astray as well
as he, in taking pains about uselefs things.

He said, Avarice is the *Metropolis* of all Evil.

* Seeing a Statue of *Perseus*, under which
was written, ΠΕΡΣΑΙΟΣ ΞΗΝΩΝΟΣ Ο
ΚΙΤΤΕΥΣ, *Perseus*, of *Zeno*, a *Cittiean*,
he said, the writer mistook; for it should be,
Ξηνώδης, *Zeno's Servant*; as indeed he was.

CHAP. III.

His Death.

Laert.

AT last falling sick (as those of *Chalcis* say,
for he died there) he was perswaded to
suffer ligatures (by way of charm) he recant-
ed and profess repentance for all he had said
offensive to the Gods. He was reduced to ex-
tream want of such things as are most necessary
to sick Persons, until *Antigonus* sent to him
two Servants; and himself followed in a litter,
as *Phavorinus* affirms in his various History, of
that Sicknefs he died; on whose death thus
Laertius.

*Bion the Boristhenite,
By his Birth to Scythia known,
Did Religious duties slight,
Gods affirming there were none.*

*If to what he then profess,
Firm he had continued still,
Then his Tongue had spoke his breast,
And been constant though in ill.*

*But the same who Gods deny'd,
He who sacred fanes despis'd,
He who Mortals did deride,
When to Gods they sacrific'd;*

*Tortur'd by a long Disease,
And of Death's pursuit afraid,
Gifts their anger to appease
On their Hearts and Altars laid.*

*Thus with smoke and incense tries
To delight their sacred scent;
I have sinn'd; not only cries,
And what I profess repent:*

*But unto an old Wives Charms
Did his willing Neck submit,
And about his feeble Arms
Caus'd them Leather Thongs to knit.*

*And a youthful sprig of bays
Did set up before his gate:
Every means and way essays
To divert approaching fate.*

*Fool to think the Gods might be
Brib'd with gifts, their favours bought,
Or the sacred Deity,
Were, and were not, as he thought.*

*But his Wisdoms Titles (now
Turn'd to Ashes) not avail
With stretched Arms, I know not how,
Hail be cry'd, great Pluto Hail.*

Of this name *Laertius* reckons ten; The
first contemporary with *Pherecydes* the Syrian,
of *Proconnesus*; who writ two Books extant
in his time.

The second a *Syracusan* wrote of the Art of
Rhetorick.

The third this Philosopher.

The fourth an Abderite of the Family of
Democritus; a Mathematician: He wrote
in the *Attick*, and *Ionick* Dialect: He first
said there were some habitable parts of the
Earth, where it was six Months day and six
Months night.

The fifth of *Soleis*; he wrote the *Æthiopick*
History.

The sixth, an Orator, who wrote nine Books
entituled by the names of the Muses.

The seventh a Lyrick Poet.

The eighth a *Milesian* Statuary; mentioned
by *Polemon*.

The ninth a Tragick Poet, one of those who
were called *Tarsici*.

The tenth a Statuary of *Clazomene* or *Chios*,
mentioned by *Hipponax*.

THE MEGARICK SECT.

EUCLID.

CHAP. I.

His Country and Masters.

* **E**UCLID (institutor of the Megarick Sect) was born at *Megara*, a Town adjacent upon the *Isthmus*; though others say at *Geta*, a City of *Sicily*.

He first studied the Writings of *Parmenides*, then went to *Athens* to hear *Socrates*: Afterwards the † *Athenians* made an order that if any Citizen of *Megara* came into the City of *Athens*, he should be put to death: So great was the hatred the *Athenians* bore to the *Megarenses*. * *Thucydides* mentions this Decree, whereby the *Megarenses* were prohibited to make use of any Laws within the *Athenian Jurisdiction*, or the *Attick Forum*: Which order the *Lacedaemonians* requiring to be repealed, and not prevailing, the *Peloponnesian War* ensued thereupon, the cruellest and longest that ever was amongst the *Grecians*.

Euclid, who was of *Megara*, and before that Decree used to go to *Athens*, and hear *Socrates*, after it was promulgated, came by night in a long Woman's Gown, and Cloak of several colours, his head attired in a Woman's Veil (so *Varro* expounds *Rica*) from his house in *Megara* to *Athens*, to *Socrates*, that he might be in that time partaker of his Counsel and instructions, and went back again before that day in the same habit twenty thousand paces.

* Upon the death of *Socrates*, *Plato* and the rest of the Philosophers, fearing the cruelty of the Tyrants, went to *Megara* to him, who entertained him kindly.

CHAP. II.

His Institution of a Sect.

† **H**E affected litigious Disputes, and * was therefore told by *Socrates*, that he knew how to contend with *Sophists*, but not with Men: Suitable to his contentious humour, he instituted a Sect, † first called *Megarick* from the place, afterwards *Eristick*, from the Litigious Sophistical Nature thereof: Whence * *Diogenes* said; it was not σχολή a School, but ὀργή anger: † thus reproved by *Timon*,

*Of all these trilles, I not value ought,
Which Phædo nor Litigious Euclid caught,
Who the Megareans mad contention taught.*

Lastly, it was called *Dialectick*; which name *Dionysius*, a *Carthaginian* first gave them,

because their Discourse consisted of question and answer.

He affirmed, that *there is but one good, which is called by several names; sometimes Prudence, sometimes God, sometimes the Mind, and the like*: He took away all things opposite to good, saying, *there was no such thing*.

He used Arguments not by Assumption, but by Inference.

He took away disputation by Similitude, saying, that it consisted either of like or unlike; if of like, it were better to examine the things themselves to which they are like: if of unlike, the comparison is to no purpose.

CHAP. III.

His Apothegms, Writings.

HE was famous in the Schools (saith * *Plutarch*) forasmuch as hearing his Brother in a rage, say, *I let me perish, if I be not revenged*: he answered, *And I, unless I persuade you to lay aside your anger, and love me as at first*. If † *Hierocles* (who relates the same Story) for τὸ Σωκράτους writ not as *Plutarch* τὸ Σωκράτους, that Epithete

* He said, *that there is one kind of Sleep, a young pliant Deity, easie to be driven away; the other gray and aged, chiefly frequenting old Men: Pertinacious and inexorable, from thence God, if he once come, it is hard to get loose; with which thing, for he is deaf, nor can you shew him any thing that may move him, for he is blind*.

† Being demanded what the Gods are, and wherein they delight: *Of all things else concerning them, saith he, I am ignorant but of this, I know they hate curious Persons*.

* He wrote (besides other things) six Dialogues. († *Panetius* doubts whether they were genuine or spurious) titles these,

Lamprias.

Æschines.

* *Phænix*; or (as *Suidas*) the *Phænixes*.

Crito.

Alcibiades.

The Erotick.

Of the same names are numbred

Euclid the Mathematician, a *Megarean* also, whence confounded by † *Valerius Maximus* with the Philosopher: *Plato* (saith he) sent the undertakers

* In voce Euclides.

† Lib. 8. c. 13.

To an envious Man said, I know not faith he,
whether some ill hath befalln you, or some
good another.

He said, Impiety is an ill companion to bold
Language;

*For though his Speech be free,
To Bondage yield must be.*

That Friends whatsoever they prove ought
to be retain'd: Left we seem to have conversed
with wicked Persons, or to shun good.

Being demanded if there were any Gods, he
said, *Old man, wilt thou not drive this croud away.*

He conceived that he might make a Field
fertile sooner by praising than by manuring it.

He said, They who love to be flattered, are
like Pots carried by the Ear.

To one who asked him what folly is, he said,
the obstruction of Knowledge.

He said, good Men, though Slaves, are free,
but wicked Men though free, are Slaves to ma-
ny Pleasures.

He said, Grammarians whilst they enquire
after the Errors of *Ulysses*, mind not their own,
nor see that they themselves go astray as well
as he, in taking pains about useless things.

He said, Avarice is the *Metropolis* of all Evil.

• Athen.

* Seeing a Statue of *Perseus*, under which
was written, ΠΕΡΣΑΙΟΣ ΕΗΝΩΝΟΣ Ο
ΚΙΤΤΕΥΣ, *Perseus*, of *Zeno*, a *Cittiean*,
he said, the writer mistook; for it should be,
οιμισιδης, *Zeno's Servant*; as indeed he was.

CHAP. III.

His Death.

Laert.

AT last falling sick (as those of *Chalcis* say,
for he died there) he was perswaded to
suffer ligatures (by way of charm) he recant-
ed and profess'd repentance for all he had said
offensive to the Gods. He was reduced to ex-
tream want of such things as are most necessary
to sick Persons, until *Antigonus* sent to him
two Servants; and himself followed in a litter,
as *Phavorinus* affirms in his various History, of
that Sicknefs he died; on whose death thus
Laertius.

*Bion the Boristhenite,
By his Birth to Scythia known,
Did Religious duties slight,
Gods affirming there were none.*

*If to what he then profess'd,
Firm he had continued still,
Then his Tongue had spoke his breast,
And been constant though in ill.*

*But the same who Gods deny'd,
He who sacred fanes despis'd,
He who Mortals did deride,
When to Gods they sacrific'd;*

*Tortur'd by a long Disease,
And of Death's pursuit afraid,
Gifts their anger to appease
On their Hearts and Altars laid.*

*Thus with smoak and incense tries
To delight their sacred scent;
I have sinn'd; not only cries,
And what I profess repent:*

*But unto an old Wives Charms
Did his willing Neck submit,
And about his feeble Arms
Caus'd them Leather Thongs to knit.*

*And a youthful sprig of bays
Did set up before his gate:
Every means and way essays
To divert approaching fate.*

*Fool to think the Gods might be
Brib'd with gifts, their favours bought,
Or the sacred Deity,
Were, and were not, as he thought.*

*But his Wisdoms Titles (now
Turn'd to Ashes) not avail
With stretched Arms, I know not how,
Hail be cry'd, great Pluto Hail.*

Of this name *Laertius* reckons ten; The
first contemporary with *Pherecydes* the Syrian,
of *Proconnesus*; who writ two Books extant
in his time.

The second a *Syracusan* wrote of the Art of
Rhetorick.

The third this Philosopher.

The fourth an Abderite of the Family of
Democritus; a Mathematician: He wrote
in the *Attick*, and *Ionick* Dialect: He first
said there were some habitable parts of the
Earth, where it was six Months day and six
Months night.

The fifth of *Soleis*; he wrote the *Æthiopick*
History.

The sixth, an Orator, who wrote nine Books
entitled by the names of the Muses.

The seventh a Lyrick Poet.

The eighth a *Milesian* Statuary; mentioned
by *Polemon*.

The ninth a Tragick Poet, one of those who
were called *Tarsici*.

The tenth a Statuary of *Clazomene* or *Chios*,
mentioned by *Hipponax*.

THE MEGARICK SECT.
E U C L I D.

CHAP. I.

His Country and Masters.

* Laert. * **E**UCLID (institutor of the Megarick Sect) was born at *Megara*, a Town adjacent upon the *Isthmus*; though others say at *Geta*, a City of *Sicily*.

A Gel. 6. 10. He first studied the Writings of *Parmenides*, then went to *Athens* to hear *Socrates*: Afterwards the † *Athenians* made an order that if any Citizen of *Megara* came into the City of *Athens*, he should be put to death: So great was the hatred the *Athenians* bore to the *Megarenses*. Lib. 1. * *Thucydides* mentions this Decree, whereby the *Megarenses* were prohibited to make use of any Laws within the *Athenian Jurisdiction*, or the *Attick Forum*: Which order the *Lacedaemonians* requiring to be repealed, and not prevailing, the *Peloponnesian War* ensued thereupon, the cruelest and longest that ever was amongst the *Grecians*.

A Gel. 6. 10. *Euclid*, who was of *Megara*, and before that Decree used to go to *Athens*, and hear *Socrates*, after it was promulgated, came by night in a long Woman's Gown, and Cloak of several colours, his head attired in a Woman's Veil (so *Varro* expounds *Rica*) from his house in *Megara* to *Athens*, to *Socrates*, that he might be in that time partaker of his Counsel and instructions, and went back again before that day in the same habit twenty thousand paces.

Laert. * Upon the death of *Socrates*, *Plato* and the rest of the Philosophers, fearing the cruelty of the Tyrants, went to *Megara* to him, who entertained him kindly.

CHAP. II.

His Institution of a Sect.

Laert. vit. * **H**E affected litigious Disputes, and * was therefore told by *Socrates*, that he knew how to contend with *Sophists*, but not with Men: Suitable to his contentious humour, he instituted a Sect; † first called *Megarick* from the place, afterwards *Eristick*, from the Litigious Sophistical Nature thereof: Whence * *Diogenes* said; it was not *σχολή* a School, but *χολή* anger: † thus reproved by *Timon*,

Of all these trifles, I not value ought,
Which *Phædo* nor *Litigious Euclid* caught;
Who the *Megareans* mad contention taught.

Lastly, it was called *Dialectick*; which name *Dionysius*, a *Carthaginian* first gave them,

because their Discourse consisted of question and answer.

He affirmed, that *there is but one good, which is called by several names; sometimes Prudence, sometimes God, sometimes the Mind, and the like*: He took away all things opposite to good, saying, *there was no such thing*.

He used Arguments not by Assumption, but by Inference.

He took away disputation by Similitude, saying, that it consisted either of like or unlike; if of like, it were better to examine the things themselves to which they are like: if of unlike, the comparison is to no purpose.

CHAP. III.

His Apothegms, Writings.

HE was famous in the Schools (saith * *Plutarch*) forasmuch as hearing his Brother in a rage, say, *Let me perish, if I be not revenged*: he answered, *And I, unless I persuade you to lay aside your anger, and love me as at first*. If † *Hierocles* (who relates the same Story) for τὸ *Σωκράτους* writ not as *Plutarch* τὸ *Σωκράτους*, that *Epithete* occasioned the mistake.

* He said, *that there is one kind of Sleep, a young pliant Deity, easie to be driven away; the other gray and aged, chiefly frequenting old Men: Pertinacious and inexorable, from this God, if he once come, it is hard to get lose; words do it nothing, for he is deaf, nor can you shew him any thing that may move him, for he is blind*.

† Being demanded what the Gods are, and wherein they delight: Of all things else concerning them, saith he, *I am ignorant but of this, I know they hate curious Persons*.

* He wrote (besides other things) six *Dialogues*. († *Panæti* doubts whether they were genuine or spurious) titles these,

Lamprias.

Æschines.

* *Phænix*; or (as *Suidas*) the *Phænixes*.

Crito.

Alcibiades.

The Erotick.

Of the same names are numbred

Euclid the *Mathematician*, a *Megarean* also; whence confounded by † *Valerius Maximus* with the Philosopher: *Plato* (saith he) sent the undertakers

* *De fraterno amore.*

† *Stob. serm. 82.*

* *Stob. Eth. 38.*

† *Stob. Eth. 47.*

* *Laert.*

† *Laert. vit. Æschin.*

* *In voce Euclides.*

† *Lib. 8. c. 13.*

takers of the sacred Altar (who came to confer with him concerning the manner and form thereof) to Euclid the Geometrician, yielding to his skill and profession: That these undertakers came to Plato is evident from the testimony of many others; but, that he remitted them to Euclid the Geometrician, or that Euclid the Philosopher owned that profession, is no where to be prov'd.

On the contrary, * Proclus affirms, that Euclid the Mathematician was of the Platonick Sect; and that † Ptolemy King of Ægypt, asking if there were any shorter way to Geometry, he answer'd, Not any King's-high-way. From the death of Solon to the first of the Ptolemys are 95 years. So that Euclid the Mathematician was much later than the Philosopher.

* In Euclid. lib. 2 cap. 4.
† The Text is imperfect, read
καὶ μὲν τῶν
καὶ φασὶν ὅτι
Πτολεμαῖος
ἠγγέλλο τὸν
εὐκλῆν ὅτι
ἐστὶ περὶ γεω-
μετρίας τῆς στοιχειώσεως βασιλῆων μέθοδος; ἡ δὲ μὲν αὖ βασιλεὺς
πρὸς γεωμετρίας βασιλικῆς ὁδὸς νεώτερος, &c. and (so well nigh) Barocius.

Euclid the Archon in the second year of the 88th Olympiad, according to * Diodorus Siculus; but † Aristotle names the Archon for that year Euclees, confirmed by his Commentators, and by * Suidas, who only errs a little in the distance of Years betwixt him and Euclid the other Archon. † Salmastius not knowing the name Euclees to be any where found amongst the Archontes, and expressly affirming the contrary, endeavours to corrupt the Text of Suidas reading Diocles.

Euclid the Archon, in the second year of the 94th Olympiad,

Euclid the Soothsayer, Friend to Xenophon, who * mentions him.

Euclid the Stone-cutter, named in † Plato's Will.

* Exped. Gr. Lib. 7.
† Laert. vit. Plat.

EUBULIDES.

† EUBULIDES a Milesian succeeded Euclid. Some affirm, that Demosthenes the Orator was his Scholar, and that Demosthenes not being able to pronounce the Letter R, he taught him by continual Exercise to do it. He was a great Enemy to Aristotle, and much affected him.

In Dialectick he invented many kinds of Interrogation or Argument, ἄδδόμενον the Lying; διαλανθάνουσα, the occult; ἡλέκτερον, Eleetra; ἑγκεκαλυμμένον, the Vailed; Σωρίτης, Sorites; Κεκελιών, the Horned; φαλεκρόν, the Bald: Of which thus Demosthenes,

The Orators sharp Eubulides knows
With subtle forked questions how to pose,
Speech from Demosthenes not sweeter flows.

These are several kinds of Sophisms, which * Aristotle in general defines Eristick Syllogisms; from this School borrowed and enlarged afterwards by the Stoicks.

ἄδδόμενον, termed by † Athenæus ἄδδόμενον, by * Cicero mentions, is a captious reasoning, not to be dissolved; named as most of the rest, not from the form, but matter; the ordinary example being this, † If you say that you lye when you speak truth, you lye: But you say that you lye when you speak truth; therefore you lye. Such is that in * Africanus, a man having four hundred (Crowns) disposeth in Legacies three hundred; next he bequeaths to you a piece of ground worth 100 Crowns: provided his Will be not liable to the Falcidian Law, by which all Legacies are made void, if the surplusage remaining for the Heirs, amount not at least to the fourth part of the goods. The question is what right you have. I say, the question is not to be resolved, being of that kind which the Dialecticks call ἄδδόμενον, what part soever we take for true will prove false. If we say the Legacies are valid, the Will comes within compass

of the Falcidian Law, whereby the condition being defective, the Legacy is invalid. Again, if because the condition is defective, the Legacies are valid, it is not liable to the Falcidian Law; and if the Law take not place upon the condition, you are not to have what was bequeathed you. So much was this Sophism esteemed, that * Seneca affirms, many Books to have been written upon it:

† Laertius reckons six distinct Treatises of Chrysippus. * Athenæus and Suidas avers, that Philletus a Choan, died of a Consumption, occasion'd by excessive study upon this Question only.

Eleetra, named (likewise) from the chief Examples; of which thus Lucian: Eleetra the illustrious Daughter of Agamemnon, knew and knew not the same thing. Orestes unknown standing by her, she knew that Orestes was her Brother, but she knew not that he was Orestes.

ἑγκεκαλυμμένον, the Vailed; named also from the matter, thus instanced by Lucian. CHR. Answer me, Do you know your Father? MERC. Yes. CHR. What if I should bring one unto you vailed, what would you say, that you know him or not? MERC. That I did not know him. CHR. And yet that Man proves to be your Father, therefore if you knew not the Man, you knew not your Father. MERC. No truly; but, pull off his vail, and I shall discover the Truth. Of the same kind is that of the Sophists, which † Aristotle affirms Socrates (in Plato's Meno) vainly labours to resolve; Do you know all pairs are even or not? The other answering he knew it. The Sophist brings forth a pair of something which he had held hidden under his Cloak, and asks, did you know that I had this even pair, or not? the other confessing he knew not, Then saith he, you know and know not the same thing.

Sorites, By Cicero termed * a Cervalis, who defines it to be † when any thing by degrees is added or taken away: As a heap (Σωρός) is made by adding a grain, or rather as * Julianus, when from things evidently true, by very short mutations the dispute

* Divin. 2.
† Cic. Lucil.

* Digest. lib. 1.

dispute is led to such things as are evidently false; at the same, † Ulpian, The common Example mentioned by * Cicero, † Lærtius * Sextus Empiricus, and others in this: Are not two a few? Are not three so likewise? Are not four the same? So on to ten. But two are a few, and therefore ten.

Keegwā the horned; Denominated as the rest from the Example, What you lost not you have, you lost not Horns, therefore you have Horns. Repeated by Seneca, A. Gellius and others. Of this kind * St. Hierom observes that to be which the Pharisees objected to our Saviour. He came (saith he) from Galilee to Judea, wherefore the faction of Scribes and Pharisees asked him whether it were lawful for a man to put away his wife for any cause, that they might entrap him by a Horned Syllogism, whatsoever he would answer being liable to exception: If you should say, a Wife might be put away for any cause, and another taken, he being a Professor of modesty should contradict himself; but if he should answer, a wife ought not to be put away for any cause, he should be accounted

guilty of Sacrilege, and judg'd to do contrary to the Doctrine of Moses, and by Moses of God. Our Lord therefore so tempers his answer, that he passeth by their trap, alledging for testimony the sacred Scripture and natural Law, opposing the first sentence of God to the second, which was granted not from the will of God, but necessity of Sin. The same Father instances another of the same kind proposed to him, * I was assaulted at Rome by a very Eloquent person, with that which they call a Horned Syllogism, so as which way soever I turn'd I was more entangl'd. To marry a wife, saith he, is it a sin or not? I plainly not thinking to avoid his ambush, said, it is not a Sin; he then propounded another question in Baptism. Are good works remitted or Evil? I with the like simplicity answered, Sins are remitted: When I thought myself secure, Horns began to bud out on each side on me, and the hidden forces to discover themselves. If, saith he, to marry a Wife be not a Sin, and that Baptism remitteth Sins, whatsoever is not remitted is reserved.

Epist. 83.

ALEXINUS.

† Amongst the many Disciples of Eubulides was Alexinus an Elean, a great lover of Contention, and therefore called Ελέγξινος from redarguing; he most opposed Zeno.

Hermippus saith, he went to Olympia, and there profess'd Philosophy; his Disciples questioning why he lived there, he answered, he meant

to institute a Sect, and call it Olympic, but his Disciples wanting subsistence, and disliking the Air, departed, he continued there solitary with one Servant only, and swimming in the River Alphæus, was hurt with a Reed, whereof he dyed.

He wrote against other Philosophers besides Zeno. And against Ephorus the Historian.

EUPHANTUS.

* From Alexinus came Euphantus an Olinthian, Master to King Antigonus, Father of Demetrius, Grandfather of Antigonus Gonatus; He died of Age; he writ The History of that time.

Tragedies many, which upon their publick Representations were much much applauded.

An Oration upon a Kingdom, to Antigonus, very celebrated.

APOLLONIUS CRONUS.

* OF the Disciples of Eubulides, was Apollonius Cronus; † Strabo saith, he was a Cyrenean by Birth, and calls him Cronus

Apollonius, implying the latter to be a fir-name, from Apollonia, a Town of Cyrene.

D I O D O R U S.

C H A P. I.

His Life.

* Laert.

Diodorus was of Jossus a City of Caria, Son of Ameinias; Laertius saith, he heard Eubulides; † Strabo that he heard Apollo-
 † Lib. 14. & nus Cronus, after whom he was called Cronus; the name of the Master being transmitted to the
 17. disciple, by reason of the obscurity of the true
 2. Laert. Cronus; * of Diodorus thus Callimachus;

—e'en Momus writ

Upon the Walls, Cronus hath wit.

He lived with Ptolemaeus Soter, in whose presence being questioned by Stilpo, in such things as upon the sudden he could not answer; he was not only punished by the King, but reproached with the name of Cronus: whereupon he went from the Feast, and having written an Oration upon that question, died of grief.

C H A P. II.

His Philosophy.

* Lib.

† Lucul.

* Strabo and Laertius affirm he was a Dialectick; Tho Dialecticks (saith † Cicero) teach in their Elements whether a connex (a proposition which hath the conjunction if) be true or false; as this, if it be day, it is light, how much is it controverted? Diodorus is of one opinion, Philo of another, Chrysippus of a third: That Diodorus laboured much herein, appears from an Epigram of Callimachus, cited and explained by * Sextus Empiricus.

* Advers. Gram.

† Pyrrh. Hyp. 2.

Concerning these propositions, the Disagreement of Diodorus from Philo and Chrysippus, (already mentioned by Cicero) is thus explained by † Sextus Empiricus; But when, saith he, or how it followeth they disagree among themselves, and those things whereby they determine a consequence to be judged, oppugn one another: as Philo said, It is a true Connex, when it beginneth not from true, and ended in false. So that according to his opinion, a true Connex may be true several ways, a false only one way. For when it beginneth from true, and endeth in true, it is true; as this, If it be day, it is light. Again, when it beginneth from false and endeth in false, it is true: As this, If the Earth flies, the earth hath wings. Likewise that which beginneth from false, and endeth in true is true; as this, if the Earth flies it is Earth: That only is true which beginneth from true, and endeth in false. Such is this, if it be day it is night. For if it be day, that it is day is true, which is the Antecedent. But that it is night is false, which was the Consequent. Diodorus saith, that is a true Connex which is not contingent, beginning from true, and ending in false. This is contrary to the opinion of Philo, for such a Connex as this,

if it be day I discourse, and if at present it be day, and I discourse, is according to Philo's opinion, a true Connex: for it begins from true, it is day; and ends in true, I discourse. But according to the opinion of Diodorus it is false: for it may so happen, that though it begin from true, to wit, it is day, yet it may end in false, to wit, that I discourse when I am silent. Thus by Contingency it may begin in true, and end in false; for before I began to discourse, it began from true, to wit, it is day: but ended in false, to wit, I discourse.

And again, * for that we examine not many opinions concerning a Connex, let us say that Connex is in it self right, which beginneth not from true, and endeth in false. This, if there be motion, there is vacuity according to Epicurus's opinion, beginning from true, to wit, there is motion, and ending in true, will be true. According to the Peripateticks, beginning from true, to wit, there is motion, and ending in false, to wit, there is vacuity, will be false; according to Diodorus, beginning from false; to wit, there is motion, and ending in false, to wit, there is vacuity, will be true, for the assumption, to wit, there is motion, he denies as false,

† Some affirm, he invented the veiled and horned Arguments (of which already in the life of Eubulides) * Alexander Aphrodisicus, saith he, used *Κρυπτολογον*, the dominative Argument: *Παύλ.*

Of whose original and efficacy thus † Epictetus, the dominative argument seems to have been interrogated and collected upon such like occasions as these: for, there being a common fight amongst these three propositions to one another: The first, that every thing past is necessarily true: The second, that possibility follows not impossibility. The third, that what is not possible, neither is nor shall be true. This fight Diodorus observing, made use of the two first, to prove, that nothing is possible, which is nor: nor shall be. And * Alexander, for that I be at Corinth, is possible, if that I have been, or ever shall be there; but if neither, it is not possible. It is possible, that a Child be made a Grammarian, if he be made such, in confirmation hereof Diodorus interrogated by the Dominative Argument.

He held, that nothing is moved, † arguing thus: 'If a thing be moved, it is neither moved in the place wherein it is, or in the place wherein it is not: But not in that wherein it is; for it resteth in the place wherein it is: nor in that wherein it is not; for where a thing is not, there it can neither act nor suffer. Therefore nothing is moved: And * consequently nothing is corrupted or perisheth.

† He asserted, that the principles of things are least indivisible Bodies, in * number infinite, in magnitude finite.

ICHTHYAS,

ICHTHYAS

* Laert.

* **ICHTHYAS** Son of *Metallus*, an eminent person, is remembred amongst these Philosophers that are derived from *Euclid*: To him *Diogenes* the *Cynick* dedicated a Dialogue.

CLINOMACHUS.

† Laert.

† **A** Mongst these descended from *Euclid*, was likewise **CLINOMACHUS**, a *Thurian*: He first wrote concerning *AXIOMES*, [Propositions] *CATAGOREMS*, [that part of a Proposition which is predicated of the other] and the like.

STILPO.

CHAP. I.

Stilpo His Life.

* Laert.

* **STILPO** was of *Megara* in *Hellas*; he lived in the time of the first *Ptolomy*: Of the Masters which he heard are reckoned,

Euclid the founder of this School: But this agrees not with his time, as was before observed.

Some followers of *Euclid*,

Thrasymachus of *Corinth*, Friend to *Ichthyas*: So *Heracleides* attesteth.

† *Diogenes* the *Cynick*.

† Laert.

† Diogenis.

Pasicles, a *Theban*, who heard *Crates* the *Cynick*, his own Brother.

Diocles of *Megara*.

Lib. 4.

Cicero saith, he was very acute, much approved by those times: His Friends (saith he) writ, he was much inclined to Wine and Women, yet relate not this in his dispraise; but, rather in his commendations, that he by Learning so subdued and repressd his vicious Nature, that none ever saw him drunk, none ever discovered any Lasciviousness in him. *Plutarch* magnifies his height of Courage, mixed with meekness and temperance.

He was much addicted to civil Affairs. Besides his Wife, he kept company with *Nicareta*, a Courtezan: He had a Daughter of ill fame, whom *Simmius*, a *Syracusan*, his intimate friend, Married; she living incontinently, one told *Stilpo* she was a dishonour to him: No more, saith he, than I am an honour to her.

Ptolomeus Soter much esteemed him, and when he took Possession of *Megara* by Conquest, gave him money, and invited him along with him to *Egypt*: Of the money he took a little, but absolutely refused the Journey: Going to *Aegina*, he stayed there till *Ptolomy's* return. *Demetrius* Son of *Antigonus*, upon the taking of *Megara*, gave order that his house might be preserved, and whatsoever belonged to him, restored; and bidding him give them an inventory of such things as he had lost, he said that he had lost nothing that belonged to him, for none had taken away his Learning; his Learning and knowledge were both left.

With *Demetrius* he disputed of Humanity so efficaciously, that he became a studious Auditor of him.

Concerning *Minerva's* Statue, carv'd by *Phidias*, he asked a Man whether *Minerva*, Daughter of *Jove* were a God; he affirmed she was: But this, saith he, is not of *Jove*, but of *Phidias*, to which the other assented: Then, saith he, she is not a God. Hereupon being cited to the Court of *Arcopagus*, he denied it not, but justified it, averring she was not a God, but a Goddess: But the *Arcopagites* nothing satisfied with this evasion, ordered that he should depart the City. Hereupon *Theodorus* firnam'd *Θεός*, said in derision, How came *Stilpo* to know this, did he put aside her vail, and look upon her breast? *Theodorus* was bold of Speech, but *Stilpo* reserved, in so much, as being demanded by *Crates*, whether the Gods delighted in bent knees and Prayers: Thou fool, saith he, do not question me in publick, but when we are alone together.

He was sincere and plain, void of all artifice. *Crates* the *Cynick*, not answering him, but *ἀποκρίσας*, I knew saith he, you would speak any thing rather than that which is decent.

Crates in propounding a question delivered a Fig to him, which he took and eat: *Crates* presently cryed out, that he had lost his fig: Yes, saith he, and your question also, of which that was in earnest.

Seeing *Crates* half frozen in cold weather, *Crates*, saith he, *methinks you want quasi xale*, (which one way implies a new Garment, another way both a Garment and Wine) *Crates* ashamed, answered thus.

Stilpo at *Megara* I saw oppressd,
Where vast *Typhoeus* lies with weight oppressd.
To bear him wrangle many Scholars came,
Fair Truth to chase away was all their aim.

At *Athens* he wrought so much upon the People that they would run out of their Shops

too see him: *They wonder at thee, Stilpo* (said one to him) *as a Monster: No, saith he, but as a true Man.*

As he was speaking with *Crates*, in the midst of their discourse he went away to buy Fish; *Crates* pursued him, crying out, that he gave over the Discourse: *No, saith he, I carry along the Discourse with me; but I leave you, the Discourse will stay, the Fish must be bought.*

Being asked, what is harder than a Stone, he answered, *a Fool.*

CHAP. II.

His Philosophy.

* **H**E was Master of the *Megarick* School, excellent in *Eristick* Disputes, by his subtle Tenents and Discourses beautifying himself, his Country and Friends.

He took away all Species (Universals) affirming, that he who saith, a Man, denotes not any Man, the Term being not proper to this or that person, for why to one rather than to another, therefore not to this; and again, that which we see is not an Herb, for an Herb was many years ago, Therefore this was not an Herb.

† He likewise denied one thing to be predicated of another, arguing thus; 'If running be predicated of an Horse, the subject is not the same with the predicate; the definition of man is one thing, that of good another, so an Horse is a differing thing from running, for upon demand, we give several definitions of each; for if a Man, and good, or an Horse, and running were the same, how could good be predicated of Food or Physick, and running of a Horse, which are things so different? Thus he admitted no conjunction with the Subject, in things which are in a subject, or predicated of a subject, but conceived that both these, unless they be the very same with the subject, cannot be predicated of it, even not as an Accident. This, though it were one of those little Sayings which *Stilpo* sportively used to cast out amongst the Sophisters, *Colotes* the Epicurean opposed so eagerly, that he framed a large discourse against *Stilpo*, grounded only upon this assertion, (which yet he neither refuted nor resolved) affirming that by holding one thing is not predicated of another, he takes away good Life; But that *Stilpo* (saith *Plutarch*) was offended only at some words, and op-

posed the manner of speaking, but took not away the course of life, or abolished things, is most evident.

* He asserted the chief good to be a mind not subject to Passion. * *Senec. Epist. 9.*

CHAP. III.

His Disciples.

† **H**E far exceeded others in fluent discourse and learning, that he converted almost all *Greece* to the *Megarick* Sect. *Philippus* of *Megara* saith he drew

Metrodorus surnamed the *Theoretick*, and *Timagoras* the *Geloan*, from *Theophrastus*.

Clitarchus and *Simmius* from *Aristotle* the *Cyrenæan*,

Of *Dialecticks*, *Paonius*, from *Aristides*.

Diphilus, Son of *Euphantus*, and *Myrmex*, Son of *Exenetus* coming to dispute against him, became both followers of him: Thus far *Philippus*: He likewise attracted

Phasidemus the *Peripatetick*, excellent in Natural Philosophy.

Alcimus, the most eminent Orator at that time in *Greece*.

Zeno the *Phenician*, an Epicurean Philosopher.

Crates, and others; in a word, whomsoever he would himself.

Heraclides saith, that *Zeno* the *Citiean*, founder of the *Stoical* Sect, was his Disciple.

CHAP. IV.

His Death, Writings.

H*ermippus* affirmeth that he died of Age; but drank a draught of Wine to hasten his end.

Stridas saith, he wrote 20 Dialogues; *Laertius* but nine; and those not very efficacious; their Titles these,

Moschus,
Aristippus or *Callias*,
Ptolemaeus,
Chærecrates,
Mitrocles,
Anaximenes,
Epigenes,
To his Daughter,
Aristotle.

He had a Son named *Dryso*, a Philosopher also.

THE

ELEACK and ERETRIACK SECTS.

PHÆDO.

* **T**HE *Elcack* Sect was instituted by *Phædo*, an *Elean* of a noble Family; it chanced that he was taken by Thieves or Pyrates, and sold to a House of common dishonest Resort; where being forced to sit at the door, he was observed by *Socrates* in passing, who noting the ingenuity of his countenance (which was extraordinary) perswaded (as *Laertius* saith) *Alcibiades* or *Plato*, or (as *A. Gellius*.) *Cebes* to buy him, from which time he addicted himself diligently to Philosophy, and was a constant Disciple of *Socrates*; so much affected by *Plato*, that he called that most excellent

cellent discourse of the immortality of the Soul, after him, *Phædo*.

He instituted a Sect called from him *Eleack*; The Dialogues ascribed to him were

Zopyrus,
Medus,
Simon,
Antimachus, or the *Old Man*,

Nicias,
Simmias,
Alcibiades,
Critolaus.

† *Panæti* doubts whether any of these were written by *Phædo*; *Medus* is by some ascribed to *Æschines*, and by others to *Polianus*; as are also *Antimachus* and the *Scythian* discourses.

P L I S T H E N E S.

† THE *Eleack* Sect was continued by *Plisthenes* was succeeded by *Menedemus* and *benes* an *Elean*; Successor to *Phædo*; *Asclepiades*.

M E N E D E M U S.

CH A P. I.

His Country, Parents, Teachers.

* *Menedemus* was one of those Philosophers that continued the School of *Phædo*, which hitherto was called *Eleack*, but from *Menedemus* was termed *Eretriack*: he was an *Eretrian*, Son of *Clisthenes*; *Clisthenes* was of the Family of the *Theopropidae*; yet tho' noble by descent, *Mechanic* by profession and indigent, some affirm he was a maker of Tents (*Hesychius Illustris* terms him an Architect) adding that he taught both Arts to his Son *Menedemus*, so that when *Menedemus* wrote a decree, an *Alexinian* Philosopher reproved him, saying, *It becomes not a Wise Man to frame both Tents and decrees.*

Menedemus being sent by the *Eretrians* with a command of Soldiers to *Megara*, went from thence to *Athens* to hear *Plato* at the Academy, with whom he was so taken, that he gave over his Military Employment.

By *Asclepiades* a *Phlyasian*, his intimate Friend, he was carried to *Stilpo* at *Megara*, whom they both heard; thence taking a Journey to *Elis*, they met with *Anchypillus* and *Moschus*, who belonged to the School of *Phædo*.

Some affirm he despised *Plato* and *Xenocrates*, and *Parabates* the *Cyrenean*; but admired *Stilpo*, concerning whom being demanded his opinion, he only answered that *he was free.*

CH A P. II.

His School and Philosophy.

* Being returned home to *Eretria*, he set up a School, and taught Philosophy there: the *Eleack* School being thus transferred to *Eretria*, was from thenceforward call'd *Eretriack*.

In his School there was no order of place, no Seats round about it; but as every Man chanced to be sitting, or standing, or walking, in the same postures they heard him.

He held, that *there was but one virtue and good*, reprehending those who asserted more; whence of one who held there were many Gods, he demanded ironically *how many?* and *whether he thought there were more than an hundred?*

He was of a versatile wit, and in compo-

sure of his Speech a difficult adversary; he turned himself every way, and found something to say for every thing: He was very Litigious, as *Antisthenes* in his successions affirms and used this question, *What is not the same, is different from that with which it is not same?* Yes. To benefit is not the same with good, therefore good doth not benefit. He took away *Negative Propositions*, leaving only the *Affirmative*; and of these he admitted the Simple, only; but rejected those which were not simple, calling them *conjoynd* and *complex*.

Heraclides saith, he was a *Platonick*, and derided *Dialectick*. *Hexinus* asking, whether he had given over beating his Father; *I neither did beat him*, saith he, *nor have given over*. The other replied, *Either say yes or no, to dissolve the Ambiguity*. It is ridiculous, saith he, to follow your *Laws*, when a Man may withstand them in the very entrance.

He writ not, or composed any thing, because (saith *Antigonus Corystius*) he was of no certain opinion; yet in dispute he was so vehement, that he many times went away with black and blue Eyes.

CH A P. III.

His manner of Living.

† HE contracted a strict friendship with *Asclepiades*, nothing inferiour to that of *Pilades* to *Orestes*: *Asclepiades* was the Elder, whence there went a common saying, that he was the Poet, *Menedemus* the Player.

* When they were yet both young Philosophers, and indigent, they were cited to the Court of *Areopagus*, to give account († according to *Solon's Law*) by what means († according to *Solon's*) the whole day amongst Philosophers without any Labour, and having no Estate) they subsisted, and were in so good a condition: They desired that one of the Masters of the common Prison might be sent for; who, when he came, attested, that they went down every night into

to the Prison, where the common Malefactors ground, and did their grind, and in pay of their Labour, received two drachms: At which the *Areopagites* much wondring, bestowed as an honourable reward upon them; two hundred Drachms.

They had other Patrons that bestowed Gifts upon them; *Archspolides* gave them three thousand pieces of Silver; they both contended which should receive last, and in conclusion, neither accepted it. The chief persons that received them were *Hipponicus*, a *Macedonian*, and *Ægetor* a *Lamiean*. *Ægetor* gave each of them thirty *Minæ*. *Hipponicus* gave *Menedemus* two thousand drachms towards the marriage of his Daughters, which, as *Heracledes* saith, were three, by his Wife *Oropia*.

For *Asclepiades* and *Menedemus* took each of them a Wife; *Asclepiades* married the Daughter, *Menedemus* the Mother: *Asclepiades*'s Wife dying, took the Wife of *Menedemus*: *Menedemus* being made a chief Magistrate, married a rich Wife; notwithstanding, he allow'd his first Wife an equal interest in the government of the House. *Asclepiades* having liv'd with *Menedemus* in great plenty; yet with great temperance, died old at *Eretria*. At that time, one, whom *Asclepiades* much loved, coming late at night, intending to have feasted with him, the Servants shut him out of doors: But *Menedemus* bad them let him in, saying *Asclepiades* would admit him even under Ground.

Menedemus was much given to Entertainments, and, because the Country was unwholesome, made many Feasts: What order he observed therein is thus delivered by *Antigonus Carystius*, and out of him (though not cited by *Laertius*. He dined but with one or two Companions at the most; if any came to him, they were admitted after dinner was ended; if they came sooner than the set time, they walked short turns before the door, and demanded of the Servants what course was carried in; if they told them fish-broth (with which they began their Dinner) they went away; if any Flesh, they went into a room prepared for that purpose. In Summer time, *Menedemus* had the Couches or Beds of his Dining-room covered with Flags and Rushes, in Winter with Sheeps-skins. Every guest brought a Cushion; the Cup they had was no bigger than a large Spoon: instead of Sweet-meats they had *Lupines*, and Beans: sometimes such fruit as the Season afforded; in Summer Pomgranates, in Spring, Pulse, in Winter, Figs. This *Lycophron* the *Chalcidian* confirms in his Satyrical Comedy upon *Menedemus*, where *Silenus* speaks thus to the Satyrs.

*Sons impious of a pious Father, I
(You see) with your delights and sports comply:
But never by the Gods at such a Feast
In Caria, Rhodes, or Lydia was a Guest.
How plentiful!*

And not long after,

*A little Pot half full of Water clear,
Rated at Earthings five a boy did bear*

*To every guest: about vile Lupines went,
With which the Beggar's Tables scarce content.*

Whilst they drank (after the feast *Menedemus* propos'd questions, and instead) of a desert gave them discourse, which excited all to temperance and continence: These continued sometimes till the crowing of the Cock broke them off, much against the will of his guests, who never thought they had enough of them.

CHAP. IV.

His civil Employments.

HE was first contemned by his Countrymen, and called Dog and Fool; but at last so much honoured by them, that they committed the government of the Commonwealth to his charge, and paid him yearly two hundred Talents, whereof he sent back fifty. * Laert.

After he applied himself to civil business, he was so thoughtful, that going to put Incense into a Censer, he put it besides. *Crates* reproaching him for undertaking publick employments, he sent him to Prison; whereupon as he chanced to pass by, *Crates* rose up and saluted him with the Title of *Agamemnonian, Leader of the City*. + Laert.

He was sent Ambassador from the *Eratrians* to *Ptolomy*, and to *Lysimachus* (much honoured wheresoever he came) and to *Demetrius*, * Euseb.

* all three Kings of *Macedonia*, of whom *Demetrius* first reigned, then *Lysimachus*, and after him (*Pyrchus* intervening) *Ptolomy*. Some accus'd him to *Demetrius*, that he would betray his City to *Ptolomy*, of which charge he acquitted himself by an Epistle, beginning thus, *Menedemus to King Demetrius, Health. I hear that you are informed many things concerning us, &c.* advising him to take heed of one of those that were his Enemies, named *Æschylus*. When he was on Embassy to *Demetrius*, he spoke very earnestly and effectually concerning *Oropus*.

Antigonus also, King of *Macedonia*, loved him exceedingly, and profess'd himself his Disciple: In his behalf he made a Decree, clear and void of ostentation, beginning thus; *Forasmuch as King Antigonus, having overcome the Barbarians in Fight, returneth into his own Country, having good success in all his undertakings: The Senate and People have thought good, &c.*

CHAP. V.

His Vertues and Apothegms.

MENEDEMUS was of exceeding gravity, for which *Crates* deriding him, said, *Asclepiad the Philiasian*, and the proud *Eretrian*, and *Timon*.

His supercilious bumbast speech begins. In severity he was so awful, that *Eurylocus* being invited by *Antigonus*, together with *Clippides*, a youth of *Cyzicum*, refused to go, fearing *Menedemus* should know it.

In reproof he was bitter and bold, of which *Laertius* instanceth his Sayings to a young Man over-confident, to *Hierocles*, &c. To an Adulterer boasting, &c. To a young Man crying, &c.

Antigonus asking; whether he should go to a Luxurious Banquet; not speaking whether he should go or not, he bad him send them word that he was a King's Son.

One who intruded himself upon him, and discoursed very absurdly, he asked if he had a Farm; he answered, many: Go then, saith he, and look after them, lest in losing your Rusticity, you lose them also.

To one asking, whether a good Man may take a Wife, he said, Do you think I am good or not? The other assenting; but I (saith he) have taken one.

Not able to limit the Prodigality of one who invited him to Supper, he silently reproved him, eating nothing but Olives.

This freedom brought him into danger when he was in Cyprus with *Nicochreon*, together with his Friend *Asclepiades*; for, the King having invited him with the rest of the Philosophers to a Monthly Feast, *Menedemus* said, this convention if it be good, ought to be every day; if otherwise, this day is too much: The Tyrant answered, that he had set apart that day to converse with Philosophers. *Menedemus* persisting in his assertion, demonstrated from what he had said of the Sacrifice, that Philosophers ought to be heard at all times. Whereupon if one of the Musicians had not helped them to escape, they had been put to death, whence the Ship being endangered by a Storm, *Asclepiades* said, that the humanity of the Musician preserved them, the roughness of *Menedemus* had undone them.

He was negligent, and (as we said) careless in every thing that concerned the order of his School; likewise high-minded, and covetous of Glory: inasmuch that when he and *Asclepiades* first exercised the trade of Building, *Asclepiades* was seen upon the house top carrying Clay; but *Menedemus*, if he espied any Man passing by, hid himself.

He was somewhat enclined to Superstition; having eaten in a Cook's Shop the Flesh of something that had died of it self ignorantly with *Asclepiades*, as soon as he knew it, he grew Sick, and looked Pale, till *Asclepiades* reproved him, saying, *He was not sick of the Meat, but of Fancy*.

In all other respects he was a person of a great and free Soul, in strength even in his old age equal to those who wrestled in Exercise, strong made, swarthy of Complexion, fat and corpulent; but of indifferent stature, as appears (saith *Laertius*) by his Statue in *Eretria*, in the old Stadium, so exactly carved, that it expresseth the naked proportion of his Limbs.

He loved *Aratus* and *Lycophron* the Tragick Poet, and *Antagoras* the Rhodian, but above all he was studious of *Homer*; next of the *Lyricks*;

then of *Sophocles*: In *Satyrs* he assign'd the second place to *Achaus*; the first to *Aeschylus*; whence to those in the State who defended the contrary part, he said thus,

*The swift in time outstript are by the slow,
A Tortoise thus an Eagle may outgo.*

These are Verses of *Achaus*: they therefore are mistaken, who say he read nothing but the *Medea* of *Euripides*, which is put among the Poems of *Neophron* the Sicyonian.

Of *Bion*, who spoke with much diligence against Prophets, he said, *he murdered the dead*.

To one who said, the greatest good is to enjoy those things which we desire; *it is a much greater*, saith he, *to desire those things which are fitting*.

He was violent (as we said) in controversy, but most affable in conversation and Action: *Alexinus*, whom in dispute he had often circumvented and bitterly derided, he gratified in deed; taking care for the safe Conduct of his Wife from *Delfi* to *Chalcis*, the way being much infested with Thieves.

He was an excellent Friend, as is manifest from his affection to *Asclepiades*, of which we have already spoken, only to *Perseus*, he was constantly a profest Enemy; for it was known that when *Antigonus* for *Menedemus* his sake would have restored the *Eretrians* to their first Liberty, *Perseus* withstood it: whereupon at a Feast *Menedemus* openly inveighed against him, using amongst many others this expression; *He is indeed a Philosopher, but of all Men that are, were, or ever shall be, the most wicked*.

CHAP. VI.

His departure from Eretria, and Death.

THE friendship he held with *Antigonus*, made him suspected by his own Country-men, as if he meant to betray the City to him; of which being accused by *Aristodemus*, he fled, and lived a while at *Oropus* in the Temple of *Amphiaraus*: Thence some golden Cups chancing to be stolen, he was by a publick decree of the *Beotians* forbidden to stay there any longer, whereupon he returned privately into his Country, and taking his Wife and Children along with him, went from thence to *Antigonus*, where he died of grief.

But *Heraclides* on the contrary affirmeth, that whilst he was Praefect of the *Eretrians*, he often defended his Country against those who would have made *Demetrius* Tyrant thereof; Neither would he therefore have betrayed it to *Antigonus*; but that was falsely laid to his charge; he afterwards went to *Antigonus*, petitioning that he would restore his Country to their Liberties; which *Antigonus* denying, he out of Grief fasted seven days, and so died. The same relation is delivered by *Antigonus Carystius*. *Heraclides* saith, he lived 84 years.

THE
HISTORY of PHILOSOPHY.

The Fifth Part.

Containing the *Academick* Philosophers.

PLATO.

CHAP. I.

The Country, Parents, and Time of PLATO.

THE most eminent of all the Sects derived the Professors thereof taught: This Sect was from *Socrates* was the *Academick*, so call'd instituted by *Plato*, continued by *Speusippus*, from the *Academy*, a place in *Athens*, where *Xenocrates*, *Polemon*, *Crates*, *Crantor*, thus far called

called the *first or old Academy*. *Arcefilus*, succeeding *Crantor*, instituted the *middle Academy*, continued by *Lacydes*, *Telecles*, *Evander*, and *Hegefinus*. *Carneades* founded the *new Academy*, of which was also *Clitomachus*: Some reckon a *fourth Academy* instituted by *Philo* and *Charmidas*: a *fifth* by *Antiochus*.

* *Plato* was out of doubt an *Athenian*, nor are they to be credited who relate him † a *Theban*, born at *Cynocephalus*; * *Antilcon* affirms his Parents to be of *Collyttus*. † He was born (according to *Phavorinus*) in the *Island Ægina*, in the *House of Phidiades*, Son of *Thales*; his Father sent with others thither at the division of the *Land* (upon their defection from, and subjection by the *Athenians*, at the beginning of the *Peloponnesian War*) and returned to *Athens*, at what time those *Athenians* were ejected by the *Lacedæmonians*, in aid of the *Æginetæ*.

* He was of an eminent Family; his Father *Aristo* (Son of *Aristoteles*) of the Race of *Codrus*, Son of *Melanthus*, who (as *Thrasilus* affirms) derived themselves from *Neptune*. *Melanthus* flying *Messena*, came to *Athens*, where afterwards by a Stratagem killing *Xanthus*, he was made King after *Thymocles*, the last of the *Theseidæ*. His Mother *Perictione*, by some called *Potone*, whose Kindred with *Solon* is thus described by *Laertius* and † *Proclus*. *Execistides* had two Sons, *Solon* and *Dropides*: *Dropides* had *Critias*, mentioned by *Solon* in his Poems.

*Bid fair hair'd Critias his Sire observe;
A wandring mind will from his Leader swerve.*

Critias had *Calleschrus*, *Calleschrus* had *Critias*, one of the thirty Tyrants, and *Glaucan* (whom *Apuleis* calls *Glaucius*). *Glaucan* had *Charmides* and *Perictione*; *Perictione* by *Aristo* had *Plato*, the sixth from *Solon*; *Solon* was

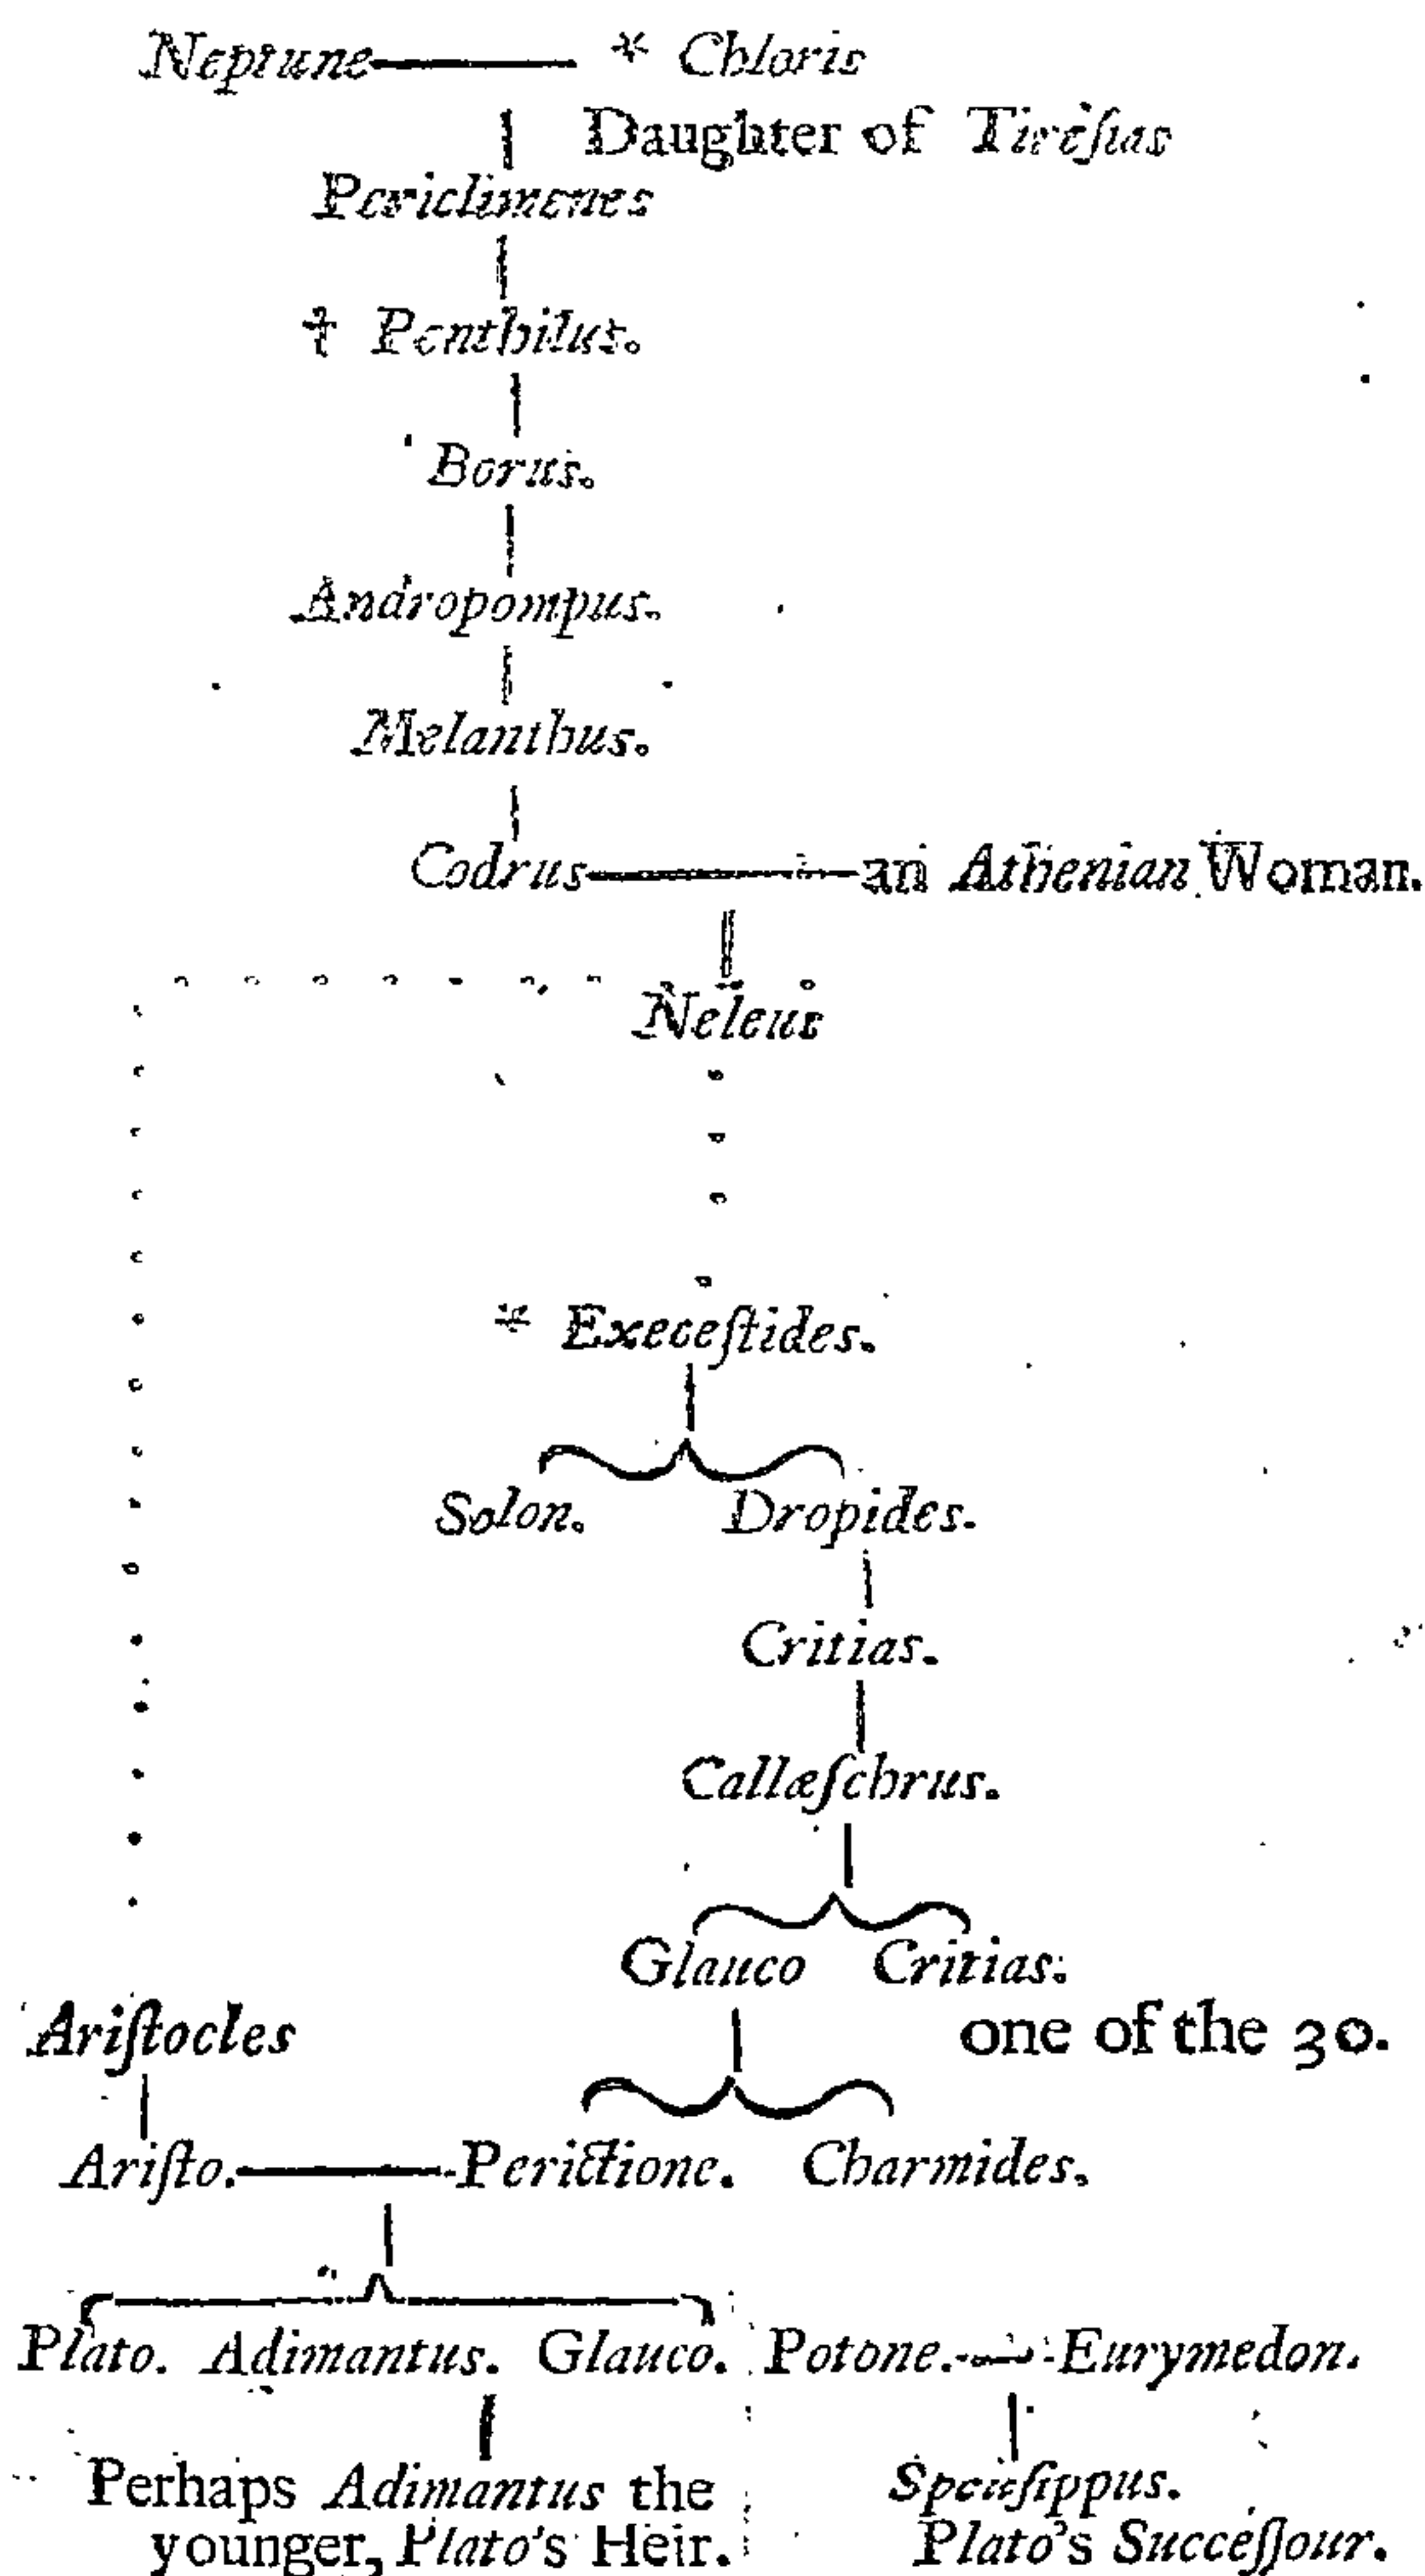

descended from *Neptune* and *Nelus*, [Father of *Nestor*] Thus *Laertius*, from whom *Proclus* differs only in that, that he makes *Glaucan* Son of the first *Critias*, Brother to *Calleschrus*, which *Critias* manifestly (with he) in *Plat.* *Charmides* confirms, calling *Glaucan* (Father of *Charmides*) his Uncle. Thus was *Plato* descended both ways from *Neptune*.

There are (saith * *Apuleius*) who assert *Plato* of a more sublime Race: *Aristander*, followed by many *Platonists*, thinks, he was begotten on his Mother by some Spectrum in the shape of *Apollo*: † *Speusippus* in his Treatise, entitled *Plato*, or *περὶ δέπνυς*, *Clarchus* in his Eulogy of *Plato*; *Anaxilides* in his second Book of *Philosophers*; *Plutarch*, *Suidas*, and others, affirm it to have been commonly reported at *Athens*, that he was the Son of *Apollo*, who appearing in vision to her (being a Woman of extraordinary Beauty) * *Perictione* se miscuit, she thereupon conceived: *Aristo* (her husband) having often attempted to enjoy her, but in vain; at last *Apollo* appearing to him in a Vision or Dream, and a voice commanding him to refrain the company of his Wife for ten Months, until her delivery were past, he forbore; whence *Tyndarus*,

*He did not issue from a mortal Bed;
A God his Sire, a God-like life he led.*

Some thereupon (as * *Saint Hierom* saith) affirmed, he was born of a Virgin, and † it was a common Speech among the *Athenians* that *Phœbus* begat *Esculapius* and *Plato*, one to cure Bodies, the other Souls.

* *Aristo* had afterwards by *Perictione*, two Sons, *Adimaretus* and *Glaucan*, and a Daughter *Potone*, Mother to *Speusippus*: These Relations of *Plato* will be more conspicuous in this Genealogical Table.

* *Apollod.*
lib. 3.
Schof. Pind.

† *Paufan.*

* *Laert. Pit.*
cles.

For the year of his Birth, (to omit the mistakes of *Eusebius*, who placeth it in the fourth Year of the eighty eighth Olympiad, in the Archonship of *Stratocles*, and of the *Chronicon Alexandrinum*, that placeth it the year following) *Laertius* saith, He was Born, according to the *Chronology* of *Apollodorus*, in the eighty eighth Olympiad, which seems to be towards the beginning of the first year, whilst *Aminias* was yet Archon. For *Laertius* elsewhere saith, That he was six years younger than *Isocrates*; for *Isocrates* (saith he) was born when *Lyfimachus*, *Plato*, when *Aminias* was Archon, under whom *Pericles* died: in the third year of the Pelopon-

* *Argum. Hip. nesian War*. This *Aminias* is by the * *Scholiast* of *Euripides* called *Ameinon*, by † *Athenæus*, *Epameimon*, by * *Diodorus Siculus*, *Epaminondas*.

The various reading occasioned either by addition or detraction of the preposition ἐπὶ, but by which of these two cannot easily be evinced. † *Ulin. Exercit. Salmasius* endeavouring to prove the name to be Ἀμείμων, positively affirms, that the Greeks never name an Archon without the Preposition ἐπὶ; but that error * *Petavius* confutes, whose Opinion is confirmed by the ancient Marble at *Arundel-House*, which addeth not the Preposition to the Names of the Archons.

† *Deipn. 5.* Neither is the Opinion of † *Athenæus* much

different, who affirms, *Plato* was born (the year before) *Apollodorus* being Archon, who succeeded *Euthydemus*, who was Archon the third year of the 87th Olympiad, and that under *Euphemus*, in the fourth year of the 90th Olympiad, he was fourteen years old. For both *Laertius* and *Athenæus* agree in the year of his death, viz. in the first of the 108th Olympiad, when *Theophilus*, the Successor of *Callimachus*, was Archon; *Athenæus* only differeth in this, that, computing 82 Archons, he attributes so many years to *Plato's* Life, whereas 'tis certain, he lived but eighty one.

The day of his Birth, * according to *Apollodorus*, was the seventh of *Thargelion*, at which time the *Delians* did celebrate the Feast of *Apollo*. So likewise *Florus*, cited by † *Plutarch*, who adds, that the Priests and Prophets call *Apollo* ἐβδομηγενης, as being born upon this seventh day; whence perhaps was occasioned the Fiction, that he was the Son of *Apollo*, which *Plutarch* esteems no Disparagement to his Deity. In the first year of the 88th Olympiad, the *Neomenia* of *Hecatombæon* fell upon *August*, 2d. and (upon those Hypotheses which we laid down formerly in the * *Life of Socrates*) the Dominical Letter for that year being E. the seventh of *Thargelion* will (according to the *Julian* account taken proleptically

* *Laert.*

† *Sympos. 8. i.*

* *Cap. 1.*

proleptically) fall upon Friday, the thirtieth of May: according to the Gregorian, upon Friday the ninth of June, in the year of the Julian period, 4286.

This is according to the Faith of the Historians, with whom the Astrologers do not agree; for * *Julius Firmicus* hath erected the Scheme * *Ann.* of his Nativity after this manner.

If the Ascendent, saith he, shall be ♈, ♉ and ♊ therein posited; and if ♋ if then be placed in the seventh, having ♌ for his Sign, and in the second the ☉ in ♎ and the ☌ in ♏ in the fifth House beholding the Ascendent with a Δ aspect, and ♐ in the ninth from the Ascendent in ♏. This Geniture renders a Man Interpreter of Divine and Heavenly Institutions, who endued with instructive Speech, and the power of Divine Wit, and formed in a manner by a celestial Institution, by the true License of Disputations shall arrive at all the secrets of Divinity. Thus Firmicus, whose Scheme agreeth not with the other Calculation, as being betwixt the midst of February and of March, during which time the ☉ is in ♎.

Hence will appear the great Anachronism of those, who affirm, that Plato went to Ægypt, in the time of the Prophet Hieremie (whom Eusebius placeth in the thirty sixth Olympiad) and heard him there. Hieremie at the Captivity of the Jews into Babilon, was carried by Johanan Son of Caree into Ægypt: The Jews were carried away by Nebuchadnezzar, at what time Tarquinius Priscus Reigned at Rome, Vapores in Ægypt, to whom the rest of the Jews fled, which was in the forty seventh Olympiad, 160 years before Plato was Born. This Opinion * once held, was afterwards retracted by Saint Augustine, in his Book of Retractions, and confuted de Civit. Dei, 8. 11.

CHAP. II.

His first Education, Exercise, and Studies.

† Whilst Plato was yet an Infant carried in the Arms of his Mother Perictione, Aristotle his Father went to Hymettus (a Mountain in Attica eminent for abundance of Bees and Honey) to Sacrifice to the Muses or Nymphs taking his Wife and Child along with him; as they were busied in the Divine Rites, the laid

the Child in a Thicket of Myrtles hard by; to whom, as he slept (* *in cunis dormienti*) came a swarm of Bees, Artists of Hymettian Honey, flying and buzzing about him, and (as it is reported) made a Honey-comb in his Mouth. This was taken for a presage of the singular sweetness of his discourse; his future Eloquence foreseen in his Infancy.

His Parents (saith † Alexander) named him after his Grandfather, Aristocles: * Speusippus (instituted in his Domestick Documents) extollet his sharpness of Apprehension, whilst yet a Child, and the admirable Modesty of his Disposition († which was such, that he was never, even all those years, seen to laugh immoderately) affirming, that the beginnings of his Youth were season'd with Labour and Love of Study; which Vertues increased and met with all the rest when he came to Man's Estate.

† Of Dionysius the Grammarian (mentioned in his *dylogia*) he received the first Rudiments of Learning. Of Aristo, an Argive, he learned the Art of Wrestling (at that time much in esteem, as being one of the Olympick Exercises) wherein he became so great a Proficient, that some affirm, he wrestled at the Isthmus in the Pythian Games.

* As in years and Vertue, so likewise he increased extraordinarily in outward proportion and shape, insomuch, that Aristo named him Plato (which implieth Latitude) in allusion to the largeness of his Person: others say, to the wideness of his Shoulders; Neantles of his Forehead: some, to his large Eloquence. Whatsoever the occasion were, this name wore our and displaced the other. That he was called also *Sarapis*, is affirmed by † Hesychius. There was not any imperfection throughout his person, except a gibbosity in the hinder part of his Head, and (as Timotheus affirms) a kind of Hesitation in his Speech.

Voice, in which sense it is here taken by the Interpreters signifieth an imperfection of Speech by stammering: *Arist. Prob. 11. 3.* unless there and here we would read *ἰσχυρῶς*.

He

* *Laert.*

* He learned also (as *Dicaearchus* relates) to Paint: He addicted himself much to Poetry, and wrote many Poems: First, *Dithyrambs*; then Epick Poetry, which comparing with *Homer*, and finding far short of him, he burned. Then he betook himself to writing Tragedies: He made a compleat Tetralogy (four Drama's, as the manner was, when they contested, to be presented at four several Festivals, *Lenæan*, *Panathenæan*, *Chytæan*, the fourth Satyrical) and gave it to the Players to be Acted, intending to contest for the Palm upon the Olympick Theatre: But the day before it should have been presented, chancing to hear *Socrates* Discourse at the Olympick Theatre († before the Bacchanals) he was so taken with that *Siren*, that he not only forbore to contest at that time, but wholly gave over all Tragick Poesy, and burned all his Poems, saying that of *Homer*,

† *Ælian. var. Hist. 2. 20.*

Vulcan come hither, Plato needs thy aid.

From that time (the twentieth year of his age, which falls about the 4th of the 92d Olympiad) he became a follower of *Socrates*, and studied Philosophy.

* *Var. Hist.*

Some affirm (of the Truth of which report, * *Ælian* justly doubts) he was driven by Poverty to betake himself to the Wars, but intercepted by *Socrates*, and instructed in that which concerns Mankind, he sold his Arms, and through his persuasion, addicted himself to Philosophy.

† *Afterwards cap. 11. • Laert. • Var. Hist.*

That he fought for his Country is certain, express'd in his answer to † *Crobylus* the Sycophant: * *Aristoxenus* and *Ælian* affirm, he was engaged thrice: First, at † *Tanagra*: the second time at *Corinth*: and lastly at *Delium*, where he fought best of all the Soldiers. Thus *Aristoxenus*. But that this is false, may be easily evinced by computation of times. The first Fight of the *Athenians* at *Tanagra*, was in the 4th year of the 80th Olympiad, 17 years before *Plato* was Born: The second, in the first of the 89th when he was but six years old. The Fight at *Delium*, was in the first of the 89th, at what time he was but four years old; from the last words of *Aristoxenus*, ἐνθα ὃ ἀεισεύεται (implying, that at *Delium* he had the prize for fighting best) may be conjectured, that this was meant of *Socrates*, who was thrice personally engaged and at * *Delium* should have had the prize for fighting best, but that his Modesty procured it to be conferred upon *Alcibiades*.

* See *Socrates's Life, cap.*

CHAP. III.

His Masters in Philosophy, and his Travels to that end.

* *A. u. dogm. Plat. Laert. Said.*

* *Socrates*, the night before *Plato* was recommended to him, dreamed, that a young Swan fled from *Cupid's* Altar in the Academy, and fate in his lap, thence fled up to Heaven, it delighted both Gods and Men with its Musick. As *Socrates* [the next day] was relating this to some of his Auditors, *Aristo* came at the same time, and presented his Son *Plato* to him,

to be his Disciple. As soon as *Socrates* saw him, reading in his looks his Ingenuity: Friends, saith he, this is the Swan of *Cupid's* Academy.

Eight years he lived with *Socrates*, in which time, he committed (as others of his Disciples) the effect of his Masters Discourse to Writing: hereof he composed Dialogues, but with so great additions of his own, † that *Socrates* hearing him recite his *Lyfis* cry'd out, Oh! *Hercules*, how many things doth this young Man feign of me? for not a few things (adds *Laertius*) of those which he writ, *Socrates* never spoke.

At the time of *Socrates's* Arraignment, the first year of the 95th Olympiad, he was one of the Senate, the youngest of the Convention. That he was a Senator, implies he was full thirty years old at that time, according to *Solon's* Law. This argues * *Hermodorus* of a mistake, who saith, he was twenty eight years old when he fled to *Megara*, upon the Death of *Socrates*, and subverts the accounts of those who under-reckon his Birth. † The Judges being much displeased with *Socrates*, *Plato* went up into the Orators Chair, intending to Plead in his Defence, and begun thus: *Though I (Athenians) am the youngest of those that come up into this place.* But all the Senate crying out of those who go down, he was thereupon constrained to do so. *Socrates* being Condemned, *Plato* offered him to procure so much Money as might purchase his Liberty, but *Socrates* refused the Offer. * About that time, *Socrates's* Friends being met together to condole his Death, *Plato* encouraged them, and bid them not despair, for that himself was capable to Govern the School: and in so saying, drank to *Apollodorus*, who answered, he would sooner take up the Cup of Poison from the hand of *Socrates*, than Pledge him upon that Condition. Upon the Death of *Socrates*, *Plato* (whose excessive Grief upon that Occasion is observed by † *Plutarch*) with others of his Disciples, fearing the Tyranny of those Persons, who put their Master to Death, * fled to *Euclid* at *Megara*, who friendly entertained them, till the Storm was blown over.

† *Apuleius* saith, that before he came to *Socrates*, he was initiated in the Sect of *Heraclitus*. But more likely is that which is affirmed by *Laertius*, that after *Socrates's* death, he applied himself to *Cratylus*, a follower of *Heraclitus*, and to *Hermogenes*. He conceived, saith * *St. Augustine*, that his own Invention, and *Socrates's* Instructions came short of the true aim of Philosophy: He considered with himself what course he should take to benefit himself most, for this purpose he determined to travel to any place, where report told him he might drink of the Spring of Learning, even to the farthest parts of the Earth, saith † *Cicero*: * First, to *Italy*, where he addicted himself to the Discipline of *Pythagoras*, which, though he saw replenished with curious and high reason, yet, he chiefly affected to imitate the Continence and Chastity thereof, though the † *Pythagorians* themselves affirm he had all his Natural Philosophy from thence.

Perceiving the knowledge of the *Pythagoreans* to be assisted with other Disciplines, he went to *Cyrene*, to learn Geometry of *Theodorus* the

† *Laert.** *Laert.*† *Laert. cit. Socr.** *Athen. deign. lib.*† *De virtut. moral.** *Laert.*† *Dogm. Plat.** *De civ. dei. lib. 8. cap.*† *De fin. 4. Apul. dogm. Plat.*† *Pythag. lib. 2.** *Apul.*

the Mathematician: thence to *Ægypt* (which was then under the Empire of *Artaxerxes Mne-mon*) * under pretence of felling Oyl, but the scope of his Journey was to fetch Astrology from thence: *To learn Arithmetick and Celestial Speculations of the Barbarians*, (saith † *Cicero*) * and to be instructed in the rites of the Prophets. † *He travelled over the Country, informing himself all the way by their Priests, of the multiplicitious proportions of Geometry, and the observation of Celestial Motions. At what time young Students at Athens were enquiring for Plato to instruct them, he was busied in surveying the inexplicable banks of Nilus, the vast extent of a Barbarous Country, and the winding compass of their Trenches, a Disciple to the Egyptian old Men.* * Having taken a full survey of all the Country; he at last settled himself in the Province of *Sais*, learning of the wise men there, what they held concerning the Universe, whether it had a beginning, and whether it is moved at present, wholly or in part, according to Reason. From these, † *Pausanias* affirms, he learn'd the Immortality of the Soul, which that they held, as likewise the transmigration thereof into several bodies, is affirmed by * *Herodotus*. † Some say, that *Enripides* followed him to *Ægypt* and falling sick, was cured by the Priests with Sea-water, whereupon he said,

The Sea doth wash away all ills of Man.

But this agrees not with the time of his death, which was before that of *Socrates*, viz. in the 93th Olympiad.

From *Ægypt* Plato returned to *Tarentum* in Italy, at what time *L. Camillus* and *P. Claudius* were Consuls at Rome, as * *Cicero* affirmeth. What *Fasti* he used, I know not, for in those which are now with us received as authentick, there are no such Consuls during the whole Life of Plato. And indeed, in those times, Rome was for the most part, Govern'd by Tribunes. † Here he conversed with *Eurytus* of *Tarentum*, the Elder, *Archytas* the Elder (at whose discourse concerning Pleasure he was Present) and with the rest of the Pythagoreans, *Echecrates*, *Timæus*, *Acrio* (corruptly in a *Valerius Maximus*, *Ario*) and *Coetus*, *Locrians*. Thus to the Learning of *Socrates* he added that of Pythagoras, and informed himself in those things which *Socrates* neglected: He would have gone also to the *Indians*, and to the *Magi*, but that the Wars which at that time were in *Asia* hindred him.

CHAP. IV.

What Authors he followed.

† *Ugubinus* affirms, that Plato borrowed the mystick part of his Philosophy from *Hermes Trismegistus*: particularly, that concerning the Divine Goodness: which, I suppose, he rather asserts from his own Conjecture, in regard Plato had been long in *Ægypt*, than from any good Authority. He was induced thereunto by those Books, which are now commonly, but falsely, vented under the name of *Hermes Trismegistus*: whereas, the Learned Ca-

Jaubon, in his Exercitations upon *Baronius*, hath sufficiently taught us the Forgery of those Books, which seem by some Impostor, to have been compiled out of the Works of Plato, and the Divine Scripture.

That Plato received some light from *Moses*, is affirmed with much greater Authorities of several Nations and Religions: Of Jews by *Aristobolus*, Plato (saith he) he followed our Law in many things, his various allegations convince him a curious observer thereof: for the Volumes of *Moses* were Translated before Alexander's time. And *Josephus*, Plato chiefly followed our Law-giver. Of Philosophers, by *Numenius*, What is Plato (saith he) but *Moses* speaking Greek? Of Fathers, by *Justin Martyr*, *Clement Alexandrinus*, *Eusebius*, *Theodoret*, *Saint Augustine*, &c.

k When Plato went to Sicily, he bought the Books of *Philolaus*, a Pythagorean, which were three, of Natural Philosophy, the first that ever were published out of that School: Some say, he had them of *Dionysius's* friends, for four *Alexandrian Mine*: Others, that *Dionysius* had them of a young Man, one of *Philolaus's* Disciples, and gave them to Plato. Others, that he sent to *Dion* at *Siracuse* to buy them for him, which he did for 100 *Mine*: *A. Gellius* saith, ten thousand Denaries: For having received of *Dionysius* above eighty Talents, he was very full of Money, Out of these, he is said (as *A. Gellius* and *Laertius* affirm) to have taken a great part of his *Timæus*, for which derided by *Timæon* (in *Sillis*) thus:

*You (Plato) with the same affections caught,
With a great Summ a little Treatise bought,
Where all the knowledge, which you own, was
taught.*

m *Alcimus* in his four Books to *Amintas*, affirms, that Plato borrow'd much from the Writings of *Epicharmus*, the Comick Poet; in the first Book he hath these words: *In Sensibiles* (saith Plato) *neither magnitude nor quality is permanent, but in continual fluxion and mutation: as if we should substract number from them, which are neither equal, nor certain, nor quantitative, nor qualitative; these are they where Generation is always, their Essence never. To Insensibles nothing can be added, nothing taken away. This is the nature of Eternal Beings, the like and same ever.* Thus Plato cited by *Alcimus*. Indeed, he teacheth this in many places, particularly in *Timæo*, where he at large explaineth what is that which never is, and never had beginning, and that which hath beginning but no being. He concludes the first comprehensible, by the intellect with Reason, the other by Sense and Opinion. But the citation of *Alcimus* seems to refer to Plato's *Theætetus*, the subject of which Dialogue is Science: there he examines some Definitions of Science by the Antients, amongst the rest, the assertion of *Protagoras*, that Science is Sense: against which he disputes largely, the sum this: That the Soul apprehends some things by mediation of the Body, others without: of the first kind are things warm, light, dry, sweet, &c. of the other, Essence, and not Being, Similitude and Dissimilitude, Identity and Diversity, Unite and Num-

* Laert.

ber: Hence it follows, that Sense apprehends not Essences, and consequently not Truths, for Essence and Truth are convertible. This assertion of Plato * Alcimus deduceth from Epicharmus, who, (saith he) hath plainly spoken of things subject to Sense and Reason, in these words:

*Gods always were, to be, desisted never,
Like them Eternal, still the same persever.
Chaos the first begotten Deity
Is stil'd: of something, how can nothing be?
Thence not the first nor second nothings are,
How we esteem of those we thus declare:
If we can even or uneven sum
Alter, by adding or subtracting one,
Seems it to you the same? to me not so,
If a continu'd Measure shrink or grow,
It is not the same Measure: such the lives
Of Men are, one decays, another thrives;
That Nature, which new being ever takes
Is different from the being it forsakes,
Not yesterday the same were I and you,
Nor shall to morrow be what we are now.*

† Laert.

† Again, Alcimus, The wise say, that the Soul apprehends some things by mediation of the Body, as when she hears or sees; others, she conceiveth within her self, without using the Body, whence of beings, some are subject to Sense, others, comprehensible by the Intellect. Therefore Plato saith, that they who desire to know the principles of the Universe, must first distinguish the Ideas in themselves, as Similitude, Unity, Multitude, Magnitude, Restauration. Secondly, add in it self, Honest, Good, Just, and the like. Thirdly, examines what Ideas cohere mutually with one another, as Science, Magnitude, Power: and withal, to think that those who are amongst us, because they participate of them, should be called by the same name, as for instance, just things are those which participate of Just, Honest which of Honest: one of every Species is eternal, perceptible by the mind, and consequently free from perturbation. Wherefore, he asserts Idea's in Nature as Exemplars, after whose likenesses other things are made. Thus Alcimus: the first part whereof seems to be taken out of Plato's Theætetus, the latter out of his Parmenides. The words of Epicharmus concerning Gods and Idea's, to which Alcimus refers this of Plato, are these:

*Is Musick then a thing? It is: The Man
Musick? no: what then? a Musician
A Man or not? he is the same of good,
Good from the thing a part is understood:
Whoever learns good by that art is made,
Who Musick, Musician: of each Trade,
As Dancing, Weaving, and the like the same,
The Art, and Artist have a different name.*

* Laert.

* Again, Alcimus: Plato in his Opinion of Idea's saith thus: if there is memory, there must be also Idea's; for Memory is of a quiet permanent thing, but nothing is permanent except Idea's, for how, saith he, could living creatures be preserved unless by their Idea and receiving a natural mind? Now they remember Similitude and their nourishment: shewing that all Creatures have an innate understanding of their own similitude, and therefore perceive things belonging to their kind. Thus

Alcimus: What place of Plato he means I know not, † Scaliger reads, Πλάτων ἐν τῇ περὶ ἰδεῶν ἔκκ. + In Arist. de λήξει φερὶν ἑκαστῶν τῶν ἰδεῶν, ἔκκ. omitting μὴ μὴν, animal. as if he made a doubt whether that both of the Opinions of Idea's were Plato's; but I rather think Alcimus meant not the title of any Book, having named none in the rest of his Citations, but what himself abstracts out of Plato's Opinion concerning Idea's. Plato in Phileto, teacheth this concerning Memory, that Sense is a motion common to the Soul and Body; this Suffering from external Senses, the other acting and dijudicating: that Memory is a conservatory or repository of the Senses. For the Soul, as oft as she in her self, or by assistance of the Body, calls to mind what she hath suffered, she is said to remember. To Plato's assertion, Alcimus applieth this of Epicharmus:

*Eumæus Wisdom's not to one confin'd;
Various in every living knowing Mind.
The Hen first doth not living things beget,
But Sits and Hatches with enlivening Heat:
This Wisdom only Nature's friend discerns,
Of whom (her Mistress) she this Lesson learns.*

And again,

*This is not strange, for every thing we find
Is to its proper Species most inclin'd;
To Dogs a Bitch seems fairest, and to Kine
A Bull, an Ass to Asses, Swine to Swine.*

These things Laertius cites out of Alcimus, adding that there are more of the same kind in those four Books, whereby he intimates the help that Plato received by the writings of Epicharmus, neither was Epicharmus himself ignorant of his own Wisdom, as may be collected from these Verses, Predicting that he should have a Follower:

*This I assert, and what I now maintain,
Shall Monuments to future times remain,
Some one hereafter will my Verse review,
And Cloathing it in Language Rich and New
Invincible himself, others Subdue.*

* Moreover Phavorinus alledgeth the whole * Laert. Form of Plato's Commonwealth in Protagoras's Antilogicks, others say, he borrowed his Politics from Socrates.

† Lastly, it is related, that much of Plato's * Laert. Morality was in the Books of Sophron the Minograph, which having been long neglected, were by him first brought to Athens, and were found lying under his Head, when he was Dead.

C H A P. V.

His School.

* B EING returned to Athens from his Journey * Laert. to Ægypt, he settled himself in the Academy, a Gymnasium or place of Exercise in the Suburbs of that City, beset with Woods, taking Name from Ecademus one of the Heroes, as Eupolis.

In Sacred Hecademus shady walks.

And Timon,

*The fluent sweet-tongu'd Sage first led the way,
Who writes as smoothly as from some green spray
Of Hecademe, Grasshoppers chirp their lay.*

Hence it was first called Ecademy, the occasion of his living here, was, that he was poor and had nothing but one Orchard in or adjoining to the Academy, which was the least part of his Successors. This Orchard at first yielded but three *aurei nummi* of yearly Rent to the Owners, afterwards the whole Revenue amounted to a thousand or more. It was in process of time much enlarged by well-willers, and Studious Persons, who dying, bequeathed by Will something to the Professors of Philosophy, their Riches to maintain the Quiet and Tranquillity of a Philosophical Life. Plato (the Academy being said to be a sickly place, and Physicians advising him to transfer his School to the Lyceum) would not be persuaded, but answered, I would not live on the top of *Athos* to linger my Life. The unwholsomeness of the place brought him to a quartan Ague, which lasted eighteen Months, but at length by sobriety and care he master'd it, and recover'd his strength more perfect than before.

First, he taught Philosophy in the Academy, and after in the Gardens of *Colonus*. At the entrance of his School in the Academy was written, *Let none Ignorant of Geometry enter here*, meant, not only of the Measure and Proportion of Lines, but also of the inward Affections.

CHAP. VI.

How he Instituted a Sect.

HAVING thus settled himself in the Academy, he began out of the Collection he had made from others, and his own invention to institute a Sect, called from the place where he taught, *Academick*. * He mixed the *Heraclitian* Discourses, with the *Socratick* and *Pythagoric*, following in Sensibles *Heraclitus*, in Intelligibles *Pythagoras*, in Politicks *Socrates*. Whereas Philosophy, † faith S. Agustine, concerns either action or contemplation (thence assuming two names, *Contemplative* and *Active*) the *Active* consisting in practice of moral Actions, the *Contemplative*, in penetration of abstruse Physical causes, and the nature of the Divinity; *Socrates* excelled in the *Active*, *Pythagoras* in the *Contemplative*. But Plato joyn'd them into one perfect kind, which he subdivided into three several parts; *Moral*, consisting chiefly in Action, *Natural*, in Contemplation, *Rational* in Distinction of true and false, which tho' useful in both the other, yet belongeth more particularly to Contemplation. So that this Trichotomy contradicts not the other Dichotomy, which includeth all within Action and Contemplation. * And as of Old in a Tragedy, the Chorus Acted alone, then *Thespis* making some intermissions of the Chorus introduc'd one Actor, *Æschylus* a second, *Sophocles* a third: in like manner Philoso-

phy was at first but of one kind, *Phisick*; then *Socrates* added *Ethick*; thirdly, *Plato* inventing *Dialectick*, made it perfect.

Of these three parts as they were held by *Plato*, and the rest of the old Academy, we cannot have a general better account than this of † *Cicero*.

Sect. 1. Ethick.

The first, concerning well-living they sought in Nature, affirming that she ought to be obeyed: and that in nothing else but Nature was to be had that chief good whereto all things should be referred, that the ultimate being of desirable things, and end of all good in the mind, body and life were acquired by Nature. Those of the Body they placed in the whole, and in the parts: Health, Strength, Beauty in the whole; in the parts, sound Sense, and a certain Excellence of particular parts, as in the feet swiftness, strength in the hands, clearness in the voice, in the tongue plainness of expression. Of the mind were those which are proper to comprehend the power of Wit, which they divided into Nature and Manners. To Nature they ascribed quickness of apprehension, and Memory, both proper to the Mind and Wit; To Manners belonged Study and a kind of Wisdom formed partly by a continual Exercise, partly by Reason, in which consisted Philosophy it self, wherein that is begun and not perfected, is called progression to Virtue, what is perfected, Virtue; perfection of Nature of all things in the Mind, the most excellent. Thus of Minds: The adjuncts of Life, that was the third, they asserted such things as conduced to the practice of Virtue.

Sect. 2. Physick.

Of Nature (for that was next) they so treated as to divide it into two things: One the efficient, the other giving it self to this, that, thereof might be made something. In that they conceived to be a power, in this a certain matter to be effected: in both, matter could not cohere, unless contained by some power, nor the power without some matter, for there is nothing which is not enforced to be somewhere: That which consists of both, they called Body and Quality: Of Qualities, some are primary, others arising from these: the primary are uniform and simple; those which arise from these are various, and as it were multiform. Air, Fire, Water, and Earth are primary, of these arise forms of living creatures, and of those things which are made of the Earth. These principles are called Elements, of which Air and Fire have a faculty to move and effect; the other parts, Water and Earth to suffer. To all these there is subjected a certain matter without form, destitute of quality, out of which all things are expressed and formed: It is capable of admitting all; and of changing all manner of ways, in the whole, and in every part: This resolves nothing to nothing, but into its own parts, which are divisible into infinite, there being in Nature no least which cannot be divided. Those which are moved, are all moved by intervals, which intervals likewise may be divided infinitely, and that power which we call quality, being moved and agitated every way, they conceive the whole matter to be thoroughly changed, and by that means those things, which they call qualitative,

to be produced, of which, in all coherent nature continued with all its parts, was effected the World, beyond which there is not any part of Matter or Body: The parts of the World are all things therein, kept together by a sensitive nature, wherein is likewise perfect Reason: It is also sempiternal, for there is nothing more strong whereby it may be dissolved: This power they call the Soul of the World, God, a certain Providence over all things subjected to him, regarding in the first place heavenly things, next on the Earth those things which appertain to Man. The same they sometimes call Necessity, because, nothing can be otherwise than is by him Ordained: a fatal immutable continuation of Eternal Order: sometimes Fortune, as producing many things not foreseen or expected by us, by reason of the obscurity and our ignorance of the Causes.

Seft. 3. *Dialectick.*

Of the third part of Philosophy, consisting in Reason and dissertation, they treated thus. Tho' Judg^{mt} arise from the Sense, yet the Judg^{mt} of Truth is not in the Senses. The Mind they as-
sured to be Judge of things, conceiving her only fit to be credited, because she alone seeth that which is simple, and uniform, and certain: This they called Idea. All Sense they conceived to be ob-
tuse and slow, and no way able to perceive those things which seem subject to Sense, which are so little, as that they cannot fall under Sense, so moveable and various, that nothing is one, constant, nor the same, because all things are in continual alteration and fluxion. All this part of things, they called Opinative: Science they affirmed to be no where but in the Reasons and Notions of Mind, whence they approved definitions of things, and ap-
plied them to all whercon they discoursed. They approved likewise explications of words by Etymo-
gies: They used Arguments and Marks for things, to prove and conclude what they meant to explain: In this consisted all the discipline of Dialectic, that is, of Speech concluded by Reason.

This Account in general *Cicero* gives of the old Academy: *Plutarch*, *Lactantius*, *Apuleius*, and others have made Collections more particular, we shall make choice of that of *Alcinous*, as most full and perfect, which by reason of the length is referred as an Appendix to *Plato's* Life.

CHAP. VIII.

His Inventions.

HE added much to Learning and Language by many Inventions, as well of things as of words. To omit *Dialectick*, of which we treated last, * *Phavorinus* attributes to his invention, *discoursing by way of a Question*: but *Aristotle* ascribes it to *Alexamenus*, a *Stirian* or *Teian*, and it appears by the Dialogues of *Plato*, that *Socrates* also used that form of arguing. *Laertius* informs us, that *Zeno Eleates* was the first composer of Dialogues, yet in my Opinion, saith he, *Plato* hath so much refined the form thereof, that he deserves to be preferred before all others, as well for invention as Reformation.

More properly may be attributed to him the

invention of † *Analytical Method*, which reduceth the thing sought unto its principle, the best of Methods. He taught it to *Leodamas*, and by it found out many things in Geometry: *Analysis*, as defined by the * Scholiast upon *Euclid*, is a * *Lib. 13.* *sumption of the thing sought, by the consequents, (as if it were already known) to find out the truth.* Examples thereof we find in the five first propositions of the 13th Book of *Euclid*, besides several others, that occur in *Apollonius Pergæus*, and *Pappus Alexandrinus*.

Amongst his Geometrical Inventions also must be remembred *the duplication of a Cube*, the occasion and manner whereof is related by † *Plutarch* and * *Philoponus*. The *Delians* afflicted with the Pestilence consulted the Oracle of *Apollo*, he answered, the Plague would cease if they doubled their Altar, which was of a Cubick figure. *Plutarch* saith, that hereupon the Overseers of the Altar, made all the four sides double to what they were before, so instead of doubling the Altar, they made it octuple to what it was. *Philoponus* saith, they caused another Cube of the same bigness with the former to be set upon it, whereby they changed the Figure of the Altar, which was no longer a Cube, but *Δόμῳ*, a quadrilateral Pillar. The first way it was Cubical, but not double; the second way double, but not Cubical. The Plague not ceasing, they consulted the Oracle again. *Apollo* answered, they had not fulfilled his Command, which was to build a Cubical Altar as big again as the former. Hereupon they went to *Plato*, as most skilful in Geometry, to learn of him the Oracle's meaning, and how they should find out the way of doubling a Cube, retaining the Cubick Figure. *Plato* answered, that the God mocked the *Grecians* for their neglect of Philosophy and Learning, insulting over their Ignorance, that he commanded them seriously to addict themselves to Geometry, that this could not be done any other way, than by finding out two mean proportionals between two right Lines in a Duple proportion, (*Plato's* particular Method is delivered by *Eutocius* in his Comment upon the first Proposition of the second Book of *Archimedes de Sphæra & Cylindro*.) He added that *Eudoxus* the *Gnidian*, or *Helico* the *Cyzicene* would do it for them. That the God needed not this duplication of his Altar, but commanded all the *Grecians*, that avoiding War and the Miseries wherewith it is attended, they should apply themselves to the Muses; and having settled the turbulent Commotions of their Minds, converse harmlessly and beneficially with one another. *Philoponus* adds, that *Plato* expounded this Problem to his Disciples, who writ much upon this Subject, though nothing thereof be extant. Of the Antients, laboured in this Problem besides *Plato*, *Archytas* the *Tarentine*, *Menæchmus*, *Eratosthenes* *Philo* of *Byzantium*, *Hero*, *Apollonius*, *Pergæus*, *Nicomedes*, *Diocles*, and *Sporus*: † *Valerius Maximus* saith, that *Plato* remitted the Overseers of the Sacred Altar to *Euclid* the Geometrician, as submitting to his Science and Profession; but this is an Error, because *Euclid* the Geometrician was much later than *Plato*, and the other *Euclid*, *Plato's* Contemporary, nothing eminent in Mathematicks, as

* Plat. 1.

hath been before me observed by Sir * Henry Savile.

That *Plato* invented many other things in the Mathematicks, (more than appears from those Writings of his that are extant) and was most eminent therein, may be argued from the three Books of *Theon Smyrnenus*, the first *Arithmetick*, the second, *Harmonicks*, the last, (not yet published) *Astronomy*. Those Books contained many things, singular and choice, not to be met with elsewhere. The design is acknowledged by the Author, to be as an introduction necessary to the understanding of *Plato's* Writings.

There are also divers words of which he is esteemed to be the first Author, † as *Antipodes*, a word by him first introduced into Philosophy, to signify those People whose feet are diametrically opposite.

* *Στοιχεῖον*, *Element*, until his time was confounded with *ἀρχή*, *Principle*, by all Philosophers from *Thales*. *Plato* distinguish'd them thus, *ἀρχή*, *Principle*, is that which hath nothing before it whereof it might be generated; *στοιχεῖον*, *Elements*, are compounded.

† The word *Poem* also, though since very trivial, was not used by any before him.

* He first used this term, *τὸ ἀπὸ τοῦ πλεονεχὸς*, *oblong number*, [in *Theateto*], thereby signifying the product of a greater number multiplied by a lesser.

† He also first introduced the word *ἐπιφανεία*, † *Laert.* *Superficies*, for which before was used *ἐπιπεδόν*

a *Plane*. Thus *Laertius*, though * *Proclus* implies, that neither *Plato* nor *Aristotle* use the word, but for it, *ἐπιπεδόν* Divine *Plato* saith, he, calls *Geometry*, the contemplation of *Planes*, opposing it to *Stercometry*, as if *Plane* and *Superficies* were the same. So likewise doth *Aristotle*. But *Euclid* and those who succeeded him, make *Superficies* the Genus, *Plane* a Species thereof.

† *θεῶν προνοία*, *Divine Providence*, a Word † *Laert.* since much used by Christians, was first the expression of *Plato*.

* He first of Philosophers wrote against *Lyfias*, Son of *Cephalus*, in *Phaedro*.

† He first considered the force and efficacy of Grammar.

* He first wrote against all that were before * *Laert.* him, whence it is wondred at, that he never mentions *Democritus*.

C H A P. VIII.

His Distinctions.

OF his Distinctions *Aristotle* made this Collection in some pieces not Extant, cited by *Laertius*.

Good is threefold.

{ *In the Soul*, as Justice, Prudence, Fortitude, Temperance, and the like.
 { *In the Body*, as Beauty, good Habit.
 { *External*, as Friends, Prosperity of our Country: Wealth.

Friendship is threefold.

{ *Natural*, which Parents bear to their Children, and Kindred to one another; which kind also is amongst Beasts.
 { *Sociable*, begotten by conversation, without any Relation of Kindred; such as was that betwixt *Pylades* and *Orestes*.
 { *Hospitable*, towards Guests, or wherewith we affect Strangers even upon Letters of Recommendation.
 { Some add a fourth kind, *amatory*

Government is of five kinds.

{ *Democratical*: a Democracy is that wherein the People Rules and have power to make Magistrates and Laws.
 { *Aristocratical*: an *Aristocracy* is that wherein neither Rich nor poor nor Nobles Govern, but the best Persons of the whole City.
 { *Olygarchical*: An Oligarchy is when Governors are Elected by the Votes of Magistrates, for they are fewer than the Poor.
 { *Eleotive by Law*: as that of the *Carthaginians*: for it is Civil.
 { *Regal*: { *Successive in a Family*; as that of the *Lacedaemonians* and *Macedonians* who confine themselves to a certain Race.
 { *Tyrannical*, Tyranny is that wherein Men are brought to Subjection either by Fraud or Force.

Justice is threefold.

{ *Towards the Gods*: they who Sacrifice as the Law requires, and perform the Divine Rites, are just towards the Gods.
 { *Towards Men*: They who restore what was lent or committed to their Trust, are just towards Men.
 { *Towards the Dead*: They who take care of Sepulchres are just toward the dead.

Science is threefold.

{ *Practice*, as playing on the Flute, Lute, and the like; which affect nothing visible.
 { *Mechanick*, As Architecture of Houses, Ships, or the like: which produceth a visible effect.
 { *Theoretick*, as Geometry, Harmonick Astronomy, which act not, neither produce any thing. The Geometrician considers the proportion of Lines to one another, Harmonick sounds: Astronomy, Stars, and the World.

- Medicine* is of five kinds. { *Pharmaceutick*, cureth Diseases by application of Medicine.
Chyrurgick, by incision or cauterising.
Dietetick, by Diet.
Nosognomonick, discerns Diseases.
Boethetick, removeth Diseases.
- Law* is two-fold. { *Written*: such are those by which States are Governed.
Not written, grounded upon Custom; as that no Man shall go naked into the *Forum*, habited like a Woman, is not forbidden by any written Law, but forborn because of the unwritten.
- Speech* is of five kinds. { *Political*, used in Orations by such as Govern States.
Rhetorical, used by Lawyers in Pleading either to Confirm, Praise, Dispraise, or Accuse.
Vulgar, used by People in common Discourse.
Dialectical, used by such as discourse in short questions and answers.]
Artificial, used by Tradesmen in their several Professions.
- Musick* is three-fold. { Of the Voice only.
Of the Voice and Hands, as singing to the Lute.
Of the Hand only, as the Harp.
- Nobility* is of four kinds. { If the Predecessors were upright, just, and honest.
If the Predecessors were Rulers of Princes.
If the Predecessors acquired Honours, as the Command of an Army, or were Crown'd in Publick Games: those who are descended from such as we call Noble.
If a Man be endued with a Generous Mind; this is the best kind of Nobility.
- Beauty* is three-fold. { *Commendable*, as a fair form.
Useful, as an Instrument, House, or the like.
Beneficial, as all that belongs to institution of Laws.
- The Soul* hath three parts. { *Rational*, the Principle whereby we Judge, Discourse, and the like.
Concupiscible, whereby we desire meat, coition, and the like.
Irascible, whereby we are emboldned, joyed, grieved, enraged.
- Perfect Virtue* hath four kinds. { Wisdom, the Principle of doing things right.
Justice, the Principle of doing things equal in private Conversation and Publick Affairs.
Fortitude, the Principle of not flying Danger through Fear, but meeting it.
Temperance, the Principle of subduing Desires, and yielding to no Pleasures, but living Moderately.
- Government* is of five kinds. { *By Law*: Those who are chosen Magistrates in a City Governed by Law
By Nature: The Males not only of Mankind, but of most other Creatures are predominant over the Females by Nature.
By Custom, as that which Masters have over their Disciples.
By Descent, as the *Lacedæmonian* Kings, who succeed out of one Family: and in *Macedonia* they use the same Custom.
By Force, as those who Rule a Kingdom against the will of the People.
- Of Rhetorick* are six kinds. { *Adhortation*, as when we perswade a War against any.
Dehortation, as when we dissuade from War.
Accusation, when we declare that we have been injured by one whom we prove cause of our Misfortune.
Defence, When a Man proves he did not any Injury or Offence.
Encomium, when we speak well of another.
Vituperation, when we declare a Man to be wicked.
- Of Right Speaking* are four kinds: when we speak { *What is requisite*: those things which will benefit both the hearer and speaker.
As much as is requisite: if we speak neither more nor less than concerns the business.
To those to whom it is requisite: as when we speak to old men that have done amiss in such terms as are fit for old Men, or to young as becomes young.
When it is requisite: neither too soon nor too late; for if that be not observed, nothing can be spoken aright.

Beneficence is of four kinds. { *In Wealth*, when we relieve the wants of any according to our Means.
In Body, when we succour those who are benten.
In Knowledge, when we instruct, cure, teach any good.
In Speech, he, who pleadeth in defence of another, helpeth him in words.

The end of things is of four kinds. { *Legal*, imposing an end to things by Decree.
Natural, such as days, years, and hours have.
Artificial, as the building of a House.
Accidental, by chance, unexpected.

Of Powers are four kinds. { One *in the mind*, to think and conjecture.
 Another *of the Body*, to walk, give, receive, and the like.
 A third, consisting in a Multitude of Souldiers, and store of Wealth, in which respect, Princes are called Powerful.
 The fourth, as to suffer good or evil to be done to us; as as to be capable of Sicknes, Learning, Health or the like.

Of Humanity are three kinds. { *In Calling*, as those who call all they meet, and salute them, taking them by the hand.
In relieving, in relieving the misfortunes of another willingly.
In Feasting and Conversation.

Felicity is divided into five parts. { *Prudent Counsel*, acquired by Learning and Experience.
Soundness of Senses, consisting in the parts of the Body, as to see with the Eyes, to hear with the Ears, to smell and taste.
Prosperity of Affairs, when those things which a Man intendeth, he performeth fully.
Good Reputation, among Men, when a Man is well spoken of.
Plenty of Riches, and things necessary to Life, so as to be able to supply Friends, and to perform Works of publick Magnificence: He who hath all these five kinds is perfectly Happy.

Arts are of three kinds. { The first diggeth out Metals, and fells Wood.
 The second gives variety of shape to things, as Wood-work and Iron-work,
 The third maketh use of these, as Horsemanship of Bridles, Souldiery of Arms, Musick of Instruments.

Good is of four kinds. { One, as when we call a Man good from his proper goodness.
 A second, as we call Virtue and Justice it self good.
 A third, as we say, Food, Exercise, and Medicines are beneficial.
 The fourth good we call the act of playing on Musick, or acting in a Play.

Of things some are { *Ill*, always capable to do Hurt, as Ignorance, Imprudence, Injustice and the like.
Good, the contrary to the former.
Indifferent, which sometimes may benefit, sometimes hurt, as walking, sitting, eating; or cannot do hurt at all, being neither good nor bad.

Good Government is threefold. { If the Laws be good.
 If the Laws be well kept.
 If without Laws the People live orderly by custom.

Ill Government is threefold. { If the Laws be bad for Natives and Foreigners.
 If the Laws in being are not observed.
 If there are no Laws at all.

Contraries are of three kinds. { *Good to ill*, as Justice to Injustice, Wisdom to Imprudence, and the like.
Ill to Ill, as Prodigality to Avarice, unjust Torments to just.
Neither to neither, as heavy to light, swift to slow, black to white.

Good is of three kinds. { Some we have, as Justice and Health.
 Of some we participate, as Good it self cannot be had, but may be participated.
 Some are Fixt, which we can neither have, nor participate, as to be virtuous and just.

Consultation is threefold.	{ From the Past, by Example; as what befell the <i>Lacedemonians</i> through over- much Confidence.	
	{ From the Present, as considering the Timorousness of Men, weakness of Walls, scarcity of Provision, and the like.	
	{ From the Future, as that Ambassadors should not be injured upon Suspicion, lest it cast Infamy upon all <i>Greece</i> .	
Voice is	{ Animate, of living Creatures.	{ Articulate, of Men.
	{ Inanimate, Sounds and Noise.	{ Inarticulate, of Beasts.
Things are	{ Divisible, compounded as Syl- lables, Symphonies, living creatures, Water, Gold.	{ Homogeneous, consist of similar parts, dif- fering from the whole only in number, as Water, Gold, and all liquid things.
	{ Indivisible, compounded of no- thing, as a point, sound.	{ Heterogeneous, consist of dissimilar parts.
Things are	{ Absolute, requiring nothing else to express them, as a Man, a Horse, and other creatures.	
	{ Relatives, which imply another thing, as greater- (than others) swifter, fairer, and the like; for what is greater relates to something lesser, and the like.	

These according to *Aristotle* were *Plato's* divisions of first things.

CH A P. IX.

His three Voyages to Sicily.

Plato made three Voyages to *Sicily*; the first to see the fiery ebullitions of *Ætna*, † and to improve the knowledge of States, and Philosophy, which he got by his other Travels; This was about the 40th year of his age, * at what time *Dionysius* the elder, Son of *Hermocrates*. Reigned in *Syracuse*; † *Plutarch* saith, he was led thither by Providence, not Fortune, and that some good Genius, designing afar off the Liberty of the People of *Syracuse*, brought him acquainted with *Dion* then very young, who entertained him as his † Guest: He much disliked the Luxury of that place, Feasting, Nocturnal Lucubrations and the like; conversed frequently with *Dion*, discoursed with him of those things which were best in Man, and with his best Arguments exhorted him thereto: by which he seemed to lay grounds for the subversion of that Tyranny, which afterwards hapned; * *Dion*, though young, was the most ingenious of all *Plato's* followers, and most eager in pursuit of Virtue, as appears as well by the Testimony of *Plato*, as his own Actions. Tho he had been brought up by the King in an effeminate Luxurious kind of Life; yet as soon as he tasted of Philosophy, the guide to Virtue, his Soul was inflamed with love thereof, and from his own Candor and Ingenuity was perswaded that *Dionysius* would be no less affected therewith: And therefore desired him when he was at leisure, to admit and hear *Plato*: Hereupon the Tyrant sent for him, at that meeting all their Discourse was concerning Fortitude: *Plato* affirmed none was further from that Virtue than a Tyrant, and, proceeding to speak of Justice, asserted the Life of the Just to be Happy, of the Unjust, Miserable. *Dionysius* was displeased at this Discourse (as reflecting upon himself) and with the standers by for approving it, at last, much exasperated, he asked *Plato* why he came

into *Sicily*? *Plato* answered, to seek a good Man: It seems, reply'd *Dionysius*, you have not yet found him. *Laertius* saith, *Plato* Disputed with him concerning Tyranny, affirming, that is not best which benefits our selves, unless it be excellent also in Virtue; whereat *Dionysius* incensed, said to him, your discourse favours of old age: and yours, answered *Plato*, of Tyranny. *Dionysius*, enraged, commanded him to be put to Death: I will have, said he, your head taken off: At which words *Xenocrates* being present, answered, He that doth it must begin with mine: but *Dion* and *Aristomenes* wrought with him to revoke that Sentence. *Dion* thinking his Anger would have proceeded no farther, sent *Plato* away at his own request in a Ship which carried *Pollis* (whom *Laertius* calls *Polis*, *Ælian*, *Pôlis*,) a *Lacedemonian* Captain (who at that time had been sent to Embassador to *Dionysius*) back to *Greece*: *Dionysius* secretly desired *Pollis* to kill him whilst he was on Ship-board; or if not, by all means to sell him, alledging, it would be no injury to *Plato*, for he would be as Happy in Bondage as at Liberty, as being a just Man. Some affirm the occasion of *Dionysius* his Anger was, because, that when he asked what was the best Brags, *Plato* answered, that whereof the Statues of * *Aristogiton* and *Harmodius* were made. Others, that it was because he was overmastered in Learning. But *Tzetzes* rejecting these as idle Fictions of Philosophers, and Falsifiers, affirms the true Reason to have been, that he perceived, he advised *Dion* to possess himself of the Kingdom: *Pollis* Transported him to *Ægina*; there *Charmander*, Son of *Charmandrites*, accused him, as meriting Death, by a Law they had made, that the first *Athenian* that should come to that Island, should, without being suffered to speak for himself, be put to Death: Which Law, as *Phavorinus* affirms, he himself made. One that was present, saying in sport, he is a Philosopher, they set him at liberty: Some say, they brought him to the publick Assembly, to plead for himself, where he would not speak a word, but underwent all with a great Courage. Then they altered their intent

intent of putting him to death, and agreed to sell him for a Slave. *Plutarch* saith, that upon a decree of the *Æginetae*, that all the *Athenians* taken in that Island, should be sold for Slaves; *Pollis* sold him there; *Anniceris*, a *Cyrenaick* Philosopher, being accidentally present, redeemed him for twenty, or as others, thirty *Mine*, and sent him to *Athens* to his Friends; they immediately return'd the Money to *Anniceris* but he refused it, saying they were not the only persons concerned in *Plato's* welfare: Some say, *Dion* sent the Money, which he would not accept, but bought therewith a little Orchard in the Academy. *Pollis* was defeated by *Chabrias*, and afterwards drowned in *Elice*. The report goes that an Apparition told him, he suffered those things for the Philosophers sake. *Dionysius* understanding what had happened, writ to *Plato*, to desire him not to speak ill of him; *Plato* returned answer, that he had not so much time vacant from Philosophy, as to remember *Dionysius*. To some detractors who upbraided him, saying, *Dionysius* hath cast off *Plato*; no, saith he, but *Plato* *Dionysius*.

Dion continued to live, not according to the ordinary luxury of the *Sicilians* and *Italians*, but in vertue, until *Dionysius* died, for which maligned by those who lived after Tyrannical institutions. Then considering, that these documents were not practised by himself alone, but by some others, though few, he entertained a hope, that *Dionysius*, the younger, who succeeded his Father in the Government, might become one of those, to the extraordinary happiness of himself, and the rest of the *Sicilians*: To this end he used many exhortations to invite him to Vertue, intermixed with some Sentences of *Plato*, with whom *Dionysius*, upon this occasion, became extremely desirous to be acquainted: To that effect, many Letters were sent to *Athens* to him, some from *Dionysius*, others from *Pythagoreans* in *Italy*, desiring *Plato* to go to *Syracuse*, who, by prudent counsel might govern the young Man, transported by his own power to Luxury. *Plato*, as himself affirmeth, fearing to be thought a Person only of words, and not willing to engage in action, and withal, hoping, by purging one principal part, to cure the disease of all *Sicily*, yielded; *Laertius* saith, upon a promise made to him by *Dionysius*, of a place and People that should live according to the Rules of his Commonwealth; which he made not good. Hence *Athenaus* accused *Plato* of Ambition. In the mean time the Enemies of *Dion* fearing a change in *Dionysius*, perswaded him to call home from Banishment *Philistius* (a person very rational, but educated in Tyrannical Principles) as an Antidote against *Plato's* Philosophy; but *Dion* hoped, the coming of *Plato* would regulate the licentious Tyranny of *Dionysius*.

Plato at his arrival in *Sicily*, (placed by *A. Gellius*, betwixt the beginning of *Philip's* Reign, four hundred years from the building of *Rome*, and the *Charonean* fight) was received by *Dionysius* with much respect: One of the King's magnificent Chariots stood ready to receive him as soon as he landed, and carried him to the Court. The King offered Sacrifice to the Gods for his coming, as a great blessing upon his go-

vernment. The temperance of their Feasts, alteration of the Court, meekness of the King, gave the *Syracusians* great hopes of Reformation: The Courtiers addicted themselves to Philosophy so much, that the Palace was full of Sand (wherein they drew Geometrical figures) not long after *Plato's* coming, at a Sacrifice in the Castle, the Herald, according to the usual manner, made a solemn Prayer, that the Gods would long preserve the Kingly Government: *Dion* standing by, said, *Will you never give over praying against me?* This troubled *Philistius* and his Friends, who feared *Plato* would insinuate into the favour of *Dionysius* so much, as that they should not be able to oppose him, since in so short time, he had effected so great an alteration in him: Hereupon they all jointly accused *Dion*, that he wrought upon *Dionysius*, by the eloquence of *Plato*, to resign his Government that it might be transferred to the Children of his Sister, to quit his command for the Academy, where he should be made happy by Geometry, resigning his present happiness to *Dion*, and his Nephews. With these and the like Instigations, *Dionysius* was so incensed, that he caused *Dion* to be unexpectedly carried on Shipboard in a little Bark, giving the Mariners order to Land him in *Italy*. This happened four Months after *Plato's* coming. * *Plato*, and the rest of *Dion's* Friends, feared to be put to some punishment, as partakers of his offence. A report was raised, that *Plato* was put to death by *Dionysius*, as Author of all that happened: but, on the contrary, *Dionysius* doubting, lest something worse might happen from their fear, treated them all kindly, comforted *Plato*, bid him be of good cheer, and intreated him to stay with him: † He caused him to be lodged in his Castle, * in the Orchards adjoining to his Palace, where not the Porter himself could go out without *Dionysius's* leave; thus cunningly, under pretence of Kindness, he watch'd him, that he might not return into *Greece*, to give *Dion* notice of the wrong done to him. *Dionysius* by frequent conversation with *Plato* (as wild Beasts are tamed by use) fell into so great liking of his discourse, that he became in love with him; but, it was a Tyrannical affection, for, he would not that *Plato* should love any but him, offering to put the power of the Kingdom into his hands, if he would value him above *Dion*. With this passion, troublesome to *Plato*, *Dionysius* was sometimes so far transported, as Men jealous of their Mistresses, that he would upon the sudden fall out with him, and as suddenly be reconciled, and ask him pardon. He had indeed a great desire of *Plato's* Philosophy, but a great respect likewise on the other side for those who dissuaded him from it, telling him, that it would ruin him to be too far engaged therein. * In the mean time there hap-

Plato

Plato endeavoured to effect; he instructed Dion in Philosophy, in the Academy: Dion lay in the City at the House of Calippus, with whom he had been long acquainted. He purchased a Country House for Pleasure, whither he sometimes went; this he bestowed afterward, at his return to Sicily, upon Speusippus, with whom he conversed most intimately, as being so advised by Plato, who knew the cheerful humour of Speusippus to be a fit divertisement for the reserved disposition of Dion. Plato had undertaken the expence of some Plays and Dances by some Youths; Dion took the pains to teach them, and paid the whole charge: By this liberality which Plato suffered him to confer upon the Athenians, he gained more Love than Plato Honour.

In the mean time, Dionysius, to acquit himself of the disesteem he had gained amongst Philosophers in Plato's Cause, invited many Learned Men, and in a vain Ostentation of Wisdom, applied improperly the Sentences he had learned of Plato: Hereupon he began to wish for Plato again, and to blame himself, for not knowing how to use him well when he had him, and that he had not learned so much of him as he might: and being like a Tyrant transported with uncertain passions and changes, a sudden vehement desire came upon him of seeing Plato again. The peace being now concluded, he sent to Plato to come to him (but not (as he had promised) to Dion) writing to him, that he would have him to come immediately, and that afterwards he would send for Dion. Hereupon Plato refused to go, notwithstanding the intreaties of Dion; alledging for excuse his old Age, and that nothing was done according to their agreement. In the mean time, Architas, whom, with others of Tarentum, Plato, before his departure, had brought into the acquaintance of Dionysius, came to Dionysius; there were also others there, Auditors of Dion. Dionysius being refused upon a second Invitation, thought his Honour deeply concerned, and thereupon sent the third time a Gally of three banks of Oars († trimmed with Fillers) and other Ships, and with them Archidemus, whom he conceived Plato most affected of all his Friends in Sicily, and some Sicilian Noblemen: * He had by all means obliged Archytas the Pythagorean, to let Plato know, he might come without danger, and that he would engage his word on it. † As soon as they came to Plato, they all protested, that Dionysius was much inclined to Philosophy, and delivered an Epistle from him to this effect:

Dionysius to Plato.

(After the accustomed way of Preface) *Nothing (saith he) should you do sooner, than come to Sicily at my request. First, as concerning Dion, all shall be done as you will; for I think you will only moderate things, and I will condescend: But, unless you come, you shall not obtain any thing which you desire for Dion, nor in any thing else, not in those which chiefly concern your own particular.*

* Other Epistles were sent from Archytas, and other Italians and Tarentines, praising

Dionysius for his love of Learning; adding, that if Plato came not, it would reflect upon his Friends, as well as on himself. † Many Letters and Intreaties were sent to Dion, from his Wife and Sister: * to these were joyned the importunities of some Friends of Plato's at Athens, † infomuch that Dion brought it to pass, that Plato (* lest he should desert him and the Tarentines,) yielded to Dionysius, without any excuse; and, as he writeth himself, was driven the third time to the Sicilian Straits,

Once more Charybdis dangers to essay.

At his arrival in Sicily, Dionysius met him with a Chariot, drawn by four white Horses, † whereinto he took him, and made him sit, whilst himself plaid the Coach-man: whereupon a facetie Syracusan, well vers'd in Homer, pleased with the sight, spoke these Verses out of the Iliads, with a little alteration:

The Chariot groc'n'd beneath its weight,
Proud that the best of Men there fate.

And as Dionysius was much joyed at his coming, so were the Sicilians put in great hopes, being all desirous, and endeavouring, that Plato might supplant Philistus, and subvert Tyranny by Philosophy: The Ladies of the Court entertained Plato with all Civility; But above all, Dionysius seemed to repose more Confidence in him, than in any of his Friends; for, whereas he was jealous of all others, he had so great respect for Plato, that he suffered him only to come to him unsearched (* though he knew him to be Dion's intimate Friend) and offered him great sums of Money, but Plato would not accept of any: († yet Onetor saith he received eighty Talents of him, wherewith enriched, he purchased the Books of Philolaus) whence Aristippus the Cyrenean, who was at the same time in the Court, said, Dionysius bestowed his Bounty on sure grounds; he gives little to us who require much, and much to Plato who requireth nothing. And being blamed that he received Money of Dionysius, Plato. Books, I want Money, saith he, Plato Books. So untrue it is, as * Xenophon asperseth him, that he went thither to share in the Sicilian Luxury: Or, as † Tzetzes, that he studied the art of Cookery, and lived with Dionysius as his Pensioner and Parasite. So far was he from any Sordid Compliance, that at a Feast, * Dionysius commanding every one to put on a Purple Gown, and Dance, he refused, saying,

I will not with Female Robe disgrace
My self, who am a Man, of Manly Race.

Some likewise ascribe this to him, which others to Aristippus; that Dionysius saying,

Who ere comes to a Tyrant, he
A Servant is, though he came free.

He answered immediately,

No Servant is, if he came Free.

† Plato.

Plat. Epist.
Plat.

† Plato, after a while, began to put Dionysius in mind of the City he had promised him to be governed by his rules; but Dionysius retracted his Promise: He moved him also in the behalf of Dion; Dionysius at the first delayed him, afterwards fell out with him, but so secretly, that none saw it, for he continued to confer as much honour on him as he could possibly, thereby to make him forsake his Friendship to Dion. Plato from the beginning perceived there was no trust to be reposed in what he said or did, but that all was deceit; yet concealed that thought, and patiently suffered all; pretending to believe him. Thus they dissimulated with each other, thinking they deceived the Eyes of all Men besides; Heraclion of Cyzicum, a Friend of Plato, foretold an Eclipse of the Sun, which falling out according to his Prediction, the Tyrant much honoured him, and gave him a Talent of Silver: Then Aristippus jesting with other Philosophers, said he could tell them of a stranger thing that would happen; they desiring to know what that was. I foretel, saith he, Plato and Dionysius will be at difference ere long; and it came to pass. * Dionysius detained Dion's Rent which he used to send yearly to him to Peloponnesus, pretending he kept it for his Nephew, Dion's Son. Plato discontented hereat, desired he might go home, saying, he could not stay, Dion being used so ignominiously: Dionysius spoke kindly to him, desiring him to stay: He thought it not convenient to let Plato go so soon to divulge his actions; but being not able to prevail with him, he told him, he would provide a means for his passage; Plato had designed to go with the Passage-boats; Dionysius seeing him bent upon his Voyage, the next day spoke thus kindly to him; That the differences betwixt Dion and me may be composed, I will for your sake condescend thus far, Dion shall receive his Revenues living in Peloponnesus, not as a banished person, but as one that may come hither when he and I, and you his friends shall think convenient. The Trustees for this business shall be your self, and your, and his Friends who live here; Dion shall receive his Rents, but through your hands, otherwise I shall not dare to trust him; in you and yours I have more confidence; stay for this reason a Year here, and then you shall carry along with you his Money, wherein you will do Dion a great Courtesy. To this Plato, after a days deliberation consented; and writ to that effect to Dion; but as soon as the Ships were gone, that Dionysius saw he had no means to get away, forgetting his promise, he made sale of Dion's Estate.

Plat. Epist. 7.

† At this time happened a Mutiny amongst the Soldiers of Dionysius, of which Heraclides a friend of Plato's was reported the Author: Dionysius laid out to take him, but could not light on him: Walking in his Garden he called Theodotes to him; Plato being accidentally walking there at the same time; after some private Discourse with Dionysius, Theodotes, turning to Plato, Plato, saith he, I persuade Dionysius that I may bring Heraclides to him to answer the Crimes wherewith he is charged, and then if Dionysius will not suffer him to live in Sicily, that he at least permit him to take his Wife and Children along with him to Peloponnesus, and live there, and

whilst he shall not plot any thing against Dionysius, that he may there enjoy his Revenues. With this assurance I have sent to Heraclides, and will send again to him to come hither; but if he come either upon the first or second notice, I have made an agreement with Dionysius, and obtained a promise from him that he shall receive no harm, either in or without the City; but, if he be so resolved, that he send him away beyond the Confines of this Country until he shall be better satisfied with him; Do not you Dionysius consent hereto, saith he? I do, answered Dionysius, neither shall he be in your House, shall he receive any prejudice. The next day (about twenty days before Plato left Sicily) came Euribius and Theodotes to Plato in much haste and trouble; Plato, said Theodotes, you were Yesterday present at the agreement betwixt Dionysius and me, concerning Heraclides. I was so, answered Plato, but since, continues Theodotes, He hath sent out Officers to apprehend him, and I fear he is somewhere very nigh; therefore go along with us to Dionysius, and let us use our utmost endeavour with him: They went; when they came before him, Plato (the rest standing silent by, and weeping) began thus, These Men, Dionysius, are afraid lest you should do something against Heraclides contrary to the agreement you made Yesterday, for I suppose he is come near hereabouts. Dionysius at this grew angry, his Colour often changed with Rage; Theodotes fell at his Feet, and taking him by the hand, besought him not to do any such thing: Plato continuing his Speech; Be of good cheer, saith he, Theodotes, for Dionysius will not do any thing contrary to the promise he made yesterday. Dionysius looking severely upon Plato, to you saith he, I made no promise; Yes by the Gods answered Plato, you promised not to do those things which Theodotes now beseecheth you not to do. Archedemus and Aristocratus being present; he told Plato (as he had done once before, when he interceded for Heraclides,) That he cared for Heraclides and others more than for him: and asked him before them whether he remembered that when he came first to Syracuse, he counselled him to restore the Grecian Cities? Plato answered, he did remember it, and that he still thought it his best course, and withal asked Dionysius whether that were the only counsel he had given him? Dionysius returned an angry contumelious Reply, and asked him, laughing scornfully, whether he taught him those things as a School-boy. To which Plato answered, You well remember: What, replies he, as a Master in Geometry, or how? Plato forbore to reply, fearing it might occasion a stop of his Voyage; but immediately went away; Dionysius resolved to lay wait for Heraclides; but he escaped to the Carthaginian Territories.

From this displeasure against Plato, Dionysius took occasion to forbear to send for Dion's Money; and first sent Plato out of his Castle, where, till then, he had lain next the Palace, pretending that the Women were to celebrate a Feast ten days in the Gardens where he dwelt; For that time he commanded Plato to live without the Castle with Archedemus; during which time Theodotes sent for him, and complained to him of Dionysius's Proceedings. Dionysius receiving Information that Plato had

gone to *Theodotes*, took a new occasion of displeasure against him, and sent one to him, who asked him whether he had gone to *Theodotes*. *Plato* acknowledged that he had, then, faith the Messenger, *Dionysius* bad me tell you, you do not well to prefer *Dion* and his Friends before him. Never from that time did he send for *Plato* to the Court, looking upon him as a profest friend to *Theodotes* and *Heraclides*, and his profest Enemy : * *Plato* lived without the Castle amongst the Soldiers of the Guard : who, as *Dionysius* well knew, had born him ill-will long and sought to murder him, because he counsell'd *Dionysius* to give over the Tyranny, and live without a Guard. † Some, who came to visit him, gave him notice that Calumnies were spread against him amongst the Soldiers * as if he excited *Dion* and *Theonides* to restore the Island to Liberty, and that some of them threatned, when they could light upon him to kill him. Hereupon *Plato* began to think of some means of Escape, which he effected in this manner ; He sent to *Archytas* at *Tarentum*, and to other Friends, advertising them of the danger wherein he was ; They, under pretence of an Embassy in the name of the Country, sent *Lamiscus* (whom *Laertius* calls *Lamiscus*) one of their Party with a Galley of three Banks of Oars to redemand *Plato*, declaring that his coming to *Syracuse* was upon the Engagement of *Archytas* : His Letter was to this Effect.

Archytas to *Dionysius*, Health.

WE all *Plato's* Friends, have sent *Lamiscus* and *Photides* to re-demand the Man according to your agreement with us : You will do well to consider with what importunity you prevail'd with us to invite *Plato* to you, promising to yield to all things, and to give him liberty to go and come at his pleasure ; remember how much you prized his coming, and preferred him before all others : If there hath hapen'd any difference betwixt you, it will besit you to treat him courteously, and restore him safe to us. This if you do, you will do justly, and oblige us.

† *Plutarch* vit. *Dion*.

† *Dionysius* to excuse himself, and to shew he was not angry with *Plato*, feasted him magnificently, and then sent him home with great Testimonies of Affection : One day amongst the rest he said to him, I am afraid, *Plato*, you will speak ill of me when you are amongst your friends The Gods forbid, answered *Plato* smiling, they should have such scarcity of matter in the Academy, as to be constrained to discourse of you. *Dionysius* at his departure, desired him to find out whether *Dion* would be much displeased if he should dispose of his Wife to another, there being at that time a report that he did not like his match, and could not live quietly with his Wife. *Plato* in his return came to *Peloponnesus*, at what time the Olympick Games were celebrated ; where the Eyes of all the *Grecians* were taken off from the sports, and fixed upon him as the more worthy object : Here he found *Dion* beholding the Exercises, to whom he related what had happened. *Dion* protested to revenge the discourtesie of *Dionysius* towards *Plato*, from which *Plato* earnestly dissuaded him : Being

come home to *Athens*, he wrote to *Dionysius*, and gave him a plain account of every thing, but that concerning *Dion's* Wife, he set it down so darkly, that he alone to whom the Letter was directed, could understand him ; letting him know that he had spoken with *Dion* about the business which he knew, and that he would be very much displeased if *Dionysius* did it : So that at that time, because there was great hopes of Reconciliation between them, the Tyrant forbore a while to dispose of his Sister *Arete*, *Dion's* Wife, as soon after, when he saw the Breach irreconcilable, he did, Marrying her against her will to one of his Friends named *Timocrates*. *Dion* thence-forward prepared for War against *Plato's* advice, who endeavoured to dissuade him from it, as well for respect of *Dionysius's* good reception of him, as for that *Dion* was well in years ; though *Ælian* saith, he put *Dion* upon that War ; which *Plutarch* imputes to the instigations of *Speusippus*.

CHAP. X.

His Authority in Civil Affairs.

AT home he lived quietly in the Academy, * not engaging himself in publick affairs ; * *Laert.* (though he were a person very knowing therein, as his Writings manifest,) because the *Athenians* were accustomed to Laws different from his Sense.

† His Fame spreading to the *Arcadians*, and † *Ælian* vii. *Thebans*, they sent Ambassadors earnestly to request him to come over to them, not only to instruct their young Men in Philosophy, but which was of higher concernment, to ordain Laws for *Megalopolis*, a City then newly built by the *Arcadians*, upon occasion of the great defeat given them by the *Lacedemonians*, in the first year of the 103d Olympiad. *Plato* was not a little pleased at this Invitation, but asking the Ambassadors how they stood affected to a parity of Estates, and finding them so averse from it, as not to be by any means induced thereto, he refused to go : but sent *Aristonimus* his familiar friend.

The *Cyreneans* likewise sent to him, desiring him to send them Laws for their City, but he refused, saying, it was difficult to prescribe Laws to Men in Prosperity. *Plutarch* ad princip. *in* *rudit.*

Yet to several People upon their Importunities he condescended.

To the *Syracusians* he gave Laws upon the ejection of their King :

To the *Cretans* upon their building of *Magnesia*, he sent Laws digested into twelve Books.

To the *Ilions* he sent *Phormio* ; to the *Pyrreans*, *Mededimus* (his familiar friends) upon the same design.

This is enough to justify him against those who * accuse him of having written a form of Government, which he could not perswade any to practise, because it was so severe : And that the *Athenians*, who accepted the Laws of *Draco* and *Solon*, derided his. *Athen.*

CHAP. XI.

His Vertues and Moral Sentences.

* **H**E lived single, yet soberly and † chastly, infomuch as in his old Age (in compliance with the vulgar opinion) he Sacrificed to Nature, to expiate the crime of his continence. So constant in his composure and gravity, that a Youth brought up under him, returning to his Parents; and hearing his Father speak aloud, said, *I never found this in Plato.* He eat but once a day, or it the second time, very sparingly; he slept alone, and much discommended the contrary manner of Living. Of his Prudence, Patience, Magnanimity, and other Vertues, there are these instances.

* *Antimachus* a Colophonian, and *Niceratus* a Heracleot, contending in a Poetick Panegyrick of *Lysander*, the prize was bestowed upon *Niceratus*: *Antimachus* in anger tore his Poem; *Plato*, who at that time was young, and much esteemed *Antimachus* for his Poetry, comforted him, saying, *Ignorance is a Disease proper to the Ignorant, as Blindness to the Blind.*

† His Servant having offended him, he bad him put off his Coat, and expose his Shoulders to be beaten, intending to have corrected him with his own hand; but perceiving himself to be angry, he stopt his hand, and stood fixt in that posture; a Friend coming in asked him what he was doing, *Punishing an angry Man*, saith he.

* Another time being displeased at his Servant for some offence, *Do you* (saith he to *Speusippus* (or as *Laertius* to *Xenocrates*) accidentally coming in) *beat this Fellow, for I am angry.* And another time to his Servant he said, *I would beat thee if I were not angry.* † Fearing to exceed the limits of Correction, and thinking it unfit the Master and Servant should be alike faulty.

* *Chabrias* the General being arraigned for his Life, he alone shewed himself on his side, not one of the Citizens else appearing for him. *Crobulus* the Sycophant met him, accompanying *Chabrias* to the Tower, and said unto him, *Do you come to help others, you know not that the poison of Socrates is reserved for you?* *Plato* answered, *When I fought for my Country, I hazarded my Life, and will now in duty to my Friend.*

† At the Olympick Games, he fell into Company with some Strangers, who knew him not, upon whose affections, he gained much by his affable Conversation, Dining, and spending the whole day with them, not mentioning either the Academy or *Socrates*, only saying, his name was *Plato*. When they came to *Athens*, he entertained them courteously. Come, *Plato*, said the Strangers, *shew us your namesake, Socrates his Disciple; bring us to the Academy, recommend us to him, that we may know him.* He smiling a little, as he used, said, *I am the Man*: Whereat they were much amazed, having conversed so familiarly with a Person of that eminence, who used no boasting or ostentation; and shewed, that besides his Philosophical discourse, his ordinary conversation was extremely winning.

When he went out of the School, he always said, *See (Youths) that you employ your idle hours usefully.*

At a Feast he blamed those that brought in Musicians to hinder Discourse.

Seeing a young Man play at Dice, he reproved him; he answered, *What, for so small a matter?* *Custom* (replies *Plato*) *is no small thing.*

Being demanded, whether there should be any record to Posterity of his Actions, or Sayings, as of others before him? *First*, saith he, *we must get a Name, then many things will follow.*

Getting on Horse-back, he immediately lighted again, saying, he feared lest he should be carried away *ἁπνυσία* by a high wilful conceit, a Metaphor taken from a Horse.

He advised drunken and angry Men to look in a Glass, and it would make them refrain from those Vices.

He affirmed, that to drink to the excess of drunkenness was not allowable at any time, unless upon the festival of that God who gives Wine.

Sleep also much displeased him, whence he saith in his Laws, *No Man sleeping is worth anything.*

That Truth is more pleasing to all, than any feigned story, so of Truth he saith, *de legibus: Truth, O Guest, is an excellent thing and durable, but to this we are not easily persuaded.*

Being told, that *Xenocrates* had spoken many unjust things against him, he presently rejected the accusation; the Informer persisting, asked why he would not believe him? He added, it was not probable, that he whom he loved so much, should not love him again. Finally, the other swearing it was thus; he, not to argue him of Perjury, affirmed, that *Xenocrates* would never have said so, but that there was reason for it.

He said, *No Wise Man punisheth in respect of the fault past, but in prevention of the future.*

Seeing the *Agrigentines* magnificent in Building, luxurious in Feasting, *These People* (saith he) *build, as if they were to live for ever, and eat as if they were to die instantly.*

Hearing a wicked Person speak in the defence of another, *This Man*, saith he, *carries his Heart in his Tongue.*

Being told, that some spoke ill of him, he answered, *'Tis no matter, I will live so that none shall believe them.*

Seeing a Young Man of a good Family, who had wasted all his means, sitting at the door of an Inn, feeding upon Bread and Water, he told him, *If you had dined so temperately, you would never have needed to sup so.*

To *Antisthenes*, making a long Oration, *You know not*, saith he, *That Discourse is to be measured by the Hearer, not the Speaker.*

Seeing a Youth over-bold with his Father, *Young Man*, saith he, *will you undervalue him, who is the cause you over-value your self?*

To one of his Disciples, who took too much care of his Body, he said, *Why do you labour so much in building your own Prison?*

Of a Prisoner Fettered, he said, *That Man is dead in his own Body, he lives in another.*

He said, that *whosoever neglected himself for another, was the most happy of all persons, for he enjoyed neither.*

One *Leo*, an eminent Citizen, being blamed for loud and immoderate clamour in the Senate, *This is, faith he, to be a Lyon indeed.*

His Disciples wondring, that *Xenocrates*, severe all his life time, had said something that was pleasant, *Do you wonder (faith he) that Roses and Lilies grow among Thorns?*

Laert. vit. Xen.

Xenocrates by reason of his severe Conversation, he advised to Sacrifice to the Graces.

He used to say, Prefer Labour before Idleness, unless you esteem Rust above Brightness.

He exhorted the Young Men to good Life, thus; Observe the different nature of Vertue and Pleasure; the momentary sweetness of the World is immediately followed by eternal Sorrow and Repentance, the short pain of the other by Eternal Pleasure.

Pl.

He said, that it was a great matter in the education of Youth, to accustom them to take delight in good things; otherwise, he affirmed Pleasure to be the bait of Evil.

He affirms Philosophy to be the true help of the Soul, the rest ornaments; that nothing is more pleasing to a sound Mind, than to speak and hear truth, than which nothing is better or more lasting.

To some, who demanded what kind of possessions were best to be provided for Children: Those (faith he) which fear neither storms, nor violence of Men, nor Jove himself.

To *Demonicus* asking his advice concerning the education of his Son: The same care (faith he) that we have of Plants, we must take of our Children; the one is Labour, the other Pleasure. But we must take heed that in this we be not too secure, in that too vigilant.

To *Philedonius*, who blamed him that he was as studious to learn as to teach, and asked him *how long he meant to be a Disciple*; as long, faith he, as I am not ashamed of growing better and wiser.

Being demanded what difference there is betwixt a Learned Man and an Unlearned, the same, faith he, as betwixt a Physician and a Patient.

He said, *Princes had no better Possessions than the familiarities of such Men who could not flatter, that Wisdom is as necessary to a Prince, as the Soul to the Body. That Kingdoms would be most happy, if either Philosophers rule, or the Rulers were inspired with Philosophy, for nothing is more pernicious than Power and Arrogance accompanied with Ignorance. That Subjects ought to be such as Princes seem to be. That a Magistrate is to be esteemed a publick, not a private good. That not a part of the Common-wealth, but the whole ought to be principally regarded.*

Plut. Sympof. 6. prefat. Ælian. var. hist.

Being desirous to take off *Timotheus* Son of *Conon*, General of the Athenians, from sumptuous Military Feasts; he invited him into the Academy to a plain moderate Supper, such as quiet pleasing sleeps succeed with a good temper of Body. The next day *Timotheus* observing the difference, said, They who feasted with *Plato*, were the better for it the next day; and meeting *Plato*, said unto him; *Your Supper, Plato, is as pleasant the next morning as over*

night, alluding to the excellent discourse, that had past at that time.

Hence appears the truth of the Poet's saying, who being derided for acting a Tragedy, none being present but *Plato*, answered, *but this one Person is more than all the Athenians besides.*

C H A P. XII.

His Will and Death.

Thus continuing a single Life to his End, not having any Heirs of his own, he bequeathed his Estate to young *Adimantus*, (probably the Son of *Adimantus*, his second Brother) by his Will; thus recited by *Laertius*.

These things Plato hath bequeathed and disposed, The Eniphistidean Grounds bordering North, on the high-way from the Cephisian Temple, South on the Heracleum of the Eniphistiades, East on Archestratus the Phrearian, West Philip the Cholidian, this let it not be lawful for any Man to sell or alienate, but let young Adimantus be possessor thereof in as full and ample manner as is possible. And likewise the Enerisiadean Farm which I bought of Callimachus, adjoining on the North to Eurymedon the Myrrinufian, on the South to Demostratus Xypeteron, on the East to Eurymedon the Myrrinufian, on the West to Cephissias; Three Minae of Silver; a Golden Cup weighing 160, a Ring of Gold, and an ear-ring of Gold, both together weighing four drachms and three oboli; Euclid the Stone-cutter oweth me three Minae, Diana I remit freely, I leave Servants; Ticho, Bictas, Apolloniades, Dionysius Goods, whereof Demetrius keepeth an Inventory. I owe no Man any thing, Executors, Sosthenes, Speusippus, Demetrius, Hegias, Eurymedon, Callimachus, Thrasippus.

If this Will be not forged, that of *Apuleius* is false, who avers the Patrimony he left was a little Orchard adjoining to the Academy, two servants, and a Cup wherein he supplicated to the Gods; Gold no more than he wore in his Ear when he was a Boy, an Emblem of his Nobility. *Dogn. Plat.*

He died in the 13th year of the Reign of *Philip*, King of *Macedon*, in the first of the 108th Olympiad; the 81st (according to *Hermippus*, *Cicero*, *Seneca*, and others) of his Age (not as *Athenus* the 82.) which number he compleated exactly, dying that very day whereon he was born; For which reason the Magi at *Athens* sacrificed to him, as conceiving him more than Man, who fulfilled the most perfect number, nine multiplied into it self. *Laert.*

He died only of Age, which *Seneca* ascribes to his Temperance and Diligence; *Hermippus* faith, at a Nuptial Feast; *Cicero* faith, as he was writing; they therefore who affirm he dyed (as *Pherecydes*) of Lice, do him much Injury; upon his Tomb these Epitaphs. *Epist. 58. Laert.*

The first.

*Whose Temperance and Justice all envies,
The fam'd Aristocles here buried lies;
If Wisdom any with renown indued,
Here was it most, by envy not pursued.*

The

The second.

*Earth in her bosom Plato's body hides,
His Soul amongst the deathless Gods resides.
Aristo's Son whose Fame to Strangers spread,
Made them admire the sacred life he lead.*

Another later.

*Eagle, why art thou perch'd upon this Stone,
And gazest thence on some Gods starry throne?
I Plato's Soul to Heaven flown represent,
His Body buried in this Monument.*

Phavorinus saith, that Mithridates the Persian set up Plato's Statue in the Academy with this Inscription;

MITHRIDATES SON OF RHODOBATES, THE PERSIAN, DEDICATED THIS IMAGE OF PLATO, MADE BY SILANION TO THE MUSES.

CHAP. XIII.

His Disciples and Friends.

THE Fame of this School attracted Disciples from all parts: Of whom were *Speusippus* an Athenian, Plato's Sisters Son, whom he said reformed by the Example of his own Life.

Xenocrates a Chalcedonian, Plato's beloved Disciple, an imitator of his gravity and magnanimity: *Athenaeus* saith, he was first the only Disciple of *Aeschines*, and relief of his poverty, seduced from him by Plato.

Aristotle a Stagirite, whom Plato used to call a Colt, foreseeing that he would ungratefully oppose him, as a Colt, having suckt, kicks at his Dam: *Xenocrates* was slow, *Aristotle* quick in extremity, whence Plato said of them, What an Ass have I, and what a Horse to yoke together!

Philippus, an Opuntian, who transcribed Plato's Laws in Wax; to him some ascribe *Epinomis*.

Hestiasus a Perinthian.

Dion a Syracusan, whom Plato exceedingly affected, as is evident from his Epigrams; seeing him in the height of honour, all Mens Eyes fixt upon his noble Actions, he advised him to take heed of that vice, which makes Men care only to please themselves; a consequent of Solitude.

Amyclus (or as *Aelian*, *Amyclias*) a Heracleote.

* *Erastus* and *Coriscus* Scepsians.

Temilans a Cyzicene.

Euemon a Lampfacene.

Pithon, whom *Aristotle* calls *Paron*, and *Heraclides* *Enians*.

Hippothales and *Callippus*, Athenians.

Demetrius of *Amphipolis*.

Heraclides of *Pontus*,

Two Women, *Lasthenia* a Mantinean, and *Axiotbia* a Phliasian, who went habited like a Man.

Theophrastus, as some affirm.

Orators, *Hyperides*, *Lycurgus*, *Demosthenes*. *Lycurgus* (saith *Philistus*) was a person of great parts, and did many remarkable things, which none could perform, who had not been Plato's Auditor. *Demosthenes*, when he fled from *Antipater*, said to *Archias*, who counsell'd him to put himself into his Hands, upon promise to save his Life; far be it from me to choose rather to live ill, than to die well, having heard *Xenocrates* and Plato dispute of the Souls immortality.

Menesthratus a Thasian.

To these reckoned by *Laertius*, add *Aristides*, a Locrian.

Eudoxus a Gnidian, who at a great Feast made by Plato, first found out the manner of fitting in a circular form.

Hermodorus, of whom the Proverb, *Hermodorus traffiques in Words*. Zenob.

Heracleodorus, to whom *Demosthenes* writing, reprehends him, that having heard Plato, he neglected good Arts, and lived disorderly.

† *Euphrates*, who lived with *Perdiccas* King of Macedonia, in so great favour, that he in a manner shared command with him. † Athen. deipn. lib. 11.

Enigon of *Lampsacum*.

Timaeus of *Cyzicum*.

Cheron of *Pellene*

Athen. Ibid.

Athen. Ibid.

Athen. Ibid.

* *Isocrates* the Oratour, with whom Plato was very intimate: *Praxiphanes* published a discourse they had together, in a Field of Plato's who at that time entertained *Isocrates* as a Guest.

After, *Phaedrus*, *Alexis*, *Agato*, young Men, whom Plato particularly affected, as appears by his Epigrams.

† *Aristonymus*, *Phormio*, *Mededimus*, his familiar Friends, already mentioned. † Cap. 10.

CHAP. XIV.

His Emulators and Detractors.

AS Plato's eminent Learning gained on one side many Disciples and Admirers, so on the other side, it procured him many Emulators, especially amongst his fellow Disciples, the followers of *Socrates*; amongst these,

Xenophon was exceedingly disaffected towards him; they emulated each other, and writ both upon one Subject, a Symposium; *Socrates* his Apology, Moral Commentaries: One writ of a Common-wealth, the other, the Institution of *Cyrus*: which Book * Plato notes as commentitious, affirming *Cyrus* not to have been such a person as is there exprest. Though both writ much concerning *Socrates*, yet neither makes mention of the other, except *Xenophon* once of Plato, in the third of his Commentaries.

Antisthenes being about to recite something that he had written, desired Plato to be present; Plato demanding what he meant to recite, he answered, that to contradict is not Lawful.

How

In Legib.

How come you, faith *Plato*, to write upon that Subject? And thereupon demonstrating that he contradicted himself, *Aristhenes* writ a Dialogue against him entituled *Satbo*.

Aristippus was at difference with him, for which reason (in *Phadone*) he covertly reproves *Aristippus*, that being near at *Ægina* when *Socrates* died, he came not to him. He writ a Book of the Luxury of the Antients; some ascribe the amatory Epigrams to his Invention, his design in that Treatise being to detract from eminent persons, amongst the rest from *Socrates* his Master, and *Plato* and *Xenophon* his fellow-Disciples.

Æschines and *Plato* also disagreed: Some affirm, that when *Plato* was in favour with *Dionysius*, *Æschines* came thither very poor, and was despised by *Plato*, but kindly entertained by *Aristippus*: But the Epistle of *Æschines* put forth by *Allatius*, expresseth the contrary. The discourse which *Plato* relates, betwixt *Crito* and *Socrates* in Prison, *Idomeneus* faith, was betwixt *Socrates* and *Æschines*; by *Plato*, out of ill will to *Æschines*, attributed to *Crito*. But of *Æschines* he makes not any mention in all his Works, except twice slightly; once in *Phadone*, where he names him amongst the persons present at *Socrates* his Death; and again in his Apology, speaking of *Lyfanius*'s Father.

Phedo, if we credit the detractions of *Athenaus*, was so much maligned by *Plato*, as that he was about to frame an Indictment against him, to reduce him to that condition of Servitude, out of which, by the procurement of *Socrates*, he had been redeemed; but his design being discovered, he gave it over. Besides his Condisciples,

Diogenes the Cynick derided his Laws, and assertion of Ideas; concerning the first, he asked if he were writing Laws; *Plato* assented. Have you not written already a Commonwealth, faith *Diogenes*? Yes, answered *Plato*. Had that Commonwealth Laws, faith *Diogenes*? *Plato* affirmed it had. Then replied *Diogenes*, what need you write new? * Another time, *Diogenes* saying, he could see the things of the World, but not Ideas: *Plato* answered, that is no wonder, for you have, and use those eyes, which behold such things: But the mind, which only can see the other, you use not.

† *Molon*, in detraction from him, said; It was not strange, *Dionysius* should be at Corinth, but that *Plato* should be at Sicily.

From these private differences, arose many scandalous imputations, forged and spread abroad by such as envied or maligned him: as * That he profest one thing and practised another: † That he loved inordinately *Aster*, *Dion*, *Phaedrus*, *Alexis*, *Agatho*, and *Archeanassa*, a Curiestan of *Colopho*: * That he was a Calumniator, envious, proud, a gluttonous lover of Figs: † That he was the worst of Philosophers, a parasite to Tyrants, and many other accusations alike improbable: From these the Comick Poets and others took liberty to abuse him; † *Theopompus* in *Autochare*.

— for one is none,
And two (as *Plato* holds) is hardly one.

Anaxandrides in *Theseo*;

When Olives he (live *Plato*) doth devour;

Timon.

As *Plato* seigns, in framing † Wonders skill'd. † So.

Alexis in *Meropide*,

Aptly thou comest, I walking round could meet
(Like *Plato*) nothing wise; but tir'd my feet.

And in *Achilione*,

Thou speak'st of things thou understandst not, go
To *Plato*, Thence Nile and Onions know.

Amph. In *Amphicrate*,

What good from hence you may expect to rise,
I can no more than *Plato*'s good comprise;

And in *Dexidemide*,

Plato, thou nothing know'st, but how
To look severe, and knit the Brow,

Cratylus in *Pseudobolymæo*,

A Man thou art, and hast a Soul, but this
With *Plato* not sure, but Opinion is.

Alexis in *Olympiodoro*.

My Body Mortal is grown dry,
My Soul turn'd air that cannot die;
Taught *Plato* this Philosophy?

And in *Parasiro*.

Or thou with *Plato* rave'st alone.

* *Ephippus* in *Naufrago* objects to *Plato* and some Friends of his, that corrupted with Money they detracted from many persons; that they went proudly habited, and they took more care of their outward Beauty, than the most Luxurious: See *Athenaus*, Lib. 11.

C H A P. XV.

His Writings.

THE Writings of *Plato* are by way of Dialogue; of the Invention of Dialogue we have † already spoken; now of the Nature thereof. † Chap.

A Dialogue is composed of questions and answers Philosophical or Political, aptly expressing the Characters of those persons that are the speakers in an elegant Stile; Dialectick is the Art of Discourse, whereby we confirm or confute any thing by Questions and Answers of the Disputants.

OF

* *Laert vit.*
Diog.

† *Laert.*

* *Seneca.*

† *Laert.*

* *Athen.*

† *Tetz. Chiliad.*

* *Laert.*

Of *Platonick* discourse there are two kinds, *Hyphgetick*, and *Exegetick*, subscribed thus,

<i>Hyphgetick</i>	{	<i>Theoretick.</i>	{	<i>Logick.</i>
		<i>Practick.</i>	{	<i>Physick.</i>
<i>Exegetick</i>	{	<i>Gymnastick.</i>	{	<i>Majeutick.</i>
				<i>Physick.</i>
		<i>Agonistick.</i>	{	<i>Endeistick.</i>
				<i>Anatreptick.</i>

We know there are other divisions of Dialogues; as into Dramatick Narrative mixt: But that division is more proper to Tragedy than to Philosophy.

Of *Plato's* Dialogues are

<i>Physick.</i>	{	<i>Timæus.</i>
<i>Logick,</i>	{	<i>The Politick.</i>
		<i>Cratylus.</i>
		<i>Parmenides.</i>
		<i>The Sophist.</i>
<i>Ethick.</i>	{	<i>Apology of Socrates.</i>
		<i>Crito.</i>
		<i>Phædo.</i>
		<i>Phædrus.</i>
		<i>Symposium.</i>
		<i>Menexenus.</i>
		<i>Clitophon.</i>
		<i>Epistles.</i>
		<i>Philebus.</i>
		<i>Hipparchus.</i>
<i>Politick,</i>	{	<i>The Rivals.</i>
		<i>The Commonwealth.</i>
		<i>The Laws.</i>
		<i>Minos.</i>
		<i>Epinomis.</i>
<i>Majeutick,</i>	{	<i>The Atlantick.</i>
		<i>Alcibiades.</i>
		<i>Theages.</i>
		<i>Lysis.</i>
<i>Pirastick,</i>	{	<i>Laches.</i>
		<i>Euthyphron.</i>
		<i>Menon.</i>
		<i>Ion.</i>
		<i>Charmides.</i>
<i>Endeistick,</i>	{	<i>Theætetus.</i>
		<i>Protagoras.</i>
<i>Anatreptick.</i>	{	
		<i>Euthydemus.</i>
		<i>Hippias 1.</i>
		<i>Hippias 2.</i>
		<i>Gorgias 1.</i>
		<i>Gorgias 2.</i>

It being much controverted (continueth *Laertius*) whether *Plato* doth dogmatize, some affirming, others denying it, it will be neces-

sary to say something thereupon. *Δογματίζειν* to dogmatize is to impose a Doctrine, as *νόμος* to impose a Law, a Doctrine is taken two ways, either for that which is decreed, or the Decree it self; that which is decreed is a Proposition, the Decree it self an Imposition. *Plato* expounds those things which he conceiveth true: Confutes those which are false, suspends his opinion in those which are doubtful. He asserts what he conceiveth true under one of these four Persons, *Socrates*, *Timæus*, an *Athenian* Guest, an *Ælian* Guest; The Guests are not as some conceive, *Plato* and *Parmenides*, but imagined nameless Persons, as what *Socrates*, *Timæus* speak, are the Decrees of *Plato*. Those whom he argueth of falsehood are *Thrasymachus*, *Callicles*, *Polus*, *Gorgias*, *Protagoras*, *Hippias*, *Euthydemus*, and the like.

In Argument he often used Induction of both sorts. Induction is a discourse, which from certain truths collects, and inferreth a truth like to those: Of Induction there are two kinds, one from Contraries, another from Consequents: From Contraries, as when he who is questioned, answereth in all things contrary to himself, as thus; My Father is either the same with yours, or not the same; if therefore thy Father be not the same with mine, he is not my Father: And again, if a Man be not a living Creature, he is Stone, Wood, or the like; but he is neither Stone nor Wood, for he hath a Soul, and moveth himself, therefore he is a living Creature; if a living Creature, a Dog and an Ox. This kind of Induction by Contraries, serves not for assertion, but confutation: Inductions by Consequents is two-fold; one, when a singular being sought, is concluded from a singular, the first proper to Oratours, the second to Logicians; as in the first, the question is, Whether such an one were a Murtherer, it is proved from his being Bloody at the same time. This Induction is Rhetorical, for Rhetorick is conversant in singulars, not in universals; it inquireth not after Justice, but after the several parts thereof: The other is Dialectick, whereby Universals are concluded from Singulars, as in this question; Whether the Soul be immortal, and whether the living are of the dead, which is demonstrated in his Book of the Soul, by a general Maxim, that contraries proceed from contraries, this being general, is proved by singulars, as waking succeeds sleeping, the greater the lesser, and so on the contrary. Thus he useth to confirm what he asserts.

Thrasylus saith, he published his Dialogues according to the tragick Tetralogy: His genuine Dialogues are fifty six, his Commonwealth divided into ten, they make nine Tetralogies, reckoning his Commonwealth one Book, his Laws another. The first Tetralogy hath a common Subject, declaring what is the proper Life of a Philosopher: every Book hath a two-fold Title; one from the Principal Person, the other from the Subject.

- The first { *Euthypron*, or of Piety : *Pirastick*.
Socrates his Apology : *Ethick*.
Crito, or of that which is to be done : *Ethick*.
Phædo, or of the Soul : *Ethick*.
- The second { *Cratylus*, or, of right naming : *Logick*.
Theætetus, or, of Science : *Pirastick*.
The Sophist, or, of Ens : *Logick*.
The Politick, or, of a Kingdom : *Logick*.
- The third { *Parmenides*, or, of Idea's : *Logick*.
Philebus, or, of Pleasure : *Ethick*.
The Symposium, or, of Good : *Ethick*.
Phædrus, or, of Love : *Ethick*.
- The fourth { *Alcibiades* 1. or, of Humane Nature : *Majentick*.
Alcibiades 2. or, of Prayer : *Majentick*.

Some

Cicer. Tusc.
quest. 2.

Some, as we said, begin with *Alcibiades Major*, others from *Theages*, others from *Euthyphron*, others from *Chippion*, others from *Timæus*, others from *Phædrus* (which they say was the first Dialogue he wrote, as the Subject it self seemeth to confirm, which favours of Youth; and therefore *Dicæarchus* condemns it as too light: to which Censure * *Cicero* agreeth, as conceiving, he ascribed too great a power to Love) others begin with *Theætetus*, many with his Apology.

Epigr.

He mentions not himself in all his Writings, except once in his *Phædo*, and another time in his Apology for *Socrates*. At the recital of his *Phædo*, all but *Aristotle* rose, and went away. The efficacy of that Dialogue which treats of the Immortality of the Soul, is evident from *Cleombrotus* of *Ambracia*, who, as soon as he had read it was so disaffected to Life, that he threw himself from a high Wall into the Sea; upon whom thus † *Callinæchus*,

*Cleombrotus cries out, farewell this light,
And headlong throws himself int' endless night:
Not that he ought had done, deserving death,
But Plato read, and weary grew of Breath:*

The Dialogues generally noted as spurious (not to say any thing of his *Epinomis*, tho' some ascribe it to *Philippus* the *Opuntian*) are these,

Midon, or the Horse-courser,
Erixias, or *Erasistratus*.
Alcyon.
Acephali, or the *Sisyphi*.
Axiochus.
Phæaces.
Demodochus.
Chelidon,
The seventh.
Epimenides.

Of these *Alcyon* is ascribed by *Phavorinus* to *Leon*.

His Style, *Aristotle* saith, is betwixt Prose and Verse. He useth variety of Names, that his Works may not easily be understood by the Unlearned. He conceiveth Wisdom properly to be of Intellectual things, Knowledge of real Beings conversant about God, and the Soul separate from the Body. Properly, he calleth *Philosophy* *Wisdom*, being the appetition of Divine Knowledge; but, commonly he calleth all Skill Knowledge, as an Artificer, a Wise Man. He likewise used the same Names in divers significations; φαῦλον, which properly signifies Evil, he useth for of simple; as *Euripides* in his *Lycimnius* of *Hercules*,

φαῦλον ἀνομῶν ἀμείγνυσι ὄγαθον.

The same words *Plato* sometimes takes for *Honest*, sometimes for *Little*. He likewise useth divers names to signify the same thing: *Idea* he useth both for Species and Genus; Exemplar, both Principle and Cause. Sometimes he useth contrary expressions to signify the same thing; Sensible he calleth a Being and no Being; a Being as having been produced; no Being in respect of its continual Mutation. *Idea*,

neither Moveable nor Permanent, the same both one and many. The like he useth often in other things.

The method of his Discourse is three-fold: first, to declare what that is which is taught; then for what reason it is asserted, whether as a principal cause, or as a comparison, and whether to defend the Tenent; or oppugn the contrary. Thirdly, whether it be rightly said.

The marks which he usually affixed to his Writings, are these,

denotes *Platonick* Words and Figures.

διπλῆ, Doctrines and Opinions proper to *Plato*.

ῥεεσιγμένον, choice Expressions.

διπλῆ ῥεεσιδμήνη, Corrections.

ὀβελος ῥεεσιγμένον, Things Superfluous.

ἀντιστάγμα ῥεεσιγμένον, Double figification or use.

κελεύριον, Philosophical Institution.

ἀσέεισιν, Agreement of Opinions.

ὀβελος, Improbation. Hitherto *Laertius*:

There are two Epistles under *Plato's* name, besides those in his Works already mentioned, one in *Laertius* his Life of *Architas*.

Plato to *Architas*. εὐπερίη.

THE Commentaries which came from you, we received with extraordinary content, infinitely admiring the Writer, who appears to us a person worthy of those ancient predecessors; for those Men are said to be Myræans of those Trojans, which were Banished in the time of *Laomedon*, good Men, as Tradition speaks them. Those Commentaries of mine, concerning which you write, are not yet Polished; however, as they are, I have sent them to you, in the keeping of them we agree both; so as I need not give you any directions. Farewell,

Another Published by *Leo Allatius* amongst the *Socratick* Epistles.

I had not any of those things to send to *Syracuse* which *Architas* desired to receive by you; as soon as possible I will send to you. *Philosophy* hath wrought in me I know not whether good or bad, a hatred of conversing with many Persons, justly, I think, since they err in all kind of Folly, as well in private as publick Affairs; but if unjustly, yet known I can hardly live and breathe otherwise. For this reason I have fled out of the City, as out of a Den of Wild Beasts, living not far from the *Ephesiades*, and the places thereabouts. I now see, that *Timon* hated not Men, he could not affect Beasts, therefore he lived alone by himself, perhaps not without danger. Take this as you please; my resolution is to live far from the City, now and for ever hereafter, as long as God shall grant me Life.

In Poësie he writ
Dithyrambs.
An Epick Poem,
Four Tragedies, all which (as we said) he
Burned.

The Atlantick Story, of which thus Plutarch;
Solon began the Atlantick Story (which he had
learnt of the Priests of Sais, very proper for
the Athenians) but gave it over by reason of his
Old Age, and the largeness of the Work. Plato
took the same Argument, as a vast piece of fer-
tile Ground fallen to him by hereditary right;
He manured it, refined it, enclosed it with large
Walls, Porches, and Galleries, such as never any
Fable, or Poem had before; but because he un-
derook it late, he was prevented by Death. The
more things written delight, the more their not
being perfected is. For as the Athenian
City left the Temple of Jupiter; so Plato's Wis-
dom amongst many excellent Writings, left the At-
lantick alone imperfect.

Epigrams, of which these are extant in Laer-
tius and the Anthology.

Upon one Named After.

* Laert. Anthol.
3. 6, 27.

* The Stars, my Star, thou viewest; Heav'n I
would be,
That I with thousand eyes might gaze on thee.

Upon his Death.

† Laert.

† A Phosphor 'mongst the Living, late wert
thou,
But Shin'st among the Dead a Hesper now.

Epitaph on Dion, Engraved on his Tomb at
Syracuse.

† Laert. Anthol.
4. 33, 26.

* Old Hecuba the Trojan Matron's years
Were interwoven by the Fates with Tears;
But thee with blooming hopes my Dion deckt,
God's did a Trophy of their Power erect.
Thy honour'd Reliques in their Country rest,
Ah Dion! whose Love rages in my Breast.

On Alexis.

† Laert. Anthol.
3. 33, 44.

† Fair is Alexis, I no sooner said,
When every one his eyes that way convey'd:
My Soul (as when some Dog a Bone we show,
Who snatcheth it) lost we not Phædrus so?

On Archæanassa.

* Laert.

* To Archæ'nassa, on whose furrow'd Brow
Love sits in Triumph, I my Service vow;
If her declining Graces shine so bright,
What flames felt you who saw her noon of light?

On Agathon.

My Soul, when I kiss'd Agathon, did start
Up to my Lip, just ready to depart.

† Laert.

To Xantippe.

† An Apple I (Love's Emblem) at thee throw,
Thou in exchange thy Virgin-zone bestow.

If thou refuse my sute, yet read in this,
How short thy years, how frail thy Beauty is.
I cast the Apple, loving those love thee,
* Xantippe yield, for soon both old will be. * Anthol.

† On the Eretrians vanquish'd by the Persians. † Herod. lib. 6.

* We in Eubœa born Eretrians are
Buried in Susa from our Country far. * Laert.

Venus and the Muses.

† Virgins (said Venus to the Muses) pay
Homage to us, or Love shall wound your hearts: † Laert.

The Muses answer'd, take these Toys away,
Our Breasts are proof against his childish darts.

Fortune Exchang'd.

* One finding Gold, in change, the Halter quits, * Laert. Anthol.
Missing his Gold, tother the Halter knits. 84. 1.

On Sappho.

† He, who believes the Muses Nine, mistakes,
For Lesbian Sappho ten their number makes. † Ath. 1. 67,
13.

Time.

* Time all things brings to pass, a change creates * Anth. 1. 19.
In Names, in Forms, in Nations and in States.

Death.

† That is a Plough-man's Grave, a Sailor's this;
To Sea and Land alike Death common is. † Anthol. 3,
22, 3.

On one Ship-wreck'd.

* The cruel Sea, which took my Life away, * Anth. 3. 226.
Forbore to strip me of my last Array:
From this a Covetous Man did not refrain,
Acting a Crime so great for so small gain;
But let him wear it to the Shades, and there
Before great Pluto in my Cloaths appear.

Another.

† Safely (O Sailors) press the Land, and wave † Anth. 3. 227.
Yet know, ye pass a Ship-wreck'd person's
Grave.

On the Statue of Venus.

* Paphian Cythera, swimming cross the Main, * Anth. 4. 124.
To Gnidas came her Statue there to see-
And from on high, surveying round the Plain
Where could Praxiteles me spy? (saith she)
He saw not what's forbidden mortal Eyes,
'Twas Mars's Steel that Venus did incize.

Another.

† Not carv'd by Steel, or Praxiteles' fam'd hand: † Anth. 4. 125.
Thus naked before the Judges didst thou stand.

Love Sleeping.

* Within the covert of a shady Grove * Anth. 4. 19.
We saw the little red-cheek'd God of Love.
He had nor Bow nor Quiver, those among
The

*The Neighbouring Trees upon a Bough were
Upon a Bank of tender Rofs-buds laid (hung:
He (smiling) slept; Bees with their noise invade
His Rest, and on his lips their Honey made.*

Pan Piping

* Anth. 4. 12,
74.

* *Dwell awful silence on the shady Hills;
Among the bleating Flocks, and purling rills,
When Pan the Reed doth to his Lip apply,
Inspiring it with Sacred Harmony,
Hydriads, and Hamadyrads at that sound,
In a well order'd measure beat the Ground.*

On the Image of a Satyr in a Fountain, and
Love Sleeping.

† Anth. 4. 12,
96.

† *A skilful hand this Satyr made so near
To Life, that only Breath is wanting here:
I am attendant to the Nymphs; before
I fill'd out purple Wine, now Water pour;*

*Who ere thou art com'st nigh, tread softly, lest
You waken Love out of his pleasing rest.*

Another.

* *On Horned Lyæus I attend,
And pour the streams these Nayads lend,
Whose noise Love's slumber doth befriend.*

* Anth. 4. 12,
97.

Another.

* *This Satyr Diodorus did not make,
But charm asleep; if prick'd he will awake.*

† Anth. 4. 12,
102.

On a Seal.

* *Five Oxen grazing in a flowery Mead,
A Jasper Seal done to the Life doth hold,
The little Herd away long since had fled,
We're not inclos'd within a pale of Gold.*

C H A P. I.

Of PHILOSOPHY, and how a Philosopher must be Qualified.

SUCH a Summary as this may be given of the Doctrine of Plato. Philosophy is the desire of Wisdom, or solution of the Soul from the Body, and a Conversion to those things, which are true and perceptible by intellect. *Wisdom σοφία*, is the Science of things Divine and Humane. A Philosopher is he who takes denomination from Philosophy, as a Musician from Musick: He who is to be a Philosopher, must be thus qualified; First, he must have a Natural Capacity of all such Learning as is able to fit and bring him to the knowledge of that Essence which is perceptible by Intellect, not of that which is in continual fluxion or mutation. Then he must have a natural Affection to Truth, and an aversion from receiving Falshood, and besides this, Temperate in a manner by Nature; for those parts which use to be transported with Passions, he must have reduced to Obedience by Nature. For whosoever hath once embraced those Disciplines which are conversant in con-

sideration of such things as truly exist, and hath addicted all his study thereunto, little valueth corporeal pleasure. Moreover, a Philosopher must have a Liberal Mind, for the estimation of mean things is contrary to a Man who intended to contemplate the truth of things. Likewise he must naturally love Justice, for he must be studious of Truth, Temperance, and Liberality. He must also have an acute Apprehension, and a good Memory, for these inform a Philosopher; those gifts of Nature, if improved by Discipline and Education, make a Man perfect in Vertue, but neglected are the cause of the worst ills. These Plato used to call by the same Names with the Virtues, *Temperance, Fortitude, and Justice.*

CH A P. II.

That Contemplation is to be preferred before Action.

WHereas *Life* is twofold, *Contemplative* and *Active*, the chief Office of the Contemplative consisteth in the knowledge of truth, as of the Active, in the practice of those things which are dictated by Reason. Hence the contemplative Life is first, after which as necessary followeth the Active. That it is so, may easily be proved thus. Contemplation is an Office of the Intellect in the understanding of Intelligibles: Action is an operation of the rational Soul, performed by mediation and service of the Body. For the Soul, when it contemplateth the Divinity and the notions thereof, is said to be best affected. This Affection is called *σοφία* *Wisdom*, which is nothing else but an assimilation to the Deity. This therefore ought to be esteemed the first and principal, as being most expetible and proper to Man; for there are no impediments that can hinder it from being within our power, and it is cause of our proposed end. But Active Life, and the practice thereof, chiefly making use of the mediation of the Body, are many times obstructed; Whereof those things which the contemplative Life considers in order to the Reformation of the Manners of Men, a Philosopher, as often as necessity requireth, shall transfer to action. Then shall a good Man apply himself to the administration of Civil Affairs, when he seeth them ill managed by others. He must look upon the Leading of an Army, Administration of Justice and Embassies, as things necessary. The Institution of Laws, ordering the Common-wealth, the compresseure of Seditions, Education of Youth in Discipline, are the chiefest, and, among those things which relate to Action of greatest consequence. Hence is it manifest, that a Philosopher must not only be perseverant in Contemplation, but also cherish and increase it, sometimes giving himself to Action as an Attendant upon Contemplation.

CH A P. III.

The three parts of Philosophy.

THE Study of a Philosopher seemeth according to Plato to be conversant chiefly in three things, in the *Contemplation* and Knowledge of things, in the Practice of Vertue, and in *Disputation*. The Science of things that are, is called *Theoretick*; of those which pertain to Action, *Practick*; the disputative part *Dialectick*.

Dialectick is divided into *Division*, *Definition*, *Induction* and *Syllogism*; *Syllogism* into the *Apo-deictick*, which concerneth necessary ratiocination; and *Rhetorical*, which concerneth *Enthymeme*, called an imperfect ratiocination; and lastly into *Sophisms*. This the Philosopher must look upon, not as the chiefest but a necessary part.

Of *Practick* Philosophy, one part is conversant about *Manners*, another orders *Families*, the last takes care of a *Common-wealth*. The

first called *Ethick*, the second *Oeconomick*, the third, *Politick*.

Of *Theoretick* Philosophy, one part enquires into things Immutable and Divine, and the first causes of things; this is called *Theology*; another the Motion of the Stars, the Revolution and Restitution of Coelestial Bodies, and the Constitution of the World. This is called *Physick*. That whereby we enquire Geometrically, and those other Disciplines which are called *μαθηματικά*, is termed *Mathematick*.

Philosophy being thus divided, we must first, according to Plato, speak of the *Dialectick* part, and in that, first of the *Judiciary*.

CH A P. IV.

D I A L E C T I C K.

Of the Judiciary part.

WHereas there is something that judgeth, something which is judged, it is necessary also that there be something which is made of both these, properly called *Judgment*. This Judgment may not unfitly be termed Judiciary, but more commonly that which judgeth. This is twofold; one, *from which*, another *by which* judgment is made. That is Intellect; this the natural Organ accommodated for Judgment; primarily of *true* things; secondarily of *false*; neither is it any thing but natural reason. To explain this more fully, of things which are, a Philosopher who judgeth the things themselves, may be called a *Judge*; reason likewise is a *Judge*, by which Truth is judged, which even now we called an Organ,

Reason is twofold, one *incomprehensible* and true; the other is *never deceived* in the knowledge of those things which are. The first is in the power of God, not of Man; the second in that of Man also. This likewise is twofold, the first *Science*, and Scientifick reason; the second *Opinion*. The first hath *Certitude*, and *Stability*, as being conversant in things certain and stable. The second *similitude of truth* and *opinion*, as being conversant in things subject to mutation. Of Science in Intelligibles, and Opinion in sensibles, the Principles are *Intellection* and *Sense*.

Sense is a passion of the Soul by the mediation of the Body, first, declaring a passive faculty; when through the Organs of Sense, the Species of things are impressed in the Soul, so, as they are not defaced by time, but remain firm and lasting, the conservation thereof is called *Memory*.

Opinion is the Conjunction of Memory and Sense; for, when some object occurreth, which can first move the Sense, thereby Sense is effected in us, and by Sense, the Memory. Then again is the same thing objected to our Sense, we joyn the precedent with the consequent Sense, and now say within our selves, *Socrates*, a Horse, Fire, and the like: this is termed opinion; when we joyn the precedent Memory with the late Sense, when these agree within themselves, it is a *true opinion*, if they disagree, a *false*; for, if a man, having the species of *Socrates* in his memory, meet with *Plato*, and think, by reason of some likeness be-
twixt

twixt them; he hath met *Socrates* again, and afterwards joyn the sense of *Plato*, which he took, as it were, from *Socrates*, with the memory which he preserved of *Socrates*, there will arise a false Opinion.

That wherein sense and memory are formed, *Plato* compareth to a *Tablet of Wax*, but when the Soul by cogitation reforming these things, which are conceived in Opinion by Memory and Sense, looketh upon these as things from which the other are derived: *Plato* sometimes calleth this a *Picture and Phantasie*. Cogitation he calleth the Souls discourse within her self: *Speech*, that which floweth from the Cogitation through the Mouth by Voice. *Intellection* is an operation of the Intellect, contemplating first Intelligibles. It is two-fold, one of the Soul, beholding Intelligibles before she cometh into the Body; the other of the same, after she is immersed in the Body: The first is properly called *Intellection*; the other, whilst she is in the Body, is termed *Natural Knowledge*, which is nothing but an Intellection of the Soul confined to the Body. When we say, intellection is the principle of Science, we mean not this latter, but the other, which is competent to the Soul in her separate State, and as we said, is then called *Intellection*, now *Natural Knowledge*. The same *Plato* termeth *simple Knowledge the wing of the Soul*; sometimes *Reminiscence*.

Of these simple Sciences consisteth *Reason*; which is born with us, the efficient of natural Science; and as Reason is twofold, Scientifick, and opinionative, so Intellection and Sense. It is likewise necessary that they have their objects, which are *Intelligibles* and *Sensibles*: And forasmuch as of *Intelligibles*, some are *Primary*, as Ideas, others *Secondary*, as the Species, that are in matter, and cannot be separated from it. *Intellection* likewise must be two-fold, one of *Primaries*, the other of *Secondaries*. Again, forasmuch as in *Sensibles*, some are *Primary*, as qualities, colour, whiteness, others by accident, as white coloured, and that which is concrete, as fire: in the same manner is *Sense*, first, of *Primaries*, second, of *Secondaries*. Intellection judgeth primary Intelligibles, not without Scientifick knowledge, by a certain comprehension without Discourse. Secondaries the same Scientifick reason judgeth, but not without Intellection. Sensibles, as well Primary as Secondary Sense, judgeth, but not without opinionative reason. That which is concrete, the same reason judgeth, but not without sense. And since the Intelligible World is the primary Intelligible, the sensible something concrete, the first Intellection judgeth with Reason, that is, not without Reason; The other Opinionative reason not without sense, whereas there is both Contemplation and Action; right Reason discerneth not in the same manner those which are subject to Contemplation, and those which are subject to Action: In contemplation, it considereth what is true, what false; in things that belong to Action, what is proper, what improper, what that is which is done. For having an innate knowledge of that which is good and honest, by using reason, and applying it to those natural notions, as to certain Rules, we judge whether every thing be good or bad.

C H A P. V.

The Elements and Office of Dialectick.

OF Dialectick, the first and chiefest Element according to *Plato*, is, first, to consider the *Essence* of every thing; next the *Accidents* thereof. *What a thing* is, it considers; either from its Superiours, by *division* and *definition*, or contrariwise by *Analysis*. *Accidents* which adhere to Substances, are considered, either from those things which are contained by *induction*, or from those which do contain by *Syllogism*.

Hence the parts of *Dialectick* are these, *Division*, *Definition*, *Analysis*, *Induction*, *Syllogism*.

Of *Divisions*, one is a distribution of the Genus into Species, and of the whole into parts; as when we divide the Soul into the rational part, and the irrational; and the latter, into the concupiscible and the irascible. *Another* is of a word into divers significations, when the same may be taken several ways. *A third* of accidents, according to their subjects; as when we say of Good, some belong to the Soul, some to the Body, some are external. The *fourth* of subjects, according to their *Accidents*; as of Men, some are good, some ill, some indifferent. Division of the Genus into its Species, is first to be used, when we examine the essence of a thing, this cannot be done but by definitions.

Definition is made by Division in this manner, we must take the Genus of the thing to be defined, as that of Man, living Creature; that we must divide by the next differences, descending to its species, as rational, and irrational, mortal, and immortal. Thus by adding the first difference to the Genus, is made the definition of Man.

Of *Analysis* there are three kinds, *one* by which we ascend from Sensibles to primary Intelligibles, *another*, whereby we ascend by demonstrates and subdemonstrates, to indemonstrable immediate propositions. The *last*, which from supposition proceedeth to those principles which are taken without supposition.

The first kind is thus, as if from that Beauty which is in the Body, we should proceed to that of the Mind, from that to another conversant in the Offices of Life, thence to that of Laws, and so at last to the vast Ocean of Beauty, that by these steps, as it were, we may arrive at the sight of the supreme Beauty.

The second kind of Analysis is thus; We must suppose that which we seek, and consider those which are precedent, demonstrating them by progression, from interior to superiours, untill we arrive at that which is first and generally granted: From which, beginning anew, we return synthetically to that which was sought. As for example, I enquire whether the Soul be Immortal, and supposing it to be so, I enquire whether it be always moved. This being demonstrated, I again enquire, whether that which is always moved, is moved by it self, which being again demonstrated, we examine, whether that which is moved by its self,

self, be the principle of Motion. Lastly, whether a Principle is ingenerate; this, as most certain, is admitted by all. That which is ingenerate, is also incorruptible; whence, as from a thing most certain, we collect this demonstration. If a Principle be ingenerate and incorruptible, that which is moved by it self, is the principle of Motion; but the Soul is moved by it self, therefore the Soul is Incorruptible, Ingenerate, and Immortal.

The third kind of *Analysis* upon supposition, is this; He who enquireth after a thing, first, supposeth that thing, then observes what will follow upon that supposition. If a reason for the supposition be required, assuming another supposition, he enquireth, whether that which was first supposed, follow again upon another supposition: This he always observeth, untill he come at last to that Principle, which is not taken upon supposition.

Induction is every method by reason, which proceedeth either from like to like, or from Singulars to Universals: It is of great efficacy to excite natural notions.

CHAP. VI.

Of Propositions and Argumentations.

OF that Speech which we call *Proposition*, there are two kinds; *Affirmation* and *Negation*; *Affirmation*, as *Socrates walketh*; *Negation*, as *Socrates walketh not*.

Of *Affirmative* and *Negative Propositions*, some are *Universal*, others *Particular*: A *particular Affirmative* is thus, *Some Pleasure is good*; a *particular Negative* is, *Some Pleasure is not good*. An *Universal Affirmative*, all dishonest things are ill; an *Universal Negative*, no dishonest thing is good.

Of *Propositions*, some are *Categorical*, some *Hypothetical*: the *Categorical* are simple, as every just thing is good: *Hypothetical* import consequence or repugnance.

Syllogisms are used by *Plato*, either to *confute* or *demonstrate*; to confute, what is false by interrogation, to demonstrate, what is true by declaration. *Syllogism* is a Speech, wherein some things being laid down, another thing besides those which are laid down, is necessarily inferred from them.

Of *Syllogisms* some are *Categorical*, some *Hypothetical*, some *Mixt*: *Categorical* are those whose sumptions and conclusions are simple propositions. *Hypothetical* are those which consist of *Hypothetical Propositions*: *Mixt*, which conclude both.

Plato useth *demonstrative Arguments* in those Dialogues, wherein he explaineth his own Doctrine; *Probable* against Sophists and young Men; *Litigious* against those who are properly called Eristick, as *Euthydemus* and *Hippias*.

Of *Categorical Syllogisms* there are three *Figures*; the first is, that wherein the common extreme is first the prædicate, then the subject. The second, when the common extremum is prædicate in both: the third wherein the common extremum is subject in both. *Extremums* are the parts of a Proposition, as in this, a *Man is a*

living Creature, *Man* and *living Creatures* are the extremums. *Plato* often argueth in the first, second, and third *Figures*; in the first, as in *Alcibiades*;

*Just things are honest,
Honest things are good,
Therefore just things are good.*

In the *second*, as in *Parmenides* as,

*That which hath no parts is neither straight
nor crooked,
But whatsoever hath Figure is either straight
or crooked,
Therefore, whatsoever hath not parts, hath
not figure.*

In the *third* thus, in the same Book,

*Whatsoever hath figure is qualitative,
Whatsoever hath figure is finite,
Therefore whatsoever is qualitative is finite.*

Likewise by *Hypothetical Syllogism* *Plato* often disputeth, chiefly in *Parmenides* thus,

*If one hath not parts, it hath neither beginning,
end nor middle,
But if it have neither beginning, end, nor middle,
it hath no bound, and if no bound, no
figure,
Therefore if one hath no parts, it hath no figure.*

In the *second Hypothetical figure*, ordinarily called the third, wherein the common extremum is subject in both, he argueth thus,

*If one hath not parts, it is neither straight
nor crooked,
If it hath a figure, it is either straight or crooked,
Therefore if it hath no parts, it hath no figure.*

In the *Third figure* by some called the second, wherein the common extremum twice precedes the other two, he thus argues, in *Phædone*,

*If having the knowledge of Equality we forget it
not, we know, but if we forget it, we have re-
course to Reminiscence, &c.*

Mixt Syllogisms which conclude by consequence, he useth thus;

*If one is whole and finite, that is, having be-
ginning, middle and end, it hath figure also,
But the Antecedent is true,
Therefore the Consequent.*

Of those also which overthrow by Consequence, the differences may be gathered out of *Plato*.

Thus when a Man hath diligently understood the faculties of the Mind, the various differences of Men, the several kinds of Reasoning which may be accommodated to this or that, and to what persons such and such reasons are to be used, he, meeting with an opportunity suiting with his purpose, will become a perfect Orator.

The

The reasons of *Sophisms* and captious Arguments are, if we observe narrowly, expressed by *Plato* in *Euthydemus*, for there is declared which are in words, which in things, and how they are to be solved.

The ten *Prædicaments* are touched by *Plato* in *Parmenide*, and in his other Dialogues; the place of Etymologies is fully set down in *Cratylus*. To conclude, he was singularly admirable for division and definition, wherein the greatest force of *Dialectick* consisteth.

The Summ of that which he saith in *Cratylus*, is this; he enquireth whether *Names* are by the power and reason of *Nature*, or by *Imposition*. He concludeth that the rectitude of names is by a certain imposition, not temerarious or casual, but seemingly to follow the nature of the things themselves; for rectitude of names is nothing but an imposition consonant to the nature of the thing: Hence every imposition of names is not sufficient for rectitude, neither the nature nor first sound of the voice, but that which is composed of both; so as every name is conveniently and properly applied to the thing. For any name applied to any thing will not signifie rightly, as if we should impose the name of *Horse* upon *Man*. To speak is a kind of *Action*: Not he that speaketh any way speaketh rightly, but he who speaketh so as the nature of the thing requireth. And for as much as expression of *Names* is a part of speaking, as *Noun* is a part of *Speech*, to name rightly, or not rightly, cannot be done by any imposition of names; but by a natural affinity of the name with the thing it self. So that he is a right imposer of names who can express the Nature of the things in their names; for a Name is an Instrument of the thing, not every inconsiderate name, but that which agreeth with its Nature. By this benefit we communicate things to one another whence it followeth, that it is nothing else but an instrument accommodated to the teaching and discerning of a thing, as a Weavers shuttle to his Webb. It belongeth therefore to a *Dialectick* to use Names aright; for as a Weaver useth a Shuttle rightly, knowing the proper use thereof after it hath been made by the Carpenter; so the *Dialectick* rightly useth that name which another hath made. And as to make a Helm, is the Office of a Ship-wright, but to use it rightly of a Pilot; so he who frameth names, shall impose them rightly, if he do it as if a *Dialectick* were present, who understandeth the nature of those things which are signified by the names. Thus much for *Dialectick*.

C H A P. VII.

Of Theoretick Philosophy.

WE come next to *Theoretick Philosophy*; whereof one part is *Theologicke*, another *Physicke*, a third, *Metaphysicke*. The end of *Theology* is the knowledge of primary Causes: Of *Physicke*, to understand the nature of the Universe, what kind of Creature *Man* is, what place he holdeth in the World; whether there

there be a Divine Providence over all things, to which there are other Gods subordinate; how Men are in respect of them. The end of *Mathematicks* is, to know the nature of a Superficies and a solid, and to consider the Motion and Revolution of Cœlestial Bodies, the contemplation whereof must first be proposed in brief. Thus *Plato* used to confirm the acuteness of the Mind, for it sharpeneth the understanding, and rendreth it more ready towards the contemplation of Divine things. That which considereth *Numbers*, being likewise a part of Mathematics, conferreth not a little to the understanding of things that are; it frees us from the error and ignorance which attend sensible things, and conduceth to the right knowledge of the essence of things: It likewise renders a Man expert in Military Affairs, especially towards the ordering of an Army by the science of *Tactics*. *Geometry* also conferreth much towards the understanding of good it self, if a Man pursue it not only for Mechanical dimension, but that he may by the help thereof ascend to things which are not, busying himself about those which are in continual Generation and Motion. *Stereometry* likewise is exceeding useful, for after the second accretion followeth this contemplation, which holdeth the third room. *Astronomy* also is useful as a fourth Discipline, whereby we consider the Motions of the Heavens and the Stars, and the Author of Night and Day, Months and Years. Thus by a familiar kind of way, finding out him who made all these, and by these Disciplines, as from certain rudiments or Elements proceeding to things more Sublime. Likewise *Musick* is to be learnt, which relateth to hearing; for, as the eyes are created for Astronomy, so are the ears for Harmony: and as when we apply our selves to Astronomy, we are led from visible things, to the Divine invisible Essence; so when we receive the Harmony of Voice in at our ears, from audible things, we ascend by degrees to those which are perceived by Intellect; unless we pursue Mathematical Disciplines to this end, the contemplation thereof will be imperfect, unprofitable, and of no value. We must therefore presently proceed from those things which are perceived by the eyes and ears to those which reason only discerneth; for, *Mathematick* is only a preface to divine things. They who addict themselves to *Arithmetick* and *Geometry*, desire to arrive at the knowledge of that which is, which knowledge they obtain no otherwise than as by a Dream, but really they cannot attain it because they know not the Principles themselves, nor those things which are compounded of the Principles: nevertheless, they conduce to those things which we mentioned; wherefore *Plato* will not have such Disciplines to be called Sciences. *Dialectick* method proceeds in such manner, that by Geometrical Hypotheses, it ascendeth to first Principles, which are not taken upon Hypotheses. For this reason he calleth *Dialect* a Science; but, neither *Mathematick*, nor *Opinion*, because it is more perspicuous than sensible things; nor a Science, because 'tis more obscure than first Intelligibles: But, the Opinion of Bodies, the Science of Primaries, the Contemplation of *Mathematicks*.

He likewise asserteth *Faith* and *Imagination*: *Faith*, of things subject to Sense; *Imagination* of Images and Species.

Because Dialectick is more efficacious than Mathematick, as being conversant about Divine Eternal things, therefore it is put before all Mathematicks, as a Wall and Fortification of the rest.

C H A P. VIII.

Of first Matter.

WE must next give a brief account of *Principles*, and those things which belong to *Theology*, beginning at the first, and from thence descending to the Creation of the World, and Contemplation thereof, whereby, at last we come to the Creation and Nature of Man.

To begin with *Matter*; this he calleth the *Receptacle*, *Nurse*, *Mother*, *Place*, and *subject of all Images*, affirming that it is touched without Sense, and comprehended by an Adulterate kind of Reason. The property thereof is to undergo the Generation of all things, and to cherish them like a Nurse, and to admit all Forms, being of her own Nature expert of all Form, Quality and Species: These things are imprinted and form'd in her as in a Table, and she admitteth their Figures, not having of her self any Figure or Quality. For, she could not be fit to receive the impressions of several Forms, unless she were wholly void of all Quality and of those Forms which she is about to receive. They who make sweet Unguents of Oyl, make choice of that Oyl which hath the least scent; they who would imprint any Figures in Wax, first smooth and polish the Matter, defacing all former Figures. It is requisite that matter capable of all things, if it must receive all Forms, must not have the nature of any one of them, but must be subjected to all forms, without any quality or figure: and being such, it is neither a Body nor Incorporeal, but a Body potentially, as Brass is potentially a Statue, because then it becomes a Statue, when it puts on the Form thereof.

C H A P. IX.

Of Ideas.

WHereas Matter is a Principle, *Plato* likewise introduceth other Principles beside Matter. One as an *Exemplar*, *Ideas*; another *Paternal*, God, the Father and Author of all things. *Idea*, as to God, is the *Notion* of God, as to us, the *primary Intelligible*, as to matter, a *manner*; as to this sensible World an *Exemplar*, as to it self, *Essence*. For whatsoever is made with understanding, must necessarily be referred to something, as if something be made from another, as my Picture from me, the exemplar thereof must be presupposed, and if there be nothing Eternal, every Artist conceiveth it first within himself, then transferreth the Forms thereon into Matter.

They define *Idea* an Eternal Exemplar of things which are according to Nature; for, the greater part of Platonists will not allow an *Idea* to be of things that are made by Art, as of a Shield, or Lute, nor of things that are preternatural, as of a Fever, or unnatural Choler; nor of singulars, as of *Socrates* or *Plato*; nor of vile abject things, as of Filth or Straws; nor of relatives, as of greater and longer: For *Ideas* are the Eternal Notions of God, perfect in themselves.

That there are *Ideas*, they prove thus: whether God be Intellect or something Intelligent, he must have his Intelligibles, and those Eternal and Immoveable; if so, there are *Ideas*. For, if matter it self be in it self void of measure, it is necessary that it receive measure from some Superiour, that is wholly remote from matter: But the Antecedent is true, therefore the Consequent; and if so, there are *Ideas*, certain measures void of matter. Again, if the World were not made by Chance, it must not only be made of something, but by something, and not only so, but after the likeness of, something; but, that after whose likeness it was made, what is it but an *Idea*? Whence it followeth, that there are *Ideas*. Again, if Intellect differ from true Opinion, that which is Intelligible differeth from that which is Opinionable; and if so, there are Intelligibles distinct from Opinionables, wherefore there are first Intelligibles, as well as first Sensibles, whence we conclude there are *Ideas*.

C H A P. X.

Of God.

WE come next to speak of the third Principle, which *Plato*, though he think it almost ineffable, conceiveth may be expressed in this manner. If there are intelligibles, and those neither sensibles, nor coherent with sensibles; but adherent to first Intelligibles, then are there first simple Intelligibles, as there are first sensibles; the Antecedent is true, therefore the consequent. But Men subject to perturbation of Sense, when they would contemplate something intelligible, presently fall upon the thought of something sensible, whereby, at the same time they imagine Magnitude, or Figure, or Colour; and therefore cannot understand this sincerely: But the Gods being void of Corporeal mixion understand purely and sincerely. Now because the Intellect is better than the Soul, and that Intellect which is always in act, and at once understandeth all things, is better than that Intellect which is in power, and of these, that is most excellent which is the cause of the other, and superior to all; This can be nothing else but God, whom we call the first, as being the Cause that the Intellect of the World always acteth. He, being himself immoveable, acteth upon the Intellect of the World, as the Sun upon the Eye, when it turneth towards him. And as that which is desired moveth the Appetite, it self remaining immoveable; so doth this Intellect move the Intellect of all Heaven.

Now

Now this first Intellect being most fair, must have the most fair Intelligible; but nothing is fairer than it self, therefore it always understandeth it self, and its own notions, which Act is called Operation.

Moreover, *God is first, eternal, ineffable, perfect in himself*; that is, needing none; and *ever perfect*, that is, absolute in all times, and *every way perfect*, that is, absolute in every part, *Divinity, Essence, Truth, Harmony, Good*. Neither do we so name these, to distinguish one from the other, but rather by them all to understand one. He is said to be *Good*, because he bestoweth his benefits upon all according to their several Capacities, and so is the cause of all good *Fair*, because he is in his essence both more and equal. *Truth*, because he is the principle of all truth, as the Son of all light. And *Father*, as being cause of all things, and adorning the mind of Heaven, and Soul of the World after his own exemplar and notions. For according to his own Will he filled all things with himself, exciting the Soul of the World, and converting it to himself, for he is cause of that Intellect, which being adorned by the Father, adorneth also the nature of all this World. He is likewise *ineffable*, and as we said, can only be perceived by the Mind, for he is neither Genus nor Species, nor difference, neither can any accident be applied to him. He is *not ill*, for that it were Impiety to affirm; *nor good*, for so he should be termed if he were meanly or highly participant of goodness. Nor *difference*, for that cannot be made according to the notion of him. Nor *qualified*, for he is not made that which he is by quality, nor perfected thereby. Nor *void of quality*, for he is not deprived of any quality that appertaineth to him. *Nor part of any thing, nor as a whole* constituted of parts; *nor as the same or divers*, for nothing can happen to him whereby he may be distinguished from others; Neither doth he *move*, or is he *moved*.

Hence the first apprehension of him is by *Abstraction* from these things, as we understand a Point by Abstraction from Sensibles, considering first a Superficies, then a Line, then a Point. The second is by *Analogy* in this manner. As the Sun is to sight and visible things, himself not being sight, yet affording the one to see, the other to be seen, so is the first Intellect to that Intellect, which is in our Soul, and to those things which it understandeth. For, it self is not the Intellect, yet it perfecteth in these the Act of Intellection, to those it affordeth that they are understood, enlightning that truth which is in them. The third way to understand him is thus: When a Man beholdeth that Beauty which is in Bodies, he proceedeth to that which is in the Soul, then to that which is in Offices and Laws: Lastly, to the vast Ocean of Beauty, after which, he considereth that which is good it self, amiable it self, expetible it self, which shineth like a Light, and meeteth the Soul, that which ascends unto it by these degrees. By this he comprehendeth God himself through reason of that Excellence, which consisteth in adoration of him. He considereth God void of parts, for nothing was before him a

part, and that of which something consisteth is precedent to that whereof it is part, for a Superficies is before a Body, and a Line before Superficies. Moreover God not having many parts, can neither be locally moved, nor altered by qualities. For if he be altered, it must be done by himself, or some other; if by some other, that other must be of greater Power than he; if by himself, it must be either to better or to worse, both which are absurd.

From all these it followeth that *God is incorporeal*, which may likewise be proved thus. If God were a Body, he should consist of matter and form; for every Body consisteth of matter, and its form joins to that matter, which is made like unto the *Idea's*, and in an ineffable manner participant of them; But that that should consist of matter and form is absurd; for then he could not be either simple or a Principle; therefore he is incorporeal. Again, if he be a Body, he consisteth of matter, and consequently is either Fire or Air, or Earth or Water, or something made out of these; but none of these is Principle by it self; besides he must then be later than matter, as consisting of it, which being absurd, it is necessary that God be incorporeal. Moreover, if he were a Body, it would follow that he must be generable, corruptible, mutable, which to affirm of God were intolerable.

CHAP. XI.

Of Qualities.

That *Qualities* are *incorporeal*, may be proved thus: Every Body is a Subject, quality is not a Subject, but an Accident, therefore quality is not a Body. Again, no Body is in a Subject; every quality is in a Subject, therefore quality is not a Body. Again, quality is contrary to quality, but no Body as no Body is contrary to a Body; therefore qualities are not Bodies. To omit, that is most agreeable to Reason, that as matter is void of quality, so quality should be void of matter, and if quality be void of matter, it must likewise be void of Corporeity, for if qualities were Bodies, two or three Bodies might be together in the same place, which is absurd.

Qualities being incorporeal, the maker of them must be incorporeal also; moreover there can be no efficient, but in corporeals, for Bodies naturally suffer and are in mutation, not continuing always in manner, nor persevering in the same state. For whensoever they seem to effect any thing, we shall find that they suffer it long before. Whence as there is something which wholly suffereth, so must there be something which wholly acteth; but such only is incorporeal.

Thus much concerning Principles as far as they relate to Theology; we proceed next to Physical Contemplations.

C H A P. XII.

Of the Causes, Generation, Elements, and Order of the World.

INASMUCH as of sensible and singular things there must of necessity be some Exemplars, viz. Ideas, of which are Sciences and Definitions (for besides all particular Men, we conceive a Man in our Mind, and besides all particular Horses a Horse, and likewise besides all living Creatures, a living Creature immortal and unbegotten: As from one Seal are made many prints, and of one Man there may be many Pictures, of all which, the Idea it self is cause that there are such as it self is) 'tis necessary that this Universe, the fairest Fabrick of God's making, be so made by God, that in the making thereof he looked upon an Idea as its exemplar, whilst by a wonderful Providence and most excellent design God applied himself to the building of this Frame, because he was good.

God therefore made it of all matter, which being before the Generation of Heaven, disorderly scattered; he from a deformed confusion reduced to beautiful order, and adorned every way the parts thereof with fit numbers and figures, until at last he so distinguished them, as now they are, Fire and Earth to Air and Water, of which there were then only the footsteps, and a certain aptitude to admit the power of Elements, and so without any reason or order, they jumbled matter, and were jumbled again by matter.

Thus God framed the World of four entire Elements, of whole Fire and Earth, Water, and Air; omitting no Power or part of any of them. For, he saith, it must be corporeal and generated, and subject to touch and sight; but without Fire and Earth nothing can be touched or seen; wherefore justly he framed it of Fire and Earth, and because it was requisite there should be some Chain to unite these, there is a Divine Chain, which according to the proportion of Reason maketh one of it self, and those things which are united to it, and the World could not be plain (for then one medium would have served) but Spherical, therefore there was need of two mediums to the constitution thereof. Betwixt Fire and Earth, by the prescription of this reason is interposed Air and Water, that as Fire is to Air, so is Air to Water, and as Air is to Water, so is Water to Earth; and again, as Earth is to Water, so is Water to Air, and as Water is to Air, so is Air to Fire.

There being nothing remaining beyond the World, God made the World one, conformable to this Idea, which is one. He likewise made it such, as that is *incapable of sickness or age*. For, besides that nothing can befall it whereby it may be corrupted, it is so sufficient to it self, that it hath not need of any exterior thing. He bestowed upon it a Spherical Figure, as being the fairest, the most capacious and aptest to motion, and because it needeth not hearing or sight, or the rest

of the Senses, he gave it not any Organs of Senses. He denied all kinds of Motion to be competent to it, except the circular, which is proper to the Mind and to Wisdom.

C H A P. XIII.

Of the convenience of Figures, with the Elements and World.

THE World thus consisteth of two parts, a Soul and a Body; this visible and corruptible, that neither subject to sight nor touch: The power and constitution of each is different, the Body consisteth of Fire, Earth, Water, and Air; which four, the maker of the Universe (there being until then nothing more confused than the Elements) formed in a Pyramid, a Cube, an Octaedron, and an Icosaedron; but chiefly in a Dodecaedron. Matter, as far as it put on the Figure of a Pyramid, became Fire, and mounted upward: For, that Figure is the most apt to cut and to divide, as consisting of fewest Triangles; and therefore is the rarest of all Figures. As far as it is an Octaedron, it took the quality of Air: Where it took that of an Icosaedron, it became Water; The figure of a Cube Earth, as being the most solid and stable of all the Elements. The figure of a Dodecaedron, he used in the fabrick of the Universe. Surfaces come nigher the nature of Principles than all these, for they are before Solids. Of its Nature, the two Parents (as it were) are two Triangles most fair and rectangular; one a Scalenum, the other an Isosceles; a Scalenum is a triangle having one right angle, the other of two thirds, the last of one third. A Scalenum therefore is the element of a Pyramid, and an Octaedron, and an Icosaedron. A Pyramid consisteth of four Triangles, having all sides equal to one another, each whereof is divided as we said, into six scalenous Triangles. The Octaedrons consist of eightlike sides, whereof each is divided into six Scalenums. The Icosaedrons of twenty in the same manner; but the Element of a Cube is an Isosceles Triangle, for four such Triangles concurring make a Square, and six Squares a Cube. God made use of a Dodecaedron in the construction of the Universe, whence there are twelve Figures of Living Creatures in the Zodiac, whereof each is divided into thirty parts. Likewise in a Dodecaedron, which consisteth of twelve Pentagons, if each be divided into five Triangles, there are in every one six Triangles, so that in the whole Dodecaedron, there will be 360 Triangles, as many as there are degrees in the Zodiac.

When matter was put into those Figures by God, first it was moved rudely without order, until at last he reduced it to order, each being conjoynd to one another, and Composed in due Proportion: Neither are these distinct in Place, but are in Perpetual Motion, which they give likewise into Matter. For being straitned by the Compass of the World, and agitated by Mutual Jostlings, they are driven, the rare

rare always into the region of the solid, whence nothing is left vacuous, nothing void of Body. The inequality which remaineth amongst them causeth Convulsion, for matter is agitated amongst them, and they reciprocally by matter.

C H A P. XIV.

Of the Soul of the World, the Sphears and Stars.

FROM Bodies he alloweth that we collect the powers of the *Soul*, for seeing that we discern all things by the *Soul*, he justly placed the principles of all things therein, that whatsoever should occur, we might contemplate it by that which is of Kin and Neighbour unto it, and attribute an Essence thereunto consonant to the functions. Then therefore he called one substance intelligible and indivisible; he placed another divisible amongst Bodies, to signify that the knowledge as well of the one as of the other may be had by Intellect. And knowing that in things intelligible and sensible, there is identity and diversity, he fitly composed the *Soul* out of all these. For, either the like is known by the like, as the *Pythagoreans* hold, or as *Heraclitus the Naturalist*, unlike always by unlike.

That he would that the World should be generate, we must not so understand as if there shall be any time wherein the World is not, but in as much as it always perisheth in Generation, and declareth, that there is some more excellent and principal cause of its essence.

The *Soul* of the World which was from all Eternity, was not made by God, but only adorned by him, in which respect he is sometimes said to have made it, for that he exciteth it, and converteth the Mind thereof, as out of a profound Sleep unto himself, that beholding his intelligibles, and affecting his notions, it should from thence receive Species and Form; whence it is manifest, that the World was endued by God, both with a *Soul* and *Mind*. For, intending it to be the best, he must have made it animate and intelligent, since an animate thing is more excellent than an inanimate, and an intelligent than an unintelligent; perhaps the *Mind* also could not subsist without a *Soul*.

This *Soul*, being diffused from the Centre of the World to the extreame, comprehendeth the whole body of the World, so as it is extended throughout the Universe, and in that manner joyneth and conserveth the whole. The external preside over the internal, for they are not divided, but these are divided into seven Circles; from the first distributed according to duple and triple Intervals. That which is comprehended by the indivisible Sphear, is correspondent to it, that which is divided to the other. For the motion of Heaven which comprehendeth all things, being not uncertain, is one and ordinate, but that of the things within it, is changeable, varied by rising and setting, whence called Planetary. The outermost Sphear moveth to the Right-Hand from East

to West, the innermost contrariwise, to the Left-Hand from West to East, meeting the World.

God framed also the Stars and Constellations, some fixed for the ornament of Heaven and might, very many in number. The *Erratick* are seven, serving for number and time, and the illumination of all things; for time is an interval of the motion of the World, as an Image of Eternity, which is the measure of the state of the Eternal World. The Planets are not of equal Power, the *Sun* is the leader of all, who illuminateth, and sheweth all things to the Eye. Next the *Moon*, which in respect of her Power hath the second place. The rest of the Planets each according to their several Proportions. The *Moon* maketh the measure of a *Month*, in that space compleating its Circle, and overtaking the *Sun*. The *Sun* measureth the *Year*, for running through the circle of the *Zodiack*, he compleateth the Seasons of the *Year*. Of the other Stars each hath its proper revolution, with which all Men are not acquainted, but only the Learned. By all those revolutions the absolute number of time is compleated, when coming all to the same point, they are in such order, as if we should imagine a right line to be drawn from the Sphear of fixed Stars to the Earth, the Centers all would be seen in that line.

There being seven Orbs in the Planetary Sphear, the maker of the World, framed in them seven conspicuous bodies of matter for the most part fiery, and inserted them into the Sphears belonging to the other *Erratick* Circle. The *Moon* he placed in that Circle which is next the Earth, the *Sun* in the second, the *Morning-Star*, and the Sacred Star of *Mercury*, in that Orb which is equal in swiftness with the *Sun*. The rest higher, each in its proper Sphear. That of *Saturn* the slowest of all, he placed in that Orb which is next to the fixed Stars. Second to this is that which they call the Sphear of *Jupiter*, next that of *Mars*; the eighth, which is the *Supream Power*, includeth all. These are all living intelligent Creatures, and Gods endued with a Spherical Figure.

C H A P. XV.

Of Demons and Elements.

THERE are other *Demons* also which we may call intelligent Gods, in each of the Elements partly visible, partly invisible, in the *ether*, Fire, Air and Water, that there be not any part of the World void of *Soul*, or of an animate Creature more excellent than humane Nature. Below these are all Earthly sublunary things; God is maker of the World, of all Gods and *Demons*. This Universe by his Divine Will shall not be dissolved. Over the rest his *Souls* preside, who by his Command and Example order whatsoever they do. By these *Elys*, *Nocturnal Visions*, *Dreams*, *Oracles*, and whatsoever Men refer to divination, is artificially wrought.

The *Earth* is fixed in the midst of all, round about the Axle-tree, which passeth through the midst of the World. It is the observer of Night and Day, the most ancient of all Gods in Heaven. Next the Soul of the World it affordeth us most Nutriture; about it the Heavens move, and it self is a kind of Star: It remaineth in its proper place, which by reason of its even weight is the Centre; the *Æther* exterior is divided into the Sphear of fixed Stars, and that of Planets. Next to these is the Air; in the midst the Earth with its Humidity.

CHAP. XVI.

Of the Younger Gods makers of Men.

After that all these were framed, there remained three kinds of living Creatures which were to be Mortal, *Volatile*, *Aquatile*, and *Terrestrial*; the generation whereof he committed to his Son, lest if he himself had begotten them, they should have been Immortal as well as the rest. They borrowing some little parts from first matter for a certain time, formed mortal living Creatures, and because of Mankind, as being next to the Gods, both the Father of all things, and his Sons likewise have a particular care, the Maker of all things sent down himself their Souls into the Earth equal in number to the Stars, and having imposed each one his proper Star, as a Vehiculum, like a Law-giver, he pronounced decrees unto them, that he himself might be inculpable, which was that there should arise Mortal affections from the Body, first Senses, next Pleasure, then Grief, and Fear, and Anger, which those Souls that should overcome, and not suffer themselves to be transported by them, should justly be accounted Victors, and at the last return to their proper Star, though they which should be transported by Injustice, should in the second Generation undergo the lives of Women, wherein if they ceased not from their Wickedness, they should at last transmigrate into the nature of Brute Beasts, the end of these Labours shall then be, when they have overcome the innate affections of the Body, and then return to their proper Habit.

CHAP. XVII.

Of the Body, and parts of Man, and Powers of the Soul.

THE Gods first formed Man of Earth, Fire, Air, and Water, borrowing some parts from matter (to be restored in their due time) which they so connected to one another by secret ties, as that of all these they framed one Body. The most excellent part of the Soul that was sent down from Heaven, they placed in the *Head*, for which as a manured Field they prepared the *Brain*. About the Face they disposed Organs proper for Sense; *Marrow* they made of smooth straight Triangles, of which the Elements were formed, that it should be the Origin of prolifick Seed. *Bones*

they formed of Marrow and Earth, the Earth moistned, and often dipt in Water and Fire. *Flesh* is compounded of Salt and Sharp, as of a kind of ferment. Marrow they enclosed with *Bones*, Bones with *Sinews* instead of Chains, that by these Inflexions the knitting of the Joints might be pliant. Over these as a cover is extended the *Skin*, partly white, partly black, for beauty and use. Of these likewise consist the Internal *Bowels*, and the Belly, and the Intestines, every where rolled about it. And from the Mouth, above the *aspera Arteria*, and the *esophagus*, of which one cometh down to the Stomach, the other to the Lungs. Meat is digested in the Belly by Spirit and Heat, and thence distributed to the whole Body according to their several Constitutions. The two Veins passing along the Spine of the Back, meet, and cross at the Head, where they spread into many parts.

Thus when the Gods had made Man, and given him a Soul as the Mistress of his Body, they placed the principal part of that Soul to which Reason appertaineth, in the head. Whence is derived Marrow and Sinews, and by the different affection of this, the Mind likewise is altered. Moreover they gave him Senses, as the attendants of Reason, and the power of judging and contemplating with Reason. Those parts of the Soul, which are moved by meaner affections, they seated in lower places; the irascible part in the Heart, the concupiscible about the Belly, and the parts next to the Navel, of which hereafter.

CHAP. XVIII.

Of Sight.

After that the Gods had placed the Eyes (Conduits of Light) in the Face, they included in them a Fiery Light, which being smooth, and in some manner thick, they conceived of Kin to Diurnal Light. This breaketh forth every where at the Eyes, but chiefly through the Eye-Balls, as being there most pure and clear. This agreeing with the external Light, as like with like affordeth the sense of Sight, whence in the night, when the light vanisheth and is obscured, this ray of ours no longer mingleth with the immediate Air; but, on the contrary, withdrawing it self inward, smooths and diffuses the motions that are in us, and so bringeth on Sleep, whereby the Eye-lids are shut. If it bring much rest, the sleep is little disturbed with Dreams, but if there remain any motions behind, we are troubled with many illusions. In this manner, Phantasies, whether true or false, arise. Of the same Nature are Images, which we see in Glasses, or other smooth pellucid Bodies, which exist only by reflection. For, as the Glass is concave or convex, or oblong, the object is differently represented to the Beholder. The light being reflected to other parts, those which are dispersed in convex meet in the concave, for in some, the right and left sides seem quite inverted, in others alike; in others, those which are upwards seem downwards, and on the contrary, those which are downwards, upwards.

CHAP.

C H A P. XIX.

Of the rest of the Senses.

HEaring is given for the perception of Voice; it ariseth from a Motion made about the Head, and setteth in the Liver. Voice is that which passeth through the Ear, Brain, and Blood to the Soul. A sharp Voice is that which is moved swiftly, deep which slowly, great which much, small which little.

Next followeth the Sense proper to the Nostrils, perceptible of Odour. Odour is an affection which passeth from the Veins of the Nostrils to the parts of the Navel. The Species thereof have no name, except the two that are most common, pleasant, and unpleasant, commonly called sweet and stinking. All Odour is more thick than Air, more thin than Water; for Odour is properly said to be of those things which have not yet received perfect Mutation, but consist of a communion of Air and Water, as smoke and mists. For, by the resolution of these into one another, the sense of Smelling is made.

Taste was made by the Gods to be judge of different favours. Hence are Veins extended to the Heart, by which several favours are examined. These Veins by dilating or contracting themselves severally according to the Savors presented to them, discern the differences. The differences of Savors are seven, sweet, sharp, sour, picquant, salt, acid, bitter; the nature of sweet Savor is contrary to all the rest, for by its Power it sootheth and pleaseth the moisture of the Tongue, whereas of the rest some disturb and dispel it, as acute Savors; some heat, and fly upwards, as the hot; others being absterfive, dissolve it; as the bitter; others are by degrees purgative and absterfive, as the Salt. Of these some contract the passages; they which do it more roughly, are called acid, they which more gently, austere.

The sense of Touching was formed by the Gods, to discern hot and cold, soft and hard, light and heavy, smooth and rough, and to judge the differences of each of these; *Yielding* Bodies, we call those which yield to the touch, *resisting* those which yield not; this proceedeth from the bases of Bodies: Those which have large Bases, are firm and solid, these which have narrow Bases are yielding, soft and easily changed. Rough is that which is uneven and hard, smooth, that which is plain and thick: As warm and cold qualities are most opposite, so they proceed from the most different causes. That which cutteth, by the acuteness and roughness of its parts, begetteth a hot affection, that which is more thick, in penetration, a cold, whilst the more rare are expelled, and the more dense compelled to penetrate into their room. Thence ariseth a Concussion and trepidation, and (an affection which is from hence begotten in Bodies,) rigor.

C H A P. XX.

Of Heavy and Light.

HHeavy and Light ought not to be defined by higher or lower place, nothing is high or low; for Heaven being absolutely round, and its convex extremity even, we cannot term any thing higher or lower, yet may we call that heavy, which is hardly drawn to a place different from its Nature; light which easily; or heavy is that which consisteth of most parts, light of fewest.

C H A P. XXI.

Of Respiration.

WE breathe after this manner. The external Air compasseth us round about, and passeth in at our Mouth, Nostrils, and invisible Pores of the Body, where being warmed, it floweth back again to the external air, by that part out of which it flowed, it again thrusteth the external Air to the interior. Thus there is an uninterrupted succession of inspiration and expiration.

C H A P. XXII.

Of the Causes of Diseases.

OF Diseases Plato alledgeth many causes. The first is defect, or excess of the Elements, and a change of places which agree not with their Nature. The second a preposterous generation of homogeneous parts, as when of Flesh is made Blood, or Choler, or Flegm; for all these are nothing but colliquation, or putrefaction. Flegm is a new colliquation of Flesh; sweat and tears are a kind of Serum of Flegm. Flegm intercepted in the outward parts, begetteth scurf and leprosie, in the inward being mingled with Melancholy, it causeth the falling sickness. Sharp and salt Flegm engender those affections which consist in rigour, for all Bodies that are inflamed with Choler must suffer that. A World of various Diseases are engendred by Choler and Flegm. As concerning Fevers; Plato conceived that a continual Fever proceedeth from excess of Fire, a quotidian from excess of Air, a Tertian from excess of Water, a Quartan from excess of Earth. It remaineth that we here begin to speak of the Soul, though not without some danger, of repeating the same things.

C H A P. XXIII.

Of the three principal Powers of the Soul.

THE Gods, the makers of Mortal Creatures, having received from the first God the Soul of Man Immortal, added unto it two Mortal Parts; yet lest the Immortal Divine part might be infected with Mortal Extravagances, they seated as Prince of all in the Tower, as it were of the Body, the Head,

in figure resembling the Universe. The rest of the Body they appointed as a vehiculum to serve this. To each mortal part they assigned its proper Habitation, placing the irascible in the Heart, the concupiscible in the midst betwixt the Navel and the Diaphragma, binding it there as a furious savage Beast. They framed the Lungs in respect of the Heart, soft, bloodless, hollow, and spongy, that the Heart being somewhat heated with Anger, might thereby be refrigerated and asswaged; the Liver to excite and allay the concupiscible part, having both sweetness and bitterness, as likewise for the clearing of Divinations which are given by Dreams: for as much as in it by reason of its smoothness, shining, and brightness, the power which proceedeth from the mind doth shine forth. The Spleen was made for the benefit of the Liver, to purge and cleanse it; so that those corruptions, which by some diseases, are contracted about the Liver, retire thither.

C H A P. XXIV.

Of the distinction of the parts of the Soul.

THat the Soul and parts thereof according to their proper faculties are three-fold, every part appointed by reason their several places, is manifest from hence. Those things which are separated by Nature, are divers; passionate and reasonable are separated by Nature; this being conversant in Intelligibles, that in things sad or joyful, to omit the passive part which is common likewise to brute Beasts. Now these two being distinct by Nature, must likewise be distinguished by place, because for the most part they disagree, and are repugnant to one another; but nothing can be repugnant to it self, neither can those things which are contrary to one another consist together in the same. In *Medea* anger seemeth to contest thus with reason;

*I know what I intend is ill,
But anger over-rules my Will.*

In *Laius* when he ravished *Chrysippus*, Concupiscence contested with reason; for so he saith;

*Men to this Crime the Gods confine,
To know the Ill that they decline.*

That the rational power is different from the passive, is evident from this, that they are ordered by several means, one by discipline, the other by habitual Practice.

C H A P. XXV.

Of the Immortality of the Soul.

THat the Soul is Immortal *Plato* proveth by these Arguments. The Soul to every thing, wherein it is, conferreth Life, as being naturally innate in her self, but that which conferreth Life to others never admitteth death, but what is such is immortal.

The Soul being Immortal, is likewise incorruptible, for it is an incorporeal Essence which cannot be changed substantially, and is only perceptible by the Intellect, not by the Eyes, and is uniform. Hence it must be simple, neither can be at any time dissolved or corrupted. The Body is contrary, for it is subject to sight and other Senseless and as it is compounded, so shall it again be dissolved, and it is multiform. When the Soul adhereth to those things which are perceptible by Intellect, it acquiesceth; Now to that by whose Presence she is disturbed, she cannot possibly be like, wherefore she is more like to those things which are perceptible by Intellect; but what is such, is such by Nature incorruptible and perishable.

Again, the Soul doth naturally preside over the Body, not the Body over the Soul, but that which by Nature ruleth and commandeth is of Kin to Divinity, wherefore the Soul being next unto God, must be Immortal, not subject to Corruption.

Again, Contraries which have no *medium*, not by themselves, but by some accident are so ordered by nature, that they may be mutually made of one another. But that which Men call Life is contrary to that which they call Death; as therefore Death is a separation of the Soul from the Body; so is Life a conjunction of the Soul with the Body, pre-existent to the Body. But if she be pre-existent, and shall subsist after the Body, it followeth that she be sempiternal, for there cannot any thing be imagined whereby she may be corrupted.

Again, if Learning be Reminiscence, the Soul must be Immortal, but that it is Reminiscence we prove thus: Learning cannot otherwise consist than by remembrance of those things we formerly knew. For, if from *Singulars* we understand *Universals*, how could we discourse by *Singulars* which are Infinite? Or how from a few perceive *Universals*? We should therefore necessarily be deceived, as if we judged that only to be a living Creature which breatheth; or how could the Notions themselves have the reason of Principles? By Reminiscence therefore, from some few which we have conceived in our our Mind, we understand the rest, and from some occurrent particulars we remember those which we knew long before, but were then given over to oblivion, when the Soul first descended into the Body.

Again, if the Soul be not corrupted by its own proper ill, neither can it be destroyed by that or any other, nor simply by any ill, and being such, shall remain uncorrupted.

Again, that which is moved in it self, as being the principle of Motion in those things which are moved, is always moved; that which is such is immortal; but the Soul is moved of it self, that which is moved of it self is the principle of all motion and generation; and a principle is exempt of generation and corruption, wherefore the Souls of Men, and of the Universe it self are such, for both partake of the same mission. He affirmeth the Soul to be moveable in her self, because it hath an innate Life, always operating by its Power.

That

That rational Souls are immortal, may clearly be asserted out of *Plato*; but whether the irrational be such seemeth doubtful; yet is it probable that being guided only by Phantasie, not endued with Reason or Judgment, neither do they contemplate any thing, or discern, or collect from it, nor can they discern ill, but generally understand nothing, nor are of the same nature with those Souls which have Intellect and Reason, but are capable of dying and being corrupted. For as much as they are immortal, it followeth that they are put into Bodies, being planted into the formed Nature of Embrio's, and transmigrate into several Bodies, as well humane as others, either according to some certain numbers which they expect, or by the Will of the Gods, or for intemperance of Life, or for love of the Body. For the Body and Soul have a kind of affinity, as Fire and Brimstone.

Moreover the Souls of the Gods have a judicative Faculty, called Gnostick, and impulsive to some action, called Parastatick, which faculties being likewise in humane Souls, become changed as soon as they come into the Body, the assistent into the concupiscible, the impulsive into the irascible.

C H A P. XXVI.

Of Fate and Free-will.

Concerning *Fate*, *Plato* held thus: All things are in Fate, yet all things are not decreed by Fate. For Fate, though it be like a Law, yet it useth not to speak in this manner, that this Man shall do thus, and to that Man, that shall befall (which were to proceed into infinite, there being an infinite Generation of Men, and infinite accidents happening daily to them; besides that this would take away our Free-will, our praise or dispraise, and whatsoever is of that kind) but rather thus; Whatsoever Soul chooseth such a Life, and doth such things, these shall follow, the Soul therefore is free, and it is left within its Power to do or not to do, without any compulsion or necessity. But that which followeth the Action is performed by Fate. As from *Paris's* ravishing of *Helene*, (which it is within his Power to do or not to do) shall follow that the *Grecians* contend with the *Trojans* about *Helene*. Thus *Apollo* foretold *Laius*;

If thou beget a Son, that Son shall kill thee.

In the Oracle are comprehended both *Laius* and the begetting of a Son, that which shall follow upon the begetting of the Son depends on *Plato*.

That which may be done is of a middle kind betwixt true and false, and being so indefinite by Nature; That which is in our Power, is carried on as it were unto it. That which is done by our election, is presently either true or false; that which is in power is different from that which is said to be in habit and act. That which is in power, declareth an aptitude in that thing, wherein the habit is not yet perfect.

So a Boy may be said to be a Grammarian, a Musician, a Carpenter in power. He is in habit of one or more of these when he hath acquired that habit. He is said to be in act, when he operateth according to that acquired habit. That which we call possible to be done, is none of these. Indeterminate is that which is in our Power, and to which part soever it inclineth, will be true or false.

C H A P. XXVII.

E T H I C K.

Of the chief Good, and of Vertues.

WE must next give a short account of *Plato's Ethics*. That which is worthy of all Honour, and is the Supream Good, he conceived not easie to be found, and if found, not safe to be declared. For this reason, he communicated the Contemplation of the chief good to very few, and those of his most intimate Acquaintance, of whom his Judgment made choice for this purpose. But our good, if we examine his Books diligently, we shall find he placed in the knowledge of the first Good, which may rightly be called God, and the first Mind. For all things which Men call good, he conceiveth to be called good in this respect, for as much as they derive something from that good, as all sweet and hot things are termed such from some Participation of the first sweet and the first hot. Of those things which are in us, only the Mind and reason have a similitude of the first good. Wherefore he calleth our good, Fair, Venerable, Amiable, Proportionate, and lastly Beatitude. Of those which are commonly called good, as Health, Beauty, Strength, there is none good, unless it be employed towards the practice of Vertue. For being separated from Vertue, they are like Matter only, and to those who make ill use of them, only ill. Yet these *Plato* sometimes calleth Mortal Goods. Beatitude he reckoneth not amongst humane goods, but amongst the Divine and Immortal. Whence he asserteth that the Souls of true Philosophers are replenished with vast admirable goods, and after the dissolution of their Mortal Body, are admitted to the Table of the Gods, and with them walk over and survey the Field of Truth, because they did see they used the utmost endeavours of their Souls to know it, and esteemed it the most precious of all things, by the Benefit whereof they illustrated, and excited their Mind as a lost or blinded Sight, preferring the conservation thereof before many corporeal Eyes. Foolish Men are like those who lead all their Life in some Cave under ground, where they never saw the light of the Sun, but only some empty thin Shadows of such Bodies as are with us upon the Earth, which seeing, they think they see true Bodies. As these, if ever they should be brought out of darkness into the clear light, would questionless despise all things which they saw before, and themselves much more, as having been absolutely deceived; So they who rise up out of the darkness of this life

life to those things which are divine and fair, in all likelihood will condemn what before they most esteemed, and love more vehemently this contemplation. Thus it appeareth, that only what is good is honest, and that Vertue sufficeth to Felicity.

Moreover, that good and fair consist in knowledge of the first good, he declareth in whole Volumes. As concerning those which are good by participation, he speaketh thus in his first Book of Laws. Good is two-fold, Humane and Divine, &c. If any thing be disjoined from the first good, and void of the essence thereof, that is called good by the foolish, which in *Entbydemo*, he affirmeth to be a greater ill to the Possessor.

That he conceiveth the Vertues to be eligible in themselves, is manifest, in as much as he affirmeth that only to be good which is Honest, which he demonstrateth in many Dialogues, particularly in those of the Commonwealth.

Hence he conceiveth that Man to be most happy and blessed, who hath attained the Science we mentioned; yet not in respect of the Honours which attend such a Person, nor of any other reward; for though he be unknown to all Men, and such things, as are commonly accounted ills, as dishonour, banishment, and death happen unto him; he is notwithstanding happy. On the contrary, a man who wants this knowledge, though he possess all things commonly esteemed good, Riches, Power, Health, Strength and Beauty, he is nothing the more happy.

He asserteth an ultimate end, conformable to all these which is to be made like unto God, as far as Humanity is capable of being such. This he expounds variously, sometimes as in *Theateto*, he affirms our resemblance to God to consist in being Prudent, Just, and Holy; wherefore we must endeavour to fly with all possible Celerity from hence to those. This flight is the resemblance to God, as much as is possible: The similitude consisteth in Prudence, Justice, and Sanctity; sometimes in Justice only, as in his last Book of the Commonwealth. For a Man is never deserted by God, whilst he endeavoureth to be just, and by the very act of Vertue, as much as a Man is capable of, he is rendered like unto God. In *Phadone* he asserteth, that this resemblance to God is acquired by Temperance and Justice, thus. *Are not they Blessed and happy, and from hence shall go into the best place, who have practised the popular civil Vertue which they call Temperance and Justice?* Again, sometimes he affirmed, that the end of Life is to be like unto God, sometimes to follow God, as when he saith, God indeed according to the old Saying, *containing the beginning, middle and end of all things*, &c. Sometimes he joineth both together, as when he saith, *The Soul following God, and being rendred like unto him*, &c. The Principle of Utility is good it self, but this is said of God, therefore the end conformable to the Principle, is to become like unto God, to the Celestial, or rather supercelestial God, who hath not Vertue, but is more excellent than all Vertue. Wherefore it is rightly said, that *κακοδαιμονία*, Misery, is a per-

versity of the the Genius, *ευδαιμονία*, Beatitude is a good habit of the Genius.

This similitude to God we shall obtain, if we enjoy convenient Nature, in our Manner, Education and Sense, according to Law, and chiefly by Reason, and Discipline, and institution of Wisdom, withdrawing our selves as much as possible from Humane Affairs, and being conversant in those things only which are understood by Contemplation: The way to prepare, and, as it were, to cleanse the Demon that is in us, is to initiate our selves into higher Disciplines, which is done by Musick, Arithmetick, Astronomy and Geometry, not without some respect of the Body, by Gymnastick, whereby it is made more ready for the actions both of War and Peace.

CH A P. XXVIII.

The Definition and kinds of Vertue.

Vertue being divine, is the perfect and best affection of the Soul, which adorneth a Man, and rendreth him more excellent and ready, as well for Speech as Action, whether he do it alone or with others.

Of the Vertues, some are placed in the rational part, some in the irrational. For where-as the Nature of the rational part is one, that of the irascible another, that of the concupiscible another, the perfection of these must likewise be different. That of the rational is *Prudence*, of the irascible, *Fortitude*, of the concupiscible, *Temperance*.

Prudence is the Science of things, good, bad, and betwixt both.

Temperance is an apt moderation of Desires and Appetites; when we call Temperance a moderation and obedience, we mean only this, that it is a faculty causing all Appetites to be subjected unto it, in decent order and submit obedience to be commanded by Nature. This is the rational part.

Fortitude is a Lawful Observation of command difficult, or not difficult, that is, it is a faculty which keepeth a Lawful Precept.

Justice is an agreement amongst all these, which causeth that the three parts of the Soul agree with one another, and that each be worthily conversant in those things which are proper, and belong unto it.

Thus it is a common intire Perfection of these three Vertues, *Prudence*, *Fortitude* and *Temperance*, in such manner that Reason commandeth, and the rest of the parts each according to its several Property, are restrained by Reason, and obey it.

Hence it followeth that the Vertues are mutually consequent to one another; Fortitude being the conservation of a lawful precept, is likewise conservative of right Reason. Right Reason proceedeth from Prudence; Prudence cohereth with Fortitude, for it is the Knowledge of good things; but no Man can discern that which is good, if he be distracted by Fear, or involved in the like troubles. In like manner, neither can any Man be Wise, and intemperate, for then he is over

overcome by Affections. If a Man do something contrary to Reason, *Plato* affirmeth he doth through Ignorance and Imprudence, so that none can be Prudent that is Intemperate or Fearful. Whence it followeth, that the perfect Vertues cohere to one another, and are inseparable.

C H A P. XXIX.

Of Vertues, Vices, and their differences.

THE gifts of Nature and progress in them are called Vertues also, by reason of their Similitude with the perfect Vertues, assuming the same name. In this Sense we call all Soldiers stout, and sometimes call Imprudent and Rash persons stout, when we speak not of the perfect Vertues, for the perfect neither increase nor decrease; but Vices are intended and remitted. One Man is more imprudent and more unjust than another, neither do all the Vices follow one another, for they are certain contraries which are not compatible to the same. Such is Fury to Cowardice, and Prodigality to Covetousness; nor can there be any Man at once possessed of all Vices, no more than a Body Tormented by all Diseases.

Moreover, there is a mean affection which inclineth not plainly either to Vice or Vertue, for it is not necessary, that all men must be good or bad; they are such, who have arrived at the height of these; for it is not easie to pass suddenly from Vertue to Vice, because betwixt extremes there is a great interval and distance.

Of Vertues some are principal, others concomitant; principal are those which are in the rational part of the Soul, and by which the other Vertues are perfected. Concomitant are those which are in the other part which are subject to Affections. These act honest things according to Reason, not that which is in them, for they have none, but that which they receive from Prudence, which is confirmed in them by Custom and Exercise.

Now for as much as neither Science nor Art consisteth in any part of the Soul, but in the Rational, those Vertues which are in the other part, that is subject to Affections, cannot be taught, because they are neither Arts nor Sciences, neither have they a peculiar Doctrine. Prudence is a Science, which prescribeth unto every one what is proper to him, as a Pilot, or Master of a Ship, to inferior ignorant Sailors. The like in a common Souldier and a General.

For as much as Ills are intended and remitted, Offences cannot be equal, but some must be greater, others lesser, for which Reason, they, who make Laws, Punish some more gently, others more severely. And though Vertues are certain Heights, as being perfect, and like unto that which is right, yet in another respect they are called Mediocrities, because all or the most of them are placed betwixt two Vices, whereof one sinneth in excess, the other in defect; as on the one side of *Liberality* is *Covetousness*, on the other

Prodigality. For in Affections we recede from the Mean, when we relinquish that which is placed in Vertue, either by excess or defect. But neither he, who beholding his Parents wronged is nothing moved thereat, nor he who is incensed at the smallest matters void of Passion or Moderate, but the quite contrary. He who at the death of his Parents grieveth not, is void of Passion; He who destroyeth himself with grieving, is over-passionate and immoderate; he who grieveth moderately, is moderately passionate. In like manner, he, who feareth upon all occasions, and more than needs, is Timorous; he who feareth nothing is rash; He only is Stout that can keep a mean betwixt Fear and Rashness; the like in all the rest. And forasmuch as that which is mean in Affections is likewise best, and Mediocrity is nothing but a mean betwixt Excess and Defect, there are these Vertues termed Mediocrities, because in Humane perturbations and passions they affect us a middle kind of way.

C H A P. XXX.

That Vertue is Voluntary, Vice involuntary.

Vertue being chiefly of those things which are in our power, not compulsive (for it could not deserve praise, if it came either by Nature or Divine Decree) it followeth, that Vertue is voluntary, begotten by a fervent, generous, and firm impulsion.

From this, that Vertue is voluntary, it followeth that Vice is involuntary. For, who, in the most excellent part of himself would ever voluntarily choose that which is the greatest of all Ills? When a Man is carried on to Vice, he first inclineth to it, not as if it were ill, but good, and if he fall into ill, doubtless he is deceived with thinking, that this way by a lesser ill, he may arrive at a greater good, and goeth in this manner unwillingly to it. For, it is not possible, a Man should pursue ill as it is ill, without any hope of good, or fear of a greater ill. All ill things therefore, which an ill man doth, are involuntary, for, injustice being involuntary, to act unjustly is so much more involuntary, as the action of Vice is beyond the idle habit thereof. Yet, though wicked actions are involuntary, the wicked nevertheless ought to be punished, and that not after one manner; but, according to the variety of hurt which they do to those they wrong. That which is involuntary consisteth in ignorance of perturbations, all which may be diverted, either by Reason, or civil Custom, or Diligence.

C H A P. XXXI.

Of Love and Friendship

Friendship, properly so termed, is made by a mutual reciprocal benevolence. This is, when either is as much concerned for the happiness of the other, as of his own, with equality

equality is preserved only by similitude of Manners: For, the like is friend to its like, if they be both Moderate; but, the intemperate cannot agree, either with themselves or the Moderate.

There are other things which are thought friendships, but are not such, in which there appeareth some shew of Vertue. Of these, is the natural good will of Parents to their Children, and of Kindred one to another, as also that which is called Civil and Sociable: These are not always accompanied with mutual Benevolence. Likewise, the Amatory Art is a kind of Friendship. That which is Honest is proper to a Generous Soul, Dishonest to a Perverse; mean, to one meanly affected. For, as the habit of the Rational Soul is threefold, Right, Dishonest, and Mean; so many different kinds are there of Love, which appeareth most clearly in the difference of the ends they propose unto themselves. The Dishonest aims only at Corporeal Pleasure, and therefore is absolutely Brutish. The Honest considereth the Mind only, as far as Vertue appeareth in it. The Mean desireth both the Beauty of the Soul and of the Body; of which Love, he who is worthy, is mean likewise; that is, neither absolutely Honest nor Dishonest. Hence that love which aimeth only at the Body, ought to be termed a *Demon* (rather than a *Deity*, which never descendeth to an Humane Body) transmitting Divine things to Men, and Humane to God.

Of the three kinds of Love, that which is proper to a good Man, being remote from Vicious Affections, is Artificial, whence it is placed in the rational part of the Soul. The Contemplations thereof are these, to discern who is worthy of Love, and to contract Friendship with him, and enjoy it: This discernment is made from his Aims or Desires, whether they are Generous, and directed to a good end, or Violent and Fervent. The contraction, or acquisition of Friendship, is made, not by wanton excessive Praise, but rather by reprehension, shewing him, that it is not convenient he should live in that manner he doth; when he enjoyeth the love of him whom he affects, he must always exhort him to those things, by exercise whereof, he may arrive at perfect habit. Their end is that of Lover and Beloved, they may at last become friends.

CHAP. XXXII.

Of Passions.

Justice is so great an ill, that it is better to suffer wrong than to do wrong; for one belongeth to a wicked Man, the other to a weak Man: both are Dishonest, but to do wrong is worse, by how much it is more Dishonest. It is as expedient that a wicked Man be punished, as that a sick man should be cured by a Physician; for all Chastisement is a kind of Medicine for an offending Soul.

Since the greater part of Virtues are conversant about Passions, it is necessary that we

define Passion. Passion is an irrational motion of the Soul, arising out of some good or ill; it is called an irrational motion, because neither Judgments nor Opinions are Passions; but motions of the irrational parts of the Soul. For in the irrational part of the Soul, there are motions, which though they are done by us, are yet nothing the more in our power. They are often done therefore contrary to our inclination and will; for sometimes it falleth out, that though we know things to be neither pleasing nor unpleasing, expetible nor avoidable, yet we are drawn by them, which could never be if such passions were the same with Judgment. For we reject Judgment when we disapprove it whether it ought to be so or otherwise. In the definition is added, arising from some good or some ill, because of that which is mean or indifferent betwixt these, no Passion is ever excited in us. All Passions arise from that which seemeth good or ill. If we see good present, we rejoyce, if future, we desire. On the contrary, if ill be present, we grieve, if imminent, we fear.

The simple Affections, and, as it were, Elements of the rest are two; *Pleasure* and *Grief*; the rest consist of these. Neither are Fear and Desire to be numbred among the principal Passions, for he who feareth, is not wholly deprived of Pleasure, nor can a Man live the least Moment, who despaireth to be freed or eased of some ill. But it is more conversant in Grief and Sorrow, and therefore he, who Feareth, Sorroweth. But he who Desireth, like all those who desire or expect something, is delighted; inasmuch as he is not absolutely confident; and having not a firm hope he is grieved. And if desire and fear are not principal Passions, it will doubtless follow, that none of the other Affections are simple; as Anger, Love, Emulation and the like; for in these, Pleasure and Grief are manifest, as consisting of them.

Moreover of Passions, some are rough others mild; the mild are those, which are naturally in Men, and if kept within their bounds, are necessary and proper to Man, if they exceed vitious. Such are Pleasure, Grief, Anger, Pity, Modesty; for it is proper to Man to *delight* in those things which are according to Nature, and to be grieved at their contraries. *Anger* is necessary to repel and punish an Injury. *Mercy* agreeth with Humanity. *Modesty* teacheth us to decline sordid things. Other Passions are rough, and preternatural, arising from some depraved or perverse Custom. Such are excessive Laughter, Joy in the Misfortunes of others, Hatred of Mankind. These, whether intense or remiss, after what manner soever they are, are always Erroneous, and admit not any laudable mediocrity.

As concerning Pleasure and Grief, *Plato* writeth thus. These Passions are excited in us by Nature. Grief and Sorrow happen to those who are moved contrary to Nature; Pleasure to those who are restored to the proper constitution of their Nature. For he conceiveth the natural state of Man to consist

list in a mean betwixt Pleasure and Grief, not moved by either, in which state we live longest. He asserteth several kinds of Pleasure, whereof some relate to the *Body*, others to the *Soul*. Again, of Pleasures some are *mix'd* with Grief, some are *pure*. Again, some proceed from the *remembrance* of things past, others from *Hope* of things to come. Again, some are *dishonest*, as being intemperate and unjust; others *moderate*, and joyned with good, as joy for good things, and the Pleasure that followeth Vertue. Now because most Pleasures are naturally dishonest, he thinks it not to be disputed whether Pleasure can be simply and absolutely a good, that being to be accounted poor and of no value, which is raised out of another, and hath not a principal primary essence. For Pleasure cohereth even with its contrary Grief, and is joyned with it, which could not be, if one were simply good, the other simply ill.

C H A P. XXXIII.

Of the Forms of Common-wealths.

OF the Forms of Commonwealths, some are supposed only, and conceived by abstract from the rest. These he delivers in his Book of a Commonwealth, wherein he describeth the first Concordant, the second Discordant, enquiring which of these is the most excellent, and how they may be constituted. He also divideth a Commonwealth like the Soul into three parts, *Keepers*, *Defenders*, and *Artificers*. The Office of the first is to Counsel, to Advise, to Command; of the second, to Defend the Commonwealth, upon occasion, by Arms, which answereth to the irascible power; To the last belong Arts and other Services. He will have Princes to be Philosophers, and to contemplate the first good, affirming that so only they shall Govern rightly. For Mankind can never be freed from ill, unless either Philosophers Govern, or they who Govern be inspired with Philosophy after a Divine manner. A Commonwealth is then Governed best, and according to Justice, when each part of the City performeth its proper Office. So that the Princes give Laws to the People; the Defenders obey them, and fight for them, the rest willingly submit to their Superiours.

Of a Commonwealth he asserteth five kinds, the first, *Aristocracy*, when the best Rule: the second, *Timocracy*, when the Ambitious; the third, *Democracy*, when the People; the fourth, *Oligarchy*, when a few; the last, *Tyranny*, which is the worst of all.

He describeth likewise other supposed Forms of Commonwealth, as that in his Book of Laws; and, that which reformeth others, in his Epistles, which he useth for those Cities that in his Books of Laws he saith are sick. These have a distinct place, and Select Men out of every Age, as according to the diversity of their nature and place, they require different Institution, Education, and Arms. The Maritime People are to study Navigation and Sea-fight; the Island fighting on foot; those in Mountainous Countries to use light Armour, those on the Shore heavy. Some of these to exercise fighting on Horse-back. In this City he alloweth not a Community of Women. Thus is Politick a Virtue conversant both in Action and Contemplation; the end whereof is to constitute a City, Good, Happy, and Convenient to it self. It considers a great many things, amongst the rest, whether War be to be waged or not.

C H A P. XXXIV.

Of a Sophist.

Hitherto we have spoken of a *Philosopher*, from whom a *Sophist* differeth; In *Manners*, because he teacheth young Men for gain, and desireth rather to *seem* than to *be* good. In *matter*, for a Philosopher is conversant in those things which always are, and continually remain in the same manner; but a Sophist in that which is not, for which reason he seeketh darkness, that he may not be known to be what he is. To things that are, that which is not, is not opposed as contrary, for it neither existeth, nor is participant of any Essence, nor can be understood. So that if any Man endeavour to express it in words, or comprehend it by thought; he is deceived, because he putteth together things contrary and repugnant. Yet that which is not, as far as it is spoken, is not a pure negation of that which is, but implieth a relation to another, which in some manner is joyned to *Ens*. So that unless we assume something from that which is, to that which is not, it cannot be distinguished from other things, but thus, as many kinds as they are of *Ens*, so many are there of *Non-Ens*, because that which is not an *Ens* is a *Non-Ens*.

Thus much may serve for an Introduction into Plato's Philosophy: Some things perhaps are said orderly; others dispersedly, or confusedly; yet is all so laid down, that by those which we have delivered, the rest of his Assertions may be found out and Contemplated.

After so serious a Discourse, it will not be amiss to give the Reader a Poetical Entertainment upon the same Subject,

Being A

PLATONICK DISCOURSE

Written in Italian, By

JOHN PICUS Earl of MIRANDULA,

In Explication of a Sonnet, By

HIERONIMO BENIVIENTI.

The First PART.

S E C T. I.

IT is Principle of the *Platonists*, That every created thing hath a three-fold being; Casual, Formal, participated. In the Sun there is no heat, that being but an Elementary Quality, not of Coelestial Nature: Yet is the Sun the Cause and Fountain of all Heat. Fire is hot by Nature, and its proper form: Wood is not hot of it self, yet is capable of receiving that quality by Fire. Thus hath heat its Casual being in the Sun, its Formal in the Fire, its Participated in the Fuel. The most Noble and Perfect of these is the Casual: and therefore *Platonists* assert, That all Excellencies are in God after this manner of being; That in God is nothing, but from him all things; That Intellect is not in him, but that he is the Original Spring of every Intellect. Such is *Plotinus's* meaning when he affirms, * *God neither understands nor knows*; that is to say, after a formal way, As *Dionysius Areopagita*, *God is neither an Intellectual nor Intelligent Nature, but unspeakably exalted above all Intellect and Knowledge.*

Señ. 2.

P*latonists* distinguish Creatures into three degrees. The first comprehends the Corporeal and visible; as Heaven; Elements, and all compounded of them: The last the invisible, incorporeal, absolutely free from Bodies, which properly are called Intellectual (by Divines, Angelical) Natures. Betwixt these is a mid-nature, which tho' incorporeal, invisible, immortal, yet moveth Bodies, as being obliged to that Office; called, the Rational Soul; inferiour to Angels, superiour to Bodies, subject to those, regent of these: above which is God himself, Author and Principal of every Creature, in whom Divinity hath a casual being; from whom, proceeding to Angels, it hath a formal

being, and thence is derived into the rational Soul by participation of their lustre: below which, no Nature can assume the Title of Divine.

Señ. III.

THAT the first of these three Natures cannot be multiplied, who is but one, the Principal and Cause of all other Divinity, is evidently proved by *Platonists*, *Peripatericks*, and our Divines. About the second, (*viz.* The Angelick and Intellectual, *Platonists* disagree. Some (as *Proclus*, *Hermias*, *Syrianus*, and many others) betwixt God and the rational Soul place a great number of Creatures; part of these they call *Noëta, vōeta*, Intelligible, part Intellectual; which Terms, *Plato* sometimes confoundeth, as in his *Phædo*. *Plotinus*, *Porphyrus*, and generally the most refined *Platonists*, betwixt God and the Soul of the World, assign only one Creature, which they call the Son of God, because immediately produced by him. The first Opinion complies most with *Dionysius Areopagita*, and Christian Divines, who assert the number of Angels to be in a manner Infinite. The second is the more Philosophick, best fitting with *Aristotle* and *Plato*, whose Sense we only purpose to express; and therefore will decline the first Path (tho' that only be the right) to pursue the latter.

Señ. IV.

WE therefore, according to the Opinion of *Plotinus*, confirmed not only by the best *Platonists*, but, even by *Aristotle*, and all the *Arabians*, especially *Avicenna*, affirm, that God from Eternity produced a Creature of Incorporeal and Intellectual Nature, as perfect as is possible for a Created Being, beyond which,

* *Ennead. 6. lib. 7. 37.*

he produced nothing; for, of the most perfect cause, the effect must be most perfect, and the most perfect can be but one; for, of two or more, it is not possible but that should be more or less perfect than the rest, otherwise they would not be two, but the same. This reason for our Opinion I rather choose, than that which *Avicen* alledges, founded upon this Principle, That from one Cause, as one, can proceed but one Effect. We conclude therefore, that no Creature but this first Mind proceeds immediately from God: for, of all other effects issuing from this Mind, and all other second Causes, God is only the mediate efficient. This by *Plato*, *Hermes*, and *Zoroaster*, is called the *Daughter of God*, the *Mind*, *Wisdom*, *Divine Reason*, by some interpreted the *Word*; not meaning (with our Divines) the Son of God, he not being a Creature, but one Essence co-equal with the Creator.

Sect. V.

ALL understanding Agents have in themselves the form of that which they design to effect: as an Architect hath in his mind a Figure of the Building he undertakes, which as his Pattern he exactly strives to imitate: This *Platonists* calls the Idea, or Exemplar, believing it more perfect than that which is made after it: and this manner of Being, Ideal, or Intelligible, the other Material and Sensible: So that when a Man Builds a House, they affirm there are two, one Intellectual in the Workman's Mind; the other Sensible, which he makes in Stone, Wood, or the like; expressing in that Matter the Form he hath conceived: to this *Dante* alludes.

—None any Work can frame,
Unless himself become the same.

Hereupon they say, tho' God produced only one Creature, yet he produced all, because in it he produced the Ideas and Forms of all, and that in their most perfect Being, that is, the Idea, for which reason they call this Mind, the Intelligible World.

Sect. VI.

AFTER the pattern of that Mind they affirm this Sensible World was made, and the Exemplar being the most perfect of all Created things, it must follow that this Image thereof be as perfect as its Nature will bear. And since Animate things are more perfect than the Inanimate; and of those the Rational than the Irrational, we must grant, this World hath a Soul perfect above all others. This is the first Rational Soul, which, tho' Incorporeal, and Immaterial, is destin'd to the Function of Governing and moving Corporeal Nature: not free from the Body as that Mind whence from Eternity it was derived, as was the Mind from God. Hence *Platonists* argue the World is Eternal; its Soul being such, and not capable of being without a Body, that also must be from Eternity; as likewise the Motion of the Heavens, because the Soul cannot be without moving.

Sect. VII.

THE ancient Ethnick Theologians, who cast Poetical Veils over the Face of their Mysteries, express these three Natures by other names. *Cælum* they call God in himself; he produced the first Mind, *Saturn*: *Saturn*, the Soul of the World, *Jupiter*. *Cælum* implies Priority and Excellence, as in the Firmament, the first Heaven. *Saturn* signifies Intellectual Nature, wholly employed in Contemplation; *Jupiter* Active Life, consisting in Moving and Governing all subordinate to it. The Properties of the two latter agree with their Planets: *Saturn* makes Men Contemplative, *Jupiter* Impetuous. The Speculative busied about things above them; the practick beneath them.

Sect. VIII.

WHICH three names are promiscuously used upon these Grounds: In God we understand first his Excellence, which as Cause, he hath above all his effects; for this he is called *Cælus*. Secondly, the production of those effects, which denotes Conversion towards inferiours; in this respect he is sometimes called *Jupiter*, but with an addition, *Optimus*, *Maximus*. The first Angelick Nature hath more names, as more diversity. Every Creature consists of Power and Act: the first, *Plato* in *Philebo*, calls Infinite: the second, finite: all imperfections in the Mind are by reason of the first: all perfections, from the latter. Her Operations are threefold. About Superiours, the Contemplation of God; about the knowledge of her self; about inferiours, the production and care of this sensible World: these three proceed from Act. By Power she descends to make inferiour things; but in either respect is firm within her self. In the two first, because Contemplative, she is called *Saturn*: in the third, *Jupiter*, a name principally applied to her power, as that part from whence is derived the Act of Production of things. For the same reason is the Soul of the World, as she contemplates her self or superiours, termed *Saturn*; as she is employed in ordering wordly things, *Jupiter*: and since the Government of the World belongs properly to her; the Contemplation to the Mind; therefore is the one absolutely called *Jupiter*, the other *Saturn*.

Sect. IX.

THIS World therefore (as all other creatures) consisteth of a Soul and Body: the Body is all that we behold, compounded of the four Elements. These have their casual being in the Heavens, (which consist not of them, as sublunary things; for then it would follow that these inferiour parts were made before the Coelestial; the Elements in themselves being simple, by concurrence causing such things as are compounded of them:) Their former being from the Moon down to the Earth: Their participate and imperfect under the Earth, evident in the Fire, Air, and Water, experience daily finds there; evinced by natural Philosophers: to which the

which the ancient *Theologians* enigmatically allude by their four Infernal Rivers, *Acheron*, *Cocytus*, *Styx*, and *Phlegeton*.

We may divide the Body of the World into three parts: *Cœlestial*, *Mundane*, *Infernal*: The Ground why the Poets feign the Kingdom of *Saturn* to be shared betwixt his three Sons, *Jupiter*, *Neptune*, and *Pluto*: implying only the threefold variation of this corporeal World; which as long as it remains under *Saturn*, that is, in its Ideal Intellectual being, is one and undivided; and so more firm and potent: but falling into the hands of his Sons, that is, changed to this material Being, and by them divided into three parts, according to the triple existence of Bodies, is more infirm and less potent, degenerating from a Spiritual to a Corporeal estate. The first part, the Heavenly, they attribute to *Jupiter*; the last and lowest to *Pluto*; the middle to *Neptune*. And because in this Principality is all Generation and Corruption, the *Theologians* express it by the Ocean, Ebbing or Flowing continually: by *Neptune* understanding the Power or Deity that presides over Generation. Yet must we not imagine these to be different Souls, distinctly informing these three parts: The World herself being one, can have but one Soul; which as it animates the subterranean parts, is called *Pluto*; the sublunary *Neptune*; the *Cœlestial*, *Jupiter*. Thus *Plato* in *Philebo* avers by Jove is understood a Regal Soul, meaning the principal part of the World which Governs the other. This Opinion, tho' only my own, I suppose is more true than the exposition of the *Grecians*.

SECT. X.

NEXT that of the World, *Platonists* assign many other Rational Souls. The eight Principal are those of the Heavenly Spheres; which according to their Opinion exceeded not that number; consisting of the seven Planets, and the Starry Orb. These are the nine Muses of the Poets: *Calliope* (the Universal Soul of the World) is first, the other eight are distributed to their several Spheres.

SECT. XI.

PLATO asserts, * That the Author of the World made the Mundane, and all other Rational

Souls, in one Cup; and of the same Elements; the universal Soul being most perfect, ours least: whose parts we may observe by this division: Man, the chain that ties the World together, is placed in the midst: and as all *mediums* participate of their extremes, his parts correspond with the whole World; thence called *Microcosmus*. In the World is first Corporeal Nature, eternal in the Heavens; Corruptible in the Elements, and their Compounds, as Stones, Metals, &c. Then Plants. The third degree is of Beasts. The fourth Rational Souls. The fifth Angelical Minds. Above these is God, their Origine. In Man are likewise two Bodies; one eternal, the *Platonists* *Vehiculum Cœlestē*, immediately informed by the Rational Soul: The other Corruptible, subject to sight, consisting of the Elements: Then the vegetative faculty, by which Generated and nourished. The third part is Sensitive and Motive. The fourth Rational; by the Latine *Peripateticks* believed the last and most Noble part of the Soul: Yet, above that is the Intellectual and *Angelick*; the most excellent part whereof, we call the Souls Union, immediately joyned to God, in a manner resembling him; as in the other Angels, Beasts, and Plants. About these *Platonists* differ, *Proclus* and *Porphyrius* only allow the Rational part to be Immortal; *Zenocrates* and *Speusippus* the sensitive also; *Numenius* and *Plotinus* the whole Soul.

SECT. XII.

IDEAS have their casual being in God, their Formal in the first Mind, their participated in the rational Soul. In God they are not, but produced by him in the *Angelick* Nature; through this communicated to the Soul, by whom illuminated, when she reflects on her intellectual parts, she receives the true forms of things, *Ideas*. Thus differ the Souls of Men from the *Cœlestial*: These in their bodily functions recede not from the Intellectual, at once Contemplating and Governing, Bodies ascend to them, they descend not. Those employed in Corporeal Office are deprived of Contemplation, borrowing Science from Sense, to this wholly inclined, full of Errors: Their only means of release from this Bondage, is, the amatory life; which by sensible Beauties, exciting in the Soul a remembrance of the Intellectual, raiseth her from this terrene life, to the eternal; by the flame of Love refined into an Angel.

The Second PART.

SECT. I.

THE apprehensive Faculties of the Soul are employed about Truth and Falshood; assenting to to one, dissenting from the other. The first is affirmation, the second negation. The desiderative converse in good and ill, inclining to this, declining to that. The first is Love, the second Hate. Love is distinguished by its objects; if of Riches, termed Covetousness; of Honour, Ambition; of Heavenly things, Piety;

of equals, friendship: these we exclude, and admit no other signification, but the desire to possess what in it self, or at least in our esteem, is fair: of a different nature from the love of God to his Creatures, who comprehending all, cannot desire or want the Beauty and perfections of another: and from that of Friends which must be reciprocal. We therefore with *Plato* define it, ὁρεξις τῆς καλῆς The desire of Beauty. Desire is an inclination to real or apparent good. As Love

* *Timæo.*

there are divers kinds of good, so of desire. Love is a Species of desire, Beauty of good. Desire is Natural or Knowing. All creatures have a particular perfection by participation of the Divine Goodness. This is their end, including that degree of Felicity, whereof they are capable, to which Center they tend. This desire we call Natural; a great Testimony of Divine Providence, by which they are unwittingly (as an Arrow by the Archer) directed to their mark. With this all Creatures desire God, as being the Original good imprinted, and participating in every particular. This is in every Nature, as more or less capable; addressed to ends more or less Noble; yet, is the ultimate end of all the same, to enjoy God, as far as they may: Thus as the Psalmist, *Every thing Worships and Praiseth God*; like suppliants, *turning and offering themselves up to him*, saith Theodoret.

Sect. II.

THE other Species of Desire is employed only about things known, given by Nature, that to every apprehensive faculty, there might be a desiderative; to embrace what it judgeth good, to refuse what it esteemeth evil; in its own nature enclin'd to good: None ever desires to be miserable; but, the apprehensive Vertue many times mistaking Evil for Good, it oft falls out that the desiderative (in it self blind) desires Evil. This in some sense may be said voluntary, for none can force it; in another sense, not voluntary, deceived by the judgment of its Companion. This is Plato's meaning, when he saith, * *No Man Sins willingly*.

Sect. III.

IT is the property of every desiderative Vertue, that he who desires, possesseth in part the thing he desires, in part not: for, if he were wholly deprived of its Possession, he would never desire it: This is verified two ways. First, nothing is desired unless it be known; and to know a thing is in some part to possess it. So Aristotle, † *The Soul is all, because it knows all*. And in the Psalmist God saith, *All things are mine, I know them*. Secondly, there is always some convenience and resemblance betwixt the desirer and desired: Every thing delights and preserves it self by that, which by natural affinity is most conformable to it; by its contrary is grieved and consumed. Love is not betwixt things unlike; Repugnance of two opposite natures is natural hate. Hate is a Repugnance with Knowledge. Hence it followeth, that the nature of the desired, is in some manner in the desirer; otherwise there would be no similitude betwixt them: yet imperfectly; else it were vain for it to seek what it entirely possesseth.

Sect. IV.

AS Desire generally follows Knowledge, so several knowings are annexed to several desiring Powers. We distinguish the knowing into three degrees; Sense, Reason, Intellect; attended by three desiderative Vertues, Appetite, Election, Will. Appetite is in Brutes, Election

in Men, Will in Angels. The Sense knows only corporeal things, the Appetite only desires such; the Angelick Intellect is wholly intent on Contemplation of Spiritual Conceptions, not inclining to Material Things, but when divested of Matter, and Spiritualiz'd, their Will is only fed with intemporal spiritual good. Rational Nature is the mean betwixt these Extreams; sometimes descending to Sense, sometimes elevated to Intellect; by its own Election complying with the desires of which she pleaseth. Thus it appears, that Corporeal Objects are desired, either by Sensual Appetite, or Election of Reason inclining to Sense: Incorporeal by Angelick Will, or, the Election of Reason, elevated to Intellectual Height.

Sect. V.

Beauty in general, is a *Harmony resulting from several things proportionably concurring to constitute a third*: In respect of which temperament, and mixture of various Natures, agreeing in the composition of one, every Creature is fair; and in this sense no simple Being is Beautiful, not God himself; this Beauty begins after him, arising from contrariety, without which is no composition; it being the union of contraries, a friendly enmity, a disagreeing concord; whence Empedocles makes discord and concord the Principles of all things; by the first, understanding the variety of the Natures compounding; by the second, their Union: adding, that in God only there is no discord, He not being the Union of several Natures; but, a pure uncompounded Unity. In these compositions the Union necessarily predominates over the contrariety, otherwise the Fabrick would be dissolved. Thus in the Fictions of the Poets, *Venus loves Mars*: This Beauty cannot subsist without contrariety; the curbs and moderates him, this temperament allays the strife betwixt these contraries. And in Astrology, *Venus* is placed next to *Mars*, to check his destructive influence; as *Jupiter* next *Saturn*, to abate his Malignancy. If *Mars* were always subject to *Venus* (the contrariety of Principles to their due temper) nothing would ever be dissolved.

Sect. VI.

THIS is Beauty in the largest sense, the same with Harmony; whence God is said to have framed the World with musical Harmonious temperament. But harmony properly implies a melodious agreement of voices; and Beauty in a strict acception relates to a proportionable concord in visible things, as Harmony in audible. The desire of this Beauty is Love; arising only from one knowing faculty, the Sight; and that gave Plotinus, (*Ennead 3. lib. 5. 3.*) occasion to derive *Love*, from *beginning Sight*. Here the Platonist may object; If Love be only of visible things, how can it be applied to *Ideas*, invisible Natures? We answer, sight is twofold, Corporeal and Spiritual; the first is that of sense, the other the Intellectual faculty; by which we agree with Angels; this Platonists call Sight, the Corporeal being only an Image of this. So Aristotle, *Intellect is that to*
the

* In *Timæo*,
ἡ ἀρετὴ ἡ
ἡ ἀρετὴ ἡ
ἡ ἀρετὴ ἡ

† De *Anima*,
3. 9.

the Soul which fight is to the Body. Hence is *Minnerva* (Wisdom) by *Homer* called *γλαυκώπις*, *Bright-eyed*. With this sight *Moses*, *St. Paul*, and, other Saints, beheld the face of God; this Divines call Intellectual, intuitive cognition, the Beatifical vision, the Reward of the Righteous.

Sect. VII.

AS Sight, so Beauty (its Object) is twofold the two *Venus's* Celebrated by *Plato*, [*Sympos.*] and our Poet) Sensible, called *Vulgar Venus*. Intellectual in *Ideas* (which are the Object of the Intellect, as colour of sight) named *Celestial Venus*. Love also is twofold, *Vulgar* and *Celestial*; for as *Plato* saith * *There must necessarily be as many Lovers as Venus's*.

* *Sympos.*

Sect. VIII.

Venus then is Beauty, whereof Love is generated: properly his Mother, because Beauty is the cause of Love, not as productive Principle of this Act, to Love, but as its object: the Soul being the efficient cause of it as of all his Acts; Beauty the material: for in Philosophy the efficient is assimilated to the Father, the material to the Mother.

Sect. IX.

Celestial Love is an Intellectual desire of *Ideal Beauty*: *Ideas*, (as we said before) are the Patterns of things in God, as in their Fountain; in the *Angelick Mind*, Essential; in the Soul by participation, which with the Substance partakes of the *Ideas* and Beauty of the first Mind. Hence it follows, that Love of *Celestial Beauty* in the Soul, is not *Celestial Love* perfectly, but the nearest Image of it. Its truest being is with the desire of *Ideal Beauty* in the first Mind, which God immediately adorns with *Ideas*.

Sect. X.

Love (saith *Plato*) was begot on *Penia*, by *Porus* (the Son of *Metis*) in *Jupiter's* Orchard, being drunk with *Nectar*, when the Gods met to celebrate *Venus's* Birth. Nature in it self inform, when it receives form from God is the *Angelick Mind*; this form is *Ideas*, the first Beauty; which in this descent from their Divine Fountain, mixing with a different nature, become imperfect. The first Mind, by its opacousness eclipsing their lustre, desires, that Beauty which they have lost; this desire is love; begot when *Porus* the affluence of *Ideas* mixed with *Penia* the indigence of that inform nature we termed *Jupiter* (1. 8.) In whose Garden the *Ideas* are Planted, with those the first Mind adorned, was by the Antients named *Paradise*; to which contemplative life and eternal felicity *Zoroastres* inviting us, saith, *Seek, seek Paradise*: Our Divines transfer it to the *Cælum Empyræum*, the seat of the happy Souls, whose blessedness consists in contemplation and perfection of the Intellect, according to *Plato*. This Love begot on *Venus's* Birth-day, that is, when

the *Ideal Beauty*, though imperfectly, is infused into the *Angelick Mind*; *Venus* yet as a Child, not grown to Perfection. All the Gods assembled at this Feast, that is, their *Ideas*, (as by *Saturn* we understand both the Planet and his *Idea*) an expression borrowed from *Parmenides*. These Gods then are those *Ideas* that precede *Venus* (she is the Beauty and Grace resulting from their variety.) Invited to a Banquet of *Nectar* and *Ambrosia*: those whom God Feasts with *Nectar* and *Ambrosia* are Eternal Beings, the rest not; These *Ideas* of the *Angelick Mind* are the first Eternals; *Porus* was drunk with *Nectar*, this *Ideal* affluence fill'd with Eternity; other *Ideas* were not admitted to the Feast, nor indued with Immortality.

Orpheus upon the same grounds saith, Love was born before all other Gods, in the bosom of *Chaos*: Because Nature full of indistinct imperfect forms (the Mind replenished with confused *Ideas*) desires their perfection.

Sect. XI.

THE *Angelick Mind* desires to make these *Ideas* perfect; which can only be done by means opposite to the causes of their imperfection, these are *Recession* from their Principle, and *mixture* with a contrary Nature: Their Remedy, *Separation* from the unlike Nature, and *return* and *conjunction* (as far as possible) with God. Love, the desire of this Beauty, excites the Mind to *Conversion* and *reunion* with him. Every thing is more perfect as nearer its Principle; This is the first Circle. The *Angelick Mind*, proceeding from the Union of God, by *Revolution* of *intrinsecal Knowledge* returneth to him. Which with the Antients is *Venus adulta*, grown to perfection. Every Nature that may have this conversion, is a Circle; such alone are the Intellect and Rational, and therefore only capable of Felicity, the obtaining their first Principle, their ultimate end and highest good. This is peculiar to Immortal Substances, for the Material (as both *Platonists* and *Peripateticks* grant) have not this reflection upon themselves, or their Principle. These, (the *Angelick Mind* and *Rational Soul*) are the two intelligible Circles; answerable to which in the Corporeal World are two more; the tenth Heaven immovable Image of the first Circle; the *Celestial Bodies*, that are moveable, Image of the second: The first *Plato* mentions not, as wholly different and irrepresentable by corporeal Nature: Of the second in *Timæo* he saith, That all the Circles of this visible Heaven (by him distinguished into the fixed Sphere and seven Planets) represent as many Circles in the Rational Soul.

Some attribute the name of Circle to God; by the ancient Theologists called *Cælus*; being a Sphere which comprehends all; as the utmost Heaven includes the World.

In one respect this agrees with God, in another not; the property of beginning from a point and returning to it, is repugnant to him; who hath no beginning, but is himself that indivisible point from which all Circles begin, and to which they return: And in this sense it is likewise inconsistent with material things, they

they have a beginning, but cannot return to it.

In many other Properties it agrees with God; He is the most perfect of Beings; this of Figures; neither admit addition: The last Sphere is the place of all Bodies, God of all Spirits: the Soul (say Platonists) is not in the Body, but the Body is in the Soul, the Soul in the Mind, the Mind in God, the utmost place; who is therefore named by the Cabalists. קדקד

Señ. XII.

THE three Graces are Handmaids to *Venus* *Thalia*, *Euphrosyne*, *Aglaia*; Viridity, Gladness, Splendour; properties attending Ideal Beauty. *Thalia*, is the permanence of every thing in its entire being; thus is Youth called green, Man being then in his perfect state; which decays as his years encrease, into his last dissolution. *Venus*, is proportion, uniting all things. Viridity, the duration of it; In the Ideal World, where is the first *Venus*, is also the first Viridity; for no Intelligible Nature recedes from its Being by growing old. It communicates this Property to sensible things as far as they are capable of this *Venus*, that is, as long as their due proportion continues. The two other properties of Ideal Beauty are Illustration of the Intellect, *Aglaia*, Repletion of the Will with desire and joy, *Euphrosyne*.

Of the Graces one is painted looking toward us; The continuation of our being is no reflex act. The other two with their Faces from us, seeming to return; the operations of the Intellect and Will are reflexive; *What comes from God to us, returns from us to God.*

Señ. XIII.

Venus is said to be born of the Sea; Matter, the Inform Nature whereof every Creature is compounded, is represented by Water, continually flowing, easily receptable of any Form. This being first in the Angelick Mind, Angels are many times express'd by Water, as in the Psalms, *The Waters above the Heavens praise God continually*, so Interpreted by *Origen*; and some Platonists expound the Ocean (stiled by *Homer* Father of Gods and Men) this Angelick Mind, Principle and Fountain of all other Creatures; *Gemistius*, *Neptune*; as Commander of all Waters, of all Minds, Angelical and Humane. This is that living Fountain, whereof he that drinketh shall never thirst: These are the Waters whereon (*David* faith) God hath founded the World.

Señ. XIV.

Porus (the Affluence of *Ideas* proceeding from God) is stiled by *Plato* the Son of *Metis* (Counsel,) in Imitation of the Scripture: whence our Saviour by *Dionysius Arcopagus* is termed the Angel of Counsel, that is, the Messenger of God the Father; so *Avicen* calls the first Cause conciliative, the Mind not having *Ideas* from it self but from God, by whose Counsel she receiveth Knowledge and Art to frame this visible World.

Señ. XV.

Love * according to *Plato*, is *Youngest and Oldest of the Gods*; They, as all other things, have a two-fold Being, Ideal and Natural. The first God in his natural Being was Love, who dispenc'd theirs to all the rest; the last in his Ideal. Love was born in the Defect of the *Ideas* into the Angelick Mind, which could not be perfect till they, its Essence, were made so, by Love's Conversion to God. The Angelick Mind owing its Natural Being to Love, the other Gods who succeeded this Mind, necessarily are younger than He in their natural Being, though they precede him in their Ideal, as not born till these *Ideas*, though imperfectly, were joyned to the informed Nature.

Señ. XVI.

THE Kingdom of Necessity is said to be before that of Love. Every Creature consists of two Natures, Material, the imperfect, (which we here understand by Necessity) and Formal the occasion of Perfection. That whereof it most partakes is said to be predominant, and the Creature to be subject to it. Hence is Necessity (Matter) supposed to Reign when the *Ideas* were Imperfect, and all Imperfections to happen during that time: all Perfections after Love began his Reign; for, when the Mind was by him Converted to God; that which before was imperfect in her, was perfected.

Señ. XVII.

Venus is said to commend Fate. The Order and Concatenation of Causes, and Effects in this sensible World, called Fate, depends on the Order of the Intelligible World, Providence. Hence Platonists place Providence (the ordering of *Ideas*) in the first Mind, depending upon God, its ultimate end, to which it leads all other things. Thus *Venus*, being the Order of those *Ideas*, whereon Fate, the World's Order, depends, Commands it.

Fate is Divided into three parts, *Clotho*, *Lachesis*, and *Atropos*: That which is one in Providence, indivisible in Eternity, when it comes into Time and Fate, is divisible into Past, Present, and Future. Others apply *Atropos* to the fixed Sphere, *Clotho*, to the seven Planets, *Lachesis* to sublunary things.

Temporal Corporeal things only are subjected to Fate; the Rational Soul being Incorporeal, predominates over it; but is subjected to Providence, to serve which is true Liberty, by whom the Will (obeying its Laws) is led to the Acquisition of her desired end. And as often as she endeavours to loose her self from this Servitude, of Free, she becomes a Servant and Slave to Fate, of whom before she was the Mistress. To deviate from the Laws of Providence, is, to forsake Reason to follow Sense and Irrational Appetite, which being Corporeal, are under Fate; he that serves these, is much more a Servant than those he serves.

Sect. XVIII.

AS from God *Ideas* descend into the *Angelick* Mind, by which the Love of Intellectual Beauty is begot in her, called *Divine Love*; so the same *Ideas* descend from the *Angelick* Mind into the Rational Soul, so much the more imperfect in her, as she wants of *Angelical Perfection*: From these Springs *Humane Love*. *Plato* discourseth of the first, *Plotinus* of the latter: who by the same Argument, whereby he proves *Ideas* not Accidental but Substantial in the *Angelick* mind, evinceth likewise the specificall Reasons, the *Ideas* in the Soul to be substantial, terming the Soul *Venus*, as having a specious spendid Love, in respect of these specificall Reasons.

Sect. XIX.

Vulgar Love is the Appetite of sensible Beauty through corporeal sight. The cause of this Beauty is the visible Heaven by its moving power. As our Motive Faculty consists in Muscles and Nerves (the Instruments of its Operation,) so the Motive Faculty of Heaven is fitted with a Body proper for Circular Sempiternal Motion: Through which Body the Soul (as a Painter with his Pencil) changeth this inferiour Matter into various Forms. Thus vulgar *Venus* (the Beauty of material Forms) hath her casual being from the moving power of the Heavens, her formal from colour, enlightened by the visible Sun, as *Ideas* by the invisible; her participate in the Figure and just order of parts communicated to sight by mediation of Light and Colour, by whose interest only it procures Love.

Sect. XX.

AS when the *Ideas* descend into the Mind, there ariseth a desire of enjoying that from whence this Ideal Beauty comes; so when the species of sensible Beauty flow into the Eye, there springs a twofold Appetite of Union with that, whence this Beauty is derived: one Sensual, the other Rational; the Principles of Bestial and Humane Love. If we follow Sense, we judge the Body wherein we behold this Beauty, to be its Fountain; whence proceeds a desire of Coition, the most intimate union with it: This is the Love of irrational Creatures. But Reason knows, that the Body is so far from being its Original, that it is Destructive to it, and the more it is severed from the Body, the more it enjoys its own Nature and Dignity: we must not fix with the Species of Sense in the Body, but refine that Species from all Reliques of Corporeal Infection.

And because Man may be understood by the Rational Soul, either considered apart, or in its union to the Body; in the first sense, Humane Love is the Image of the Celestial; in the second, desire of sensible Beauty; this being by the Soul abstracted from Matter, and (as much as its Nature will allow) made Intellectual. The greater part of Men reach no higher than this; others more perfect, remem-

bring that more perfect Beauty which the Soul (before immers'd in the Body) beheld, are inflamed with an incredible desire of reviewing it, in pursuit whereof, they separate themselves as much as possible from the Body, of which the Soul (returning to its first Dignity) becomes absolute Mistress. This is the Image of Celestial Love, by which Man ariseth from one Perfection to another, till his Soul (wholly united to the Intellect) is made an Angel. Purged from material dross, and transformed into spiritual flame by this Divine Power, he mounts up to the Intelligible Heaven, and happily rests in his Fathers Bosom.

Sect. XXI.

Vulgar Love is only in Souls immerst in matter, and overcome by it, or at least hindred by perturbations and passions. *Angelical* Love is in the Intellect, Eternal as it. Yet but inferr'd, the greater part turning from the Intellect to sensible things, and corporeal cares. But so perfect are these Celestial Souls, that they can discharge both Functions, Rule the Body, yet not be taken off from Contemplation of Superiors: These the Poets signify by *Janus* with two Faces, one looking forward upon Sensible things, the other on Intelligible: less perfect Souls have but one face, and when they turn that to the Body, cannot see the Intellect, being deprived of their Contemplation: when to the Intellect, cannot see the Body, neglecting the care thereof. Hence those Souls that must forsake the Intellect, to apply themselves to Corporeal Government, are by Divine Providence confined to caduque, Corruptible Bodies, loosed from which, they may in a short time, if they fail not themselves, return to their Intellectual felicity. Other Souls not hindred from Speculation, are tied to Eternal Incorruptible Bodies.

Celestial Souls then (designed by *Janus*, as the Principles of Time, Motion intervening) behold the Ideal Beauty in the Intellect, to love it perpetually; and inferiour sensible things, not to desire their Beauty; but to communicate this other to them. Our Souls before united to the Body, are in like manner double-faced; but, are then as it were, cleft asunder, retaining but one; which as they turn to either object, Sensual or Intellectual, is deprived of the other.

Thus is vulgar Love inconsistent with the Celestial; and many Ravished at the sight of Intellectual Beauty, become blind to sensible; imply'd by *Callimachus*, *Hymn 5.* in the Fable of *Tyresias*, who viewing *Pallas* naked, lost his sight; yet by her was made a Prophet, closing the Eyes of his Body, she opened those of his Mind, by which he beheld both the present and future. The Ghost of *Achilles* which inspired *Homer* with all Intellectual Contemplations in Poetry, deprived him of corporeal sight.

Though Celestial Love liveth eternally in the Intellect of every Soul; yet only those few make use of it, who declining the care of the Body; can with *St. Paul* say, *Whether in the Body, or out of the Body they know not.* To which state a Man sometimes arrives; but continues there but a while, as we see in *Ecclesiastes*.

Sect.

SECT. XXII.

Thus in our Soul (naturally indifferent to Sensible or Intelligible Beauty) there may be three Loves; one in the Intellect, Angelical; the second Humane; The third Sensual: The two latter are conversant about the same object, Coporeal Beauty; the sensual fixeth its Intention wholly in it; the Humane separates it from Matter. The greater part of Mankind go no further than these two; but they whose understandings are purified by Philosophy, knowing Sensible Beauty to be but the Image of another more perfect, leave it, and desire to see the Celestial, of which they have already a Taste in their Remembrance, if they persevere in this Mental Elevation, they finally obtain it: and recover that which though in them from the beginning, yet they were not sensible of, being directed by other Objects.

The Sonnet.

I.

Love, (whose Hand guides my Heart's strict Reins,
Nor, tho' he Govern it, disdains
To feed the Fire with pious care
Which first himself enkindled there.)
Commands my backward Soul to tell
What Flames within her Bosom dwell;
Fear would persuade her to decline
The Charge of such a high Design;
But all her weak Reluctance fails,
Gainst greater Force no Force avails.
Love to advance her Flight will lend
Those Wings by which he did descend
Into my Heart, where he to rest,
For ever, long since built his Nest:
I, what from thence he dictates, write,
And Draw him thus by his own Light.

II.

Love, flowing from the Sacred Spring
Of uncreated good, I sing:
When Born; how Heaven he moves; the Soul
Informs; and doth the World controul;
How closely lurking in the heart,
With his sharp Weapons subtle art
From heavy Earth he Man unties,
Enforcing him to reach the Skies.
How kindled, how he flames, how burns;
By what Laws guided now he turns
To Heaven, now to the Earth descends
Now rests 'twixt both, to neither bends.
Apollo, Thee I Invoke,
Bowing beneath so great a weight.
Love, Guide me through this dark design,
And imp my shorter wings with thine.

III.

When from true Heaven the Sacred Sun
Into th' Angelick Mind did run,
And with enliven'd Leaves adorn,
Bestowing Form on his first-born;
Inflaming by innate desires,
She to her chiefest good aspires;
By which Reversion her rich Brest
With various Figures is impress;

And by this Love exalted turns
Into the Sun, for whom she burns,
This flame, rais'd by the Light that shin'd
From Heaven, into th' Angelick Mind,
Is Eldest Love's Religious Ray,
By Wealth and Want begot that Day,
When Heav'n brought forth the Queen, whose
Hand
The Cyprian Scepter doth Command.

IV.

This Born in Amorous Cyprian Arms,
The Sun of her bright Beauty warms.
From this our first desire accrues,
Which in new Fetters caught, pursues
The honourable path that guides
Where our Eternal good resides.
By this the Fire, through whose fair Beams
Life from above to Mankind streams,
Is kindled in our hearts, which glow
Dying, yet dying greater grow;
By this th' Immortal Fountain flows,
Which all Heaven forms below, bestows;
By this descends that shower of Light
Which upwards doth our minds invite;
By this th' Eternal Sun inspires,
And Souls with Sacred lustre fires.

V.

As God doth to the Mind dispence
Its Being, Life, Intelligence,
So doth the Mind the Soul acquaint
How to Understand, to Move, to Paint;
She thus prepar'd, the Sun that shines
In the Eternal Breasts designs,
And here what she includes diffuses,
Exciting every thing that uses
Motion and Sense (beneath her State)
To Live, to Know, to Operate.
Inferiour Venus hence took Birth;
Who shines in Heaven, but lives on Earth;
And o'er the World her shadow spreads:
The Elder in the Sun's Glass reads
Her Face, through the confused screen
Of a dark shade obscurely seen;
She Lustre from the Sun receives,
And to the Other Lustre gives;
Celestial Love on this depends,
The Younger, vulgar Love attends.

VI.

Form'd by th' Eternal Look of God.
From the Sun's most sublime abode.
The Soul descends into Man's Heart,
Imprinting there with wondrous Art
What worth she borrow'd of her Star,
And brought in her Celestial Carr;
As well as Humane Matter yields,
She thus her Curious Mansion Builds;
Yet all those Flames from the Divine
Impression differently decline:
The Sun, who's Figur'd here, his Beams
Into another's Bosom streams;
In whose agreeing Soul he stays,
And Gilds it with his Virtuous Rays,
The Heart in which Affection bred,
Is thus by pleasing Error fed.

C 6 2

VII. The

VII.

THe heart where pleasing Error reigns,
 This Object as her Child maintains,
 By the fair Light that in her shines
 (A rare Celestial Gift,) refines;
 And by degrees at last doth bring,
 To her first splendours sacred Spring:
 From this Divine Look, one Sun passes
 Through three resurgent Burning-glasses,
 Kindling all Beauty, which the Spirit,
 The Body, and the Mind inherit.
 The rich spoils, by th' Eye first caught,
 Are to the Souls next Handmaid brought,
 Who there resides: She to the Breast
 Sends them; reform'd, but not express'd:
 The heart from Matter Beauty takes,
 Of many one Conception makes;
 And what were meant by Nature's Laws,
 Distinct, She in one Picture draws.

VIII.

THe heart by Love allur'd to see
 Within her self her Progeny;

This, like the Sun's reflecting Rays
 Upon the Waters face, surveys;
 Yet some Divine, though Clouded Light
 Seems here to twinkle, and invite
 The Pious Soul, a Beauty more
 Sublime, and perfect to adore,
 Who sees no longer his dim shade
 Upon the Earth's vast Globe display'd,
 But certain Lustre, of the true
 Sun's truest Image now in view.
 The Soul thus entering in the Mind,
 There such uncertainty doth find.
 That she to clearer Light applies
 Her aims, and near the first Sun flies:
 She by his Splendour Beauteous grows,
 By Loving whom all Beauty flows
 Upon the Mind, Soul, World, and All
 Included in this spacious Ball.

IX.

BUt hold! Love stops the forward Course
 That me beyond my scope would force.
 Great Power! if any Soul appears
 Who not alone the Blossoms wears,
 But of the rich Fruit is possest,
 Lend him thy Light, deny the rest.

The Third PART.

TO treat of both Loves belongs to different Sciences; Vulgar Love to Natural or Moral Philosophy; Divine, to Theology or Metaphysics. Solomon discourseth excellently of the first in Ecclesiastes, as a Natural Philosopher; in his Proverbs as a Moral: Of the second in his Canticles, esteemed the most Divine of all the Songs in Scripture.

Stanza. I.

The chief Order Established by Divine Wisdom in created things, is, that every inferior Nature be immediately Governed by the Superior; whom whilst it obeys, it is guarded from all ill, and led without any obstruction to its determinate Felicity; but, if through too much Affection to its own Liberty, and desire to prefer the Licentious Life before the profitable, it Rebel from the Superior Nature, it falls into a double inconvenience. First, like a Ship, given over by the Pilot, it lights sometimes on one Rock, sometimes on another, without hope of reaching the Port. Secondly, it loseth the Command it had over the Natures subjected to it, as it hath deprived its Superior of his. Irrational Nature is Ruled by another, unfit for its Imperfection to Rule any. God by his ineffable Excellence provides for every thing, himself needs not the Providence of any other: Betwixt the two extremes God

and Bruits, are Angels and Rational Souls, Governing others, and Governed by others. The first Hierarchy of Angels immediately illuminated by God, enlighten the next under them; the last (by Platonists termed Demons, by the Hebrews דמונים as Guardians of Men), are set over us as we over Irrationals. So Psal. 8. Whilst the Angels continued subject to the Divine Power, they retained their Authority over other Creatures; but when Lucifer and his Companions through inordinate love of his own Excellence, aspired to be equal with God, and to be conferved, as He, by their own strength, they fell from Glory to extream Misery; and when they lost the Privilege they had over others, seeing us freed from their Empire, enviously every hour insidiate our Good. The same Order is in the lesser World, our Soul: the inferior Faculties are directed by the Superior, whom following they err not. The imaginative corrects the mistakes of outward Sense; Reason is illuminated by the Intellect, nor do we at any time miscarry, but when the Imaginative will not give Credit to Reason, or Reason confident of it self, resists the Intellect. In the desiderative the Appetite is Governed by the Rational, the Rational by the Intellectual, which our Poet implies, saying,

[Love

[Love, whose Hand guides my Heart's strict
Reins.]

The Cognoscitive Powers are seated in the Head, the Desiderative in the Heart: In every well ordered Soul, the Appetite is Governed by Intellectual Love; implied by the Metaphor of Reins, borrowed from Plato in his Phædrus.

[Love to advance my flight, will lend
The Wings by which he did ascend
Into my heart——]

When any Superiour Vertue is said to descend, we imply not, that it leaves its own height to come down to us, but draws us up to it self; its descending to us, is our ascending to it; otherwise such conjunction would be the imperfection of the Vertue, not the perfection of him who receives it.

II.

[Love flowing from the Sacred Spring
Of uncreated good——]

From the Fountain of Divine Goodness into our Souls, in which that influx is terminated.

[When Born. &c.]

The Order, Participation, conversion of Ideas see Part 2, Sect.

[——how Heaven he moves, the Soul
Inferms, and doth the World controul.]

Of these three properties, Love is not the efficient: God produceth the Ideas in the Angelick Mind, the Mind illustrates the Soul with Ideal Beauty; Heaven is moved by its proper Soul: But, without Love, these Principles do not operate: He is the cause of the Mind's conversion to God, and of the Soul's to the Mind; without which, the Ideas would not descend into the one, nor the Specifick Reasons into the other: the Soul not illuminated by these, could not elicit this sensible form out of Matter, by the motion of Heaven.

III.

When the first emanation from God (the plenty of Ideas) descended into the Angelick Mind, she, desiring their perfection, reverts to God, obtaining of him what she covets; which the more fully she possesseth, the more fervently she loves. This desire, (Celestial Love,) born of the obscure Mind and Ideas is explained in this Stanza:

[——true Heaven——]

God who includes all created beings, as Heaven all sensible, lib. 2. Sect. Only Spiritual things, according to Platonists, are true

and real, the rest but shadows and images of these.

——[the Sacred Sun——]

The light of Ideas streaming from God.

[——enlivened Leaves——]

The Metaphor of Leaves relates to the Orchard of Jupiter, where these Ideas were planted, 2. 10. Enlivened, as having in themselves the principle of their operation, Intellection the noblest life, as the Psalmist, Give me understanding, and I shall live. So the Cabalist to the second Sephira, which is Wisdom, attributes the name of Life.

[——adorn bestowing form——]

To Adorn denotes no more than accidental perfection, but Ideas are the substance of the Mind, and therefore he adds, bestowing form; which though they come to her from without, she receives not as accidents, but as her first intrinsic act: Which our Author implies, terming her desires innate.

[And by this Love exalted turns
Into the Sun, for whom she burns.]

Love transforms the Lover into the thing loved.

[——Wealth and Want——]

Porus and Penia, 2. 10.

IV.

The properties of Celestial Love are in this Stanza discovered.

[——In new Fetters caught——]

The Soul being oppressed by the Body, her desire of Intellectual Beauty sleeps; but awakened by Love, is by the sensible Beauty of the Body, led at last to their Fountain, God.

[——which glow
Dying, yet glowing greater grow.]

Motion and Operation are the signs of Life, their privation of Death: in him who applies himself to the Intellectual part, the rational and the sensitive fail; by the Rational he is Man, by the Intellectual Communicates with Angels: As Man he dies, revived an Angel. Thus the Heart dies in the flames of Intellectual Love; yet consumes not, but by this death grows greater, receives a new and more sublime Life. See in Plato the Fables of Alcestes and Orpheus.

V. This

V.

This Stanza is a Description of Sensible Beauty.

[The elder in the Sun's glass reads
Her Face, through the confused screen
Of a dark shade obscurely seen.]

Sensible Light is the act and efficacy of Corporeal; Spiritual Light of Intelligible Beauty. Ideas in their descent into the inferior Angelick Mind, were as Colours and Figures in the Night: As he who by Moonlight seeth some fair Object, desires to view and enjoy it more fully in the day; so the Mind, weakly beholding in her self the Ideal Beauty dim and opaque (which our Author calls the *Screen of a dark shade*) by reason of the Night of her Imperfection, turns like the Moon to the Eternal Sun, to perfect her Beauty by him; to whom addressing her self, she becomes Intelligible Light; clearing the Beauty of Celestial *Venus*, and rendering it visible to the eye of the first Mind.

In Sensible Beauty we consider first the Object in it self, the same at Midnight as at Noon: Secondly, the light; in a manner the Soul thereof: the Author supposeth, that as the first part of the Sensible Beauty (Corporeal Forms) proceeds from the first part of Intellectual Beauty (Ideal forms) so sensible light flows from the Intelligence, descending upon Ideas.

VI, VII, VIII.

Corporeal Beauty implies, first, the material disposition of the Body, consisting of Quantity in the proportion and distance of parts, of quality in Figure and Colour: Secondly; a certain quality which cannot be expressed by any term better than Gracefulness, shining in all that is fair: This is properly *Venus*, Beauty, which kindles the Fire of Love in Mankind: They who affirm it results from the disposition of the Body, the Sight, Figure, and Colour of Features, are easily confuted by experience. We see many Persons Exact and unaccustomable in every part, destitute of this Grace and Comeliness; others less perfect in those particular conditions, excellently graceful and comely; Thus *Catullus*,

Many think Quintia Beauteous, Fair, and tall,
And streight she is, apart I grant her all:
But altogether Beauteous I deny;
For, not one Grace doth that large shape supply.

He grants her Perfection of Quality, Figure, and Quantity; yet not allows her handsome, as wanting this Grace. This then must by consequence be ascribed to the Soul, which when perfect and lucid, transfuseth even into the Body some Beams of its Splendor. When *Moses* came from the Divine Vision in the Mount, his Face did shine so exceedingly, that the People could not behold it unless veiled.

Porphyrius relates, that when *Plotinus's* Soul was Elevated by Divine Contemplation, an extraordinary brightness appeared in his looks. *Plotinus* himself avers, that there was never any Beautiful Person wicked, that this Gracefulness in the Body, is a certain sign of Perfection in the Soul, *Proverbs* 17. 24. *Wisdom shineth in the Countenance of the Wise.*

From Material Beauty we ascend to the first Fountain by six Degrees: The Soul through the Sight represents to her self the Beauty of some particular Person, inclines to it, is pleased with it, and while she rests here, is in the first, the most Imperfect material degree. 2. She reforms by her Imagination the Image she hath received, making it more Perfect as more Spiritual; and separating it from Matter, brings it a little nearer Ideal Beauty. 3. By the light of the Agent Intellect abstracting this Form from all singularity, she considers the Universal Nature of Corporeal Beauty by it self: This is the highest degree the Soul can reach whilst she goes no further than Sense. 4. Reflecting upon her own Operation, the knowledge of Universal Beauty, and considering that every thing founded in Matter is particular, she concludes this Universality proceeds not from the outward Object, but her Intrinsic Power, and Reasons thus: If in the dim Glass of material Phantasms this Beauty is represented by virtue of my Light, it follows, that beholding it in the clear Mirror of my substance divested of those Clouds, it will appear more perspicuous: thus turning into her self, she finds the Image of Ideal Beauty communicated to her by the Intellect, the Object of Celestial Love. 5. She ascends from this Idea in her self, to the place where Celestial *Venus* is, in her proper Form; who in fulness of her Beauty not being comprehensible, by any particular Intellect, she, as much as in her lies, endeavours to be united to the first Mind, the chiefest of Creatures, and general Habitation of Ideal Beauty, obtaining this, she terminates and fixeth her Journey: this is the sixth and last degree: They are all imply'd in the 6, 7, and 8 Stanza's.

[Form'd by th^e Eternal look, &c.]

Platonists affirm some Souls are of the Nature of *Saturn*, others of *Jupiter*, or some other Planet; meaning, one Soul hath more Conformity in its Nature with the Soul of the Heaven of *Saturn*, than with that of *Jupiter*, and so on the contrary; of which there can be no Internal Cause assigned; the External is God, who (as *Plato* in his *Timæus*) Soweth and Scattereth Souls, some in the Moon, others in other Planets and Stars, the Instruments of Time.

Many imagine the Rational Soul descending from her Star, in her *Vehiculum Caeleste*, of her self forms the Body, to which by that Medium she is united: Our Author upon these grounds supposeth, that into the *Vehiculum* of the Soul, by her endued with Power to form the Body, is infused from her Star a particular formative vertue, distinct according to that Star: thus the Aspect of one is *Saturnina*, of another Jovial.

Jovial, &c. in their looks were read the nature of their Souls.

But because inferiour Matter is not ever obedient to the Stamp, the Virtue of the Soul is not always equally exprest in the visible Effigies: hence it happens that two of the same Nature are unlike; the Matter whereof the one consists being less disposed to receive that Figure than the other; what in that is compleat is in this imperfect; our Author infers, that the Figures of two Bodies being formed by vertue of the same Star, this Conformity begets Love.

[From the Sun's most Sublime abode.]

The Tropick of *Cancer*; by which Souls according to the *Platonists* descend, ascending by *Capricorn*. *Cancer* is the House of the Moon, who predominates over the vital parts, *Capricorn* of Saturn, presiding over Contemplation.

[The Heart in which Affection's bred
Is thus by pleasing Error fed.]

Frequently, if not always, the Lover believes that which he loves more Beauteous than it is, he beholds it in the Image his Soul hath

formed of it; so much fairer as more separate from Matter, the Principle of Deformity; besides, the Soul is more indulgent in her Affection to this Species, considering it is *her own Child*, produc'd in her Imagination.

[—one Sun passes
Through three resulgent Burning-glasses]

One Light flowing from God, Beautifies the Angelick, the Rational Nature, and the Sensible World.

[—the Soul's first Hand-maid—]

The Imaginative

[—to the Breast]

The *Breast* and *Heart* here taken for the Soul, because her nearest Lodging; the Fountain of Life and Heat.

[Reform'd but not exprest.]

Reform'd by the Imagination from the Deformity of Matter; yet not reduc'd to perfect Immateriality, without which, true Beauty is not exprest.

S P U S I P P U S .

C H A P . I .

*His Life.**Leet.*

SPEUSIPPUS was an *Athenian*, born at *Mirrbynus* [wich belonged to the *Pandionian* Tribe] his Father named *Eurymedon*, his Mother *Potone*, Sister to *Plato*.

* *Apul. dogm. Plat.*

† *Plut. de adulat. & unci discrim*

* *Chio, Epist. ad Aladrid.*

* He was brought up in the Domestick Documents of his Uncle *Plato*, † who (as he used to say) *Reformed* Speusippus's Life after the Pattern of his own.

* *Plato* had four Kinswomen, Daughters

of his Nieces; the eldest of these he Married to *Speusippus*, with a small Portion, thirty *Mine*, which *Dionysius* had sent him: To this sum *Chio*, glad of the Occasion, added a Talent, which *Speusippus* earnestly refused, until at last, he was overcome by the just importunities of the other to receive it, alledging that he gave it not as Money, but as Kindness; that such gifts were to be entertained, for they encreased Honour,

honour, the rest were dishonourable; that he ought to accept of the good-will, though he despised the Money. The rest of those Virgins were married richly to Athenians, only *Speusippus*, who best deserved, was poor. With these Arguments *Speusippus* was induced to accept of *Chio's* gift; whereat *Chio* much congratulated his own good Fortune, as having laid hold of an occasion, such, as perhaps, saith he, *I shall not meet again in all my Life*.

Phil. vit. Dion.

When *Dion* came to *Athens*, *Speusippus* was continually in company with him, more than any other Friend there, by *Plato's* Advice, to soften and divert *Dion's* Humour, with a facile Companion, such as he knew *Speusippus* to be; and that withal, he knew discreetly how to observe time and place in his Mirth: whence *Timon* (in *Sillis*) calls him, *a good Jester*.

The last time that *Plato*, upon the importunity of *Dionysius*, went to *Sicily*, *Speusippus* accompanied him. Whilst they lived at *Syracuse*, *Speusippus* kept more Company with the Citizens than *Plato* did, and insinuating more into their Minds, at first they were afraid to speak freely to him, mistrusting him to be one of *Dionysius's* Spies: But within a while they began to confide in him, and all agreed in this, to pray *Dion* to come to them, and not to take care for Ships, Men or Horses, but to hire a Ship for his own Passage; for the *Sicilians* desired no more, than that he would lend them his Name and Person against the Tyrant.

Speusippus at his return to *Athens*, perswaded *Dion* to War against *Dionysius*, and deliver *Sicily* from the Bondage of Tyranny, assuring him the Country would receive him gladly. *Dion* upon this Information received such encouragement, that he began secretly to levy Men: The Philosophers much advanced his Design. When he went to *Sicily*, he bestowed a Country-House, which he had purchased since his coming to *Athens*, upon *Speusippus*.

CHAP. II.

His Profession of Philosophy.

** Laert.*

** Plato* dying, in the first year of the 108th Olympiad, *Theophilus* being Archon, *Speusippus* succeeded him in the School of the Academy, † whom he followed also in his Doctrine.

† Laert.

He first, as *Theodorus* affirms, looked into the Community, and mutual assistance of Mathematical Disciplines, as *Plato* did into that of the Philosophical.

** Laert.*

** He* first, according to *Cenaus*, declared those things, which *Isocrates* conceived not to be divulged, the same perhaps which † *Cicero* calls *μυσθίκιον* of *Isocrates*.

† Epist. ad At.

2. 1.

** Stob. Phys.*

1. 1.

** Laert.*

** He* affirmed, that the Mind was not the same, either with Good or One; but of a peculiar Nature proper to it self.

** He* set up in the School which *Plato* had built, the Images of the Graces.

He exacted Money of his Disciples, contrary to the custom of *Plato*.

The two Women who were *Plato's* Auditors, *Lasthenia* the *Mantinean*, and *Axiotea* the *Phibiasian*, heard *Speusippus* likewise.

Having continued *Master* of the School eight years, he at last, by reason of his infirm Disposition, much debilitated by the Palfie, sent to *Xenocrates*, desiring him to come and take from him the Government of the School, which *Xenocrates* did.

CHAP. III.

His Writings.

HE wrote † many things, chiefly in Philosophy, Commentaries and Dialogues, of which were

Aristippus the Cyrenaick.

Of Riches 1.

Of Pleasure 1.

Of Justice 1.

Of Philosophy 1.

Of Friendship 1.

Of the Gods 1.

The Philosopher 1.

To Cephalus 1.

Cephalus 1.

Clinomachus, or Lysias 1.

The Citizen 1.

Of the Soul 1.

To Gryllus 1.

Aristippus 1.

The Confutation of Arts 1.

Commentary Dialogues.

Artificial 1.

Dialogues of likeness in things 10.

Divisions and Arguments to things like.

Of the Genus's and Species of Examples.

To Amartirus.

Encomium of Plato.

Epistles to Dion, Dionysius, Philip.

Of Law.

The Mathematician.

Mandrobulus.

Lysias.

Definitions, of all these Writings the only extant.

Orders of Commentaries.

Verses.

** Phavorinus*, in the second of his Commentaries, saith, That *Aristotle* paid three Talents for his Books. ** Laert.*

CHAP. IV.

His Death.

HE was (as † *Timotheus* saith) very infirm of Body, † infomuch that he was fain to be carried up and down the Academy in a kind of a running Chair: Riding in this manner, he one day met *Diogenes*, whom saluting, he said, Joy be with you: But not with you; answered *Diogenes*, who can endure to live being in that condition. At length he dyed willingly through Grief, as *Laertius* affirms, who elsewhere citing *Plutarch* in the *Lives* of *Lysander* and *Scilla*, saith, He died of the *Phibiriasis*; but there is no such thing extant in *Plutarch*. ** Laert.*

D d

c Though

^c Laert.

Though he followed *Plato* in his Opinions; yet he did not imitate his Temper, for he was austere, cholerick, and had not so great command over his Pleasures. In anger he threw a Dog into a Well, and indulging to Pleasure, he went to the Marriage of *Cassander*, in *Macedonia*: He was also so great a Lover of Money, that some Poems which he had written, not very good, he sung publicly for gain: For which Vices, *Dionysius* writing to him, thus derides him: *And we may learn Philosophy from our Arcadian She-Scholar. Plato took no Money of his Scholars, you exact it whether they are willing or not.* ^d *Athenæus* cites the same Epistle, after he had reproached him

^d Deipn. lib.

for Avarice and Voluptuousness, he objects his Collections of Money from many Persons; his Love to *Lasthenia*, the Sardinian Curtezan; after all this adding, *Why do you accuse us of Avarice, who your self omit not any sordid way of gain? Did not you after Hermias's Debt was satisfied, make Collections in his Name amongst his Friends, to your own use?*

To a rich Man in love with a deformed Person; *What need you her, saith he? for ten Talents you may have a handsomer.* ^{Laert.}

To him *Simonides* wrote Histories, wherein he related the actions of *Dion* and *Bion*.

There was another *Speusippus*, a Physician of *Alexandria*.

XENOCRATES.

CHAP. I.

His Country, Parents, and living with Plato.

^a Laert.
^b Suid.

Xenocrates was of *Chalcedon*, Son of ^a *Agatho*, or ^b *Agathenor*. From the Years of his Life 82. which in all probability ended when *Polemo* succeeded in the School, the first Year of the 116th Olympiad: It may be gathered that he was born in the fourth Year of the 95th Olympiad. He heard *Plato* from his Childhood. He was dull of Apprehension, whence *Plato* comparing him with *Aristotle*, said, *One needs a Spur, the other a Bridle; what an Ass and what an Horse have I to Yoke together!* He was severe, and had a sad Look, for which reason *Plato* oft said to him, *Xenocrates, Sacrifice to the Graces*, which was an usual Phrase to Melancholy People. Another time *Plato* sharply reprehended the roughness of his Disposition, which he took quietly and unmoved; saying to one that instigated him to reply in his own defence, *No, this is an Advantage to me.*

^c Ælian.
14. 9.^d Laert.
^e Ath. Deipn.

He accompanied *Plato* in his Voyage to *Sicily*, ^c where at a drinking Feast, with *Dionysius*, being honoured with a Wreath of Gold, instead of a Garland of Flowers; which were bestowed upon the Guests upon such Occasions, when he went away, he put it upon the Statue of *Mercury*, where they used to leave their ordinary Garments.

^f Laert.

When *Dionysius* fell out with *Plato*, and threatened to find one that should cut off his Head, *Xenocrates* made answer, *not before he hath cut off this*; shewing his own.

^g Var. hist. 3.
19.

^g *Ælian* saith, that *Xenocrates* having taken a Journey into his own Country, *Aristotle* with his Disciples came to *Plato*. *Speusippus* was at that time sick, and therefore could not be with *Plato*. *Plato* being fourscore years old, (which falls upon the fourth Year of the 107th Olympiad, the Year before his Death) his Me-

mory through Age much decay'd, *Aristotle* fell upon him with subtle Sophistical questions, whereupon *Plato* gave over walking in publick and retired with his Friends to his own House. At the end of the three Months *Xenocrates* returning from his Travel, finds *Aristotle* walking where he had left *Plato*, and seeing that he and his Friends, when they went out of the School went not to *Plato*, but to some other part of the City, he asked one there present, what was become of *Plato*, thinking he had been Sick; the other answered, he is not Sick, but *Aristotle* hath molested him, and driven him out of the School, so that now he teacheth Philosophy in his own Garden. *Xenocrates* hearing this, went immediately to *Plato*, whom he found discoursing to his Disciples, persons of great worth and eminence. As soon as he had ended his Discourse, he saluted *Xenocrates*, as he used, very kindly, and *Xenocrates* him. When the Company was dismiss'd, *Xenocrates*, without speaking a word of it to *Plato*, getting his Friends together, after he had chid *Speusippus* for permitting *Aristotle* to possess the School, made a Head against *Aristotle*, and opposed him with his utmost force, until at last he re-instated him in the School. Thus *Ælian*. But this Story, which he acknowledgeth to have taken up no better Authority than vulgar Report, disagrees with many Circumstances of *Aristotle*'s Life, supported by far more credible Testimonies.

CHAP.

C H A P. II.

His Profession of Philosophy.

AFTER *Speusippus* had held the School eight years, finding himself not able to continue that charge any longer, he sent to *Xenocrates*, intreating him to take it upon him, which *Xenocrates* did ^a in the second year of the 110th Olympiad, *Lisimachides* being Archon, not without emulation and dissension with the *Peripateticks*, for ^b *Aristotle*, at his return out of *Macedonia*, finding *Xenocrates* possessed of the Academy, instituted a School in opposition to him, in the *Lycaum* saying,

*Silent to be now most disgraceful were,
And see Xenocrates possess the Chair.*

^c Some affirm, that *Alexander* falling out with *Aristotle*, to vex him, sent a Present to *Xenocrates*, ^d of fifty Talents, whereof *Xenocrates* took but 3000 Atticks, and sent back the rest, saying, That he needed it most that was to maintain so many. Or, as ^e *Stobaeus* relates it, having entertained the Messenger after his usual Fashion, Go and tell *Alexander*, faith he, that after the rate I live, I shall not need fifty Talents in all my Life. ^f The Money being brought back to *Alexander*, he asked, if *Xenocrates* had not any Friend; adding that as for his own Friends, the Wealth of *Darius* was too little for them.

[†] He asserted *Unity* and *Duality* to be Gods; the first as it were Masculine, in the nature of a Father, reigning in Heaven, whom he called also *Jupiter*, the *Odd*, and the *Mind*. The other, as it were Female, and the Mother commanding all things under Heaven. This he called the Mind of the Universe. He likewise asserts Heaven to be Divine, and the fiery Stars to be Olympian Gods, the rest sublunary invisible Deities, which permeate through the Elements of Matter, whereof that which passeth through the Air is called *Juno*; that which through the Water, *Neptune*; that which through the Earth, *Ceres*. This the *Stoicks* borrowed from him, as he the former from *Plato*.

^{*} He continued Master of the School twenty five years, until the first year of the hundred and sixth Olympiad; then his Disciple *Polemio* succeeded him. During that time, he lived very retired in the Academy; and if at any time he went into the City, all the Tradesmen and other People thronged to see him.

C H A P. III.

His Vertues and Apotheosis.

[†] **A**MONGST his other Vertues, he was very remarkable for his Continnence, of which there is this Instance: *Phryne*, a famous *Athenian* Curtezian, having laid a Wager with some Young Men his Disciples, that he could not resist her Enticements, stole privately into his Bed: The next Morning being question'd and latight at by his Disciples, she said, the Wa-

ger they laid was of a Man, not of a Stone. To this end he used to mortifie himself by incision, and cauterising of his Flesh.

[†] His Wisdom and Sanctity was much revered by *Athenians*, for being to give his Testimony, and to swear, as the custom was, that he spoke nothing but truth, the Judges all rose up, and cried out, that he should not Swear, indulging that to his Sincerity, which they did not allow to one another.

^{*} Being sent with others to *Philip* on an Embassy, the rest received Gifts from him, and went to treat in private with him; *Xenocrates* did neither, and for that part was not invited by him: The Ambassadors returning to *Athens*, said, that *Xenocrates* went along with them to no purpose: Whereupon the *Athenians* were ready to impose a mulct upon him; but when they understood by him, that they were at that time to consider chiefly concerning the Common-wealth, *Philip* having corrupted the rest with Gifts, and that he would not accept any, they bestowed double Honours upon him. *Philip* said afterwards, that of those who came to him, only *Xenocrates* would not take any Gifts.

Being sent in the time of the *Lamiack* War (which was about the second year of the hundred and fourth Olympiad) Ambassador to *Antipater*, about the redemption of some *Athenian* Prisoners, *Antipater* invited him to sit down to Supper, whereto he answered in the words of *Ulysses* in *Homer*:

*O Circe, what Man is there that is good,
Before his friends are freed can think of food.*

Antipater was so pleased with the ingenious application of these Verses, that he caused the Prisoners immediately to be set at Liberty.

[†] His Clemency, faith *Ælian*, extended not only to Men, but, often to irrational Creatures, as once, when a Sparrow, pursued by a Hawk, flew to his Bosom, he took it, much pleased, and hid it till the Enemy were out of Sight; and when he thought it was out of Fear and danger, opening his Bosom, he let it go, saying, that he had not betrayed a Suppliant.

^{*} *Bion* deriding him, he refused to make any answer in his own Defence; for, a Tragedy, faith he, being mocked by a Comedy, needs not a Reply.

To one, who though he neither had learned Musick, Geometry, nor Astronomy; yet desired to be his Disciple: *Away*, faith he, *you have not the handles of Philosophy*. Some affirm he said, *I teach not to card Wool*.

Antipater coming to *Athens*, met and saluted him; which Salute he returned not, until he had made an end of the Discourse he was about.

[†] He was nothing proud; he assigned a particular Business to every part of the Day, a great part thereof to Meditation, one part to Silence.

^{*} Whensoever he pierced a Vessel of Wine, it was sowed before he spent it, and the Broths that were made for him were often

thrown away the next day ; whence proverbially was used, *the Cheese of Xenocrates*, of things that last well, and are not easily consumed.

† Val. Max.
7. 2.

† Holding his Peace at some detraactive discourse ; they asked him why he spoke not ? Because, saith he, I have sometimes repented of speaking, but never of holding my Peace.

Yet, this Man, saith *Laertius*, because he could not pay the Fine imposed upon Aliens, the *Athenians* sold. *Demetrius Phalcrius* bought him, contenting both Parties, the *Athenians* with their Tribute, *Xenocrates* with his Liberty.

CHAP. IV.

His Writings.

† Laert.

† HE left many Writings, Verses, exhortations, and Orations, their Titles these.

- Of Nature* 6 Books.
- Of Wisdom* 6.
- Of Riches* 1.
- Arias* 1.
- Of Indefinite* 1.
- Of a Child* 1.
- Of Continence* 1.
- Of Profitable* 1.
- Of Free* 1.
- Of Death* 1. which some conceive to be the same with that which is extant amongst the spurious *Platonick* Dialogues, under the Title of *Axiochus*.
- Of Voluntary* 1.
- Of Friendship* 2.
- Of Equity* 1.
- Of Contrary* 2.
- Of Beatitude* 2.
- Of Writing* 1.
- Of Memory* 1.
- Of False* 1.
- Callicles* 1.
- Of Prudence* 2.
- Oeconomick* 1.
- Of Temperance* 1.
- Of the Power of Law* 1.
- Of a Commonwealth* 1.
- Of Sanctity* 1.
- That Vertue may be taught* 1.
- Of Ens* 1.
- Of Fate* 1.
- Of Passions* 1.
- Of Lives* 1.
- Of Concord* 1.
- Of Disciples* 2.
- Of Justice* 1.
- Of Vertue* 2.
- Of Species* 1.
- Of Pleasure* 2.
- Of Life* 1.

- Of Fortitude* 1.
- Of One* 1.
- Of Ideas* 1.
- Of Art* 1.
- Of Gods* 2.
- Of the Soul* 2.
- Of Science* 1.
- Politick* 1.
- Of Scientificks* 1.
- Of Philosophy* 1.
- Of Parmenides Opinions* 1.
- Archidemus, or of Justice* 1.
- Of Good* 1.
- Of things which pertain to Intellect* 8.
- Solutions concerning Speech* 1.
- Physical Auscultation* 6.
- A Summary.* 1.
- Of Genus's and Species* 1.
- Pythagorean Assertions* 1.
- Solutions* 2.
- Divisions* 8.
- Positions* 3.
- Of Dialectick* 14, & 15, & 16.
- Of Disciplines concerning Distinctions* 9.
- Concerning Ratiocination* 9.
- Concerning Intelligence* 4.
- Of Disciplines* 6.
- Concerning Intelligence* 2.
- Of Geometry* 5.
- Commentaries* 1.
- Contraries* 1.
- Of Numbers* 1.
- Theory of Arithmetick* 1.
- Of Intervals* 1.
- Astrologick* 6.
- Elements, to Alexander concerning a Kingdom* 4.
- To Tribas.*
- To Hephæstion.*
- Of Geometry* 2.
- Verses* 345.

CHAP. V.

His Death.

HE died in the 82 year of his age by a fall in the Night into the Bafin (wherein he was drowned) probably in the first year of the 116th Olympiad, for in that Year *Polemo* his Successor took upon him the School.

Laertius saith, there were six more of his Name, but mentions only five. One, very ancient, skilful in *Tactics* ; another of the same City and Family with this Philosopher, Author of the Oration upon the Death of *Arfinoe* ; the fourth saith he, a Philosopher, who writ in Elegiack Verse, but not happily, perhaps the same, who, *Suidas* saith, was nothing inferior to this *Xenocrates* for Continence ; the fifth, a Statuary, the sixth a Writer of Songs, as *Aristoxenus* affirms.

P O L E M O.

P O L E M O.

PO L E M O was an *Athenian* of *Oca*, [a Town belonging to the *Oenian* Tribe,] his Father *Philostratus* (who according to † *Antigonus Carystius*) was a Citizen of great account; and kept a Chariot and Horses.

Polemo in his Youth was very Intemperate, and dissolute; he frequently took a sum of Money, and hid it in a private corner of some Street, to supply his Extravagances upon occasion. Even in the Academy were found three *oboli*, which he had hid under a Pillar, upon the same account. This Wildness caused discontent betwixt him and his Wife, who, thinking herself not well used by him, accused him *ὡς μετ' ἐξουσίας*.

* Neither did he delight (saith *Valerius Maximus*,) in Luxury only, but even in the infamy thereof. On a time, coming from a Feast, not after the setting but rising of the Sun; and seeing the Door of *Zenocrates* the Philosopher open, full of Wine, smelling sweet of Unguents, crowned with Garlands, richly attired, he rushed into his School, which was filled with a Croud of Learned Persons. Not contented with so rude an Intrusion, he sat down also, intending to make sport at his excellent Eloquence, and prudent Precepts. Hereupon all were offended as the Affront deserved, only *Zenocrates*, continuing the same Countenance and Gesture, fell from the Discourse in which he was, and began to speak of Modesty and Temperance, with the gravity of whose Discourse, *Polemo* being reduced to Repentance, first took his Garland off from his Head, and flung it on the Ground; soon after he withdrew his Arm within his Cloak; Next he laid aside the cheerfulness of that look which he had formerly, when he affected feasting; lastly, he wholly divested himself of Luxury, and being thus cured by the wholesome Medicine of one Discourse, he, from an infamous Prodigal became a most excellent Philosopher, being * from that time forward so addicted to study, that he surpassed all the rest, and succeeded *Xenocrates* in the Government of the School, which he began in the first Year of the 116th Olympiad.

After he began to study Philosophy, he had such a constant Behaviour, that he retained always the same Countenance, and kept the same tone in all his Speech, whereby *Crantor* was taken with him. A Mad Dog having bit him by the Knee, he alone of all the Company seem'd to be unconcerned in it, and

a Tumult happening thereupon in the City, he asked without any disturbance, what was the matter? In the Theatres also, he was nothing moved. When *Nicostratus* the Poet, firnamed *Clytemnestra*, recited something to him and *Crates*, *Crates* was much taken therewith, but he made no more show than as if he had heard nothing, and was altogether such as *Meclimbius* the Painter in his Books of Picture hath described him, for he saith in his actions was expressed a stubbornness and hardness.

Polemo used to say, we ought to exercise our selves in things, not in Dialectick Disciplines, lest, satisfying our selves with the taste and meditation of the superficial parts of Science, we become admired for subtilty in Discourse, but contradict our selves in the practice of our Life.

He was facete and ingenious, shunning that which *Aristophanes* imputes to *Euripides*, sourness and harshness. He taught, not sitting, but, walking. The *Athenians* much honour'd him for his great Integrity, he took great delight in Solitude, whence for the most part he dwelt in a Garden, about which his Disciples built themselves little Lodges, near to his School. He was a studious imitator of *Xenocrates* (who, *Aristippus* saith, much loved him) always remembering his Innocence, severity and gravity, to which, like a Dorick Measure, he conformed his own Steps.

Antigonus Carystius saith, that from the thirtieth year of his Age to his Death, he drank nothing but Water.

He held that the World is God.

He much affected *Sophocles*, chiefly in those places where (to use the Phrase of the Comick Poet) a *Molossian Dog seemeth to have written together with him*. And whereas *Phrynichus* saith he was

Not sweet, nor flat, but gently smooth; he said, that *Homer* was an Epick *Sophocles*, *Sophocles* a Tragick *Homer*.

He died very old of a Consumption, and left behind him many Writings. *Laertius* hath this Epigram upon him;

*Wert thou not told, that Polemo lies here,
On whom slow sickness (man's worst passion) prey'd?
No, 'tis the Robe of Flesh he us'd to wear,
Which ere to Heaven he mounted, down he laid.*

Of his Disciples are remembered *Crates*, *Zeno* the Stoick, and *Arcefilus*.

CRATES.

CRATES.

Laert.

CRATES was a Thriasian, Son of Antigenes; he was an Auditor of Polemo, and loved by him; he succeeded him in the Government of his School. They both profited so much by one another, that living they not only followed the same institutes, but even to their last ends were alike, and being dead, were buried in the same Sepulchre. Upon which occasion Antagoras writ thus upon them both,

*Where thou art, say ere thou passest by,
Crates and Polemo here buried lie;
Both for their mutual Love no less admir'd,
Than for their Eloquence, by which inspir'd,
O th' wisdom they profess'd the Age was proud,
Yet gladly to their sacred Precepts bow'd.*

Hence Arcefilaus, when he went from Theophrastus, and applied himself to them, said, *They were Gods, or certain Reliques of the Golden Age.*

They were nothing popular, but what Dionysiodorus an ancient Musician was wont to say, may be applied to these, when he boasted, that none had ever heard him sing, as they had Ismenius, nor had ever seen him in a Ship, or at the Fountains.

Antigonus saith, that he sojourned at Crantor's, when he and Arcefilaus lived most friendly, and that Arcefilaus dwelt with Crantor, Polemo with Crates, together with Lysicles, who was one of the Citizens, and truly, Polemo, as is before-mentioned, loved Crates; Crantor, Arcefilaus. But Crates dying, as Apollodorus in the third of his Chronicle, left Books which he had written, partly of Philosophy, partly of Comedy; Orations suited for publick pleading, or Embassie.

He had many eminent Disciples, of whom was Arcefilaus, and Bion the Boristhenite, afterwards called a Theodorean from that Sect.

There were ten of this Name. The First an antient Comick Poet.

The Second, an Oratour of the Family of Isocrates.

The Third, an Engineer, that went along with Alexander in his Expeditions.

The Fourth, a Cynick.

The Fifth, a Peripatetick.

The Sixth, this Academick.

The Seventh, a Grammarian.

The Eighth writ of Geometry.

The Ninth, an Epigrammatick Poet.

The Tenth, of Tarsis, an Academick Philosopher.

CRANTOR.

Laert.

CRANTOR was of Soli, much admired in his own Country. He came to Athens, where he heard Xenocrates, and studied with Polemo.

He writ Commentaries, 3000 Verses, whereof some ascribe part to Arcefilaus.

Being asked how he came to be taken with Polemo, he answered from the tone of his Speech, never exalted nor depressed.

Falling Sick, he went to the Temple of Æsculapius, and walked there; where many resorted to him from several parts, not thinking he stayed in respect of his Sickness, but that he meant to erect a School in that place; amongst the rest came Arcefilaus, whom, tho' he loved him very much, he recommended to Polemo, whom he himself after his recovery heard also, and was extreemly taken with him.

He bequeathed his Estate, amounting to twelve Talents to Arcefilaus, who asking him where he would be buried, he answered,

In Earth's kind Bosom happy 'tis to lie.

He is said to have written Poems, and to have deposited them, sealed up in his own Country, in the Temple of Minerva; of him thus Theatetus.

Pleasing to Men, but to the Muses more.

*Crantor too soon of Life was dispossess'd,
Earth his cold Body we to thee restore,
That in thy Arms he peacefully may rest.*

Crantor above all, admired Homer and Euripides, saying it was hard in proper Language to speak at once tragically and passionately, and quoted this Verse out of his Bellerophon.

*Alas, yet why alas,
Through such Fate Mortals pass.*

Antagoras the Poet alledgeth these Verses, as written by him.

* *My Soul's in doubt, for doubtless is his race,
Whether I Love first of all Gods shall place.
Which drew from Erebus their old descent,
And Night beyond the Ocean's vast extent;
Or whether to bright Venus, or to Earth,
Thou owest thy double form, and sacred birth.*

ἀμφήεις. one doubtless imitating the other, which both the Interpreters not observing, have strangely rendred this place.

* Read. Ἐν δαίμ μοι θυμὸς, ὅπως ὅς. as Callimachus hymn. I. Ἐν δαίμ μάλα θυμὸς ἐπεὶ γένος

He was very ingenious in imposing apt names. He said of an ill Poet that his Verses were full of Moths; and of *Theophrastus*, that his Theſes were written in a Shell.

He wrote a Treatiſe concerning Grief, which was generally much admired, as *Cicero* and *Laertius* atteſt.

He died before *Polemo* and *Crates* of the Dropſy.

ARCESILAUS.

CHAP. I.

His Country, Parents, Teachers.

Arcesilaus (whom *Cicero* calls *Accſilas*) was a *Pitanean* of *Æolis*; his Father, according to *Apollodorus*, in the third of his Chronologicks, named *Seuthus*, or as others *Scythus*. He was the youngest of four Brethren, two by the ſame Father, only the other by the ſame Mother; the eldeſt was named *Pylades*: Of thoſe who had the ſame Father, the eldeſt was *Mareus*, Guardian to his Brother *Arceſilaus*.

* Aldobrandiniſ edition reads the 130. He was born by computation from his death (which was in the fourth year of the * hundred thirty and fourth Olympiad, the ſeventy fifth of his Age) in the firſt Year of the hundred and fixteenth Olympiad.

He firſt heard *Autolychus* the Mathematician, his Country-man, before he came to *Athens*, with whom he travelled to *Sardis*.

Next he heard *Xanthus* an *Athenian*, a Maſter of Muſick.

He heard alſo *Hipponicus* the Geometrician, who, excepting his Skill in that Art, was otherwiſe a gaping dull Fellow, for which *Arceſilaus* deriding him, ſaid, Geometry flew into his Mouth as he gaped. Of *Hipponicus* falling mad, he took ſo great care that he brought him to his own Houſe, and kept him there until he was quite cured.

He likewiſe, by the compulſion of his Brother, ſtudied Rhetorick, and being by Nature vehement in Diſcourſe, and of indefatigable Induſtry, he addiſted himſelf likewiſe to Poetry. There is an Epigram of his extant upon *Attalus* to this effect;

*For Arms and Horſes oft hath been the Name
Of Pergamus through Piſa ſpread by Fame:
But, now ſhall (if a mortal may divine)
To future times with greater Glory ſhine.*

There is another Epigram of his upon *Menedorus*, Son of *Eudemus*.

*Far hence is Thyatire, far Phrygian Earth,
Whence Menodore thou diſt derive thy Birth.
But down to Acheron unpierc'd by Day,
From any place thou knew'ſt the ready way.
To thee this Tomb Eudemus dedicates,
Whom Love hath wealthy made, tho' poor the Fates.*

Although his Brother *Marcus* would have had him profeſſed Rhetorick, yet was he naturally more enclined to Philoſophy; to which end, he firſt became a hearer of *Theophrastus*, in which time *Crantor* being much taken with him, ſpoke that Verſe of *Euripides* to him, out of his *Andromeda*:

Maid, if I ſave thee, wilt thou thankful be?

He answered in the following Verſe,

Stranger, for Wiſe or Slave accept of me.

From thence-forward they lived in intimate Friendſhip, whereat *Theophrastus* troubled, ſaid, *He had loſt a Youth of extraordinary Wit, and quickneſs of Apprehenſion.*

He emulated *Pyrrho*, as ſome affirm, and ſtudied Dialeſtick, and the Eretrick Philoſophy, whence *Ariſto* ſaid of him,

*Pyrrho beyond, Plato before,
And in the middle Diodore.*

And *Timon*,

*Next leaden Menedemus he purſues,
And Pyrrho doth, or Diodorus chooſe.*

And ſoon after maketh him ſay thus;

I'll ſwim to Pyrrho, and crook'd Diodore.

He was a great admirer of *Plato*, whoſe Books he had.

CHAP. II.

Upon what occaſion he conſtituted the middle Academy.

† **C**rates dying, *Arceſilaus* took upon him the Government of the School, which † *Laert.* was yielded to him by *Socratides*. Being poſſeſſed of that place, he altered the Doctrine and manner of Teaching, which had been obſerved by *Plato* and his Succeſſors; upon this occaſion.

Plato

Plato and his followers down to to *Arcesilaus*, held, (as was said) *That* there are two kinds of things, some perceptible by *Sense*, others perceptible only by *Intellect*: *That* from the latter ariseth *Science*, from the former *Opinion*: *That* the *Mind* only seeth that which always is simple, and in the same manner, and such as it is, that is, *Ideas*. But that the *Senses* are all dull and slow, neither can they perceive those things which seem subjected to *Sense*, because either they are so little, that they cannot fall beneath *Sense*, or so moveable and transient, that not one of them is constant or the same; but, all are in continual Lapse and Fluxion. Hence they called all this part of things *Opinionable*, affirming that *Science* is no where, but, in the Notions and Reasons of the Mind.

* Yet, did they profess against those, who said, the Academy took away all *Sense*; for they affirmed not, that there was no such thing as colour, or taste, or sapor, or sound; but, only maintained, there was no proper mark of true and certain in the Senses, there being no such any where.

† Hence they allowed, that we make use of the Senses in Actions, from the reason that appeareth out of them; but, to trust them as absolutely true and infallible, they allowed not.

Thus held the *Academicks* down to *Polemo*, * of whom *Arcesilaus* and *Zeno* were constant Auditors; but *Zeno* being older than *Arcesilaus*, and a very subtle Disputant, endeavoured to Correct his Doctrine, not that, as *Theophrastus* saith, he did enervate Vertue; but on the contrary, he placed all things that are reckoned among the good, in Vertue only: And this he called *Honesty*, as being simple, sole, one good: Of the rest, though neither good nor evil, he held that some were according to Nature, others contrary to Nature, others mediate: Those which are according to Nature, he held to be worthy Estimation, the contrary contrary; the Neuter he left betwixt both, in which he placed no value. Of those which are Eligible, some were of more Estimation, some of less; those which were of more he called *preferred*, those of less *rejected*. And as in these, he did not change so much the things themselves as the words, so betwixt a *Rectitude* and a *Sin*, an *Office* and a *Preter-office*: He placed some things mediate, holding that Rectitudes consisted only in good Actions, Sins in Evil; but, Offices either performed or omitted, he conceived mediate things. And whereas the Philosophers of the old Academy did not hold all Vertue to consist in Reason, but some Vertues to be perfected by Nature or Custom; *Zeno* on the contrary placed all Vertue in Reason; and whereas the *Academicks* held, as we said [in the Life of *Plato*,] That all those Vertues may be separated, *Zeno* maintained that could not be, averring, that not only the use of Vertue (as the *Academicks* held) but the Habit thereof was excellent in it self; neither had any one Vertue, who did not always make use of it. And whereas the *Academicks* took not away Passion from Man, affirming that we are subject to Compassion, desire, fear, and joy, by Nature; but, only contracted them, and reduced them within narrower limits; *Zeno* affirmed,

that from all these, as from so many Diseases, a wise Man must be free. And whereas they held, that all Passions were natural and irrational, and placed in one part of the Soul, Concupiscence, in the other Reason: Neither did *Zeno* herein agree with them, for he asserted, that Passions are voluntary, that Opinions are taken up by Judgment, that immoderate Intemperance is the Mother of all Passion. Thus much for *Ethicks*.

† As for *Physick*, he did not allow that fifth Nature besides the four Elements, of which the *Academicks* held *Sense* and *Mind* to be effected; for he asserted Fire to be that Nature which begetteth every thing, both *Mind* and *Sense*. He likewise dissented from them, in that he held, nothing can be made by a thing which hath no Body, (of which Nature, *Xenocrates*, and the old *Academicks* thought the Soul to be) and that whatsoever made any thing, or was it self made, must of necessity be a Body.

* He likewise asserted many things in the third part of Philosophy, wherein he asserted some things new of the Senses themselves, which he conceived to be joined by a certain extrinsecal impulsion, which he called *Phantasie*. To these Phantasies received by the Senses, He added Assent of the Mind, which he held to be placed in us, and voluntary. He did not allow all Phantasies to be faithful and worthy Credit; but, only those which have a proper Declaration of those things which they seem, which Phantasie when it is seen, is called *comprehensible*, when received and approved, he calleth it *comprehension*. That which was comprehended by *Sense*, he calleth *Sense*, and, if it were so comprehended, that it could not be pulled away by reason, *Science*; if otherwise, *Ignorance*; of which kind was Opinion, infirm and common to false or unknown things. Betwixt *Science* and *Ignorance* he placed that comprehension we mentioned, not reckoning it among the good nor the bad; but affirming that only was to be credited, whence he likewise attributed Faith to the Senses, for as much as he conceived the comprehension made by the Senses to be true and faithful, not that it comprehended all things that are in being; but that it omits nothing that can fall beneath it, as also, because Nature hath given it as a rule of *Science* and principle of it self, whence notions are afterwards imprinted in the Mind, from which not only Principles, but certain larger ways towards the invention of Reason, are found out. Error, timidity, ignorance, opinion, suspicion, and in a word, whatsoever is not of firm and constant assent, he took away from Vertue and Wisdom. In these things consisteth almost all the change and dissention of *Zeno* from the old *Academicks*.

Zeno thus maintaining many things contrary to *Plato*, as that the Soul is Mortal, and that there is no other World, but this, which is subject to *Sense*. *Arcesilaus* perceiving this Doctrine to spread and take much, prudently concealed the Doctrine of the Academy, lest the mysteries of *Plato* being divulged and made too common, should become despicable; and therefore faith† *St. Augustine*) he thought it fitter to un-† *Contr. Acad. Lib.* teach the Man that was not well taught, than to teach those, whom by Experience he found not to be docile enough. * Here-

* Cic. lib.

† Contr. Acad. Lib.

† Cic. Acad.
quæst. I.

* Hereupon *Arcefilanus* undertook to oppose and contest with *Zeno*, not out of any pertinacity or desire of Glory, but led thereunto by that obscurity of things, which had brought *Socrates* to a confession of his own Ignorance; as likewise *Democritus*, *Anaxagoras*, *Empedocles*, and almost all the ancient Philosophers, who affirmed, *That* nothing could be understood, nothing perceived, nothing known: *That* the Senses are narrow, our Minds weak, our Lives short, and *Truth* (as *Democritus* saith) *drown'd in an Abyss*. *That* all things are held by opinion and institution, nothing left to Truth: and finally, *That* all things are involved in darkness.

† Cic. ibid.

† Thus *Arcefilanus* denied there is any thing that can be known, not so much as that which *Socrates* reserved, [*that he knew nothing*] conceiving all things to be hid in such darkness, that there is nothing which can be seen or understood. For these reasons we ought not to profess or affirm any thing, or to approve any thing by assent; but always to restrain and withhold our Haste from Error, which then proveth great, when it approveth a thing false or unknown. Neither is there any thing more vile, than by assent and approbation to prevent Knowledge and perception.

* Cic. ibid.

* He did, as was agreeable to this Tenet, dispute against all Assertions and Doctrines; and having found, that in the same thing the reasons of two Opinions directly opposite, were of equal weight, he thence inferred, that we ought to withhold our assents († ἐπέχεν) from both: [This *Laertius* means, when he saith, that he took away propositions, by reason of the repugnance of Speech, and was the first that taught to argue on both sides.] * And that neither the Senses nor Reason are to be credited. He therefore praised that Apophthegm of *Hesiod*:
The Gods all knowledge have conceal'd from Men.

† Contra Acad.
Lib. 3.

But this † *Saint Augustine* affirms was only done, to conceal mysteriously the meaning of *Plato*; but, they nevertheless had and held his Doctrines and Decrees, which they used to unfold to those who liv'd with them till they were old.

* De finib. I. 2.

He likewise, as *Laertius* saith, first altered the manner of disputing which *Plato* delivered, and made it more litigious by question and answer, of which, thus * *Cicero*: *Socrates* used to find out by question and answer, the opinions of those with whom he discoursed, that if there were occasion, he might say something upon that which they answered: This custom not retained by his Successors, was taken up by *Arcefilanus*, who instituted, that they who would learn of him should not question him; but, themselves tell him what they thought, which when they had done, he disputed against it; but, his Auditors were to maintain their own opinion as much as they could possibly. This course took *Arcefilanus*, contrary to all other Philosophers, amongst whom, he that would learn held his Peace; which course, saith *Cicero*, is at this time held in the Academy, where he that will learn, speaks in this manner; Pleasure seems to be the chief good, whereupon in a long Oration it is disputed against it, whereby may easily be understood, that they who say, a thing seemeth to me to be so, are not really of that opinion, but desire to hear the contrary maintained.

This School constituted by *Arcefilanus*, was called the *second Academy*, in relation to its descent from *Plato*, or the *middle Academy*, in respect of the *new* one, which was afterwards set up by *Carneades*; though † *Cicero* seemeth to make no distinction between this and that, but calleth this the *new Academy*: But, though 'tis likely, that it was not at first so called; yet, upon the introduction of a newer, it was afterwards more generally known by the title of the *middle*, or, *second Academy*.

These *Academicks* differ from the *Scepticks*, in as much, as, though they affirmed that nothing can be comprehended; yet they took not away *true* or *false* from things. On the contrary, they held that some Phantasies were true, others false; but the *Scepticks* hold that they are both indifferent; alike defensible by Reason. The *Academicks* assert some things to be wholly improbable, some more probable than others, and that a Wise Man, when any of these occur, * may answer *yes* or *no*, * following the probability, provided that he withhold from assenting. But the *Scepticks* hold all things to be alike indifferent, not admitting Judgment, nor allowing that either our Senses or Opinions can perceive true or false, and therefore no faith is to be given to them, but we ought to persist firm and unmovable without Opinion, or saying of any thing that it is, any more than that it is not.

CHAP. III.

His Vertues and Apophthegms.

† HE preferred *Homer* above all Writers, of whom he constantly read some piece before he went to Bed, and as soon as he rose in the Morning. When he went to read any thing in him, he said, he went to his *Mistress*.

Pindar also he said was proper to raise the Voice, and give us supply of Words.

He was sententious and succinct in Speech, often using Expressions of doubtful meaning. He used to reprehend and chide sharply, and freely, whence *Timon* saith of him,

When thou chid'st young Men, think thou once wert young.

In this kind, *Laertius* instances his Sayings to a Young Man, speaking confidently, &c. to an immodest young Man, &c.

Emo a *Chian*, who, though very deformed, thought himself very handsome, asking him as he put on a rich Cloak, whether he thought a Wise Man might not love? *Arcefilanus* answered, do you mean if he be as handsome and as fine as you.

To an effeminate Person, upbraiding him as it were of Pride, he spoke this Verse,

Shall we demand Great Sir, or Silent be?

He immediately answered,
Woman, why speakest thou these harsh Words to me?

Being troubled with the talk of an inconsiderable mean Person, he said,

The Sons of Slaves intemperately speak.

Of another who talked impertinently, and loudly, he said, he had a peevish Nurse. For

E c

some

some he would make no answer at all.

To an Ufurer, who said there was something he knew not, he answered in these Verses out of *Sophocles's OEnomaus*,

*The course of Storms hid from the Bird doth lie,
Until the time that she must lay draw nigh.*

To a Dialectick Philosopher of *Alexinus's* School, who was not able to say any thing worthy *Alexinus*, he related what *Philoxenus* did to a maker of Bricks, who over-hearing him sing his Verses false, trod upon his Bricks and broke them, saying, as you spoil mine, so I yours.

He was angry at those who learned not the liberal Sciences in due time.

In dispute he used this word, *I say, and will not such a one*, (naming the Person) *assent to this?* which many of his Disciples affected to imitate, as also his manner of speaking and gesture.

He was most acute in answering appositely, and converting his discourse to the present subject, and fitting it for every time.

He was very efficacious in perswasion, whence many Disciples resorted to him, though sometimes he sharply touched them, which they took patiently.

He was very good, and much excited hope in his Auditors.

As to the necessaries of Life, he was liberal and communicative, ready to do good, and much endeavouring to conceal it, avoiding all that kind of vain-glory. Visiting *Cresibius*, who was sick, and perceiving him to be poor, he privately put a Purse under his Pillow, which when he found; This, saith he, is the sport of *Arcefilaus*. Another time he sent him 1000 Drachms. * *Plutarch* relates this as done to *Apelles* the Chian Painter, whom *Arcefilaus* besides

many other testimonies of kindness coming to visit as he lay sick, and perceiving how poor he was, departed, and returning soon after, bringing twenty Drachms with him, then sitting close to *Apelles's* Bed-side, *Here is nothing*, says he, *besides Empedocle's Four Elements, Fire, Water, Earth, and Æther mounting high, but methinks you lie not at your Ease*, and with that taking occasion to remove his Pillow, he conveyed the Purse privately under it, which when the old Woman that tended him found, and wondring, shewed to *Apelles*, he laughing, said, *This is one of Arcefilaus's Thefts*.

† He recommended *Archias*, an Arcadian to *Eumenes* King of *Pergamus*, by whom he was exalted to great Dignity.

He was very liberal, and free from Covetousness, as appeared by his Utensils of Silver, and vying with *Athacrates*, and *Callicrates*. He had many Vessels of Gold, which he lent unto many upon occasion of Feasting. These Silver Vessels a certain Man borrowed to entertain his Friends withal; *Arcefilaus* knowing him to be poor, would never send for them back: Others report he lent them to him on purpose, and when he brought them back, because he was poor, he freely bestowed them on him.

He had a fair Estate at *Pitane*, from which *Pylades* his Brother continually supplied him. *Eumenes* also Son of *Phileterus*, gave him many large Presents, whence to him only of all Kings he applied himself.

When *Antigonus* was much followed, and many Persons thronged to his House, he forbore, declining his acquaintance. He was intimate with *Hierocles*, the Governour of *Munichia*, and *Pireum*, and constantly, on Holidays, went thither to visit him: *Hierocles* often entreated him to visit *Antigonus*, but he refused, and went along with him as far as the Door, and there parted with him. After *Antigonus's* fight at Sea, many writing consolatory Epistles to him, *Arcefilaus* was silent. Being sent by his Country on an Embassy to *Antigonus* at *Demetrias*, he returned frustrate of his design.

He lived the greatest part of his time in the Academy, avoiding to meddle with publick Business; but sometimes went to the *Piræum*, as we said, out of Love to *Hierocles*; for which some reproved him.

He was very magnificent (indeed a second *Aristippus*) in the entertainment of his Friends. He openly professed Love to *Theodote* and *Philotia*, Curtezans of *Elis*, for which being reprehended, he rehearsed the *Chrias* of *Aristippus*. He was very amorous, and much affected the Company of young Men, whence *Aristo* of *Chios*, a Stoick, called him a corrupter of Youth, temerarious, and impudent. Of those whom he affected are mentioned *Demetrius* and *Leochares*; *Demochares*, Son of *Laches*, and *Pythocles* Son of *Bugerus*, much affected him.

For these things he was much inveighed against at the House of *Hieronymus* the *Peripatetick*, who had invited his Friends to celebrate the Birth-Day of *Alcyoneus*, Son of *Antigonus*, for the keeping of which Feast, *Antigonus* sent yearly much Money. At this Feast *Arcefilaus* would not dispute amidst the Cups; and when *Aridelus* propounded a question to him, requiring that he would say something to it, he answered it is the best property of a Philosopher to know the Seasons of all things.

But, he was so free from Pride, that he counselled his Disciples to go and hear other Masters; and when a certain Chian Youth of his School declared, that he was not pleased with what he said so much as with the Discourses of *Hieronymus*, he took him by the hand and led him to the Philosopher, desiring him to cherish him according to his quality.

To one that asked why Men went from other Sects to the *Epicureans*, but never from the *Epicureans* to other Sects: Because, saith he, of Men, some are made Eunuchs, but of Eunuchs never any are made Men.

* He said, Where there are many Medicines, and many Physicians, there are most Diseases; and where there are many Laws, there is most Iniquity. * Stob. Ser. 212.

† He advised to shun Dialectick, because it turneth all things upside down. † Stob. Ser. 212.

* He compared Logicians to Gamesters that play at Dice, who take delight whilst they are cosened. * Stob. Ser. 212.

† He affirmed, that Poverty is rugged, as *Ithaca*, but good to bring up a Child, in that it inureth to Frugality and Abstinence, and is generally a good School of Vertue. † Stob. Ser. 235.

CHAP. IV.

His Death.

* Laert.

* **W**hen he drew nigh the end of his Life, he bequeathed all his Estate to his Brother *Pylades*; to which end, *Mareus* not knowing it, he sent him first to *Chios*, and from thence sent for him back again to *Athens*. He sent three Copies of his Will, one to *Amphicritus* at *Eretria*, another to some Friends of his at *Athens*, the third to *Thaumastias* his near Kinsman, to be kept by them; with the last he sent this Letter.

Arcefilaus to *Thaumastias*, health.

I gave *Diogenes* my Will to bring to you, for being often sick and infirm of Body, I thought fit to make my Will, lest if any sudden Accident should befall me, I should depart this Life with

some Injury done to you, whom I have found so bountiful towards me. I desire that you, the most faithful of all my Friends, will take it into your Custody. Approve your self just to that extraordinary trust which I have reposed in you, that it may appear I have made a right choice.

He died, as *Hermippus* saith, in a kind of Phrenzy, after he had drunk much Wine, 75 years old, in the fourth Year of the 134th Olympiad, as may be conjectured from the succession of *Lacydes*, in the School which began at that time. The *Athenians* buried him with such Solemnity as never any was before.

He took not any Women into the House with him, neither had he any Children. He flourished according to *Apollodorus* in the 120th Olympiad.

There were three more of this Name, one an ancient Comick Poet, the second an Elegiack Poet, the third a Statuary.

L A C Y D E S.

* Laert.

LACYDES succeeded *Arcefilaus*; he was a *Cyrencean*, (his Father named *Alexander*.) a person of much gravity, and had many Emulators. He was from his youth much given to study, poor, but pleasing to all company, and of a delightful Conversation.

As concerning his managing his Household affairs, it is reported that when he took any thing out of the place where he kept his provisions, he locked the Door, and threw the Key in at a hole that none might steal ought from him; which his Servants observing, frequently took it, and opening the Door, carried away what they thought good, and then put it into the same place again, in which Fact they were never discovered.

* Euseb. præp. Ev. ang. lib. 14.

But the most pleasant part of the Story, is, that (as † *Numenius* affirms) he was thereby perswaded to be of the Opinion of the middle Academicks; that nothing is comprehended by sense, arguing thus; Why should I think that Sense can comprehend any thing certainly, when I know that my own Senses are so often deceived, for when I go abroad, I think that I see with my Eyes those things which I leave in my Storehouse; when I return I find none of them; which could not be unless our Senses were fallible and uncertain.

Lacydes upon the Death of *Arcefilaus*, being made Master of the School in the fourth year of the 134th Olympiad, taught in the Academy, in the Gardens which were made by *Attalus* the King, which from him were called the *Lacydean* Gardens: *Laertius*, and, from him, *Suidas*, make him Institutor of the new Academy; but erroneously. He continued this Charge 26 Years, at the end whereof he resigned it, whilst he was yet alive, to *Telecles* and

Euander, *Phocians*, his Disciples, in the second year of the 141st Olympiad.

Attalus sending for him to come to him, he returned him answer, *That Pictures make the best shew at a distance.*

Studying Geometry in his old Age, one said to him, Is it now time? he answered, When, if not now?

Athenæus saith, That *Lacydes* and *Timon* Philosophers, being invited by one of their Friends to an entertainment of two days, and desirous to suit themselves to the Company, drank very freely. *Lacydes* went away first, half Drunk, and perceiving *Timon* to steal away too, said II. x. out of *Homer*,

To our great Glory Hector we have Slain.

The next day meeting *Timon* again at the same place, and seeing him not able to take off his Cups at once, made a pause, when he put it to his Mouth the second time, he said out of II. 5. another place of *Homer*,

Those are unhappy who contest with me.

Ælian likewise numbers these two amongst the great drinkers, and perhaps not unjustly; for by excess of Wine he fell into the Palsie, of which he died in the second Year of the one hundred Forty first Olympiad.

He wrote Philosophicks, and of Nature. In the School, he was succeeded, as is said by *E V A N D E R*, *Evander*, by his Disciple, *EGESINUS*, whom *Clemens Alexandrinus* calleth *Hegesilaus* of *Pergamus*, *Egesinus*, by *C A R N E A D E S*.

CARNEADES.

CHAP. I.

His Country, Parents, Time, Masters.

CARNEADES (Successor of Egesinus) was * *Cyrene*, whence † *Cicero* saith, he was an acute Person, as being an *African*. He was Son of *Epicomus*, or *Philocomus*. *Apollodorus*, as cited by *Laertius* affirmeth he died in the 162d Olympiad; but there is a mistake in the Text; for the words of *Apollodorus* relate doubtless to the time of his Birth, which upon that Authority, we may affirm to have been in the first Year of the 162th Olympiad. *Florus* (cited by * *Plutarch*) adds, he was * *Sympos.* born on the seventh day of *Thargelion*, at what time the *Carnean* Festivals were celebrated at *Cyrene*, whence perhaps he took his Name. This time falling after the *Callippical* Period, we shall compute it according to † *Petavius's* Method, which although it be not exempt † *Delle.* from question, yet is better than that of *Scaliger*, *temp. p.*

* *Eub.*† *Acad. quest.*

The 114th day of the *Julian* year is the 24th of *April*, on which fell the 7th of *Thargelion*; which the *Dominical* Letter being *B*. fell on Sunday, Proleptically taken.

* He was Disciple to *Egesinus* the *Academick*, and † learned Logick of *Diogenes* the *Stoick*, whence in arguing he would many times say, *If I have concluded right, the cause is my own; if not right, Diogenes must return the Mina he had of me*; which was the price the *Dialectick* Philosophers took.

CHAP. II.

How he constituted the new Academy.

HE succeeded *Egesinus* in the School, and is by *Cicero* reckoned the fourth from *Arcefilaus*, (who constituted the *middle Academy*, introducing a suspension of Assent, grounded upon the uncertainty of things:) *Carneades*, constituted the *new Academy*, maintaining the same kind suspension, with no less eagerness; yet upon more moderate grounds: * For he held that the incomprehensibility of things, proceeded not from the nature of the things themselves, as *Arcefilaus* maintained; for as much as every thing really existeth in it self, and if any thing be affirmed, or denied of another, it is true or false, as to the thing it self; but the things themselves remaining firm, we derive from them a Phantasie and Similitude, which for the most part, like false Messengers lie and deceive us. To all true things there are some false adjoined, and those so like, that there is no certain note of Judication and Assent, wherefore we cannot perceive any thing to be true.

But he was nothing less rigid as to the *Academical* suspension, for † he denied that any thing could be perceived, not so much as that very Maxim; *Nothing can be perceived*, arguing thus.

All Phantasms are of two kinds; the first included the perceptible and imperceptible; the second kind, the probable, and the improbable. Those which are contrary to Sense and Evidence, pertain to the former division; against the latter we ought not to say any thing. Wherefore there is no Phantasie followed by perception, but by approbation many; for it were contrary to Nature that nothing should be probable.

More fully * *Sextus Empericus*. *Carneades*, saith he, did not only oppose the *Stoicks*, but all that went before him, as to *Judgment*. His first and common Argument against all, is, that by which he sheweth absolutely, that there is nothing from which truth can be judged; nor Reason, nor Sense, nor Phantasie, nor any thing, for all these in a word deceive us. His second Argument is that whereby he shews, that altho there be something that doth judge, yet it cannot exist without an Affection from Evidence. For an Animal differeth from inanimate things by the sensitive faculty, it apprehendeth thereby both it self and external things; but Sense remaining immovable, impassible, and immutable, is not Sense, nor apprehendeth any thing, but being changed, and after some manner affected by incursion of Evidences, then it declareth things. In that affection therefore of the Soul which ariseth from Evidence, we are to seek that which judgeth. This Affection is declared when that appeareth from which it proceedeth, which Affection is nothing else but Phantasie. Phantasie therefore is a certain affection in an animal, which sheweth both it self and some others, as when we see any thing, our Sight is affected in some manner, so, as it was not before that act of Seeing. By this alteration we apprehend two things: First, the alteration it self, that is the Phantasie. Secondly, that from which this alteration proceeds, the thing visible. The like in the rest of the Senses. As therefore Light manifesteth it self and all things in it, so Fancy being the chief guide of Knowledge in an Animal, must like unto Light, manifest both it self, and that evident object which effecteth it. But because it doth not always shew that which is true, but often erreth, and differeth from the thing whence it proceedeth, like ill Messengers, it necessarily followeth that all Phantasies cannot leave a judgment of Truth, but only if it be true. Again, because there is no Phantasie so true, but it may be false; and of all Phantasies that seem true, there are some false, which differ little from them; that which judgerh must consist in common phantasie of true and false. But the common Phantasie of these comprehendeth not, and if it comprehendeth not, neither is there any thing that judgeth. And if Phantasie have not a Judicative Power, neither can Reason judge, for that is derived from Phantasie and justly. For that whereof it judgeth, ought first to appear unto it, but nothing can appear but through Sense void of Reason; therefore neither Sense void of Reason, nor Reason it self is that which judgeth.

Thus disputeth *Carneades* against all other Philosophers, to shew there is not any thing that judgeth. But being demanded what judgeth,

* *Laert.*
† *Cic. Acad.*
¶ *ibid.* 4.

* *Namen. apud*
† *Euseb.*

† *Cic. Acad.*
¶ *ibid.* 4.

* *Adv. Mathema.*

judgeth, as to the leading of Life, and acquisition of Beatitude, he hath recourse to *probable* Phantasia; and together with probable, *undistracted* and *circumcurrent*, their differences these. Phantasia is the phantasia of something, viz. of that which it is made, and of that in which it is made: That of which it is made is the external sensible *Object*; that in which the *Man*. It hath two relations, one to the Object phantasied, the other to the phantasm derived from that Object. From the relation to the object it is either true or false; true, when it agreeth with the object; false, when it disagreeeth: From its relation to the Phantasm, there is one which seemeth true, another false. That which seemeth true is by the *Academicks* called *Emphasis* and *Probability*, and *probable* Phantasia; that which seemeth not true, is called *Apemphasis*, *Improbability*, and *not-probable* phantasia. For, neither that which seemeth false, and is such; nor that which is true, and seemeth not such, have any thing in their Nature perswasive. But, of these Phantasies, that which is manifestly false, and seemeth not true, limiteth the Judicatory, but is not that which judgeth, as likewise produceth from that which is, but differs from it, such as was that of the Fury proceeding from *Electra* to *Orestes*. Of that which seemeth true, one kind is *tenuous*, as that which is in a thing so little, as that it is not visible, either because it takes not up room enough, or by reason of the weakness of Sight, which receiveth things confusedly, and not distinctly. The other is that which hath this common property with the true, that it seemeth to be very true. Now of these, the *tenuous*, loose, remiss Phantasia cannot be that which judgeth; for that which cannot clearly manifest it self, nor the thing that effected it, cannot attract us, nor invite assent; but that which seemeth true and is manifest enough, that according to *Carneades*, is the Judge of Truth.

This being that which judgeth, it hath a great Latitude, and being extended into another Species, hath a more probable and vehemently affected Phantasia. Probable is taken three ways; First, for that which is true, and seemeth true; Secondly, for that which is false, and seemeth true; Thirdly, for that which is true, common to both. Whence that which judgeth must be that phantasia which seemeth true, which the *Academicks* call probable. Sometimes the false incurreth; so that it is necessary to use the common phantasia of true and false; yet not because that more seldom incurreth, I mean, that which imitateth the Truth, we are not to give credit to that which is for the greater part true, whereby it happeneth our Judgment and Actions are for the most part directed.

That which first and commonly Judgeth, *Carneades* held to be this. But forasmuch as phantasia sometimes is not of one kind, but like a Chain, one dependeth on another, there must therefore be a second Judge, which is *probable* and *undistracted* phantasia. As he who receiveth the phantasia of a Man, necessarily receiveth the phantasia of such things as are about him, and without him; of the things about

him, as colour, magnitude, figure, motion, speech, cloathing, Shooes; of things without him, as Air, Light, Day, Heaven, Earth, Companions, and the like. When therefore none of these phantasies seems false, but all agree in seeming true, we credit it the more. That such a one is *Socrates* we believe, because he hath all those things which *Socrates* useth to have, as Colour, Magnitude, Figure, Gesture, Cloak, in none of these disagreeing with it self. And as some Physicians argue a Man to be in a Fever, not from one symptom, as from a high Pulse, or great heat, but from the concurrence of that heat with the Pulse, as also from ulcerous touch, redness, thirst, and the like, all agreeing together. So the *Academick* maketh a Judgment of Truth, from a concurrence of phantasies, and when none of all his phantasies that join in the concurrence retract him as false, he saith that which incurreth is true.

That there is a credible *undistracted* concurrence, is manifest from *Menelaus*: Having left in his Ship an Image of *Helene* which he had brought from *Troy*, as if it had been *Helene* her self, landing at the Island *Pharos*, he there met with the true *Helene*, and from her attracted a true phantasia, but would not believe that phantasia, being distracted by the other, which told him that he had left *Helene* in the Ship. Such is *undistracted* phantasia therefore, which likewise seemeth erroneous, forasmuch as there are some more *undistracted* than others. Of *undistracted* phantasies, that is most credible and perfect which maketh a Judgment.

Moreover there is a *Circumcurrent* phantasia, the form whereof is next to be declared. In the *undistracted* we only enquire whether none of those phantasies which join in concurrence, attract us as false, but that they all seem true, and not improbable. But in that which is made by concurrence, which useth *circumcurrence*, strictly examines every phantasia which is in that concurrence, as in Assemblies, when the People take account of every particular person that stands for the Magistracy, whether they deserve that power and right of judging. In the place of Judgment, there is that which judgeth, and that by which the judgment is made, the distance and interval, figure, time, manner, affection, and operation, each of which we examine strictly. That which judgeth, whether the Sight be dim, for if it be, it is too weak for judgment; that which is judged, whether it be not too little; that through which whether the Air be obscure; the distance, whether it be too great; the *medium* whether confused; the place, whether too wide and vast; the time, whether too sudden; the Affection, whether not phrenetick; the operation, whether not unfit to be admitted. For if all these be in one, that which judgeth is *probable* phantasia, and together, *probable*, *undistracted*, and *circumcurrent*. Wherefore as when in Life we enquire concerning some little thing, we examine of Witnesses; when we enquire into something of greater consequence, we examine more; but when of a thing most necessary, we examine each of the Witnesses by the joint testimony of all. So saith *Carneades*, in light. incon-

inconsiderable matters, we make use of *probable* Phantasie, only for Judgment; in things of some moment, of *undistracted* Phantasie; in things that concern well and happy Living *circumcurrent* Phantasie.

And as in things of great moment they take divers Phantasies, so in different Circumstances the never follow the same; for they say, they attend only probable Phantasie in such things wherein the circumstance of time alloweth not a strict Examination: As for instance: The Enemy pursues a Man; he coming to a Cave, takes a Phantasie, that there are some Enemies there lying in wait: Transported by this Phantasie as probable, he shunneth and flyeth from the Cave, following the probability of that Phantasie, before he accurately and diligently examine whether there really be any Enemies in Ambush in that Cave or no. *Probable* Phantasie is followed by *circumcurrent*, in those things in which time allows a curious Examination of each particular, to use judgment upon the incurring thing. As a Man coming into a dark Room, and seeing a Rope rolled up, thinking it to be a Serpent, he flies away; but afterwards returning, he examines the truth, and perceiving it not to stir, begins to think it is not a Serpent; but withal considering, that Serpents are sometimes frozen or nummed with the cold, he strikes it with his Staff: And having thus by *Circumcurrence* examined the Phantasie which incurred to him, he assenteth that the Phantasie he had taken of that Body as a Serpent, is false. And again, as I said, when we manifestly behold, we assent that this is true, having first over-run in our Thoughts that our Senses are all entire, and that we behold this waking, not in a dream; that the Air is perspicuous, and a convenient distance from the Object. Hereby we receive a creditable Phantasie, when we have time enough to examine the particulars concerning the thing seen. It is the same in *undistracted* Phantasie, which they admit, when there is nothing that can retract us, as we said of *Menedæus*. Hitherto *Sextus*.

Yet though nothing can be perceived, a wise Man may consent to that which is not perceived; that is, he may *opionate*; but so as he knoweth himself to *opionate*, and that there is nothing which can be comprehended and perceived.

He asserted the ultimate end to be the enjoyment of Natural Principles, which saith *Cicero*, he maintained, not that he really thought so, but in opposition to the *Stoicks*.

He read the Books of the *Stoicks* very diligently, and disputed against them with so good success, that it gave him occasion to say; *If Chrysippus had not been, I had not been.*

Clitomachus used to say of him, he could never understand what he really held; for he would sometimes argue on one side, sometimes on the other; and by the *Calumny* of his Wit, saith *Cicero*, many times deride the best causes. Of the *Sorites* used by him, See *Sextus Empiricus*.

CHAP. III.

Upon what occasion he was sent on an Embassy to Rome.

THE Athenians being fined by the Romans about 500 Talents, at the suit of the Oropians and Sicyonians, for destroying Oropus, a City of *Beotia*, sent three Philosophers on an Embassy to the Roman Senate, to procure a mitigation of this fine, which had been imposed upon them without hearing their defence; *Carneades* the *Academick*, *Diogenes* the *Stoick*, and *Critolaus* the *Peripatetick*. About the time of this Embassy, there is much disagreement amongst Authors. *A. Gellius* saith, they came after the second *Punic* War, and maketh *Ennius* later than their coming; which *Petavius* justly conceiveth to be false, for as much as *Ennius* died in the 585th year from the building of the City. But *Cicero* affirmeth this Embassy to have been when *P. Scipio* and *M. Marcellus* were Consuls, which was the 599th Year. *Pausanias* reckoneth it upon the 603d Year of the City, which *Cassaubon* approveth.

Each of these Philosophers, to shew his Learning, made choice of many eminent parts of the City, where they discoursed before great multitudes of people to the admiration of all. The Eloquence of *Carneades* was violent and rapid; that of *Critolaus*, neat and smooth, that of *Diogenes* modest and sober. *Carneades* one day disputed copiously concerning Justice before *Galba* and *Cato*, the greatest Orators of that time. The next day he subverted all he had said before by contrary Arguments, and took away that Justice which he had so much commended. This he did the better to confute those, that asserted any thing. That dispute whereby he overthrew Justice is recorded in *Cicero*, by *L. Furius*.

To these three Philosophers resorted all the studious young Men, and frequently heard and praised them. Chiefly the sweetness of *Carneades*, which was of greatest power, and no less fame than power, attracting eminent and benign Hearers, filled the City with noise like a great Wind; and it was reported that a *Grecian* person, qualified to Admiration, attracting all, had infused a serious Affection into the young Men, whereby forgetting other diversions and pleasures, they were carried on as it were with a kind of madness to Philosophy. This pleased all the Romans, who gladly beheld their Sons instructed in *Greek* Learning by such excellent Men. Only *Cato* at the first noise of Admiration of the *Greek* Learning, was troubled, fearing the young Men should apply themselves that way, and so prefer the glory of Eloquence before Action and Military Discipline. The same of Philosophers encreasing in the City, and *C. Acilius*, (whom *A. Gellius* and *Macrobius* call *Cecilius*) an eminent person, having at his own Request been the Interpreter of their first Oration to the Senate; *Cato* (who was then very old) under a fair pretence, moved, that these Philosophers might be sent out of the City, and coming

Cic. Acad. Quest. 4.

De fin. lib. 2.

Levi.

Cic. Acad. Quest. 4.

coming into the Senate-house, blamed the Magistrates, that they had so long suffered such Ambassadors to continue amongst them without any answer, who were able to persuade them to any thing: wherefore he first desired that something might be determined concerning their Embassy, that they might be sent back again to their own Schools, and instruct the Sons of *Greeks*, and that the *Roman* youth might, as they did before, apply themselves to the observance of their own Laws and Magistrates. This he did not out of anger to *Carneades*, as some thought, but out of an Ambitious Emulation of the *Greek* Humanity and Literature.

CHAP. IV.

His Vertues and Apophthegms.

Lib. 8. c. c. 7. **H**E was a Person infinitely Industrious, less conversant in *Phylick* than *Ethick*, and so studious that he neglected to cut his Hair and Nails. *Valerius Maximus* saith, he was so studious, that when he lay down at Meals, his Thoughts were so fixt, that he forgot to put his Hand to the Table, and that *Melissa*, who lived with him as a Wife, was fain to put him in mind thereof, and help him.

He was so eminent for Philosophy, that the Oratours themselves would many times break up their Schools, and come and hear him.

He had a great and loud Voice, whereupon the *Gymnasiarch* sent to him not to speak so loud, whereto he answering, *send me the Measure by which I should speak*; the other wisely and appositely replied, *You have a Measure, your Hearers*.

He was sharply invective, and in Argument almost invincible. He avoided Feasting, cut of the reason we mentioned, his great studiousness.

One named *Mentor* a *Bithynian*, as *Phavorinus* saith, who had endeavoured to seduce a Mistress that he kept, coming into the School, he presently jestled at him, in turning these words of *Homer*,

*Hitherto comes one oppress'd with hoary Years,
Like Mentor in his Voice and Looks appears,
Who from the School I charge you turn away.*

The other rising up replied,

He thus proclaim'd, the rest did straight obey.

Being to dispute with *Chrysippus*, he purged himself by white Hellebore so sharpen his Wit, lest any corrupt Humours in his Stomach might oppress the vigour and constancy of his mind.

Stob. Ser. 212. He compared *Dialectick* to the Fish *Polypus*, which when its Claws grow long, bites them off; so Logicians, growing subtle, confute their own assertions.

Plot. de tranqu. anim. He advised Men in their greatest Prosperity

to be mindful of a change, for that which is unexpected is most grievous.

He said the Sons of Rich Men and Kings learn nothing well but Riding, for their Masters flatter them; they who contest with them, willingly yield to them; but a Horse considers not whether a private Man or a Prince, a poor Man or a Rich be on his Back, but if he cannot rule him, he throws his Rider.

He seemed to be extremely averse from Death, whence he often said, *The same Nature which hath put us together will dissolve us*; and hearing that *Antipater* died by drinking Poison, he was a little animated by his constancy in Death, and said, *Then give me too*, they asking what, *Wine*, saith he.

In the midst of the Night he was struck blind, and knew not of it, but waking, bid his Servant bring a Light; the Servant did so, telling him he had brought one, then, said he, read you.

CHAP. V.

His Death and Writings.

HE lived according to *Laertius* 85 years, or according to *Cicero*, 90. The words of ** Apollodorus* that he died in the fourth year of the 162d Olympiad, which falleth upon the 626th Year from the building of *Rome*, may easily be evinced to be false, by the greatest part of the Circumstances of his Life; particularly from this; that *Antonius* in *Cicero* saith, when he went Pro-consul into *Asia*, he found *Carneades* the *Academick* at *Athens*, who opposed all in dispute, according to the manner of his Sect. The Year of *Antonius*'s Proconsulship was the 652d Year from the building of *Rome*. But this account, as we said before, is to be applied to the time of his Birth, from which the 85th falleth upon the first year of the 184th Olympiad, the 90th upon the second of the 185th.

Laertius saith, at his death there was a great Eclipse of the Moon, which some interpreted to proceed from a Sympathy with his Loss. Upon this Eclipse I conceive *Petavius* grounded his computation of *Carneades*'s Death, when he saith, † it was upon the first year of the 163d Olympiad. May 2. fer. 2. hora 5. 46. at *Athens*. But there being a mistake of the Year, there is consequently a greater in the account of the feria and hour.

Carneades, as *Cicero* saith, wrote four Books of suspension of Assent. He wrote likewise Epistles to *Ariarathes*, King of *Cappadocia*, the only Monument left behind him, extant in *Laertius*'s time. Whatsoever else went under his Name, *Laertius* saith, was written by his Disciples, of whom he had many, the most eminent *Clitomachus*.

There are remembred two more of this Name, one a Philosopher, Disciple to *Anaxagoras* mentioned by *Suidas*, the other an Epigrammatick Poet, mentioned by *Laertius*.

CLITOMACHUS.

* *Liect.* * **CLITOMACHUS** was a *Carthaginian*, Son of † *Diogenetus*. He was first called *Asdrubal*, as *Plutarch* and *Laertius* affirm,* and professed Philosophy in his own Country, and native Language. Being forty Years old he went to *Athens*, and heard *Carneades*, who being much taken with his Industry, instructed and exercised him in Philosophy. With *Carneades*, *Cicero* saith he lived until he was old, and succeeded him in the School; and chiefly illustrated his Doctrins by his Writings, the number of which Books being above Four Hundred; were a sufficient Testimony of his † *Industry*, and that he had no less of Wit, than *Carneades* of Eloquence. He was well versed in three Sects, the *Academick*, *Peripatetick*, and *Stoick*.

Of his Books are remembred by *Cicero*, one * of *Consolation* to his Captive Country-Men, *Carthage* being then subdued by the *Romans*; another to † *Cajus Lucilius* the Poet, wherein he explained and defended the *Academick* suspension of Assent, having written before of the same things to *L. Censorinus*, who was Consul with *M. Manilius*, the sum of which Discourse was this.

* The *Academicks* hold there are such dissimilitudes of things, that some seem probable, others on the contrary. But this is not ground enough to say that some things may be perceived, others cannot, because there are many false that are probable, but no false can be perceived and known. Those therefore extremely err, who affirm the *Academicks* to take away sense; for they say not, there is no Colour, Sapor, or Sound, but dispute, that there

is not any proper inherent *note* in these of true and certain: (which having expounded, he adds) A Wise Man suspends Assent two ways; one, when [as we know] he absolutely refuseth to assent to any thing; another, when he with-holds from answering, either in approbation, or improbation of something, so that he neither denieth nor asserteth it. In the first way he assents to nothing, in the second he will follow Probability, and according as he finds it or not, answers yes or no. He who with-holdeth his assent from all things, is yet moved, and asserteth something. He reserves therefore these phantasies by which we are excited to Action, and those of which being questioned, we may answer on either part, only as of a thing that seemeth to us so, but without assent; neither are all such phantasies approved, but only those which are not obstructed by any thing.

† In asserting good, he joined pleasure with honesty, as *Callipho* also did. * He was a great Enemy to *Rhetorick*, as *Cri-tolaus* the *Peripatetick*; and *Charmidas* were also.

Arts they did not expel out of Cities, knowing them to be very profitable to Life, no more than they would drive *Oeconomick* out of Houses, or *Shepherds* from their Flocks; but they all persecuted, and every where ejected the Art of Speaking, as a most dangerous Enemy.

† He compared *Dialectick* to the Moon, which is in continual encrease or decrease.

* Falling sick he was taken with a Fit of a Lethargy, out of which he no sooner came, but he said, *Love of Life shall flatter me no longer*; and thereupon with his own hands ended his life.

PHILO.

* *Stob. Eclog. Ethic.* * **PHILO** was of *Larissa*, he heard *Clitomachus* many years, and is nam'd by *Seneca* as Constitutor of a fourth *Academy*; but *Cicero* affirms, he disallowed the distinction of Academies, and wrote expressly to prove the first and the new Academy to be both one. * Whilst he lived, the Academy wanted not a Patron. † The *Romans* admir'd him, as *Plutarch* affirms, above all *Clitomachus's* Scholars, for his excellent discourse, and loved him for the sweetness of his disposition. *Cicero* no sooner went out of the first Schools and rudiments of Learning, but he became an Auditor of *Philo*, as he acknowledgeth him.

Amongst other excellent things (saith * *Sto. Eclog. Ethic.* *baeus*) he gave this Division of Philosophy. He compared Philosophy to a Physician; As the office of a Physician is first to perswade the sick person to permit himself to be cured; next to confute the reasons of his Adversary: So is it of a Philosopher, both which consist in Exhortation. Exhortation is a discourse inciting to Vertue; whereof one part explaineth its great use, the other refelleth Adversaries, or such as any way calumniate Philosophy. The comparison holds in a second manner, thus: As the part of a Physician, after he hath perswaded the patient to admit of Cure, is to apply the means thereof, as well to remove the causes of the Disease,

as to induce and settle Health; so is it in this Science. After Exhortation, he endeavoureth to apply the cure, by removing false opinions wherewith the Soul is infected, and by substituting true. In the second place therefore it treats of good and evil, for the sake of which the Exhortation was made. Thirdly, the comparison holds thus: As all Medicines refer to one end, health, so all Philosophy to Beatitude. That part which treats of ends is joyned with another which treats of Life: For as in Medicine, it is not sufficient to restore health, unless it likewise deliver Rules by which it may be preserved; so in Life, some Precepts are required for conservation of the end: And this part also is twofold; private, or common: One considers the affairs of particular persons, as, whether a wise Man should manage a Common-wealth, whether he may live with Princes, whether he may Marry: The other considers the business of all in general; as, what Common-wealth is best, how Magistrates are to be chosen. This common part is called *Politick*, and is treated of distinctly by itself, as being of greatest Latitude. Now if all were wise Men, there would be no need of more Places, for the more subtle divisions would emerge from the Precedent. But because there must likewise be a care of the middle sort of

Men, who cannot apply themselves to long disputations, either through want of time, or diversion of Business, there must not be omitted a Treating of Precepts, which delivereth short Rules concerning the use of each.

As to the *Stoical* Judicatory, *comprehensive Phantasie*, he held all things to be incomprehensible; as to the nature of the things themselves, comprehensible. Thus he took away the *comprehensive Phantasie* asserted by *Zeno*.

He held that to be a good connexion, which beginneth from true and endeth in false, as (if it be day, and I dispute) this, *If it is day, I dispute*: According to which tenet there may be true axioms three ways, a false only one way: For, when it beginneth from true, and endeth in true, it is true; as *If it is day, it is light*: And when it beginneth from false, and endeth in false, it is true, as, *If the Earth flies, the Earth hath Wings*. Likewise if it beginneth from false and endeth in true, it is true; as, *If the Earth flies, it is Earth*. That which is false, is that which beginneth from true, and endeth in false; as, *If it is day, it is night*; for, the antecedent, *it is day*, is true; but the consequent, *it is night*, is false.

He appointed, that the precepts of Oratours should be delivered at one time, those of Philosophers at another.

ANTIOCHUS.

* *Plut. vit. Cicer.*

* *Cic. Ac. qu. 1.*

† *Acad. Qu. 4.*

* *Cic. de Leg. lib. 2.*

† *Vit. Cicer.*

* *Cic. Acad. quest. 4.*

† *Sext. Empir. Pyrrh. Hypot. 1. 33.*

ANTIOCHUS was an *Ascalonite*, † Brother of *Aristus*, Disciple of *Philo*. He lived with *L. Lucullus*, the Quæstor, and General; he was also a great Friend to * *Atticus*, whom he invited to the Academy. He is named by *Sextus Empericus*, as Constitutor of a *fifth Academy*: For, as † *Plutarch* saith, he fell off from the Sect of *Carneades*, either moved by the evidence of Sense, or, as some thought, by ambition, and dissention with the Disciples of *Clitomachus* and *Philo*. So that with some little alteration, he made use of the Doctrins of the *Stoicks*; and * though he were called an *Academick*, he had been, but for some alterations, an absolute *Stoick*; † whence it was said of him, *He taught the Stoical Philosophy in the Academy*; for he manifested, that the Do-

ctrins of the *Stoicks* were in *Plato*. In his old age, saith * *Cicero*, he betook himself to the old *Academicks*, forsaking the new, † and diligently enquiring into the opinion of the Antients, * endeavoured to follow *Aristotle* and *Xenocrates* †, professing, that the *Stoicks* and *Peripateticks* agreed in the thing, and differed only in words. To which effect *Cicero* mentions a Book which he sent to *Balbus*: He wrote also another against his Master *Philo*, entituled *Sofus*. † *Cicero* being at *Athens* heard him, and was much taken with the eloquence and volubility of his Discourse, (* declaring him to be the most polite and accute of all Philosophers in his time) † but not with the new Doctrine which he introduced.

Thus far there is a continued series of the *Academick Philosophers*.

THE
HISTORY of PHILOSOPHY.

The Sixth Part.

Containing the *PERIPATETICK* Philosophers.

ARISTOTELES.

CHAP. I.

His Country, Parents, and time of his Birth.

UPON the death of *Plato*, his Disciples separated themselves into two Sects. The first continued in the same School, where he taught, the *Academy*: The other possess'd the *Lyceum*. The first was known by the general name of *Academicks*, or *Peripateticks of the Academy*; the other *Ammon. sub finem. comment. in proem. Periphr.*

other by the general name of *Peripateticks*; or more particularly, *Peripateticks of the Lyceum*. Of the first we have discoursed already; we come now to the other, of which *Aristotle* was the Head.

Aristotle was born at *Stagira*, a City of *Thrace*, according to *Herodotus* and *Thucydides*, *Pausanias* and *Suidas*, by others placed in *Macedonia*, to take from him the imputation of a Barbarian. It was seated upon *Strymon*, a River which parts those two Countries, having a Haven called *καπεθ*, and a little Island of the same name belonging to it. This place, to which *Aristotle* owed his Birth, he afterwards requited with extraordinary Gratitude.

His Father was named *Nicomachus*, descended from *Nicomachus*, Son of *Machaon* (whose Skill in Medicine is celebrated by *Homer*) Son of *Æsculapius*, from whom *Nicomachus*, *Aristotle's* Father, deriv'd not only his Pedigree, but his Art also, for he was a Physician. *Suidas* saith, he wrote six Books of Medicine, and one of Physick. *Galen* alledgeth a Pluister of one *Nicomachus*, either this or the elder. This *Nicomachus* (whom some affirm to have been Grandson to *Hippocrates* the Physician) lived in the time of *Amintas*, King of *Macedonia*, (Father of *Philip*) a Prince (as *Justin* witnesseth) eminent for all Royal Vertues. To him *Nicomachus* was not only Physician, but Friend and Favourite. *Tzetzes* forgot these Relations of *Aristotle* (as *Nunnesius* observes) when he affirmed that he was called an *Æsculapian* figuratively, in respect of his Skill in Medicine, though it be true also that he did profess that Art.

His Mother, *Laertius* and *Suidas* name *Phæstias*, *Dionysius Halicarnassæus*, and *Ammonius*, *Phæstis*. *Ammonius* saith, she also was descended from *Æsculapius*, alledging in testimony thereof this Epigram,

*His Mother Phæstis, Sire Nicomachus,
Descended both from Æsculapius.*

But *Dionysius Halicarnassæus* saith, she was Daughter of a *Chalcidian*, one of the Colony which was sent from *Chalcis* to *Stagira*. Her Picture, *Aristotle*, in piety to her Memory, caused to be made by *Protogenes* an eminent Painter of that time, which Picture *Pliny* reckons amongst the choicest pieces of that Master.

Aristotle (as *Suidas* affirms) had a Brother named *Arimnestas*, and Sister *Arimnesta*. His Brother died before him without Issue, as appears by his Will.

Aristotle was born according to the testimonies of *Apollodorus*, *Dionysius Halicarnassæus* and others, in the first year of the 99th Olympiad, at what time *Diotrephes* was Archon at *Athens*, 44 years after the Birth of *Plato*, as *Athenæus* accounts more justly than *Ammonius* and *Suidas*, who reckon but 42 before the Birth of *Demosthenes*, three years. *Agellius* affirms, he was born the seventh year after the recovery of the City of *Rome* from the Gauls by *Camillus*; but because (as *Plutarch* saith) it is hard to find out on what year the City was taken, it will be hard also to find upon what year it was recovered. The recovery was seven

Months after its taking, but in the following Year, for it was taken in *July*, recovered in *February*. If therefore as *Valerius Flaccus*, *Agellius*, and *Cassius Hemine* account, the taking of the City was in the 363d year from the building thereof, it was recovered in 364th. Thus *Aristotle* was born in the first year of the 99th Olympiad, the 370th from the building of *Rome*.

But, if as *Livy* affirms, the taking of *Rome*, was in the 365th year from the building thereof, and its recovery in the 366th, *Aristotle* according to that account must have been born in the third year of the 99th Olympiad, in the 372d year from the building of the City. Again, if the City were taken in the 364th year after the building thereof, and recovered in the 365th Year, as *Varro*, *Pliny*, *Dionysius Halicarnassæus* account, whom *Scaliger* followeth, *Aristotle* must have been born in the second year of the 99th Olympiad, the 371 from the building of the City, reckoning always ten Months for a Year, and not casting them off, as *Pliny* and others seem to do, and beginning immediately the next year, which Months being reckoned, the account will agree with ours; hitherto *Nunnesius*.

CHAP. II.

His first Education and Studies.

Nicomachus and *Phæstis* the Parents of *Aristotle* being both dead, he was brought up by *Proxenus* an *Atarnean*, during which time being yet very young, he learned the Liberal Sciences, as appeareth, saith *Ammonius*, from those Writings of his which partly concern Poetry, partly the Poets themselves, as likewise from his *Homeric Questions*, and several Books concerning the Art of Rhetorick.

In gratitude for this care taken by *Proxenus* in his Education, *Aristotle* afterwards, not only bred up in like manner *Nicanor*, the Son of *Proxenus*, in all kinds of Learning, but adopted him his Son, and with his Estate bequeathed his Daughter to him. He likewise caused the Statues of *Proxenus* and his Wife, to be made and set up in Honour of them, as is manifest by his Will.

Athenæus (citing an Epistle of *Epicure*) and *Eliau* relate, that having consumed the Inheritance left by his Father in Prodigality and Luxury; he betook himself to the Wars, wherein having ill success, he professed Medicine, and by chance coming into *Plato's* School, and hearing their disputes, being of a Wit far beyond the rest, he addicted himself to Philosophy, and became Famous therein. But this agrees not well with the circumstance of his Story, as related by Authors of greater Credit, and less Prejudice.

CHAP.

C H A P. III.

How he heard Plato:

^a *Ammon.* **H**AVING attained the Age of 17 years, he went (in obedience to the Pythian Oracle, which advised him to addict himself to Philosophy) to Athens, *Laertius* saith (out of *Apollodorus*) that he was then but seventeen years old, in which year *Nausigenes* was Archon, *Dionysius Halicarnassensis* saith, it was the year following, at what time *Polyzelus* was Archon, perhaps it was upon *Nausigenes*'s going out of his Office, whom *Polyzelus* succeeded. But ^b *Euменus* is much mistaken, who saith, he was thirty years old when he came first to Plato, perhaps (as *Nunnesius* conjectures) because he had read in Plato, that Dialectick ought not to be studied till the thirtieth Year. And no less err *Ammonius*, (if he be Author of that Life) and *Olympiodorus*, who affirm, that *Aristotle* coming to Athens in the seventeenth year of his Age, heard *Socrates* three years, whereas *Socrates* was put to Death when *Laches* was Archon, thirty two years before *Nausigenes*, under whom *Aristotle* was seventeen years old.

Being recommended to Plato, he became his Disciple, and so continued twenty years, as an Epistle of his to Philip (cited by the old Interpreter of his Life) did testify.

Plato much loved him, and admired his acuteness of Apprehension, and diligence in study; for which (^c *Philoponus* saith) *Plato* used to call him the Mind of the School, and when ^d he was not at his Lectures, he would say, *The Intellect is not here*; or, as *Rhodiginus*, the Philosopher of Truth is absent. And comparing his acuteness with the dulness of *Xenocrates*, *Plato* was wont to say, ^e *What an Horse, and what an Ass have I to yoke together?* *Xenocrates* needs a Spur, *Aristotle* a Bit.

^f Whilst he lived with Plato, he was extremely studious, and given to Reading, in so much that *Plato* called his house, *the house of the great Reader*, and would often say, ^g *Let us go to the great Reader's House*. This may be confirmed by that great number of ancient Authors which are cited in his Works. And though ^h *Laertius* (either in his own, or *Carneades*'s words) saith, that *Aristotle* hath thrust in as many sentences of old Authors in his writings, as both *Zeno* and *Chrysippus*; yet every one that is acquainted with the Writings of *Aristotle*, knoweth how judiciously and concisely he giveth an account of their Opinions, not for Ostentation, but disquisition.

ⁱ Some report there was a great enmity betwixt *Plato* and *Aristotle*; which first arose from *Plato*'s dislike of his manner of Habit: For, *Aristotle* wore rich Garments, and rich Shooes, and contrary to *Plato*'s rule, cut his hair short, and wore Rings. He had likewise (say they) a scornful derision in his look, and tenacious contradiction in his discourse, which *Plato* not approving, preferred before him *Xenocrates*, *Speusippus*, *Amyclas* and others, to whom he communicated his Doctrine and many favours, but repudiated *Aristotle*, who thereupon, whilst *Plato* was yet alive, set up a School in opposition to him, in the

Lyceum; at which ingratitude, *Plato* much troubled, said, *Aristotle* kicks at us as young Colts at the Damm that soiled them, when they have sucked their fill, and for that reason, usually called *Aristotle* the Colt.

^m They add, that *Xenocrates* being gone in to his Country, and *Speusippus* not well, *Aristotle* came into *Plato*'s School with some of his followers, and circumvented him with fallacious arguments, whereupon *Plato* retired to his own house, and there taught privately, leaving *Aristotle* in possession of the School, which he kept till *Xenocrates* returning, ejected him, and re-instated *Plato*. The chief Author of this report seems to have been *Aristoxenus*, cited by ⁿ *Eu-sebius*, who as *Suidas* observes, as soon as *Aristotle* was dead, cast many Aspersions upon him, out of a malicious revenge, because *Aristotle* preferred *Theophrastus* before him in the succession of the School, notwithstanding that *Aristoxenus* had gained a great name and credit among the Disciples.

But as *Ammonius* argues, it is not likely, that *Aristotle*, if he would, could have ejected *Plato* out of the School, or have obtained Licence to erect a new one in opposition to him, for as much as at the same time *Chabrias* and *Timotheus*, *Plato*'s kinsmen, were in great power, and Generals of the Athenian Forces. Yet some there are, who affirm this, grounding it only on *Aristotle*'s contradicting of *Plato* in many things; to which *Ammonius* answers, that *Aristotle* doth not simply contradict *Plato*, but those who misinterpret his Writings. For if he do sometimes contradict *Plato*, what wonder? Seeing, that therein he followeth *Plato* his Author, whose saying it was, that Truth ought to be preferred before all things; as also that Saying, *Socrates* indeed is dear, but Truth most dear. And elsewhere. What *Socrates* saith, we must not so much regard, as we ought to be solicitous concerning Truth. The same course *Aristotle* took, if at any time he confuted *Plato*'s Assertion, therein obeying him by following the Truth; and it is observed by ^p some, that he is very sparing in naming him, where he opposeth his Doctrine, and that thrice he makes honourable mention of him in his ^q *Rhetorick*, his Book of the World, (if that be his) and his ^r *Problems*.

True therefore it is, (as *Apollodorus*, *Dionysius Halicarnassensis*, but especially *Aristotle* himself, in his ^s Epistle to Philip, affirm) that he was a constant, sedulous hearer of *Plato* twenty Years, ^t unto the thirty seventh of his Age, even until *Plato* died, and then was so great an honourer of his Memory, that in testimony of his extraordinary Affection, he erected an Altar to him, bearing this Inscription:

^x *This Altar Aristotle's Hand did raise To Plato, whom the Impious must not praise.*

^y *Olympiodorus* speaking of the honour which *Aristotle* gave to his Master, confirmeth it by this Argument, that he writ a whole Oration in commendation of *Plato*, wherein he first made a relation of his Life, then praised him. He adds, that *Aristotle* in his Elegies to *Eudemus*, extols him thus:

And

*And coming to the fam'd Cecropian Town,
In sign of Friendship did an Altar raise
To him, whom impious persons must not praise:
Who straying Man to vertue did restore
Much by his Precept, by Example more.
One to the Gods so pious, good to Men,
No future Age must think to see again.*

^a Athen. deipn. 8. ^z Some affirm, that whilst he lived with Plato, he professed Medicine, and kept a Shop: But those ^a Aristocles confutes. ^z Euseb. præpar. Evang.

CH A P. IV.

How he lived with Hermias.

^a Laert. Suid. ^a **P**lato dying in the first year of the 108th Olympiad, and Speusippus his Nephew succeeding in the School, Aristotle went to Hermias the Eunuch, King of Atarna, a City of Mysia in Asia, who heretofore had been his fellow-Disciple under Plato, and had a particular kindness for him. Hermias receiv'd him with great testimonies of Love and respect. With him he lived three Years, [^b instructing him in Philosophy] at the end whereof, Hermias was (as ^c Strabo saith) surpris'd by Memnon a Rhodian, and sent to Artaxerxes, King of Persia, who put him to Death. Pythais his Sister, a Woman of extraordinary vertue, (whom Hermias, having no Children, had design'd his Heir) being upon this accident reduced to great extremities and afflictions, Aristotle, in a pious gratitude to the memory of his Friend, (as his own a Letter to Antipater attesteth) took her to Wife, and ^e set up the Statue of Hermias in the Temple of Delphi, with this Inscription.

*This Man the Persian King against all right
A Sacrifice to his fierce Anger made;
Not like a Foe by Martial Arms in Fight;
But as a Friend by shew of Love betray'd.*

He wrote likewise a Hymn to Vertue, in memory of his Friend, to this Effect.

*Vertue, whom we all obtain
With much Labour, but more Gain,
For your sake to dye would please,
Toyl and Torments were but ease.
You direct Men in pursuit
Of immortal sacred Fruit,
Richer far than Gold refin'd,
Soft as Sleep, as Parents kind;
Great Alcides for your sake
Labours vast did undertake:
Leda's valiant twins made known
More your Glories than their own;
Ajax and Achilles too
Only dy'd for Love of you;
Ah! for you Atarna's Pride,
Hermias untimely dy'd.
But his name we will revive;
That our Muse shall keep alive,
Paying Hospitable Jove
Pious thanks for a Friend's Love.*

There wanted not those who cast many as-

persions and calumnies upon this Vertuous friendship: some affirm'd that Hermias lov'd Aristotle inordinately (an imputation not well suiting with an Eunuch,) and that for for this Reason he gave him Pythais to wife, whom Suidas and the Greek Etymologist affirm to have been his Daughter either by Nature or Adoption, Demetrius Magnesium's Neice, Aristippus's Concubine, so little do they agree in their Relation: They add that Aristotle was so passionately in love with her, that he Sacrificed to her after the same manner as the Athenians to Ceres at Eleusis. This Laertius relates as done whilst she was alive; but Lyco, first Author of this Calumny, that it was after her death. Moreover that Aristotle in a thankful acknowledgment of his Bounty, wrote a Pæan in praise of Hermias, meaning the Hymn last mentioned, which ^f Athenæus, proveth a-^g gainst the Calumnies of Demophilus not to be a sacred Hymn or Pæan, but a Scholion or Festival Song. Hence Theocritus the Chian derides him in this Epigram.

*To the slave Eunuch who Atarna sway'd
An empty Tomb empty Aristotle made,
Who from the Academy did retire
To wallow in vain pleasures faithless mire.*

In answer to these Calumnies (first raised by Lyco, dispersed further by Aristippus, and continued by those that malign the memory of Aristotle) Apelleio writ certain Books wherein he accurately confutes those who durst in this manner impudently Blaspheme (such are his words) the name of Aristotle; so much prejudice and malice being in the Accusation, as might easily argue the falseness thereof.

^g Upon the Death of Hermias, Aristotle ^h (with Xenocrates) fled from Atarna to Mytilene, as Apollodorus and Dionysius Halicarnassæus affirm in the fourth year of the 108th Olympiad, Eubulus being Archon.

CH A P. V.

How he lived with Philip and Alexander.

ABout this time Philip King of Macedonia, Father of Alexander, taking care for the Education of his Son, now growing towards Man's Estate, and unwilling (saith ^a Plutarch) ^b to commit his Education to Professors of Musick, or any other of the Liberal Sciences, as knowing him fit for higher designs, sent to Aristotle the most famous and Learned of Philosophers, to come and instruct him. ^c Agellius ^d recites his Epistle, which was to this effect.

Philip to Aristotle, Health.

KNow that I have a Son, I render the gods many thanks: not so much for his Birth as that he was born in your time, for I hope that being educated and instructed by you, he will become worthy both of us, and the Kingdom which he shall inherit.

Aristotle at this request of Philip, went to Macedonia to him, in the 4th year of the 108th Olympiad, as ^e Apollodorus and Dionysius Halicarnassæus

carneassus affirm, at what time *Alexander* was fifteen years old.

^d *Ammon.* He lived there infinitely esteemed and beloved of *Philip* and *Olympia* his Wife, *Alexander's* Mother, ^e They caused his Statue to be made and set up in honour of him. *Philip* had a kindness so particular for him, that he allowed him in a manner an equal share in the Government of the Kingdom; which interest *Ammonius* saith, he employed to the advantage as well of private persons, as of the publick, as appeareth (saith the Latin Interpreter of his Life) by his Epistles to *Philip*. ^f *Plutarch* affirms that *Philip* as a recompence to *Aristotle*, re-edified the Town where he was born, *Stagira*, which he had before laid waste. He likewise assigned him a School and Study, near *Mieza*, a Town of *Macedonia* not far from thence, where, unto this day (saith *Plutarch*) they shew the stony Seats, and shady Walks of *Aristotle*.

^g *Plut.* He instructed *Alexander* in the deepest parts of Learning, not only in Ethicks and Politicks, but his most reserved and solid Doctrins, called *Acroatick* and *Epoptick*; never communicated to the Vulgar.

That he taught him likewise the Art of Medicine, *Plutarch* argueth, forasmuch as *Alexander* was not only exceedingly delighted with the Theory thereof, but practised it successfully upon many of his Friends, to whom he prescribed Receipts and Diets, as appeareth, saith he, by his Epistle.

^h *Plut.* Perceiving *Alexander* to be much taken with *Homer's* Iliads, as conceiving and calling it the best institution of military Vertue, he took much pains in correcting and restoring the Text, and then gave it to *Alexander*, which Copy he infinitely prized.

He writ a Book to *Alexander*, entituled: *Of a Kingdom*, mentioned by *Laertius* and *Ammonius*, wherein he instructed him how to rule.

ⁱ *Vel. Interp.* So much did he incline the Mind of *Alexander* to do good, that he used to say, if any day passed wherein he had not conferred some benefit, *I have not reigned to day*.

^k *Plut. vit. Alex.* *Alexander* so much affected him, that he professed he admired and loved him no less than his Father; because his Father, he said, only gave him being, but *Aristotle* well-being.

The love which *Philip* and *Alexander* bore him was so great, that *Theocritus* the *Chian* cast the same Asperion upon it, as he did on his Friendship with *Hermias*.

In the first year of the 111th Olympiad, *Pythodorus* being Archon, *Philip* died, and was succeeded by his Son *Alexander*, whose active Spirit, soon after his coming to the Crown, designed an Expedition against the King of *Persia*. Hereupon *Aristotle* having now lived with *Alexander* eight years, though *Justin* saith but five which some interpret of the time before *Philip's* death, but not without some violence, (for that was above seven) preferring the quiet of a Contemplative Life before the troubles of War, took leave of him, returned to *Athens*, leaving in his room *Calisthenes* an *Olynthian*, his Kinsman (Son of his Cousin *Hero*) and Disciple; whom before his departure, observing to speak with too much liberty and obstinacy to the King, he reproved in these words,

Son, if thou thus employ thy Tongue,
Thy thread of Life cannot be long.

And so it came to pass not long after upon this occasion. *Hermolaus*, Son of *Sopolis*, a youth of a noble Family, that studied Philosophy under *Callisthenes*, hunting the Wild Boar with *Alexander*, prevented the King by casting his dart first at him, for which he was by the King's command punished with many stripes. Troubled at the ignominy thereof, he conspired with *Sostratus*, *Antipater*, and some other Companions of his, to murder *Alexander*, which Treason being discovered by *Epimenes*, one of the Conspirators, they were all put to death. *Aristobulus* and *Ptolemaeus* Son of *Lagus* affirm, they accused *Callisthenes*, as him who instigated them to this attempt. Hereupon *Callisthenes* was put into an Iron Cage, and so carried up and down in a miserable sordid condition, and at last, as *Laertius* relates (though others otherwise) thrown to Lyons and devoured.

CHAP. VI.

His School and manner of Teaching.

Thus *Aristotle* having lived eight years with *Alexander*, returned to *Athens*, as ^a *A. Laert.* ^b *pollodorus* and ^c *Dionysius Halicarnassensis* affirm, ^d *Epist. ad Ammon.* in the second year of the hundred and eleventh Olympiad, *Pythodorus* being Archon, where he found *Xenocrates* teaching in the Academy, which place was resigned unto him by *Speusippus*, in the fourth year of the hundred and ninth Olympiad.

Hence it appeareth, that ^e *Hermippus* erreth, ^f *Laert.* in affirming, that *Xenocrates* took upon him the School of *Plato*, at what time *Aristotle* was sent by the *Athenians* on an Embassy to *Philip*. For as ^g *Patricius* hath observed, it can no way agree in time, it being certain, as ^h *Laertius* attests, that *Speusippus* succeeded *Plato* in the School in the first year of the Hundred and Eighth Olympiad, immediately upon *Plato's* Death, and continued therein eight years, that is, to the end of the hundred and ninth Olympiad; in the second year of which Olympiad, *Aristotle*, as we said, went to *Philip*; not on an Embassy, but upon his Invitation, to educate *Alexander*.

Neither is the Author of *Aristotle's* Life less mistaken, who saith, that upon the Death of *Speusippus*, the *Athenians* sent to *Aristotle*, and that both of them, *Aristotle* and *Xenocrates*, took upon them *Plato's* School, *Xenocrates* in the Academy, *Aristotle* in the Lyceum. But this error is easily detected by the same computation, for at the time of *Speusippus's* death, *Aristotle* was with *Alexander*, nor did he leave him until six years after, all which time *Xenocrates* professed Philosophy in the Academy.

ⁱ The Academy being prepossessed by *Xenocrates*, *Aristotle* made choice of the Lyceum, ^j *Laert.* ^k *Epist. ad Ammon.* (a place in the Suburbs of *Athens*, built by *Pericles* for the exercising of Soldiers.) Here he taught and discours'd of Philosophy, to such as came to him, walking constantly every day till the hour of anointing, which the *Greeks* usually did before Meals, whence he and his followers are called *ἀπὸ τοῦ περιπατεῖν*, from walking, *Peripateticks*. Others say, he was called *Peripatetick* from walking

walking with *Alexander*, newly recovered of a sickness, in which manner he used to discourse of Philosophy with him.

(g) *Laert.* (g) The number of his Auditors encreasing very much, he gave over walking, and taught sitting, saying,

*Now to be silent most disgraceful were,
And see Xenocrates possess the Chair.*

Though *Cicero* and *Quintilian* affirm, he used this Verse against *Isocrates*, in emulation of whom he taught Rhetorick to his Disciples every Morning. (b) So many Disciples resorted to him, that he made Laws in his School, as *Xenocrates* did in the *Academy*, creating *Archons* that Rul'd ten days.

(b) *Laert.*

(i) *Agel. lib. 21. cap. 5.*

(i) The Discourse and Doctrine which he delivered to his Disciples was of two kinds. One he called *Exoterick*, the other *Acroatick*. *Exoterick* were those who conduced to Rhetorick, Meditation, nice Disputes, and the knowledge of civil things. *Acroatick* those in which more remote and subtle Philosophy was handled, and such things as pertain to the Contemplation of Nature and Dialective Disceptations. *Acroatick* Discipline he taught in the *Lyceum* in the Morning, not admitting every one to come and hear them, but those only, of whose Wit and principles of Learning, and diligence and Study, he had before made Trial. His *Exoterick* Lectures were in the Afternoon and Evenings; these he communicated to all young men without any distinction, calling the latter his *Evening Walk*, the former his *Morning Walk*.

C H A P. VII.

His Philosophy.

(a) *Vit. Ar.*

IN *Philosophy* (saith (a) *Ammonius*) he seems to have done more than Man, for there's not any part of Philosophy whereof he treated, but he doth it most accurately, and many things he himself (such was his Sagacity and Acuteness) finding out, compleated and finished.

(b) *Ammon. vit. Ar.*

(b) In *Logick* it was his Invention, that he separated the Precepts of Disputation from the things themselves of which we Dispute, and taught the Manner and Reason of Disputation. For they who went before, tho' they could Demonstrate, yet they knew not how to make a Demonstration; as they who cannot make Shoes, but only wear 'em. *Alexand. Aphrodiseus* affirms, that he first reduced Syllogisms to *Mood* and *Figure*. *Philoponius*, that he invented all Dialectick Methods, whence *Theodorus* calls him both *Inventor* and *Perfetter* of *Logick*, which he indeed in a manner challengeth (but modestly) to himself, in the last Chapter of his *Elenchs*, affirming nothing had been done in that kind before, but what the *Eristicks* and *Sophists* taught. As for the *Categories*, the invention whereof some ascribe to the *Pythagoreans*, it is much more probable, that they were wholly his own; for those Books entituled *καθ' ἑαυτὸν λόγους* under the Name *Archytas*, from which some conceive *Aristotle* to have borrowed much, the particulars whereof are instanced by (c) *Patricius*, *Themistius* affirms to have been written, not by the *Pythagorean* (neither hath *Laertius* made mention of any writings of his, for the *Pythagoreans* at that time wrote but little; the first that wrote any

(c) *Dissertat. Peripat.*

thing being *Philolaus*) but by some *Peripatetick*, who thought his work might pass with greater credit, if published in the name of so antient a Philosopher.

In *Physick* the *fifth Essence*, whereof Celestial Bodies consist, distinct from the four Elements, is generally ascrib'd to his invention; only *Simplicius* citeth the Authority of *Xenocrates*, in his Book of the Life of *Plato*, that *Plato* constituted five simple Bodies, Heaven and the four Elements, asserting, they differ no less in Nature than in Figure; for which reason he assign'd the Figure of a *Dodecadron* to Heaven, offering from the Figure of the four Elements. But these, as the Learned *Nunnesius* observes, seem to be rather Symbolical, and Pythagorical, than the true meaning of *Plato*. For *Plato* in his *Timæus* expressly avers, that the Heavens are of their own Nature Dissolute, but by the Divine Will is kept together, as it were, by a tie from being dissolved. *Xenarchus*, a Philosopher, wrote against the *fifth Essence*; introduced by *Aristotle*, whom *Alexander Aphrodiseus* exactly answereth. *Theodorus* calleth *Aristotle*, *The Perfetter of Physick*, adding, that only his Writings upon that Subject were approv'd by following Ages, who rejected whatsoever others had written in the same kind, as appeareth by their loss. What *Epicure* and others have objected against him as a fault, That he enquired with such diligence into the minute, and meanest things of Nature, is a sufficient Testimony of his Excellence and Exactness in this Study.

(d) In *Ethick*, whereas *Polyenus* placed Felicity in External Goods, *Plato* in those of the Soul only, *Aristotle* placed it chiefly in the Soul; but affirmed it to be defiled and streightned if it want exterior goods, properly using these terms. For those things which are defiled, have the same Beauty within, but their Superficies only is hidden; and those which are streightned have the same real magnitude.

(d) *Vet. Interp.*

(c) In *Metaphysick*, which he calleth *First-Philosophy* and *Wisdom*, and (as the more antient Philosophers before him) *Theology* (f) tho' there be not any invention of his extant, yet, he perfectly went through all the Parts thereof. For he was not only acquainted, as some fallily imagine, with Terrestrial things, and those which belong to this World; but even with those things which are above this World, as may appear from the eighth Book of his *Physick*, where he saith, that the first cause is not subject to motion, neither in it self, nor by accident, in which words he declarerh, that God is not a Body, nor any way passible. And in his 12th. Book of *Wisdom*, or *Metaphysicks*, he discourseth accurately of God and *Intelligences*, in a rational clear way, not involv'd in Fables, or Pythagorical Symbols; but founding his Assertion upon Reason and Demonstration, as much as the Subject, and Humane Reason alloweth. (g) *Patricius* labours much to prove that whatsoever he had in this kind excellent, he borrow'd from *Hermes Trismegistus*. But (h) as we have already said, Mr. *Casaubon* hath fully evinced that Book to have been imposed upon the World by some later Writer.

(c) *Ammon.*

(f) *Ammon.*

(g) *Dissert. Peripat.*

(h) *In the Life of Plato, c. p.*

What is added by the acient Latin Interpreter concerning *Aristotle's* Sentence of that *visu- al Hexagonal Pyramid*, (which (i) a Learned Per-

(i) *Nunnesius Vit. Arist.*

son hath observed to be chosen as a middle way betwixt the Sentence of those who made the Optick Pencil a Pyramid of a quadratick base, and those who made it of a Conick Figure) is very obscure; and hardly admits of an Interpretation worthy so great an Author.

C H A P. VIII.

His Correspondence with Alexander.

WHILST Aristotle taught Philosophy at Athens, his Disciple Alexander was employed in an expedition to Asia against Darius King of Persia, incited thereunto by the principles of Honour, which were infused into him by Aristotle, particularly from the Presidents of Achilles, Ajax, and other Heroes celebrated by Homer, whose Iliads Aristotle had so carefully recommended unto him. He began this Expedition in the third year of the 11th Olympiad, at which time Ctesicles was Archon at Athens, immediately after the departure of Aristotle, who (it is probable) came only for this reason from him, as preferring a quiet and studious Life before the troubles of War.

The first thing that Alexander did, was to visit the Tomb of Achilles in the Sigeum, at the sight whereof he broke forth into these words; O fortunate young Man that hadst a Homer to celebrate thy praise! for had it not been for his Iliads, adds Cicero, in the same Tomb where Achilles's Body lay, his Name also would have been buried. He took with him the Iliads of Homer corrected by Aristotle, and made it his constant companion, insomuch that he laid it every night with his dagger, under his Pillow. And in a Victory over Darius, having taken a Casket of Unguents of extraordinary Value amongst the Spoils of Darius, beset with Pearls and precious stones (as Pliny describes it) his Friends telling him how many uses it might be put to, because Unguents did not become a Soldier; Yes, saith he, it shall serve to keep the Books of Homer, that the most precious work may be kept in the richest Case; hence was this correct Copy called, as Plutarch saith, ἐκ τῆς νασθῆκος.

Whilst he was in Asia, engaged in the Wars against Darius, in the midst of his continual Victories and Business, hearing that Aristotle had published his Acroatick Books of Natural Philosophy, he sent this Letter to him;

a Alexander to Aristotle, Health.

YOU have not done well in publishing your Acroatick discourses, for wherein shall we excel others, if this Learning wherein we have been Instituted, be made common to all? As for me, I had rather excel others in Knowledge than in Power, Farewell.

To which Aristotle returned this Answer.

c Aristotle to Alexander, Health.

YOU wrote to me concerning my Acroatick Discourses that they ought not to have been communicated, but kept secret. Know, that they are made publick, and not publick; for none but they who have heard us can understand them. Farewell.

Thus, notwithstanding Alexander was busied in the Wars, yet he forgot not his Master Aristotle, but kept a friendly correspondence with

him. So constant was he in his Love to Learning, and particularly so much enflamed, (as Pliny saith) with a curious desire of understanding the natures of living Creatures, that he sent thousands of Men, throughour all Asia and Greece, to procure all kinds of living Creatures, Birds, Beasts and Fishes, at an excessive charge, & Athenæus saith, 800 Talents, which according to Budens's account is 840000 Crowns: These Men he sent with what they took to Aristotle, that he might not be ignorant of any thing that any Nation afforded; by which information, he composed, as Pliny affirmeth, fifty excellent Volumes, of Living Creatures, of which ten are only left, unless we put into the same number, those Books of his which have some relation to this Subject: As of the going of living Creatures. 1, Of the parts of living Creatures, and their Causes. Of the Generation of living Creatures. If this were done by Alexander, as Pliny, and Athenæus attest (though Alian ascribeth it to Philip) it must necessarily have been whilst he was in his Asiatick Expedition. For Aristotle, as hath been already proved, stayed but a very short time with him after the death of his Father.

Aristotle made the same use of his correspondence with Alexander, as he had done of the Interest he before had with Philip, the advantage not only of particular persons, but of whole Cities.

This the City of Stagira, the place of his Birth, did acknowledge, which, at the suit of Aristotle, Alexander caused to be re-edified, and re-peopled and restored to its former state, having before by Philip been laid level with the Ground. For, though Plutarch relate this as done in the time of Philip, Laertius, Ammonius, Dion, Chrysostome, Ælian, and others hold, that it was done by Alexander, to which Valerius Maximus adds, that it was not long before Aristotle's Death. In memory of which Benefit, the People of Stagira used to celebrate a yearly Festival, which they called the Aristotelian Feast, naming the Month in which it fell, Stagarites.

Erethus likewise, the Country of Theophrastus, which Alexander determined to punish very severely; by the mediation of Aristotle was pardoned.

That he benefited many particular persons is evident, saith Ammonius, from his Epistles to the King, yet extant, wherein he recommends several Persons to him,

Hence it is manifest, that the Author of his Life is mistaken, when he affirms, that in Alexander's Asiatick expedition, Aristotle accompanied him to the Brachmanes, where he writ that noble piece of the Laws and Institutions of 255 Cities. That likewise he travelled over all Persia with Alexander, where during the War, Alexander died, and Aristotle returned into his own Country. This relation agrees not with the other Circumstances of Aristotle's Life. Alexander died in the fourth year of the hundred and thirteenth Olympiad, two years before Aristotle's departure from Athens.

But as it is apparent, that this Mistake proceeded only from Ignorance (yet that so great, that Patricius argues from thence neither Ammonius nor Philoponius to be Authors of his Life) so are there some other Errors, which no

less manifestly appear to have proceeded from Malice, raised, it is likely, by the Authors of the other Scandals and Imputations, wherewith they sought to blast his Memory.

m Laert.

Some affirm that *Alexander*, upon the Treason of *Calisthenes*, took a great displeasure against *Aristotle*, for having recommended him to him. For tho' at first, Writing to *Criterius*, *Attalus*, and *Alcetas* immediately upon this accident, he sent them word, that the Youths had confessed the Plot proceeded only from themselves, not by the instigation of any other. Yet afterwards, in an Epistle to *Antipater*, he imputes the same Crime to *Calisthenes*, not without this sharp Reflection upon *Aristotle*: *The Youths, said he, were Stoned to Death by the Macedonians, but as for the Sophist, I will punish him my self, and those who sent him, and those who entertain in their Cities such as are Traitors to me.* Hereupon they Interpret the Bounty of *Alexander* to *Xenocrates*, and Favour to *Anaximenes*, as not proceeding from the Magnificence of his Disposition, but from the displeasure he had conceiv'd against *Aristotle*, whom he endeavour'd to Vex, by obliging his Adversaries and Emulators.

n Plut. vit. Alex.

o Laert.

p Plut. Alex.

Upon this supposed Displeasure was grounded another report, that *Aristotle* Conspiring with *Cassander* against *Alexander*, sent him, by *Antipater*, some of the Water of *Styx*, wherewith he poisoned *Alexander*. But the Relators hereof differ not a little amongst themselves: *Diodorus Siculus* and *Suidas* affirm, that *Alexander* was poisoned by *Cassander* Son of *Antipater*; *Arianus* by *Folla* his younger Son: *Porphyrius* saith, That nothing but the horn of an Ass, such as the Asses of *Scythia* had, would contain the poyson: *Justin* and *Pausanius*, the Hoof of a Horse; *Pliny* and *Arrian*, of a Mule, *Plutarch* and *Zonaras*, of an Ass. They differ no less about the place whence the Water was fetch'd. Neither indeed can it be expected there should be a better harmony amongst the Relators of this Fable, when there is so great Dissention and variety of Relations concerning the occasion and manner of his Death. But the most credible is that of *Ephippus* (cited by *Athenaeus*) *Orosius*, *Justine*, and otherers, who aver, that *Alexander* died of a Fever, caused by excess of Drinking.

C H A P. IX.

Upon what Occasion he left Athens, and went to Chalcis.

a Laert.

TWelve years *Aristotle* professed Philosophy in the *Lyceum*, not molested by any; for tho' his eminence in Learning procured him many Emulators and Enemies, yet the Favour he had with *Alexander*, while he lived, awed them so much, that they durst not make any Discovery of the ill will they bore him. No sooner was *Alexander* dead (according to *Dionysius Halicarnassensis*) but some of them conspired against his Life. To which end, *Eurymedon*, a Priest, or (according to *Phavorinus*) *Demophilus*, accused him of Impiety; That he introduced some Philosophical assertions, contrary to the Religion of the Athenians; that he celebrated *Hermias* as a God, with a Hymn, and had caused his Statue to be set up in the Delphian Temple, with an honourable Inscription. Some affirm hereupon, he made an Oration in defence of himself, at the Court of

Areopagus, wherein he openly pronounced this Verse, made out of two in *Homer*.

b Odys.

Pears upon Pears, and Figs on Figs grow here.

By *σῦκον ἐπὶ σύκα*, (*Figs on Figs*) reflecting upon the Multitude of *Sycophants*, which sprung up every day in the City. Hence *Phavorinus* saith, he was the first Philosopher that pleaded for himself, and there was an Oration to that purpose went about many years after under his Name. But, of the truth hereof, *Athenaeus* maketh question.

Others affirm, that *Aristotle* perceiving the Conspiracy that was against his Life, stole privately out of *Athens*, and went to *Chalcis*, where he spent the rest of his days, returning to his Friends, who demanding the reason of his going, made this answer, *We left Athens, that we might not give the Athenians occasion to commit again the same wickedness they committed against Socrates, that they might not be guilty of a double Crime against Philosophy.* To *Antipater* he wrote the forementioned Verse,

c Laert.

lib. 1.

Pears upon Pears, and Fings on Figs grow here.

Giving him to understang how dangerous it was for him to live in *Athens*, since the *Athenians* were wholly addicted to *Sycophantism* and *Calumny*. This departure of *Aristotle* from *Athens*, *Dionysius Halicarnassensis* placeth in the second year of the 114th Olympiad: *Apollodorus* a year latter, perhaps less rightly.

Being near sixty two years of Age, very Sickly, and without hope of living much longer, the whole company of his Followers came to him, and besought him to make choice of a Successor, whom after his Death they might look upon as the Perfeeter of those Studies wherein to he had brought them. There were at that time many excellent Scholars in his School, but especially two, *Theophrastus* and *Menedemus*, or rather as *Patricius* reads, *Eudemus*. These excelled the rest in Wit and Learning. The first was of *Lesbos*, *Eudemus* of *Rhodes*. *Aristotle* answered them, he would do as they requested, when he saw it convenient. Soon after the same persons being present who had made this request to him, he complained the Wine he then drank did not agree with his Health, but was unwholsome and harsh; and therefore desired they would send for other sorts, both *Rhodian* and *Lesbian*, saying, he would make use of that which he should find best for him, they go, seek, find, bring. *Aristotle* first calls for the *Rhodian*, tastes it, A strong Wine, saith he, and pleasant; then calls for the *Lesbian*, which having tasted, *Both, saith he, are good, but ἡδίων ὁ λέσβιος*, the *Lesbian* is the sweeter; whereby every one understood that his choice was not of the Wine, but of his Successor, which was *Theophrastus* of *Lesbos*, a Man of extraordinary sweetness in Discourse and Conversation: Whence not long after, as soon as *Aristotle* was dead, all his Disciples applied themselves to *Theophrastus*.

f Angel. 13. 5.

C H A P. X.

His Apothegms.

OF his Apothegms are remembered these. Being demanded what a Man got by Lying, he answer'd, *not to be believed when he spoke truth.* Being

hath many Friends, bath none ; which is likewise extant in the seventh Book of his Ethicks.
He said, When things happen not as we would, we must will as they happen.
Seeing a youth very self-conceited, and withal ignorant; Young Man, faith he, I wish I were what you think your self, and my Enemies, what you are.
Seeing a young Man proud of a fine Cloak, Why boast you, faith he, of a Sheep's Fleece?
He said, They who demonstrate plain things, light a Candle to see the Sun.
Being reviled by an Impudent Person; Thou, faith he, Who art vers'd to bear all things, speakest them with delight; I who am not used to speak them, take no delight in hearing them.
Being demanded why he who taught others to speak, himself held his Tongue; A Whetstone, faith he, cannot cut, yet it sets an edge upon Swords.
Being asked who can keep a Secret; He, faith he, that can hold a glowing coal in his mouth.
Seeing a young man very neatly dress'd, Are you not asham'd, faith he, when Nature hath made you a Man, to make your self a Woman?
A handsome young man, much Courted; said to him, If I were hated of the Citizens as you are, I would hang my self; and I, reply'd he, would hang my self if I were lov'd by them as you are.
Being demanded how a Man should come to be Rich; he answered, by being Poor in Desire.
It repented him of three things; that he had ever committed a Secret to a Woman; that he had Rid when he might have gone a Foot; that he had live one day not having his Will made.

CHAP. XI.

His Will and Death.

FROM that Speech of Aristotle last mention'd, may be gather'd how careful he was to make his Will, but more from the exact form thereof, which was thus:

(a) Laert. **(a)** *BE all well; but if it happen otherwise, thus Aristotle maketh his Will. Be Antipater my sole Executor during the Minority of Nicanor. Let Aristomenes, Timarchus, Hipparchus, Dioteles, (and if he please, and have leisure) Theophrastus, be Guardians of the Children and of Herpylis, and all that I leave. I Will, that my Daughter, as soon as she shall be Marriageable, be given Nicanor to Wife. If any thing happen otherwise (which God forbid) before she be Married, or after she be Married before she hath any Children, let Nicanor have the ordering of my Son, and the disposal of all other things, for his Reputation and mine. Let therefore Nicanor take care of the Maid Pythais, and my Son Nicomachus, and order their Estates according to their Conditions, as a Father and a Brother. If in the mean time any thing shall happen to Nicanor (which God forbid) either before my Daughter be Married, or if Married, before she hath any Children, if he make any Will, as he appointeth, so let it be. Otherwise, if Theophrastus approve of it, let him Marry the Maid, and have the same power that Nicanor*

should have had. Otherwise, let the Estates as well of the Maid as the Boy be disposed with the joynt consent of the Guardians, and Antipater, as they shall think fit. Let likewise the Executors of Nicanor take care to remember us and Herpylis, since that she hath been faithful to me, and if she will take a Husband, that such a one be given unto her as may be no disparagement unto us. Let them give her out of my Estate, besides what is already mentioned, a Talent of Silver, three Maid-servants, if she so please, and the Hand-maid which she hath, and the Boy Pyrrheus. And moreover, if she will dwell at Chalcis, let her have that Habitation which joyneth to the Garden; if at Stagyra, our Patrimonial Seat; which howsoever Herpylis shall choose, let the Executors furnish it, as they shall think convenient and proper for Herpylis. Let likewise Nicanor take charge of the Boy Mirmax, that he may be restored honourably, as becometh us, unto his own, with all his goods which we delivered to our Trust. Let likewise Ambracis be a free Woman, and have bestowed upon her at her Marriage, fifty Drachms, and the Girl which she hath. I Will likewise, that to Thales be given, besides the Handmaid he hath bought, a thousand Drachms, and another Handmaid. Likewise to Simo, besides that Money which he hath already received to buy a Servant, let another Servant be bought, or the like Sum be given again, wherewith he may purchase one. As soon as my Daughter shall be Married, let Tycho, Philo, Olympias and his Son be free men. Of those Boys which served me, let none be sold, but let my Heirs make use of their Service, and when they come to Age let them be manumitted. Let the Executors take care of those Statues of Nicanor, and his Mother, and Proxenus, which I gave order for to Gryllius, as soon as they are perfected, be set up. Let likewise the Statue of Arimnestus be set up, that this Monument may remain of him, since he died without Children. I Will likewise that the Statue of my Mother be Consecrated to Ceres, in the Numan Temple, or where else shall be thought fitting. Wheresoever my Body is Buried by the Executors, thither let the Bones of Pythias according as she desired, be brought and laid with mine. Let likewise Nicanor, if he continue well in health, dedicate at Stagyra, to Jupiter Soter, and Minerva Sotira, Statues of Beasts, of Stone of four Cubits, in performance of the Vow which we Vowed for him.

He died at Chalcis, in the third year of the 114 Olympiad, Philocles being Archon, in the 63d. and great Climacterical year of his Age (not as (b) Eumelus, 70 years old) as appeareth by the computation of Apollodorus and Dionysius Halicarnassus; thus,

	years.	(c) Laert.
He came to Athens at	18	
Heard Plato	20	
Lived with Hermias	3	
With Philip and Alexander	8	
Taught in the Lyceum	12	
Lived at Chalcis	2	
In all	63	

The manner of his Life is variously related, (c) *Strabo*, *Hesychius*, *Illustris*, and from him *Suidas*, relate that he drank Hemlock, either being condemn'd thereunto by the *Athenians*, as *Socrates* was, or to prevent their Judgment.

(d) *Justin Martyr*, (e) *Gregory Nazianzen*, (f) *Calius Rhodoginus*, the Greek *Etymologist*, *Nonnus*, and others, follow the common Report, that a Question was proposed to him of the wonderful Nature of *Euripus*, an Arm of the Sea, coming into *Chalcis* (as *Lucian* avers) which Ebboeth and Floweth seven times in twenty four hours. Not being able to resolve it, he died of Shame and Anxiety. Some affirm that as he sat on the Bank, having considered long upon it, he at last threw himself headlong into the River, saying, *Since Aristotle could not take Euripus, Euripus take thou Aristotle*.

But the Authors of greatest Credit, (g) *Apolodorus*, (h) *Dionysius Halicarnassens*, (i) *Censorinus*, *Laertius* and others affirm, That he died of a pain in his Stomach, caused by over-watching, and excess of Study. For *Laertius* affirms he was a most indefatigable Student, and when he went to Bed, he held a Brazen Ball in his hand, that when he fell asleep, the noise of it falling into a Basin set under it for that purpose, might awake him, which *Alexander* his Disciple imitated. To this pain of his Stomach he was very subject, and sometimes asswaged it by applying a Bottle of hot Oyl to his Breast. *Notwithstanding this natural infirmity of his Stomach*, saith *Censorinus*, and the frequent Indisposition of a sickly Constitution, he preserv'd himself a long time through his Virtue and Temperance; for it is much more strange that he attain'd the Age of 63 years, than that he lived no longer.

The Author of the Book *de Pomo*, affirmeth, That when he was dying, he said to his Disciples, standing about him, it was not without Reason that *Homer* said, the Gods came down to Earth to relieve Mankind. (k) *Coclius Rhodoginus* adds from the same Author, that when he felt the Pangs of Death to come upon him, weeping between grief and hope, he often repeated these words, *Thou Cause of Causes have Mercy on me*: And his Disciples, when they saw he was departing, said, *He who receiveth the Souls of Philosophers, may he take thine likewise, and lay it up in his own Treasury, as the Soul of a right and perfect Man, as we have known thee to be*. Of this there is no Testimony more Ancient than that of the Author of the Book *de Pomo*, who (as *Patricius* clearly observes from his Writings) was a Christian.

(l) The *Stagirites* fetch'd his Body from *Chalcis* to *Stagira*, where they Buried it with much Solemnity, Building a Magnificent Tomb for him, and erecting an Altar to his Memory.

CHAP. XII.

His Person and Virtues.

(*) *Laert.* AS concerning his Person, he was Slender, having little Eyes, and a small Voice. When he was Young, *Laertius* and *Plutarch* affirm, he had a great hesitation in his Speech. † He went in a Rich Habit, and wore Rings; his Beard,

(†) *Ælian. ver. hist.*

was shaven, his Hair cut short; he had a high Nose, Nose, if we credit the Head put up by *Fulvius Ursinus*, found at Rome, at the bottom of the *Quirinal Hill*. He was of a sickly Constitution, troubled with a natural weakness of Stomach, and frequent Indispositions, which he over-mastred by his Temperance.

St. Hierom affirmeth, he was the Prince of Philosophers, an absolute Prodigy, and great Miracle in Nature, into whom seemeth to have been infused whatsoever Mankind is capable of.

He was extremely pious towards God and Man, upon which Subject, *Fortunus Licetus* hath lately written two Books.

Eusebius, *Cassiodorus*, and others affirm, that many Persons, Eminent for Sanctity, especially followers of School-Learning, have, through the means of *Aristotle's* Philosophy, been carri'd on to Inspection into the highest Doctrins of true Faith; as, that there is one God, &c.

As concerning his gratitude to Men, besides those Instances already mentioned, to *Proxenus* and his Son, to *Hermias* and his Sister, to his Master *Plato*, to his own Mother, Brother and Country, and infinite others; many Philosophers, whose Opinion he takes occasion to alledge, he mentions with their due Praise; of which were his Master *Plato* (of whom we have already spoken) whom, as we have said, he sometimes mentioned honourably, and sometimes concealeth his Name, where he preferreth his own Opinion. Amongst others, of whom he maketh Honourable mention, are observed *Democritus* in his first Book, *de Generatione*; *Diogenes*, *Apollonides*, in the same Book; *Anaxagoras*, in the first of his *Metaphysics*.

For that he was very moderate, the Interpreter of his Life confirms, instancing in his Book of *Categorems*, where he saith, *We ought not to determine any thing hastily; but to consider often, and to doubt of every thing, is not unuseful*. And again, in his Book of Good, *We must remember, being Men, not only that we are happy, but that we ought to be able to prove it by firm Reason*. And, again, in his *Ethicks* to *Nicomachus*: *Man is our Friend, Truth our Friend; but above all, we ought to honour Truth*. And in his *Meteorologicks*: *As concerning these, we doubt of some of them, others we touch superficially*. And in the same, not once or twice, but infinite times, *Men do happen upon the same Opinions, therefore we ought not to be proud of our own Wisdom, in any thing whereof we conceive our selves to be the Inventers*.

The common report therefore (grounded upon no Authority) that he collected the Books of the Antient Philosophers, and having taken out of them what he intended to confute, burnt them, is manifestly false; for any one that reads *Cicero*, will find, they were most of them extant in his time.

CHAP. XIII.

His Wives and Children.

HE had two Wives, the first *Pythais*, Sister to *Hermias*, the Eunuch, Tyrant of *Atarna*, and his adopted Heir. Of the Scandals that were cast upon him by this Marriage, *Aristotle* fully acquits

acquits himself in his Epistles to *Antipater*, where he professeth, that he Married her only out of the good will which he bore unto *Hermias*, and out of a compassion for the great misfortunes that had hapned to her Brother; adding, that she was a Woman endowed with extraordinary Modesty, and all other Vertues.

His second Wife was named *Herpylis*, a Woman of *Stagira*, whom *Apellico* (cited by *Euseb.*) and (perhaps from him) *Suidas* affirm, he Marry'd after the death of *Pythias*: With her he lived to his end, as *Herimppus*, cited by *Athenæus*, and *Timothæus*, by *Laert.* affirm. *Timæus*, a profess'd calumniator of *Aristotle* saith, she was his Concubine, and that *Aristotle* lived with her, following the Counsel of *Hesiod* in his Georgicks; from which Calumny, *Hesiod* is fully vindicated by *Proclus*.

By *Herpylis* he had one Son, as *Apellico* affirmeth, whom he named after his own Father, *Nicomachus*: To him he dedicated his great *Morals*, which *Cicero* thinks to have been written by *Nicomachus* himself: For I see not, saith he, why the Son might not be like the Father.

This *Nicomachus* was a Disciple of *Theophrastus*, and much beloved by him; under whom he profited exceedingly in Philosophy, and arriv'd at much Eminence therein. *Suidas* saith, he writ eight Books of Physick, four of Ethicks. *Cicero* compares him both with his Tutor and Father. *Aristocles* cited by *Eusebius* affirmeth he was bred up an Orphan, by *Theophrastus*, afterwards died young in the Wars, which relation agreeth not with *Aristotle*'s Will, nor with *Suidas* or *Cicero*, who aver that he writ Books, out of which *Laertius* brings a citation, in *Eudoxo*.

He had a Daughter also called *Pythias*, who, as *Sextus Empericus* affirms, was thrice Marry'd. First to *Nicanor* the *Stagirite*, Friend to *Aristotle*. Secondly, to *Procles*, who derived his Pedigree from *Demaratus* King of *Lacedæmonia*. By him she had two Sons, *Procles* and *Demaratus*, who Studied Philosophy under *Theophrastus*. Her last Husband was *Aletródorus*, Disciple of *Chrysippus* the *Cnidian*, Master of *Erasstratus*. By him she had a Son, named after her Father, *Aristotle*. Of this *Aristotle* there is mention in the Will of *Theophrastus*, where he is called the Son of *Midias*, not *Aletródorus*. *Suidas* affirms he died before his Grandfather.

CHAP. XIV.

His Disciples and Friends.

THE Disciples of *Aristotle* were so many and so eminent, that *Nicanor* of *Alexandria* wrote an express Book upon that Subject, which had it been extant, would doubtless have given us an exact account of them, whereas now we must rest satisfied with an imperfect Catalogue.

To omit the three Princes that were his Disciples, *Hermias*, *Alexander* (of whom already) and *Antipater*, Successor to *Alexander* in *Macedonia* (who amongst other things wrote two Books of *Epistles*, in one whereof he related the Death of *Aristotle*) in the first place is mentioned.

Theophrastus of *Eressus*, a City of *Lesbos*, the most Eloquent of his Disciples. Him he appointed to Succeed him in the School.

Phanias of *Eressus* also. He wrote many Books often cited by *Athenæus*; amongst the rest, *Ammonius* cites his *Categories*, *Analyticks*, and of *Interpretation*.

Eudemus of *Rhodes*, esteemed by *Aristotle* in the second place next to *Theophrastus*. His Life was written by *Damias*, as *Simplicius* affirms, who often mentions him. He wrote *Analyticks*, and a *Geometrical History* (both cited by *Simplicius*) and some other Histories cited by *Laertius*; wherein he said the *Magi* were of Opinion, that Men should Rise again after Death. He Survived *Aristotle*.

Eudemus of *Cyprus*, who died in *Sicily* where he took *Dion*'s part, as appeareth from *Plutarch*.

Aristotle in honour of him, call'd his Dialogue of the Soul, after his Name.

Pasicles, Brother of *Eudemus* the *Rhodian*. To him some ascribe the first lesser Book of *Metaphysicks*, as *Philoponus* affirmeth.

Theodectes; to him *Aristotle* dedicated some Books of Rhetorick, mentioned by *Valerius Maximus*, which he afterward retracted. *Patricius* conceives he was rather a Companion than a Disciple of *Aristotle*, because he mentions him seven times in his Rhetorick, which he is never observed to have done of any Disciple.

Clearchus of *Soli*. He wrote many Books often cited by *Athenæus*.

Dicæarchus, Son of *Phidias* of *Messana* in *Sicily*, a Philosopher, Orator, and Geometrician, as *Suidas* affirmeth. He is cited by *Cicero*, mentioned often by *Plutarch* amongst the best Philosophers.

Aristoxenus, Son of *Mnesias* a Musician of *Tarentum* in *Italy*, who going to *Mantinia*, there Studied Philosophy and Musick. He heard his Father, and *Lamprus* an *Erythraean*, and *Xenopholus* a *Pythagorean*, and last of all *Aristotle*, whom after his death he calumniated and wronged much, because he had left *Theophrastus* his Successor in the School, whereas himself was in great esteem amongst the Disciples. Thus *Suidas*.

Nicanor, mentioned in his Will.

Philo, who wrote against one *Sophriscles*, who caused the Philosophers to be voted out of *Attica*.

Plato the younger, mentioned by *Laertius* and in *Platone*. *Philoponus*.

Socrates a *Pythinian*, mentioned by *Laertius*. In *Socrate*.

Mnasfon, a *Phocian*, mentioned by *Ælian* as one of those who assisted *Aristotle* in the ejection of *Plato* out of the Academy. *Galen* likewise mentions him as Author of some Medicinal Writings ascribed to *Aristotle*.

Phrasidemus, a *Phocian*, mention'd by *Laertius*, as a *Peripatetick* Philosopher. It is likely he was a Disciple of *Aristotle*, for he was contemporary with *Theophrastus*.

Palephatus, of *Abydus*, an Historian much beloved of *Aristotle*.

Calisthenes, an *Olynthian*, *Aristotle*'s Sister's Son, of whom already.

Hipparchus, a *Stagirite*; of kin to *Aristotle*. He wrote, as *Suidas* affirmeth, of the distinctions of Sexes amongst the Gods, of Marriage, and the like.

Leon, a *Byzantine*, a Peripatetick Philosopher and Sophist. Some affirm he was a Disciple of *Aristotle*. He was so excessively fat, that coming to *Athens*, upon an Embassie, the People laugh at him; to whom he said, do you laugh to see me thus fat? I have a Wife a great deal fatter; yet when we agree, one Bed will hold us both, but when we disagree, not the whole House. The People suspecting him of Confederacy with *Philip*, upon a Letter of his, came in a Tumult to his House, whereupon fearing to be Stoned, he Strangled himself.

Æschiron of *Mitylene*, an Heroick Poet, loved much by *Aristotle*, as *Suidas* saith.

Calippus an *Athenian*, who also heard *Plato*.

Satyrus, whose Books of *Lives and Characters* are cited by *Athenæus*.

Hieronymus the *Rhodian*, eminent in Philosophy. That he was *Aristotle's* Disciple is acknowledged by *Athenæus*.

Heracledes of *Pontus*, a great Philologist.

To these add of less note, *Echecratides* a *Mezimynean*, and *Adraustus* a *Macedonian*, both mentioned by *Stephanus*. *Euximbius*, mentioned by *Plutarch*. *Clitus* a *Milesian*: *Menon* the Historian; *Diotels* and *Timarchus*.

CHAP. XV.

His Detractors.

AS the Friends and Followers of *Aristotle* were more in number than those of any other Philosopher, so were also his Detractors, of whom having already had occasion to make some mention, we shall not need to give any further account than this of *Aristotle's*, alledged by * *Eusebius*.

* *Prepar. Evangelicæ lib. 15.*

How then is it possible, that what *Epicure* relates of *Aristotle* can be true, that when he was a young Man, he wasted prodigally all the Means his Father left him, whereby he was necessitated to betake himself to the Wars; but therein being unfortunate, he set up an Apothecaries Shop, and *Plato* keeping open School, amongst the rest admitted him?

And who will credit *Timæus* the *Tauromenite*, who writes, that being come to riper years, he shut up his poor Shop, and gave over his Mercenary Profession?

Who can be perswaded to believe what *Aristoxenus* the Musician saith in the Life of *Plato*, that when he was from home, some Strangers rose up, and set up a School in opposition to him, which words some interpret of *Aristotle*, but Erroneously; for *Aristoxenus* always commendeth *Aristotle*; [yet *Suidas*, as we said, avers the contrary.]

Who does not esteem the Commentaries of *Alexinus* ridiculous? For he bringeth in *Alexander* as a Youth talking with his Father *Philip*, slighting the Instructions of *Aristotle*, but approving those of *Nicagoras*, surnamed *Hermes*.

Eubulides manifestly falsifies in the Book he wrote against *Aristotle*. For first, he bringeth in some dull Poems as written by others, upon his Marriage and Affinity with *Hermias*; then he saith, that he injured *Philip*, that he was not present with *Plato* at his Death, and that he corrupted his Writings.

As for the Accusation of *Demochares* against Philosophers it is not worth the mention; for he Asperfeth not only *Aristotle*, but all the rest; and whosoever looks upon his Calumnies, will say they are trivial; for he affirms, that some Letters of *Aristotle's*, against the City of *Athens* were intercepted and discovered; that he betrayed his own Country, *Stagira* to the *Macedonians* that when *Olynthus* was taken, he informed *Philip* upon the Sale and Ransom of the Goods and Prisoners, which were the most Wealthy of the *Olynthians*.

No less foolishly doth *Cephisodorus*, Disciple of *Isocrates*, Calumniate him as an effeminate Person, and a Glutton, with many other Aspersions of the same kind.

But of all, the most foolish is that of *Lyco*, who professed himself a *Pythagorean*, for he saith, That *Aristotle* Sacrificed to his Wife after she was dead, as the *Athenians* to *Ceres*; and that using to bathe himself in warm Oyl, he afterwards sold it; and that when he went to *Chalcis*, those who bought his Goods, found in one bark 75 brass Pots. Indeed near so many were the Calumniators of *Aristotle*, from whom sprung up others, some in the same Age, others a little after, all Sophists, Litigious Persons and Orators; of whose Names and Books no more remains than of their Bodies.

As for those who Flourished after these, some repeat only what these had said before, and therefore we need not take any notice of them; much less of those, who not lighting upon those Books, have framed some Inventions of their own; such as they, who affirm, he had 300 Pots, for there was not any Author of that time who made mention thereof, but *Lyco*, and he saith, there were found only 75 Pots.

And not only from Computation of time, and from the Persons who assert these Calumnies, may any Man perceive all they say to be but false; but also from this, that not any two of them lay the same thing to his Charge, but every one hath a particular Calumny different from the rest. But, if any one of these had been true *Aristotle* should have heard of it, not only once from them, but a thousand times.

It is manifest therefore, the same thing befel *Aristotle*, which hapned to many others, that as well for the Respect and Friendship he had with Princes, as for the excellency of his Dissertations, the Envy of the Sophists of that Age persecuted him. But such as are Ingenious ought not to mind Calumniators, but those who have praised and imitated him, whom they will find to fall nothing short of the others, either for number or worth. Hitherto *Aristocles*.

CHAP. XVI.

His Writings.

L Aertius hath given a large Catalogue of his Writings, as a Testimony of his Excellency in all kinds of Learning. Their Titles, as reduced to their several Heads, by *Patricius*, are these,

Against the ancient Philosophers.

OUT of Plato's *Laws* 2.
 Out of Plato's *Commonwealth* 2.
 Out of Timæus and Archytas their
Writings 1.
Problems out of Democritus 2.
 Against Melissus 1.
 Against Alcmaeon 1.
 Against Gorgias 1.
 Against Xenophanes 1.
 Against Zeno 1.
 Of the Philosophy of Archytas 3.
 Of the Philosophy of Speusippus and
 Xenocrates 1. In all 19.

The Sum of all these Books, excepting the Epistles, is 513. Laertius reckons them to be near 400. perhaps accounting the several Books that are upon the same subject for one. But of these the greatest part is lost, and of many that are extant the titles altered; of the extant there are only these:

Logick.

Categories 1.
 Of Interpretation 1.
 First Analyticks 2.
 Second Analyticks 2.
 Topics 8.
 Elenchs 1.

Phylick.

OF Natural Auscultation 8.
 Of Heaven 4.
 Of Generation and Corruption 2.
 Of Meteors 4.
 Of the World 1. suspected.
 Of the Soul 3.
 Of Sense and Sensibles 1.
 Of Memory and Reminiscence 1.
 Of Sleep and waking 1.
 Of Dream 1.

Divination by Dreams 1.
Of the motion of Living Creatures 1.
Of the length and shortness of Life 1.
Of youth and age, life and death 1.
Of Respiration 1.
Of the going of Animals 1.
Of Breath 1.
Of the generation of Animals 5.
Of the parts of Animals 4.
The History of Animals 10.
Of Colours 1.
Of Physiognomy 1.
Spurious 2.

Ethick.

Ethick, to Nicomachus 10.
 Great Ethick 2.
 Ethick to Eudemus 7.
 Of Vertues 1.
 Oeconomick 2.
 Politick 8.

Metaphysick.

Metaphysick 14.
 Of the abstruse part of Divine
 wisdom according to the Egyptians,
 Translated out of Arabick;
 but suspected to be spurious, 14.

Mathematicks.

Mathematicks 2.
 Mechanick 1.
 Of infecable Lines.

Phylologicks.

Rhetorick 3.
 Rhetorick to Alexander 1.
 Poetick 1.

Extraordinary;

Problems 38.
 Wonders 1.
 Of Xenophanes; Zeno and
 Gorgias 1.

Besides these, there are many other Books cited for his, under these titles.

Magick, Laert. Proæm.
Epitome of Oratours, Laert. Aristip.
Of Beans, Laert. Pythag.
Of Mixtion, Aristot. de sensu. cap. 3.
Of Savors, Arist. de sensu. cap. 4.
Physical History, Arist. de incess. Animal. cap. 2.
Of Nutriment, Arist. de Somno, cap. 3.
Selection of Contraries, Arist. Metaph. lib. 3. cap. 2.
Division of Contraries, Arist. Metaph. lib. 10. c. 3.
Of Opposites, Simplic. in cap. de Opposit. Comm. 8.

Collection.

Collection of Pythagorick Opinions; Simplic. in lib. 2. de Cælo. Com. 4.

Of Idea's, Alexand. in lib. 1. Metaphys.

Comm. 59. where he cites the fourth Book, tho' *Laertius*, but one, as if there were no more.

Of Enunciation, Alexand. in lib. 4. Metaphys. Com. 25. & 44.

Homerical Difficulties. 6.

Of Platonick assertions. Plut. contra. Colot.

Eudemus, Plut. Consol. ad Apollon.

Of Drunkenness, Plut. Symposiac. 3. *Athenæus* cites the tenth Book hereof.

Animal, or of Fishes, Athen. Deipn. 7.

Of living Creatures, and of things pertaining to living Creatures, Athen.

Of the manners of living Creatures. Athen.

Of Pheasants, Athen.

Of Consanguinity, Athen.

Of wonderful Luxury, Athen.

Apology, Athen.

Historics, Athen.

Barbarous Jurisdictions.

Of Audibles, Porphy. Comm. in Ptol.

Mus. Proclus in Timæum Plat.

The Cohabitant, Proclus. Proæm. in Repub. Platon.

Θεολογούμενα, Macrobian. Saturnal. lib. 1.

Of Nature, Clem. Alexandrin. Strom. lib. 6.

We shall not add the *Peplus* cited by *Nicephorus*, and the *Chria* by *Stobæus*, under his Name, since it is manifest they belong not to the same *Aristotle*, as *Patricius* hath evinced.

These Books *Aristotle* gave to *Theophrastus*, when he made him his Successor in the School, as *Strabo* affirmeth; adding, that *Aristotle* was the first we know of, that made a Library, which the *Ægyptian* Kings learned of him to do. *Theophrastus* bequeathed all his Books to *Nelius* a Sceptian, who carried them to *Scepsis*, and dying, left them to his Heirs, men of no Learning, who only kept them confusedly lock'd up: And when they understood what care was taken by the *Attalick* Kings (in whose Jurisdiction *Scepsis* was) to make a Library in *Pergamus*, they hid them in a hole underground [where they continu'd about 130 years] by which means they receiv'd some injury by the Wet and Worms. At last, some that were descended from *Aristotle* and *Theophrastus*, sold them to *Apellico* a *Tcian*, [who, according to *Athenæus*, was made free of the City of *Athens*, a person very rich, who, besides many other Libraries, bought this of *Aristotle* being himself a Lover of Peripatetick Philosophy] for a great sum of Money. This *Apellico* was more a lover of Books, than of Learning; so that because they had received some injury, he caused them to be Transcribed, supplying the defects not rightly, and by that means put them forth full of faults. The Ancient Peripateticks that succeeded *Theophrastus*, wanting Books, as having but very few, and those Exoterick, could not treat exactly upon part of Philosophy. They that lived later, after that these Books were published, had much greater helps to Philosophy and the imitation of *Aristotle*, although by reason of the infinite faults they were forced to say many things by guess. Hereunto *Rome* conducted not a little; for (soon after the death of

Apellico, *Sylla* taking *Athens*, in the fourth year of the 173 Olympiad, seized upon his Library. and causing it to be carried to *Rome*, *Tyrannio*, a Grammarian, a person studious of *Aristotle*, obtained leave of the Library keeper to be permitted the use of them) the Booksellers not having good Writers, and not comparing well the Copies, it occasioned many faults, as well in those Books that were at *Rome*, as in those Transcribed and sold into *Alexandria*. *Plutarch* adds, that from this *Tyrannio*, *Andronicus* the *Rhodian* had them, who first made them publick, setting forth those Volumes, which, saith he, we have.

Thus *Strabo* and *Plutarch*; *Athenæus* saith, that *Nelius* sold them to *Ptolemaus Philadelphus*, by whom they were Translated to *Alexandria*, where how long they lay hid is uncertain, which Library was afterwards burned by *Julius Caesar*.

CHAP. XVII.

His Commentators.

NO sooner were the Writings of *Aristotle* communicated to the World, but they were entertained with general approbation, which some expressed, by employing themselves in Commenting upon them, whose example was followed by many in all following Ages. To omit *Pasocrates* the *Rhodian*, Brother of *Eudemus* who wrote, as *Galen* affirmeth, upon the Book of *Categories*; we shall name in the first place,

Andronicus the *Rhodian*, who first published *Aristotle's* Writings, put forth a Paraphrase or Comment upon the greatest part of them.

Next, his Disciple *Boethius*, a *Sidonian*, took much pains in the exposition of *Aristotle*, whence he is often mentioned honourably by *Ammonius* and *Simplicius*.

Aristo a *Coan*, Disciple also to *Andronicus*, as *Strabo* affirms, living in the time of *Nicias*, Tyrant of *Coos*, is reckoned by *Simplicius* amongst the old Commentators upon *Aristotle's* *Categories*. a Geogr. lib. 14.

Nicolaus Damascenus, who lived in the time of *Augustus*, by whom much loved, is cited by *Simplicius* and *Averroes*, as an Expofitor of *Aristotle*.

Athenodorus of *Tarsis*, a *Stoick*, who lived also under *Augustus*, as *Plutarch* affirms, is cited by *Simplicius*, as having written upon *Aristotle's* *Categories*; but rather by way of Confutation than interpretation, as did likewise *Alexander Ægeus*, *Nero's* Tutor, mentioned by *Simplicius*; *Cornelius*, who lived at the same time, cited by *Porphyrius* and *Simplicius*; *Lucius* and *Nicostrotus* a *Macedonian*, who lived under *Antonius*.

Sotion of *Alexandria*, and *Achæcius* seem to have written upon the *Categories*, being often cited by *Simplicius* upon that Subject.

Taurus the *Berisian*, a *Platonick* Philosopher, living under *Antonius*, wrote first concerning the difference between the Doctrines of *Plato* and *Aristotle*.

Adrastus the *Aphrodisæan*, wrote a Comment on *Aristotle's Categories*, and of his *Physick*, and a Book concerning the Method of his Philosophy.

Aspasius wrote a Comment on all *Aristotle's* Works, taking particular care to restore the Text, to which end he is often quoted by *Simplicius* and *Boetius*. There is Comment upon some Books of the *Ethicks* extant under his Name.

Hermenus somewhat later, seems to have written upon all, or the greater part of *Aristotle's* Works, cited by all the *Greek* Commentators that are extant, and by *Boetius*.

Alexander the *Aphrodisæan*, who lived under *Antonius* and *Severus*, wrote upon the *Analyticks*, *Topicks* and *Elenchs*, whence stiled by the latter Interpreters, Εξήγητης the *Expositor*.

Galen, who lived at the same time, wrote three Books upon *Aristotle* of *Interpretation*, four Books upon the first of the first *Analytick*, four upon the second of the first, six upon the first of the second *Analytick*, five upon the second.

b Suid.

b *Atticus* a *Platonick* Philosopher, besides seven Books, wherein he proved *Plato* and *Aristotle* to be of the same Sect, contrary to the Assertion of *Taurus*; he wrote also a Dialogue upon the *Categories* extant, seven Books upon the *Categories*, cited by *Simplicius*, a Comment upon the Book of *Interpretation*, cited by *Boetius*. Not to mention what he wrote upon *Aristotle* de *Anima*, since it appears from *Suidas*, that it was rather by way of Opposition than Exposition, which c *Theodoret* likewise confirms.

c Græ. affect.
L. 12.

Jamblicus of *Calsis* in *Carlosyria*, Master to *Julian* the Emperor, wrote in an abstruse way upon the Book of *Categories*.

Dexippus, by some thought to be Son of *Jamblicus*, wrote a Dialogue on the *Categories*, extant.

Maximus a *Byzantine*, Disciple of *Jamblicus*, wrote Commentaries on the *Categories*, and other Books of *Aristotle*, as *Simplicius* and *Suidas* affirm.

Plutarch the younger son of *Nestorius* flourishing under *Valentinian* the first, *Gracian* and *Theodosius* the first, according to *Suidas* and *Philoponus*, wrote Commentaries upon some Books of *Aristotle*.

Syrianus, surnamed the Great, of *Alexandria*, a Philosopher, who flourished under *Arcadius*, *Honorius*, *Theodosius* the second, and *Valentinian* the second, wrote Commentaries upon *Aristotle's* Books of *Nature*, of *Motion*, of *Heaven*, and upon the *Categories*, cited by *Simplicius* and *Philoponus*. Likewise upon the

Second, Fifth and Sixth Book of *Metaphysicks*, which are extant.

Olympiodorus an *Alexandrian*, who derived himself from *Ammonius Saccus*, and was contemporary to *Plutarch* and *Syrianus*, wrote upon *Aristotle's* *Meteors*, extant. He was later than that *Olympiodorus*, who writ upon *Plato*.

Themistius, Living, according to *Suidas*, under *Julian* and *Jovian*, wrote a Paraphrase upon *Aristotle's* *Physick*, eight Books; a Paraphrase on the *Analyticks*, two Books; upon his Books of the *Soul*, seven Books. Of the Scope and Title of the Book of *Categories*, one Book.

Proclus, Disciple of *Syrianus*, wrote two Books concerning *Motions*, wherein he made an abstract of *Aristotle's* second Book of *Motion*. That he wrote also upon his Book of *Heaven*, and the *Elements*, may be conjectured from the frequent Citations of *Simplicius*.

Marinus, who succeeded *Proclus* in the School, seemeth to have written something upon *Aristotle's* Book of the *Soul*, being often cited upon that Subject by *Philoponus*.

Ammonius Hermoneus wrote upon *Aristotle's* *Categories*, and upon his Book of *Interpretation*, both which are extant; as likewise upon his Books of the *Soul*, cited by *Philoponus*.

Damascius, a *Platonick* Philosopher, Disciple to *Ammonius*, besides what he wrote in Confutation of *Aristotle* concerning *Time*, epitomiz'd the four first, and the eighth Book of his *Physick*, and the first Book of *Heaven*. To these add

Philoponus and *Simplicius*, and *Asclepius*, Disciple to *Ammonius*.

Johannes Damascenus, whose Compendium of *Aristotle's* *Logick* and *Physick* are extant; he lived about the year 770.

Eustrathius wrote upon some of the *Nichomachian Ethicks*; and *Eustratius* upon his Book concerning *Demonstration*.

Michael Psellus, about the year 800. and *Michael Epeus*, upon the *parva naturalia*.

Magentinus upon the *Categories*, and the Book of *Interpretation*.

Nicephorus Blemmydes (under *Johannes duca*) upon the *Logick* and *Physick*.

Georgius Plachymerius and *Theodorus Metochita* lived about the year 1080. and wrote Epitoms extant.

Of *Arabick* Commentators were *Avicenna* and *Averroes*; about the year 1216.

The later Writers it will be unnecessary to mention, there being a Catalogue of them annexed to *Aristotle's* Works of the *Paris Edition*.

ARISTOTLE's Epistles.

To Philip 1.

They who undertake a Command for the good of their Subjects, not preferred thereunto, either by Fortune or Nature, trust not in their own Power, which they know subject unto Chance, but grow great in Virtue, whereby they order the Commonwealth wisely. For there is nothing amongst men so firm and solid, but the rapid Motion of the Sun changeth it e'er the Evening. Nature, if we enquire into the truth, varieth all Lives, interweaving them like the action of a Tragedy with Misfortunes. Men, like Flowers, have a set time wherein they Flourish and Excel others. Wherefore behave not your self towards Greece Tyrannically or Loosely, for one argues Petulance, the other Temerity. Wise Princes ought not to be admired for their Government, but Governance; so that tho' Fortune change, they shall have the same Praise. As for the rest, do all things well, preferring the health of your Soul, by Philosophy, that of your Body by Exercise.

To Philip 2.

Most Philosophers assert Beneficence to be something equal to God. To speak the truth, the whole Life of Mankind is comprised in conferring and returning Benefits. So as some bestow, others receive, others return. Hence it is just to commiserate all that are in Adversity, for Pity is the sign of a mild Soul, sternness of a Rude, it being dishonest and impious to neglect Vertue in Misfortunes. For this I commend our Disciple *Theophrastus*, who saith, we never repent of doing good; it brings forth good Fruit, the Prayers and Praises of the obliged. Wise Men therefore must study to oblige many, thinking that, besides the Praise, there may some advantage accrue from hence in the change of Affairs, and if not all, at least some one of those to whom he hath done good, may be in a capacity to requite him. For this reason, endeavour to be ready in doing good, but give not way to your Passions, for that is Kingly and Civil, this Barbarous and Odious. As you see occasion, practise and neglect not this useful Advice.

To Philip 3.

THE most excellent Princes, whose Honour toucheth the Stars, have conferred most Benefits, and not accommodating their sway only to the present, but considering the instability of Fortune, have treasured up good deeds as useful in either condition. In Prosperity it procures

them Honour, for Honour is proper to Vertue; in Adversity Relief, for Friends are much better tried in bad Fortune, than in good. The sight of Benevolent Persons are like to that of Land to Men in a Storm. All Fortune apt to desert us, is the true scope which they propose to themselves, who war, or do unjustly, or comply dishonestly, only the clearness of virtuous persons is not unacquainted with the Instability of Fortune, but, by Reason sustaining all Accidents, and being, as *Plato* saith, above them, they are never disordered. Take heed therefore of the rapid motion of things; look upon them as a Circle which reverts into it self; cast up the Accounts of Life, for Chance imposeth many things upon Life, and maketh our Inclinations follow it. Pardon those that Offend Ignorantly; be ready to Acquit those that do Good. This, if you perform not once, but continually, your Court will be secure from all danger. This, considering the greatness of the things I have said, is but little, but, considering the Person to whom I write, All.

To Alexander 4.

I Am in doubt how to begin, for upon whatsoever I reflect, all seems great and wonderful, not fit to be forgotten, but proper for remembrance, and exhortation, not to be defaced by time. Good precepts and exhortations of Matters have Eternity for their Spectator. Endeavour to make use of your power, not to oppress, but to oblige others, than which nothing can be greater in Man's Life. Mortal Nature, which often yieldeth, and is overcome by Fate, obtaineth Eternal Memory by the greatness of such works. Consider this well; you are not unreasonable as some are, who think good advice ridiculous. Your Descent is Honourable, your Kingdom Hereditary, your Learning sound, your Glory Admirable; and as much as you exceed others in the Goods of Fortune, so ought you to be excellent among the Good in Vertue. In fine, do that which is profitable, and finish what you design.

To Theophrastus 5.

A Sudden Injury is better than a slow Benefit, for the remembrance and harm of that lasts but a while, but this groweth old, as if it hated to Build a Work to Perpetuity, and many times deferring what we intend to bestow upon another, he meets with a calm else-where, which allays the Tempest of his Mind. Wherefore I say, mutual Society ought not only to do no wrong, but if any be received, to be ready to forgive it, for perhaps to do no wrong is above the power of Man. As for him who hath erred, to make use of reproof, is the property of a good well-seated Judgment.

THE DOCTRINE OF ARISTOTLE.

The FIRST PART.

CHAP. I.

Of Philosophy in General, and particularly of DIALECTICK.

THE Philosophy of Aristotle is well known, many abstracts thereof have been published, many are read daily in Universities by publick Professors: yet will it be requisite to our design, to give a short account thereof, that it may appear wherein the Doctrine and Method of the Peripateticks is different from that of the Academicks and Stoicks.

(*) Laert.

* Philosophy, according to Aristotle, is twofold, Practick and Theoretick. To the Practick belongs Ethick and Politick: this, concerning the well ordering of a City: That, of a House. To the Theoretick belongs Physick and Logick; but Logick is not properly a part thereof, but a most expedient Instrument.

Of Logick he asserted two ends, probable and true; for each he makes use of two Faculties, Dialectick and Rhetorick for the probable; Analytick and Philosophy for the true, omitting nothing towards Invention, Judgment and Use. For Invention, his Topicks and Methodics afford a plentiful supply, out of which may be taken Problems for probable Arguments. For Judgment, his first and second Analyticks: in the first, Propositions are examined; in the second, he treats exactly of their composition, and the form of Syllogism. To Use, belongs his Agonisticks, and his Books concerning Interrogation, and his Eristicks, and his Sophistick Elenchs, and of Syllogisms, and the like. Hitherto Laertius.

Of his Logick we have only these Books remaining, Of Categories, of Interrogation, Analyticks, Topicks, and Sophistick Elenchs. The first considers simple Terms: The second, Propositions: The rest Syllogisms, Demonstrative, Dialectick, and Sophistick. The Categories are placed first by the general consent of all Interpreters: neither is it to be doubted, but that the rest are disposed according to the genuine Method of Aristotle. For, in the beginning of his ^b Analyticks, he saith, We must speak of Syllogism before we come to speak of Demonstration, because

^b Lib. c. 2.

Syllogism is the more general. And in his ^c E. c. Cap. 2. *lenchs: Of Didascalick and demonstrative Syllogisms, we have spoken already in the Analyticks: Of the Dialectick and Pyraetick, in the Book immediately preceeding these: We come now to speak of the Agonistick and Eristick.*

CHAP. II.

Of Terms.

* **T**erms are of three kinds, Homonymous, * ^{Cap. 1.} *Synonymous, and Paronymous. Homonymous, whose name only is common, their Essence divers: Synonymous, whose name and definition are common to either: Paronymous have denomination from the same thing, but differ in case or termination.*

Synonymous, (or Univocal) terms, are reduced to ten general heads, called Categories.

1. † Substance, of two kinds: First, which is most properly Substance, is neither predicated of nor inherent in a Subject. ^{† Cap. 5.} *Second, Substances are Species and Genus's, which subsist in the first. The properties of first-substances are, 1. Neither to be in, nor predicated of a Subject. 2. To be all substances equally. 3. To signify this particular thing. 4. To have no contrary. 5. To admit no degrees of more or more or less. 6. To be susceptible of contraries.*

2. * Quantity, of two kinds; Discrete, as ^{* Cap. 6.} *Number; Continuous, as a Line. Their properties, 1. To have no contraries. 2. To admit no degrees of more or less. 3. d To denominate things equal or unequal.*

3. † Relatives, whose whole being is in some manner effected towards one another; their properties, 1. To have contraries, as Father and Son. 2. To admit degrees of more and less, as in kindled. 3. To follow one another mutually. 4. To be naturally together.

5. Quality,

e 4. *Quality*, from which things are denominated *Qualified*: It hath four kinds. 1. *Habit and Disposition*. 2. *Natural Power and Impotence*. 3. *Possible Qualities and Passions*. 4. *Form and Figure*. The Properties, 1. To have contraries, as black and white. 2. To admit intension or remission. 3. To denominate things, like or unlike.

f 5. *Action*. 6. *Passion*. Their Properties are, to admit contraries, to admit degrees of intension or remission.

7. *When*. 8. *Where*. 9. *Position*. 10. *Habit*. These admit not contraries, nor degrees of intension or remission.

Of those which cannot be reduc'd to any certain Category, are 1. *Opposites* and 2. *Precedents*. 3. *Cocquals*. 4. *Motion*. 5. *Possession*.

g Of *Oppositions* there are four kinds, *Relatives*, *Contraries*, *Extreams* in the same kind, as black and white. *Privatives*, as privation and habit, light and darkness: *Contradictories*, which affirm and deny, as learned, not learned.

CHAP. III.

Of Proposition.

a *Voice* is a sign of the Notions of the mind, as in the mind are two kinds of Intellection, one simple, expert of truth and falsity, the other either true or false: So in voice, some is simple, some complex.

b A *Noun* is a Voice signifying according to institution, whereof no part is significant by it self.

c A *Verb* is a Voice implying time, whereof no part is significant by it self.

d A *Speech*, *λογος*, is a voice signifying according to institution, whose parts are significant separate.

Of Speech, the enunciative only (called proposition) belongs to Philosophy, the precatory and imperative, to Rhetorick, Poetry, &c.

e Propositions are divided four ways; into simple and complex, into affirmative and negative, into universal, particular, indefinite and singular, into pure and modal; the modal is either necessary, possible, contingent, or impossible.

f Propositions have three accidents, *Opposition*, *Consuetation*, *Conversion*.

Opposition is either contradictory of a particular to an universal; or contrary, of an universal to an universal; or sub-contrary, of a particular Negative to a particular Affirmative.

Consuetation, (*ἀναλογία*) or *Æquipollens*, is the Consideration of those Affections of a Proposition, in respect whereof, two Propositions signifie together the same thing, and are together true or false.

Conversion is a transposition of the Terms, preserving the Affirmation, Negation, and verity of the Proposition: It is either Absolute, which reserves the same quantity, but alters the quality; or Partial, which reserves not the same Quantity.

CHAP. IV.

Of Syllogism.

a *Syllogism* is a Speech, in which some things being laid down, another necessarily follows. *Perfect Syllogism* is that which requireth no other to shew its power, clearness, and efficacy. *Imperfect* requires another to that purpose, by Conversion, or transposition of the Propositions.

b The *Matter* of Syllogism is three Terms, *c* the *Form* is the right Disposition of the Matter, according to Figure and Mood.

Figure is an apt disposition of the Medium with the extreams, apt for concluding a right. *Mood* is a disposition of Propositions, according to quantity and quality. There are three Figures.

The first, when the *Medium* is first *Subject*, then *Predicate*. It hath nine Moods, four Useful, five Useless and Illegitimate: Of the Useful, two are Universal, two particular.

The first. $\left\{ \begin{array}{l} \text{Every A is B.} \\ \text{Every C is A.} \\ \text{Therefore every C is B.} \end{array} \right.$

The second $\left\{ \begin{array}{l} \text{No A is B.} \\ \text{Every C is A.} \\ \text{Therefore no C is B.} \end{array} \right.$

The third. $\left\{ \begin{array}{l} \text{Every A is B.} \\ \text{Some C is A.} \\ \text{Therefore some C is B.} \end{array} \right.$

The fourth $\left\{ \begin{array}{l} \text{No A is B.} \\ \text{Some C is A.} \\ \text{Therefore some C is B.} \end{array} \right.$

c In the second Figure, the Medium is *Predicated* of both the Extreams. It hath 16 Moods, 4 true, 12 false and Illegitimate. Of the true, two are universal, two particular.

The first. $\left\{ \begin{array}{l} \text{No M is N.} \\ \text{Every O is N.} \\ \text{Therefore no O is M.} \end{array} \right.$

The second. $\left\{ \begin{array}{l} \text{Every M is N.} \\ \text{No O is N.} \\ \text{Therefore no O is M.} \end{array} \right.$

The third. $\left\{ \begin{array}{l} \text{No M is N.} \\ \text{Some O is N.} \\ \text{Therefore some O is not N.} \end{array} \right.$

The fourth. $\left\{ \begin{array}{l} \text{Every M is N.} \\ \text{Some O is not N.} \\ \text{Therefore some O is not M.} \end{array} \right.$

d In the third Figure, the Medium is *Sub-jected* to both Extreams. It hath 16 Moods, 10 false and Illegitimate; 6 Legitimate, which conclude particularly.

The

- The first. $\left\{ \begin{array}{l} \text{Every } P \text{ is } R. \\ \text{Every } P \text{ is } S. \\ \text{Therefore some } P \text{ is } S. \end{array} \right.$
- The second. $\left\{ \begin{array}{l} \text{No } P \text{ is } R. \\ \text{Every } P \text{ is } S. \\ \text{Therefore some } S \text{ is not } R. \end{array} \right.$
- The third. $\left\{ \begin{array}{l} \text{Some } P \text{ is } R. \\ \text{Every } P \text{ is } S. \\ \text{Therefore some } S \text{ is } R. \end{array} \right.$
- The fourth. $\left\{ \begin{array}{l} \text{Every } P \text{ is } R. \\ \text{Some } P \text{ is } S. \\ \text{Therefore some } S \text{ is } R. \end{array} \right.$
- The fifth. $\left\{ \begin{array}{l} \text{Some } P \text{ is not } R. \\ \text{Every } P \text{ is } S. \\ \text{Therefore some } S \text{ is not } R. \end{array} \right.$
- The fifth. $\left\{ \begin{array}{l} \text{No } P \text{ is } R. \\ \text{Some } P \text{ is } S. \\ \text{Therefore some } S \text{ is not } R. \end{array} \right.$

c Cap. 23.

e Every Syllogism ought to be framed in one of these three Figures; but those of the second and third being imperfect, ought to be reduced to the first, which is the most absolute and perfect.

f *Anal. Prior. lib. 2. c. 22, &c.*

f There are six other Forms of Argument, *Conversion of Terms, Induction, Example, Abduction, Instance, Enthymem.* All these have their Efficacy from the power of Syllogism, and are reducible to Syllogism.

As concerning the invention, power, and conversion of Syllogism, he is exact and curious to admiration.

CHAP. V.

Of Apodeictick (or demonstrative) Syllogism.

a *Anal. poster. lib. 1. c. 1.*

ALL discursive knowledge is made by a praportion of the things themselves whereof we discourse; for ratiocination is not concerning things unknown. *Demonstration* is a discursive knowledge, and therefore requireth three praportions. First, that the Subject is, and what it is in a rude confused manner. Secondly, what the prapredicate is, and what it signifies. Thirdly, that the Principles are true.

b Cap. 2.3

b To know, is to understand that a thing is, that this is cause thereof, and that it cannot be otherwise. *Demonstration* is a scientific Syllogism. *Demonstrative Science* is from true, first, immediate, more known causes of the conclusion First, as having none precedent, and being adequate to, and convertible with the effect. *Immediate* or *confectaneous*, as having no term betwixt to joyn them. *More known*, as being prapmisses to the conclusion, not to be demonstrated by any thing.

c Cap. 4.

c *Demonstrative Science* is of a thing necessity, whence the demonstration it self consists of necessary propositions; which necessity requireth explication of that which is prapdicted, of *all by by it self*, and which is *universal*.

Of *all*, is that which is attributed to every one, and at all times, as a living creature to a man:

By it self, as being of Essence, proper, competent *per se*, and competent to it self, for it self.

An *universal Attribute* is that which is in every one by it self, in as much as it is it self.

d *Demonstration* is of conclusions of *eternal d* *truth*, for they are universal propositions; whence it followeth, that neither demonstration nor Science are of perishable things; neither are definitions of such, which are the principles of demonstration.

That there is demonstration, it is not necessary to have recourse to *Plato's* Idea's separate from singulars; it is enough that there are common natures which are in singulars, and are prapdicted of them.

e It is one thing to know that a thing is so, another to know why it is so. Hence there are two kinds of demonstration, *διότι*, and *ὅτι*, the first is the true, and most perfect, of which hitherto.

f The other kind of demonstration, *viz. ὅτι*, *f* *Cap. 12.* is more imperfect; it is made two ways in the same Science: First, when the cause is demonstrated by the effect thus, *Stars which do not twinkle are nearest to the Earth; but, the Planets do not twinkle, therefore they are nearest to the Earth.* Secondly, when the effect is proved by a cause remote, and not reciprocal, or by an effect of the remote cause, as this, *every thing that breatheth is a living creature; but no Wall breaths, therefore no Wall is a living Creature.*

To know *διότι*, is proper to subalternate principle Sciences, as Geometry and Arithmetick, which contemplate the first proper causes; to know *ὅτι*, is the subalternate and inferiour, as Optick and Musick.

g Of all Figures, the first is most accommodated to knowledge, for that only concludes with an universal affirmative, and therefore in that only is a demonstrative *διότι*.

b Thus far concerning Science; the opposite to Science is *Ignorance*, which is twofold: One of *pure negation*, as when a Boy or ignorant fellow knows not that the Sun is greater than the Earth, because he is ignorant of Astrology. The other, of *depraved disposition*, as when an Astrologer or ignorant Optick believes, that things are as they seem, this is error, which erroneous ignorance is in false propositions, or in a Syllogism through a false medium.

Defect of Sense causeth Ignorance of pure negation; for if any sense be wanting, it is necessary that some science of sensibles be likewise wanting; for we learn all things either by induction or demonstration. *Induction* is made of singulars perceived by sense, *Demonstration* is of Universals, which are declared by Induction; wherefore the beginning of Science is from singulars, which are Sensibles. Hence it is impossible for a Man born blind to have the science of Colours. Yet no Science is next and immediately from Sense, for Sense is of Singulars, which are here, and now; but Science and Demonstration is of Universals, which are every where, and ever, not subject to Sense. Yet, Sense conduceth to Science and Demonstration, for as much as an Universal is collected from Particulars known by Sense.

C H A P. VI.

Of Dialectick Syllogism.

Topic. lib. 1. a **D**ialectick Syllogism is that which concludes from Probables; Probables are those things which appear such to all, or to most, or only to the Wise and most Eminent.

b Cap. 3. *b* Dialectick is a conjectural Art, as Rhetorick and Medicine; therefore (like those) it attaineth not always its end; it is enough for a Dialectick, that he omit nothing of his Art for concluding probably.

c Cap. 4. *c* All Disputation is of things controverted, either by Problem or Proposition. A Problem questions both parts, as *a living Creature, is it the Genus of Man or not?* A Proposition questions but one part, as, *is not living Creature the genus of Man?* Every Proposition and Problem is either *genus*, (under which is contained the difference) *definition*, *proprium*, or *accident*.

d Cap. 15, &c. *d* Definition is a Speech, signifying what a thing is. *Proprium* is that which declareth, not what a thing is, but is in it only, and Reciprocal with it. *Genus* is that which is pradicated, *in quid*, of many that differ specifically. *Accident* is that which is neither Definition, nor Genus, nor *Proprium*, and may be, or not be in its subject.

e Cap. 10. *e* Dialectick Proposition is a probable interrogation, received by all or many, or the most excellent, yet so as it is not wholly alienate from the common Opinion.

f Cap. 11. *f* Dialectick Problem is threefold; *Practick* or *Moral*, pertaining to Election or Repulse; *Theoretick*, pertaining to Science; *neutral*, which conduceth to the rest. *viz.* Logick.

g Cap. 12. *g* Dialectick Argument is twofold, *Induction* and *Syllogism*.

h Cap. 13. &c. *h* Arguments are gained by four Instruments, 1. *Choice of Propositions*. 2. *Distinction of Æquivoques*. 3. *Invention of differences*. 4. *Consideration of Similitudes*.

Problems are either universal or particular; the same places which confirm or confute one, confirm or confute the other. From *proprium*, *genus*, and *definition*, is immediately and simply made *Demonstration*, but not from *Accident*, because that is external, not necessarily and intimately inherent in the Subject. We shall not here say any thing of the multitude of places he hath invented, which are more necessary to those that will learn the Art, than suitable to this abridgment.

The Disputant must first find out a place (or medium) secondly, dispose and question it within himself; thirdly, propose it to his Adversary.

In Disputation against the Learned, Syllogism is to be used, against the Vulgar Induction.

lib. 8. Cap. 4. *i* The Office of the Opponent is to compell his Respondent to this incredible and absurd consequent from his *Thesis*; of the Respondent to take care, that nothing absurd be collected from his *Thesis*.

C H A P. VII.

Of Sophistick Syllogism.

a **A**N *Elench* is a Syllogism which contradicts *a Sophist.* the conclusion asserted by the Respon- *Elench. cap. 1.* dent. Of *Elenchs* some are true, some are false; that proper to a *Sophos*, whose Office is to pursue and defend Truth, and to discover and confute Falshood; this to a *Sophist*, who from seeming Wisdom acquireth gain, and had rather seem than be.

b A *Sophist* hath five ends, whereto he endeavoureth to reduce his adversary; the first is *Elench*, or Redargution *c* of which there are two kinds; one in the word, the other out of *c Cap. 3.* the word.

Sophisms in the word, are fix. 1. *Homonymie*, as that ill is good, for *τὰ δέοντα* are good, but ills are *τὰ δέοντα*. The fallacy consists in the word *τὰ δέοντα*, which signifies sometimes necessarily inevitable, sometimes beneficial.

2. By *Amphibolic*, as *βέκεσαι λαβὴν μὲ τὸς πολεμίους*; which signifies either that the Enemies would take me, or that I would take the Enemies.

3. By *Composition*, as *τὸ δύνασθαι καθήμενον βαδίζειν*, that he who sits can walk, which is true in a divided sense, not in a compounded.

4. By *Division*; as five are two and three, therefore even and odd.

5. By *Ascent*, which is not so easily done in Logick as in Poetry.

6. By *Figure of the word*, when things which are not the same, are Interpreted in the same manner, as a Male for a Female.

d *Sophisms out of the word* are seven. 1. From *d Cap. 4.* *accident*, when that which is demanded is equally competent to the thing, and to the accident; for whereas many things are competent to the same, it is not necessary that they be all in the subject and Pradicate, as, *if Coriscus differs from a Man, he differs from himself, for he is a Man.*

2. From that which is Simple, or *κατὰ πᾶν*, when that which is said in part is taken as of all, as, *if that which is not, is imaginative, that which is not, is.*

3. From Ignorance of the *Elench*, when not understanding the true nature of a contradiction, they think that to be an absolute contradiction which is none, omitting either the same respect in the thing, or the same respect of the same thing, or the simplicity, or the time. To this all *Sophisms* may be reduced.

4. Of the *Consequent*; when we allow those to be true Reciprocal Consequences which are not such, as, *it is yellow, therefore it is Honey; and the contrary, it is not yellow, therefore it is not Honey.*

5. Of *petition of the principle*, neither by requiring that to be granted, which was to be proved, or proving the same by the same, the terms only changed; as *the Soul is immortal because it is not subject to death.*

6. Of a *not-cause as a Cause*, as when that is taken to be the Cause of the thing or conclusion, which is cause of neither; as *Arms disturb Peace, therefore they are to be taken away.*

7. Of *Plurality of Interrogations as one*, when many things are asked in one; as *Justice and Impiety, are they Vertues or not?*

Hitherto

Hitherto of Elenchs; the four other Ends whereto a Sophist endeavours to reduce his adversary, are, *Falsity, Paradox, Solæcism, and Tautology.*

Sophisms are solved either by *distinction* or *negation.*

Thus much may serve for a flight view of his *Logick*, whereof we have but few Books left, in respect of the many which he wrote upon that part of Philosophy.

THE SECOND PART.

CHAP. I.

Of Physick.

NOT to question the method of *Aristotle's* Books of Physick, much less their Titles (as some, to make them better agree with *Laertius's* Catalogue, have done) and least of all their Authority, with *Patricius*; we shall take them in that Order which is generally received; according to which, next *Logick*, is placed *Physick*.

a Metaphys.
5. 1.

a *Physick* is a Science concerning that substance which hath the principle of Motion and Rest within it self.

The Physical Books of *Aristotle*, that are extant, treat of these nine general heads. *Of the Principles of natural things: Of the common affections of natural things: Of Heaven: Of Elements: Of the Action and Passion of Elements: Of Exhalation: Of Plants: Of Animals: Of the Soul.*

CHAP. II.

Of the Principles of Natural Bodies.

a Phys. lib. 1.
cap. 3. 4.

THE Principles of Natural Bodies are not one, as *Parmenides* and *Melissus* held; nor *Homoimerias*, as *Anaxagoras*; nor *Atomes*, as *Leucippus* and *Democritus*; nor *sensible Elements*, as *Thales*, *Anaximander*, *Anaximenes*, *Empedocles*; nor *Numbers*, or *Figures*, as the *Pythagoreans*, nor *Ideas*, as *Plato*.

b Cap. 5.

b That the Principles of things are *Contrary* (privately opposite) was the joyn't opinion of the Ancients, and is manifest in Reason. For Principles are those which neither are mutually of one another, nor of others, but of them are all things. Such are, first, contraries; as being first, they are not of any other; as contrary, not of another.

c Cap. 6.

c Hence it follows, that being contrary they must be *more than one*, but *not Infinite*, for then natural things would not be comprehensible by Reason: yet more than two; for of contraries only nothing would be produced, but that they would rather destroy one another.

d Cap. 7.

d There are therefore *three* Principles of Na-

tural Bodies; two contrary; *Privative* and *Form*; and one common subject of both, *Matter*. The constitutive Principles are *Matter* and *Form*; of privation Bodies consist not, but accidentally, as it is competent to *Matter*.

c Things are made of that which is *Ens* potentially, *Materia prima*, not of that which is *Ens* actually, nor of that which is *Non ens* potentially, which is pure nothing. *f* *Matter* is neither generated nor corrupted. It is the first infinite subject of every thing, whereof it is framed primarily, in its self and not by accident, and into which it at last resolveth. To treat of *Form* in general, is proper to *Metaphysicks*.

CHAP. III.

Of Nature, and the Causes of Natural Bodies.

OF Being, some are by Nature, as *Plants*, *a* others from other causes; those have in themselves the principle of their Motion, these have not. Nature is a Principle and Cause of the motion and rest of that thing wherein it is primarily, by it self, and not by accident. *Material Substances* have Nature; *Natural Properties* are according to Nature: Nature is twofold, *Matter* and *Form*; but *Form* is most Nature, because it is in *Act*.

b Of Causes are four kinds; the *Material*, of which a thing is made; the *Formal*, by which a thing is made, or reason of its Essence; The *Efficient*, whence is the first Principle of its mutation or rest, as a Father; the *Final*, for which end it is made; as health is to walking. Causes are immediate or remote, principal or accidental; actual or potential; particular or universal.

Fortune and Chance are Causes of many effects. Fortune is an accidental Cause in those things which are done by Election for some end; Chance is larger; an accidental cause in things which are done for some end, at least that of Nature. They are both efficient.

Nature

d Cap. 8. *d* Nature acts for some end: not temerari-
ously, or casually; for those things which are done
by nature, are always or for the most part done
in the same manner, yet sometimes she is fru-
strated of her end, as in Monsters, which she
intends not.

c Cap. 9. *e* Necessity is twofold: absolute, which is from
matter; Conditional, which is from the end or
form: both kinds are in natural things.

C H A P. IV.

*Of the Affections of Natural Bodies, Motion,
Place, Time.*

*Physic. lib. 3.
cap. 2.* **M**otion is of a thing which is not such, but
may be such, the way or act by which
it becometh such, as curing of a Body which is
not in health, but may be in health, is the way
and act by which it is brought to health. Neither
is it absurd, that the same thing should be both
in act and power, as to different respects; for the
thing moved, as Water in warming is in act, as to
the heat which it hath, in power, as to the great-
er heat which it is capable of.

b Cap. 7. *b* Infinite is that which is pertransible with-
out end, such an infinite in act there is not: not
amongst simple Bodies, for the Elements are con-
fin'd to certain number and place: Neither
amongst mixt Bodies, for they consist of the
Elements which are finite. But, there are things
infinite potentially, as in addition; Number,
which may be augmented infinitely, in division;
Magnitude, which may be divided infinitely;
in time, and continued succession of Genera-
tion.

c Lib. 4. cap. 3. *c* The properties of place are, that it con-
tains the thing placed: that it is equal to, and
separable from the thing placed: that the place
and the thing placed are together: That it hath
upwards or downwards, and the like differen-
ces: that every Physical Body tends naturally
to its proper place, and there resteth.

Place is the immediate immovable Super-
ficies of a continent Body. Those things which
are contained by another Body are in place:
But those which have not any other Body a-
bove or beyond them, are not properly in
place. Bodies rest in their natural places,
because they tend thither as a part torn off
from the whole.

d Cap. 8. *d* Vacuum is place void of Body: such a
Vacuum there is not in Nature, for that would
destroy all motion, seeing that in Vacuum there
is neither upwards nor downwards, backwards
nor forwards. Nor would there be any reason,
why Motion should be to one part more than to
another. Moreover it would follow, that it were
impossible for one body to make another recede,
if the triple dimension, which bodies divide,
were vacuous. Neither is the motion of rare
bodies upwards caused by vacuity, for that mo-
tion is as natural to light bodies, as to move
downwards is too heavie.

e Cap. 10. 11. *e* Time is the number of motion by before and
after. Those two parts of Time are conjoin-
ed by ($\tau\delta\ \nu\omega$) the present, as the parts of a
line are by a point. Time is the measure of rest
as well as of motion: for the same measure

which serves for the privation, serves for the ha-
bit. All motion and mutation is in time: for
in every motion there is swiftness or slowness,
which is defined by Time. The Heavens, Earth,
Sea, and other sensibles, are in time, for they are
movable.

f Time being a numerate number, exists not *f* Cap. 14.
without a numerant, which is the Soul. The
measure of time and other things, is that which
measurcth the first and most equal motion: this
is the motion of the *Primum mobile*, for the first
in every kind is the measure of the rest.

C H A P. V.

Of the Kinds and Properties of Motion.

a **M**otion appertains to three Categories, to *a* *Phys. l. 5.
cap. 2.* Quantity, accretion and diminution; to
Quality, alteration; to Where, local motion.

Rest is a privation of motion in a body, when,
where, and how it is apt for motion.

b As all magnitude is primarily, and *per se*, *b* *Lib. 6. cap. 11.*
continuous and divisible into infinite, so is all
motion, by reason of magnitude, and time it self.
For whatsoever is not composed of indivisibles,
is divisible into infinite; but no continuous thing
is composed of indivisible things, for it is quan-
titative, whereas indivisibles having no extremes
or parts, can neither be conjoined by continuous
nor contiguous motion.

c Yet it followeth not, that if there be infi- *c* *Cap. 2.*
nite magnitude, there can be no motion; for it
is not infinite in act, but in power, as are like-
wise time and motion.

d Neither is there any motion in the instant, *d* *Cap. 3.*
 $\tau\delta\ \nu\omega$ for nothing is moved or resteth, but in time.

e Motion therefore is divisible, as well in re- *e* *Cap. 4.*
spect to the time; wherein it is made, as in re-
spect to the thing wherein it inheres; as both
these are always indivisible, so may motion it
self be divided according to these.

f Whatsoever is changed, as soon as it is *f* *Cap. 5.*
changed, must necessarily be in the (next) term
to which, for it leaveth the state or form in which
it was, and assumeth that to which it tendeth;
yet tho' in motion, there is a first motion of
perfection, wherein we may truly say, the mu-
tation is made, yet there is no first motion of
inception.

g Whatsoever is moved in any whole time, *g* *Cap. 6.*
is necessarily moved in every part of that time.

h All motion is finite, for it is in time, which *h* *Cap. 7.*
is finite.

Whatsoever is thus proper to motion, is to be
applied also to rest and quiescence.

C H A P. VI.

Of the first Mover.

a **W**hatsoever is moved must necessarily be *a* *Lib. 7. cap. 13.*
moved by another, either external or *2, 5, 6, 7.*
internal. But lest this progression be into infi-
nite, we must of necessity at last come to one
first mover, which is not moved by another.
This first mover, the Cause and Origen of all
motion, is Immoveable, one, eternal, and indivi-
sible, void of all quantity.

Hitherto of Elenchs; the four other Ends whereto a Sophist endeavours to reduce his adversary, are, *Falsity*, *Paradox*, *Solæcism*, and *Tautology*.

Sophisms are solved either by *distinction* or *negation*.

Thus much may serve for a slight view of his *Logick*, whereof we have but few Books left, in respect of the many which he wrote upon that part of Philosophy.

THE SECOND PART.

CHAP. I.

Of Physick.

NOT to question the method of *Aristotle's* Books of Physick, much less their Titles (as some, to make them better agree with *Laertius's* Catalogue, have done) and least of all their Authority, with *Patricius*; we shall take them in that Order which is generally received; according to which, next *Logick*, is placed *Physick*.

a *Metaphys.*
5. 1.

a *Physick* is a Science concerning that substance which hath the principle of Motion and Rest within it self.

The Physical Books of *Aristotle*, that are extant, treat of these nine general heads. *Of the Principles of natural things*: *Of the common affections of natural things*: *Of Heaven*: *Of Elements*: *Of the Action and Passion of Elements*: *Of Exhalation*: *Of Plants*: *Of Animals*: *Of the Soul*.

CHAP. II.

Of the Principles of Natural Bodies.

a *Phys. lib. 1.*
cap. 3. 4.

THE Principles of Natural Bodies are not one, as *Parmenides* and *Melissus* held; nor *Homoimerias*, as *Anaxagoras*; nor *Atomes*, as *Leucippus* and *Democritus*; nor *sensible Elements*, as *Thales*, *Anaximander*, *Anaximenes*, *Empedocles*; nor *Numbers*, or *Figures*, as the *Pythagoreans*, nor *Ideas*, as *Plato*.

b *Cap. 5.*

b That the Principles of things are *Contrary* (privately opposite) was the joyned opinion of the Ancients, and is manifest in Reason. For Principles are those which neither are mutually of one another, nor of others, but of them are all things. Such are, first, contraries; as being first, they are not of any other; as contrary, not of another.

c *Cap. 6.*

c Hence it follows, that being contrary they must be *more than one*, but *not Infinite*, for then natural things would not be comprehensible by Reason: yet more than two; for of contraries only nothing would be produced, but that they would rather destroy one another.

d *Cap. 7.*

d There are therefore *three* Principles of Na-

tural Bodies; two contrary, *Privative* and *Form*; and one common subject of both, *Matter*. The constitutive Principles are *Matter* and *Form*; of privation Bodies consist not, but accidentally, as it is competent to *Matter*.

c Things are made of that which is *Ens* potentially, *Materia prima*, not of that which is *Ens* actually, nor of that which is *Non ens* potentially, which is pure nothing. *f* *Matter* is neither generated nor corrupted. It is the first infinite subject of every thing, whereof it is framed primarily, in its self and not by accident, and into which it at last resolveth. To treat of *Form* in general, is proper to *Metaphysics*.

CHAP. III.

Of Nature, and the Causes of Natural Bodies.

OF Being, some are by Nature, as *Plants*, *a* *Phys. lib. 2.* others from other causes; those have in themselves the principle of their Motion, these have not. Nature is a Principle and Cause of the motion and rest of that thing wherein it is primarily, by it self, and not by accident. *Material Substances* have Nature; *Natural Properties* are according to Nature: Nature is twofold, *Matter* and *Form*; but *Form* is most Nature, because it is in Act.

b Of Causes are four kinds; the *Material*, of which a thing is made; the *Formal*, by which a thing is made, or reason of its Essence; The *Efficient*, whence is the first Principle of its mutation or rest, as a Father; the *Final*, for which end it is made; as health is to walking. Causes are immediate or remote, principal or accidental; actual or potential; particular or universal.

Fortune and Chance are Causes of many effects. *Cap. 4. 5.* Fortune is an accidental Cause in those things which are done by Election for some end; Chance is larger; an accidental cause in things which are done for some end, at least that of Nature. They are both efficient.

Nature

d Cap. 8.

*d Nature acts for some end: not temerari-
ously, or casually; for those things which are done
by nature, are always or for the most part done
in the same manner, yet sometimes she is fru-
strated of her end, as in Monsters, which she
intends not.*

c Cap. 9.

*e Necessity is twofold: absolute, which is from
matter; Conditional, which is from the end or
form: both kinds are in natural things.*

CHAP. IV.

*Of the Affections of Natural Bodies, Motion,
Place, Time.*

Physic. lib. 3.
cap. 2.

MOtion is of a thing which is not such, but
it may be such, the way or act by which
it becometh such, as curing of a Body which is
not in health, but may be in health, is the way
and act by which it is brought to health. Neither
is it absurd, that the same thing should be both
in act and power, as to different respects; for the
thing moved, as Water in warming is in act, as to
the heat which it hath, in power, as to the great-
er heat which it is capable of.

b Cap. 7.

*b Infinite is that which is pertransfible with-
out end, such an infinite in act there is not: not
amongst simple Bodies, for the Elements are con-
fin'd to certain number and place: Neither
amongst mixt Bodies, for they consist of the
Elements which are finite. But, there are things
infinite potentially, as in addition; Number,
which may be augmented infinitely, in division;
Magnitude, which may be divided infinitely;
in time, and continued succession of Genera-
tion.*

c Lib. 4. cap. 3.

*c The properties of place are, that it con-
tains the thing placed: that it is equal to, and
separable from the thing placed: that the place
and the thing placed are together: That it hath
upwards or downwards, and the like differen-
ces: that every Physical Body tends naturally
to its proper place, and there resteth.*

*Place is the immediate immovable Super-
ficies of a continent Body. Those things which
are contained by another Body are in place:
But those which have not any other Body a-
bove or beyond them, are not properly in
place. Bodies rest in their natural places,
because they tend thither as a part torn off
from the whole.*

d Cap. 8.

*d Vacuum is place void of Body: such a
Vacuum there is not in Nature, for that would
destroy all motion, seeing that in Vacuum there
is neither upwards nor downwards, backwards
nor forwards. Nor would there be any reason,
why Motion should be to one part more than to
another. Moreover it would follow, that it were
impossible for one body to make another recede,
if the triple dimension, which bodies divide,
were vacuous. Neither is the motion of rare
bodies upwards caused by vacuity, for that mo-
tion is as natural to light bodies, as to move
downwards is too heavie.*

e Cap. 10. 11.

*e Time is the number of motion by before and
after. Those two parts of Time are conjoyn-
ed by (τὸ νῦν) the present, as the parts of a
line are by a point. Time is the measure of rest
as well as of motion: for the same measure*

which serves for the privation, serves for the ha-
bit. All motion and mutation is in time: for
in every motion there is swiftness or slowness,
which is defined by Time. The Heavens, Earth,
Sea, and other sensibles, are in time, for they are
movable.

*f Time being a numerate number, exists not
without a numerant, which is the Soul. The
measure of time and other things, is that which
measurcth the first and most equal motion: this
is the motion of the Primum mobile, for the first
in every kind is the measure of the rest.*

CHAP. V.

Of the Kinds and Properties of Motion.

MOtion appertains to three Categories, to
Quantity, accretion and diminution; to
Quality, alteration; to Where, local motion.

*Rest is a privation of motion in a body, when,
where, and how it is apt for motion.*

*b As all magnitude is primarily, and per se, b Lib. 6. cap. 1:
continuous and divisible into infinite, so is all
motion, by reason of magnitude, and time it self.
For whatsoever is not composed of indivisibles,
is divisible into infinite; but no continuous thing
is composed of indivisible things, for it is quan-
titative, whereas indivisibles having no extremes
or parts, can neither be conjoyned by continuous
nor contiguous motion.*

*c Yet it followeth not, that if there be infi- c Cap. 2:
nite magnitude, there can be no motion; for it
is not infinite in act, but in power, as are like-
wise time and motion.*

*d Neither is there any motion in the instant, d Cap. 3:
τὸ νῦν for nothing is moved or resteth, but in time.*

*e Motion therefore is divisible, as well in re- e Cap. 4:
spect to the time; wherein it is made, as in re-
spect to the thing wherein it inheres; as both
these are always indivisible, so may motion it
self be divided according to these.*

*f Whatsoever is changed, as soon as it is f Cap. 5:
changed, must necessarily be in the (next) term
to which, for it leaveth the state or form in which
it was, and assumeth that to which it tendeth;
yet tho' in motion, there is a first motion of
perfection, wherein we may truly say, the mu-
tation is made, yet there is no first motion of
inception.*

*g Whatsoever is moved in any whole time, g Cap. 6:
is necessarily moved in every part of that time.*

*b All motion is finite, for it is in time, which b Cap. 7:
is finite.*

*Whatsoever is thus proper to motion, is to be
applied also to rest and quiescence.*

CHAP. VI.

Of the first Mover.

Whatsoever is moved must necessarily be
moved by another, either external or
internal. But lest this progression be into infi-
nite, we must of necessity at last come to one
first mover, which is not moved by another.
This first mover, the Cause and Origen of all
motion, is Immoveable, one, eternal, and indivi-
sible, void of all quantity.

b Lib. 8. cap. 6. *b Immovable*, for whatsoever things are moved, are either immediately moved by a first immovable mover, or by some other which is likewise moved by another, until at last we come to some first mover, for nothing can move it self, unless there be a first mover: but of infinites there is no first.

c Cap. 6. *c One*, for he is most perfect, as being Author of the most perfect and most simple motion, that of the *primum mobile*. Besides, the best in every kind is one: for good is simple, ill multiplicitious.

d Cap. 7. *d Eternal*, for motion it self is eternal, as appears thus: The mover and the moveable must either be from Eternity, or have had beginning in some time: if they began at any time, it must have been by motion, and consequently before the first motion there was another, by which the mover and moveable began, which were absurd. Again, if they were eternal, yet without motion, it must be either by reason of the inaptitude of the moveable, or of its remoteness from the mover. But neither could the moveable be made more apt, or brought nigher to the mover except by the motion, whence would follow that there was a motion before the first motion. Again, Time, the measure of motion, is eternal, therefore motion it self is such. That time is eternal (besides that it is the general agreement of Philosophers) is thus proved: it cannot be conceived without *τὸ νῦν*, the instant, which is intermediate betwixt the past and future, both the end of one, and the beginning of the other; but, if Time had a beginning, this *τὸ νῦν* would have been only a beginning, not end; if Time should have an end, this instant would be only an end, not a beginning, both which are repugnant to the nature of a moment.

e Lib. 8. cap. 10. *e Indivisible*, void of quantity; the proof whereof is grounded upon three Theoremes. 1. That no finite mover can move in infinite time, therefore the first mover is infinite. 2. That there cannot be infinite power in finite quantity; therefore the first mover is incorporeal. 3. That there cannot be finite power in that which is infinite, therefore the first mover is infinite in power. Hence may be collected, that it is impossible the first mover should be divisible, corporeal, or affected with quantity: for if he had any, it would either be infinite, of which kind actual there is none: or finite, wherein could not consist his infinite power.

CHAP. VII.

Of HEAVEN.

HAVING treated of the Principles, Causes, and Affections of natural Bodies in general, he proceeds next to particulars.

a De Caelo. lib. 1. cap. 1. *a* The World is perfect, because it consists of Bodies which are perfect, and comprehendeth all perfection, it self not being comprehended by any other.

b Cap. 2. *b* Of Bodies, some are *simple*, others *compounded of the simple*. All natural bodies are moveable locally *per se*. There is a twofold *local motion*, *simple*, which is competent to simple bodies: and *mixt*, which is to the mixt.

Hence it followeth, that there are so many kinds of simple bodies, as variations of simple motion: for of one simple body, there is one proper motion. Simple, local Motion is twofold: *circular*, about the center, and *right*: the right is either upwards from the center, or downwards to the center, and both these either simply, or *κατὰ τὸ*. This fourfold variation of right motion, evinceth that there are four simple bodies called *Elements*: circular motion must be proper to some other first essence, different from the constitutions of the other four simple bodies, more divine and precedent to all the rest: This is *Heaven*.

e Heaven hath neither gravity nor levity: this *e Cap. 3.* is manifest from its motion which is circular, not from the center which is proper to light things, nor to the center, as is proper to heavie, but about the center.

Heaven is void of Generation, and Corruption, and consequently of accretion, diminution and alteration, for it hath no contrary; it is therefore the first body, not to be consumed by time and age.

d No body can be infinite, therefore the world it self is not infinite, neither is there any body beyond it infinite, nor intelligible or mathematical. *d Cap. 5. 7.*

e There is but one World, for if there were more, the Earth of one would move to the Earth of the other (as being of one kind) and ascend out of its proper place. *e Cap. 2.*

f The World is eternal; whatsoever is eternal is ingenerate and incorruptible. Plato therefore erred, in affirming the World to be generated, but incorruptible. If he meant that as it was generated, it is by nature corruptible, yet shall never be actually dissolved, because of the eternal cause of its conservation, God; he erreth also, for then there would be something that should be always, and yet could not be always. *f Cap. 12.*

g Heaven is void of Labour (*ἀπονέου*) for it hath no contrary to retard its motion. *g Lib. 2. cap. 3.*

b Heaven hath the threefold difference of position, upwards and downwards, backwards, right and left, for these are proper to all animate things which have the principle of motion within themselves. The right side of Heaven is the *East*, for thence begins its motion; the left side the *West*; and consequently the Arctick Pole is lowermost, the Antartick uppermost; forwards our Hemisphere, backwards the other. *b Cap. 2.*

i Heaven naturally moveth circularly, but this *i cap. 3.* circular motion is not uniform throughout all Heaven, for there are other Orbs which move contrary to the *primum mobile*; that there may be a vicissitude in sublunary things, and generation and corruption.

k Heaven is *Spherical*, for to the first Body the first figure is most proper. If it were quadrangular, triangular, or the like; the angles would sometimes leave a space without a body, and occupate another space without a body. The motion of Heaven is circular, as being the measure of all others, therefore most compendious and swiftest. *k Cap. 4.*

l The motion of the *primum mobile* is equal and uniform, for it hath neither beginning, middle, nor end; the *primum mobile* and first mover being eternal in both, and subject to no variation. *l Cap. 1.*
Stars

m Cap. 7.

^m Stars are of the same Body with that wherein they are carried, but more thick and compact; they produce warmth and Light in inferiour things through friction of the Air by their Motion; for swift motion fires Wood, and melts Lead, yet the Spheres themselves are not heated, but the Air only, and that chiefly by the Sphere of the Sun, which by his accession towards us, increaseth the heat, his Beams falling more directly, and with double force upon us.

n Cap. 8.

ⁿ The Stars being infixed in the Heavens, are mov'd not by themselves with a proper motion, as Fishes in the Water, and Birds in the Air, but according to the motion of their Orbs. Otherwise those in the eighth Sphere would not be always be æquidistant from one another; neither would the Stars have always the same side turning towards us, as we see the Moon hath.

The *primum mobile* is carried about with the swiftest motion; the seven Orbs of Planets under it, as they are nearer to it, are carried so much the more swiftly about by the motion thereof; and as they are further distant, more slowly. Whence by how much the nigher they are to the *primum mobile*, so much the slower is their proper motion, because it is contrary to that of the *primum mobile*, as being from East to West.

o Cap. 11.

^o The Stars are round, for that figure is most unapt for Self-Motion: We see the Moon is round by her Orbicular Sections; therefore the other Stars are so likewise, for the reason is the same in all.

p Cap. 13. 14.

^p The Centre of Heaven is the Earth, round, seated immoveable in the midst; which together with the Sea makes up one Globe.

C H A P. VII.

Of Elements.

a De Cælo.
lib. 3. cap. 3.

^a THE Element of Bodies is a simple Body. into which other Bodies are divided, in which it is either actually or potentially; as in Flesh, Wood, and the like, there is Fire and Earth potentially; for into these they are segregated, but actually they are not; for then should the flesh and wood be segregated.

Whereas every natural Body hath a proper motion. Motions are partly simple, partly mixt; the mixt proper to mixt Bodies, the simple to simple: It is manifest that there are simple Bodies, for there are simple motions; the circular proper to Heaven, the right to the Elements.

b Cap. 5.

^b The Elements are not Eternal; for they are dissolved with reciprocal mutations, and perish, and are mutually generated of one another.

c Lib. 4. cap. 1.

^c The motive qualities of the Elements are Gravity and Levity. Heavy is that which is apt to be carried downwards to the Center or midst of Heaven; Light is that which is apt to be carried upwards towards the extremities of Heaven. These are either simple or comparative. *Simply heavy* is that which is below all, as the Earth; *Simply light*, is that which is above all, as the Fire; *Comparatively heavy and light* are those in which are both these; above some, below others, as Air and Water. From these have mixt things, gravity and levity, the heavy are carried downwards to a definite medium, the light

upwards to a definite extremity, for nothing tends to infinite. Whence it followeth, that two Elements are extremely contrary, simply heavy, and simply light, Fire and Earth, which tend to contrary places. Betwixt these are two means, participating of the nature of each extremity, Air and Water. Those Elements which are highest and lightest, are most perfect, and have the nature of Forms in respect of the Inferiour, because these are contained by those; to be contained, is the property of matter; to contain, of form.

^d Hence it follows, that there are four kinds of particular second matter, differing by the accidental differences of heat, cold, humidity, siccity, levity and gravity, (simple and comparative) though there be but one common matter of them all; for they are made mutually of one another. The mean Elements are heavy in their proper places; for Earth being taken away, Water tending downwards, succeeds in its room; Air descends into the place of Water, but not contrariwise; for Water ascends not into its place of Air, unless by force. In the extremity it is otherwise; for the Air being taken away, the Fire will not descend into its place, nor the Earth ascend into the place of Water or Air; for Fire is not heavy, nor Earth light in their natural place, because they are Extremity Elements.

d Cap. 5.

^e Figure conduceth to the swiftness or slowness of motion either upwards or downwards, but is not simply, and in it self the cause of motion; so an acute Figure cuts the medium swiftly, a broad obtuse Figure slowly. Hence a thin plate of Lead or Iron will swim on Water, because it comprehends much of the subjected Body, which it cannot easily divide or penetrate.

e Cap. 6.

C H A P. VIII.

Of Generation, Corruption, Alteration, Augmentation, and Diminution.

^a There is a perpetual succession of Generation, as well simple as accidental, which proceeds from two Causes; *Efficient*, the first mover, and the Heavens, always moving, and always moved; and *Material*, the first matter, of which, being *non-ens* actually, *ens* potentially, all things generable and corruptible consist. This is incorruptible in its self, susceptible of all forms, whereby the corruption of one natural substance becometh the generation of another, whatsoever matter remaineth upon the Corruption, being assumed towards the generation of another.

a De gener.
or corrup.
lib. 1. cap. 3.

Generation and Corruption are two-fold, *simple*, of a substance, *κατὰ τὴν οὐσίαν*, of an accident, generation of the less noble substance is called generation *κατὰ τὴν οὐσίαν* in respect of the more noble, as that of Earth in respect of Fire.

Corruption always succeedeth Generation, because the Term, *to which* of Corruption (*viz. non-ens*) is the Term *from which* of Generation; and the Term *to which* of Generation (*viz. ens* in act) is the Term *from which* of Corruption. The matter of that which is Generated, and that which is corrupted is the same, forasmuch as they are and may be made reciprocally of one another, as Air of Water, Water of Air; but differently disposed. I i 2 *Alte-*

b Cap. 4.

b Alteration and Generation are different mutations; in alteration the subject remaineth entire, the affections only are changed, as of sick, sound; in generation the whole is changed, not any sensible subject remaining. Alteration is a mutation according to quality; *augmentation* and *diminution*, according to quantity, *local motion* according to place.

c Cap. 5.

c Augmentation and diminution differ from other mutations; first, in the object, generation and corruption concerns substances: Alteration, quality, place; augmentation and diminution quantity. Again, in the manner, that which is generated, or corrupted, or altered, not necessarily changeth place, but that which augments or diminisheth, in some manner changeth place, for it is bigger or lesser.

Augmentation is an addition to præexistent quantity; *diminution* a detraction. Whatsoever is augmented or decreased, is augmented or decreased according to every part thereof, by reception of something throughout all parts; detraction on the contrary. The animate Body encreaseth, but not the aliment, for the living creature remaineth, the aliment is converted into the substance of the living creature. Hereupon that which is augmented is like unto that which is altered, for both of these remain. All parts of a living creature are augmented; the similar first, as bones and flesh; then the dissimilar, as consisting of the others.

Augmentation is made by accession, or something according to form, not according to matter; for by it the whole is augmented and made more such. Accession of parts, according to matter, is not augmentation, for by materials only (destitute of that form, which the parts to be augmented have) the whole living creature cannot encrease. Aliment therefore, whereby the living creature is augmented, must be the same potentially which the thing augmented is in act. At first, it is contrary, and dissimilar, being in power the part of a living creature, in act something else: at last it becometh assimilate to the living creature, taking the form of a part (by aggeneration) through the digestive power of the animate body, which changeth the aliment into its own substance.

For this reason augmentation presupposeth nutrition. *Nutrition* is, when the aliment as substance is converted into the same substance of the living creature. Augmentation, when the same aliment as quantitative, is added to the quantity of the living creature. Hence a living creature as long as it is sound, is always nourished, but not always augmented. As that which is added is potentially quantitative flesh, so it can augment flesh; as it is potentially flesh only, so it nourisheth; which when it can only do (as when so much Wine is poured into Water that it turns all into Water) then there is a diminution of the quantity, but the form remaineth.

CHAP. X.

Of Action and Passion.

a **C**ontact is of several kinds, *Mathematical*, ^{a De gener. & corrupt. lib. 1.} by contiguity; *Physical*, when the extremes of several Bodies meet, and mutually act and suffer; *virtual*, by power, and metaphorical.

b The mutual action and passion of Physical ^{b Cap. 7.} contract is betwixt things, partly unlike as to their form, partly like as to their genus (for they are contraries) matter; each endeavouring to reduce the patient to his own likeness, as fire, wood.

Every *Physical agent* in acting, suffers from the Patient, for both the Agent and Patient are active, endued with Forms Elementary, susceptible of contraries. But as the first mover is *immoveable*, so is the first agent *impassible*.

c Every thing acts, as it is such, actually: ^{c Cap. 9.} suffers, as it is such, potentially. The conditions of Action and Passion are five: 1. What the Agent is in Act, the Patient is in Power. 2. The Patient is such according to each part. 3. That which is more disposed, suffers more, and so on the contrary. 4. Every Patient is continuous, and not actually divided. 5. The Agent must necessarily touch the Patient, either immediately or mediately.

CHAP. XI.

Of Mixtion and Temperament.

a **M**ixtion is not Generation, for the matter ^{a De gener. & corrupt. lib. 1.} is not fixt with the form; nor alteration, for the quality is not mixed with the subject; nor augmentation, for aliment, the matter of augmentation, is not mixed with, but converted into the animate body. Conjunction of small bodies is not true mixtion, but co-acervation, for those bodies remain actually in the same, according to their forms, not composing one third according to every part. Things which have not the same matter, are not mixt, because they cannot be active and passive reciprocally.

Those things which are properly said to be mixed, must have one common matter, they must mutually act upon, and suffer one from another; they must be easily divisible: yet so, as that one be not excessive in respect of the other, for then it is not mixtion, but mutation into the more predominant, as a drop of Wine into a great quantity of Water.

b The principles and differences of Elements ^{b De gener. & corrupt. lib. 2.} (sensible tactile Bodies) are tactile qualities, in as much as by such qualities, sensible bodies, as ^{cap. 2.} such, are constituted and differ. Of tactile qualities there are seven Orders, Hot, Cold, Moist, Dry, Heavy, Light, Hard, Soft, Viscous, Arid, Rugged, Smooth, Thick, Thin. From the two first Orders are derived the differences of Elements, for by Heat and Cold, Humidity and Siccity, they act and suffer, and are mutually changed by alterative Passions. Of these first qualities two are active, Heat and Cold; two Passive, Humidity and Siccity. Heat is that which congregates homogeneous

neous things; cold, that which congregates heterogeneous things; humid, that which is not easily contained in its own bounds; dry, the contrary.

c Cap. 3.

c As there are four Elements, there must be four conjunctions of the primary qualities, from each of which the Elements are severally collected. The first conjunction is of hot and dry, whence proceedeth fire; the second hot and moist, whence Air; the third of moist and cold, whence Water; the fourth of cold and dry, whence Earth. In each of these one quality is predominant: Earth is more dry than cold, Water more cold than moist, Air most moist than hot, Fire more hot than dry.

All these Elements may be mutually transmuted into one another; the Symbolical which agree in one primary quality, are more easily transmuted into one another than the asymbolical, because it is less difficult to change one than many. This Transmutation is not a Generation, but a kind of Alteration, whence it is manifest one Element cannot be the principle of another.

d Cap. 7.

d *Mixtion*, whereby the Elements concur to the composition of a mixt Body, is made by coacervation, as *Empedocles* held; but after such a manner, that their contrary qualities remain in the mixt, not potentially only, nor simply actually in their height, but in a mean kind of way, their extremities being reduced to some temper. From this contemplation come mixt Bodies, differing according to the various proportion of the temperament; and as they are compounded of the Elements, so they resolve into the same.

e Cap. 8.

e All these mixt Bodies consist of all the Elements; of Earth, for every thing participates of the nature of that thing whereof it is produced; of Water, because every mixt thing must be concrete and terminated; which properties Water best affordeth to Earth; of Air and Fire, because every perfect mixt Body is made by temperament of contraries, such is Air to Earth, Fire to Water. Again, the nature of all mixt Bodies, as well animate as inanimate, as to mixture is the same, but that the animate consists of all the Elements, is manifest in that they are nourished by them.

f Cap. 9.

f The causes and common principles of mixt bodies are three; material, formal, efficient. The *Material* is the power to be, and not to be, by which elementary things are generated and corrupted. The *formal* is the reason of the essence of every thing; g the *universal efficient* is the circular motion of Heaven, not only as being eternal, continual, and before generation, but chiefly because it bringeth nigh to us, and carrieth far from us that which hath the generative power of all things, that is, the Sun, and the other Stars, which by their accession and recession are the causes of generation and corruption.

g Cap. 10.

h All these are so disposed according to the order of Nature, that because no natural being can be permanent in the same individual state, they may be at least preserved by a continual succession of many individuum of the same species. Whence the natural cause of generation is only conservation of the species.

i Cap. 11.

CHAP. XII.

Of Imperfect mixt Bodies.

a **M**ixt Bodies are twofold, *imperfect* and *perfect*: *Meteors* are imperfect mixt Bodies produced according to Nature, but after a less orderly and constant manner. b The general matter thereof are the Elements; the efficient, the Coelestial Bodies which act upon inferiors by a kind of coherence. c Heaven is highest; next Heaven the Element of Fire; next Fire, Air; under Air, Water and Earth. Clouds are not generated in the Sphere of Fire, nor in the Region of the Air, partly by reason of the heat which is there, partly by reason of the motion of the Heavens which carrieth along with it the Element of Fire, and the upper Region of the Air, by which motion heat is produced in inferior Bodies; for the Air being carried along by the Heaven, is heated by that motion, and by the proximity of the Sun and of the Element of Fire.

a Meteor. lib. 2. cap. 1.

b Cap. 2.

c Cap. 3.

d *Flames* that appear in the upper part of the Air, are made thus; The Sun by his warmth extracteth a kind of breath out of the Earth, which, if hot and dry, is called *exhalation*, and if hot and moist, *Vapour*. Exhalation ascends higher, as being higher, and being got into the upper Region of the Air, is there enkindled by the motion of the Air, and proximity of the Fire. Hence come those they call *Fire-brands*, *Goats*, *falling-stars*, and the like. e Hence are also *Phasmes*, such as are called *gulfs*, *chasmes*, *bloody colours*, and the like; the exhalation being variously coloured by reflection of the light, but chiefly seeming purple, which colour ariseth from the mixture of fire and white.

d Cap. 4.

e Cap. 5.

f The efficient cause of Comets are the Sun and Stars; the material, an exhalation, hot, dry, condensed, and combustible; so as it burns not much, nor is soon extinguished. It is called a *Comet*, or *airy Star*, when it is alike on every side: a *pogoneia* or *bearded star*, when it hath a long train. That it consists of Fire, is manifest, because at the same time, there is commonly great wind and drought. It appears seldom, and then single, and beyond the Tropicks, because Stars, especially the Sun, dissipate the matter whereof it consists.

f Cap. 6. 7.

g The *Galaxie* is not the light of many Stars together, as *Anaxagoras* held, but an exhalation hot and dry, kindled by the motion of many great stars, which are in that part where the *Galaxie* appeareth.

g Cap. 8.

h We come next to those Meteors which are in the middle and lower Region of the Air, they are there kept so long, until they are condensed by the cold of that place into drops of water, which if they come down very small, are called *mistling*; if greater, *Rain*. This thick vapour, which is seen suspended in the Air, and changeth from Air to Water, is a Cloud. *Mist* is the superfluity of a cloud, condensed into water.

b Cap. 9.

i Vapour attracted by a small heat not much above the Earth, and descending more condensed by the nocturnal cold, becometh either Dew,

i cap. 10.

Dew or *Frost*: *Frost*, when it congealeth before it resolves into water; *Dew*, when it turns into water, so as the warmth cannot dry it up, nor the cold freeze it.

k Cap. 11. *k* *Snow* is a congealed cloud; *Rain*, *Dew*; *Frost* and *Snow* differ almost only in bigness and finalness.

l Cap. 12. *l* *Hail*, tho' it be of the same nature as Ice, yet is seldom produced in Winter, as being caused by *Antiperistasis*.

m Cap. 13. *m* As the Air above the Earth condensed, becometh vapour, and vapour by cold becometh water, so doth it also in the caverns and receptacles of the Earth, by a continual mutation; first it turns into little drops, then those little into greater. Hence come all Springs and heads of Rivers, abundantly flowing out at one part of the Earth. Hence great Rivers and Fountains commonly flow from great Hills, which have greatest Caverns.

n Cap. 14. *n* The parts of the Earth are in continual mutation, sometimes humid, sometimes dry, sometimes fertile, sometimes desert, by new eruptions or defections of Rivers, or access or recess of the Sea, according to certain periods of time. Thus have the parts of the Earth their youth and age, as well as Plants and living Creatures, by the heat and conversion of the Sun. *Time* and the *World* are Eternal; but *Nilus* and *Tanais* were not always, for those places whence they first issued, were once dry grounds.

o Lib. 2. cap. 2. *o* The proper place of water is the concave superficies of the Air: This place the Sea, compassing the Earth, possesseth; for the swift and more rare water is drawn upwards by the heat of the Sun; the Salt, more thick and terrene, settleth downwards. For this reason all waters tend to the Sea, as to their proper place: Yet, hereby the Sea is not enlarged, for the Sun draweth out of it, by reason of its expansion, as great a quantity of water as it receiveth from Rivers.

p Cap. 30. *p* The Sea is, as the World, Eternal, the saltness thereof proceedeth from admixtion of some terrene, adust, exhalation. From the top of the Sea is drawn up a fresh vapour; from the bottom, heated by the Sun, an exhalation, which passeth through the Sea, and cometh up with the vapour; but falling back into the Sea, bringeth that saltness with it, as water passed often through Ashes.

q Cap. 4. *q* *Winds* are produced by the Sun and Stars, of a hot, dry exhalation, which ascending, is driven down again by the coldness of the middle Region of the Air, and by reason of the lightness of its nature, cannot go directly to the bottom, but is carried by the Air up and down. We call it a hot and dry exhalation, as being more dry than humid. Wind is weakest in the beginning, but gaineth strength, by taking along with it other light exhalations, which it meets with by the way.

r Cap. 5. *r* Winds are laid by heat and cold, excessive heat consumeth the exhalations, as soon as it cometh out of the Earth: excessive cold binds up the pores of the Earth, so as it cannot pass.

s Cap. 8. *s* *Earthquake* is a trembling of the Earth, caused by an exhalation hot and dry, inclosed in the bowels of the Earth, which striving to get forth, as its nature requireth, and not able, by reason of the solidity of the Earth, to pass, ma-

keth the Earth shake, forcing a way through it, and bearing down whatsoever opposeth it. The more hot this included Spirit is, the more vehement.

Of the same nature is *Lightning*, *Thunder*, and the like. *Thunder* is, when an exhalation inclosed in a thick cold Cloud, rolleth it up and down, and at last breaketh through it with more or less noise, according to the thickness of the Cloud. By this eruption it acquirith a rare kind of heat and light, which is *Lightning*, subsequent to the noise of the eruption; yet seen before the other is heard, by reason of the quickness of the sight beyond the hearing.

t As of dry exhalations, the rare and dispersed produce *Thunder* and *Lightning*; so of the great and condensed is made *ἐκνεφίας, τύφων, πρησις*, and *Thunderbolts*.

u Of *lucid Meteors* appearing in the Clouds, *Haloes*, *Rain-Bows*, *Parelies*, and *Streaks*: All these are caused by refraction, but differ according to the objects from which they are reflected. A *Halo* appeareth about some Star, when there hapneth a Cloud to be, the middle part whereof, by reason of its rarity, being dissipated the rest of the parts about, by reflection, represent the colour of the Star. *Rainbow* is a refraction of the Sun's beam upon a humid Cloud, ready to dissolve into Rain. In like manner are caused *Parelies* and *Streaks*.

x There are likewise imperfect mixt Bodies, under, or within the Earth, and these also of two kinds; some caused by exhalation, called *Minerals*; others by vapour, called *Metals*, fusile or ductile.

C H A P. XIII.

Of perfect mixt Bodies.

a **T**HE common affections of perfect mixt Bodies, are those which proceed from the primary qualities of the Elements, whereof two are active, Heat and Cold; two passive, humidity and ficcidity. The natural effect of these is *Generation*, when Heat and Cold overcome the Matter; otherwise it is *inquinat*ion and *inconc*otion. The opposite to simple Generation is *Putrefaction*; every thing, unless violently dissolved, putrieth. Hence those things that putrifie, become first humid, then dry; for the external heat expelleth the internal, and at last consumeth it. All things therefore putrifie except fire, for putrefaction is the corruption of the natural heat in every humid body, by the external. For this reason, things are less subject to putrifie in cold or in motion, and the hotter or greater they are; as a part of the Sea may putrifie, the whole cannot.

Out of putrid things are bred living creatures; for the natural heat, whilst it is separating, endeavoureth as much as possible, that what is taken asunder and segregated by corruption, may gather together in some small parts, which afterwards, by help of the Sun, receive life. Thus are Worms, Beetles, Gnats, and other Insects bred.

b *Concoction* is the effect of heat, inconcoction of cold. Concoction is a perfection caused

fed by natural heat of the opposite passive qualities, which are mixed with the matter; as being passive. The end of Concoction in some things is mutation of the Essence, as when food is converted into flesh and blood; in others only a mutation according to quantity or quality, as in fruits that ripen. Inconcoction is an Imperfection in the opposite passive qualities, proceeding from defect of heat.

Concoction is three-fold, *πέπαισις*, *ὑψισις*, *ὑπ-ηισις*. Inconcoction is also three-fold, *ἀμύσις*, *μύ-λυνσις*, *σάλευσις*.

c Cap. 3.

c *Πέπαισις* is the Concoction of that Element which is in fruits; it is perfect, when the seeds that are within the fruit are capable of producing their like, hereto is opposite, *ἀμύσις*, the Inconcoction of Fruits not able through want of heat to overcome the humidity.

ὑψισις is a concoction of an humid interminate by external humidity and heat; hereto is opposite *μύλυνσις*, the inconcoction of a humid interminate, caused by defect of external humidity and heat.

ὑπ-ηισις is a concoction by dry and external heat, yet not excessive, for then it were adustion: to this is opposed *σάλευσις*, an inconcoction caused through defect of heat and fire, or excess of humidity in the Subject.

d Cap. 4.

d As concerning the two passive qualities; things are humid and dry, either actually, or potentially. Those things which are mixt of humid and dry, are terminate, for these qualities mutually terminate one another, whence bodies consist not without Earth and Water, this humid, that dry. And for this reason Animals can only live in Earth and Water, which are their matter.

The first affections of terminate bodies are hardness and softness; hard is that which yields not to the touch; soft the contrary. Both these are such, either absolutely, or relatively. They are made such by concretion, which is a kind of exiccation.

e Cap. 6.

e Exiccation is of things that are water, or of the nature of Water, or have water in them, either naturally infite, or adventitious. It is done principally by heat, accidentally by cold. Humectation (its contrary) is the concretion of a vapour into water, or liquefaction of a solid Body, as Metal. Concretion is, when the humidity being removed, the dry is reduced together, and condensed, either by cold, as in generation of Stones; or by heat, as in segregation of Salt from water. To Concretion is opposite, Resolution, which is effected by its contraries. Those things which are condensed by heat only, are resolved by cold only, and so on the contrary.

f Cap. 8.

f Besides these principal affections, there are others secondary, chiefly competent to homogeneous Bodies, some passive, some active.

Of passive qualities in mixt Bodies, there are eighteen differences, *Concretile*, *Eliquabile*, *Mol-
lifiable*, *Humectable*, *Flexible*, *Frangible*, *Impres-
sible*, *Formable*, *Compressible*, *Tractile*, *Ductile*, *Fissile*, *Settile*, *Unctuous*, *Friable*, *Condensable*, *Combustible*, *Exhalable*, and their contraries. From these are thus denominated, *Homimerious* mixt Bodies, as Metals; Gold, Brass, Silver, Stone and the like; and whatsoever is made out of these; as likewise similar parts in Animals

and in Plants, as Flesh and Bone, whereof some are more cold, which consist most of Water; others more hot, which consist most of Earth and Air.

CHAP. XIV.

Of Plants and Animals.

AT the end of his *Meteors* he proposeth to speak of Similar parts, as Blood, and the like; what they are, and to what end, their matter and reason, but especially whence they have their motion; next to proceed to dissimilar parts; and lastly to speak of those which consist thereof, as Men, Plants, and the like. Hence Patricius conjectures that his Books of the parts of living Creatures, did immediately succeed those of the Meteors, wherein he treateth (as he proposeth) of similar parts unto the tenth Chapter of the second Book, and from thence of the Dissimilar. But to reduce his Books of living Creatures to this method, is the less certain, for as much as many of these (besides those which treated particularly of Anatomy) have been lost, of which perhaps were some which might better have cleared the series; for in the Books themselves concerning Animals, there is nothing to ground it upon.

For the same reason, it is uncertain where his Books of Plants ought to have been placed, which are lost. Perhaps they might precede those of Animals; for he asserts that Plants have Souls, (contrary to the Stoicks) endued with vegetative power; that they live even tho' cut asunder, as Insects, whereby two or more are made of one; that the substance they receive by aliment and the ambient Air, is sufficient for the preservation of their natural heat.

As concerning Animals, we have, Of their Going, one Book. Of their History, ten Books. Of their parts, four Books. Of their Generation, five Books. So exquisitely hath he treated upon this Subject, as cannot well be expressed by an abridgement, and therefore we shall omit it; the rather because little or nothing was done herein by the Academicks or Stoicks, a collation with whom is the principal design of this summary.

CHAP. XV.

Of the Soul.

THE knowledge of the Soul conduceth much to all Truth, and especially to Physick, for the Soul is as it were the principle of animate things. Animate things differ from inanimate chiefly by motion and sense.

a De anima lib. 1. cap. 1.

b Whence the ancient Philosophers defined the Soul by these; Democritus, the Pythagoreans, Anaxagoras by Motion; Empedocles and Plato by knowledge; others by both; others by incorporiety, or a rare body; Thales, something that moveth; Diogenes, Air; Heraclitus, Exhalation, an immortal substance; Hippo, Water; Critas, Blood.

b Cap. 1.

c The Soul doth not move it self, as Democritus held; for whatsoever, is moved, is moved by another. Again, if the Soul were moved per se, it would be in place, and it were capable of being

c Cap. 3.

being moved violently, and it would be of the same nature with the body, and might return into the body after the separation. Neither is the Soul moved by it self, but from its objects; for if it were moved essentially, it might recede from its essence. The Soul therefore is not moved *per se*, but by accident only, according to the motion of the Body.

a Cap. 4.

d The Soul is not *Harmony*, (a proportionate mixture of contraries) for then there must be more Souls in the same body, according to the different constitution of its parts. But tho' we commonly say, the Soul *grieveth, hopeth, feareth*, &c. we are not to understand that the Soul is moved, but only that these are from the Soul in the Body that is moved; some by local motion of the Organs, others by alteration of them. To say, the Soul is angry, is no more proper than to say she builds; for it is the man that is angry by the Soul, otherwise the Soul were liable to *age, decay, and infirmity*, as well as the Organs of the Body.

e Cap. 5.

e Neither is the Soul *a rare body*, consisting of Elements, for then it would understand nothing more than the Elements themselves; neither is there a Soul diffused through all things, as *Thales* held, for we see there are many things inanimate.

Some from the different functions of the Soul argue, that there are more Souls than one in man, or that the Soul is divisible, the supreme intellectual part placed in the head, the irascible in the heart, concupiscible in the Liver: But this is false, for the Intellect is not confined to any part of the Body, as not being corporeal, nor organical, but immaterial and immortal.

f Lib. 2. cap. 2.

f The Soul is the first *Entelechy* of a natural organical body, having life potentially. *First, Entelechy.* Entelechy is twofold, the first is the principle of Operation, as Science; the Second, the Act it self. *Of a Natural,* [*g* not of an artificial body, as a Tower or Ship. *Organical Body.*] that is, endued with instruments for operation, as the eye for seeing, the ear for hearing; even Plants have simple Organs. *Having life potentially*] as it were in it self, for potentially is less than actually; actually, as in him that wakes; potentially, as in him that is asleep.

g Laert.

The Soul is otherwise defined, that by which we first live, feel, and understand; whence appeareth, there are three faculties of the Soul, *nutritive, sensitive, intellectual*; the inferior comprehended by the superior potentially, as a triangle by a quadrangle.

CHAP. XVI.

Of the Nutritive Faculty.

a Cap. 4.

a THE first and most common faculty of the Soul, is the *Nutritive*; by which life is in all things, the acts and operation thereof are to be generated, and to take nourishment.

Nutrient is received either towards Nutrition or Augmentation. Nutrition is the operation of the Nutritive Faculty conducing to the substance it self of the animate being, augmentation is the operation of the nutritive faculty, whereby

the animate Body encreaseth to perfect Magnitude. In nutrition are considered, the Soul nourishing, the Body nourished, and the food by which the nourishment is made; hereto is required a natural heat, which is in all living creatures. The aliment is both contrary, or unlike, and like, to the body nourished: as it is undigested, we say nourishment is by the contrary; as altered by digestion, like is nourished by its like.

CHAP. XVII.

Of the Sensitive Faculty.

a THE Sensitive Faculty of the Soul is that *a Cap. 5.* by which Sense is primarily in Animals. Sense is a mutation in the Organ caused by some sensible Object. It is not sensible of it self, nor of its Organ, nor of any interior thing. To reduce it to act, is requisite some external sensible object, for sense cannot move it self, being a passive power, as that which is combustible cannot burn it self.

b Of sensible Objects there are three kinds: *b Cap. 6.* *proper*, which is perceived by one Sense, without Error, as colour in respect of sight. *Common* which is not proper to any one, but perceived by all. *Accidental*, which, as such, doth not affect the Sense.

Sense is either *External or Internal*, the External are five, *Seeing, Hearing, Smelling, Touching, Tasting.*

c The Object of *Seeing* is Colour, and some- *c Cap. 7.* thing without a name that glistens in the dark, as the Scales of Fish, Glow-worms and the like. Colour is the motive of that which is actually perspicuous: nothing therefore is visible, without light. Perspicuous is that which is visible, not by it self, but by some other colour or light, as Air, Water, Glass. Light in the act of a perspicuous thing, as it is perspicuous. It is not fire, nor a body, for then two bodies would be in the same place.

To sight and all other senses is requisite a *medium* and convenient distance. The object first effects the *medium*, then the Organ.

d The object of *Hearing* is sound. Sound is *d Cap. 8.* made by collision of two Bodies, Hard, Smooth, and Hollow, in a *medium*, as Air or Water, swiftly and vehemently before the *medium* be dissipated.

Ecco is a reflex sound, when the Air, gathered together and forced into a vessel, or some place which hindereth its diffusion and progress, reverts as a Base against a Wall. Sound is always reflected, tho' not always perceptibly, as light also, otherwise all places would be dark, which were not directly opposite to the Sun, or some lucid body.

Sound is made by that which moveth the Air, and continually stirreth it, till it arrive at the organ, wherein there is an insite, connatural, animate, immovable Air, which being moved by the external Air, yieldeth the sense of hearing. Hence it cometh that we can hear under water, for the water cannot get into this air, because of the winding narrow passages in the Ear: If it do get in, or the membrane which containeth

Alteration

this Air be otherwise broken, it causeth deafness.

Voice is the Impulsion of Air attracted by respiration, and forced against against the vocal Artery by the Soul, which is in the Lungs, with some intent of signification. Voice therefore is not proper to all Animals, but to such only as have Blood and Breath. Fishes therefore have not Voice.

e The object of *Smelling* is Odour. This Sense is not so perfect in Men as in other Creatures, whence Men perceive not Odours, unless with delight or dislike, when they are so strong as to excite one of these. This defect proceedeth from the organ of Smelling, which in us is more obtuse. The *medium* of smelling is Air and Water, for Fishes smell. Hence all living Creatures smell not after the same manner; they which breathe, smell by drawing in the Air, the rest not so, because of the different accommodation of the Organ. Those therefore which smell by drawing in the Air, cannot smell under Water, *Odour* consists generally in dry, as *sapor* in humid. The Organ of Smelling is dry potentially, as the Object is actually.

f The object of *Taste* is sapor. Whatsoever is gustable, is tactable, and humid, either actually, or at least potentially. Dry things are subject to taste, as they are potentially humid, and melt as Salt. The Taste perceiveth that which is gustable, and that which is ingustable, as the Sight Darkness, the Hearing, silence; for every Sense perceiveth the presence and absence of its object. That which is potable is perceived by the touch, as humid by the taste, as having Sapor. The Tongue tastes not that which is dry, because the organ of taste must be such potentially, as the object is actually; but without humidity nothing is gustable. The kinds of Sapois are sweet and bitter; to sweet are referred unctuous; to bitter salt. The mean are sharp, piccant, acid, acute, gustable is that which moveth the Taste, and reduceth it to act.

g The objects of *Touch* are the primary qualities, the Organ is that part which is potentially that which the object is in act; for that which is like, cannot suffer from its like. We feel not things of equal heat, cold, hardness, or softness. The Flesh is the *medium*; the first sensory is something more internal. Herein touch and taste differ from the other Senses, whose objects are at greater distance. Touch perceiveth things tactile and not tactile.

b All these Senses receive sensible Species without matter, as Wax the Impression of a Seal without the Gold. The Organ or Sensory is that in which the sensitive faculty primarily exists; a vehement Object destroyeth the Organ.

i That there are no more external Senses than these five, is manifest, in that there are no more in perfect Animals; neither is there any need of a sixth Sense to perceive common Objects, which every Sense discerns by accident, as motion, figure.

The act of the Object, and the act of the Sense it self, as Sonation and Audition, are really the same, differ only intentionally. This act is generally in the sensitive, not in the subject.

k Sensible qualities are finite, as being bounded by Extrems and their Contraries, divisible by accident into infinite, according to the division of their continuous Subject.

l In Sensibles, some are potentially sensible, *Ibid.* as a part joined to the whole; others actually, as the whole it self, or a part separated from the whole. But of separate parts some are so little, that Sense cannot actually perceive them, by reason of their want of due Magnitude.

m Sounds and Odours are successively generated in the *medium*, and by degrees deduc'd to the Organ; but light is produced in an Instant in the medium, not carried thro' it by local motion.

CHAP. XVIII.

Of Common Sense.

a **E** Very external Sense perceiveth the differences of its own object, as Sight judgeth of black and white; but the differences of divers objects cannot be perceiv'd by the same Sense; there is therefore a *common sense*, which judgeth the actions of external Sense and the differences of sensible objects. The Judgment being of a sensible object, must be done by sense, and by one sense only; for, if there were more, one would object one object apart, the other another, and consequently could not judge between them. For that which judgeth must have knowledge of all that whereof it judgeth, which no exterior Sense can afford, as being confined to its proper Object.

Common Sense judgeth contrary or different Sensibles in the same instant, for it discerneth together sweet and black, bitter and sweet. Hence it is like the Center of a Circle, which in divers respects is called one, and many. It is one, as all the external Senses are united in it; many, as it is the Fountain and Judge of them.

b Sense differs from Intellect; for Sense is *b De Anima, lib. 3. cap. 3.* in all living Creatures; Intellect in few. Sense erreth not about its proper object, but is always true; Intellect often erreth by false Opinions and Habits.

CHAP. XIX.

Of Phantasie and Cogitation.

a **F**rom *Sense* is derived *Phantasie* and *Cogitation*. *a Cap. 3.* Phantasie differs from Sense and Intellect, tho' it exist not without a previous knowledge of Sense, as neither doth Cogitation, which is in action of the Intellect, comprehending Science, Opinion, and Prudence.

The act of *Phantasie* differs from *Cogitation*, for we fancy things false and at our own pleasure; but we think only what is true, and like unto truth, and that not as we please our selves, but as the thing seemeth. Moreover, when we think that things are ill or good, we are moved with Fear, Joy, Hope; but when we fancy only without application of Judgment, we are not mov'd no more than we are frighted at a Picture.

Phantasie is not properly *Sense*; Phantasie acteth in him that sleepeth, Sense doth not. Sense was with us from our Birth, Phantasie not. Sense is in all Animals, phantasie is not. Sense is true, phantasie often false. Sense is only of things present, phantasie of the absent likewise.

Phantasie is not *Science* or *Intellect*, for that is

K k

always

always of things true and real, Phantasia often is of things false. Phantasia is not *Opinion*, for Opinion is followed by Faith, Phantasia is not.

Phantasia is a motion in Animals from Sense in Act, by which motion they are variously affected, and conceive things sometimes true, and sometimes false. The Error of Phantasia ariseth from the Error of the Senses: Phantasia therefore is of near affinity with Sense; for though it be not sense, yet it exists not without Sense, or in things that have no sense. It is derived *ὑπὸ τοῦ φῶτος* from light; for Sight, the most excellent of Senses, cannot act without Light.

Many things are done by Animals according to Phantasia, either because they have not Intellect, as Beasts, or that Intellect is obscured in them.

CHAP. XX.

Of Memory and Reminiscence.

*a Lib. de
Memor.*

& Rem. cap. 1.

From Phantasia proceeds Memory, which is of things *past*, as Sense is of the *present* Opinion of the *future*. Sense and Intellection are necessarily previous to Memory. Hence those Animals only which have Sense of time, remember as Horses and Dogs; yet Memory is not without Phantasia, even not that Memory which is of intelligible things; for he that remembereth is sensible that he first saw, heard, or learned what he remembereth. Memory therefore is reducible *per se* to Phantasia, as being of Phantasms, to Intellect only by Accident. Hence in the same part of the Soul, wherein Phantasia exists, resideth likewise Memory, for if it were placed only in the Intellectual Faculty, it would not be competent to Beasts, which we see it is.

Memory is made by impression of some Image by the Sense upon the Soul. Hence they who retain not the Image and Figure of Sense, either by continual motion, or excessive Humidity, as Children, or Drought, as Old Men, remember not. To Memory therefore is required a moderate temperature of the Brain; yet more inclined to dry.

b Cap. 2.

b Reminiscence is not a Resumption or Assumption of Memory, but differs specifically from both these, for Beasts have not Reminiscence though they have Memory, Reminiscence being made by discourse and diligent disquisition collecting one thing from another by a continued Series and order, until at last we call that to Mind which we had forgotten.

CHAP. XXI.

Of Sleep and Waking.

*a Lib. de Som. a
& Vigil. cap. 1.*

TO Sense belongeth *Sleep* and *Waking*; for those animate things which want sense neither sleep nor wake, as Plants. Sleep is an immobility, and band as it were of Sense; Waking is a solution and remission of Sense.

b Cap. 2.

b The chief Seat of Sleep is the common Sense, which being bound up by Sleep, all the exterior Senses, whereof this is the common Centre, are bound up likewise and restrained

for the rest and health of the Animal; which is the end of waking also.

c Every impotence of Sense is not Sleep, but only that which is caused by evaporation of the Aliment. Hence we are most subject to sleep after Meat; for then much humid vapour ascends, which first maketh the head heavy by consistence there, then descends and repels the heat, whereby is induced Sleep. That Sleep is made in this manner, is evident from all soporiferous things, as Poppy, which causeth Heaviness in the Head by sending up vapours. Labour produceth sleep, by dispersing the Humours, whence produceth Vapour. Drunken Men and Children are subject to sleep much, melancholy Persons little, for they are so cold within, that the Vapour exhaleth not, especially they being of a dry Constitution. Sleep therefore is a recession of the heat inward, with a natural kind of Circumobstinance.

CHAP. XXII.

Of Dreams.

Dreaming is an affection of the sensory part, in as much as it is Fantastick. A Dream is an Apparition or Phantasm seen in Sleep.

After the Functions of the external Senses, there remain their motions and similitudes induced by their objects into their Organs. These occurring in sleep, cause Dreams, but not at all times, nor at every age, for their Species shew not themselves; but upon cessation of the Humours. Hence Dreams are not immediately after sleep, nor in Infants soon after their Birth, for then there is too great Commotion by reason of the Alimentary Heat. As therefore in troubled water no Image appeareth, or if any, much distorted; but when it is calm, the Image is rendered clearly; so when there is a tumult and agitation of the Humours, there are no Images presented, or those dreadful, such as are the Dreams of Melancholy and Sick Persons; but when the Blood passeth smoothly, and the Humours are settled, we have pure and pleasing Dreams; a Dream therefore is a Phantasm caused by motion of Sensibles already perceived by Sense, occurring to Animals in Sleep.

CHAP. XXIII.

Of the Intellectual Faculty.

THE third faculty of the Soul is the *Intellective*, proper to Man. Intellect is that part of the Soul whereby it knoweth and understandeth. It is two-fold, *Patient* and *Agent*. *Patient Intellect* is that by which Intellect becometh all things, for Intellection is like Sense; Sense is by Passion from a sensible Object, Intellect from an Intellectual. The properties of patient intellect are these; it is void of corruptive passion; it is apt for reception of Species, it is that Species potentially; it is not mixt with the Body; it hath no Corporeal Organs; it is the place of Species.

b That there is also an Agent Intellect, is manifest;

nifest ; for in whatsoever kind, there is something that is potentially all of that kind, there is something likewise which is the efficient cause of all in that kind ; this is the agent Intellect, a cognoscitive power which enlightneth Phantasms and the patient Intellect. The properties thereof are, that it is separable from the Body, Immortal and Eternal ; that it is not mixt with the Body ; that it is void of passion ; that it is ever in act ; but the patient Intellect is Mortal, which is the cause of forgetfulness.

^c The action of the Intellect is twofold, one, *Intellection of Indivisibles*, in which is neither Truth nor Falshood, as all *simple* apprehensions; the other *complex*, when we compound and unite notions by Affirmation or Negation. This is always either true or false ; the other neither. The simple is precedent to the complex.

^d Intellect in act is either *Practick* or *Theoretick*. As a sensible Object reduceth the sensible faculty from power to act, so doth an intellectual faculty ; and as the operation of Sense is three-fold, simple apprehension, Judgment if it be good or ill, and lastly, appetition or aversion according to that perception : So likewise is the operation of the *Practick Intellect* threefold : First, it is moved by phantasms, as Sense is by external Sensibles. Secondly, it judgeth the object to be good or ill, by Affirmation or Negation. Thirdly, it moveth the Will to pursue or shun it, whence it is called *practick*. This practick Intellect is moved as well when the sensible object is absent, as when it is present, only excited by the phantasie. The object of the *Theoretick Intellect*, is true or false ; of the practick, good or ill.

^e The rational Soul in some manner is every thing ; for that which actually knoweth, is in some manner the same with the thing known.

C H A P. XXIV.

Of the motive faculty.

^a Besides the *nutritive*, *sensitive*, and *intellective* Faculties, there is also a *motive* Faculty in animate Creatures. That it is not the same with the *nutritive* is manifest, in as much as it proceeds from Imagination and Apprehension, which Plants had not, neither have they Organs fit for motion, which Nature would have given them if they have this power. That it is not the same with the *sensitive*, appears, in that some Animals which have sense, have not the power, as *Zoophytes*, which have not the organs fit for this motion. Neither is it the same with the *Theoretick Intellect*, for that judgeth not as to Action : But progressive motion is the action of an Animal flying ill, or pursuing good.

^b The Principles of *local Motion* in Animals, are the *practick Intellect* (under which is comprehended Phantasie) and *Appetite*. These two direct and impel the motive faculty to action : Intellect and Phantasie by directing what is to be shunned, what to be embraced ; Appetite by shunning or embracing it. Appetite is the chief Principle thereof ; for that may move without Intellect, as in Beasts, and many times in Men, who desert their reason to follow their pleasure : But Intellect never moveth without Appetite,

that is, Will : For Appetite is the principle of all Motion, Honest and Dishonest ; Intellect only of honest motion.

In Man, Appetite is twofold : *Will*, which followeth the Judgment of Reason ; and *sensual Appetite*, irascible or concupiscible, which followeth Sense and phantasie.

In the motion of Animals, three things are considered : First, that which moveth, and that is two-fold ; the *Appetible Object*, which moveth the Appetite as a final Cause, not as an Efficient ; and the *Appetite* it self, which being moved by the appetible Object, moveth the Animal. Secondly, by what it moves, which is the Heart of the Animal, by which Instrument the appetible object moveth it. Thirdly, that which is moved, the Animal it self perfect.

^c *Insects* are moved locally, as *perfect* Animals are, and consequently by the same principles, Appetite and Phantasie ; but this Phantasie is imperfect, diffused through the whole Body, as appeareth by their uncertain motion, only towards present occurrent objects. That they have Appetite is manifest, in as much as they are sensible of Pain and Pleasure.

Beasts have *sensitive* Phantasie only ; Rational Creatures, *deliberative*, which compareth many things conducing to some foreknown end, and chooseth the most expedient. Yet sometimes the Sensitive Appetite in Man overwayeth the rational ; but by the order of Nature, the Will, which is Rational, ought, as being the Superior to it, to overway the Sensitive. Thus there are three motions, one of the Will commanding, another of the Sensitive Appetite resisting, and a third of the Body obeying. But when the sensitive over-ruleth, there are only two motions, for the Will resists not, but is deceived.

C H A P. XXV.

Of Life and Death.

^a *Generation* and *Dissolution* are common to all living Creatures, though all are not produced and dissolved in the same manner.

^b The Generation of a Living Creature is the first Conjunction of the nutritive Soul with the natural heat.

Life is the permanence of that Soul with the said heat.

Youth is the encrease of the first Refrigerative part, *Age* the decrease thereof, *senectus*, the constant and perfect Life which is betwixt both.

As long as an animate Creature liveth, it hath natural heat within it self ; and as soon as that faileth, dieth. The Principle of this Heat is in the Heart. If it be extinguished in any other part, the Animal may live ; but if in the Heart, it cannot.

This Heat is extinguished two ways ; first by *Consumption*, when it faileth of it self ; Secondly, by *extinction*, from some contrary, as in violent Death, the cause is the same in both, defect of aliment, which in the living Creature is its Vital Moisture, as Fire wanting Refrigeration, groweth more violent, and soon consumeth the Humidity, which being gone, it self must of necessity go out.

Refrigeration therefore is necessary to the conservation of the natural Heat. Plants are refrigerated by the ambient Air, and by Aliment: their natural heat is extinguished by excessive Cold, and dried up by excessive Heat. — Animals which live in the Air, or in the Water, are refrigerated by the Air or Water, some by breathing, others without.

c Cap. 23, 24. c Death, according to the extinction of Natural Heat, is two-fold, *violent* or *natural*; violent, when the Cause is extrinsical; natural, when the Principle thereof is in the animate Creature. For that part whereon Life dependeth (the Lungs) is so ordered by Nature, that it cannot perform its Office for ever. Death therefore cometh from defect of heat, when through want of Refrigeration the Radical Humidity is consumed and dried up. Refrigeration faileth naturally, when by progress of time the Lungs in Creatures that have Breath, the Gills in Fishes grow so hard that they are unapt for Motion.

d Cap. 23. d Old Men die easily, as having but little natural heat; and without Pain, because their dissolution comes not from any violent affection.

e Lib. de lon. & brevit. cap. 4. e The Lives of living Creatures, as well of the same, as of divers species, differ in length; the longest Life, most commonly, is that of some Plants, as the Palm and Cypress; that of Creatures which have blood, rather than the Bloodless; that of Terrestrial Creatures rather than the Aquatile: That of those which have great Bodies, as of Elephants, rather than those of little.

f The causes of long Life are first the quantity and quality of the vital Moisture, if it be much and fat, not easily dried up nor congeal'd. Secondly, Natural Heat, which suffereth not that Humour to be congealed. Thirdly a due proportion betwixt this heat and that Moisture. Fourthly, fewness of Excrements, for Excrements are contrary to Nature, and sometimes corrupt Nature it self, sometimes a part.

Salacious Creatures, or Laborious, grow soon old by reason of Exsiccation. For the same reason Men are shorter lived than Women; but more active.

In hot Countries animate Creatures are larger and live longer than in cold. Those Animals which have little or no Blood, either are not at all produced in the Northern parts, or soon die.

Both Plants and Animals, if they take not Aliment, die; for the Natural Heat when the aliment faileth, consumeth the matter it self, wherein it is, the Vital Moisture.

Aquatile Creatures are shorter Liv'd than the Terrestrial, and the Bloodless than those that have Blood, because their Humidity is more waterish, and consequently more apt to be congealed and corrupted.

g Plants live long, as having less of waterish moisture, which therefore is not so apt to be congealed. The largeness of the upper parts as well in Plants as Animals, is a sign of long Life, because it argues much natural heat. The upper part of a Plant is the Root, not the Boughs. g Cap. 6.

THE THIRD PART.

CHAP. I.

ETHICK.

WE come next to the *Moral* part of Philosophy, including *Ethick*, *Oeconomick*, and *Politick*. Of the first, we have ten Books of Aristotle's, written (to his Son) *Nichomachus*, two Books call'd his *great Ethick*; one of *Virtues*. Of *Oeconomick*, two Books: of *Politick* eight. We shall not have recourse to these for an account of his Doctrine in this kind, being furnished by *Stobæus* with a summary of what he and the rest of the Peripateticks asserted in Morality.

a Eclog. Ethic. *Ethick* a (saith he) is so called ἀπο τῆ ἐθους, from *Custom*, for those things, the Principles and Seeds whereof we receive from Nature, are to be perfected by Custom and right Institution. Hence Ethick pertaineth only to Living

Creatures, and particularly to Man; for the rest acquire custom, not by Reason, but Necessity, Man by Reason.

Of the *Soul*, one part is *Rational*, the other *Irrational*; the rational part is *Judicative*, the irrational *Appetitive*; of the rational that which is *Theoretick*, conversant in divine things, is called *Science*; that which is *Practick*, conversant in Humane Actions, is called *Council*. Of the latter, one part is *concupiscible*, another *irascible*.

In like manner *Virtue* is twofold, rational and irrational, consisting in Theory and Practice. Ethick Vertue consisteth not in Science, but in Election of Goods.

Vertue is perfected by three things; *Nature* *Custom* and *Reason*. For a Man differing from other Creatures both in Body and Mind, as being a Species

a Species placed between divine Essences and irrational Creatures, hath some affinity to both; in what is rational, and agrees with the Soul, he is ally'd to the Divinity; in what is irrational, proper to the Body, he agrees with the irrational. Both these desire Perfection by Reason; and first he desireth to be, for this is naturally insite in him. Hence he affecteth things that are according to Nature, and is averse from things contrary to his Nature. He endeavoureth to preserve *Health, Pleasure, Life*; these being according to Nature, expetible in themselves, and good. On the contrary, he shunneth *Sickness, Pain, and Death*, as being repugnant to Nature, and therefore ill, and to be avoided. We love our own Bodies, we love our own Souls, their parts, their faculties, their acts: The principle of Appetite, Office, and Vertue is a providential care of these. If Error did not happen concerning things expetible and avoidable, but that we lived continually participant of good, and void of ill, we should not enquire in these for a true Election. But being things expetible and avoidable, through Ignorance often deceived, sometimes rejecting the good, sometimes admitting the ill for good, we necessarily have recourse to *constancy of Judgment*, which having obtained convenient to Nature, we call it, from the excellency of its Function, *Virtue*, admiring and honouring it above all things. For Actions, and those which are call'd Offices, proceed from election of things according to Nature, and rejection of things repugnant to Nature. Herein consist *right actions* and *Sins*; even on these dependeth almost the whole reason of *Election*, as we shall briefly demonstrate.

That Children are *expetible* to Parents, not only *for use* or benefit, but also in *themselves*, is most evident. There is no Man so cruel and savage, who doth not rather desire his Children after his Death should live happily and well, than otherwise: By this affection dying persons make Wills, providing even for the unborn, choosing Tutors and Guardians to assist them. And as *Children* are loved for themselves, so likewise we love *Parents, Brethren, Wife, Kindred, Acquaintance, Countrymen*, for themselves, as having some interest in them by Nature. For, Man is a sociable communicative Creature; and tho' of Friendships some are more remote than others, it is nothing to the purpose, for all friendship is for its own sake, and not for use only. And if Friendship with Country-men be expetible in it self, it will likewise be expetible in it self with all Men; for all those who benefit others, are so affected towards them, that they do most actions for the Office sake. Who will not free any Man from a wild Beast, if he be in his Power? Who will not direct a Man that is out of his way? Who will not relieve a Man that is ready to starve, or direct a Man in a Desert to a Spring? Who desires not to be well spoken of after Death? Who abhors not these Speeches as unnatural?

When I am dead, let Earth be mix'd with Fire, I care not, so I now have my desire.

It is manifest therefore, that we have a natural good-will and friendship towards all Mankind, as a thing being expetible in it self, and consonant to Reason.

*The Race of Gods and Men is one,
From Nature both alike begun.*

Love of all Mankind being thus common to us, much more evidently it is expetible in it self towards those whom Conversation hath made our Friends. A Friend, Friendship, and Good-will, are expetible in themselves.

In like manner *Praise* is expetible *in it self*; for we contract Society with those who praise us: And if Praise, *Glory* likewise, which is nothing but the praise of many Persons.

Now seeing that *external Goods* are expetible in themselves, much more are the goods of Soul and Body expetible in themselves. For, if Man be expetible in himself, the parts of Man must likewise be expetible in themselves. The parts of Man in general are *Soul* and *Body*; the Body therefore is expetible in it self. Why should the body of another Person be dear to us, and not our own? Or why should our Body be dear to us, and not the parts and functions thereof? *Health* therefore, *Strength, Beauty, Swiftnes, sound Sense*, and the rest are expetible in themselves; for none of ordinary capacity would choose to be *deform'd* or maim'd, tho' no Inconvenience would happen thereupon; so that deformity, even without any Inconvenience, seemeth justly avoidable. And if deformity be avoidable in it self, Beauty is expetible, not *for use* only, but in *it self*. For, that Beauty pleaseth is manifest, in as much as all have a natural Inclination (besides that of conversation) to such as are Beautiful, and endeavour to confer benefits on them, so as it seemeth to procure Benevolence. In this respect therefore Beauty is judged expetible in it self, deformity avoidable in it self. It is the same in *Health* and *Sickness, Strength* and *Weakness, Activity* and *Heaviness, Sense* and *privation of Sense*.

And if *Corporeal Goods* are expetible in themselves, and their contrary evils avoidable, the Parts and Vertues of the Soul must necessarily be expetible also. For, Vertue beginning, as we said, from the Body, and external Goods, and reflecting upon it self, and considering how much more near relation it hath to the Soul, contracteth a nearer affinity with it. So that the Vertues of the Soul are much to be preferred before those of the Body, which is easily collected from what hath been said. For, if Corporeal Health be expetible in it self, much more is *Temperance*, which freeth us from the fury of the Passions. And if Corporeal *Strength* ought to be number'd amongst Goods, much more ought *Magnanimity*, by which the Soul is strengthened. And if Corporeal *Beauty* be expetible in it self, much more is that of the Soul, *Justice*.

In like manner is it with the Vertues. For, there are three kinds of *Goods*, which though different, have some kind of Analogy. That which in the Body is called *Health*, in the Soul is called *Temperance*, and in Externals, *Riches*. What in the Body is *Strength*, in the Soul is *Magnanimity*, in Externals, *Power*. What in the Body is *vigour of Sense*, in the Soul is *Prudence*, in externals, *Felicity*. What in the Body is *Beauty*, in the Soul is *Justice*, in Externals, *Friendship*.

There are three kinds of Goods expetible in themselves, those concerning the *Soul*, those concerning the *Body*, and the *External*; but especially

ally those of the Soul, for the Soul is more excellent than the Body.

Yet tho corporeal and external Vertues be inferiour to those of the Soul, they are not to be neglected, partly, as being expetible in themselves; partly, as conducing to civil, sociable and contemplative life, for life is defin'd by civil, sociable, and contemplative actions; *Vertue* (according to this *Scit*) not being a lover of it self, but communicative and civil. For when we say, Vertue is nearest allied to it self, the desire of the knowledge of Truth necessarily followeth it, so as wise Men may rightly part with their life, and Fools rightly preserve theirs; since that to those who are perfect, it is an equal thing to depart this Life or not.

The excellency of Vertue is much encreas'd by corporeal and external goods; yet, the end cannot any way be compleated by them. The function therefore of *Vertue* is *Beatitude*, by successful actions. Corporeal and External goods are said to be efficient of *Beatitude*, for as much as they confer something thereto, not that they compleat it; for *Beatitude* is Life. Life consists of actions, but those can neither be reckoned amongst actions nor functions.

Hereupon comes in *Benevolence*, *Grace*, *Humanity*, *Love of Children* and *Brethren*, of our Country, *Parents*, *Benevolence of Kinsfolk*, *Friendship*, *Equality*, and the whole company of Vertues; which who neglect, manifestly sin, as to expetible goods, and avoidable Evils; and also in the acquisition and use of Goods, they sin in election, by Judgment; in acquisition, by the manner; in use, by Ignorance; in election they sin, as desiring that which is not good, or preferring the lesser good, as most prefer *pleasant* before *profitable*, *profitable* before *honest*. In acquisition, as not considering whence, nor in what manner, nor how far it ought to be acquired. In use, for as much as all use being referr'd either to it self or some other, in the former they observe no moderation, in the latter no decency.

In these things, though the wicked sin, yet do the Just behave themselves uprightly, following Vertue as their Leader.

In all Vertues there is *Judgment*, *Election*, and *Action*; there is no Vertue without these; Prudence hath the first place, the rest follow.

Vertue is called the *best Affection*, which may be collected from Induction. The Vertue of a Shoemaker is that by which he knoweth how to make Shooes; and of an Architect, that by which he knoweth how to build a handsome House. Vertue therefore is the best of Affections.

Of Vertue there are two Principles as it were, *Reason*, and *Passion*; which sometimes agree, sometimes disagree; for Pleasure or Grief, where Reason gets the Mastery, is called *Temperance*, when Passion, *Intemperance*; The *Harmony* and Concord of both is *Vertue*, one rightly commanding, the other obeying.

Expetible is that which attracteth the *Appetite* to it self, avoidable, that which repelleth it, Reason consenting thereto. Expetible and good were by the Ancients esteemed the same; for they affirm'd Good to be that which all desire.

Of Goods, they say some are expetible for themselves, some for others; the first are either *honest* or *necessary*. *Honest* are the *Vertues* and

their Functions; necessary, *Life*, and those things which pertain unto it, as the Body with its parts and uses; and those which are call'd External Goods; as *Riches*, *Peace*, *Glory*, *Liberty*, *Friendship*, for each of these conferreth to the use of *Vertue*.

Beatitude consisteth of Good and successful Actions; wherefore it is wholly good, as playing upon Pipes is wholly artificial; for the use of the matter doth not take away the Goodness from *Beatitude*; as the use of Instruments taketh not away from the Art of Medicine. Such things as are made use of towards this perfection, are not to be reckoned as Parts; for they, without which the Action cannot be, are not rightly parts thereof; for parts conduce to the whole, the rest conduce to the End.

Good is divided into *Honest*, *Profitable*, and *Pleasant*; these are the Scopes of all Actions. *Beatitude* consists of all these. It is the use of perfect Vertue, in perfect Life, with prosperous Success; and the Function of perfect Life according to Vertue; and the use of Vertue according to Nature, without any Impediment.

Tho' some assert that the End is to be happy, and *Beatitude* the scope, as Riches are good, and to be Rich that which is behoveful; yet is it better to follow the Ancients, who assert the End to be that for whose sake all things are, it self not being for the sake of any other; or the ultimate of things expetible; or Life according to vertue, in corporeal and external goods, either in all or the most principal.

This being the greatest good, useth the Ministry of the rest; for as those things which confer hereunto are to be esteemed Goods, so those things which resist it, are indifferents; for every good Action doth not effect *Beatitude*.

They assert *Beatitude* to be the use of perfect Vertue, as holding some Vertues to be perfect, others imperfect. The perfect are *Justice* and *Integrity*; the Imperfect are *Ingenuity* and *Progression*. The perfect agreeth with the perfect, so as the end thereof is the function of that Vertue, whereof no part is wanting.

They added perfect Life to shew that *Beatitude* is in Men of full Age, for a young man is imperfect, and so is his Life. *Beatitude* therefore is in perfect time, the longest that is appointed for us by the Gods. As one verse makes not a Poem, nor one step a Dance, nor one Swallow a Summer; so neither doth a short time confer *Beatitude*, for *Beatitude* is perfect, and requireth a perfect Man and Time.

They added *successful Function of Vertue*, because the Goods of Nature are necessarily requisite to *Beatitude*; for a good Man may exercise vertue in misery, but cannot be happy. For as Vertue is the only Efficient of honest Actions, so is *Beatitude* of honest, good and excellent. Neither doth it abide amongst ill or unhappy things, but enjoyeth the good, nor is deprived of the contemplation of good, or the conveniences of Life.

Beatitude being the most pleasant and fairest of things, encreaseth like an Art by the multitude of its Instruments. It is not the same in God and Man, neither is it equal amongst good Men, for it may sometimes be taken away by oppression, of miseries. Hence it is to be doubted whether a Man may be termed happy as long as he is alive;

alive, considering the uncertainty of Fortune; whence *Solon* said, *Consider the end of a long Life, whether it be happy.*

Those who sleep, are not participant of Beatitude, but after some manner, as the function of the Soul is capable of awaking.

Lastly, they added *Nature*, because every waking of good Men is not the use of perfect Vertue, but only that which is according to Nature, that is, free from madness; for madness as well as sleep depriveth Men of use, and of this Reason, and maketh them like Brutes.

As Beatitude is said to be the use of Vertue, so is Misery of Vice; yet not so, that as this sufficeth to Misery, so that doth to Beatitude.

Life is made four and unpleasant to the Good by excessive Adversity, to the Ill even in Prosperity, because they sin more, nor can rightly be termed happy.

Having asserted Beatitude to be the chief Good, it followeth that we expound how many ways it is taken.

Good is understood *three* ways. First, for that which is the cause of Preservation to all beings; next, for that which is predicated of every good thing. Lastly, for that which is expetible in it self. The first is *God*; the second the *Genus* of Goods; the third, the *end*, to which all are referred, Beatitude.

That which is expetible in it self, is said *three* ways, either that for which something is done; or, for which all things are done; or, some part of these.

Again, of these, some are *final*, some *efficient*: Final, are the actions proceeding according to Vertue; efficient, the materials of expetible things.

Of Goods, some are *Honourable*, some *Laudable*, some *Faculties*, some *profitable*. Honourable, as *God*, our *Prince*, *Parent*: Laudable, as *Riches*, *Empire*, *Liberty*: Profitable, the efficient, as *Health*.

Again, of things good and expetible, some are expetible *in themselves*, some for others; in themselves, as the *Honourable*, *Laudable*, and *Faculties*; for others, as the *Profitable*, which effect and conserve other things.

Again, of things good in themselves, some are *ends*, others *not ends*; Ends, as *Justice*, *Vertue*, *Health*, and whatsoever consisteth of these; Not ends, as *Ingenuity*, *Memory*, *Learning*.

Again, of Goods, some are *wholly* perfect, others *not*; of the first are *Vertue* and *Prudence*, which benefit all; of the latter, *Riches* and *Power*, which require to be used by a good Man. The same things whereof a good Man maketh right use, a wicked Man abuseth, as the same which a good Musician useth well, he who is ignorant of Musick useth amiss. Whosoever maketh ill use of any thing, is hurt thereby; as, a good Horse, which is a help to him that knoweth how to Ride, hurts the unskilful Rider.

Again, of Goods, some are in the *Soul*, some in the *Body*, some *External*: In the *Soul* are *Ingenuity*, *Art*, *Vertue*, *Wisdom*, *Prudence*, *Pleasure*; in the *Body*, *Health*, *soundness of Sense*, *Beauty*, *Strength*, *soundness of Limbs*, and all *Parts*, with their *Faculties* and *Functions*. External are

Riches, *Glory*, *Nobility*, *Power*, *Friends*, *Kindred*, *Country*. The goods of the Soul are either conferred by *Nature*, as *Wit* and *Memory*; or acquir'd by *diligence*, as the *Liberal Sciences*; or fall into perfection, as *Prudence*, *Justice*, and lastly, *wisdom*.

Again of Goods, some may be both *obtained* and *lost*, as *Riches*; some obtained, but not lost, as *Felicity* and *Immortality*: Some lost, but not obtained, as *Sense* and *Life*; some neither obtained nor lost, as *Nobility*.

Again, of Goods, some are *only* expetible in themselves, as *Pleasure* and *Indolence*, some efficient *only*, as *Riches*: Some *both* efficient and expetible in themselves, as *Vertue*, *Friends*, *Health*.

Goods are divided more ways than these, as not belonging all to one *Genus*, but to all the ten Categories.

These things laid down, we come next to speak more accurately concerning Vertue, which they place in both parts of the Soul: In the *Rational* part, *Integrity*, *Prudence*, *Wisdom*, *Memory*, and the like: In the *Irrational* part, *Temperance*, *Justice*, *Fortitude*, and other Vertues. These (say they) may be extinguished by excess, which they prove by testimony of the Senses, as things obscure by manifest. For, as by excess or defect of Exercise, *Health* is corrupted, but by moderate exercise is preserv'd: In like manner is it in *Temperance*, *Fortitude*, and other Vertues. For, as we do call him who feareth the Thunder, mad, not valiant; so on the contray, he who feareth Shadows is a Coward: But, he is valiant who neither feareth all things, nor nothing. These things encrease or extinguish Vertue: Being moderate, they encrease Courage: being too great, or too little, they extinguish it.

In like manner are all other Vertues extinguished by *excess* or *defect*, encreased by *mediocrity*.

Neither is Vertue only limited by these, but by *Pleasure* and *Grief* likewise, in as much as for pleasure we commit Wickedness, and for grief shun good. To explain this more fully, they unfold the nature of the Soul, wherein are seen three things, *Passions*, *Faculties*, *Habits*: *Passions*, as *Anger*, *Fear*, *Hate*, *Love*, *Emulation*, *Pity*, and the like: To which is subsequent *Pleasure* or *Grief*. *Faculties*, by which we make use of passions, and are angry, do emulate, and the like. *Habits* are those from which the Functions of these proceedeth rightly, or otherwise. If any Man be so disposed, that he is any upon any occasion, he hath the habit of *Anger*; if so, as to be angry upon no occasion, he hath the habit of *Stupidity*, both which are blameable. The laudable Habit is that of *Meekness*, by which we are angry in due time and place. Vertues therefore are Habits, by which the Functions of passions become laudable.

All Vertue consisteth in Action; all action is continuous. Whatsoever things are continuous, like magnitude, have excess, defect, and mediocrity, either in relation to one another, or to us. The mean, relating to us, is in all the best, (this is not quantitative, but qualitative, and therefore is perfect; whereas the extremes, excess and defect, being contrary, are repugnant to one another, and to the mean. But the mean is to both extremes, (as equality is to inequality, greater than the least, less than the greatest.) Vertue therefore is a deliberative Habit, consisting in mediocrity, relating to our selves. Theo-

Theophrastus having laid down some qualities, (following his Master) endeavoureth to conclude from each of them: The examples he alledgeth are these: Temperance, Intemperance, Stupidity, Meekness, Wrath; Indolence, Fortitude, Boldness, Timidity, Justice, Liberality, Prodigality, Avarice, Magnanimity, Pusillanimity, Arrogance, Magnificence, Ostentation. For of these Habits, some are ill, through excess or defect. Others good through mediocrity. He is not *temperate* who desireth nothing, nor he who desireth all things; one like a Stone, desireth not even natural expetibles; the other thro' excessive desire, becommeth Intemperate. He only is temperate, who desireth honest things with reason, in due time and measure. He is not *meek* who is angry upon all occasions, nor he who is angry upon none; but he who is endued with the mean Habit. He is not *valiant* who feareth nothing, nor God himself; nor he who feareth all things, even his own Shadow. Nor *just* who either assumeth or derogateth too much from himself, but who observeth equality. He is not *liberal* who giveth away all, nor he who giveth nothing; nor *magnanimous*, who esteemeth himself worthy all great things, nor he who esteemeth himself worthy none; but he who observeth a Decorum. He is not *magnificent* who is splendid every where, nor he who nowhere; but who observes due time and place.

Thus the Genus of Vertues is placed in *Mediocrity*, and mutually consequent in it self; yet, not alike in all, for Prudence is consequent to the rest in its own proper nature; the rest are consequent to it by accession; for he who is just, must necessarily be wise, but not on the contrary.

Of Passions and Appetites, some are good, some bad, some mean; the good are *Friendship, benevolence, indignation, shame, confidence, compassion*; the bad, *envy, malevolence, contumely*; the mean, *grief, fear, anger, pleasure, desire*.

Every Passion is conversant in Pleasure and Grief, for which reason the Vertues depend upon them; but *love of Money, love of Pleasure, love-Melancholy*, and the like, are habits distinct from Vices.

Of Love, one kind is of *Friendship*, another of *Conjunction*, the third of *both*. The first is good, the second bad, the third mean.

Of Friendship there are four kinds: *Sodality, Affinity, Hospitality, Erotick*: Whether that of *Benevolence*, and that of *Admiration* be to be added to these, is doubtful. The first is derived from *conversation*; the second from *nature*; the third from *cohabitation*; the fourth from *affection*, the fifth from *good-will*; the last from some *faculty*. Of all these, there are in general three ends, honest, profitable, and pleasant: All Persons that are studious of Friendship aim at one or more of these ends. The first Friendship is that which every Man hath to himself; the next to his Parent; the rest to his Friends and Neighbours: Whence excess in the first, and defect in the rest ought to be avoided; that being esteemed *self-Love*, this *reservedness*.

xâeis is taken three ways, for a profitable benefit, or for the profitable return of a benefit, or for the remembrance of a benefit. It is placed likewise in the Face and Speech, whence a Man is termed *gracious*, *εὐχάεις*, *ἐμίχαις*:

A good Man must lead a Life conjoined with Vertue, whether according to the necessity of the times, he execute the office of a Magistrate, or cohabit with Princes, or impose Laws, or govern some other part of the Common-wealth. If he be not busied in any of these, he must addict himself to a popular Life, either by Contemplation, or Action, or (which is between both) Instruction. For tho' he ought to follow the Action and Contemplation of excellent things; yet if the time will not allow him to use both, he may make choice of one, and prefer the Contemplative life, yet not neglecting the Common-wealth. He shall therefore marry, to the end he may have issue, and addict himself to chaste Love, and as occasion requireth, drink Wine freely, and finally maintain his Life by due observance of Vertue, and be ready to resign it, if there be necessity, taking care to be buried in his own Country, according to the Rites thereof.

Thus there are three kinds of Life, the *active*, and *contemplative*, and that which consists of *both*. As the voluptuous is esteem'd beneath the dignity of a Man, so is the contemplative prefer'd before the rest. A good Man shall addict himself to the Government of the Commonwealth, by choice not chance; for the active Life is conversant in civil Affairs, That Life is best which is led according to Vertue and Nature; the next is that which is a mean condition, as to both, these are both expetible. But the life which is conjoined with Vice is to be avoided. A happy life differs from a Good in this. The happy is always consonant to Nature, the good sometimes repugnant to Nature. To the first, Vertue only is not requisite; to the other, it is requisite. A mean Life is that which is placed in mediocrity, not destitute of Offices. *Relatitudes* in life are according to Vertue, *Sins* according to Vice: *Offices* in the mean kind of Life.

To these things thus declared we must add, that Vertue is a habit desiring mean Pleasures and Grievs, pursuing that which is honest, as it is honest: Vice is the opposite hereto.

Wisdom is the Science of the first Causes.

Prudence a habit examining and acting good things, as they are good.

Fortitude a habit betwixt *boldness* and *Fear*.

Meekness is a mean betwixt *wrath* and *stupidity*.

Liberality is a mean betwixt *Prodigality* and *Penuriousness*.

Magnanimity is in the mean betwixt *Arrogance*, * For the

and *Pusillanimity*. *Magnificence* is the mean betwixt *Ostentation* and *sordidness*. *Text doubtly is defective, and this is to be supplied,*

Indignation is the mean betwixt *Envy* and *Malevolence*. *μεγαλοψυχία ὁ μέγας ὁ πρὸς τὸν ἑαυτοῦ καὶ τοῦ ἑτέρου ὀργισμὸς. Ὁ δὲ ὀργισμὸς ὁ πρὸς τὸν ἑαυτοῦ καὶ τοῦ ἑτέρου ὀργισμὸς. Ὁ δὲ ὀργισμὸς ὁ πρὸς τὸν ἑαυτοῦ καὶ τοῦ ἑτέρου ὀργισμὸς.*

Gravity is the mean betwixt *Affentation* and *Contradiction*. *ἰσχυρία ὁ μέγας ὁ πρὸς τὸν ἑαυτοῦ καὶ τοῦ ἑτέρου ὀργισμὸς. Ὁ δὲ ὀργισμὸς ὁ πρὸς τὸν ἑαυτοῦ καὶ τοῦ ἑτέρου ὀργισμὸς.*

Modesty is the mean betwixt *Impudence* and *Bashfulness*. *μεσότης ὁ μέγας ὁ πρὸς τὸν ἑαυτοῦ καὶ τοῦ ἑτέρου ὀργισμὸς. Ὁ δὲ ὀργισμὸς ὁ πρὸς τὸν ἑαυτοῦ καὶ τοῦ ἑτέρου ὀργισμὸς.*

Urbanity is the mean betwixt *Scurrility* and *Rusticity*. *μεσότης ὁ μέγας ὁ πρὸς τὸν ἑαυτοῦ καὶ τοῦ ἑτέρου ὀργισμὸς. Ὁ δὲ ὀργισμὸς ὁ πρὸς τὸν ἑαυτοῦ καὶ τοῦ ἑτέρου ὀργισμὸς.*

† *Friendship* is the mean betwixt *dotage* and *enmity*. *ἡλικία ὁ μέγας ὁ πρὸς τὸν ἑαυτοῦ καὶ τοῦ ἑτέρου ὀργισμὸς. Ὁ δὲ ὀργισμὸς ὁ πρὸς τὸν ἑαυτοῦ καὶ τοῦ ἑτέρου ὀργισμὸς.*

Truth is the mean betwixt *detractation* and *boasting*. *ἀλήθεια ὁ μέγας ὁ πρὸς τὸν ἑαυτοῦ καὶ τοῦ ἑτέρου ὀργισμὸς. Ὁ δὲ ὀργισμὸς ὁ πρὸς τὸν ἑαυτοῦ καὶ τοῦ ἑτέρου ὀργισμὸς.*

Justice is the mean betwixt *excess* and *defect*. *δικαιοσύνη ὁ μέγας ὁ πρὸς τὸν ἑαυτοῦ καὶ τοῦ ἑτέρου ὀργισμὸς. Ὁ δὲ ὀργισμὸς ὁ πρὸς τὸν ἑαυτοῦ καὶ τοῦ ἑτέρου ὀργισμὸς.*

There are other Vertues, part ranked by themselves, part under the former. As under *Justice* and *Derogation*.

Justice

Justice are, *ευσέβεια*, *ὀσιότης*, *χρηστότης*, *εὐκοινωνία*, *εὐσωαλλαξία*, under Temperance *εὐκοσμία*, *ἐπιείκεια*, *αὐτάρκεια*, *εὐψυχία*, *φιλοπονία*, defined thus.

Ευσέβεια, is a habit of Worshipping the Gods and Demons, a mean betwixt *Atheism* and *δαίσιδαίμονια*.

ὀσιότης, a Habit of observing Right towards the Gods and the Dead, a mean betwixt *ἀνοσιότης*, and something that wants a name.

χρηστότης, a Habit of doing well voluntarily for their own sakes: a mean betwixt *πονηρία*, and something that wants a name.

Εὐκοινωνία, a habit, rendring men grateful in Society, a mean betwixt *ἀκοινωνία*, and something that wants a name.

Εὐσωαλλαξία, a habit avoiding injustice in Contracts: a mean betwixt *ἀσωαλλαξία*, and something that wants a name, which pertaineth to *extream right*.

Εὐκοσμία, a habit of observing order, a mean between *Ἀταξία*, and something that wants a name.

Ἀυτάρκεια, a habit liberally content with the present, a mean betwixt *πτωχεία*, and *πολυτελεία*.

Εὐψυχία, a habit of sustaining grievous things unconquered, a mean betwixt *ἀψυχία*, and *ἀειμανιότης*.

Φιλοπονία, a habit performing excellent things indefatigably, a mean betwixt *μαλακία*, and *μάλασπονία*.

Lastly, *Probity* is a virtue consisting of all the rest; it is perfect, as well because it rendreth good things honest and profitable, as for that it desireth honest things for their own sake.

CHAP. II.

OECONOMICK.

HAVING thus explained the Virtues and the chief Heads of *Ethick*, it remaineth that we speak of *Oeconomick* and *Politick*, for as much as Man is by nature a *Civil Creature*. The first Commonwealth is the lawful congression of man and woman, for procreation of Children, and Society of Life. This is called *ὀικος*, a *Family*, it is the ground and beginning of a City. A Family seemeth to be a little City, for Marriage being contracted, and Children growing up one under another, and joyn'd one to another, there is deduced another Family, and so a third, and a fourth. Of these is constituted Neighbourhood and a City, for many Neighbourhoods make us up a City. Thus as a Family hath in it the seeds of a City, so likewise of a Commonwealth, for in a Family there are the prints of *Monarchy*, an *Aristocracy*, and a *Democracy*. The Society between Parents and Children represents a *Monarchy*; that betwixt man and Woman an *Aristocracy*, as being contracted for issue, mutual comfort and assistance. To these is added a *Servant*, appointed to be such by Nature, able for Service, but not to live of himself, requiring therefore a Master to Govern him. Of all these reduced to a community is constituted a *Family*.

The Government of a Family is by Nature given to *Men*, for the Counsel of *Women* is weaker, *Children* are not yet arrived to it, *Servants* never can. The whole ordering therefore of a Family

depends upon the Man; the whole prudence of *Oeconomy* therefore is in Man: This is partly *Paternal*, partly *Nuptial*, partly *Herile*, partly *Acquisitive*. For, as an Army requireth *Provision*, a City, *Merchandise*, Art, *Instruments*; so a Family Neecessaries, as well for common life as convenience. Of these the Master of the Family takes the first care, how honestly to encrease his Revenues, and moderate his expences. He, as being the head of the Family, ought to be skilful in many things, as in *Agriculture*, *Grasing*, *Metals*, whereby he may advantage himself without doing injury to others. Of Acquisition there are two kinds, one better than the other; that by *Nature*, this by *Art*.

CHAP. V.

POLITICK.

THUS much concerning *Oeconomick*; we come next to speak in short of *Politick*.

First then, *Cities* are constituted as well for the natural propensity of man to society, as for utility. A City is the most perfect Society. A Citizen is he who is concern'd in the Magistracy. A City is a compleat number of such persons, which proceedeth so far, as that it be not a disagreeing within it self, not contemptible, but may conveniently provide for life, and defend it self against enemies.

Oeconomical prudence is one kind, *Legislative* anothe, *Political* a third, *Military* a fourth.

A City is Governed either by one man, or some few, or all; and each of these either rightly, or unjustly: Rightly, when the Princes respect the common good; unjustly, when they consider their own private Interest. The right are *Monarchy*, *Aristocracy*, *Democracy*; the unjust, *Tyranny*, *Oligarchy*, *Ochlocracy*. There is also a mixt Government, consisting of the good kinds. And whereas a Commonwealth is often changed into better or worse; that is best which is guided according to Virtue; that worst, which is according to Vice.

They who Command, or Advise, or Judge in *Democracy*, are taken out of *all*, either by *Suffrage*, or *Lot*: In *Oligarchy*, out of the *Richer*; in *Aristocracy*, out of the *Best*.

Sedition in Cities is either according to *Reason* or *Interest*; the first, when equals are reduced to unequal extremities; the second, for Honour, Power, or Gain.

Commonwealths are overthrown either by *Force* or *Fraud*. They last longest which respect the publick utility.

Courts of *Judicature*, *Processes*, *Pleas*, and *Magistracies*, are ordered according to the forms of every Commonwealth. The most general commands are *Priesthood*, *Generalship*, *Admiralty*, *ναυαρχία*, *ἀγορονομία*, *γυμνασιαρχία*, *γυναικονομία*, *παιδονομία*, *ἀστυνομία*, *ταμεία*, *νομοφυλακία*, *περχηλορεία*, whereof some relate to Cities, others to Havens and Traffick.

The Office of a Commonwealth-man is to reform a Commonwealth, which is much harder than to erect one; and to divide the common people into two parts, one for necessary Offices, the other for convenient: *Mechanicks*, *Husband-*

Justice

Justice are, *εὐσέβεια*, *οσιότης*, *χρηστότης*, *εὐκοινωνησία*, *εὐσωαλλαξία*, under Temperance *εὐκοσμία*, *ἐνστάξια*, *αὐτάρκεια*, *εὐψυχία*, *φιλοπονία*, defined thus.

Εὐσέβεια, is a habit of Worshipping the Gods and Demons, a mean betwixt *Atheism* and *δαίσιδαίμονια*.

Ὀσιότης, a Habit of observing Right towards the Gods and the Dead, a mean betwixt *ἀνοσιότης* and something that wants a name.

Χρηστότης, a Habit of doing well voluntarily for their own sakes: a mean betwixt *πονηρία*, and something that wants a name.

Εὐκοινωνησία, a habit, rendring men grateful in Society, a mean betwixt *ἀκοινωνησία*, and something that wants a name.

Εὐσωαλλαξία, a habit avoiding injustice in Contracts: a mean betwixt *ἀσωαλλαξία*, and something that wants a name, which pertaineth to *extream right*.

Εὐκοσμία, a habit of observing order, a mean between *Ἀταξία*, and something that wants a name.

Ἀυτάρκεια, a habit liberally content with the present, a mean betwixt *πτωχεία*, and *πολυτελεία*.

Εὐψυχία, a habit of sustaining grievous things unconquered, a mean betwixt *ἀψυχία*, and *ἀειμαυνιότης*.

Φιλοπονία, a habit performing excellent things indefatigably, a mean betwixt *μαλακία*, and *μαλαιοπονία*.

Lastly, *Probity* is a virtue consisting of all the rest; it is perfect, as well because it rendreth good things honest and profitable, as for that it desireth honest things for their own sake.

CHAP. II.

OECONOMICK.

HAVING thus explained the Virtues and the chief Heads of *Ethick*, it remaineth that we speak of *Oeconomick* and *Politick*, for as much as Man is by nature a *Civil Creature*. The first Commonwealth is the lawful congression of man and woman, for procreation of Children, and Society of Life. This is called *ὄικος*, a *Family*, it is the ground and beginning of a City. A Family seemeth to be a little City, for Marriage being contracted, and Children growing up one under another, and joyn'd one to another, there is deduced another Family, and so a third, and a fourth. Of these is constituted Neighbourhood and a City, for many Neighbourhoods make up a City. Thus as a Family hath in it the seeds of a City, so likewise of a Commonwealth, for in a Family there are the prints of *Monarchy*, an *Aristocracy*, and a *Democracy*. The Society between Parents and Children represents a *Monarchy*; that betwixt man and Woman an *Aristocracy*, as being contracted for issue, mutual comfort and assistance. To these is added a *Servant*, appointed to be such by Nature, able for Service, but not to live of himself, requiring therefore a Master to Govern him. Of all these reduced to a community is constituted a *Family*.

The Government of a Family is by Nature given to *Men*, for the Counsel of *Women* is weaker; *Children* are not yet arrived to it, *Servants* never can. The whole ordering therefore of a Family

depends upon the Man; the whole prudence of *Oeconomy* therefore is in Man: This is partly *Paternal*, partly *Nuptial*, partly *Herile*, partly *Acquisitive*. For, as an Army requireth *Provision*, a City, *Merchandise*, *Art*, *Instruments*; so a Family *Necessaries*, as well for common life as convenience. Of these the Master of the Family takes the first care, how honestly to encrease his Revenues, and moderate his expences. He, as being the head of the Family, ought to be skilful in many things, as in *Agriculture*, *Grassing*, *Metals*, whereby he may advantage himself without doing injury to others. Of Acquisition there are two kinds, one better than the other; that by *Nature*, this by *Art*.

CHAP. V.

POLITICK.

THUS much concerning *Oeconomick*; we come next to speak in short of *Politick*.

First then, *Cities* are constituted as well for the natural propensity of man to society, as for utility. A City is the most perfect Society. A Citizen is he who is concern'd in the Magistracy. A City is a compleat number of such persons, which proceedeth so far, as that it be not a disagreeing within it self, not contemptible, but may conveniently provide for life, and defend it self against enemies.

Oeconomical prudence is one kind, *Legislative* anothe, *Political* a third, *Military* a fourth.

A City is Governed either by one man, or some few, or all; and each of these either rightly, or unjustly: Rightly, when the Princes respect the common good; unjustly, when they consider their own private Interest. The right are *Monarchy*, *Aristocracy*, *Democracy*; the unjust, *Tyranny*, *Oligarchy*, *Ochlocracy*. There is also a mixt Government, consisting of the good kinds. And whereas a Commonwealth is often changed into better or worse; that is best which is guided according to Virtue; that worst, which is according to Vice.

They who Command, or Advise, or Judge in *Democracy*, are taken out of *all*, either by *Suffrage*, or *Lot*: In *Oligarchy*, out of the *Richer*; in *Aristocracy*, out of the *Best*.

Sedition in Cities is either according to *Reason* or *Interest*; the first, when equals are reduced to unequal extremities; the second, for Honour, Power, or Gain.

Commonwealths are overthrown either by *Force* or *Fraud*. They last longest which respect the publick utility.

Courts of *Judicature*, *Processes*, *Pleas*, and *Magistracies*, are ordered according to the forms of every Commonwealth. The most general commands are *Priesthood*, *Generalship*, *Admiralty*, *ναυαρχία*, *ἀγρονομία*, *γυμνασιαρχία*, *γυναικονομία*, *παιδονομία*, *ἀστυνομία*, *ταμεία*, *νομοφυλακία*, *πρεσβυτεία*, whereof some relate to Cities; others to Havens and Traffick.

The Office of a Commonwealth-man is to reform a Commonwealth, which is much harder than to erect one; and to divide the common people into two parts, one for necessary Offices, the other for convenient: *Mechanicks*, *Husbandmen*;

men, and Merchants are for the necessary sort, continually serving the Commonwealth; but Soldiers and Councillors, who are Servants for Virtue, and perform Noble things, are the more excellent.

Old Men are most proper to be Councillors, and also Priests to perform the Sacred Rites; young men for War. This order is exceeding ancient, first constituted by the Egyptians, who, amongst other things excellently disposed, appointed the Temples of the Gods to be built in

the highest places, and the Lands of private persons to be disposed, partly at the confines of the Country, partly near the City, whereby both parts of the Country should meet in Tribute and Tax. They likewise well ordered the institution of Sodalities, and a publick care for the Education of Children, and that those who are too young or too old, should not Marry, to prevent their having weak Children. Likewise, that nothing mixt be taken away, nothing perfect exposed, abortion not procured. Thus much of Politicks.

THE FOURTH PART.

CHAP. I. OF METAPHYSICKS.

THE Fourth and last part of Philosophy, which treateth of Ens in general, is by Aristotle termed sometimes, First, Philosophy; sometimes Wisdom, sometimes Theology, by his Followers and Interpreters called Metaphysick, from the order thereof, as Alexander Aphrodisæus and Philoponus affirm; being placed after Physick, as treating of a less known, and more Noble Object.

Upon this Subject there are fourteen Books of Aristotle Extant, which, saith Alexander Aphrodisæus, by the method of the discourse and style, are easily evinced to be his.

a Metaphys. lib. 6. cap. 1. *b* Lib. 4. cap. 2. *a* Metaphysick considereth Ens as it is Ens, and the primary cause thereof. *b* Ens is Analogous, pradicated primarily of substance, which is one essence; of Accidents, not simply, but in regard of their common attribution to substance. Ens thus being one analogically, the Science thereof is one likewise; but it treateth chiefly of substance, because that is the first essence upon which the rest depend, and from which they are denominated.

CHAP. II.

Of the first Principle.

THE first most common Axiom, or complex principle is this, *It is impossible that the same thing should be, and not be, in the same, and according to the same respect.*

To this principle, all demonstrations and opinions are reduced. It is it self indemonstrable, as being the first; otherwise there would be an infinite progression in demonstration. There is nothing more known by which it may be proved, no greater absurdity than the denial of it, that an Adversary can be reduced to.

With the first negative principle, the first affirmative hath a near affinity. *It is necessary that every thing be predicated affirmatively or negatively of another.* It is not true in matter of a future contingent determinately, but only indeterminately. This affirmative principle therefore is not absolutely the first, yet it is true; neither can there be a medium betwixt contradictory propositions, no more than betwixt even and uneven number; every proposition either affirms or denies, therefore every proposition is either true or false; between these there is no medium.

CHAP. III.

Of Substance and Accident.

OF Ens in general there are three divisions; first, by Accident and *per se*; secondly, Potentially and Active; thirdly, Intentional and Real. *a* Lib. 6. cap. 2.

Of Ens by Accident, there is no Science, for it is in a manner Non ens, it hath no cause *per se*, it is not generated or corrupted *per se*; it is not always, nor for the most part, nor necessary, whereas Science is of things contrary to these.

b Ens *per se*, is divided into ten Categories. The first is Substance, and the first Ens, and consequently the first Category, for it is predicated in quid of the first subject, whereas Accidents are predicated in quale or quantum. Again, Substance only is Ens *per se*, Accidents are Ens, as they are Affections of Substance. Substance is the first Ens, by Reason or Definition, because Accidents are defined by Substance. By Knowledge, because the Knowledge of Accidents depends on the Knowledge of Substance. By Time, for there is some Substance without Accident, as God and Intelligences, but there is no Accident without a Substance. Likewise material Substances are prece-

Cap. 3.

Cap. 4. 5.

precedent in Time, at least to some Accidents, which arrive unto them after they have some time generated. And lastly, *by Nature*, for the Subject is, by Nature, before that which inhereth in it. Hence this part of Physick treateth only of Substance.

c Subject or Substance is three-fold; *Matter*, *Form*, *Compositum*. The two latter are more *Ens*, than *Matter*, tho' *Matter* be truly Substance, as being the first and last Subject which remaineth, tho' all the Affections of a Body be taken away. This is first *Matter*, which in it self is neither compleat Substance, nor Quantitative, nor in any other *Category*. Neither is it first Substance, for that is separable, and may exist by its own power without others. That is likewise a determinate, perfect, singular Substance; but *Matter* cannot be separated from *Form*, neither is it singular or determinable.

d *Form* is that which the thing it self is said to be, *per se*, τὸ τὶ ὡς ἑαυτοῦ, *The being of a thing what it was*, the whole common Nature and Essence of a Thing, answerable to the Definition. Compound sensible Substances have a proper Definition; but *Ens by Accident*, consisting of Subject and Accident, hath not, tho' it may be by Accident described and explained. Even *Categorical Accidents* being one *per se*, and of one Nature, have a *Quiddity* and Definition, not simple, as Substances, but after their own manner.

e *Matter* and *Form* are not properly generated, but the whole *Compositum*, whereto *Idea's* [separate Substances] confer nothing, neither as efficient, nor exemplary Causes.

f The common substantial, or formal parts of the thing defined, are to be put into the Definition of the whole; but the material parts of the *Individuum* it self, must not.

CHAP. VI.

Of Power and Act.

a *Lib. 9. cap. 9.* **N**ext Substance, we come to Power and Act. Power is either *Active* or *Passive*: Active Power is the Principle of changing other Things, or acting on another, in as much as it is another. Passive Power is in a manner the same with Active, for the motion of Passion and Action is really the same, neither can one be without the other, tho' simply they are diverse, being in different Subjects, Passive in the Patient, Active in the Agent.

b *Cap. 2.* Of Powers, some are void of Reason, as the Power of warming; some *Rational*, as Arts. The *Rational* are of Contraries, as Medicine is of Health and Sick; the *Irrational* of one only, as Heat produceth Heat.

c *Cap. 3.* The Power (contrary to the *Megarick* Philosophers, followers of *Zeno*) remains, although not reduced to Act; for we call a Man *Architect*, tho' he be not actually employed in Building. Again, Animals have Sense, even when they are not in Act. Thirdly, it were impossible any thing could be, which were not actually. Possible is that whose Power, if it were reduced to Act, would not imply any impossibility.

d They are mistaken, who think there is any thing possible; which shall never actually be, or that there are Powers whose Acts are impossible; for hence it would follow, that all things should be possible, nothing impossible. Possible is that which doth or may follow from some Power; if it never followeth, or cometh out of that Power, it is impossible. That which is possible therefore, must at some time or other be in Act.

e *Cap. 5.* Of Powers there are three kinds, some *Natural*, as senses; some *acquired by Custom*, as playing on a Pipe; some by *Discipline*, as Arts. The two last require previous Operations, the natural do not. Natural and Irrational Powers are necessarily reduced to Act, when the Agent and Patient are at a due distance, and there is nothing betwixt to hinder them. The rational Powers are not so, for they are free to Act or not to Act as they please.

f Act is, when the thing that was in power is otherwise than when it was in power. *f* *Cap. 6.*

g All Act is before Power, and before all *g* *Cap. 8.* Nature which is contained under Power, by Reason, Essence and Time. By Reason, because Power is defined by Act. By Time, because tho' Power be temporal before Act in the same numerical Object; for a Man may first be learned, before he actually be such; yet, in different things of the same species, Act is ever before Power in time; for nothing can be made or reduced from Power, unless by an Agent actually existent.

Lastly, Act is before Power in Essence; first, because it is later in Generation; for Generation beginneth from the imperfect State of a Thing, and proceedeth to the perfect. Now all Generation proceedeth from Power to Act. Secondly, Act is the end of Power; but the end, as it is later in Generation, so it is more perfect by Nature, and first in Intention.

CHAP. V.

Of True and False.

a *Lib. 6. cap. 2.* *b* *Lib. 9. cap. 10.* **T**he first Division of *Ens* is into *Intentional* and *Real*. *b* The *Intentional* is either true or false. The Intellect asserteth truly, if its judgment be conformable to the thing; falsely, if not conformable, for there is composition and division in the things themselves, as well as in the Intellect. Whence if the Intellect compound things by Affirmation, as they are really compounded; or divide them by Negation, as they are really divided, it asserteth truly; otherwise falsely. True and false are in the simple apprehension of things, but simply, not enunciatively, so as that truth is nothing but a simple perception of the Object: falsehood a non-perception or ignorance thereof, tho' ignorance be not properly falsity. Whence simple apprehension may be true in it self, false it cannot be, for falsity requireth composition.

Complex Truth and Falshood may be of the same separate substances.

He cannot be deceived in the knowledge of things *immoveable*, whosoever hath once conceived them *immutable*; for either he will judge always truth, or always err, because things

things immovable are always in the same manner. The vicissitude and deception, and true and false judgment, is only in things contingent and mutable.

CHAP. XVI.

Of One, the Same, and Diverse.

ONE is an affection of *Ens*, not a *Substance* as *Pythagoras* and *Plato* affirmed, but a *Categoreme*, prædicated of every thing as it is *Ens*. To one is opposite many, by privative opposition, and therefore one is manifested by many, as indivisible by divisible, the privation by the habit. For divisible is more known to sense than indivisible, and multitude than unity. To one are referred the same, equal, like; to many, divers, unequal, unlike.

b Things are diverse either by *Genus* or *Species*: by *Genus* those which have not the same matter, or a mutual Generation; or whereof one pertains to corruptible substance, the other to incorruptible. By *Species*, those which have the same genus. Genus is that wherein those things that are diverse are said to be the same according to substance.

CHAP. VII.

Of Immortal, Eternal, and Immoveable Substances.

a Substance is threefold, two kinds, *natural*, whereof one is corruptible, as *Animal*; the other *sempiternal*, as *Heaven*. The third is *immoveable*.

That there is a perpetual immoveable substance, is proved thus. Substances are first *Ens*, therefore if all substances are corruptible, all things likewise must be corruptible; which is false, for there is an eternal local motion, circular, proper to *Heaven*, which it is not possible should have had a beginning, or shall have a dissolution, no more than time. If therefore Time be eternal, as motion, there must necessarily be some incorruptible and eternal substance, not only that wherein that eternal motion exists, the *Heaven* it self; but one substance, which so moveth, that tho' it remain its self moveable, yet it moveth others from eternity to eternity, not having only the power of moving, but being continually in the act of motion. For *Plato* and the rest, who conceived God to have done nothing for a great while, err, because that power were frustraneous which were not reduced to act. Besides, motion would not have been eternal, unless the moving substance were not only eternal, and in perpetual actual motion; but such likewise, that it could not but it must move always, as being a pure act void of power.

Hence the substances which cause eternal motion, are void of matter, for they move from an eternal act, and are void of all power.

In things that sometimes are, sometimes are not, power is precedent to act, but simply and absolutely act is precedent to power. For, neither things natural or artificial are reduced from

power to act, but by something that actually exists. Now if the same thing always return by a circular motion, it necessarily followeth, that there is something eternal which remaineth ever the same, and operateth in the same manner. Such an eternal first moving substance is the first *Heaven*. The vicissitude of *Generation* and *Corruption* is not caused by the first *Heaven*, for that moveth always in the same manner, but by the inferior Orbs, especially the *Sun*, which by his accession bringeth life, by his recession death to all things mortal.

Thus is the first *Heaven* eternal, for it is moved with eternal motion; besides which there is something which always moveth, and is never moved it self, and is eternal, and substance, and act.

CHAP. VIII.

Of GODS.

THis first mover, moveth in the same manner as things appetible and intelligible, that is, it so moveth others, as it self remaineth immoveable. The motion of the first Agent, as it is the first efficient cause, consisteth in that influence thereof, whereby it concurrith effectually with the inferior intelligences in moving its own Orb. Wherefore the efficiency of the first mover is an application of the powers of the inferior movers to their proper works, wherein he concurrith with them actively, and independently. Thus the intelligences move the *Heavens*, not for the generation of inferior things (for the end must be more noble than the means) but for that chief and amiable good, whereunto they endeavour to be like, as their ultimate end.

The first mover is void of mutation, an *Ens*, wholly and simply necessary, and consequently the principle of all. Upon this first principle depend *Heaven* and *Nature*, because without him, their ultimate end and first efficient, nothing can be, or be operated.

This first mover, *God*, enjoyeth the most perfect life: perpetual and most pleasant, which absolute felicity is proper to him: for as much as he understandeth and contemplateth himself with infinite delight. For, as we are happy in contemplation that lasts but a little while, so is *God* most happy, in the infinite and most perfect contemplation of himself, who is of all things most admirable.

God is an eternal living being, the best of beings, an immoveable substance, separate from sensible things, void of corporeal quantity, without parts, and indivisible; for such must that principle or substance be which moveth in infinite time. Nothing finite hath infinite power. All magnitude must be either finite or infinite. Finite magnitude cannot move in infinite time; infinite magnitude there is not, as we proved in the *Physick*.

God is impassible, not subject to alteration; the first local motion, which is the circular, not being competent to *God*, because he is immoveable, it followeth that other motions that induce passion or alteration, and are later than local motion, cannot likewise be competent to him.

CHAP.

CHAP. IX.

Of Intelligence.

a Cap. 8.

BEfides this *first Substance* the mover of the first Heaven, there must likewise be other substances separate from matter, eternal and immoveable, president over the motions of the inferior Orbs; so that after what number and order those Orbs are disposed, according to the same are these external moving, and immovable substances ordered.

From the number of the *motions* may be collected the number of the Spheres, and consequently of the substances moving, which according to *Aristotle* are 47.

Heaven is numerically *one*, because the first mover is one. It is an ancient Tradition that these first substances that move the Heavens are *Gods*. This Opinion is truly Divine; but what is added, that they had the shape of Men, or some other Animal, was only invented for perswasion of the common People, for the use of Laws, and the convenience of Life. Thus much may serve for a short view of his *Metaphysics*.

THEOPHRASTUS.

CHAP. I.

His Country, Parents, Masters.

* De Exil.

a Lib. 13.

b Laert.
c Suid.d Praef. Hb. 1.
e Lib. 13.

f Laert.

Theophrastus succeeded *Aristotle*, he was born at *Erebus*, (as * *Plutarch*, *Laertius*, and others affirm) a Sea-Town of *Lesbos*, seated upon a Hill, as a *Strabo* describes it, distant from *Sigrium* 18 *Stadia*.

His Father was named *Melantes*, as b *Athenodorus* affirmeth, according to c others, *Leo*, by profession a *Fuller*. *Theophrastus* was first called *Tyrtamus*. He heard *Leucippus* in his own Country, afterwards went to *Plato*, and lastly became an Auditor of *Aristotle*, who changing the roughness of his Name, called him, as *Suidas* saith, *Euphrastus*, afterwards *Theophrastus*, from the Divine Eloquence of his Speech, wherein (as *Cicero*, d *Pliny*, *Laertius*, e *Strabo*, and others aver) he excelled all the rest of his Disciples.

f He was likewise so quick of apprehension, that what *Plato* had said of *Aristotle* and *Xenocrates*, *Aristotle* applied to him and *Calisthenes*. *Theophrastus* was acute to admiration, ready to apprehend every thing that he taught; *Calisthenes* was dull: So that one needed a Bridle, the other a Spur.

CHAP. II.

His Profession of Philosophy, and Disciples.

a Laert. Suid.

A*ristotle* retiring to *Chalcis*, in the 2d. year of the 114th. Olympiad, a being importuned by his Disciples to appoint a Successor, made choice of *Theophrastus* (as hath been already related in the Life of *Aristotle*) who thereupon undertook the Government of the School, and *Aristotle* dying, lived in his Garden, *Demetrius Phalerius* cohabiting with him. This time wherein *Theophrastus* flourished, is reckoned by b *Pliny* to be about the 440th. Year from the building of *Rome*; c 390 Years, as d *Salmasius* rightly Reads, before that time wherein *Pliny* wrote.

e *Hermippus* saith, he went at certain hours to the School, neatly dressed, and there sitting down, discoursed in such manner, that he omitted no gesture suitable to the Argument whereupon he treated, so that once to express a Glutton he licked his Lips.

f In the fourth year of the 118th. Olympiad, f *Laert.* *Athen.* *Xenippus* being Archon, *Sophocles*, Son of *Am-deipn.* *phiclides*, procured a Law to be made, forbidding all Philosophers to keep publick Schools, unless such only as the Senate and People should think fit to License; if any did otherwise, he should be put to Death. By this Decree, saith *Athenaeus*, he Banished all the Philosophers out of the City, amongst the rest *Theophrastus*, who the year following returned, when as *Philo*, a Disciple of *Aristotle*, accused *Sophocles* for having done contrary to Law. Whereupon the *Athenians* revers'd the Decree, fined *Sophocles* five Talents, and called home the Philosophers; by which means *Theophrastus* returning, was reinstated in the School.

Laertius saith, there came to hear him 2000 Disciples; *Suidas* saith (if there be no mistake in the Number) 4470. of whom were *Strabo*, his Successor, *Demetrius Phalereus*, *Nichomachus*, Son of *Aristotle*, whom *Aristippus* saith, he much affected; *Erasistratus* the Physician, as some affirm, and *Menander* the Comick Poet.

CHAP. III.

His Vertues and Apothegms.

a **H**E was exceeding Learned and Studious, a *Laert.* as *Pamphila* affirmeth.

b He was very liberal in conferring benefits; b *Laert.* and a great cherisher of Learning.

c He made Collections of Money for the c *Athen. lib. 5.* Conventions of Philosophers, not for Luxury, but for Temperance, and Learned Discourses.

d He

CHAP. IV.

His Will and Death.

a His Will is thus delivered by Laertius, a Laert.

BE all well; but if any thing happen otherwise, thus we give Order. All those Goods which belong to the House, I bequeath to Melantes and Pancreon Sons of Leo; Those which are set apart for Hipparchus, I Will be thus disposed. First, That the Study and Ornaments belonging thereunto be perfected, and if any thing may be added more to Beautifie them, that it be done. Next; that the Statue of Aristotle be set up in the Temple, and the other Donaries which were before in the Temple. Moreover, that the little Walk which is near the School be built new; not worse than it was before, and that the Maps of the World be placed in the lower Walk. That an Altar likewise be built, wanting nothing of Perfection and Splendor. I Will that the Statue of Nicomachus as big as the Life be finished; it is in Praxitele's hand; let him go on with it. Let it be placed wheresoever they shall think good, who have the disposal of the rest, and are named in my Will. Thus much for the Temple and Donaries. My Land at Stagira I bequeath to Callinus, all my Books to Neleus. The Garden and Walk, and all the Houses belonging to the Garden, I bequeath to my Friends hereafter named, that they may Exercise themselves, and Study Philosophy therein; for Men cannot always be abroad. But with Condition, that they do not Alienate it, nor pretend any Propriety thereto, but esteem it a thing Sacred in common Possessions, making use of all things therein as becometh just and loving Friends. The Persons to whom I Will that this be in Common, are, Hipparchus, Neleus, Strato, Callinus, Democritus, Demaratus, Callisthenes, Melantes, Pancreon, and Nicippus. Let also Aristotle, Son of Midias and Pythias, if he desire to Study Philosophy, partake likewise of the same Priviledge; and let the most Ancient of the Overseers take great care of him, that he be instructed as well as is possible in Philosophy. Let us be buried in that part of the Garden, which they shall think most convenient, not erecting a Monument, or any thing that is Sumptuous over our Graves. Thus let all things be ordered according as is said; the Temple, Monument, Garden, and Walk repaired; let Pompylus, who dwelleth in them, take charge of them, and of other things as he did heretofore, for whose pains therein, let the Possessors thereof consider him. As for Pompylus and Threpta, who have been long since manumitted, and done as good Service, if there be any thing which we have bestowed upon them, or they themselves have required, as also the 2000 Drachms which I appointed to be given to them and Hipparchus, let them firmly possess it all, as I have often expressed to Melantes and Pancreon, who assented thereunto. Moreover I bestow on them Somatales and the Girl. Of my Servants, I manumit Molon and Cimon, and Parmenon; as for Manes and Callias, when they shall have lived four years in the Gardens, discharging their Office unbameably, I Will they be set at Liberty.

Of

CHAP.

d He twice freed his Country, being under the oppression of Tyrants.

e Cassander Son of Antipater much esteemed him, and Ptolomy the first wrote Letters to him.

f He was so much honoured by the Athenians, that Agnonides accusing him of Impiety, very hardly escaped from being fined himself.

a Of his Apothegms are remembered these. He said, It is more safe trusting to an unbridled Horse, than intemperate Speech.

b To a young Man at a Feast silent: If you hold your peace, saith he, because you are foolish, then you are wise; but, if you are wise, you do foolishly in holding your peace.

c He used to say, Of all things that are spent, time is the most precious.

d Being demanded, as Aristo saith, what he thought of Demosthenes; he answered, he is worthy of this City; of Demades; he is above the City.

e To Philip Son of Cassander he saith, I wonder your eyes do not make musick, the pipe of your nose coming so directly upon them.

f To prove that Riches are not to be loved and admired, he instanced Callias, a Rich Athenian, and Ismenias a Theban; these saith he, use the same things, as Socrates and Epaminondas.

g He saith we must not love Strangers, to the end we may make trial of them, but make trial of them to the end we may love them.

h He said the Soul paid a dear Rent for her Habitation in the Body.

i He said Falshood raised from Calumny and Envy, endureth a little while, but soon perisheth.

k Seeing a young man blush, he of good comfort, saith he, that is the complexion of Virtue.

l He used to say, stand in aw of thy self, and thou shalt not be ashamed before others.

m He said, The good need but few Laws, for things are not accommodated to Laws, but Laws to things.

n The Envious are more unhappy than others in this respect, that they are troubled not only at their misfortunes, but also at the good fortunes of others.

o Being derianded what preserved humane life, he said, beneficence, reward, and punishment.

p He said Honours are to be acquired, not by conversation and favour, but by action.

q Being demanded what Love is, he answered, the passion of an idle Soul.

r He said a Woman ought not to be seen her self, nor behold others richly attired, for both are inticements to dishonesty.

s He said, Love is an excessive desire of something irrational, the entrance thereof easie, the disingagement difficult.

Of the Domestick Utensils, let the Overseers bestow on Pompylus as many as they think fit, and sell the rest. To Demotimus I give Cario; to Neleus, Donax; let Eubius be Sold: Let Hipparchus give to Callinus 3000 Drachms. And for Melantes and Pancreon, if we did not look upon Hipparchus, as having heretofore been very beneficial to us, and now quite Ship-wreck'd in his fortunes, we should have appointed him a Joynt-Estate with Melantes and Pancreon. But because I conceive it were not easie for them to be joyned in the ordering of one Family with him, and that it would be more to their advantage to receive something certain from Hipparchus, for these Reasons let Hipparchus give to each of them, Melantes and Pancreon, a Talent. Let him likewise duly furnish the Overseers with all Charges necessary for the performance of the forementioned Works; which done, let Hipparchus be free and discharged from all Debts and Covenants to me. If any benefit come to Hipparchus from Chalcis on my behalf, let him wholly enjoy it as his own. Be these the Overseers of those things contained in my Will; Hipparchus, Neleus, Strabo, Callinus, Demotimus, Calisthenes, Ctesarchus.

Copies of the Will of Theophrastus, Signed with his Ring, are kept; the first by Hegesias Son of Hipparchus. Witnesses, Callipus a Pelanean; Philomelus, an Euonymean; Lyfander, an Hybrian; Philion, an Alopecian. The second Olympidorus hath attested by the same Persons. The third is in the hands of Adimantus, delivered to his Son Androsthenes. Witnesses, Aimnestus Son of Cleobulus; Lysistratus Son of Phidion, a Thasian; Strabo Son of Arcefilaus, a Lampfacene; Theopippus Son of Theopippus, of Potters Street; Dioscorides, Son of Dionysius, an Epicephisian. Thus (saith Laertius) was his Will.

He died old, having lived Eighty five years, his Spirits being wasted, as Suidas affirms, with continual Writing; and upon the Marriage of one of his Disciples, giving himself some intermission and rest, it occasioned his end.

As he lay upon his Death-bed, * Cicero saith, He blamed Nature for giving Harts and Crows so long Life that could do no good thereby, and to Man who could do most good, so short; whereas if Man had been allowed longer time, his life might have been adorned with the perfection of Arts and Learning. Thus he complained, that as soon as he came within the view of these, he was taken away.

His Disciples came to him, and asked him if he had any thing to say to them; Nothing, saith he, but that the life of man loseth many pleasures only for glory. When we begin to live, then we die: nothing is more unprofitable than the desire of glory. But be happy, and either give over study, for it is very laborious, or go perseverantly thro' it, for it is of great glory. The vanity of life is much greater than the benefit thereof. But, I have not time to advise you what to do; do you consider at leisure what is best for you: In saying which words, he expired. The whole People of Athens followed his body on foot to the Grave.

CHAP. V.

His Writings.

HE left many Writings, whereof, saith Laertius, because they are full of all kind of Learning, I thought good to give this Catalogue.

- First Analyticks 3.
- Later Analyticks 7.
- Of the Analysts of Syllogisms, 1.
- Epitome of Analyticks 1.
- Places of Deduction 2.
- Agonistics, concerning the Theory of Eristick Arguments.
- Of the Senses 1.
- To Anaxagoras 1.
- Of Anaxagoras 1.
- Of Anaximenes 1.
- Of Archelaus 1.
- Of Salt, Nitre, Allom, 1.
- Of Combustibles: or, as the other Edition, of things that may be petrified, 2.
- Of indivisible lines 1.
- Of Auscultation 2.
- Of Winds 1.
- The differences of Virtue 1.
- Of a Kingdom 1.
- Of the Discipline of a King 1.
- Of Lives 3.
- Of old age 1.
- Of the Astrology of Democritus 1.
- Of Sublime things 1.
- Of Apparitions 1.
- Of Humour, Colour, Flesh 1.
- Of the Description of the World 1.
- Of Man 1.
- A Collection of the Doctrines of Diogenes 1.
- Of Definition 3.
- Erotick 1.
- Another of Love 1.
- Of Felicity 1.
- Of Species 2.
- Of the Epilepsie 1.
- Of Divine Inspiration 1.
- Of Empedocles 1.
- Epichirems 18.
- Instances 3.
- Of Voluntary 1.
- Epitome of Plato's Commonwealth 2.
- Of the diversity of voice in Creatures of the same kind 1.
- Of Subitaneous Apparitions 1.
- Of Biting and Blows 1.
- Of Animals that are said to have Wisdom 7.
- Of those which dwell in dry places 1.
- Of those which change colour 1.
- Of those which dwell in Caves 1.
- Of Animals 7.
- Of Pleasure according to Aristotle 1.
- Of Pleasure, another 1.
- Theses 24.
- Of hot and cold 1.
- Of dizziness and dimness 1.
- Of sweat 1.
- Of Affirmation and Negation 1.

Calisthenes,

- Calisthenes, or of Grief 1.
 Of Labours 1.
 Of Motion 3.
 Of Stones 1.
 Of Pestilence 1.
 Of Fainting 1.
 Megarick 1.
 Of Melancholy 1.
 Of Metals 1.
 Of Honey 1.
 Of the Collections of Metrodorus 1.
 Sublime Discourse 2.
 Of Drunkenness 1.
 Of Laws Alphabetically 24.
 Epitome of Laws 10.
 To Definitions 1.
 Of Odours 1.
 Of Wine and Oyl.
 First Propositions, 18.
 Legislative 3.
 Politick 6.
 Politick according to severl occasions 4.
 Politick Customs 4.
 Of the best Commonwealth 1.
 Collection of Problems 5.
 Of Proverbs 1.
 Of Congelation and Liquefaction 1.
 Of Fire 2.
 Of Winds 1.
 Of the Palsie 1.
 Of Suffocation 1.
 Of Madnes 1.
 Of Passions 1.
 Of Signs 1.
 Sophisms 2.
 Of the solution of Syllogisms 1.
 Topicks 2.
 Of Punishment 2.
 Of Hair 1.
 Of Tyranny 1.
 Of Water 3.
 Of Sleep and Dreams 1.
 Of Friendship 3.
 Of Ambition 2.
 Of Nature 3.
 Of Physick 17.
 Of the Epitome of Physicks 2.
 Physicks 8.
 To Natural Philosophers 1.
 Of Natural Histories 10.
 Of Natural Causes 1.
 Of Chyles 5.
 Of false Pleasure 1.
 Of the Soul 1. Thesis.
 Of undoubted Faith 1.
 Of simple dubitations 1.
 Harmonicks 1.
 Of Virtue 1.
 Occasions or contradictions 1.
 Of Sentence 1.
 Of Ridiculous 1.
 Meridians 2.
 Divisions 2.
 Of Differences 1.
 Of Injuries 1.
 Of Calumny 1.
 Of Praise 1.
 Of Experience 1.
 Epistles 3.
 Of Casual Animals 1.
 Of Selection 1.
 Encomiums of the Gods 1.
 Of Festivals 1.
 Of Prosperity 1.
 Of Enthymemes 1.
 Of Invention 2.
 Moral Disputes 1.
 Moral Descriptions 1.
 Of Tumult 1.
 Of History 1.
 Of the judgment of Syllogisms 1.
 Of Flattery 1.
 Of the Sea 1.
 To Cassander, of a Kingdom 1.
 Of Comedy 1.
 Of Meteors 1.
 Of Speech 1.
 Collection of Words 1.
 Solutions 1.
 Of Musick 3.
 Of Meteors 1.
 Megacles 1.
 Of Laws 1.
 Of things contrary to Law 1.
 A Collection of the Doctrines of Xenocrates.
 Confabulations 1.
 Of an Oath 1.
 Rhetorical Precepts 1.
 Of Riches 1.
 Of Poesy 1.
 Problems, Politick, Ethick, Physick, Erotick 1.
 Proverbs 1.
 Collection of Problems 1.
 Of Physical Problems 1.
 Of Example 1.
 Of Proposition and Narration 1.
 Of Poesie, another, 1.
 Of the wise men 1.
 Of Advice 1.
 Of Solecisms 1.
 Of the Art of Rhetorick 1.
 Of Rhetorical Arts, 71 kinds.
 Of Hypocrisie 1.
 Aristotelick, or Theophrastick Commentaries 6.
 Natural Sentences 16.
 Epitome of Physicks 1.
 Of Gratitude 1.
 Ethick Characters.
 Of Falshood and Truth 1.
 Of the History of Divinity 6.
 Of the Gods 3.
 Geometrical Histories 4.
 Epitome of Aristotle, concerning Animals 6.
 Epichirems 2.
 Theses 3.
 Of a Kingdom 2.
 Of Causes 1.
 Of Democritus 1.
 Of Calumny 1.
 Of Generation 1.
 Of the Prudence and Manners of Animals 1.
 Of Motion 2.
 Of Sight 4.
 To Definitions 2.
 Of being Given 1.
 Of greater and lesser. 1.

Of Greater and Lesser 1.
 Of Musick 1.
 Of the Divine Beatitude 1.
 To those of the Academy 1.
 Protreptick 1.
 How a City may be best Inhabited 1.
 Commentaries 1.
 Of the Fiery Ebullition in Sicily 1.
 Of things granted 1.
 Of the ways of knowing 1.
 Of the Lying Argument 3.
 Ante-Topick 1.
 To Æschilus 1.
 Astrological History 6.
 Arithmetical Histories of Increase 1.
 Acicharus 1.
 Of Judicial Orations 1.
 Epistles concerning Aftycreon to Phantias
 and Nicanor.
 Of Picty 1.

Enias 1.
 Of opportunities 2.
 Of seasonable discourses 1.
 Of the Institution of Children 1.
 Another, different 1.
 Of Institution, or of Virtues, or of Temperance 1.
 Protreptick 1.
 Of Numbers 1.
 Definitions of Syllogistick speech 1.
 Of Heaven 1.
 Politick 2.
 Of Nature 2.
 Of Fruits and Animals. All which, faith Laertius, amount to 1182 Divisions: These Books, as Theophrastus had ordered in his Will, were delivered to Neleus. What afterwards became of them, hath been related in the Life of Aristotle.

S T R A T O.

CHAP. I.

His LIFE.

Strato ^a was Successor to Theophrastus. He was of ^b Lampfacum, his Father ^c Arcefilaus, or, as some, ^d Arcesius, mentioned in his Will. ^e He was a Person of great worth, Eminent, faith Laertius, in all kinds of Philosophy, but especially, in that which is called Physick, the most ancient and solid part, ^f wherein he introduced many things new, ^g dissenting not only from Plato, but from his Master Aristotle. ^h From his excellency herein he was called the Natural Philosopher: ⁱ He prescribed all Divine Power to Nature. ^k Ethick he touched but little. ^l He took upon him the government of the School, according to Apollodorus in the [third year of the 123 Olympiad] and continued therein eighteen years. He instructed Ptolomy the Son of Philadelphus, who bestowed eighty Talents upon him.

CHAP. II.

His Will and Death.

His Will, faith Laertius, was to this Effect.

THUS I order, against the time that I shall die. All these things which are in my House, I bequeath to Lampyrion and Arcefilaus. Out of the Money which I have at Athens, let my Executors first defray the Charges of my Funeral, and the Solemn Rites after my Enterment, doing nothing superfluously, nor Niggardly. The

Executors of these things I appoint in my Will to be these; Olympicus, Aristides, Mnesigenes, Hippocrates, Epicrates, Gorgylus, Diocles, Lyco, Athanes. I leave the School to Lyco, for the rest are either too old, or otherwise employed. All the rest shall do well if they confirm this Choice that I have made. I bequeath likewise all my Books unto him, except those which are written by our own hand, besides all Utensils, Carpets and Cups for Feasting. Let the Executors give 500. Drachmes to Epicrates and one of the servants, which Arcefilaus shall think good. Let Lampyrion and Arcefilaus discharge all the debts, which Daippus undertook for Hiraus. Let nothing be owing either to Lampyrion, or to the Heirs of Lampyrion, but let him be discharged of all, and the Executors bestow on him 500. Drachmes, and one of the Servants, as Arcefilaus shall think good; that having taken much pains with us, he may have sufficient for Food, and Rayment. I manumit Diophantus, and Diocles, and Abus. I give Simmias to Arcefilaus. I manumit Dromo. When Arcefilaus shall come, let Hiraus with Olympicus and Epicrates, and the rest of the Executors cast up the Accounts of the Charges of my Funeral and other things; whatsover is over and above, let Arcefilaus take it of Olympicus, not pressing him upon the day of payment. Let Arcefilaus discharge the Covenants which Strato made with Olympicus, and Aminias, which are in the hands of Philocrates Son of Tisamenus. As for my Tomb, let it be ordered

as Arcefilaus and Olympicus, and Lyco shall think good.

This was his Will, preserved by *Aristo* the Chian. He was of so thin and low a constitution, that he felt not any pain at his death.

Of his Name *Laertius* reckons eight.

The first, a Disciple of *Isocrates*.

The second, this Philosopher.

The third a Physician, Disciple of *Erasistratus*.

The fourth an Historian, who wrote the Wars of *Philip* and *Perseus* with the Romans.

The fifth is wanting.

The sixth, an Epigrammatick Poet.

The seventh, an ancient Physician.

The eighth, a Peripatetick, who lived at *Alexadria*.

CHAP. III.

Suidas saith, he wrote many Books: *Laertius* gives this Catalogue of them.

Of a Kingdom 3.

Of Justice. 3.

Of God 3.

Of Good 3.

Of Principles 3.

Of Lives.

Of Felicity.

Of Philosophy.

Of Fortitude.

Of Vacuum.

Of Heaven.

Of Breath.

Of Humane Nature.

Of the Generation of Animals.

Of Mixtions.

Of Sleep.

Of Dreams.

Of Sight.

Of Sense.

Of Pleasure.

Of Colour.

Of Diseases.

Of Judgments.

Of Faculties.

Of Metallick Machines.

Of Hunger and Offuscation.

Of Light and Heavie.

Of Divine Inspiration.

Of Time.

Of Aliment and Augmentation.

Of uncertain Animals.

Of Fabulous Animals.

Of Causes.

Solutions of Questions.

Proems of Places.

Of Accident.

Of More or Less.

Of Unjust.

Of Priority and Posteriority.

Of Priority of Genus.

Of Proprium.

Of Future.

Confutations of Inventions.

Commentaries, which are suspected.

Epistles; beginning thus, *Strato* to *Ar-
sinoe*, Health.

LYCO.

CHAP. I.

His LIFE.

STRATO, saith *Laertius*, was Succeeded by *Lyco*, Son of *Astyanax* of *Troas*, an Eloquent Person, and excellent for Education of Children. He heard also *Panthædus* the Dialectick.

He said, that as Horses need both Bridle and Spur, so in Children there must be joyned both Modesty and Ambition. Of his florid expression is alledged this instance. Of a poor Maid he said, βαρὺ γὰρ φορτίον πατρὶ κέρη διασπάνον πατρὶς ἐπιτέχουσα τὸν ἀκμαῖον τῆς ἡλικίας. A Maid is a heavie Burden to her Parents when she outruns the flowry season of her youth for want of a dower. Whence *Antigonus* said of him, That as the fragrancy and pleasantness of an excellent Apple will not admit Transplantation, so whatsoever he said was to be heard only from himself. For this sweetness of Discourse some added the let-

ter γ to his name, calling him γλύκων, which implieth sweetness: so * *Plutarch*.

* De Exiliis.

In Stile he was very different from himself.

Upon those who were sorry they had not learned when time was, and wished it might be recalled, he jested thus; he said, that they who endeavoured to make amends by a late penitence for their past negligence, were conscious of the impossibility of their wishes. And of those that sought to bring it to pass, he said, they had lost all Reason, in applying the nature of a strait Line to a crooked Ruler, or beholding their Face in troubled Water, or a confused Mirror.

He said, that to the wreath of publick Games in the Forum many aspired, to the Olympick, few or none.

He

He many times by his Counsel much advantaged the Athenians.

In his Garments he affected Neatness so much, that as *Hermippus* saith, he wore an upper garment very precious and fine.

He was very expert in all Exercises, active and well made for a Wrestler, being thin-ear'd and well set, as *Antigonus Carystius* affirmeth: Whence in his own Country he practised the *Elean Games*, and played at Ball.

He was intimate with *Eumenes* and *Attalus* beyond all men, who supply'd him with many things. *Antiochus* also would have had him lived with him, but could not get him.

He was so great an Enemy to *Hieronymus* the *Peripatetick*, that upon a Solemn day (of which already in the Life of *Arcefilaus*) he only forbore to come to him.

He compared Orators to Frogs, these, saith he, croak in the water, those by the water of an hour-glass.

He was Master of the School forty years, succeeding *Strato* in the 127th Olympiad, as he had given Order by his Will.

CHAP. II.

His Will and Death.

Laertius produceth a Will of his to this effect.

THUS I dispose of my Estate, if I shall not recover of this Sickness. All that is in my House I bequeath to the Brethren, *Astyanax* and *Lycos*, out of which is to be paid whatsoever I owe at Athens to any Man, as also the Charges of my Funeral and Exequies. What is in the City, and *Egina*, I bestow upon *Lycos*, because he is of our Name, and hath lived long with us, to our great content, as one that deserved the place of a Son. The *Peripatium* I leave to those Friends that will make use of it, as *Bulo*, *Callinus*, *Aristo*, *Amphio*, *Lycos*, *Pytho*, *Aristomachus*, *Heraclius*, *Lycomedes*, *Lycos*, my Kinsman. Let them put him in that place who they conceive will persevere in it, and discharge it best, which let the rest of my Friends confirm for my sake, and the places. My Funeral and the Burning of my Body be so ordered by *Bulo* and *Callinus*, it be not Prodigal nor Niggardly. Out of my Estate at *Egina*, let *Lycos* after my Death give to the Young Men as much Oyl as will serve their turns, that thereby the Memory of me and him that Honours me, may be justly preserved. Let them set up my * Statue, and choose a fit place for the setting up of it, wherein let *Diophantus* and *Heraclides*, Son of *Demetrius* assist them. Out of my Rents in the City, let *Lycos* pay all that I have named after his departure; in the next place let *Bulo* and *Callinus*, and the Ex-

* For Wrestling and other Exercises.

penses of my Funeral be discharged. Let that Household stuff be taken away which I have left as common betwixt them. Let likewise the Physicians *Pasithemis* and *Midas* be Honoured and Rewarded for their care of me, and for their skill. To the Son of *Callinus* I leave a couple of *Thericlean Pots*; and to his Wife a couple of *Goblets*, and a fine Carpet, and a shaggy Carpet, and a Coverlet, and two Couch-Beds, the best that are left, that we may not seem unmindful of their due respect towards us. As for those that served me, I order thus; *Demetrius*, who hath been long a Free-man, I forgive the price of his Redemption, and bestow upon him five *Minae*, and a Cloak and a Coat; and, as having undergone many Labours with me, let him be decently supplied with necessities. *Crito* the *Chelcidonian*, I forgive the price of his Redemption, and bestow further on him four *Minae*. *Micrus* also I manumit, whom let *Lycos* bring up, and six years hence let him instruct him. In like manner I manumit *Chares*, whom let *Lycos* also bring up; I give him two *Minae*, and my Books that have been Published: The rest that have not been Published, let them be given to *Callinus*, and let him take diligent care for the publishing of 'em. To *Syrus* the Free-man I give four *Minae*, and *Menodora*, and if he oweth me any thing, I forgive it him. To *Hilara* I give five *Minae*, a shaggy Coverlet, two Couch-beds, a Carpet, and which Bed he shall choose. I manumit likewise the Mother of *Micrus* and *Noemones* and *Dion*, and *Theon*, and *Euphranor*, and *Hermias*; as also *Agathos*, after he hath served two years more; as also *Ophelio* and *Possidonius*, the bearers of my Litter, after they have served four years more, I will that they be set at Liberty. I give moreover, to *Demetrius*, *Crito*, and *Syrus*, to each a Bed and Coverlet, such as *Lycos* shall think fit. This I bestow on them, for as much as they have expressed themselves faithful in the performance of such things as were committed to their Charge. As for my Burial, whether *Lycos* will have it here or at home, let it be as he will; for I perswade my self, he will do what is fitting, no less than if I had done it my self. When he shall have faithfully performed these things, let the bequests of my Will remain firm. Witnesses, *Callinus*, an *Hermionean*, *Aristo* the *Chian*, *Euphronius* a *Paeanian*.

Thus, saith *Laertius*, having wisely managed all thing appertaining to Learning and Humanity, his Prudence and Diligence extended even to the making of his Will; so that in that respect, also he deserveth studiously to be imitated. He died 74 years old, of the Gout.

There were four of his name.

The first, a *Pythagorean*, mentioned in the Life of *Aristotle*.

The second, this *Peripatetick*.

The third, an *Epick Poet*.

The fourth, an *Epigrammatick Poet*.

ARISTO.

^a *Strabo l. 10.* **A**RISTO Succeeded Lyco. He was of the Island ^a *Ceos*, famous for a Law, That whoſoever exceeded 60 years of age, ſhould be put to Death, that there might be no want of Proviſion for thoſe that were more Serviceable. In former time, ſaith *Strabo*, it had four Cities, now there remain but two, *Julis* and *Carthea*, into which the reſt were transferred. *Paceſſa* into *Carthea*, *Careſſus* into *Julis*. In *Julis* *Ariſto* was born. He was an Auditor of *Lyco*, and Succeeded him in the Government of the *Peripatetick* School as *Cicero*, *Plutarch* and *Clemens Alexandrinus* affirm.

He was a great imitator of *Bion* the *Boriftenite*. *Cicero* ſaith, he was neat and elegant. He wrote a Treatiſe of *Nilus*, cited by *Strabo*, and *Amatory Similies*, frequently cited by *Athenæus*.

^b *Athen. deipn. 10.* In the ſecond Book of his ^b *Amatory Similies*, he ſaith, that *Polemo* the *Academick* adviſed to provide ſuch entertainment at Feaſts, as ſhould be pleaſant not only at the preſent, but alſo on the morrow.

^c *Athen. deipn. 12.* ^c In the ſame Book of his *Amatory Similies*, of an Athenian well in years, named *Dorus*, who would be thought handſome, he apply'd the words of *Ulyſſes* to *Dolo*,

*Rich Presents ſure may lead away,
And thy too eaſie Soul betray.*

^d in the ſecond of his *Amatory Similies*, he ^d *Deipn. l. 13.* ſaith, the Ancients firſt bound their heads, conceiving it good againſt the pain cauſed by the vapours of the Wine, afterwards for more ornament they uſed Garlands.

Laertius upon the teſtimony of *Panætius* and *Soficrates* affirmeth, that all the writings aſcribed to *Ariſto* of *Chios* the *Stoick* (except the *Epiftles*) belong to *Ariſto* the *Peripatetick*; their Titles, theſe,

Protrepticks 2.
Of Zeno's Doctrine: Scolaſtick Dialogues 6.
Of Wiſdom, Diſſertation 7.
Erotick Diſſertations.
Commentaries upon vain-glory.
Commentaries 15.
Memorials 3.
Chryſæ's 11.
Againſt Orators
Againſt Alexinus's oppoſitions.
To the Dialecticks 3.
To Cleanthes, Epiftles 4.

CRITOLAUS.

^a *Lib. 16.* **C**Ritolaus was, according to *Plutarch*, of *Phaſelis*, an eminent Sea-Town of *Lycia*; deſcribed by ^a *Strabo* to have three Havens, and a Lake belonging to it. He was an Auditor of *Ariſto*, and Succeeded him in the School, as *Cicero*, *Plutarch*, and *Clemens Alexandrinus* affirm.

He went to *Rome* on an Embaſſy from the *Athenians* in the 534th year, from the building of the City, which falleth upon the 2^d year of the 140th Olympiad.

^b He condemned *Rhetorick*, as being uſed rather as an *Artifice*, than an *Art*. ^b *Sent. Empt.*

DIODORUS.

Diodorus was Diſciple to *Critolaus*, and Succeeded him in the School, as is manifeſt from *Clemens Alexandrinus*, who adds, that in his aſſertion concerning our chief end, he joyn-

ed *Indolence* with *Honeſty*. He is mentioned by *Cicero*, how long he taught, or who ſucceeded him, is unknown. Thus far we have an uninterrupted account of the *Peripatetick* School.

THE

THE
HISTORY of PHILOSOPHY.

The Seventh Part.

Containing the CYNICK Philosophers.

ANTISTHENES.
CHAP. I.

His LIFE.

THE *Cynicks* are derived from *Antisthenes*, Disciple of *Socrates*, who, being most pleased with those discourses of his Master, which treated of Tolerance and Laboriousness, instituted this Sect. ^a He was born at *Athens*, his Father an *Athenian* named *Antisthenes* also, his Mother

Mother a *Thracian*, or, as *Plutarch*, a *Phrygian*, in whose defence, to those who reproached him that she was a Foreigner, he answered, *Cibele the Mother of the Gods was a Phrygian*. He likewise derided the *Athenians* for boasting of their being Natives, saying, they were nothing more Noble than Snails and Locusts. *b* Neither did *Socrates* the less esteem him; but on the contrary, hearing that he had behaved himself valiantly at the Fight at *Tanagra*, he said of him, *I knew two Parents both Athenians could not beget so excellent a person*. He first heard *Gorgias* the Orator, whence his Dialogues are written in a Rhetorical Stile, consisting chiefly in Verity and Exhortation. *Hermippus* saith, at the *Istian* meeting, he used to make Orations in praise and dispraise of the *Athenians*, *Thebans*, and *Lacedemonians*, before all the Assembly. But seeing many of the Citizens come thither, he refrained.

Next he applied himself to *Socrates*, and profited so much under him, that he counselled his Scholars to become his fellow Disciples under that Master. He lived in the *Piræum*, and went every day 40 *Stadia*, to hear *Socrates*.

He affected even whilst he was Disciple to *Socrates*, to go in poor habit, and *c* once having turned the torn part of his Garment outermost, *Socrates* spying it, said, *I see vain-glory through a hole*; or, as *Ælian*, do you use this Ostentation before us also?

d Upon the death of *Socrates* he was the occasion of Banishment to *Anytus*, and of Death to *Melitus*; for *Melitus* meeting with some young Men of *Pontus*, invited to *Athens* by the Fame of *Socrates*, he brought them to *Anytus*, telling them he was wiser than *Socrates*; whereupon the standers by in Indignation, turn'd 'em both out of the City; of which already in the Life of *Socrates*.

CHAP. II.

His Institution of a Sect.

Socrates being Dead, of whom he learned Tolerance and Apathy, he made choice of *Cynosarges*, a Gymnasium at *Athens* just without the Gates, as of the fittest place in which he might Discourse of Philosophy. *b* It was so called upon this occasion. *Didymus* the *Athenian* Sacrificing in his own House, a white Dog that was by, snatcht the Victim, and running away with it, laid it down in another place; *Dydimus* much troubled thereat, consulted the Oracle, which enjoyned him to erect a Temple in that place where the Dog had laid down the Victim, and to dedicate it unto *Hercules*, which was called *Cynosarges*, *ὀκνὸς ἀργυράος*, *The Temple of the white Dog*. *c* Hence *Antisthenes* and his Followers were called *Cynicks*, and by those that disapproved their Institution, *Dogs*; *Antisthenes* himself being termed *Ἀσκησιώτης*, the sincere Dog.

He first doubled his old fordid Cloak, and wore it alone [without a Coat] as *Diocles* affirmeth; he carried likewise a Staff and Satchel. *Neantes* saith he first used a single Cloak. *Socrates* in the third of his Successions, saith, *Diodorus* the *Aspendian* wore a long Beard, and carried a Staff and Wallet.

d His Assertions are these, *That Virtue may be acquir'd by teaching; and those Persons Noble, who are Virtuous. That Virtue was Self-sufficient*

to Felicity, not needing any thing but a Socratick Courage. That Virtue consisteth in Actions, not requiring many Words nor much Learning, and is self-sufficient to Wisdom: for all other things have a reference thereto. That Infamy is good and equal to Labour, and that a wise man ought not to Govern the Common-wealth according to the Laws in Force, but according to Virtue; That a wise Man, to have Issue, may make choice of beautiful women, and Love, for a wise man only knoweth what ought to be loved.

Diocles addeth these; That nothing is new to a wise man; That a good man deserveth Love, That Virtuous Persons are Friends; That we ought to get assistance in War, Valiant and Just; That Virtue is an Armour that never can be taken from us; That it is better with some few good men to oppose all the wicked, than with many wicked men to contend with few good. Observe your Enemies, for they first find out your Faults; esteem a just man more than a neighbour; The same Virtue belongeth to man and to woman; These things are good which are honest, ill which are dishonest; all things esteem strange; Wisdom is the safest Fortification, for it will neither fall away, nor can be betray'd; In these inexpugnable things we ought to build Forts, by Meditation.

c *Agellius* saith, He esteemed Pleasure the greatest Ill; whence he used to say, *I had rather be Mad, than be addicted to Pleasure*. *Lib. 9. c. 5.*

f As to the Opinion of the *Cynicks* in general (not esteeming them, saith *Laertius*, a meer Form and Institution of Life, but a true Set of Philosophy) they were these. *Laert. vit. Menodem.*

They took away, with *Aristo* the *Chian*, *Dialectick* and *Physick*, and only admitted *Ethick*; whence what some said of *Socrates*, *Diocles* applied to *Diogenes*, affirming he used the same Expressions. That we ought to enquire,

What Good and Ill
Our Houses fill.

They likewise rejected the Liberal Sciences; whence *Antisthenes* said, those who have acquired Temperance, ought not to study any Learning, lest by other things they be diverted. Geometry likewise, Musick, and the like, they wholly took away. Whence *Diogenes*, to one that shew'd him a Watch, *It is an excellent Invention*, saith he, *against Supping too late*. And to one that entertain'd him with Musick,

Wisdom the greatest Cities doth Protect;
But Musick cannot one poor House direct.

They likewise, as the *Stoicks*, affirmed to be happy to live according to Virtue, as *Antisthenes* in his *Hercules*; for there is a kind of affinity betwixt these two Sects, whence the *Stoicks* asserted *Cynism* to be the nearest way to Virtue, and so lived *Zeno* the *Cittiean*.

Their Diet was slender, their Food only such as might satisfy Nature, their Cloaks fordid; they despised Riches, Glory, and Nobility: Some of them fed only on Herbs and cold Water, living under such shelters as they could find, or in Tubs, as *Diogenes* did, who affirmed, it was proper to the Gods to want nothing, and that those who stand in need of fewest things come nearest to the Gods.

They held also, according to *Antisthenes* in his *Hercules*, that Virtue may be acquired by Learning, and that it cannot be lost; that a wise Man

Man deserves to be loved, and never fineth, and is a Friend to such as are like him, and trusteth nothing to Fortune.

They took away with *Aristo* the *Chian*, all things between Virtue and Vice.

C H A P. III.

His Apothegms.

Laert.

OF his Apothegms are remembred these. He proved Labour to be good, by the Examples of *Hercules* and *Cyrus*, one a *Grecian*, the other a *Barbarian*.

He first defined Speech thus, *Speech is that which declareth that which is or was.*

To a young man of *Pontus* that came to be his Disciple, and asked him what he must bring with him, he answered, *Βιβλιαεὶς καὶνὸς, καὶ γραφεὶς καὶνὸς, καὶ πινυμενὸς καὶνὸς*, a new Book, a new Pen, and a new Tablet, where the word is *καὶνὸς* is equivocal, and signifieth divided (divided *καὶνὸς*) Wit.

To one, demanding what kind of Wife he should take; *If a fair one*, faith he, *she will be common; if foul, a torment.*

Hearing that *Plato* spoke ill of him; *it is King-like*, faith he, *to do well, and be ill spoken of.*

Being initiated into the *Orphick* Solemnities, the Priest telling him, that they who were initiated into those Rights, were made partakers of many excellent things in the next World: *Why then*, said he, *do you not die?*

To one that reproached him that both his Parents were not free; *Neither*, faith he, *were they both Wrestlers, and yet I am a Wrestler.*

Being demanded why he had few Disciples, *I beat them away*, said he, *with a Silver Staff.*

Being demanded why he rebuk'd his Disciples so sharply; *So*, faith he, *do Physicians the Sick.*

Seeing an Adulterer running away, *unhappy Man*, said he, *how much danger might you have escaped for one half-penny.*

He said according to *Hecaton*, *It is better to fall among Crows than Flatterers; for those only devour the dead, these the living.*

Being demanded what was most happy for Man, he answered, *To die in Prosperity.*

To a Friend, complaining he had lost his Notes; *You should have writ them in your mind*, faith he, *and not in your Book.*

As Rust consumeth Iron, so Envy, faith he, *consumeth the Envious Man.*

Those who would never die, faith he, *must live Piously and Justly.*

He said, *Cities were then perishing, when they could not distinguish the good from the bad.*

Laert. Stob.

Being commended by some wicked men; *I am troubled*, faith he, *to think what ill I have done.*

He said, *The cohabitation of concurring Brethren is firmer than any Wall.*

He said, *We ought to carry such provision along with us, as if we should happen to be Shipwreck'd, we might swim away with.*

To those who reproached him for conversing with wicked Persons, *So do Physicians with the Sick*, faith he, *yet are not sick themselves.*

He said, *It is absurd to separate Corn from the Weeds, and in War to reject the unserviceable Person; yet in a Common-wealth, not to extirpate the Wicked.*

Being demanded what he had gain'd by Philosophy, he answered, *That I can converse with my self.*

At a Feast, to one that said to him, *Sing*; he reply'd, *Do you then Pipe.*

Diogenes demanding a Coat, he bad him double his Cloak.

Being demanded what Learning was most necessary, *that*, faith he, *which unlearneth ill.*

He advised those who were provoked by revilings, to bear it with greater Fortitude, than if Stones were cast at them.

He derided *Plato*, as being proud; and seeing at a Show a Horse going loftily, turning to *Plato*, *Metinks*, said he, *you would have acted the Part of this Horse very well.* This he said, because *Plato* at the same time had commended the Horse.

Anothe time visiting *Plato* as he lay sick, and looking into the Basin whereinto he had vomited, *I see here*, faith he, *the Choler, but not the Pride.*

He advised the *Athenians* to love Asses as well as Horses, which they conceiving absurd; and yet, faith he, you choose those for Generals, who know nothing, but how to stretch out the hand.

To one that said to him, many praise thee; *Why*, faith he, *what ill have I done?*

To one that demanded (as *Phanias* faith) what he should do to be a good and an honest man: *If you learn*, faith he, *of knowing Persons, that the Vices which you have, are to be avoided.*

To one that praised a life full of delicacies; *Let the Sons of my Enemies*, faith he, *live delicately.*

To a young man who desired his Statue might be made handsomer than himself; tell me, faith he, if the Brass it self could speak, what you think it would boast of? the other answered of its handsome Figure: *Are you ashamed then*, reply'd he, *to be proud of the same that an inanimate creature would be?*

A young man of *Pontus* promised to supply him, as soon as his Ship came home laden with Salt-Fish; hereupon he took him to a Meal-woman, and filling his Satchel, departed; she calling to him for Money, *This young man*, faith he, *will pay you as soon as his Ship comes home.*

When at any time he saw a Woman richly dressed, he went to her House, and bad her Husband bring out his Horse and Arms, that if he were so provided, he might allow her those freedoms, being better able to justify the injuries it occasioned; otherwise, that he should take off her rich habit.

He said, *Neither a Feast is pleasant without Stob. Serm. ii. Company, nor Riches without Vertue.*

He said, *Those Pleasures which come not in at the door, must not go out by the door, but by Incision or Purging with Hellebore, or by * Starving, * Ser. 44. so to punish those Surfeits which we have incurred for a short pleasure.*

He said, *Whosoever feareth others, is a Slave, Ser. 50. though he know it not himself.*

He said, *No Covetous Man can be a good Man, Ser. 53. or a King, or a Free-man.*

Being demanded what a Feast is, he answer'd, *Ser. 87. The occasion of Surfeits,*

He said, *We ought to aim at such pleasures as Ser. 117. follow labour, not at those which go before labour.*

He said *Common Executioners are better than Ser. 148. Tyrants; those put only guilty Men to Death, Tyrants the innocent.* He

- Ser. 171. He said, *We ought to wish our Enemies all good things but Fortitude, for that they possess would fall into the hands of the Victor, not the owner.*
- 1 Ser. 212. *Him that contradicteth, he said, we must not again contradict, but instruct; for a mad man is not cured by another's growing mad also.*
- Plut. rep. Stoic. He said, *A man should always have in readiness his Wits or a Rope.*
- Plut. vie. Lyc. Seeing the Thebans much exalted with their success at the Luctrian Fight: he said, *They were like Boys that Triumph when they have beaten their Masters.*
- Plut. vit. Per. To some that commended a Piper; But, saith he, *he is an ill man; for else he would never have been so good a Piper.*

C H A P. IV.

His Writings.

OF his Books, saith Laertius, there are ten Tomes.

The first containing these.
Of Speech, or of Characters.
Ajax, of the Speech of Ajax.
Ulysses, or of Ulysses.
An Apology for Orestes.
Of Lawyers.
Biographe, or Desias, or Isocrates.
*Against Isocrates's *Ἀπὸς ὕψους*.*

The second Tome.
Of the Nature of Animals
Of Procreation of Children, or of Marriage, Erotick.
Of Sophists, Physiognomick.
Of Justice and Fortitude, Protrepick
2, 3.
Of Theognis.

The third Tome.
Of Good.
Of Fortitude.
Of Law, or of Policy.
Of Law, or of Fair and Just.
Of Freedom and Servitude.
Of Faith.
Of a Guardian, or of Trusting.
A Victory, Oeconomicks.

The fourth Tome.
Cyrus.
Hercules the greater, or of Strength.
 The fifth Tome.
Cyrus, or of a Kingdom.
Aspasia.

The sixth Tome.
Truth.
Of Dissertation, Anti-Logick.
Sathon, of Contradiction 3.
Of Dialectick.

The seventh Tome.
Of Discipline, or of Names 5.
Of Dying.
Of Life and Death.
Of things after Death.
Of the use of Names, or Eristick.
Of Interrogation and Answer.
Of Opinion and Science 4.
Of Nature 2.
Interrogation concerning Nature 2.
Opinions, or the Eristick.
Problems concerning Learning.

The eighth Tome.
Of Masick.
Of Interpreters.
Of Homer.

Of Injustice or Impiety.
Of Chalcas.
Of the Spie.
Of Pleasure.
 The ninth Tome.
Of the Odysses.
Of Minerva's wand, or of Telemachus, Helena and Penelope.
Of Proteus.
The Cyclops, or of Ulysses.
Of the use of Wine, or of Drunkenness, or of the Cyclops.
Of Circe.
Of Amphiaras.
Of Ulysses and Penelope.
Of the Dog.

The tenth Tome.

Hercules, or Midas.
Hercules, or of Prudence, or of Strength.
The Master, or Lover.
The Master, or Spies.
Menexenus, or of Ruling.
Alcibiades.
Archelaus, or of a Kingdom.

These, saith Laertius, were his Writings, the great number whereof Timon derides, calling him an ingenious Trifler.

There is also among the Socratic Epistles one under his name to this effect.

Antisthenes to Aristippus.
IT is not the part of a Philosopher to live with Tyrants, and to waste time at Sicilian Feasts, but rather to be content with a little in his own Country; but you esteem it the greatest excellence of a virtuous Person, to be able to acquire much Wealth, and to have powerful Friends. Riches are not good; neither if they were in themselves good, are they such, being thus obtained; nor can a multitude of unlearned persons, especially Tyrants, be true Friends. Wherefore I would counsel you to leave Syracuse and Sicily; but if, as some report, you are in love with Pleasure; and aim at such things, as bescem not wise persons, go to Anticyra and cure your self by drinking Hellebore, for that is much better for you than the Wine of Dionysius; this causeth Madness, that asswageth it. So that as health and discretion differ from sickness and folly, so much shall you be better than you are in these things which you now enjoy. Farewel.

The answer to this Epistle, see in the life of Aristippus.

C H A P. V.

His Death.

HE died, saith Laertius, of sickness. As he lay on his death-bed, Diogenes came to him and asked him if he wanted a Friend. Another time he came to him with a Dagger; Antisthenes crying out, who will free me from this pain? He shewed him the Dagger, saying, *This shall.* Antisthenes reply'd, I say from my pain; not from my life: for he bore his Sickness somewhat impatiently through love of life.

Theopompus commends him above all the Disciples of Socrates, as being of such acute and sweet discourse, that he could lead any man to what he would.

There were three more of this name, one a Heraclitean Philosopher, the second of Ephesus, the third of Rhodes, an Historian.

DIOGENES.

CHAP. I.

His Country, Parents, Time, Banishment.

^a Laert.

DIOGENES was of *Sinopis*, a City of *Pontus*, his Father named *Icesius*, or, as others, *Icetes*; by Profession a Money-changer. He was Born (as appears by Computation from his Death, which was in the 90th Year of his Age, in the first year of the 114th Olympiad, *Hegesias* being *Archon*) about the third year of the 91st Olympiad. *Suidas* saith, he was first called *Cleon*. *Diocles* saith, his Father trading publickly in Exchange of Money, was surpris'd, Coining false Money, and thereupon fled: But *Eubulides* saith, *Diogenes* himself did it, and fled together with his Father; even *Diogenes* in his *Podolus*, acknowledgeth as much. Some affirm, That being made overseer, he was perswaded by the Workmen to go to *Delphi* or *Delus*, the Country of *Apollo*, to enquire of the Oracle if he should do that whereto he was advised, *παρα-χρηστει το νομισμα* which is of ambiguous Significa-
Nⁿ

Signification, implying to alter the course of Life, and to coin false Money. The Oracle assented: *Diogenes* not understanding it in the Civil Sense, betook himself to Coining, and being taken in the Act, was Banished, or, as others say, fled for Fear. Some affirm, he adulterated the Money he received from his Father, for which the Father was cast into Prison, and there died; the Son fled, and coming to *Delphi*, enquired of the Oracle by what means he should become Eminent, whereupon he received that Answer.

When he left his Country, one of his Servants followed him, named *Manes*, who not enduring his Conversation, ran away from him; some perswaded *Diogenes* to enquire after him, who answered, Were it not a shame, since *Manes* doth not need *Diogenes*, that *Diogenes* should need *Manes*? The Fellow wandering up and down, came at last to *Delphi*, where he was torn in pieces by Dogs.

CHAP. II.

How he lived at Athens.

Coming to *Athens*, saith *Laertius*, he applied himself to *Antisthenes*, following the Cynical Philosophy instituted by him. *Antisthenes* having invited many to hear him, and but few coming, at last in anger would not suffer any to come to him, and therefore bad *Diogenes* be gone also. *Diogenes* continuing to come frequently, he chid and threatned him, and at last struck him with his Staff: *Diogenes* would not go back, but persisting still in his desire of hearing him, said, *Strike if you will, here is my Head, you cannot find a Staff hard enough to drive me from you, until you have Instructed me.* *Antisthenes* overcome with his Perseverance, admitted him, and made him his intimate Friend. From that time forward he heard him.

Some affirm, saith *Laertius*, he first wore a double Cloak, upon which he used to lie [at Night:] He likewise carried a Wallet, wherein was his Meat. He made use of all places for all things, Dining, Sleeping, and discoursing in any Place, inasmuch that pointing to *Jupiter's* walk, and the *Pompæum*, two publick places at *Athens*, he said, The *Athenians* built them for his dwelling. Falling once Sick, he walked with a Staff, which afterwards he continually used, as likewise a Wallet, not in the City, but when he Travelled. He wrote to one to build him a little House, which the other not doing so soon as he required, he made use of a Tub in the *Metro-um* to live in, as he declareth in his *Epistles*. In Summer he used to roul in the burning Sand; in Winter to embrace Statues covered with Snow, accustoming himself continually to Sufferance. *b* A *Lacedæmonian* seeing him in this Posture in the depth of Winter, asked him if he were not a cold; *Diogenes* said, he was not: What you do then, replied the other, is no great matter.

At first he used to beg, of which there are many Instances: He one time begg'd of a Man thus, *If you have given to others, give also to me. If to none, begin with me.*

c Another time he begg'd of a Statue, whereof of being demanded the Reason, *That I may the better, saith he, bear a Refusal.*

He requested something of a covetous Person, who delaying to give; *Man*, saith he, *I ask you εἰς τροφὴν not εἰς ταφὴν, Food, not a Grave.*

He requested something of a person very obdurate, who answered, yes, if you can perswade me to it; *Nay*, replied he, *If I were able to perswade you to any thing, it should have been to have hanged your self.*

Of a Prodigal he begged a *Mina*; the other asked why he begged a *Mina* of him, and of others but an *Obolus*: *Because*, saith he, *I hope to receive of others again; but whether I shall ever have any more of you, the Gods know.*

Being reproached that *Plato* begged not, but he begged: *Yes*, saith he, *he beggeth too; but*

*Close in your Ear,
Lest others hear.*

d Having received some little Money from *Dionysius* the *Carisian*, he said,

*The Gods afford thee thy Desire,
A Man and House—*

Alluding to his Effeminacy.

e For this Reason he said, the Imprecations of *Tragedians* concurred in him, for he was without any City, without a House, depriv'd of his Country, a Beggar, a Vagabond, having his livelihood only from day to day. And yet, adds *f* *Ælian*, he was more pleased with this Condition, than *Alexander* with the Command of the whole World, when having conquered the *Indians*, he returned to *Babylon*.

g Seeing a Mouse, as *Theophrastus* saith, running up and down, he thence took occasion of Comfort, considering it a Creature that looked not for Lodging, and was not displeased with Darkness, nor nice as to Diet.

He walked in the Snow bare-foot, and tried to eat raw Flesh, but could not.

He said, he imitated Singing-Masters, who raise their Voice too high, thereby to teach others the just Tone.

The *Athenians* loved him much; for a Youth having bored Holes in his Tub, they punished him, and gave *Diogenes* a new one.

He used to perform the Offices of *Ceres* and *Venus* in publick, arguing thus: *If it be not absurd to dine, it is not absurd to dine even in the Market-place; but it is not absurd to dine, therefore it is not absurd to dine even in the Market-place.*

h *Χειρὶς γὰρ* in the publick Forum; *I would*, saith he, *I could as easily satisfy my Hunger.*

i As he dined in the Forum, some that were present called him Dog; *Nay*, saith he, *you are Dogs that stand about me when I am at Dinner.*

Being reproached for feeding in the open Forum; *In the Forum*, saith he, *I grew Hungry.*

Being reproach'd that he drank in a Victualing-house; *And in a Barber's shop*, saith he, *I am shaved.*

He lived without any Servant. Being demanded by one whether he would have a Maid-Servant, or a Man, he said, neither; Who then, answered the other, shall carry you out to your Grave

b *Ælian* v. v. *Hist.* 13. 28.

a *Ælian* v. v. *Hist.* 10. 16.

b *Plut.*

h *Laert.* it is explained by *Plutarch*, de *Stoic.* *i* *Laert.*

grave when you die? *Diogenes* replied, *he that wants a House?*

CHAP. III.

How he lived at Corinth.

^{a Lucr.} **I**N his old age he took a Voyage to *Ægina*, but was by the way taken by some Pirates, the name of whose Captain was *Scirpalus*. They carried him to *Greet*, and there exposed him to Sale; they asked him what he could do; he answered, *he could command Men*; and to the Cryer, he said, *If any Man wants a Master, let him buy me*. Offering to sit down, they would not suffer him, (it being the Custom of such as were to be sold for Slaves, to leap up and down) *'Tis no matter for that*, saith he, *Fishes are sold which way soever they lie*; adding, he wondred that Men, being to buy a Pot or Vessel, examine it curiously on the inside; but if a Man, they are satisfied with his look, and outside. Pointing to a *Corinthian* richly attir'd that passed by, named *Xeniades*, *Sell me*, saith he, *to that Man, for he wants a Master*. To *Xeniades* as soon as he had bought him, he said, *Be sure you do as I command you*, he answered in the common Proverbial Verse.

The Springs of Rivers upwards run.

Diogenes reply'd, if being sick you had bought a Physician, would you obey his advice, or would you say as before, *The Springs of Rivers upwards run*.

His Friends, according to *Cleomenes*, offered to redeem him; but he told them they were fools, for Lyons were not Slaves to their Keepers, but the Keepers to the Lyons, for the property of Servitude is to fear, and Men fear Beasts.

^{b Lucr.} ^{c Gell.} *Xeniades* having bought him, carried him to *Corinth*, ^{d Lucr.} *c* asked him what he would do; he answered, he knew how to command free persons. *Xeniades* wondring at his answer, set him at Liberty, and delivered his Sons to his Charge, saying, *take then my Children, and command them*. *d* He put the Government of his Family also into his hands, which he acquitted himself of excellently well in every thing, in so much that *Xeniades* said, *he had brought a good Genius into his House*.

He did not suffer the young men that were under his charge, to exercise themselves as Wrestlers, but only till they were warm, and for their health sake. He taught them many sayings of Poets by heart, and some of his own; and that they might more easily remember the full sum of Learning, he made a brief Collection thereof. He taught them at home to Minister, using thin Diet, and drinking Water, to go negligently in Habit, shaven, without Coats, without Shooes, and silent, looking upon themselves as they went. He brought them up likewise to Hunting. On the other side, they took great care of *Diogenes*, and recommended him to their Parents.

^{e Plut. vit. Alex.} *e* When *Alexander* was upon expedition against the *Persians*, many Philosophers came to salute him; the same duty he expected from *Diogenes*, who was at that time at the *Craneum*, a *Gymnasium* in *Corinth*, where he lived idly, not

minding *Alexander*. *Alexander* therefore went and found him out, sitting in the Sun; he rose a little to look upon the great Crowd of People that came along with *Alexander*; who saluting him; asked *Diogenes* what he would desire of him, he answered, *that you would stand aside a little from betwixt me and the Sun*. Hereat *Alexander* was so surpris'd, and so much admir'd his high Mind, that his Attendants in returning laughing thereat; but I, said he, were I not *Alexander*, would choose to be *Diogenes*.

CHAP. IV.

His Philosophy.

^{a Lucr.} **A**ND concerning Opinions, he said, there is a twofold *Exercitation*, one *Spiritual*, the other *Corporal*; if in the first of these we employ our selves constantly, frequent phantasies will occur, which facilitate the performance of Virtue; the one cannot be without the other, a good habit and strength being necessary both in respect of the Soul and the Body.

That Virtue is easily acquired by exercitation, he argued, in as much as in the Mechanick Arts and others, that Artists by practice quickly arrive at an extraordinary readines therein, and Wrestlers and Musicians excel one another according to the continual pains they take therein one more than another; and if they should have taken the same pains about their Souls, it would not have been unprofitably and imperfectly employed.

He said, Nothing in Life can be rightly done without exercitation; and that exercitation could master any thing; for whereas men should chuse Natural Labours, whereby they might live happily; they on the contrary make choice of the unprofitable, and through their own Folly are in continual misery. For even the contempt of Pleasure, if we accustom our selves thereto, will be most pleasant; and as they, who inure themselves to a voluptuous life cannot be taken off it without much trouble and grief; so they who exercise themselves in a contrary manner, with as great ease contemn even the pleasures themselves.

He ascribed not so much to Law as to Nature; he affirmed that he followed the same course of Life with *Hercules*, preferring nothing before Liberty.

He asserted that all things belong to the Wise; arguing thus; *All things belong to the Gods, the Gods are Friends to Wise Persons; all things are common amongst Friends; therefore all things belong to the Wise*.

As concerning Law, he held that without it a Commonwealth could not be order'd; for, saith he, *Without a City there cannot be any profit of Civil things; a City is a Civil thing; of Law without a City there is no profit, therefore Law is Civil*.

He derided Nobility, Glory, and the like, saying, they were the Ornaments or Veils of Wickedness, and that only a right Commonwealth ought to be honoured.

He held that there ought to be a Community of Women, conceiving Marriage to be nothing, and

and that every Man and Woman might enjoy one another as they pleased themselves, and consequently that all Children should be in common.

He held that it was not unlawful to take any thing out of a Temple, or to feed upon living Creatures; neither was it impious to eat Man's Flesh, as appeared by the Practice of other Nations; adding that all things are in all and by all: In Bread there is Flesh, in Flesh Bread; the remainders of Flesh and Bread being insinuated by occult passages into other Bodies, and evaporating in like manner. This *Laertius* cites out of a Tragedy of his named *Thyestes*, if faith he, that Tragedy belong to him, and not rather to *Philiscus* or *Pasiphaon*.

Musick, Geometry, Astronomy, and the like; he rejected as unprofitable and unnecessary.

CHAP. V.

His Apophegms.

a Laert.

HE was very acute, faith *Laertius* in deriding others. He said *Euclid's* School was not *σχολή*, but *χολή*, not a School, but Anger, for the Dialecticks affected *Litigious* dispute. He said *Plato's* School was not *διδασκαλία*, but *καταλέχεια*, not an Exercitation, but Consumption.

He said, when he look'd upon *Pilots, Physicians* and *Philosophers*, Man was the wisest of all Creatures; but when he looked upon *Interpreters* of Dreams, *Prophets*, or Persons puffed up with Wealth or honours, nothing is more foolish than Man.

He said, that he often found it convenient in Life to have ready an Answer, or a Rope.

At a great Feast, seeing *Plato* eat Olives; Why, faith he, you being a Wise Man, and going to *Sicily* for such Entertainments, did you not enjoy them? He answer'd, by the Gods, *Diogenes*, I fed upon Olives there likewise as well as upon other things. *Diogenes* replied, why then needed you to have gone to *Syracuse*, were there no Olives at that time in *Attica*? This *Phavorinus* ascribes to *Aristippus*, adding, that as he was eating Figs, he met him, and said, Taste; the other taking and eating; I bade you, faith he, taste, and not devour.

In the Presence of some Friends of *Plato*, sent to him by *Dionysius*, *Diogenes* trod under foot *Plato's* Robe, saying I tread under foot *Plato's* Pride: But *Diogenes*, answered *Plato*, how proud are you your self, when you think you contemn Pride? *Sotion* relates this as said to the Cynick by *Plato*.

b Stob. Ser.
133.

b *Diogenes* sent to *Plato* for Wine and Figs, he sent him a large Vessel of Wine and Figs; whereupon *Diogenes*, As you, faith he, being demanded how much two and two are, answer Twenty, so you neither grant what I request, nor answer what I demand; thus censuring his Verbosity.

Being demanded in what part of *Greece* he had seen good Men: Men, faith he, no where, but good Boys at *Lacedæmon*.

Making a serious Discourse, and perceiving that no Man came to hear him, he began to Sing, whereat a great many gathered together, whom

he reproached for coming to trifles, being so backward to serious Things.

He said, Men contested in undermining or kicking, but none about Goodness.

He wondred at *Grammarians*, who enquiring after the misfortunes of *Ulysses*, forgot their own; and at *Musicians*, who whilst they Tune their Instruments, have discordant Affections in their Souls; and at the *Mathematicians*, that gazing upon the Sun and Moon, neglecting what was just at their Feet; and at *c Orators*, who studied *c Stob. 206.* to speak just things, and neglected to act them; and lastly, at covetous Persons, for dispraising Money, which they loved above all things.

He reprehended those, who though they commended Just Men for thinking themselves to be above Money, yet esteem'd the Rich happy.

He was angry at those, who when they sacrificed to the Gods for their health, Feasted at the same time contrary to their health.

He wondred at Servants, who seeing their Masters eat excessively, did not take away their Meat.

He praised those, who being about to Marry, would not Marry; who being about to go to Sea, would not go to Sea; who being about to undertake some publick Office, would not undertake it; and who being about to bring up Children, forbore to bring them up; and who would compose themselves to live with great Men, yet never went to them.

He said, when we stretch out our hand to our Friend, we should never clutch our Fist.

One bringing him into a new house, and forbidding him to spit, he spit in his Face, saying, he could not find a worse place. Some ascribe this to *Aristippus*.

Crying out upon a time, *Men come hither*, a great many flocked about him, whom he fell upon with his Stick, and beat them, saying, *I called Men, not Varlets*. This *Hecaton* in his *Chria* relates.

Alexander said, If he had not been born *Alexander*, he would have desired to have been born *Diogenes*.

He said, They were not maimed who were Dumb and Blind, but they who had not a Wallet.

Going once half shaven to a Feast of young Men, as *Metrocles* relates, they beat him, whereupon he took their Names, and setting them down in a Parchment-Roll, he wore it at his Breast, whereby being known, they were reviled and beaten.

He said, he was the Dog of the praised, but none of the Praiser's durst go a hunting with him.

To one saying, At the *Pythian Games* I overcame Men; No, faith he, I the Men, you the Slaves.

To those who said to him, You are now old, take your Ease; What, faith he, if I were to run a Race, should I give over when I were almost at the end, or rather contest with greater Courage?

Finding *Demosthenes* the Orator at Dinner in a common Victualling-house, who asham'd would have stolen away; Nay, faith he, you are now the more Popular. *Ælian* relates it thus, *Diogenes* being at Dinner a common Victualling-house, and seeing *Demosthenes* pass by, invited him in, *Demosthenes* refusing; Do you think it, faith

saith *Diogenes*, a disparagement to dine here, when your Masters dine here every day? Meaning the common People, to whom Orators are but Servants.

To some Strangers who were desirous to see *Demosthenes*, pointing to him with his middle Finger; this, saith he, is he that leads the *Athenians*.

In reproof to one who had thrown away his Bread, and was ashamed to take it up again, he tied a string about the neck of a Bottle, and dragged it after him through the *Ceramick*.

He said most Men were mad. *Præter digitum*, all but the Finger; if any man should walk pointing with his middle Finger, he will be thought mad; if his Fore-finger, not so.

He said the most precious things were sold cheapest, and so on the contrary; for a Statue will cost 3000 pieces of Silver, a peck of Wheat, two pieces of Brass.

To one who came to him to study Philosophy, he gave a Fish, and bid him follow him; the other ashamed, threw it away, and departed: Not long after, meeting the same Person, he laughing, said, *The Friendship betwixt you and me was broke off by a Fish*. *Diocles* relates it thus; One saying to him, Command me, *Diogenes*; he gave him a Pennyworth of Cheese to bring after him, the other refusing to carry it, Our Friendship, saith he, a penny-worth of Cheese hath dissolved.

Seeing a Boy drink Water in the hollow of his hand, he took his little cup out of his Wallet and threw it away, saying, *The boy out-went him in Frugality*. He threw away his Dish also, seeing a Boy that had broken his, supping up his Broth in the same manner.

Seeing a Woman prostrate her self unhandfomly in Prayer, and desirous to reprove her superstition, as *Zoilus* the *Pergæan* reports, came to her, and said, Are you not ashamed, Woman, that God who stands behind you (for all things are full of him) should see you in this undecent posture?

He said, such as beat others, ought to be consecrated to *Æsculapius*, the God of Chirurgery.

He said, *Against Fortune we must oppose Courage; against nature, Law; against passion, Reason*.

In the *Craneum*, *Alexander* standing by him, as the Sun shone, said to him, Ask of me what thou wilt; he answered, *Do not stand between me and the Sun*.

One reading a long tedious Discourse, and coming at last near a Blank Leaf at the end of the Book, *Be of good Courage Friend*, saith he, *I see Land*.

To one proving by the *horned Syllogism* that he had Horns, he feeling on his Forehead, *But I*, saith he, *feel none*. In like manner another maintaining there was no such thing as motion, he rose up and walked. To one disputing concerning Meteors, *How long is it*, saith he, *since you came from Heaven?*

A wicked Man having written over the door of his House, Let no ill thing enter here: Which way then, saith he, must the Master come in?

He anointed his Feet with sweet Unguents, saying, the scent went from the crown of his head into the Air, but from his Feet to his Nostrils.

To some *Athenians*, that perswaded him to

be initiated into some Religious Mysteries, alledging that such as were initiated had the chiefest places in the other World: It is ridiculous, saith he, if *Agésilæus* and *Epaminondas* live there amongst Bogs, and the common People that are initiated, live in the Blessed Islands. Or as *Plutarch*, hearing these Verses of *Socrates*:

— Thrice happy they
Who do these Mysteries survey:
They only after Death are Blest,
All miseries pursue the rest.

What, saith he, shall *Patoecion* the Thief be in better condition (because he was initiated) than *Epaminondas*?

Micc coming to him as he was at dinner; See, saith he, *Diogenes* also maintaineth Parasites.

Diogenes being present at a discourse of *Plato's*, would not mind it; whereat *Plato* angry, *d. Ælian var. hij. 14. 33.* said, Thou Dog, why mindst thou not? *Diogenes* unmoved, answered, *Yet I never return to the place where I was sold, as Dogs do*, alluding to *Plato's* Voyage to Sicily.

Returning from a Bath, one asked him, if there were many Men there? He said, No: The other asking him, if there were much company; he said, *there was*.

Plato defining Man a two-footed Animal without Wings, and this definition being approved; *Diogenes* took a Cock, and plucking off all its Feathers, turned it into *Plato's* School, saying, This is *Plato's* Man; whereupon to the definition was added, *Having broad Nails*.

To one demanding at what time he should Dine, *If thou art Rich*, saith he, *when thou wilt; if Poor, when thou canst*.

At *Megara*, seeing their Sheep with thick Fleeces, and their Children almost naked; *It is better*, saith he, *to be the Sheep of a Megaraean, than his Son*.

To one, who hitting him with the end of a long Pole, bade him take heed, *Why*, saith he, *do you mean to hit me again?*

He said, *The Orators were the Servants of the Multitude; Crowns, the Boils of Glory*.

He lighted a Candle at Noon, saying, *I look for a Man*. *e Stob. Ser. 43*

He stood in the Rain without any shelter; some that were present pitying him, *Plato*, who was there likewise, said, *If you will shew your selves pitiful to him, go away, reflecting upon his Vain-glory*.

One giving him a box on the Ear, *O Hercules*, saith he, *I knew not that I should have walked with a Helmet*.

Medias giving him many Blows with his Fist, saying, There are 3000 Drachms [alluding to the fines imposed upon such Outrages] ready counted for you upon the Table: The next day he got a *Castus*, and beat him with it, saying, *There are three Thousand Drachms ready counted for you*.

Lycias an Apothecary asked him, if he thought there were many Gods: *How* saith he, *can I think otherwise, when I take you to be their Enemy?* Others ascribe this to *Theodorus*.

Seeing one that had besprinkled himself with Water; *O unhappy Man*, saith he, *dost thou not know, that the Errors of Life are no more to be wash'd away by Water, than Errors in Grammar?*

He

He rebuked those who complained of Fortune, saying, *They did not request what was good, but that which seemed good to them.*

Of those who are terrified with Dreams, he said, *You never are concerned for the things you do waking; 't is what you fancy in your sleep you make your greatest business.*

f Et Plut.
de curiositate.

f At the Olympick Games the Cryer proclaiming, *Diocippus hath overcome Men; he Slaves, saith he, but I mean.*

Alexander sending an Epistle to Antipater at Athens, by one whose name was Athlias, Diogenes being present said, *Athlias from Athlias, by Athlias to Athlias, alluding to the name, which implieth Misery.*

Perdiccas threatening him with death unless he would come unto him; *that is no great matter, saith he, for a Cantharides or Spider may do as much; you should rather have threatned, that you would have lived well without me.*

He often said, the Gods had given to Men an easie Life, but that it was hidden from those who used choice diet, unguents, and the like; whence to one whose servant put on his Cloaths, *you will not be truly happy, saith he, until he wipe your nose also, that is, when you have lost the use of your hands.*

Seeing some that had the charge of the things belonging to the Temple, leading a Man to Prison, who had stoln a Cup out of the Treasury, *the great Thieves, saith he, lead Prisoners the lesser.*

To a young man that throwing Stones at a Gibbet, *Well done, saith he, you will be sure to hit the mark.*

To some young men that coming about him, said, take heed you do not bite us: *fear not boys, saith he, Diogenes eats not Beets* [for so he termed effeminate persons.]

To one Feasting, cloathed in a Lion's skin, *do not, saith he, defile Virtues Livery.*

To one extolling the happiness of Callisthenes, in that living with Alexander he had plenty of all things; nay, saith he, *he is not happy, for he dines and sups when Alexander pleases.*

When he wanted Money, he said, he went to demand, not borrow of his friends.

Seeing a young man going along with some great persons to a Feast, he took him from them, and carried him to his own friends, bidding them to look to him better.

To one neatly dressed, who had asked him some question, *I cannot answer you, saith he, unless I knew whether you were a Man or a Woman.*

g Vit. Athena.

g Of a young Man playing at Catabus in a Bath, *By how much the better, saith he, so much the worse.*

At a Feast one threw a Bone to him as to a Dog; which he like a Dog took up, and lifting his Leg, *περὶ σόβεισεν αὐτοῖς.*

Orators, and all such as sought glory by speaking, he called *τρίσανδράπους*, thrice men, instead of *τρίπαλις*, thrice wretched.

He called an unlearned Rich-man a Sheep with a Golden Fleece.

Seeing written upon the Gates of a Prodigal's House, to be Sold; *I knew, saith he, being so overcharged with Wine, it would Vomit up the Owner.*

To a young man professing himself much displeased at the many persons that courted him,

Let him see, saith he, that you are displeased, by casting off your effeminacy.

Of a foul Bath, where, saith he, *shall they be washed that wash here?*

A big fellow that plaid on the Harp, tho' by all others discommended for playing ill, he praised; being asked why, *because, saith he, being an able fellow, he chooseth rather to play on the Harp than to Steal.*

A certain Harper who plaid so ill, that the Company always went away and left him, he saluted thus, *good morrow Cock;* the other asking why, *because, saith he, your Musick maketh every one rise.*

Seeing a young man doing something, which tho' 'twere ordinary, he conceiv'd to be unseemly, he filled his bosom with Beans, and in that manner walked through the People, to whom gazing upon him, *I wonder, saith he, you look at me, and not at him.*

Hegesias desiring to lend him some of his Writings, *You are a fool, saith he, Hegesias, who eat Figs not painted, but real; yet neglect true exercitation, and seek after the written.*

Seeing one that had won the Victory at the Olympick Exercises, feeding Sheep; *you have made hast, saith he, good man, from the Olympick Exercises to the Nemean, the word alluding to feeding of Sheep.*

Being demanded how it cometh to pass that Wrestlers are for the most part stupid fellows, he answered, *because they are made chiefly of the skins of Oxen and Swine.*

To a Tyrant, demanding of him what Brass was best, he answer'd, *that whereof the Statues of Harmodius and Aristogiton were made.* This others ascribe to Plato.

Being asked how Dionysius useth his Friends, *as vessels, saith he, emptying the full, and throwing away the empty,*

A young man newly Married, having written upon his House, *the Son of Jupiter, Hercules, Callinicus dwelleth here, let nothing ill enter;* he added, *Assistance after a defeat,* implying it was too late, he being already Married.

He said Coverousness is the Metropolis of all Evil.

Seeing one that had wasted all his means, eating Olives, *If you had used to dine so, saith he, you would not have supp'd so.*

He said, *Good men are the Images of the Gods, Love is the business of idle persons.*

Being asked what is the most miserable thing in Life, he said, *an old man in want.*

b Being demanded, the bitings of what Beasts were most dangerous; *of Wild Beasts, saith he, a Detractor; of Tame, a Flatterer.*

b Et Stob.
Ser. 65.

Beholding a Picture of two Centaurs very ill painted, he said, *Which of these is Chiron?* the Jest consisteth in the Greek word, which signifieth worse, and was also the name of a Centaur, Tutor to Achilles.

He said, *the Discourse of Flatterers is a Rope of Honey. He called the Belly the Charybdis of Life.*

Hearing that Didymo, an Adulterer was taken; *he deserves, saith he, to be put out of his name* (meaning Emasculated.)

i Being asked why Gold looks pale; *because, saith he, many lie in wait for it.*

i Stob. Ser. 65.

Seeing

Seeing a Woman carried in a Litter; that is not, faith he, a fit Cage for such a Beast.

Seeing a Servant that had run away from his Master, sitting upon the brink of a Well: Young Man, faith he, take heed you do not fall in: alluding to the punishment of Fugitive Servants.

Seeing one that used to steal Garments in the Bath; he said, ἐπ' ἀλομυαίων ἢ ἐπ' ἄλλοις ἱματίων, Do you come for Unguents, or for another Garment?

Seeing some Women hanged upon an Olive-tree; I would, faith he, all Trees bore the same Fruit.

Seeing a Thief that used to rob Tombs, he spoke to him in that Verse of Homer,

— What now of Men the best,
Com'st thou to plunder the Deceas't?

Seeing a handsome youth all alone asleep, he awaked him, saying in the words of Homer, Awake.

Μὴ τις σοι εὐδοντὶ μελασθενῶ ἐν δόρῳ πύζῃ.

To one that Feasted sumptuously, he said that Verse of Homer.

Son thou hast but a little time to live.

Plato discoursing concerning Ideas, and naming τραπέζῃς, and κυβερτήεις, as if he should say, Tableity and Cuppeity, he said, I see Plato, the Table and the Cup, but not the Tableity and Cuppeity. Plato answered, it is true indeed, you have Eyes by which the Table and Cup are seen; but not an Intellect, by which Tableity and Cuppeity are seen.

Being demanded what he thought Socrates; he answered, mad. Being demanded at what time a Man should marry; a young Man, faith he, not yet; an old Man not at all.

To one that asked, what he should give him to let him strike him, he answered, a Helmet.

To a young Man dressing himself neatly, if this, faith he, be for the sake of Men, you are unhappy, if for Women, you are unjust.

Seeing a young Man blush; Take Courage, faith he, that is the Colour of Vertue.

Hearing two Men plead against one another, he condemned both, saying, One had stolen, the other had not lost.

Being demanded what Wine he thought most pleasant, he answer'd, That which is drunk at another's Cost.

To one that said, many deride thee; he answered, but I am not derided: As conceiving, faith Plutarch, in those only to be derided, who are troubled at such things.

To one who said, Life is an ill thing: Life, faith he, is not an ill thing, but an ill Life is an ill thing.

As he was Dining upon Olives, they caused a Tart to be set before him, which he threw away, saying,

Stranger, when Kings approach, withdraw.

The words of Laius's Officers to Oedipus.
Being asked what kind of Dog he was, he answered, When he was hungry, a Spaniel; when his

belly was full a Mastiff; one of those which many commend, but dare not take abroad with them a Hunting.

Being demanded whether Wife-Men might eat Dainties, All things, faith he, as well as others.

o Being demanded why Men gave to Beggars, and not to Philosophers; Because, faith he, they are afraid they may be Lame or Blind, but are not afraid they may be Philosophers.

To one that reproached him as having counterfeited Money; Indeed, faith he, there was a time when I was such a one as you are; but the time will never come that you will be as I am.

Coming to Mindus, and seeing the Gates very large, the City small, Mindinians, faith he, shut your Gates, lest your City run out at them.

Seeing a Thief that was taken stealing Purple, he applied that Verse of Homer to him,

The Purple death, and potent Fate have seiz'd.

To Craterus, who invited him to come to him, he returned Answer, I had rather lick Salt at Athens, than enjoy the greatest Delicacies with Craterus.

Meeting Anaximenes the Orator, who was very Fat; Give us, faith he, some of your Flesh, it will ease you, and help us.

The same Anaximenes being in the midst of a Discourse, Diogenes shewing a piece of Salt-fish, diverted the Attention of his Auditors; whereat Anaximenes growing angry, See, faith he, a hard Pennyworth of Saltfish hath broke off Anaximenes's Discourse.

Some ascribe this to him. Plato seeing him wash Herbs, came and whispered thus to him; If you had followed Dionysius, you would not have needed to wash Herbs; to whom he returned this Answer in his Ear, If you had washed herbs, you needed not to have followed Dionysius.

To one that said to him, many laugh at you; And Asses perhaps at them, faith he, but they care not for Asses, nor I for them.

Seeing a young Man studying Philosophy: Well done, faith he, you will teach those who love your outward Beauty, to admire your Soul.

To one that admired the multitude of votive Offerings in Samothracia, given by such as had escaped Shipwrack: There would have been far more, faith he, if those who perished had presented theirs. Others ascribe this to Diagoras the Melian.

To a young man going to a Feast, he said, You will come back Chiron (alluding to the word which implyeth worse) the young man came to him the next day, saying, I went and returned not Chiron: No, faith he, not Chiron but Eurition.

Returning from Lacedemon to Athens, to one that asked him from whence he came, and whither he went: From Men, faith he, to Women.

Returning from the Olympick Games, to one that asked if there were much People there; Much People, faith he, but few Men.

He compared Prodigals to Fig-trees growing on a Precipice, whose Fruit Men taste not, but Crows and Vultures devour.

Meeting *Anaximenes* the Orator, who was very Fat; *Give us*, faith he, *some of your Flesh, it will ease you, and help us.*

The same *Anaximenes* being in the midst of a Discourse, *Diogenes* shewing a piece of Salt-fish, diverted the Attention of his Auditors; whereat *Anaximenes* growing angry, *See*, faith he, *a hard Pennyworth of Saltfish hath broke off Anaximenes's Discourse.*

Some ascribe this to him. *Plato* seeing him wash Herbs, came and whispered thus to him; *If you had followed Dionysius, you would not have needed to wash Herbs; to whom he returned this Answer in his Ear, If you had wash'd herbs, you needed not to have followed Dionysius.*

To one that said to him, many laugh at you; *And Asses perhaps at them*, faith he, *but they care not for Asses, nor I for them.*

Seeing a young Man studying Philosophy: *Well done*, faith he, *you will teach those who love your outward Beauty, to admire your Soul.*

To one that admired the multitude of votive Offerings in *Samothea*, given by such as had escaped Shipwrack: *There would have been far more*, faith he, *if those who perished had presented theirs.* Others ascribe this to *Diagoras* the *Melian*.

To a young man going to a Feast, he said, *You will come back Chiron* (alluding to the word which implyeth *worse*) the young man came to him the next day, saying, *I went and returned not Chiron*: *No*, faith he, *not Chiron but Eurition.*

Returning from *Lacedamon* to *Athens*, to one that asked him from whence he came, and whither he went: *From Men*, faith he, *to Women.*

Returning from the Olympick Games, to one that asked if there were much People there; *Much People*, faith he, *but few Men.*

He compared Frodigals to Fig-trees growing on a Precipice, whose Fruit Men taste not, but Crows and Vultures devour.

Phryns

Stob. Ser.
161.

Plut. Fab.
Max.

Stob. Ser. 39.

Phryne the Curtezān having set up a golden Statue of Venus at Delphi, he wrote on it ; *From the Intemperance of the Grecians.*

Alexander coming to him, and saying, I am Alexander the great King : And I, saith he, am Diogenes the Dog.

Being asked why he was called Dog : *I fawn on those that give, saith he, I bark at those that will not give, and I bite the wicked.*

As he was gathering Figs, the Keeper of the Orchard spying him, told him, it is not long since a Man was Hang'd upon that Tree : And for that Reason, saith he, *I will cleanse it.*

p Ael. 12. 58.

Observing Dioxippus the Olympick Victor, to cast many Glances upon the Curtezān : See, saith he, *a common Woman leads the martial Ram by the Neck.*

To two infamous Persons stealing away from him : *Fear not, saith he, Dogs eat not Thistles.*

To one that asked him concerning a Youth taken in Adultery, whence he was ; he answered, of Tegea ; Tegea (a City of Arcadia) whereto he alluded, is a publick Brothel.

Seeing one, that in former times had been an ill Wrestler, profess Medicine ; *What is the matter, saith he, have you a design to cast those down that have thrown you ?*

Seeing the Son of a common Woman throw Stones amongst a croud. *Take heed, saith he, you do not hit your Father.*

To a Youth shewing him a Sword, given him by one that loved him, he said, *ἡ μὲν μάχαιρα καλὴ ἡ δὲ λαβὴ ἀισχυρή.*

To some that extolled one who had bestow'd something on him : *But you do not praise me, saith he, who deserved to receive it.*

To one that redemanded an old Cloak of him, *If you give it me, saith he, I must keep it ; if you lent it me, I must make use of it.*

To a supposititious Person that said to him, You have Gold in your Cloak, *Yes, saith he, and for that Reason I lay it q under me when I go to Sleep.*

Being demanded what he had gained by Philosophy, *If nothing else, saith he, at least this, to be prepared for all Fortunes.*

Being demanded of what Country he was, he answered, *A Citizen of the World.*

To one that Sacrificed, praying he might have a Child, *You Pray for a Child, saith he, but never trouble your self what kind of Child it may prove.*

At an Ordinary, being demanded Money, he answered the Master in that Verse of Homer,

Ask others, but from Hector hold thy Hand.

r Et Stob. Ser.

He said, The Mistresses of Kings were Queens, for the Kings did whatsoever they would have them.

The Athenians having decreed to stile Alexander, Bacchus ; And make me, saith he, Serapis.

To one reproaching him for living in filthy places, *The Sun, saith he, visits Kennels, yet is not defiled.*

Being at Supper in the Temple, they brought him course Bread, he threw it away, saying, *Nothing but what is pure must come within a Temple.*

To one that said, Why do you, who know nothing, profess Philosophy ? He answered, *Tho' I should but pretend to study Philosophy, yet that were a Profession thereof.*

To one that recommended his Son to him, saying, he was very Ingenious, and exceeding well Educated ; He answered, *Why then doth he need me ?*

Those who speak good things, but do them not, differ nothing from a Lute, for that neither hears, nor hath Sense.

He went to the Theatre ; as all the people were going out, being asked why he did so, *This saith he, is that I study all my Life time.*

Seeing an Effeminate young Man, *Are you not ashamed, saith he, to use your self worse than Nature hath done ? She hath made you a Man, but you will force your self to be a Woman.*

Seeing an Ignorant Man tuning a Lute, *Are you not ashamed, saith he, to try to make a Lute sound harmoniously, and yet suffer your Life to be so full of Discord ?*

To one that said he was unfit for Philosophy, *Why do you live, saith he, if you care not for living Honestly ?*

To one who despised his own Father, *Are you not ashamed, saith he, to despise him who is the cause you are so proud ?*

Hearing a handsome Youth speak foolishly, *Are you not ashamed, saith he, to draw a Leaden Dagger out of an Ivory Sheath ?*

Being reproached for accepting a Cloak from Antipater, he answered in those words of Homer,

The Gifts of Gods must not be thrown away.

One that hit him with a pole, and then bid him take heed, he struck with his Staff, and said, *and take you heed.*

To one that sued to a Curtesān, *What mean you Wretch, saith he, to sue for that which is much better to miss ?*

To one that smelled sweet of Unguents, *Take heed, saith he, this Perfume make not your Life stink.*

He said, *Slaves serve their Masters, but wicked Men their Passions.*

Being demanded why Slaves are called *Andes, ποδα Footmen*, because saith he, *They have Feet like Men, but such Minds as you that ask the Question.*

Seeing an unskilful Archer going to shoot, he sat down at the Mark, *Left saith he, he should hit me.*

He said, *Lovers are unhappy in pleasure.*

Being demanded whether Death be ill, *How, saith he, can that be ill, whereof when it cometh we have no Sense ?*

Alexander coming to him, and saying, Do you not fear me ? What saith he, are you Good or Ill ? He answered Good : *Who, replies Diogenes, fears that which is Good ?*

He said, *Learning is a Regulation to young Men, a Comfort to Old Men, Wealth to Poor Men, and an Ornament to Rich Men.*

To Didymo an Adulterer curing a Maids Eye, *Take heed, saith he, lest in curing the Eye you hurt not the Ball, [the word κορὴ signifying both Eye-ball and Virginity.]*

To one that said his Friends lay in wait for him, *What then is to be done, saith he, if Friends and Enemies must be used alike ?*

Being demanded what is best amongst Men, he answered, *Freedom of Speech.*

Coming into a School, and seeing there many Statues

q The jest consisteth in the Allusion betwixt those two Greek Words *ὑποβολιμαῖος* & *ὑποβόλιος* μένος.

Statues of the Muses, but few Auditors, *By the help of the Gods, Master*, saith he, *you have many Auditors.*

Stob. Eth. Ser. 1 To one that asked him how he might order himself best, *By reprehending*, saith he, *those things in your self which you blame in others.*

Ser. He gave good Counsel to a person very diffolute; being demanded what he was doing, he answered, *Washing an Æthiopian.*

Ser. 32. He went backwards into the School of the Stoicks, whereat some laughing, *Are you asham'd*, saith he, *to do that in the whole course of your life, for which you deride me in walking?*

Ibid. He said, *Men provide for their living, but not for their well living.*

Ser. 37 & 84. He said, it was a shame to see Wrestlers and Singing-Masters observe temperate Diet, and moderate their Pleasures, one for Exercise, the other for his Voice, and yet no man would do so much for Vertue's sake.

Ser. 45. He said, Pride, like a Shepherd, driveth men whither it pleaseth.

Ser. 48. Seeing the high Walls of Megara, he said, *Unhappy People, mind not the height of your Walls, but the height of their Courages, who are to stand on the Walls,*

Ser. 53. He compared Covetous Men to such as have the Dropie, those are full of Money, yet desire more; these have Water, yet thirst after more: Passions grow more intense by enjoyment of what they desire.

Ser. 53. Seeing a man make Love to an old Rich Widows: *This Love*, saith he, *is not blind but toothless.*

Ser. 54. Being demanded what Beasts were the worst: *In the Field*, saith he, *Bears and Lions; in the City, Usurers and Sicophants.*

Ser. 64. He compared Flattery to an empty Tomb, on which *Friendship* was inscribed.

Ser. 65. Blaming *Antisthenes* for being too remiss in discourse, in regard that when he spoke loudest, he could hardly be heard, and calling himself the Trumpet of Reproof: *Antisthenes* reply'd, he was like a *Bee*, that makes no great noise, yet stings sharply.

Ibid. He said, Reproof is the good of others.

Ibid. A certain *Athenian* asking him why he lived not with the *Lacedemonians*, whom he praised so much: *Physicians*, saith he, *tho' they study Health, converse wih the Sick.*

Ibid. He said, other Dogs bark at their Enemies, I my Friends, that I may preserve them.

Ibid. He asked *Plato* if he were writing Laws: *Plato* affirm'd he was. Did you not write a Commonwealth before, saith *Diogenes*? I did, answers *Plato*. And had not that Commonwealth Laws, said he? the other answering it had; *To what end* reply'd *Diogenes*, *do you write new Laws?*

Ser. 68. He said, *To give Physick to a dead Body, or advise an old Man, is the same thing?*

Ser. 71. To a bald Man that reviled him, *I will not return your Reproaches*, saith he, *yet cannot commend your Hair, for leaving so bad a Head.*

Ibid. To an Informer that fell out with him; *I am glad*, saith he, *of the enmity betwixt us, for you hurt not your Foes, but your Friends.*

Ser. 72. To one that reviled him; *No man*, saith he, *will believe you when you speak ill of me, no more than they would me, if I should speak well of you.*

Ser. 77. *Alexander* sent him a Dish full of Bones with

this Message, it was meat for Dogs; he answered, *Yea, but not for a King to send.*

He said, It was the same fault to give to them *Ibid.* that deserved nothing, as not to give to them that do.

He said, *As Houses where there is plenty of* *Ser. 87.* *Meat, are full of Mice, so the Bodies of such as eat much, are full of Diseases.*

At a Feast, one giving him a great Cup full of *Ser. 23.* *Wine*, he threw it away, for which being blamed, *If I had drunk it*, saith he, *not only the Wine would have been lost, but I also.*

Being demanded what was hardest, he answer'd, *To know our selves, for to construe most things according to our own Partialty.* *Ser. 102.*

He said, *Medea* was a wise Woman, and not a Witch, who by Labour and Exercise corroborated the Bodies of Effeminate Persons, whence arose the Fable, that she could renew Age. *Ser. 117.*

To one that profess'd himself a *Philosopher*, *Ser. 125.* but argued litigiously, he said, *Why do you spoil the best part of Philosophy, yet would be thought a Philosopher?*

Questioning one of those young Men that followed him, he was silent; whereupon *Diogenes*, *Ser. 133.* *Do you not think*, saith he, *it belongs to the same man to know when to speak, and when to hold his peace?*

Being demanded how a man should live under the Authority of Superiors; as we do by Fire, *Ser. 149, & 153.* saith he, not too near, lest it burn; not too far off, lest we freeze.

Seeing some Women talk privately together: *Ser. 183.* he said, *the Asp borrows Poyson from the Viper.*

Being demanded what was the heaviest burden the Earth bears, he answered, *An ignorant Man.* *Ser. 210.*

An Astrologer in the Forum, discoursing to the *Ser. 211.* People, and shewing them in a Tablet the Erratick Stars: *No*, saith *Diogenes*, *it is not the Stars that err, but these*, pointing to the People.

Being demanded what Men are the most noble: *They*, saith he, *Who contend Wealth, Glory, and Pleasure, and over-master the contraries to these, Poverty, Ignominy, Pain, Death.* *Ser. 216.*

Seeing the Servants of *Anaximenes*, carrying many goods, he demanded to whom they belonged; they answered to *Anaximenes*. *Is he not ashamed*, replied *Diogenes*, *to have so much Household-stuff, and yet not be Master of himself?* *Ser. 230.*

He said, Vertue dwelleth neither in a rich City, nor a private House. *Ser. 233.*

He said Poverty is a self-taught help to Philosophy; for what Philosophy endeavours to persuade by words, Poverty enforceth in practice. *Ser. 235.*

To a wicked man reproaching him for his poverty; *I never knew*, saith he, *any man punished for Poverty, but many for Wickedness.* *Ibid.*

He called Poverty a self-instructing Virtue. *Ibid.*

To one that reproached him with Poverty: *What mean you*, saith he? *Poverty never made a Tyrant, Riches many.* *Ser. 237.*

Alexander seeing him asleep in his Tub, said, *Ser. 248.* *O Tub full of Wisdom: The Philosopher rising up*, answerd, *Great King,*

One drop of Fortune's better far Than Tubs replete with Wisdom are.

To whom a slanderer by reply'd.

One drop of Wisdom Fortune's Seas excels; In unwise Souls misfortune never dwells.

O o

Seeing

Ser. 270. "Seeing an old Woman painted, *If this be for the living, you are deceived, faith he; if for the dead, make hast to them.*

Ser. 271. To one bewailing his own misfortune, as that he should not die in his own Country, *Be of comfort, faith he, the way to the next World is alike in every place.*

Æl. var. hist. 10, 11. Having a great pain in his shoulder which troubled him much, one said to him in derision, why dost thou not die, *Diogenes*; and free thyself from this Misery? He answer'd, *It is fit they should live who know how to order their Life; for you who know not what to do or say, it is a convenient time to die.*

Plut. de Exul. He used to say, *Aristotle* Dineth when *Philip* pleaseth, but *Diogenes* when it pleaseth *Diogenes*.

Plut. quæst. ger. Resp. At *Corinth*, seeing *Dionysius* the younger, who was deposed from the Kingdom of *Sicily*, *This is a Life, faith he, you deserve not, you merit rather not to live here freely and without fear, but at home in perpetual imprisonment.*

Plut. de vert. Moral. To some who commended *Plato*, he said, *What hath he done worthy commendation, having professed Philosophy so long, yet never moved any to grief.*

Plut. aud. de Poet. To one demanding how he might take the greatest Revenge upon his Enemy, he answered, *By being Good and Virtuous your self.*

Macrobi. Sat. 7, 3. In commending his Master *Antisthenes*, he would say of him, *Of Rich, he made me Poor; and instead of a fair House, made me live in a Tub.*

CHAP. VI.

His Writings.

OF the Writings ascribed to him, are these.

Dialogues.	Of Death.
Ichthyas.	Epistles.
The Geay.	Tragedies 7.
The Leopard.	
The Athenian People.	{ Helena.
Policy.	{ Thyestes.
Ethick Art.	{ Hercules.
Of Riches.	{ Achilles.
Erotick.	{ Medea.
Theoderus.	{ Chrysippus.
Hypias. Aristarchus.	{ OEdipus.

Sesicrates and *Satyrus* affirm, that none of these were written by *Diogenes*; the Tragedies *Staiyrus* ascribes to *Philiscus* of *Ægina*, *Socion* affirmeth these only to have been written by *Diogenes*.

Of Vertue.	Cephalio.
Of Good.	Philiscus.
Erotick.	Aristarchus.
The Poor.	Sisiphus.
The Tolerant.	Ganymede.
The Leopard.	Chria's, &
Cassander.	Epistles.

CHAP. VII.

His Death.

HE Dièd, as *Demetrius* faith, at *Corinth* about 90 years old, the same day that *Alexander* died at *Babylon*; which according to *Ælian* was the seventh of *Thargelion*, in the first year of the 114th Olympiad.

The manner of his death is variously related. *Eubulus* faith, he lived to his end with *Xeniades*,

and was buried by his Sons. As he lay sick, *Xeniades* asked him how he would be buried; he answered, with his Face downward; *Xenides* demanding the reason, *Because, faith he, all things will be turned upside down*; alluding, faith *Lactius*, to the greatness of the *Macedonians*, who not long before were a poor inconsiderable People. Some report, that being near Death, he gave order that his Body should be left unburied, that the wild Beasts might partake of him, or be thrown into a Ditch, and a little dust be cast over it; or thrown upon a Dung-hill, that he might benefit his Brethren.

Ælian faith, that being sick to Death, he threw himself down from a Bridg which was near the Gymnasium, and ordered the Keeper of the *Palestra* to take his Body and throw it into the River *Ilyssus*.

Others affirm he died of a Surfeit of raw flesh; others, that he stop'd his own Breath; others, that cutting a Cuttle-fish in pieces to throw it to dogs, it bit asunder a Nerve in his Foot, whereof he died.

Others affirm he died as he was going to the Olympick Games: Being taken with a Fever, he lay down by the way, and would not suffer his friends to carry him; but sitting under the shade of the next Tree, spoke thus to them; *This night I shall be a Victor, or Vanquished; if I overcome the Fever, I will come to the Games; if not, I must go to the other World, and drive it away by death.*

Antisthenes faith, his Friends were of opinion he stopp'd his own breath; for coming, as they constantly used, to visit him in the *Cranæum* where he lived, they found him covered: they did not imagine it was sleep, by reason of his great wakefulness; but immediately putting back his Cloak, perceived he was dead. Hereupon there arose a contention amongst them who should bury him; they fell from words to blows; but the Magistrates and great ones of the City, came themselves and buried him by the Gate, which leads to *Isthmus*. Over the Sepulchre they placed a Column, and upon it a Dog, cut out of *Parian* Stone. Afterwards his own Country-men honoured him with many brazen Statues, bearing this Inscription;

*Time doth the strongest Brasts decay;
Diogenes, thou ne'er canst dye,
Who to content the ready way
To following Ages didst descry.*

Laertius reckons five of this name; the first of *Apollonia*, a Natural Philosopher.

The second a Sicionian.

The third this.

The fourth a Stoick of *Seleucia*.

The fifth of *Tarsis*.

MONIMUS.

MOnimus was a *Syracusan*, Disciple to *Diogenes*; he was first Servant to a Money-changer, to whom *Xeniades* who bought *Diogenes*, often coming, he was so taken with the Worth and Virtue of the Person, that he counterfeited himself Mad, and threw all the Money from off the Table, whereupon his Master turning him away, he betook himself to *Diogenes*. He

He followed likewise *Crates* the Cynick, and others of that Sect, which confirm'd his Master in the Opinion that he was Mad. He was a Person Eloquent and Learned, mentioned by *Meander* in his *Hippocramus*; of so great constancy that he contemned all Glory for Virtue's sake. He wrote some things, which at first appearance seem'd *Ludicrous*, but contained deep serious Sense: as of *Appetites* two Books, and a *Protreptick*.

ONESICRITUS.

Onesicritus was of *Aegina*; or according to *Demetrius*, an *Astypalean*; he had two Sons: he sent the younger, named *Androsthenes*, to *Athens*, who hearing *Diogenes*, would not depart thence. Hereupon he sent the elder, named *Philiscus*, who stay'd there likewise for the same reason. Lastly, the Father himself went, and was so much taken with *Diogenes*, that he became a sedulous Auditor of him, as his two Sons were.

He was esteem'd amongst the most eminent Disciples of *Diogenes*. *Laertius* compares him with *Xenophon*: One fought under *Cyrus*, the other under *Alexander*: One wrote the *Institution of Cyrus*, the other the *Praise of Alexander*: Their Stiles also were very like.

CRATES.

Crates was a *Theban*, Son of *Ascandas*: He was likewise reckon'd amongst the most eminent of *Diogenes*'s Disciples: yet *Hippobolus* saith, he was not a Disciple of *Diogenes*, but of *Bryso* the *Achean*.

He flourish'd about the 113th Olympiad: *Androsthenes*, in his *Successions*, saith, that being at a Tragedy where *Telephus* was represented, carrying a Basket in a fordid condition, he betook himself to the Cynical Philosophy, and selling all his Estate, (for he was very Rich, having gotten together above two hundred Talents) he distributed it amongst the Citizens, and was so constant a Professor of this Philosophy, that *Philemon*, the Comick Poet, takes notice thereof in these words.

*By him in Summer a thick Coat was worn.
In Winter-time (so temperate) a torn.*

Diocles saith, *Diogenes* perswaded him to part with his Estate, and to throw all the Money he had left into the Sea: and that the House of *Crates* was from *Alexander*, that of *Hipparchia* his Wife, from *Philip*. Some of his near Friends that came to him to dissuade him from this course of Life, he beat away, for he was of a resolute spirit.

Demetrius the *Magnetian*, saith, he deposited some Money in the hands of a Banquier, with this condition, that if his Sons betook themselves to any Civil Employments, it should be repaid again; but, if to Philosophy, it should be distributed amongst the People, for as much as a Philosopher stands in need of nothing.

Eratosthenes relates, that having a Son named *Pasicles*, By his Wife *Hipparchia*, as soon as he arrived at mans Estate, he brought him to the

house of a young maid that was his slave, saying, This is a hereditary matrimony to you: but those who commit adultery, are, according to the Tragedians, punished with banishment or death; Those who keep Concubines were, according to the Comedians, by luxury and drunkenness, transported to madness.

Pasicles, the Disciple to *Euclid*, was his brother. He said, 'tis not possible to find a man without a fault; for, in every Pomgranat there is at least one grain corrupt.

Having displeas'd *Nicodromus* a Lutinist, he beat him black and blew; whereupon he pasted a piece of paper on his Forehead, wherein was written, *Nicodromus did this*.

He was exceedingly invective against common women.

He reprov'd *Demetrius Phalerius* for sending bread and wine to him, saying, *I wish the fountains also produc'd bread*; intimating, that he liv'd with water.

The Athenian Magistrates blamed him for wearing a long robe; *I will shew you*, *Theophrastus*, says he, *in the same attire*; which they not believing, he brought them to a Barber's shop, where he was sitting to be trimm'd.

At *Thebes*, being beaten by the Master of the *Gymnasium*; or, as others, at *Corinth* by *Eutibicrates*, he laughed, saying,

*He by the foot him drew,
And o'er the threshold threw.*

Zeno in his *Chrias* saith, he sowed a sheep-skin upon his cloak, to appear the more deformed. He was of a very unhandsome look; and whilst he discours'd, laughed.

He us'd to lift up his hands and say, *Be of good courage, Grecians, both for the eyes and all other parts, for you shall soon see these deriders surpris'd by sickness, and proclaiming you happy, blame their own slothfulness*.

He said, we ought so long to study Philosophy, until the leaders of the Army seem to be Horse-drivers.

He said, they who liv'd with Flatterers, were forsaken persons, living like sheep amidst wolves, not with those who wish'd them well.

Perceiving he drew nigh to death, he looked upon himself, saying,

*And dost thou go, old Friend,
To the next World, thou whom old age doth bend?*
For he was Crook'd through Age.

To *Alexander*, asking whether he would that his Country should be restored, or not: To what end, saith he, *seeing there will come perhaps another Alexander, and Depopulate it*. He said, Contempt of Glory and Want were his Country, which were not subject to Fortune; and that he was Countryman to *Diogenes*, not fearing any body.

Coming into the *Forum*, where he beheld some buying, others selling: *These*, saith he, *think themselves happy in employments contrary to one another; but I think my self happy, in having nothing to do either way*. Stub. Scr. 37.

To a young man follow'd by a great many Parasites: *Young Man*, saith he, *I am sorry to see you so much alone*. Scr. 62.

He said, *We ought not to accept gifts from all men, for Virtue ought not to be maintained by Vice*. Scr. 77.

Seeing at *Delphi* a golden Image of *Phryne* the

the Curtezan, he cried out, *This is a Trophy of the Grecian Intemperance.*

Seeing a young man highly fed and fat: *Unhappy youth, faith he, do not fortifie your Prison.*

He said, *He gained Glory, not by his Riches, but his Poverty.*

To one, demanding what he should get by Philosophy: *You will learn, faith he, to open your purse easily, and give readily, not as you do now, turning away, delaying and trembling, as if you had the Palsy.*

He said, *Men know not how much a Wallet, a measure of Lupines, and security of mind is worth.*

The Epistles of Crates are extant, wherein, faith Laertius, he writes excellent Philosophy, in stile resembling Plato. He wrote Tragedies likewise, full of deep Philosophy.

He died old, and was buried in Boetia.

METROCLEES.

Metrocles was Disciple of Crates, Brother to Hipparchia. He first heard Theophrastus the Peripatetick, &c. afterwards apply'd himself to Crates, and became an eminent Philosopher.

He burnt, as Hecaton faith, his Writings, saying, *These are the Dreams of Wild Phantastick Youth.*

He burnt likewise the dictates of his Master, Theophrastus.

Vulcan come hither, Venus needs thy aid.

He said, *Of things, some are purchased by money, as Houses; some by time and diligence, as Learning: Riches is hurtful, if not rightly apply'd.*

He died old, he strangled himself.

Of his Disciples are remembered Theombrotus and Cleomenes. Demetrius of Alexandria, was Auditor of Theombrotus: Timarchus of Alexandria, and Echicles of Ephesus, were Disciples of Cleomenes. Echicles heard also Theombrotus, from whom came Menedemus, of whom hereafter. Amongst these was also Menippus, of Sinopis.

HIPPARCHIA.

Hipparchia was likewise taken with the Discourses of those Cynicks, she was sister to Metrocles; they were both Marionites. She fell in love with Crates, as well as for his Discourse as manner of Life, from which none of her Suitors by their Wealth, Nobility or Beauty, could divert her, but that she would bestow her self upon Crates; threatening her Parents, if they would not suffer her to Marry him, she would kill her self. Hereupon her Parents went to Crates, desiring him to dissuade her from this Resolution; which he endeavoured, but not prevailing, went away, and brought all the little Furniture of his House and shewed her, *This, faith he, is your Husband, That the Furniture of your House, consider upon it, for you cannot be mine unless you follow the same course of Life.* She immediately took him, and went up and down with him, and and in publick, *συνελεύετο*, and went along with him to Feasts.

At a Feast of Lysimachus, she met Theodorus

the Atheist, with whom she argued thus; if that, which if Theodorus do, be not unjustly done, neither is it unjustly done if Hipparchia do the same: But Theodorus, if he strike himself, doth not unjustly; therefore Hipparchia doth not unjustly if she strike Theodorus; Theodorus answered nothing, only plucked her by the Coat, which she wore not like a Woman, but after the manner of the Cynicks; whereat Hipparchia was nothing moved; whereupon he said,

Her Webb and Loom

She left at Home.

I did, faith she, Theodorus, and I think have not erred in choosing to bestow that time which I should have spent in weaving, on Philosophy. Much more faith Laertius is ascribed to her.

MENIPPUS.

Menippus was a Cynick, a Phœnician, by Birth, Servant by condition, as Achaichus affirms. Diocles faith, his Father was of Pontus, called Bato Menippus for acquisition of Riches went to Thebes, and was made free of that City. He wrote nothing serious, all his Books being full of Mirth, not unlike the writings of Meleager. Hermippus faith, he was named Hemerodanista, the daily Usurer, for he put out Money to Merchants upon Interest, and took pawns; at last being cheated of all his goods, he hanged himself.

Some say the Books that are ascribed to him, were writ by Dionysius and Zopyrus, Colophonians, which being ludicrous, they gave to him as a person disposed that way; they are reckoned thirteen.

Nenia's.

Testaments.

Epistles, in the persons of the Gods.

Two Natural Philosophers, Mathematicians and Grammarians.

Of Epicure.

Laertius reckons six of this name; the first wrote the Lydian story, and epitomiz'd Xanthus.

The second this.

The third a Sophist, of Caria.

The fourth a Graver.

The fifth and sixth Painters, both mention'd by Apollodorus.

MENEDEMUS.

Menedemus was Disciple of Colotes, of Lampfacum; he proceeded, as Hippobolus relates, to so great extravagance, that he went up and down in the habit of the Furies, declaring he was come from the World below to take notice of such as offended, and that he was to return thither to give an account of them.

He went thus attired, *A dark Gown to's heels, girt with a purple girdle; upon his head an Arcadian hat, on which were woven the twelve signs; tragick buskins, a long beard, in his hand an ashen staff.* Hitherto of the Cynicks.

THE
HISTORY of PHILOSOPHY.

The Eighth Part.

Containing the *STOICK* Philosophers.

ZENON.
CHAP. I.

His Country, Parents, First Studies.

THE Sect of *Stoicks* had its Original from the *Cynicks*, *Zeno* was the Author thereof, who having first been a Scholar of *Crates*, and afterwards a hearer of other Philosophers, at last instituted this new Sect. * He was born at *Cittium*, a Greek Sea-town, in the Isle of *Cyprus*, * *Laert.*
b with

Stilp. lib. *b* with a lock'd Haven, Inhabited by *Phanicians*,
c Stilp. *c* whence he sometimes was termed the *Phanician*. His Father was called *Mnaseas*, by some
d Cit. de fin. *Demcas*, a Merchant, whence was objected to *Zeno*, the obscurity of his Birth and Country, as
e Plat. de rep. Stoic. being *d* a Stranger, and of mean Parentage, whereof he was so far from being ashamed, that
f Laert. *e* he refused to be made a Citizen of *Athens*, as conceiving it to be an undervaluing of his own Country; in so much as *f* when he contributed to a Bath in *Athens*, and his Name was inscribed upon a Pillar with the Title of Philosopher, he desired they would add a *Cittican*.

g Laert. *g* *Zeno* (as *Hecaton* and *Apollonius Tyrinus* relate) enquiring of the Oracle what course he should take to lead the best course of Life, was answer'd, that he should converse with the dead; whereupon he addicted himself to the reading of ancient Authors.

h Laert. *h* Herein he was not a little furthered by his Father, who, as *Demetrius* saith, trading frequently to *Athens*, brought him as yet but very young, many Socratical Books, which excited in him a great Affection to Learning.

i Laert. *i* Being now 17. (or as *Perseus* 22) years old, he took a Voyage to *Athens*, carried thither as well by his particular inclination to Philosophy, as by his Business, which was to sell some Purple that he had brought out of *Phanicia*. He took along with him a hundred Talents, and having sold his Merchandise, apply'd himself to Philosophy, yet continued to lend his Money out to Merchants upon Interest, so to improve his Stock.

k Plat. de util. c.p. ex inimic. Some affirm his Ship was cast away in the *Piræum*, which news being brought him to *Athens*, he seemed nothing at all moved, but only said, *Thou dost well Fortune, k to drive me into a* *Goton*; or as *Seneca*, Fortune commands me to Study Philosophy more earnestly.

l Laert. *l* Others say, That being troubled at the loss of his Ship, he went up to the City of *Athens*, and sitting in a Boosellers Shop, read a piece of *Xenophon's* Commentaries, wherewith being much pleased, he asked the Book-seller where such men lived; *Crates* by chance passed by, the Book-seller pointed to him, saying, *Follow that* *Alan*; which he did, and from that time forward, became a Disciple of *Crates*.

CHAP. II.

Of his Masters.

a Laert. *ZENO* thus changing the course of his Life, applied himself to *Crates*, a being apt to Philosophy, but more Modest than suited with the Cynical Sect. Which *Crates* to remedy, gave him a Pot full of Portage to carry through the Ceramick; and perceiving him to hide it, as ashamed, with his Coat, he struck the Pot with his Stick and broke it. *Zeno* running away, all wet, *What*, said he, *are you running away, little Phœnician? No body hurt you.* He made a little hollow cover of a Pot, in which he carried the Money of his Master *Crates*, that it might be in readiness when he went to buy meat. Thus he lived a while with *Crates*, during which time he writ his Book of the *Commonwealth*, whence some

jesting, said, it was written under the Dog's tail.

At last deserting *Crates* he applied himself to *Stilpo* the *Megarick* Philosopher. *Apollonius b Laert.* *Tyrinus* saith, That taking hold of his Cloak to pluck him away from *Stilpo*, he said, O *Crates*, *the handles by which the Philosophers are to be taken hold of, are their Ears; lead me by those your way, or else, tho' you constrain my Body to be with you, my mind will be with Stilpo.* With *Stilpo* he remained ten years.

From *Stilpo* he went to *Xenocrates*, being so well satisfied with the Instruction of these two Masters, that he said, *He made a very good Voyage when he was Ship-wreck'd; tho' others apply it to his living with Crates.*

c He afterwards apply'd himself to *Diodorus c Laert.* *Crœnus*, as *Hippobotus* avers, under whom he studied Dialectick, to which Science he was so much addicted, that *d* when a certain Philosopher of *d Laert.* that Sect had informed him of seven Species of Dialectick, in that fallacy which is called *the Mower*, he asked him what he was to give him for his reward, the Philosopher demanded an hundred pieces of silver; *Zeno* (so much was he affected to Learning) gave him two hundred.

e Lastly, notwithstanding that he had made a *e Laert. Stilp.* great progress in Philosophy, he heard *Polemon*, whose Doctrine was against *Pride*; whereupon *Polemon* told him, *Zeno, I am not Ignorant that you lie in Ambush, and come slyly into my Garden (as the Phanicians use) to steal away Learning.*

CHAP. III.

His School, and Institution of a Sect.

*H*AVING been long a hearer of others, he at last thought fit to communicate the Learning which he had received and improved. To this end he made choice of the *ποικίλη σόα, the pain- a Laert.* *ted Walk*, so named from the Pictures of *Polygnotus*, otherwise called *Pisianastia*. Here he constantly walked and discoursed, resolving to settle there, and make the place as full of Tranquility as it had been before of Trouble: For, in the time of the thirty Tyrants, near 1400 Citizens were there put to Death.

Hither resorted a great many Disciples to him, who were at first called *Zenonians*, as *Epicure* affirmeth, from their Master, afterwards from the place where he taught, *Stoicks*, as *Eratosthenes* in his eighth Book of Antient Comedy; adding, that not long before, some Poets that lived there were called *Stoicks* also, upon which occasion the name was very well known.

He was subtil in Disquisition and Dispute.

He Disputed earnestly with *Philo* the Dialectick, and exercised himself together with him: so that *Zeno the younger* admired him no less than his Master *Diodorus*.

He first seemeth (saith *Laertius*) to have set a bound to the looseness and extravagance of Propositions: But of this more, when we come to speak of his Philosophy, which by reason of its largeness, we remit to the end of his Life.

CHAP.

CHAP. IV.

What Honours were conferred upon him.

ZENO, by the Philosophy which he taught, and the practise of his Life conformable to that Doctrine, gain'd so high an Estimation amongst the Athenians, that ^{a Laert.} they deposited the Keys of the City in his Hands, as the only Person fit to be entrusted with their Liberties. His Name was likewise much Honoured by his own Country-men, as well those at Cyprus, as those who lived at Sidon.

Amongst those who honoured and favoured Zeno, was Antigonus Gonotus King of Macedonia, a Prince no less Eminent for his Verue than his Greatness, much esteem'd him, and as often as he went to Athens, heard him. He sent many times to invite him to come to him, amongst the rest, one Letter to this Effect, alledged by Apollonius Tyrinus.

King Antigonus to Zeno the Philosopher, Health.

I Think that I exceed you in Fortune and Glory; but, in Learning and Discipline, and that perfect Felicity which you have attained, I am exceeded by you: Wherefore I thought it expedient to write to you, that you will come to me, assuring myself you will not deny it. Use all means therefore to come to us, and know, you are not to instruct me only, but all the Macedonians. For, he who teacheth the King of Macedonia, and guideth him to Vertue, it is evident that he doth likewise instruct all his Subjects in Virtue. For such as is the Prince, such for the most part are those who live under his Government.

Zeno answered thus:

To King Antigonus, Zeno, health.

I Much esteem your earnest desire of Learning, in that you aim at Philosophy; not popular, which perverteth manners, but that true discipline which conferreth profit, avoiding that generally commended pleasure which effeminates the Souls of some young Men. It is manifest, that you are enclined to Generosity, not only by Nature, but by Choice. A generous Nature with indifferent exercise, assisted by a Master, may easily attain to perfect Virtue. But I am very infirm of Body, by reason of my Age, for I am fourscore Years Old, and therefore not able to come to you. Yet, I will send you some of my Con-Disciples, who, in those things that concern the Soul, are nothing inferior to me; in those of the Body, are much superior to me; of whom, if you make use, you will want nothing conducing to perfect Beatitude.

Thus Zeno absolutely refused to go to Antigonus; but sent him his Disciple Persæus, Son of Demetrius, a Cithician, (who flourished in the 130th Olympiad, Zeno being then very old) and Philonides a Theban, both mentioned by Epicurus in his Epistle to Aristobulus, as having been with Antigonus.

CHAP. V.

His Apophthegms.

OF his Apophthegms are remembered these: Of a Man very finely drest, stepping lightly over over a Kennel; *He doth not care for the Dirt,* saith he, *because he cannot see his Face in it.*

A certain Cynick came to him to borrow Oyl, saying he had none left: Zeno denied him, and as he was going away; *Now,* saith he, *Consider which of us two are the more Impudent.*

Cremonides, whom he much affected, and Ceanthes sitting down beside him, he arose, whereat Ceanthes wondring, *I have heard good Physicians say,* saith he, *that the best remedy for Tumours is Rest.*

Two sitting by him at a Feast, he that was next him hit the other with his Foot: Zeno hit him that was next him with his Knee, and turning him to him, *What then think you?* saith he, *that you have done to him that sits below you.*

To one that loved the company of Boys, *Neither have those Masters,* saith he, *any Wit, who converse always with Boys, nor the Boys themselves.*

He said, that Elegant Speeches were like Alexandrian Silver, fair to the Eye, and figured like Money, but not a whit of the more value. Speeches which are otherwise, he likened to Attick Tetradrachmes, which had a rough stamp, but were of greater value.

Aristo his Disciple discoursing many things foolishly, some petulantly, others confidently, *It cannot be,* saith he, *but your Father was drunk when you were beget: Whereupon himself being very concise of Speech, he called him the Talker.*

To a great Eater who left nothing for those that eat with him, he caused a great Fish to be set before him, and immediately to be taken away; the other looking upon him, *What,* saith he, *do you think your Companions suffer every day, seeing that you cannot suffer my Greediness once?*

A young Man, who questioned something more curiously than suited with his Age, he brought to him a Glass, and bad him look in it, and then asked him, *whether he thought that Question agreed with that Face?*

To one that said, he disliked many things of Antisthenes's Writing, he brought his Chria of Sopheles, and asked him, if there were any thing therein excellent? The other answered, he knew not: *Are you not ashamed then* (replied Zeno) *if Antisthenes have said any thing ill, you select and remember that: but if any excellent, you are so far from remembring, as not to mind it?*

To one that said the Speeches of Philosophers were short: *You say very true,* saith he, *so should their very Syllables be, as much as is possible.*

One saying of Polemon, that he proposed some things and said others: He frowning said, *What rate do you set upon things that are given?*

He said, that a Disputant should have the voice and Lungs of a Comedian, but not the loudness.

To those that speak well, he said, we should allow a place to hear, as to skillful Artificers to see; on the other side, the hearer must so attend to what is spoken, that he take no time to censure.

To a young Man that spoke much; *your Ears* saith he, *are fallen into your Tongue.*

To

To a handsome youth, who said, that he thought that in his Opinion, a wise man ought not to love: *Nothing, faith he, will be more unhappy to you than are handsome.*

He said, that *most Philosophers are in many things fools, in trivial and vulgar ignorant.*

He pronounced that of *Caecia*, who when one of his Disciples began to grow high, beating him, he said, *Right is not placed in Great, but Great in Right.*

To a young man discoursing with much confidence; *Young man, faith he, I should be loath to tell you my thoughts.*

A Youth of *Rhodes* Handsome and Rich, but refractory to him; not enduring, he bad him first sit in a dirty seat, that he might dirt his Gown; next placed him amongst the Beggars, that he might converse with them and their rags, until at last the young man went away.

He said, *that nothing is more unseemly than Pride, especially in young men.*

He said; that *we must not only commit to memory speeches and words, as those who make ready some dish of meat; but apply it, and make use of it in our minds.*

He said, that *young men must use all modesty in their walking, in their behaviour, and in their garments; often repeating those Verses of Euripides concerning Capaneus.*

*He was not puffed up with his Store,
Nor thought himself above the Poor.*

He said, *nothing was more alienate from the comprehension of Sciences, than Poetry: and, that we need nothing more than Time.*

Being asked who is a friend? he answered, *My other self.*

Having taken his Servant in a Theft, he beat him; the fellow said, it was his destiny to steal; and to be beaten, said he.

He said, that *Beauty is the sweetness of the voice, or, according to some, he called it, the flower of Beauty.*

Seeing the Servant of one of his Companions black and blew with stripes; *I see, faith he, the fruits of your Anger.*

To one that smelt sweet of Oynments; *Who is it, faith he, that smells so effeminately?*

To *Dionysius* surnamed *ῥηδαιμύς* the retractor, who asked him, why he corrected all but himself; *because, faith he, I do not believe you.*

To a young man who spoke too freely, *For this reason, faith he, we have two Ears and but one Tongue, that we should hear much and speak little.*

Laert. Stob.
Serm. 126.

He was invited to a Feast with other Philosophers by the Ambassador of *Antigonus* (according to *Laertius* of *Ptolomy*) and whilst of the rest every one amidst their Cups made Ostentation of their Learning, he alone sat silent; whereupon the Ambassadors asking him what they should say of him to *Antigonus*, *That which you see, faith he, for of all things, it's hardest to contain speech.*

Being demanded how he behaved himself when reviled, he said, *as an Ambassador dismiss'd without answer.*

He changed the Verses of *Hesiod*, thus,

Who good advice obeys, of men is best.

Next, he who ponders all in his own breast.

For that man (faith he) is better who can obey god advice, and make good use thereof, than

he who finds out all things of himself; for the latter hath only understanding, but the other practice also.

Being demanded how it came to pass that being very austere, he notwithstanding was very cheerful and merry at a Feast; he answered, *Lupines, tho' in themselves bitter, being steeped, grow sweet.*

He said, *it was better to slip with the foot than with the tongue.*

He said, *That to do well is no small matter; to begin well, depended on a small moment.*

This some ascribe to *Socrates*.

One of the young men in the Academy speaking of foolish studies, *If you do not dip your tongue in your mind, faith Zeno, you will speak many other foolish things.*

He accused many, saying, *when they might take pleasure in labour, they would rather go to the Cooks shop for it.*

He said, *that we should not affect delicacy of diet, not even in sickness.*

Being demanded by one of his Friends, what course he should take to do no wrong; *Imagine, reply'd he, that I am always with you.*

Being demanded whether a man that doth wrong, may conceal it from God; *no, faith he, nor he who thinketh it.*

To some that excused their Prodigality, saying, that they had plenty, out of which they did it; *will you excuse a Cook, faith he, that should oversalt meat because he hath store of salt?*

He said that of his Disciples, *some were, φιλόσοφοι lovers of Knowledge; others, λόγολοι, lovers of speaking.*

He compared the Arts of *Dialectick* to just measures filled, not with *Wheat* or any thing of value, but with *Chaff* and *Straw*.

He said, *we ought not to enquire whether men belonged to great Cities, but whether they deserved a great City.*

Seeing a friend of his too much taken up with the business of his Land, *unless you lose your Land, faith he, it will lose you.*

He said, *a man must live not only to eat and drink but to use this life for the obtaining of a happy life.*

Antigonus being full of Wine, went to visit him, and kissing and embracing him as a drunken man, bad him demand whatsoever he would, swearing that he would give it him; *Zeno* answered, *πορευθεὶς ἐμεσον*, at once reproving his vice, and taking care of his health.

Stretching out the fingers of his right hand, he said, *such is phantasie*; then contracting 'em a little, *such is assent*; then closing them quite, and shutting his fist, *such is comprehension*; then putting to it his left hand, and shutting it close and hard, *such (faith he) is Science, of which none is capable but a wise man.*

CH A P. VI.

His Death.

ZENO having continued according to *Apollonius*, Master of his School fifty eight years, and attained to the 98th of his age, by the computation of *Laertius* and *Lucian*, (for that he lived but 72 years, as some affirm upon the testimony of *Perseus*, seems to be a mistake, seeing that his Letter to *Antigonus* was written

d Laert.

written in his 80th year) d in all which time he was never molested by any Sickness; died upon this occasion; Going out of the School, he fell and broke his Finger, whereupon striking the Ground with his Hand, he said, as *Niobe* in the Tragedy, *I come, why do you call me?* Or as others, *Why do you drive me?* And going out, e some say, he immediately strangled himself; f others, that by little and little he famish'd himself.

e Laert.

f Suid.

g Laert.

g When the news of his Death came to *Antigonus*, he broke forth into these Words, *What a spectacle have I lost!* and being demanded why he so much admired him, *Because*, said he, *tho' I bestowed many great things upon him, he was never therewith exalted or dejected.* He sent immediately *Thraso* on Embassie to the *Athenians*, requesting that they would build him a Tomb in the Ceramick, which the *Athenians* performed, honouring him with this Decree.

A D E C R E E.

*A*thenides being Archon, the Tribe of *Acamantis* having the first place in the *Phrytaneum*, the tenth day of *Alimasterton*, the three and twentieth of the sitting of the *Phrytaneum*, the Congregation of Presidents decreed thus: *Hippo* Son of *Cratistoteles* a *Aympeteian*, and the rest of the Presidents, *Thraso* Son of *Thraso*, an *Anacean*, declared;

Whereas *Zeno* Son of *Mnaseas*, a *Cittican*, hath professed Philosophy many Years in this City, and in all other things performed the Office of a good Man, encouraging those young Men, who applied themselves to him, to *Vertue* and *Temperance*, leading himself a Life suitable to the Doctrine which he professed, a Pattern to the best to imitate; The People have thought fit (good Fortune go along with it) to do Honour to *Zeno* Son of *Mnaseas* the *Cittican*, and to Crown him with a Crown of Gold according to the Law, in reward of his *Vertue* and *Temperance*, and to build a Tomb for him publicly in the Ceramick. For, the making of which Crown, and building of the Tomb, the People shall make choice of five Men of the *Athenians* to take charge thereof. This Decree the Scribe of the People shall write upon two Pillars, one whereof shall be placed in the Academy, the other in the *Lyceum*. The charge of the Pillars, he who is Overseer of the Publick Works shall undertake to defray, by way of Rate, that all may know, the *Athenian* People honour good Men both alive and dead. To take care of the bulding are appointed, *Thraso* an *Anacean*; *Philocles*, a *Pyrean*; *Phadrus*, an *Anaphistian*; *Medon*, an *Acarnean*; *Micythus* a *Sympalletean*.

The *Athenians* caused likewise his Statue in Brass to be set up, as did also the *Cittieans* his Countrymen. *Antipater* the *Sidonian* bestowed this Epitaph upon him.

Here *Zeno* lies, who tall *Olympus* scal'd,
Not heaping *Pelion* on *Ossa's* head,
Nor by *Herculean* Labours so prevail'd,
But found out *Vertue's* Path which thither led.

Another Epigram was written upon him by *Xenodorus* the *Stoick*, Disciple of *Diogenes*.

Zeno thy Years to beary Age were long,
Not with vain Riches, but with self content:
A stout and constant Self deriv'd from thee
The Mother of nought-dreading Liberty:
Phoenicia, whence thou issuedst, who can flight
Thence *Cadmus* too, who post long Greece
to write.

C H A P. VII.

His Person and Vertues.

*A*S concerning his Person, *Timotheus* faith, that he was wry neck'd: *Apollonius Tyreus*, that he was lean, tall, and of a swarthy complexion, whence stiled by some (as *Chrysippus*) the *Thracian* sprig. b His look was sad, grave, severe, and frowning; his Constitution not strong for which reason *Pericles* faith, he forbore to fast much. His ordinary Diet consisted in raw food especially Figs, both raw and dried, bread and honey, which he eat moderately, and a little sweet Wine.

His Continence was such, that when *Pericles*, who cohabited with him, brought a She-Min-*Laert.* strel to him, he immediately sent her back.

Notwithstanding his Severity, he was very *Laert.* complaisant, and often teased with being *Antigonus*, and meeting him sometimes drunk, went along with him to *Aristocles* the Musician, to nightly Banquets and Plays.

Popular Ostentation he avoided, by sitting in *Laert.* the lowest place, whereby he freed himself from the troublesome importunity of the other part.

He never walked with more than two or three *Laert.* at once: *Cleantes* faith, he many times gave Money to People that they would not trouble him; and throng about him. Being on a certain time encompassed by a great Croud, he shewed them a wooden Ball on the top of the Cloyster, which formerly belonged to an Altar: This, faith he, was once placed in the middle; but, because it is troublesome, it is now laid aside: I desire you would in like manner withdraw your selves, that you may be less troublesome.

He was so free from being corrupted by Gifts, that *Demecharis* Son of *Laches*, desiring *Laert.* him to let him know what business he would have to *Antigonus*, promising to write about it, and assuring him, that *Antigonus* would furnish him with whatsoever he desired; he turned away from him, and would never alter converse with him.

He was so humble, that he conversed with *Laert.* mean and ragged Persons; whence *Timon*,

And for Companions gets of Servants store,
Of all Men the most empty, and most poor.

He was most patient and frugal in his household-Expences, something inclining to the frugality of the *Barbarians*. *Laertius* mentions one Servant that he had; *Seneca* avers he had none.

Whensoever he reprehended any, it was covertly and afar off, as may appear by many of *Laert.* his Apophthegms.

His Habit was mean, whence it was said of *Laert.* him,

P p

Him

Him the Winters rigid Frost or Rain,
The scorching Sun, or sharp Disease can pain:
Not like the common sort of People he;
But, Day and Night bent on Philosophy.

The Comick Poets unwittingly, intending to
discommend him, praise him, as *Philemon*, in
his Comedy of Philosophers,

He Water drinks, then Broth and Herbs doth eat,
To Live, his Scholars teaching, without Meat.

This some ascribe to *Possidippus*.

His Vertues were so Eminent that they grew
at last into a Proverb, *More Continent than*
Zeno the Philosopher; whence *Possidippus*,

—He ere ten days were spent,
Zeno in Continnence out-went.

Indeed he excelled all men in this kind of
Vertue, and in Gravity, and, by *Jove* (addeth
Laertius) in Felicity likewise.

CHAP. VIII.

His Writings.

HE wrote many Books, wherein (saith *La-*
ertius) he so discoursed, as no *Stoick* af-
fer him: Their Titles are these:

Laert. de vit.
Alex. Orat.

Of *Common-wealth*, written whilst he was an
Auditor of *Crates*, and (as * *Plutarch* saith)
much applauded; the Scope whereof was this,
That we should not live in several Cities and
Towns by distinct Lanes; but, that we should own
all Men as our Countrymen and Fellow-Citizens;
that there should be one manner of Life, and
one Order, as one Flock which grazeth by equal
right in one Pasture.

Of Appetite; or, of humane Nature.

Of Passions.

Of Office.

Of Law.

Of the Discipline of the Grecians.

Of Signs.

Of the Universe.

Of Signs.

Pythagoricks.

Universals.

Of Words.

Homeric Problems 5.

Of hearing Poetry.

The Art.

Solutions.

Confutations.

Memorials.

The Morals of *Crates*.

* *Laert.*

* Some, amongst whom is *Cassius* a *Sceptian*,
reprehended many things in the Writings of *Ze-*
no: First, that in the beginning of his *Common-*
wealth, he affirmeth, *The Liberal Sciences to be*
of no use.

Again, That all wicked Men are Enemies among
themselves, and Slaves and Strangers, as well Fa-
thers to their Children, as Brethren to Brethren. A-
gain, That only good men are Citizens, and Friends,
and Kindred, and Children, as he affirmeth in
his Book of the *Commonwealth*. So that ac-
cording to the *Stoicks*, Parents should be Ene-
mies to their Children, because they are not wise.

That in his *Commonwealth* he would have
Women to be in common.

That no Temples, Courts of Judicature, nor
publick Schools, should be built in a *Commonwealth*.
That Money is not necessary, neither for Ex-
change nor Traffick.

That Women should go in the same Habit as Men.

CHAP. IX.

His Disciples.

ZENO (saith *Laertius*) had many Disciples;
the most eminent these;

PERSÆUS Son of *Demetrius*, a *Cittiean*; some affirm he was *Zeno's* Scholar, others that *Laert.*
he was one of the Servants which were sent by
Antigonus to *Zeno* to transcribe his Writings;
whence *Bion* seeing this Inscription on his Sta-
tue, PERSÆUS OF ZENO A CITTIEAN said, * *Athen.*
The Graver mistook, for instead of δούλῳ, he
should have put δαμνῳ, a Servant.

Afterwards he returned to *Antigonus* King of
Macedonia; *Antigonus* to make a Tryal of him,
caused a false Report to be brought him, that
his Lands were spoiled by the Enemy; whereat
appearing troubled, Do you not see, saith *Ant-*
igonus, that Riches are not to be reckoned amongst
indifferent things?

Antigonus so much favour'd him, that he pre-
ferred him to the Government of *Acrocorinthus*;
on which Fort depended not only *Corinth*, but
all *Peloponnesus*; in this charge he was unfor-
tunate; for the Castle was taken by the cunning
of *Aratus* a *Sicyonian* (* *Athenæus* saith, whilst
Persæus was feasting) who turned out *Persæus*, * *Deipn.*
whereupon afterwards to one that maintained
only a wise Man is a Governour; and I, saith he,
was one of the same Mind, being so taught by *Ze-*
no, but now am of another Opinion; The *Sicyo-*
nian young Man (meaning *Aratus*) hath taught
me otherwise; Thus *Plutarch*; But *Pausanias*
saith that *Aratus* upon taking of the Fort, a-
mongst others put *Persæus* the Governour to
Death.

He said, That those were esteem'd Gods who *Cic.*
had invented some things very useful to humane
Life.

He wrote these Books; Of a Kingdon; the
Lacedæmonian Commonwealth; Of Marriage; Of
Impiety; *Thyestes*; Of Love, *Protrepticks*, *Ex-*
ercitations; *Chrysa's* 4. *Commentaries*, against
Plato's Laws 7. * *Symposiack Dialogues*.

ARISTO Son of *Miliades*, a *Chian*, Sir-
named the *Siren*; when *Zeno* fell into a long * *Athen. Dēp.*
Sickness, he left him, and went (as *Diocles* saith) *Laert.*
to *Polemo*: He was also a follower of *Persæus*,
whom he flattered much, because of his favour
with *Antigonus*; for he was much given to
Pleasure, even unto his End. Thus revolting
from his Master *Zeno*, he asserted,

That the end consists in those mean things
which are betwixt Vertue and Vice; that is, in
indifference; not to be moved on either side,
nor to imagine the least difference to be in these
things, but that they are all alike: For a wise
Man is like a good Player, who whether he per-
sonate *Agamemnon* or *Thersides*, will act either
part very well: Thus he took away the Dig-
nity which *Zeno* held to be in these mean things
betwixt Vertue and Vice; holding that there is
no difference in them.

Cic. Acad.
quest 4.

Cic. de finib.

He

He took away *Physick* and *Logick*, affirming that one is above us, the other appertains nothing to us: *Ethick* only appertains to us; he compared *Dialectick Reason* to Cobwebs, which tho they seem artificial, yet are of no use.

He introduced not on any Virtues, as *Zeno*; nor one called by several names, as the *Megarick* Philosophers, but affirmed they have a Quodammodotative Relation to one another.

Professing these Tenets, and disputing in *Cynosarges*, he came to be called Author of a Sect; whence *Milciades* and *Diphilus* were called *Aristonians*.

He was very perswasive, and wrought much upon the common people, whence *Timon in Sillis*.

One of *Aristo's* smooth perswasive Race.

He defended eagerly this Paradox of the *Stoicks*, That a wise man doth not Opinionate, but Know; which *Persæus* opposing, caused of two like Twins, first, one to give a depositum to him, then the other to come and re-demand it; and by his doubting, if it were the same person, convinced him.

He inveigh'd against *Arcefilaus* [* calling him a corrupter of Youth.] On a time, seeing a Monster like a Bull, but of both Sexes, he said, *Alas! here is an Argument for Arcefilaus against Energy*. To an Academick who said, he comprehended nothing, (do you not see (saith he) him who sitteth next you? which he denying,

Who struck you blind faith he, or took your light away?

He wrote these Treatises, *Protrepticks* 2. Of *Zeno's Doctrine*: *Scholastick Dialogues* 6. Of *Wisdom* *Dissertations* 7. *Erotick Dissertations*: *Commentaries upon Vain-glory*. *Commentaries* 15. *Memorials* 3. *Chriar* 11. *Against Orators*: *Against Alexinus his Oppositions*; *To the Dialecticks* 3. *To Cleanthes Epist.* 4. But *Panætius* and *Socrates* affirm the *Epistles* only to be his, the rest to be *Aristo's* the *Peripatetick*.

The Sun striking hot upon his head (which was bald) occasioned his death. There was another of the same name, a *Julite*, a *Peripatetick*; another an *Athenian*, a *Musician*, a *Tragick poer*; a fifth, an *Alæan*, who writ the *Rhetorical Art*; a sixth of *Alexandria*, a *Peripatetick*.

Erillus, (or as *Cicero*, *Herillus*) was a *Carthaginian*; when he was a Boy, he was Loved and Courted by many; which *Zeno*, by causing him to be shaved, diverted.

He held, That the end is Science, which is to live so, as to refer all things to Science, joyned with Life. That Science is a habit susceptible of phantasies, falling under Reason.

Yet, sometimes he said, there is no end; but, that the end it self is changed by the things, and those which are joyned to the things, as Brasses, of which the Statues of *Alexander* and *Socrates* is made.

That τέλος the end, and ὑποτέλις differ; one is objected to unwise persons as well as wise, the other to wise only.

Those things which are betwixt Virtue and Vice, are indifferent.

His Books are written in a short Stile, consisting of few words, but very efficacious, wherein is contained what he held contrary to *Zeno*.

His Writings these, *Of Exercitation*, *Of Passion*, *Of Suspicion*, *the Law-giver*, *Majeustick*, *Antipheron*, *The Master*, *The Preparative*, *The Directive*, *Hermès*, *Medea*, *Dialogues*, *Moral Theses*.

His Disciples were called *Herillians*, named by *Cicero* as a particular Sect amog the *Socrifticks*.

Dionysius, Son of *Theophrastus*, an *Hraclæot*, from the change of his Opinion, firnamed δ μεταβέβηκεν, *The Retractor*. He was from the beginning studiously addicted to Learning, and writ Poems of all kinds; then betook himself to *Aratus*, being much pleased with him. Of Philosophers he first heard, as *Diocles* affirms, *Heracledes* his Country-man; then *Alexinus* and *Menedemus*, after these *Zeno*.

Revolting from *Zeno*, he addicted himself to the *Cyrenæans*; he went to common houses, and addicted himself to other Pleasures.

He asserted the end to be Pleasure, and that by reason of his own pur-blindness; for being much grieved thereat, he durst not affirm Grief to be one of the indifferents.

He died eighty years old, starved.

His Writings are thus intituled, *Of Apollo* 2. *Of Riches and Poverty*, and *Punishment*; *Of the use of Men*; *Of good Fortune*; *Of the Kings of the Ancients*; *Of things that are praised*; *Of the Customs of the Barbarians*.

Sphærus was of *Bosphorus*; he first heard *Zeno*, then *Cleanthes*, and having made a sufficient progress in Learning, went to *Alexandria* to *Ptolomy Philopater*, where there arising a dispute, Whether a Wise Man doth Opinionate, and *Sphærus* maintaining that he doth not, the King commanded some Quinces, *Athenæus* faith Birds, of Wax to be set before him, wherewith *Sphærus* being cozened, the King cried out, that he assented to a false phantasia; *Sphærus* presently answered, That he assented not that they were Quinces, but that it was probable they were Quinces; but comprehensive Phantasia differs from probable, * for that is never false, but in probable matters sometimes a thing falls out otherwise than we imagined. † *Menesistratus* accusing him that he denied *Ptolomy* to be King, he answered, that he thought *Ptolomy*, or such a one was King.

His Writings are these: *Of the World*, *of the Seed of Elements*, *of Fortune*, *of Beasts*, *against Atoms and Apparitions*, *of the Organs of Sense*, upon *Heraclitus's* five dissertations; *of Moral description*, *of Office*, *of Appetite*, *of Passions* 2. *Dissertations of a Kingdom*; *of the Lacedæmonian Commonwealth*, *of Lycurgus and Socrates* 3. *Of Law*, *of Divination*, *Erotick Dialogues*, *of the Eretriack Philosophers*, *of things like*, *of Definitions*, *of Habit*, *of Contraries* 3. *Of Reason*, *of Riches*, *of Glory*, *of Death*, *of the Art of Dialectick* 2. *Of Categorems*, *of Ambiguities*, *of Epistles*.

Cleanthes, whom *Zeno* compared to writing-tables, that are so hard, they will not easily admit an impression; but having once received it, keep it long. He succeeded *Zeno*, of him therefore apart.

Philon, a *Theban*.

Callippus, a *Corinthian*.

Possidonius, an *Alexandrian*.

Athenodorus of *Soli*; there were two more of the same name, *Stoicks*.

Zeno, a *Sidonian*.

Last in the Catalogue of his Disciples must be remembred an *Eretrian* youth (mention'd by * *Ethic. Serm.* * *Stobæus*) who heard *Zeno* till he came to be a man: then returning to *Eretria*, his Father asked him what he had learn'd all that time; he answered, he would shortly let him see, and did so: for, not long after, his Father in anger did beat him, which he took quietly, saying, *This I have learned, To bear with the Anger of a Father, and not to oppose it.*

In the Life of *Zeno* (for as much as he is Author of that Sect) it will be requisite to give account of the Doctrine of the Stoicks in general; wherein, if the terms seem harshly rendred, it will easily be forgiven by those, who consider the Stoicks were no less particular in their words, than in their Doctrines.

THE DOCTRINE OF THE STOICKS.

The First Part.

CHAP. I.

Of Philosophy in General, and Particularly of Dialectick.

*Pl. de plac.
Phil. 1.*

Wisdom is the Science of things Divine and Humane; Philosophy is the exercitation of convenient Art. Convenient is the only and supream Virtue. Of *Virtues* in the most general Sense there are three kinds, *Natural*, *Moral*, *Rational*: For which cause Philosophy likewise hath three parts, *Physick*, *Ethick*, *Logick*: *Physick*, when we enquire concerning the World, and the things in the World: *Ethick* is employed about humane life: *Logick* is that part which concerns Reason, which is also called *Dialectick*. *b* Thus *Zeno* the *Citiean* first divided it in his Book of *Speech*; and *Chrysippus* in his first Book of *Speech*, and in his first of *Physicks*; and *Apollodorus Ephillus* in his first Book of *Introductions into Doctrines*; and *Eudromus* in his *moral Institutions*, and *Diogenes* the *Babylonian*, and *Possidonius*. These parts *Apollodorus* calleth *Places*; *Chrysippus* and *Eudromus* *Species*; others *Genus's*.

*c Ammonius in
Categ.*

That *Logick* is a part of Philosophy distinct from the rest, (wherein all the Stoicks agree). is proved by two Arguments, the first this: *e* Every thing which useth another, if that which the thing using, useth, be neither part, nor particle, nor part of part of any other, it must be part or particle of the thing using; as *Medicine* useth the art of prescribing diet, which art being neither part nor particle of any other, is consequently a part or particle of *Medicine*; of part, as to the Cure; of particle, as to the Practice.

*d Philop. in
1. Anal.
pr.*

d Philosophy is conversant about *Logick*; *Logick* therefore is either a part or particle of Phi-

losophy; but, a particle it is not, for it is not a part either of the Contemplative or the Active. That which is a particle of any thing, ought to have the same matter and scope with that whereof it is a part. *Logick* hath neither of these common with Active Philosophy, the matter whereof is humane things, and moderation of appetite, the common scope, what in them is to be embraced or shunned; but the matter of *Logick* is propositions; the scope, to demonstrate by a compofure of propositions, that which necessarily falls out upon the Collection. Neither is *Logick* a part of the contemplative, the matter whereof is things Divine; the end, contemplation of them: now, if it be not a part, either of the contemplative or the Active, it is not a particle of Philosophy, but equally separate from both these, and consequently it must be a part of it.

c The second Argument is thus. No Art frameth its own Instruments; if therefore Philosophy make *Logick*, it is not its Instrument, but part thereof.

f Philosophy, is by some compared to a Field which produceth all manner of fruit: *Physick* to the soil and tall trees, *Ethick* to the mature pleasant fruit, *Logick* to the strong fence. Others liken it to an Egg: *Ethick* to the yolk, which some affirm to be the Chicken: *Physick* to the white, which is the nourishment of the Chicken, *Logick* to the outside or shell. *Possidonius*, (because the parts of Philos. are inseparable from one another, but plants are distinct from the fruits, as Walls from Hedges) chuseth rather to compare Philosophy to a living creature, *Physick* to Blood and Flesh, *Logick* to Bones and Nerves, *Ethick* to the Soul. (Thus *Sextus Empiricus*, by whom, perhaps, *Laertius* is to be corrected, who saith, *They likened Ethick to the Flesh, Physick to the Soul*) Lastly, they compare Philosophy to a City well Fortified and Governed according to Reason.

g Some affirm, that none of these parts are distinct from the rest, but all intermingled with one another, for which reason they deliver them confusedly. The greater part place *Logick* first, *Ethick* next, *Physick* last; because the Mind ought first to be fortified for the keeping those things which are committed to it, so as it be not easily expugnable. The *Dialectick* place is a fortification for the Mind. Secondly, to describe the contemplation of Manners, that they may be reformed, which is safely undertaken, when the Logical power is first laid down. Lastly, to induce the contemplation of Nature, for that is more Divine, and requireth a more profound attention. This method *b* *Plutarch* affirms to have been observed by *Chrysippus*, adding that of *Physick*, the last part, is that which treateth of God; for which reason they call the precepts of Religion *teleia*. It seems therefore, that there is some mistake in *Laertius*, who of those who place *Logick* first, *Physick* next, and *Ethick* last, citeth *Zeno* in his Book of *Speech*, and *Chrysippus*, and *Archædemus*, and *Eudromus*. But *Diogenes* the *Ptolemaean* (continueth he) begins with *Ethick*: *Apollodorus* puts *Ethick* in the second place; *Panætius* and *Possidonius* begin with *Physick*, as *Phanias*, companion of *Possidonius* affirms in his first of *Possidonius's* dissertations. *i* Of *Logick*, *Cleanthes* assigneth six parts, *Dialectick*,

*e Ammonius
in Categ.*

*f Sext. Emp.
adv. Log. 1.*

g Laert.

*b De Plac.
Phil.*

Dialectick, Rhetorick, Ethick, Politick, Physick, Theologic: Some affirm, these are not parts of Logick, but of Philosophy it self: So *Zeno of Tarfis*. The Logical part is by some divided into two Sciences, *Rhetorick* and *Dialectick*; some add *the definitive part*, some divide the definitive into that which concerns *invention* of truth (by which the differences of Phantasies are directed) and that which concerns *knowledge* of truth; for things are comprehended by notions.

k Laert.

k Rhetorick is the science of well speaking, by dilating upon the thing comprehended. *Dialectick* is the Science of well speaking, (that is true and consentaneous) or well disputing by Question and Answer. It is defined by *Possidonius*, the Science of True, False, and Neuter.

l Laert.

l Rhetorick is of three kinds, *Deliberative, Judicial, Demonstrative*: The parts of *Rhetorick* are *Invention, Style, Disputation, Pronunciation*: *Rhetorical Speech* is divided into, *Proem, Narration, Confutation, Epilogue*.

m Laert.

m Dialectick is necessary, and a virtue within its species, containing other virtues, ἀπεπρωσία, a Science whereby we are taught when to assent, and when not; ἀνεκδήμις, a firm reason, whereby we resist appearances, and are not led away by them; ἀνελεγχία, a Fortitude of Reason which keeps us from being transported with the adverse opinion: ἀναλαβήν a habit directing phantasies to right reason.

n Laert.

n Dialectick is a Science or certain comprehension, or a habit, not erring by reason in reception of phantasies; but without *Dialectick*, a wise man cannot be infallible in reason; for by this, we discern the true, false, and probable, and distinguish the ambiguous.

CHAP. II.

Of the Instruments and Rules of Judgment.

a Laert.

a IN the first place, they put the discourse concerning phantasies and sense, as a Judiciary, whereby the truth of things is discerned.

b Cic. Acad. I.

b The Senses (according to *Zeno*, who made many alterations in *Dialectick*, and asserted many things of the Senses that were wholly new) are joyned by a certain kind of extrinsecal impulsion, termed phantasia. To these phantasies received by the senses, is added an assention of the mind, which is placed in us voluntary. The phantasia, when seen, is comprehensible, when received and approved, comprehension; and, if so comprehended, as that it cannot be plucked away by reason, science.

c Galen. hist. phil.

c Judgment is a perfection which discerneth a thing.

d Sen. Empir. adv. log.

d That which judgeth is taken two ways: 1. By which we say, some things are, others are not; these are true, those are false. 2. Of Essence only; and this is understood three ways, commonly, properly, and most properly. Commonly, for every measure of comprehension, in which sense, even those things which judge naturally, have this appellation, as sight, hearing, taste. Properly, for every artificial measure of comprehension; thus a cubit, a ballance, a ruler, a pair of compasses, are called things that judge; but sight and hearing, and the other common Instruments of Sense, are not. Most properly, for every measure of comprehension of a thing, uncertain, and

not evident. In which sense, those things which belong to the actions of life, are not said to be things judging, but the logical only, and those which dogmatical Philosophers alledge for the invention of truth.

The Logical is subdivided into that *from which*, that *by which*, and *application* or habitude. *From which*, the man; *by which*, the sense: the third is the application of phantasia or sight. For as in the Staticks, there are three things which judge, the weigher, the ballance, and position of the ballance: The weigher is the judge from which, the ballance the judge by which, the position of the ballance, as it were a habitude. And again, as to discern right or oblique things is required an Artificer, a Ruler, and the application thereof; in like manner in Philosophy are required those three things mentioned to the discernment of true and false; the man from whom the judgment is made, is like the Weigher or Artificer; to the Ballance and Ruler answer Sense and Cogitation, by which the judgment is made: to the habitude of the forenamed instruments, the application of phantasia, by which a man cometh to judge.

c The Judge of Truth, they affirm to be comprehensive Phantasia, that is, proceeding from that which is; so *Chrysippus* in the 12th of his *Physicks*, and *Antipater*, and *Apollodorus*. But *Boethius* holds many Judicatories, the Mind, and Sense, and Appetite, and Science; from whom *Chrysippus* dissenting in his first Book of *Reason*, affirmeth the Judicatories to be Sense and Anticipation. Anticipation is a natural notion of Universals. Others of the more ancient Stoicks (as *Possidonius* saith in his Book of *Judgments*) assert right Reason to be the Judiciary.

c Laert.

CHAP. III.

Of Sense.

a Dialectick is derived from corporeal senses; *a St. Aug. Civ. dei. 8. 7.* for, from thence, the Soul conceiveth notorious (ἐνοιας) of those things which are explained by definition, and from thence is propagated and connexed the whole reason of Learning and Teaching.

b Sense is a Spirit, proceeding from the supream part of the Soul, and permeating to the Organs.

c Whatsoever things are comprehended, are manifestly comprehended by Sense; all conceptions of the Mind depend upon Sense. *c Orig. contra Cels. lib. 7.*

d Comprehension made by the Senses is true and faithful, (according to *Zeno*) for as much as Nature hath given it as a rule for Science, and principle of her self. *d Cic. Acad. quest. 1.*

e Nothing is more clear than this *εὐαγγελία* evidence, there cannot be any Speech more perspicuous: *e Cic. Acad. quest. 5.*

f Of Sensibles and Intelligibles, some are true, but, not directly sensible; but, by relation to those things which are next, as falling under Intelligence. *f Sext. Empir. Pyrrh. hyp. 2. 8.*

CHAP.

C H A P. IV.

Of Phantasie.

IN the first place (saith * *Diocles the Magneſian*) they put the reason concerning phantaſie and ſenſe, as a judgment, whereby the truth of things is diſcerned. It is phantaſie as to its genus, and likewise in as much as the reason of aſſent, comprehension, and intelligence (which is more excellent than the reſt) conſiſts not without phantaſie; for phantaſie goeth firſt, then the mind endued with elocution, declarerth by words what it ſuffers from the phantaſie.

b Phantaſie is ſo called from *φῶς* light; for as light ſheweth it ſelf, and with it ſelf all thoſe things which are contained within it; ſo phantaſie ſheweth it ſelf, and that which maketh it.

c Phantaſie is an impreſſion in the Soul: *Cleantes* adds, an impreſſion by depreſſion and eminence, as that impreſſion which is made in Wax by a Seal.

Chryſippus conceives this to be abſurd: For 1. ſaith he, when the Soul firſt apprehends a triangle and a ſquare, it will follow, that the ſame body, at the ſame time, muſt have in it ſelf ſeveral figures, which is abſurd. Again, whereas many phantaſies are together conſiſtent in us, the Soul muſt have diverſe figures, which is worſe than the former. He therefore conceived, that *Zeno* uſed the word Impreſſion, for Alteration, meaning thus: Phantaſie is an alteration of the Soul, whereby it is no longer abſurd; that the ſame body (many ſeveral phantaſies being at the ſame time conſiſtent in us) ſhould receive ſeveral alterations. For, as the Air receiving at once innumerable different percussions, hath preſently many alterations: ſo the ſupream part of Soul, receiving various phantaſies, doth ſomething which hath proportion and conformity thereto.

Some object, that this expoſition is not right: becauſe, tho' every phantaſie is an expreſſion and alteration in the Soul: yet, every impreſſion or alteration of the Soul, is not phantaſie; as when the finger ſmarts or itches, and the hand is rubb'd, there is then an impreſſion or alteration in the Soul: but it is not phantaſie, becauſe it is not in the ſupream part of the Soul.

They answer, That in ſaying, an impreſſion in the Soul, is implied as in the Soul as fully, as if we ſhould ſay, phantaſie is an impreſſion in the Soul as in the Soul: as when we ſay, the white in the eye, we imply, as in the eye, that is, the white is in a certain part of the eye, which all men have ſo by nature. So when we ſay, Phantaſie is an impreſſion in the Soul, we imply the impreſſion to be made in the ſupream part thereof.

Others more elegantly answer, that the word Soul is taken two ways, either for the whole, or for the principal part; when we ſay, man conſiſts of Soul and Body; or, that death is a ſeparation of the Soul from the Body; we mean properly the ſupream part, wherein properly conſiſts the motions and goods of the Soul. When *Zeno* therefore calleth phantaſie an impreſſion in the Soul, he is not to be underſtood of the whole Soul, but of part thereof; as if he ſhould ſay, phantaſie is an alteration of the ſupream part of the Soul.

To this interpretation, ſome object thus: Ap-

petition, Aſſent, and Comprehension, are alterations in the ſupream part of the Soul; but, theſe differ from phantaſie, that being a certain kind of perſwaſion and affection, whereas this is more operation than appetite, therefore the definition is not good, being competible to many other things.

They answer by recourſe to *συμπασεις* (*implicancies*) that a definition is underſtood to be in all. As he who ſaith, Love is an application of the Soul towards procurement of Friendſhip, implieth amongſt young people; ſo when we ſay, that phantaſie is an alteration in the ſupream part of the Soul, we imply by perſwaſion; for, alteration is not made by operation.

d Of phantaſies there are many kinds, ſome are ſenſible, others not ſenſible. *Sensible* are thoſe which are received through one or more of the ſenſes: *Not sensible* are thoſe which are received through the mind, as of incorporeals, and other things, comprehended by reaſon. The ſenſible formed from things that are, are made with conſeſſion and aſſent. There are alſo apparitions of phantaſies, proceeding from things which are.

Again, ſome are *Rational*, others *Irrational*; *Rational*, thoſe of Reasonable Creatures; *irrational*, thoſe of Unreasonable. The Rational are intelligence, the Irrational have no name.

Again, ſome are *Artificial*, others *In-artificial*; for, an Image is conſidered by an Artiſt one way; by him that is not an Artiſt, another way.

e Again, ſome are *Probable*, others *Improbable*: *Probable* are thoſe which make an eaſie motion in the Soul; as, it is now day, I diſcourſe, and the like. The *Improbable* are of a contrary nature, averting us from aſſent; as, it is day, the Sun is not above the Earth; if it is dark, it is day. *Both Probable and Improbable* are thoſe, which, by relation to other things, are ſometimes ſuch as in doubtful ſpeeches, neither probable are improbable nor, ſuch, as theſe, The Stairs are even, the Stairs are odd.

Of probable and improbable phantaſies, ſome are true, ſome are false, ſome are neither true nor false. *True*, are thoſe, whoſe predication is true, as, It is day, 'tis light: *False*, whoſe predication is false; *Both true and false*, as happened to *Oreſtes* in his madneſs, meeting *Electra*; that he met ſomething, it was true, for it was *Electra*; but, that it was Fury, was false. *Neither true nor false*, are thoſe which are taken from the Genus; for the Genus is not ſuch as the ſpecies in all reſpects: As, of men, ſome are *Grecians*, ſome are Barbarous; but, Man in general is not *Grecian*, for then all men muſt be *Grecians*; neither Barbarous, for the ſame reaſon.

Of true phantaſies, ſome are *comprehensive*, others are *not comprehensive*. *Not-comprehensive* are thoſe which happen through ſickneſs, or perturbation of mind; many being troubled with Frenſie or Melancholy, attract a true Phantaſie which is not comprehensive, even from that which extrinſecally occurs caſually, for which reaſon, they neither aſſent it often, nor aſſent unto it. *Comprehensive* phantaſie is that which is impreſſed and ſigned by that which is, and conformable to that which is, ſo as it cannot be of that which is not.

To comprehensive phantaſie three conditions are requiſite: 1. That it ariſe from that which is; for many phantaſies ariſe from that which is not,

as in mad men. 2. That it be conformable to that which is; for some phantasies are from that which is, but represents the similitude of that which is not: As *Orestes* derived a phantasia from that which was, viz. from *Electra*, but not according to that which was; for he thought her to be one of the Furies. Comprehensive phantasia must be conformable to that which is, and so impressed and signed, as that it may imprint artificially all the properties of the thing fancied, as Gravers touch all the parts of those things which they imitate, and the impression made by a Seal on Wax exactly and perfectly, beareth all its characters. Lastly, That it be without impediment; for sometimes comprehensive phantasia is not creditable, by reason of outward circumstances; as when *Hercules* brought *Alceſtis* taken out of the Earth, to *Admetus*, *Admetus* drew from *Alceſtis* a comprehensive phantasia, but did not credit it; for, he considered, that she was dead, and therefore could not rise again, but, that sometimes Spirits appear in the shape of the deceased.

f *Plut. plac. Phil.* 4. 12.

f *Phantasia*, *Phantaſton*, *Phantaſticon*, and *Phantaſm*, according to *Chrysippus*, differ thus: *Phantasia* is a Passion made in the Soul, which sheweth it self, and that which made it; as, when with our eyes we see white, it is a passion engendered by sight in the Soul, and we may call this a passion, because the object thereof is a white thing which moveth us: The like of smelling and touching.

Phantaſton is that which maketh phantasia; as the white and the cold, and whatsoever is able to move the Soul, that is *Phantaſton*.

Phantaſticon is a frustraneous attraction, a passion in the Soul proceeding from nothing; as in those who fight with shadows, or extend their hands in vain: For, to phantasia is objected *Phantaſton*, but *Phantaſticon* hath no object.

Phantaſm is that, to which we are attracted by that frustraneous attraction, which happens in Melancholy, or Mad persons; as *Orestes* in the Tragedy, when he saith,

Bring hither, Mother, I implore,
The Snaky Bloody Maids no more,
Whose very looks wound me all o're.

This he saith in his madness, for he saw nothing: wherefore *Electra* answers him,

Ab! quiet in thy Bed (unhappy) lie,
Thou seeſt not what thou thinkeſt before thy eye.

CHAP. V.

Of True and Truth.

a *St. Aug. contra Acad.* lib. 2.

b *Sext. Emp. Pyrrh. hyp.* 2. 8.

a **T**RUE (according to *Zeno*) is that which is impressed in the Mind from that whence it is, in such manner, as it cannot be from that which is not: Or, as others; b *True* is that which is, and is opposed to something. *False* is that which is not; yet, is opposed to something also.

Truth and *True* differ three ways, by *Essence*, by *Constitution*, by *Power*. By *Essence*, for *Truth* is a Body; but, *True* is incorporeal, for it is a dicible λεπτόν, and therefore incorporeal. On the contrary, *Truth* is a Body, as being the enunciative Science of all true things. All Science is in some measure the supream part of the Soul, which supream part is a Body: therefore *Truth* in general is corporeal.

By *Constitution*; *True* is conceived to be something uniform and simple by nature; as, *It is day, I discourse*. *Truth*, as being a Science, consisteth of many things, by a kind of conservation. Wherefore as a People is one thing, a Citizen another; a People is a Multitude consisting of many Citizens; but, a Citizen is no more than one. In the same manner differeth *Truth* from *True*. *Truth* resembleth a People, *True*, a Citizen; for, *Truth* consisteth of many things collected, *True* is simple.

By *Power*; for *True* doth not absolutely adhere to *Truth*: A Fool, a Child, a Mad-man, may speak something *True*, but, cannot have the Science of that which is *True*. *Truth* considers things with Science, inasmuch that he who hath it, is wise; for, he hath the Science of true things, and is never deceived, nor lieth, altho' he speak false, because it proceedeth not from an ill, but good affection.

CHAP. VI.

Of Comprehension.

a **C**omprehension (κατάληψις) was first used in this sense by *Zeno*, by a Metaphor taken from things apprehended by the hand; b which allusion he expresseth by action. For, shewing his hand with the fingers stretched forth, he said, such was phantasia; then bending them a little, said, such was Assent; then compressing them and clutching his fist, such was Comprehension.

c Comprehension is a firm and true knowledge, non-comprehension the contrary; for some things we only think that we see, hear, or feel, as in Dreams and Frenzies; other things we not only think, but truly do see, or hear, or feel. These latter, all but the Academicks and Scepticks) conceive to fall under firm knowledge; the other, which we imagine in Dreams or Frenzie, are false.

c *Galen. hist. phil.*

d Whatsoever is understood, is comprehended by the Mind, one of these two ways, either by evident Incurſion (which *Laertius* calls by Sense) or by Transition from evidence (*Laertius*, Collection by Demonstration) of which latter there are three kinds, by Assimilation, by Composition, by Analogy.

d *Sext. Emp. pir. adv. Geom. cap.* 19.

By *Incurrent Evidence* is understood White and Black, Sweet and Sour.

By *Transition* from evidents; By *Assimilation*, is understood *Socrates* by his Picture: By *Composition*, as of a Horse and Man is made a Centaur; for putting together the Limbs proper to both Species, we comprehend by phantasia that which was neither Horse nor Man, but a Centaur compounded of both.

By *Analogy*, things are understood two ways, either by *Augmentation*; or, when from common ordinary men, we by augmentation phancy a Cyclops, who not like

Men that with *Ceres's* gifts are fed,
But, some tall Hill erects his head.

Or by *Diminution*, as a Pigmy. c Likewise the Center of the Earth is understood by Analogy from lesser Globes.

To these kinds add, f Comprehension by Transference, as eyes in the breast; by Contrariety, as Death; by Transference, as dicibles, and place; by Privation, as a Man without hands; just and good are understood Naturally.

CHAP.

C H A P. IV.

Of Phantasia.

a Lucr.

IN the first place (saith * Diocles the *Mag-nesian*) they put the reason concerning phantasia and sense, as a judgment, whereby the truth of things is discerned. It is phantasia as to its genus, and likewise in as much as the reason of assent, comprehension, and intelligence (which is more excellent than the rest) consists not without phantasia; for phantasia goeth first, then the mind endued with elocution, declareth by words what it suffers from the phantasia.

b Plut. plac. Phil. 4. 12.

b Phantasia is so called from φῶς light; for as light sheweth it self, and with it self all those things which are contained within it; so phantasia sheweth it self, and that which maketh it.

c Sext. Emp. Pyrrh. hyp. 1. 2.

c Phantasia is an impression in the Soul: *Cleantes* adds, an impression by depression and eminence, as that impression which is made in Wax by a Seal.

Chrysippus conceives this to be absurd: For 1. saith he, when the Soul first apprehends a triangle and a square, it will follow, that the same body, at the same time, must have in it self several figures, which is absurd. Again, whereas many phantasies are together consistent in us, the Soul must have diverse figures, which is worse than the former. He therefore conceived, that *Zeno* used the word Impression, for Alteration, meaning thus: Phantasia is an alteration of the Soul, whereby it is no longer absurd; that the same body (many several phantasies being at the same time consistent in us) should receive several alterations. For, as the Air receiving at once innumerable different percussions, hath presently many alterations: so the supream part of Soul, receiving various phantasies, doth something which hath proportion and conformity thereto.

Some object, that this exposition is not right: because, tho' every phantasia is an expression and alteration in the Soul: yet, every impression or alteration of the Soul, is not phantasia; as when the finger smarts or itches, and the hand is rubb'd, there is then an impression or alteration in the Soul: but it is not phantasia, because it is not in the supream part of the Soul.

They answer, That in saying, an impression in the Soul, is implied as in the Soul as fully, as if we should say, phantasia is an impression in the Soul as in the Soul: as when we say, the white in the eye, we imply, as in the eye, that is, the white is in a certain part of the eye, which all men have so by nature. So when we say, Phantasia is an impression in the Soul, we imply the impression to be made in the supream part thereof.

Others more elegantly answer, that the word Soul is taken two ways, either for the whole, or for the principal part; when we say, man consists of Soul and Body; or, that death is a separation of the Soul from the Body; we mean properly the supream part, wherein properly consists the motions and goods of the Soul. When *Zeno* therefore calleth phantasia an impression in the Soul, he is not to be understood of the whole Soul, but of part thereof; as if he should say, phantasia is an alteration of the supream part of the Soul.

To this interpretation, some object thus: Ap-

petition, Attention, and Comprehension, are alterations in the supream part of the Soul; but, these differ from phantasia, that being a certain kind of persuasion and affection, whereas this is more operation than appetition, therefore the definition is not good, being competent to many other things.

They answer by recourse to *συνεμψασεις* (*impli-ancies*) that a definition is understood to be in all. As he who saith, Love is an application of the Soul towards procurement of Friendship, implieth amongst young people; so when we say, that phantasia is an alteration in the supream part of the Soul, we imply by persuasion; for, alteration is not made by operation.

d Of phantasies there are many kinds, some are *sensible*, others *not sensible*. *Sensible* are those which are received through one or more of the senses: *Not sensible* are those which are received through the mind, as of incorporeals, and other things, comprehended by reason. The sensible formed from things that are, are made with concession and assent. There are also apparitions of phantasies, proceeding from things which are.

Again, some are *Rational*, others *Irrational*; *Rational*, those of Reasonable Creatures; *irrational*, those of Unreasonable. The Rational are intelligence, the Irrational have no name.

Again, some are *Artificial*, others *In-artificial*; for, an Image is considered by an Artist one way; by him that is not an Artist, another way.

e Again, some are *Probable*, others *Improbable*: e Sext. E. The *Probable* are those which make an easy mo- pir. lib. 2. tion in the Soul; as, it is now day, I discourse, and the like. The *Improbable* are of a contrary nature, averting us from assent; as, it is day, the Sun is not above the Earth; if it is dark, it is day. Both *Probable* and *Improbable* are those, which, by relation to other things, are sometimes such as in doubtful speeches, neither probable are improbable nor, such, as these, The Stairs are even, the Stairs are odd.

Of probable and improbable phantasies, some are *true*, some are *false*, some are neither true nor false. *True*, are those, whose predication is true, as, It is day, 'tis light: *False*, whose predication is false; Both *true* and *false*, as happened to *Orestes* in his madness, meeting *Electra*; that he met something, it was true, for it was *Electra*; but, that it was *Fury*, was false. Neither *true* nor *false*, are those which are taken from the Genus; for the Genus is not such as the species in all respects: As, of men, some are *Grecians*, some are *Barbarous*; but, Man in general is not *Grecian*, for then all men must be *Grecians*; neither *Barbarous*, for the same reason.

Of true phantasies, some are *comprehensive*, others are *not comprehensive*. *Not-comprehensive* are those which happen through sickness, or perturbation of mind; many being troubled with Frensie or Melancholy, attract a true Phantasia which is not comprehensive, even from that which extrinsically occurs casually, for which reason, they neither assent it often, nor assent unto it. *Comprehensive* phantasia is that which is impressed and signed by that which is; and conformable to that which is, so as it cannot be of that which is not.

To comprehensive phantasia three conditions are requisite: 1. That it arise from that which is; for many phantasies arise from that which is not,

as in mad men. 2. That it be conformable to that which is; for some phantasies are from that which is, but represents the similitude of that which is not: As *Orestes* derived a phantasia from that which was, viz. from *Electra*, but not according to that which was; for he thought her to be one of the Furies. Comprehensive phantasia must be conformable to that which is, and so impressed and signed, as that it may imprint artificially all the properties of the thing fancied, as Gravers touch all the parts of those things which they imitate, and the impression made by a Seal on Wax exactly and perfectly beareth all its characters. Lastly, That it be without impediment; for sometimes comprehensive phantasia is not creditable, by reason of outward circumstances; as when *Hercules* brought *Alcestis* taken out of the Earth, to *Admetus*, *Admetus* drew from *Alcestis* a comprehensive phantasia, but did not credit it; for, he considered, that she was dead, and therefore could not rise again, but, that sometimes Spirits appear in the shape of the deceased.

f Plut. plac.
Phil. 4. 12.

f *Phantasia*, *Phantaston*, *Phantasticon*, and *Phantasm*, according to *Chrysippus*, differ thus: *Phantasia* is a Passion made in the Soul, which sheweth it self, and that which made it; as, when with our eyes we see white, it is a passion engendered by sight in the Soul, and we may call this a passion, because the object thereof is a white thing which moveth us: The like of smelling and touching.

Phantaston is that which maketh phantasia; as the white and the cold, and whatsoever is able to move the Soul, that is *Phantaston*.

Phantasticon is a frustraneous attraction, a passion in the Soul proceeding from nothing; as in those who fight with shadows, or extend their hands in vain: For, to phantasia is objected *Phantaston*, but *Phantasticon* hath no object.

Phantasm is that, to which we are attracted by that frustraneous attraction, which happens in Melancholy, or Mad persons; as *Orestes* in the Tragedy, when he saith,

*Bring hither, Mother, I implore,
The Snaky Bloody Maids no more,
Whose very looks wound me all o're.*

This he saith in his madness, for he saw nothing: wherefore *Electra* answers him,

*Ab! quiet in thy Bed (unhappy) lie,
Thou seest not what thou thinkest before thy eye.*

CHAP. V.

Of True and Truth.

a St. Aug.
contra Acad.
lib. 2.
b Sext. Emp.
Pyrrh. hyp. 2. 8.

a **T**RUE (according to *Zeno*) is that which is impressed in the Mind from that whence it is, in such manner, as it cannot be from that which is not: Or, as others; b *True* is that which is, and is opposed to something. *False* is that which is not; yet, is opposed to something also.

Truth and *True* differ three ways, by *Essence*, by *Constitution*, by *Power*. By *Essence*, for *Truth* is a Body; but, *True* is incorporeal, for it is a dicible λεπτόν, and therefore incorporeal. On the contrary, *Truth* is a Body, as being the enunciative Science of all true things. All Science is in some measure the supreme part of the Soul, which supreme part is a Body: therefore *Truth* in general is corporeal.

By *Constitution*; *True* is conceived to be something uniform and simple by nature; as, *It is day*, *I discourse*. *Truth*, as being a Science, consisteth of many things, by a kind of conservation. Wherefore as a People is one thing, a Citizen another; a People is a Multitude consisting of many Citizens; but, a Citizen is no more than one. In the same manner differeth *Truth* from *True*. *Truth* resembleth a People, *True*, a Citizen; for, *Truth* consisteth of many things collected, *True* is simple.

By *Power*; for *True* doth not absolutely adhere to *Truth*: A Fool, a Child, a Mad-man, may speak something *True*, but, cannot have the Science of that which is *True*. *Truth* considers things with Science, inasmuch that he who hath it, is wise; for, he hath the Science of true things, and is never deceived, nor lieth, altho' he speak false, because it proceedeth not from an ill, but good affection.

CHAP. VI.

Of Comprehension.

a **C**omprehension (κατάληψις) was first used in a Cic. Acad. this sense by *Zeno*, by a Metaphor taken from things apprehended by the hand; b which allusion he expresseth by action. For, shewing his hand with the fingers stretched forth, he said, such was phantasia; then bending them a little, said, such was Assent; then compressing them and clutching his fist, such was Comprehension.

c Comprehension is a firm and true knowledge, non-comprehension the contrary; for some things we only think that we see, hear, or feel, as in Dreams and Frenzies; other things we not only think, but truly do see, or hear, or feel. These latter, all but the Academicks and Scepticks) conceive to fall under firm knowledge; the other, which we imagine in Dreams or Frenzy, are false.

d Whatsoever is understood, is comprehended by the Mind, one of these two ways, either by evident Incurfion (which *Laertius* calls by Sense) or by Transition from evidence (*Laertius*, Collection by Demonstration) of which latter there are three kinds, by Assimilation, by Composition, by Analogy.

By Incurrent Evidence is understood White and Black, Sweet and Sour.

By Transition from evidents; By Assimilation, is understood *Socrates* by his Picture: By Composition, as of a Horse and Man is made a Centaur; for putting together the Limbs proper to both Species, we comprehend by phantasia that which was neither Horse nor Man, but a Centaur compounded of both.

By Analogy, things are understood two ways; either by Augmentation; or, when from common ordinary men, we by augmentation phancy a Cyclops, who not like

*Men that with Ceres's gifts are fed,
But, some tall Hill erefts his head.*

Or by Diminution, as a Pigmy. c Likewise the Center of the Earth is understood by Analogy from lesser Globes.

To these kinds add, f Comprehension by Transference, as eyes in the breast; by Contariety, as Death; by Transference, as dicibles, and place; by Privation, as a Man without hands; just and good are understood Naturally.

CHAP.

CHAP. VII.

Of Assent.

a cic. acad.
quest. 4.

THese things being enough known, which we have already explained, let us now speak a little of *Assent*, and *Approbation*, term'd *συγκατάθεσις*, not that, that is not a large place, but the grounds thereof have been already laid. For when we explained the power that was in the Senses, we likewise declared, that many things were comprehended and perceived by the Senses, which cannot be done without *Assent*. Moreover, seeing that betwixt an inanimate and an animate being, the greatest difference is, that the inanimate doth nothing, the animate doth something; we must either take away sense from it, or allow it assent, which is within our power. When we will not have a thing either to perceive or assent, we in a manner take away the Soul from it; for as it is necessary, that the scale of Ballance which is laden, should tend downwards; so is it that the Soul should yield to things that are perspicuous,

b cic. lib. de
fato.

Altho' Assent cannot be made unless it be moved by phantasmie, yet when that phantasmie hath an immediate cause, it hath not (according to *Chrysippus*) this principal reason; not that it can be made without any extrinsecal excitation (for it is necessary that Assent be moved by phantasmie) but it returns to its Cylinder and Cone, which move not by impulsion; then of their own nature the Cylinder seems to rowl, and the Cone to turn round. As therefore he who thrust the Cylinder, gave it the beginning of motion, but did not give it volubility; so the objected phantasmie imprinteth, and as it were sealeth in the Soul its Species, yet the assent is in our power, and that (as he said in a Cylinder) extrinsecally impelled, the motion is continued by its own power and nature.

c cic. acad.
quest. 4.

Phantasies, wherewith the Mind of Man is presently affected are not voluntary or in our own power, but infer themselves by a kind of violence, approbations (*συγκατάθεσις*) by which these phantasies are known and judged, are voluntary, and made according to our arbitrement. So as upon any dreadful noise from Heaven, or by the fall of any thing, or sudden news of some danger, or the like; it is necessary that the mind of a wise Man be a little moved, and contracted, and appalled, not through opinion perceived of any ill, but certain rapid and inconsiderate motions, which prævert the office of the Mind and Reason. But presently the same Wise Man approveth not *τὰς τοιαύτας φαντασίας*, those dreadful phantasies, that is, *ἡ συγκατάθεσις* but rejects and refuses them; nor is there any thing in these, which seemeth to him dreadful. Thus differ the Souls of wise and unwise men: The unwise, when phantasies appear cruel and difficult at the first impulsion of the mind, think them to be truly such as they appear, and receiving them as if they were justly to be feared, approve them by their assent, *ἡ προσεπιδοξάζει*, (this word the Stoicks use upon this occasion:) But a wise man suddenly changing Colour and Countenance, *ἡ συγκατάθεσις* assents not, but retaineth the state and vigour of his judgment, which he al-

ways had of these phantasies, as nothing dreadful, but terrifying only with a false shew, and vain fear.

CHAP. VIII.

Of Notions.

From Sense, the Rule of Science, Notions, *a cic. acad. l.* are imprinted in the Soul, by which, not only principles, but larger ways to Reason are found out.

A man when he is born, hath the supream *b Plut. de plac. phil. 4. 12.* part of his Soul, like unto clean paper, upon which every notion is inscribed. The first manner of inscription is by the Senses; as for example: They who perceive a thing that is white, after it is taken away, retain the memory thereof; but, when they have conceived many remembrances of one Species, then they say, they have experience, for experience is a multitude of similitudes.

Of *Notions*, some are *Natural*, which are in such manner as we have said, and without Art: Others *gained* by Learning and Industry: These are properly called *Notions*, the other *Anticipations*. The reason for which we are called rational, is said to be perfected by anticipations in the first seven years.

Intelligence is the phantasm of the Intellect of a Rational Creature; for phantasm, when it lighteth upon a rational Soul, is then called *ἐννοία*, Intelligence, a word taken from the Intellect. For to other Creatures there happen not phantasms; to the Gods only, and to us these are incident. Those which belong to us, are phantasms, as to their genus; notions as to their species; as denaries and staters, when paid for transportation, are called *Naula*.

Common Notions are planted in all men, *c arrian. l. 22.* (in which they all agree together) one is not repugnant to another; for, who holds not, that good is profitable, and ought to be chosen with utmost endeavours? Who holds not, that what is just, is fair and well becoming? Whence then proceed contentions and differences? To wit, from the application of first notions to singular things.

These Notions, and whatsoever is of this *d Simp. in E. pic.* kind, which right reason conformeth in us, being long examined, are true, and suitable to the natures of things.

CHAP. IX.

Of Science and Opinion.

That which is comprehended by Sense, *a Cic. Acad. quest. 1.* *Ze-* no called *Sense*; and if so comprehend- ed, as not to be plucked away by reason, *Science*, otherwise *Ignorance*; from which proceedeth *Opinion*, which is weak and common, to the false and unknown.

These three are joyned together, *b Sext. Emp. adv. Logic.* *Science*, *Opinion*, and *Comprehension*, which borders upon the other two. *Science* is a firm, stable, immutable comprehension with Reason. *Opinion*, an infirm, weak assent: *Comprehension*, which cometh between both, is an assent to comprehensive phantasmie. Comprehensive phant-

taſie is true, in ſuch a manner, that it cannot be falſe. Therefore Science is in wiſe Men only, Opinion in Fools; Comprehension is common to both, as being that by which Truth is judged; *c* and is for this Reaſon reckoned by Zeno, neither amongſt the right (*καλοσθώματα*) nor amongſt the bad (*καλασθήματα*) but betwixt Science and Ignorance, affirming, that this only is to be credited.

C H A P. X.

Of Voice, Speech, and Words.

Theſe three are joined to one another; that which is ſignified, that which ſignifieth, and the contingent. *That which ſignifieth*, is the Voice, as Dion; *That which is ſignified*, is the thing declared by the Voice; it is that which we apprehend, and is preſent in our Cogitation. *The contingent* is the outward Subject, as Dion himſelf.

b Dialectick being converſant about that which ſignifieth, and that which is ſignified, *c* is divided into two places: One, *Of Significats*, the other *of Voice*. The place of Significats is divided into *Phantaſies*, and *ſubſiſtents on Phantaſie*, *Dicibles*, *Axioms*, &c.

In the other place, concerning *Voice*, is declared literal *Voice*, the *parts of Speech*, the nature of *Solaciſms* and *Barbariſms*, *Poems*, *Ambiguities*, *Song*, *Muſick*, and (according to ſome) *Definitions* and *Diviſions*.

d The Phantaſies of the Mind precede Speech, (*Of theſe therefore we have already treated*) then the Mind endued with the Faculty of ſpeaking, declareth by Speech what it receiveth from the Phantaſie: For this Reaſon, *e* the conſideration of Dialectick, by the joint conſent of all, ſeems as if it ought to be firſt taken from the place of Voice.

f Voice is Air percuffed, the proper ſenſible object of Hearing, (as *Diogenes the Babylonian*, in his *Art of Voice*.) The Voice of a living ſenſitive Creature, is Air percuffed with Appetite; the Voice of Man is Articulate, proceeding from the Mind: At his fourteenth year it is perfected.

Speech (as *g* *Diogenes* ſaith) is a literal Voice; as, it is Day. *Word* is a ſignificative Voice proceeding from the Mind. *Language* is a Speech according to the variety of Nations, whereof each uſeth its peculiar Dialect; as the *Attick* ſaith, *θαλαττα*, the *Ionick* *ἰμέην*. Voice and Speech differ, in that Voice is ſound, but Speech articulate only. Speech and Word differ; for Word is always ſignificative; but, Speech ſometimes ſignifieth nothing, as *Blitiri*, which is no word. To ſpeak and to pronounce differ; Voices are pronounced, but things only are ſpoken; *h* for, to ſpeak, is to pronounce a ſignificant Voice of a thing that is ſaid.

i Hence *Chryſippus* ſaith, That he who be- ginneth to ſpeak and pronounce Words, before he can put them in their right place, doth not ſpeak, but think that he ſpeaks; as the Image of a Man is not a Man: So in Crows, Daws and Children, when they firſt begin to ſpeak, the words which they ſay are not words. He only ſpeaketh who knoweth to put a word in the right place.

They (particularly *h* *Zeno*) took much pains in the Invention and Explication of words, wherein they diſtinguiſhed very ſubtilly. Hence *Cicero* calleth the *Stoicks* Architects of Words. *Ammonius*, the *Grammarians*, followers of the *Stoicks*.

n The *Elements* of Speech are the 24 Letters. *Letter* is taken three ways: Firſt, for the Character or Figure which is formed. Secondly, for the Element or Power. Thirdly, for the Name, as *A*. Of the Elements, ſeven are *Vowels* *α ε ι ο υ ι ω*, fix *Mutes*, *β γ δ ζ η π τ*.

o Of Speech there are five parts, as *Diogenes* ſaith in his Book of *Voice*, and *Chryſippus* p. At firſt they reckoned but four, ſeparating the *Articles* from the *Conjunctions*, afterwards the latter *Stoicks* dividing the *Appellatives* from the *Nouns*, made them five, *Noun*, *Appellation*, *Verb*, *Conjunction*, *Article*. (*Antipater* in his Book of *Speech* added the *medium*.) *Appellation* (as *Diogenes* ſaith) is a part of Speech ſignifying a common quality; as, Man, Horſe. *Noun*, a part of Speech denoting a proper quality; as *Diogenes*, *Socrates*. *Verb*, (as *Diogenes* ſaith) a part of Speech ſignifying a thing, which is predicated of one or more things, incompoſed; or, as ſome ſay, an Element of Speech without caſes, whereby the parts of Speech are connected; as I write, I ſpeak. *Conjunction* is a part of Speech without Caſes, conjoining the parts of Speech. *Article* is an Element of Speech, having caſes; diſtinguiſhing the kinds and numbers of Nouns; as, *ὁ, ἡ, τὸ, οἱ, αἱ, τὰ*.

q Every word, by reaſon of that which it ſignifieth, called four neceſſary things into queſtion, its *Origin*, *Power*, *Declination*, *Ordination*.

As concerning the firſt, which the *Greeks* call *Ετυμολογία*, they conceiv'd that Names are given by Nature: the firſt pronounced Voices, imitating the things themſelves, from which the Names were afterwards impoſed, by which reaſon they derive *Etymologies*, conceiving that there is not any word, for which there cannot be given a certain Reaſon. They therefore ſtudiouſly enquired whence words are deduced; much pains was taken, firſt by *Zeno*, then by *Cleanthes*, afterward, by *Chryſippus*, to give a reaſon of commentitious Fables, and to explain the cauſes of Words, why they are called ſo and ſo.

This beginning is to be ſought, until we arrive ſo far, as that the thing agree in ſome Similitude with the ſound of the word, as when we ſay *tinkling* of Braſs, the *neighing* of Horſes, the *bleating* of Sheep, the *gingling* of Chains: Theſe words by their Sound, expreſs the things which are ſignified by them.

But for as much as there are things which ſound not, in theſe the Similitude of Touching hath the ſame Power: As they touch the Senſe ſmoothly or harſhly, the ſmoothneſs or harſhneſs of Letters in like manner touches the hearing, and thereby occaſioneth their Names. As when we ſay *ſmooth*, it ſounds ſmoothly: So who will not judge *harſhneſs* to be harſh by the very word? it is ſmooth to the Ear, when we ſay *Pleasure*; harſh, when we ſay *Crux*, a *Croſs*; the things themſelves make good the ſound of the Words. *Honey*, as ſweetly as the thing it ſelf affects our Taſte, ſo ſweetly doth the name touch our Hear-

ing: *Sour*, as harsh in both. *Wool* and *Bryers*, as the Words are to the hearing, the Things are to the touch. These are conceived to be the Infancy, as it were of Words, when the Sense of the thing concords with the Sense of the sound.

From hence proceeded the licence of Naming, according to the Similitude of the things among themselves; as when, for example, *Crux*, a Cross, is therefore so called, because the harshness of the word concords with the harshness of the Pain which the Cross affecteth. But, *Crura*, Thighs, are so called, not from harshness of pain, but, because in length and hardness, they are, in respect of other Limbs, like unto the Wood of a Cross. Hence it comes to abuse, that the Name is usurped, not of a like thing, but as it were near; for what likeness is there between the Signification of *little* and *minute*, when as that may be *little*, which not only is nothing *minute*, but is somewhat grown; yet, by reason of a certain nearness, we say *minute* for *little*. But, this abuse of the Word is in the Power of the Speaker; for he may use the word *little*, and not *minute*. This Example belongs to that which we will shew, when we call that a *Fish-pond* which hath no Fish in it, nor any thing like a Fish: It is denominated from Fishes, by reason of the Water wherein Fishes live. So the word is used by Translation, not from Similitude, but a certain kind of Vicinity. And if any one should say, That Men in Swimming resemble Fishes, and that from thence a Fish-pond is so named, it were foolish to refuse it, since that neither is repugnant to the nature of the thing, and both are occult. But, this is to the purpose, which we cannot dilucidate by one Example, how much the Origine of the Word, which is taken from Vicinity, differs from that which is derived from Similitude.

From hence there is a Progression to the contrary. *Lucus* is thought to be so named, *Quod minime luceat*; and *bellum*, *quod res bella non sit*; and *factus*, *quod res facta non sit*. But if we derive *porcus*, as some do a *factitate*, it returns to that Vicinity, when that which is made, is named that by which it is made.

For this Vicinity is very large, and divided into many parts; either by efficiency, as this word *porcus* à *factitate*; from which likewise *factus*; or by effect, as *puteus*, so named, because the effect thereof is *potatio*; or by that it containeth, as *urbs* *ab orbe*, because in a place which they liked, they first made a track about it with a Plough, as *Virgil* saith of *Æneas*.

—*Urbem designat Aratro.*

Or by that which is contained, as if *horreum* were derived from *hordeum*; or by abuse, as *hordeum* for Wheat; or the whole from a part, as *mucro*, which is the point, for the whole Sword; or a part from the whole, as *capillus quasi capitis pilus*. What need we go any further? Whatsoever else can be reckoned, we may see the Origin of the word contained, either in the Similitude betwixt Things and Sounds, or in the Similitude betwixt Things themselves, or in Vicinity or Contrariety, which Origin we cannot pursue beyond Similitude.

But this we cannot do always; for there are

innumerable Words, the Reason of which lie hid. To the Infancy, or rather Stock and Seed of such Words, beyond which no Origin is to be sought, neither if a Man do enquire can he find any, they proceed in this manner. The Syllables, in which *v* hath the place of Consonant, as in these Words, *venter*, *vaser*, *velum*, *vinum*, *vomis* *vulnus*, have a thick, and as it were, a strong sound, which the very custom of speaking confirmeth, which from some Words we take them away, lest they should burthen the Ear; for which reason we say *amasti*, rather than *amavisti*; and *abiit*, not *abivit*, and innumerable of the same kind. Therefore when we say *Vis*, the sound of the word having, as we said, a kind of force, suiteth. Now from this Vicinity, by that which they affect, that is, because they are violent, *vincula* seem to be named, and *vimen* *quod aliquid vinciat*. Thence *vites*, because they clasp about those things by which they grow. Hence also by Similitude, *Terence* calls a crooked old Man *vietum*. Hence the Earth, worn into winding Paths by the Feet of Passengers, is call'd *via*; but if *via* be so named, *quasi vi pedum trita*, the Origin returns to the Vicinity: But let us suppose it derived from the Similitude it hath with *vitis* or *vimen*, that is, from its winding; one asketh me why it is call'd *via*? I answer, from the winding and crookedness thereof, which the Ancients called *vietum*; thence the Rounds of a Wheel *victos*. He demands how *vietum* comes to signify winding? I answer, from the Similitude of *Vitis* a Vine: He requires whence *vitis* is so named? I say, because it doth *vincire* those things which it comprehends. He questions whence *vincire* is derived? We say, *a vi*. He asks whence *vis*? We give this reason, because the word in its robust and forcible sound agreeth to the thing which it signifieth. He hath nothing more to demand.

^t In like manner, in this word *Ego*: as *Chrysippus* observes, in pronouncing the first Syllable, we depress the under-lip, as if it were to point to our selves; then by motion of the Beard we point to our own Breasts; of which *u Nigidius* hath given more Instances, in his Grammatical Commentaries. ^t *Galen. de decret. Hipp. & Plat. lib. 2.*

The second Question concerning Words, is of their Power, *περὶ σημαίνοντων*, of *Significants*; whence ^x *Chrysippus* divided *Dialectick* into two parts, *περὶ σημαίνοντων καὶ σημαινομένων*, of *Significants*, and *Significats*. Here they enquire how many ways every thing may be said, and how many ways a thing said may signify?

Here is examined the Ambiguity of Words. ^y *Ambiguity* (or *Amphiboly*) is a word signifying two or more things, naturally and properly, according to the Language of the Nation, in such manner, that many Senses may be collected from the same Words, as *αυλησις πέντων*, which one way signifies, *the Pot fell* thrice; another way, *the She-Minstrel fell*. ^y *Laert.*

^z Every word (according to *Chrysippus*) is by nature ambiguous, for the same may be taken two or more ways: ^y Neither is that any thing to the purpose which *Hortensius* Calumniates in *Cicero*. Thus, they affirm that they hear Ambiguities acutely, explain them clearly. The same persons hold, that every Word is Ambiguous; how then can they explain the Ambiguous by the ^z *Agel. 9. 11.* ^y *D. Aug. de Dialect.*

the Ambiguous, that were to bring a Candle not lighted into the Dark? This is ingeniously and subtilly said, but like that of *Scevola* to *Antonius*, You seem to the wise to speak acutely, to Fools truly: For what else doth *Hertensius* in that place, but by his Ingenuity and Facetiousness, as an intoxicating Cup, bring Darknes upon the unlearned? For, when they say, Every Word is Ambiguous, it is understood of single Words. Ambiguities are explained by Disputation; no Man disputeth by single words, none therefore explaineth Ambiguous words by Ambiguous words. And yet seeing that every word is Ambiguous, no Man can explain the Ambiguity of words, except by words, but those conjoined and not Ambiguous. As when we say, Every Soldier hath two Feet, it doth not follow, that a whole Regiment of Soldiers that have two Feet, should have in all but two Feet. So when I say, every word is Ambiguous; I do not say, a Sentence, nor a Disputation, although they are woven of Words. Every Ambiguous word therefore may be explained by an inambiguious Disputation.

The third Question is concerning *Declination*, *Agel. 2. 25. ἀνομαλία* and *ἀναλογία*. Some follow *Analogy*, others *Anomaly*. *Analogy* is a like Declination of like, in Latin *Proportio*. *Anomaly* is an inequality, following the customs of Declinations. *a* *Chrysippus* wrote six Books *περὶ τῆς ἀνομαλίας*, shewing, that like things are noted with unlike words, and unlike things with like words.

The last Question is concerning *Ordination*, *συνταξις*. *b* Upon this Subject *Chrysippus* wrote two Books (*Laertius* reckons more) whose scope is not Rhetorical, but Dialectick, as will easily appear to the Reader: *Of the Syntax of Axioms: of true and false Axioms: Of possible and impossible: Of contingent, and transient, and ambiguous*, and the like, which confer nothing to single speech or pleasure, or grace to elocution.

c There are five excellencies of Speech, *Propriety*, *Perspicuity*, *Succinctness*, *Decorum*, *Elegance*. *Propriety* is a proper Phrase, according to Art, not after the common Expression.

Perspicuity is, when that which is intended is deliver'd clearly.

Succinctness is, when that only is comprised, which is necessary to the thing.

Decorum is a conformity to the thing.

Elegance is an avoiding of vulgar Phrase.

d Amongst the faults of Speech is *Barbarism*, a Phrase not in use with the best Persons; and *Solacism*, a Speech incoherently framed.

CHAP. XI.

Of Definition and Division.

a **D**efinition (according to *Antipater* in his book of *Definitions*) is Speech by *Analysis* pronounced adequately; or (as *Chrysippus* in his Book of *Definitions*) an Answer to this Question, What a Thing is?

b Those Definitions are vicious which include any of those things which are not in the things defined, or not in all, or not in some; so as if we should say, *A Man is a Rational Creature*, or *a mortal Grammatical Creature*; seeing that no Man is Immortal, and some Men are

not Grammarians, the Definition is faulty.

c We must therefore, when we take those things which are common to the things we would define, and others, prosecute them so far until it become proper, so as not to be transferrable to any other thing; as this, *An inheritance is riches, add which by the Death of some Person falleth to another*, it is not yet a Definition, for Riches may be held many other ways, as well as by Inheritance; add one word, *by right of Law*; now the thing will seem disjoyned from community: So that the definition is thus explained. *Inheritance is Riches, which by the death of one person falleth to another by right of Law*: It is not yet enough, therefore add, *neither bequeathed by Will, nor detained by Possession*, and it is perfect.

d Of Definition there are two kinds: One of things which are: the other of things which are understood. Those things which are, we call such as may be seen or touched, as a Field, House, a Wall, and the like. On the other side, we say those things are not, which cannot be touched or shewn, as Possession, Guardianship, Nation, Kindred, which have not any body, yet there is some Conformity in the understanding, which we call notional, whereby in Argumentation they may be explained by definition. This latter kind is rather called Description, a Speech, which by the exterior figure of the things bringeth us to the things themselves, or a Definition simply expressing the Power of a Definition.

e Again, of Definitions, some are of partitions, others of Divisions. Of Partitions, when the thing proposed is torn (as it were) into pieces, as if we should say, the Civil Law is that which consisteth in Laws, Senators, things judged, the authority of Lawyers, Edicts of Magistrates, Manners and Equity.

The definition of Divisions comprehendeth all Species which are under the Genus defined, thus. *Abalienation* is of that thing which is in our power, or a deliverance of it into the power of another; or a concession by Law, amongst whom those things may be done by Civil Right.

f Division is a Section of the Genus into its immediate Species, as, of *Living Creatures*, some are rational, some irrational. *g* This therefore is an ill division, *Of men some are Grecians, some Egyptians, some Persians, some Indians*; for the next Species are not desperate, but opposite. We must therefore say thus; *Of Men some are Grecians, some Barbarians*; and again, by subdivision of *Barbarians*, some are *Aegyptians*, some *Persians*, some *Indians*, which likewise is in the division of things that are. For those which are good and bad, are different to us; those who are intermediate betwixt good and bad, are indifferent to us. The division therefore ought not to be so, but rather thus: *Of things that are, some are indifferent, others different; of the different, some are good, some are ill*; for this division is like unto that which saith, of Men, some are *Grecians*, others *Barbarians*; of *Barbarians*, some are *Aegyptians*, some *Persians*, some *Indians*; the other is likewise; Of Men, some *Grecians*, some *Aegyptians*, some *Persians*, some *Indians*.

Hence it followeth, that *h* perfect division hath an universal power; for he who divideth thus; *Of Men, some are Grecians, others Barbarians*.

ing: *Sour*, as harsh in both. *Wool* and *Bryers*, as the Words are to the hearing, the Things are to the touch. These are conceived to be the Infancy, as it were of Words, when the Sense of the thing concords with the Sense of the sound.

From hence proceeded the licence of Naming, according to the Similitude of the things among themselves; as when, for example, *Crux*, a Cross, is therefore so called, because the harshness of the word concords with the harshness of the Pain which the Cross affecteth. But, *Crura*, Thighs, are so called, not from harshness of pain, but, because in length and hardness, they are, in respect of other Limbs, like unto the Wood of a Cross. Hence it comes to abuse, that the Name is usurped, not of a like thing, but as it were near; for what likeness is there between the Signification of *little* and *minute*, when as that may be *little*, which not only is nothing *minute*, but is somewhat grown; yet, by reason of a certain nearness, we say *minute* for *little*. But, this abuse of the Word is in the Power of the Speaker; for he may use the word *little*, and not *minute*. This Example belongs to that which we will shew, when we call that a *Fish-pond* which hath no Fish in it, nor any thing like a Fish: It is denominated from Fishes, by reason of the Water wherein Fishes live. So the word is used by Translation, not from Similitude, but a certain kind of Vicinity. And if any one should say, That Men in Swimming resemble Fishes, and that from thence a Fish-pond is so named, it were foolish to refuse it, since that neither is repugnant to the nature of the thing, and both are occult. But, this is to the purpose, which we cannot dilucidate by one Example, how much the Origine of the Word, which is taken from Vicinity, differs from that which is derived from Similitude.

From hence there is a Progression to the contrary. *Lucus* is thought to be so named, *Quod minime luceat*; and *bellum*, *quod res bella non sit*; and *fadus*, *quod res fada non sit*. But if we derive *porcus*, as some do a *faditate*, it returns to that Vicinity, when that which is made, is named that by which it is made.

For this Vicinity is very large, and divided into many parts; either by efficiency, as this word *porcus* à *faditate*; from which likewise *fadus*; or by effect, as *putens*, so named, because the effect thereof is *potatio*; or by that it containeth, as *urbs* *ab orbe*, because in a place which they liked, they first made a track about it with a Plough, as *Virgil* saith of *Æneas*.

—*Urbem designat Aratro.*

Or by that which is contained, as if *horreum* were derived from *hordeum*; or by abuse, as *hordeum* for Wheat; or the whole from a part, as *muco*, which is the point, for the whole Sword; or a part from the whole, as *capillus quasi capitis pilus*. What need we go any further? Whatsoever else can be reckoned, we may see the Origin of the word contained, either in the Similitude betwixt Things and Sounds, or in the Similitude betwixt Things themselves, or in Vicinity or Contrariety, which Origin we cannot pursue beyond Similitude.

But this we cannot do always; for there are

innumerable Words, the Reason of which lie hid. To the Infancy, or rather Stock and Seed of such Words, beyond which no Origin is to be sought, neither if a Man do enquire can he find any, they proceed in this manner. The Syllables, in which *v* hath the place of Consonant, as in these Words, *venter*, *vaser*, *velum*, *vinum*, *vomis* *vulnus*, have a thick, and as it were, a strong sound, which the very custom of speaking confirmeth, which from some Words we take them away, lest they should burthen the Ear; for which reason we say *amasti*, rather than *amavisti*; and *abiit*, not *abivit*, and innumerable of the same kind. Therefore when we say *Vis*, the sound of the word having, as we said, a kind of force, suiteth. Now from this Vicinity, by that which they affect, that is, because they are violent, *vincula* seem to be named, and *vimen* *quod aliquid vinciatur*. Thence *vites*, because they clasp about those things by which they grow. Hence also by Similitude, *Terence* calls a crooked old Man *victum*. Hence the Earth, worn into winding Paths by the Feet of Passengers, is call'd *via*; but if *via* be so named, *quasi vi pedum trita*, the Origin returns to the Vicinity: But let us suppose it derived from the Similitude it hath with *vitis* or *vimen*, that is, from its winding; one asketh me why it is call'd *via*? I answer, from the winding and crookedness thereof, which the Ancients called *victum*; thence the Rounds of a Wheel *victos*. He demands how *victum* comes to signifie winding? I answer, from the Similitude of *Vitis* a Vinc: He requires whence *vitis* is so named? I say, because it doth *vincire* those things which it comprehends. He questions whence *vincire* is derived? We say, *a vi*. He asks whence *vis*? We give this reason, because the word in its robust and forcible sound agreeth to the thing which it signifieth. He hath nothing more to demand.

^t In like manner, in this word *Ego*: as *Chrysippus* observes, in pronouncing the first Syllable, we depress the under-lip, as if it were to point to our selves; then by motion of the Beard we point to our own Breasts; of which *u Ni-gidius* hath given more Instances, in his Grammatical Commentaries.

The second Question concerning Words, is of their Power, *περὶ σημαίνοντων*, of *Significants*; whence ^x *Chrysippus* divided *Dialectick* into two parts, *περὶ σημαίνοντων* *ἢ σημασινομένων*, of *Significants*, and *Significats*. Here they enquire how many ways every thing may be said, and how many ways a thing said may signifie?

Here is examined the Ambiguity of Words. ^y *Ambiguity* (or *Amphiboly*) is a word signifying two or more things, naturally and properly, according to the Language of the Nation, in such manner, that many Senses may be collected from the same Words, as *αυτισεις πεισινωει*, which one way signifies, *the Pot fell* thrice; another way, *the She-Minstress fell*.

^z Every word (according to *Chrysippus*) is by nature ambiguous, for the same may be taken two or more ways: ^y Neither is that any thing to the purpose which *Hortensius* Calumniates in *Cicero*. Thus, they affirm that they hear Ambiguities acutely, explain them clearly. The same persons hold, that every Word is Ambiguous; how then can they explain the Ambiguous by the

the Ambiguous, that were to bring a Candle not lighted into the Dark? This is ingeniously and subtilly said, but like that of *Scævola* to *Antoninus*, You seem to the wise to speak acutely, to Fools truly: For what else doth *Hortensius* in that place, but by his Ingenuity and Faceriousness, as an intoxicating Cup, bring Darknes upon the unlearned? For, when they say, Every Word is Ambiguous, it is understood of single Words. Ambiguities are explained by Disputation; no Man disputeth by single words, none therefore explaineth Ambiguous words by Ambiguous words. And yet seeing that every word is Ambiguous, no Man can explain the Ambiguity of words, except by words, but those conjoined and not Ambiguous. As when we say, Every Soldier hath two Feet, it doth not follow, that a whole Regiment of Soldiers that have two Feet, should have in all but two Feet. So when I say, every word is Ambiguous; I do not say, a Sentence, nor a Disputation, although they are woven of Words. Every Ambiguous word therefore may be explained by an inambiguious Disputation.

The third Question is concerning *Declination*, *ἁνωμαλία* and *ἀναλογία*. *z* Some follow *Analogy*, others *Anomaly*. *Analogy* is a like Declination of like, in Latin *Proportio*. *Anomaly* is an inequality, following the customs of Declinations. *a* *Chrysippus* wrote six Books *περὶ τῆς ἀνωμαλίας*, shewing, that like things are noted with unlike words, and unlike things with like words.

d Amongst the faults of Speech is *Barbarism*, a Phrase not in use with the best Persons; and *Solacism*, a Speech incoherently framed.

CHAP. XI.

Of Definition and Division.

a Laert.

a **D**efinition (according to *Antipater* in his book of *Definitions*) is Speech by *Analysis* pronounced adequately; or (as *Chrysippus* in his Book of *Definitions*) an Answer to this Question, What a Thing is?

b Sext. Emp. adv. Log.

b Those Definitions are vicious which include any of those things which are not in the things defined, or not in all, or not in some; so as if we should say, *A Man is a Rational Creature*, or *a mortal Grammatical Creature*; seeing that no Man is Immortal, and some Men are

not Grammarians, the Definition is faulty.

c We must therefore, when we take those things which are common to the things we would define, and others, prosecute them so far until it become proper, so as not to be transferrable to any other thing; as this, *An inheritance is riches, add which by the Death of some Person falleth to another*, it is not yet a Definition, for Riches may be held many other ways, as well as by Inheritance; add one word, *by right of Law*; now the thing will seem disjoyned from community: So that the definition is thus explained. *Inheritance is Riches, which by the death of one person falleth to another by right of Law*: It is not yet enough, therefore add, *neither bequeathed by Will, nor detained by Possession*, and it is perfect.

c Cic. Topic.

d Of Definition there are two kinds: One of things which are: the other of things which are understood. Those things which are, we call such as may be seen or touched, as a Field, House, a Wall, and the like. On the other side, we say those things are not, which cannot be touched or shewn, as Possession, Guardianship, Nation, Kindred, which have not any body, yet there is some Conformity in the understanding, which we call notional, whereby in Argumentation they may be explained by definition. This latter kind is rather called Description, a Speech, which by the exterior figure of the things bringeth us to the things themselves, or a Definition simply expressing the Power of a Definition.

d Cic. Topic.

e Again, of Definitions, some are of *partitions*, others of *Divisions*. Of *Partitions*, when the thing proposed is torn (as it were) into pieces, as if we should say, the Civil Law is that which consisteth in Laws, Senators, things judged, the authority of Lawyers, Edicts of Magistrates, Manners and Equity.

e Cic. Topic.

The definition of *Divisions* comprehendeth all Species which are under the Genus defined, thus. *Abalienation* is of that thing which is in our power, or a deliverance of it into the power of another; or a concession by Law, amongst whom those things may be done by Civil Right.

f *Division* is a Section of the Genus into its immediate Species, as, *of Living Creatures, some are rational, some irrational*. *g* This therefore is an ill division, *Of men some are Grecians, some Egyptians, some Persians, some Indians*; for the next Species are not desperate, but opposite. We must therefore say thus; *Of Men some are Grecians, some Barbarians*; and again, by subdivision of *Barbarians, some are Egyptians, some Persians, some Indians*, which likewise is in the division of things that are. For those which are good and bad, are different to us; those who are intermediate betwixt good and bad, are indifferent to us. The division therefore ought not to be so, but rather thus: *Of things that are, some are indifferent, others different; of the different, some are good, some are ill*; for this division is like unto that which saith, of Men, some are Grecians, others Barbarians; of Barbarians, some are Egyptians, some Persians, some Indians; the other is likewise; Of Men, some Grecians, some Egyptians, some Persians, some Indians.

Of Subjects.

Of Qualitatives.

**b Simplic. in
Categ.**

c All qualities are either *causes*, and then they ^c *causae* are called *forms*; or *effects*, and then they are ge- ^{in Dial.} nerally called *in* *accidents*, *habituals*, which word *accident* extends as large as the common accident, both of things corporeal and incorporeal, & some-
what

what. Of *habituals* there are four kinds, *μετέκλετα*, that is, *ἐννοήματα*, when they reside in the mind; *τεκνέματα*, that is, *πλάσεις*, when they fall from the mind into the voice; *καλεγορήματα*, when by the motion of the mind, they are predicated of any thing; *συμβεβηκέναι*, or, *συμβαμμένα*, when they happen to subjects.

d Habits are only things united; but those which are conjoined by contiguity, as a Ship, or by distance, as an Army; in these there can be no habit; nor one thing Spiritual above all, nor one reason, whereby they may come to subsist within one habit.

It is common to quality of corporeal things to be the difference of their substance, not taken severally, but contracted into one notion and property of the mind, nor by time or strength reduced to form, but by its own reality, according to which, the generation of the qualitative subsists.

Power (a Species of quality) is that which hath and giveth the faculty of exercising many accidents; as Prudence giveth the faculty of walking prudently, and discoursing prudently: or according to some, Power is that which the faculty of exercising many Accidents, and which Ruleth and Governeth the Acts subjected unto it. What *Aristotle* called natural *Power*, they name *Aptitude*.

Habits are intended and remitted: Dispositions cannot be intended or remitted. Thus the straightness of a Wand, altho it may easily be discomposed and bent, is a Disposition; for straightness cannot be intended or remitted. Likewise the Virtues are Dispositions, not in respect of their firmness and constancy, but because they cannot admit of degrees of more and less: but, Arts must either have firmness, or not be Dispositions. Thus *Habitude* is taken in the Latitude of the Species, *Disposition* is the chief perfection of the Species, and in that which is the most it can be, whether it be easily alter'd (as the straightness of a Wand) or not.

CHAP. XVI.

Of Quodammodotatives.

THE third kind of things are *τὰ πῶς ἔχοντα*, *Quodammodotatives*. *a* They differ from Qualitatives, because matter is otherwise effected by habits, otherwise by *Quodammodotatives*, in this or that manner. Moreover, Qualitatives are *Quodammodotatives* as to matter, and conversant therein; but properly, *Quodammodotatives* are conversant in Qualitatives. *b* Again, as habituals may be said to extend farther than habits, so *Quodammodotatives* are larger than Qualitatives; for *Quodammodotatives* extend even to those things which are *Quodammodotatives* as to others, and include them; but Qualitatives consist only in those which make a difference.

c This place *Boethius* conceives to have the power of habit. Habit chiefly and universally is taken three ways: First, to be to it self, and according to it self: Secondly, in respect to another: Thirdly, of another to it. That which is considered *as to it self*, pertains to *Quodammodotatives*; as *armed*, for it is a habit of ones self, to ones self, That which is *to another*, pertains to Relation; for a Father, or a right Hand, are said, according to a Habit, not of themselves to

themselves, but of them to another. But that which is of another to us, as of an Armed Man, being the Habit of another to us, pertains to Habit.

To this head they reduce *Quantitatives* and *Quantity*, and their Species, *Place*, *Time*, and some Species (according to *Aristotle*) of quality, *Figure* and *Form*; as also *Action*, *Passion*, *Site*, *Habit*.

CHAP. XVII.

Of Quodammodotatives as to others.

THE last genus of Things is *πρὸς τὸ πῶς ἔχοντα*, *Quodammodotatives as to others*. *a* Of these there are two kinds, *Relatives* and *Quodammodotative-Relatives*. The *Relatives* are opposed and distinguished from those which are by themselves, and absolute. The *Quodammodotative-Relatives* are opposed to those which have a difference; as for Example, sweet and Sour, and whatsoever is of the like kind, are *Relatives*; but *Quodammodotative-Relatives*, are as the right side, *Father*, and the like; for they have a difference, in that they are characteriz'd by differences, according to some Species. As therefore there is one notion of those which are by themselves, and absolute, and another of those which are consider'd with difference: So some things are *Relatives*, others *Quodammodotative-Relatives*. The consequence of Conjunctions in these is contrary; for, with those which are by themselves, co-exist those which have a difference; for, those which are by themselves, have some differences, as white and black. But those, which are by themselves, co-exist not with those which have a difference. Sweet and Bitter have differences, whereby they are characterized; yet they are not absolute, but *Relatives*. But, those which are *Quodammodotative-Relatives*, being contrary to those which have differences, are likewise *Relatives*. For, the right side, and a *Father*, besides that they are *Quodammodotative*, are likewise *Relatives*: But sweet and Bitter being *Relatives*, have a difference, whereby they are contrary, being *Quodammodotative-Relatives*. Those which are *Quodammodotative-Relatives*, it is impossible should be by themselves, and absolute, or by difference; for they depend solely upon Relative-habit. *Relatives* therefore are not by themselves, for they are not absolute; yet are they according to difference, because they are distinguished by some Character. To express this more clearly, *Relatives* are those, which by their proper Character respect another: *Quodammodotative-Relatives* are those which use to happen to another, but not without mutation and alteration of those things which are about them; yet, with respect of something external. If therefore any thing with difference respect another, it is only *Relative*, as Habit, Science, and Sense: but if it respect another, not out of inherent difference, but in pure habit, it is *Quodammodotative-Relative*. For, a *Father*, and right side, to their consistence, require some external things, for as much as there being no Mutation made in them, he is no longer a *Father*, his Son being dead, and the right side is no longer, so, after he is risen, in respect of whom it was said to be such; but sweet

b *Simplic*, in *Categ.*

c *Simplic*, *ibid.*

a *Simplic*, in *Categ.*

sweet and bitter will not alter, unless their power be likewise changed. If therefore *Quodammodotatives* are changed in habit to another, although they receive no Passion in themselves, it is manifest they have their being in the habit alone, not in difference.

^a This Genus was first introduced by *Aristo*, ^b who first defined *Quodammodotative-Relatives* to be those, whose being is the same with their *Quodammodotative being to one another*: And so also *Andronicus* defines them.

C H A P. XVIII.

Of Dicibles.

TO the place concerning things and significats, belongeth that concerning *Dicibles*, ^{αὐτὸ λεγόμενον}, to which true and false is common. ^a *Dicible* is that which consisteth according to rational phantasia. ^b *Rational Phantasia* is that, by which what is comprehended by Phantasia, may be expressed by Speech. Every thing that may be said, ought to be said, for from thence is derived the Denomination.

^c *Dicible* is a mean betwixt Notion and Thing. *Dicibles* are Notions, that is, ^{νοήματα}, but not merely and simply Notions, ^d which in as much as they are the principles of Science, and are Intelligences, are called ^{περλήψεις}, and ^{ἐννοιαί}, but in as much as they reside in the mind, are called ^{ἐννοήματα}, and are Genus's and Species, in which manner, being ready for expression, they are called *Dicibles*, and pertain to the Enunciative faculty of the Soul. For whatsoever is said, if it be so considered as it is said of something, they are *Categorems*; if so, as it breaketh forth into Voice, and with Voice, they are Words; if retained in the Mind, ready to break forth, they are *Dicibles*. *Dicible* therefore is a Word, and yet signifies not a Word, but that which is understood in the Word, and is contained in the Mind.

^e Of *Dicibles* there are two kinds, the *Defective* and the *Perfect*. The *Defective* are those which have an imperfect Enunciation, not completing the Sentence, but requiring something to follow; as *writeth*, for we ask, who? To this kind belong *Categorems*, which are prædicated of other things.

The *Perfect* are such as have a perfect Enunciation: Of these are two kinds: The first peculiarly called *Perfect*, which tho' they compleat the Sentence, yet signify neither true nor false. Of these there are many kinds, as *Interrogation*, *Percontation*, *Imperative*, *Adjurative*, *Optative*, *Imprecative*, or *Execrative*, *Substitutive*, *Hypothetical*, *Compellative*, *like to*, or *Transcending an Axiom*, and *Dubitative*.

Interrogation is that which is a perfect Sentence, but requireth an answer, as, *Is it day?* for this is neither true nor false; so that *it is day*, is an Axiom, *Is it day?* an Interrogation.

Percontation is a thing for which we cannot answer significantly, as Interrogation, *yes*: but as thus, *He dwelleth in such a place*.

Imperative is a thing, in speaking whereof, we command; as,

Go thou to the Inachian Flood.

^f *Adjurative*, as *Witnes: thou Earth*
Optative, which we speak wishing, as,
Great Jove who dost in Ida Reign,
The Victory let Ajax gain.

Imprecative, or *Execrative*, as,
As on the Ground this Wine I pour,
So may the Earth his Blood devour.

Substitutive, or *Expositive*, as, *Let this be a right Line.*

Hypothetical, as, *supposing the Earth to be the Center of the Globe of the Sun.*

Compellative, is a thing in speaking, which we call another, as,

Atrides, Agamemnon, King of Men.

Like to, or *Transcending an Axiom*, is that which hath an axiomatical manner of speaking; but because it superabounds in some Particle or Affection, it is not ranked amongst Axioms, as,

How Beauteous is thy Virgin Train!

How like to Priam's Son, that Swain!

Dubitative is a thing different from an Axiom, which whosoever speaks, maketh a doubt, as,
Then are not Life and Grief of Kin? All these are neither true nor false.

The other kind of perfect *Dicibles* which compleat the Sentence, affirmeth or denieth, and is either true or false. It is called *Axiom*.

C H A P. XIX.

Of Categorems.

^a **C***ategorem* is that which is prædicated of another, or a thing construed with one or more, or as (*Apollodorus*) a defective *Dicible*, construed with the right case, to make an Axiom.

^b Whatsoever is prædicated of another, is prædicated of the name of the Case; and both these are either *perfect*, as that which is prædicated, and together with the subject sufficient to make an Axiom. Or they are *defective*, and require some Addition to make thereof a perfect Prædicate.

If that which is prædicated of a Name, make an Axiom, it is a *Categorem*, or ^{σύμβημα}, a Congruity, as *walketh*, for Example, *Socrates walketh*.

But if it be prædicated of the Case (whereby Transitions are made from one Person to another, wherein it is necessary that some oblique Case be likewise pronounced with the right) they are called ^{ᾠσαυμβάματα}, as an addition to the ^{σύμβημα}, (or as ^c *Priscian* renders it, *less than Congruities*) as *Cicero saved his Country*.

Again, if that which is prædicated of some Noun, require a Case of some other Noun to be added to make up the Axiom, so as the Construction be made of two oblique Cases, they are ^{ᾠσαυμβάματα}, incongruities, or according to *Ammenius*, *less than*, ^{σύμβημα}, as, *it pleases me to come to thee*; whether the Nouns only, or the Words require it.

^d Again, of *Categorems* there are four kinds, *Right*, *Supine*, *Neuter*, and *reciprocally Active*, and *Passive*. *Right* are those which have a motion tending to another, and are construed with one of the oblique Cases, for the making of a *Categorem*, as *Heareth*, *Seeth*, *Discourseth*.

Supine are those which are considered from Habit to an Agent, and is construed with a passive particle, as, *I am heard*, *I am seen*.

Neuter, as those which are neither way, as, *to be wise*, *to walk*.

Reciprocally, Active and Passive are those, which seem *Supines*, but are not, for they are acts

acts, as *κέρειται*, for therein is included *ὁ κερύμειρος*.

The *Right* (or *Nominative Case*), is so called by the Stoicks, whom the Grammarians follow, because it falleth directly from the Notion which is in the Mind. *Oblique Cases* are the *Genitive*, *Dative*, and *Accusative*.

CHAP. XX.

Of Simple Axioms.

a Laert.

Axiom is that which is either true or false, or a thing perfect by it self, negative, or affirmative, as far as it extends; or, (or according to *Chrysippus*, in his *Dialectick Definitions*) axiom is that which affirmeth or denieth as far as it extends; as *Dion walketh*. It is called Axiom *ἐπεὶ τὸ ἀξιωματικὸν καθ'ἑαυτὸν*, because Assent is either given to it or not: for he who saith, it is day, assenteth thereunto. If it be day, the Axiom is true; if it be not, false.

b Laert.

b Of Axioms, the first and most proper difference is of the *Simple*, and not *Simple* (thus divided by *Chrysippus*, and *Archidemus*, and *Athenodorus*, and *Antipater*, and *Crinis*.)

c Laert. Sect.
Empir. edv.
1. 2. cap. de
vitiis.
d Laert.

c Simple axioms are those which consist neither of one axiom twice taken, nor of different axioms, neither by one or more conjunctions; as, *It is day, 'tis at night* *Socrates Disputes*. *d* Of simple axioms there are many kinds, *Apophtick*, or *Negative*, *Arnetick*, or *Universally Negative*, *Steretick*, or *Privative*; *Categorick*, or *prædicative*; *Categoreutick*, or *Indicative*; *indefinite* and *mediate*.

e Laert. A-
pud. ἑξῆς.

e Negative axioms are those, in which a negative particle is proposed; as, *If this is, that is not*. But if the negation be of the latter part of the axiom, the other part not being negative, then the axiom is not negative, but *prædicative*; as, *It hapneth to some pleasure not to be good*. This therefore declareth what hapneth to the thing, and therefore is prædicative. *f* A Species of negative axiom, is the *supernegative*, when, between the parts connected and copulated by two affirmations, a preposition with a negation is interposed, and that very negation denied; as, *If it is day, it is not light*. Of the same kind are all those, wherein negation is proposed to negation; as, *It is not both day, and not day*.

f Beut. in Cic.
Tp.

g Laert.

g *Universally negative* axioms are those, which consist of an universal negative particle, and a *Categorem*; as, *no man walketh*.

h Laert.

h *Privative* are those which consist of a privative particle, and an axiom in power, as, *he is inhumane*.

i Laert.

i *Prædicative* are those, which consist of a right Case and *Categorem*; as, *Dion walketh*.

k Laert.

l Sect. Empir.

k *Indicative*, or *l* *Definitive* is that which consists of a demonstrative right Case, and a *Categorem*; as, *this man walketh*.

m Laert.

Sect. Empir.

m *Indefinite*, is that, which consists of one or more indefinite particles; as, *a certain man walketh, he is moved*.

n Sect. Empir.

n *Intermediate* are of this kind, *a man sitteth, or a man walketh*: *a certain man walketh* is indefinite, for it determines no single person; *that man sitteth* is definite. *Socrates sitteth*, is intermediate; for it is not indefinite, because it determines the Species; nor definite, because it is not pronounced with demonstration, but it is intermediate betwixt both.

o An indefinite axiom, as, *some one sitteth*, is true, when the thing definite is true; as, *he sitteth*; but if none of the singulars do sit, the indefinite axiom is not true, that *some one sitteth*.

CHAP. XXI.

Of not-simple Axioms.

Not-simple axioms are those, which are in a manner double, consisting of one axiom diversified, or of axioms: of one axiom diversified; as, *if it be day, it is day*: of axioms, as, *if it be day, 'tis light*.

b In not-simple axioms, that which immediately followeth the conjunction, *if*, or *whereas*, is called the *Antecedent*, the *first*, or the *beginning*; the rest is called the *ending*, or *Consequence* or *second*. Notwithstanding that the axiom be pronounced by invention; as, *It is light, if it be day*; for in this, the ending or consequence, is, *it is light*, altho it be spoken first: the antecedent, *it is day*, altho it be put in the second place; for it immediately followeth the conjunction *if*.

The Laws and Rules of Consequents are these: *c* From True followeth True: as, if it be day, it followeth that it is light. *2.* From False followeth False; as, if this be False that it is night, this is likewise, *it is dark*. *3.* From False followeth True, as from this, *the Earth flieth*, followeth, *the Earth is*. *4.* From True doth not follow False; for from this, *the Earth is*, it followeth not, *that the Earth flies*.

d Of not-simple propositions there are many kinds, *Connex*, *Adnex*, *Conjunct*, *Casual*, *Declarative of the more*, and *Declarative of the less*.

e *Connex* (according to *Chrysippus* in his *Dialectick*, and *Diogenes* in his *Dialectick Art*) is that which consists of the connective conjunction, *if*: which conjunction declareth, that the consequent is second to the first: as, *if it be day, it is light*. Of a diversified axiom, and the Conjunction *if*, consisteth this connex, *If it be day, it is day*, these are properly right axioms. Of different axioms, and the Conjunction *whereas*, this, *if it is day, 'tis light*. *f* Connex axioms are called also *Tropical*, because they turn from the antecedent to the consequent.

The Rules of connex axioms are these: *g* That is a true connex wherein the contrary of the consequent is repugnant to the antecedent, as, *if it is day, 'tis light*; for, *that it is not light*, the contrary to the consequent, is repugnant to, *it is day*, the antecedent. A false connex is that wherein the contrary to the consequent, is not repugnant to the Antecedent; as this, *if it is day, Dion walks*; for, *that Dion walketh not*, is not repugnant to, *it is day*.

h *Adnex* (which some reckon as a species of the connex) according to *Crinis*, in his *Dialectick*, is an axiom connected by the conjunction *whereas*, as, beginning with an axiom, and ending with an axiom; as, *whereas it is day, it is light*, the conjunction sheweth, that the second is a consequent of the first, and that the first is subsistent.

The Rules of adnex axioms are these: *i* That is a true adnex, which beginneth from true, endeth in that which is consequent; as, *whereas it is day, the Sun is over the Earth*. False is that which beginneth from False, or endeth not consequentially; as,

sweet and bitter will not alter, unless their power be likewise changed. If therefore *Quodammodotatives* are changed in habit to another, although they receive no Passion in themselves, it is manifest they have their being in the habit alone, not in difference.

a Laert. vit. Aristonis. b Simplic. in Categ.

a This Genus was first introduced by *Aristo*, *b* who first defined *Quodammodotative-Relatives* to be those, whose being is the same with their *Quodammodotative being to one another*: And so also *Andronicus* defines them.

C H A P. XVIII.

Of Dicibles.

TO the place concerning things and significats, belongeth that concerning *Dicibles*, *διεξι λέξιων*, to which true and false is common. *a* *Dicible* is that which consisteth according to rational phantasie. *b* *Rational Phantasie* is that, by which what is comprehended by Phantasie, may be expressed by Speech. Every thing that may be said, ought to be said, for from thence is derived the Denomination

a Laert.

b Sext. E. pir. Adv. log.

c Ammon. in proem. Arist. διεξι λέξι. d Burf. in Dial. Cic. 5. 1

c *Dicible* is a mean betwixt Notion and Thing. *Dicibles* are Notions, that is, *νοήματα*, but not merely and simply Notions, *d* which in as much as they are the principles of Science, and are Intelligences, are called *περλήψεις*, and *ἐννοιαί*, but in as much as they reside in the mind, are called *ἐννοήματα*, and are Genus's and Species, in which manner, being ready for expression, they are called *Dicibles*, and pertain to the Enunciative faculty of the Soul. For whatsoever is said, if it be so considered as it is said of something, they are *Categorems*; if so, as it breaketh forth into Voice, and with Voice, they are Words; if retained in the Mind, ready to break forth, they are *Dicibles*. *Dicible* therefore is a Word, and yet signifies not a Word, but that which is understood in the Word, and is contained in the Mind.

e Laert.

e Of *Dicibles* there are two kinds, the *Defective* and the *Perfect*. The *Defective* are those which have an imperfect Enunciation, not completing the Sentence, but requiring something to follow; as *writeth*, for we ask, who? To this kind belong *Categorems*, which are prædicated of other things.

The *Perfect* are such as have a perfect Enunciation: Of these are two kinds: The first peculiarly called *Perfect*, which tho' they compleat the Sentence, yet signify neither true nor false. Of these there are many kinds, as *Interrogation*, *Percontation*, *Imperative*, *Adjurative*, *Optative*, *Imprecative*, or *Execrative*, *Substitutive*, *Hypothetical*, *Compellative*, *like to*, or *Transcending an Axiom*, and *Dubitative*.

Interrogation is that which is a perfect Sentence, but requireth an answer, as, *Is it day?* for this is neither true nor false; so that *it is day*, is an Axiom, *Is it day?* an Interrogation.

Percontation is a thing for which we cannot answer significantly, as Interrogation, *yes*: but as thus, *He dwelleth in such a place*.

Imperative is a thing, in speaking whereof, we command; as,

Go thou to the Iuachian Flood.

f *Adjurative*, as *Witness thou Earth Optative*, which we speak wishing, as, *Great Jove who dost in Ida Reign, The Victory let Ajax gain.*

f Ammon. in lib. διεξι λέξι.

Imprecative, or *Execrative*, as, *As on the Ground this Wine I pour, So may the Earth his Blood devour.*

Substitutive, or *Expositive*, as, *Let this be a right Line.*

Hypothetical, as, *Supposing the Earth to be the Center of the Globe of the Sun.*

Compellative, is a thing in speaking, which we call another, as,

Atrides, Agamemnon, King of Men.

Like to, or *Transcending an Axiom*, is that which hath an axiomatical manner of speaking; but because it superabounds in some Particle or Affection, it is not ranked amongst Axioms, as,

How Beauteous is thy Virgin Train!

How like to Priam's Son, that Swain!

Dubitative is a thing different from an Axiom, which whosoever speaks, maketh a doubt, as, *Then are not Life and Grief of Kin?* All these are neither true nor false.

The other kind of perfect *Dicibles* which compleat the Sentence, affirmeth or denieth, and is either true or false. It is called *Axiom*.

C H A P. XIX.

Of Categorems.

a **C***ategorem* is that which is prædicated of another, or a thing construed with one or more, or as (*Apollodorus*) a defective *Dicible*, construed with the right case, to make an Axiom.

b Whatsoever is prædicated of another, is prædicated of the name of the Case; and both these are either *perfect*, as that which is prædicated, and together with the subject sufficient to make an Axiom. Or they are *defective*, and require some Addition to make thereof a perfect Prædicate.

If that which is prædicated of a Name, make an Axiom, it is a *Categorem*, or *σύμβαμα*, a Congruity, as *walketh*, for Example, *Socrates walketh*.

But if it be prædicated of the Case (whereby Transitions are made from one Person to another, wherein it is necessary that some oblique Case be likewise pronounced with the right) they are called *ἄσσυμβαματά*, as an addition to the *σύμβαμα*, (or as *c* *Priscian* renders it, *less than Congruities*) as *Cicero saved his Country*.

Again, if that which is prædicated of some Noun, require a Case of some other Noun to be added to make up the Axiom, so as the Construction be made of two oblique Cases, they are *ἄσσυμβαματά*, incongruities, or according to *Ammonius*, *less than*, *σύμβαματά*, as, *it pleases me to come to thee*; whether the Nouns only, or the Words require it.

d Again, of *Categorems* there are four kinds, *Right*, *Supine*, *Neuter*, and *reciprocally Active*, and *Passive*. *Right* are those which have a motion tending to another, and are construed with one of the oblique Cases, for the making of a *Categorem*, as *Heareth*, *Seeth*, *Discourseth*.

Supine are those which are considered from Habit to an Agent, and is construed with a passive particle, as, *I am heard*, *I am seen*.

Neuter, as those which are neither way, as, *to be wise*, *to walk*.

Reciprocally, *Active* and *Passive* are those, which seem *Supines*, but are not, for they are

acts

acts, as *κέρειαι*, for therein is included *ὁ κερειόμενος*.

The Right (or Nominative) Case, is so called by the Stoicks, whom the Grammarians follow, because it falleth directly from the Notion which is in the Mind. *Oblique Cases* are the Genitive, Dative, and Accusative.

CHAP. XX.

Of Simple Axioms.

Axiom is that which is either true or false, or a thing perfect by it self, negative, or affirmative, as far as it extends; or, (or according to *Chrysippus*, in his *Dialectick Definitions*) axiom is that which affirmeth or denieth as far as it extends; as *Dion walketh*. It is called Axiom *ἀξίωμα ἀξιωματικὸν καὶ ἐξιστάμενον*, because Assent is either given to it or not: for he who saith, it is day, assenteth thereunto. If it be day, the Axiom is true; if it be not, false.

b Of Axioms, the first and most proper difference is of the *Simple*, and not *Simple* (thus divided by *Chrysippus*, and *Archidemus*, and *Athenodorus*, and *Antipater*, and *Crinis*.)

c Simple axioms are those which consist neither of one axiom twice taken, nor of different axioms, neither by one or more conjunctions; as, *It is day, 'tis at night* *Socrates Disputes*. **d** Of simple axioms there are many kinds, *Apophatick*, or Negative, *Arnetick*, or Universally Negative, *Steretick*, or Privative; *Categorick*, or prædicative; *Categoreutick*, or Indicative; *indefinite* and *mediate*.

e Negative axioms are those, in which a negative particle is proposed; as, *If this is, that is not*. But if the negation be of the latter part of the axiom, the other part not being negative, then the axiom is not negative, but *prædicative*; as, *It hapneth to some pleasure not to be good*. This therefore declareth what hapneth to the thing, and therefore is prædicative. **f** A Species of negative axiom, is the *supernegative*, when, between the parts connected and copulated by two affirmations, a preposition with a negation is interposed, and that very negation denied; as, *If it is day, it is not light*. Of the same kind are all those, wherein negation is proposed to negation; as, *It is not both day, and not day*.

g Universally negative axioms are those, which consist of an universal negative particle, and a *Categorem*; as, *no man walketh*.

h Privative are those which consist of a privative particle, and an axiom in power, as, *he is inhumane*.

i Prædicative are those, which consist of a right Case and *Categorem*; as, *Dion walketh*.

k Indicative, or *Definitive* is that which consists of a demonstrative right Case, and a *Categorem*; as, *this man walketh*.

m Indefinite, is that, which consists of one or more indefinite particles; as, *a certain man walketh, he is moved*.

n Intermediate are of this kind, *a man sitteth, or a man walketh*: *a certain man walketh* is indefinite, for it determines no single person; *that man sitteth* is definite. *Socrates sitteth*, is intermediate; for it is not indefinite; because it determines the Species; nor definite, because it is not pronounced with demonstration, but it is intermediate betwixt both.

o An indefinite axiom, as, *some one sitteth*, is true, when the thing definite is true; as, *he sitteth*; but if none of the singulars do fit, the indefinite axiom is not true, that *some one sitteth*.

CHAP. XXI.

Of not-simple Axioms.

Not-simple axioms are those, which are in a manner double, consisting of one axiom diversified, or of axioms: of one axiom diversified; as, *if it be day, it is day*: of axioms, as, *if it be day, 'tis light*.

b In not-simple axioms, that which immediately followeth the conjunction, *if*, or *whereas*, is called the *Antecedent*, the first, or the beginning; the rest is called the *ending*, or *Consequence* or *second*. Notwithstanding that the axiom be pronounced by inversion; as, *It is light, if it be day*; for in this, the ending or consequence, is, *it is light*, altho it be spoken first: the antecedent, *it is day*, altho it be put in the second place; for it immediately followeth the conjunction *if*.

The Laws and Rules of Consequents are these: **c** From True followeth True: as, if it be day, it followeth that it is light. **2.** From False followeth False; as, if this be False that it is night, this is likewise, *it is dark*. **3.** From False followeth True, as from this, *the Earth flieth*, followeth, *the Earth is*. **4.** From True doth not follow False; for from this, *the Earth is*, it followeth not, *that the Earth flies*.

d Of not-simple propositions there are many kinds, *Connex*, *Adnex*, *Conjunct*, *Casual*, *Declarative of the more*, and *Declarative of the less*.

e *Connex* (according to *Chrysippus* in his *Dialectick*, and *Diogenes* in his *Dialectick Art*) is that which consists of the connective conjunction, *if*: which conjunction declareth, that the consequent is second to the first: as, *if it be day, it is light*. Of a diversified axiom, and the Conjunction *if*, consisteth this *connex*, *If it be day, it is day*, these are properly right axioms. Of different axioms, and the Conjunction *whereas*, this, *if it is day, 'tis light*. **f** *Connex* axioms are called also *Tropical*, because they turn from the antecedent to the consequent.

The Rules of *connex* axioms are these: **f** That is a true *connex* wherein the contrary of the consequent is repugnant to the antecedent, as, *if it is day, 'tis light*; for, *that it is not light*, the contrary to the consequent, is repugnant to, *it is day*, the antecedent. A false *connex* is that wherein the contrary to the consequent, is not repugnant to the Antecedent; as this, *if it is day, Dion walks*; for, *that Dion walketh not*, is not repugnant to, *it is day*.

h *Adnex* (which some reckon as a species of the *connex*) according to *Crinis*, in his *Dialectick*, is an axiom connected by the conjunction *whereas*, beginning with an axiom, and ending with an axiom; as, *whereas it is day, it is light*, the conjunction sheweth, that the second is a consequent of the first, and that the first is subsistent.

The Rules of *adnex* axioms are these: **i** That is a true *adnex*, which beginneth from true, endeth in that which is consequent; as, *whereas it is day, the Sun is over the Earth*. False is that which beginneth from False, or endeth not consequentially; as,

as, *whereas it is day, Dion walketh*, if this be said when it is not day.

Laert.

i A *conjunct* axiom is that, which is knit together by Conjunctions copulative; as, *it is both day and it is light*. The Rules thereof are these: That is a *right* conjunction wherein all things are true; as, *it is day, and it is light*. That is *false*, which hath something false. An axiom which hath neither conjunction nor disjunction, is to be taken in the sense of the speaker; for conjunction is sometimes taken for disjunction; as, to me, and my heir.

Laert.

A *disjunct* axiom is that which is disjoined, by a disjunctive conjunction; as, *either it is day, or it is night*. This conjunction sheweth, that one of the axioms is false.

Agell. 16.8.

All things that are disjoined, are repugnant to one another, and their opposites likewise are repugnant. Of all things that are disjoined, one must be true, the rest false, otherwise nothing at all is true, or all, or more than one are true, either those which are disjunct, will not be repugnant, or those which are opposite to them will not be contrary to one another, then the disjunct will be false, and is called *ἀντισυνζυγμένον*, as this is, in which the opposites are not contrary; either thou runnest, or walkest, or standest, for they are repugnant to one another, but their opposites are not repugnant, because not to walk, and not to stand, and not to run, are not contrary in themselves; for those things are said to be contrary, which cannot be true together. But you may at the same time neither walk, nor run, nor stand. Every disjunction therefore is not only true, but necessary; for if of contraries there could be a false conjunction, no disjunction could be true.

A *Casual* axiom is that which is connected by this conjunction, *because*, as because it is day, 'tis light; for the first is, as it were cause of the second. The Rules thereof are these: A casual conjunction is *true*, when beginning from true, it endeth in the consequent, and cannot have the antecedent for its consequent; as because it is day, 'tis light: but this axiom, it is light, doth not follow from the other, it is day.

A *False* casual is that which either beginneth from false, or endeth in that which is not consequent, or whose Antecedent may be the consequent, as, because it is night, *Dion walks*.

An Axiom *declarative of the more*, is that which is construed with this conjunction, *more*, as *it is more day than night*. *Declarative of the less*, is contrary to the former, as, *it is less day than night*.

CHAP. XXII.

Of contrary Axioms.

Laert.

Contrary Axioms are those which are repugnant to one another, according to Truth and Falshood, whereof one affirmeth, the other denieth, as; *it is day, it is not day*. Only Negatives are contrary. *ἀντιθέμενα*, and opposite, and repugnant, for only in contraries one proposition is true, the other false. The other three kinds of contraries alledged by *Aristotle*, are pronounced without a conjunction. Whatsoever is pronounced without a conjunction, is neither true nor false, for true and false belongeth to axiom. Axiom is a speech which consisteth in the con-

junction of some thing, whereas, of *Aristotle's* other three kinds of contraries, none are conjunct but simple, as black and white, double and single, sight and blindness.

Adverse are (as likewise defined by *Aristotle*) those which in the same kind are most distant. Nothing that is pronounced by negation is adverse, (*ἐναντίον*) to another, for then the adverse to Virtue will be not Virtue, and to Vice not Vice, and under not Virtue will be included many other things besides Vice, even a Stone, a Horse, and whatsoever is besides Virtue; under not Vice, will be found Virtue, and all other things. Thus all things would be adverse to one, and the same the adverse to Virtue and Vice. Moreover, if Virtue were not adverse to Vice, but to not-vice, the intermediate will be adverse both to good and bad, which is absurd.

The Rules of Contraries are these: 1. Contrariety is principally in Acts, Habits, and the like. 2. Categorems and Qualitatives are called as it were contrary. Prudently and Imprudently in some manner lead to things contrary, but contraries absolutely are in things: and Prudence is so immediately contrary to imprudence, not this to that.

Contraries are either *disjunctive* or *subdisjunctive*; *disjunctive*, as when we say, *it is either day or night*. *Subdisjunctives*, are of two kinds, either *in whole*, betwixt Universals, as, *every living creature either doth or suffereth, no living creature either doth or suffereth*; or *in part*, betwixt particulars, as *he either sitteth or walketh; he neither sitteth nor walketh*.

The rules of contraries are these: Of Dis. * *Simplie.* junctives one being asserted, the other is necessarily taken away; one being taken away, the other is necessarily asserted.

Of subdisjunctives in whole, both cannot be true, both may be false; both cannot be affirmative, both cannot be negative.

Of Subdisjunctives in part, both may be true, because they are taken in part.

CHAP. XXIII.

Of Possible and Impossible, Necessary and Unnecessary, probable, paradoxal and reasonable Axioms.

Moreover of Axioms, some are *possible*, others *impossible*; some *necessary*, others not *unnecessary*. A *possible* Axiom is that which is susceptible of a true prædication, without obstruction from those things, which though external, are yet contingent with the thing it self; as, *Diocles lives*. *Impossible* is that which can never be susceptible of truth, externals oppugning it, as *the Earth flies*. *Necessary* is that which is so true as that it cannot any way receive a false prædication, or, may receive it; but those things which are extrinsecal, will not permit that it be true, as *Virtue profiteth*. *Not-necessary* is that which may be either true or false, exterior things not obstructing it, as *Dion walks*.

b These future repugnants and their parts are according to the same manner, as the present and the past. For if it be true that the thing either shall be or shall not be, it must be either true or false, because futures are determined according to these; as, if a Navy is built to morrow, it is true to say that it shall be built; but if it

* *Simplie. in lib. Arist. de opposit.*

it be not, it is false to say that it shall be built, because it will not be; therefore it will either be, or not be, and consequently one of the two is false.

Concerning possibles and necessities, there is great difference betwixt *Diodorus* and *Chrysippus*. *c Diodorus* holds that only to be possible which either is, or will hereafter be. That which neither is, nor ever shall be, is impossible. As *for me to be at Corinth* is possible, if I ever were there or ever shall be there; but if I never was there, nor ever shall be there, it is impossible. That *a Boy shall be a Grammarian* is not possible, unless hereafter he come to be one.

d On the contrary, *Chrysippus* held, that those things which neither are nor ever shall be, are yet possible to be, as, *to break a Gem*, tho' it never come to be broken. *e* Moreover that from possibles an impossible may follow, as in this Axiom, which is a true connex: *If Dion be dead, He (pointing to Dion) is dead*: The antecedent, *if Dion be dead*, is possible, because it may at some time be true that he shall be dead; but this Axiom, *he is dead*, is impossible: For *Dion* being dead, the Axiom likewise is abolish'd, that *he is dead*, seeing he is no longer that Man, capable of being demonstrated by the Pronoun, *He*, for *he* is a demonstration of a living Creature. If therefore *Dion* being not yet dead, this word, *He* may be said of him, being dead, it cannot be said *he is dead*. So that in this place, *he is dead*, is impossible. For it were not impossible, if, some time after the death of *Dion*, of whom it was before predicated in the connex whilst he lived, it might be again predicated, *he is dead*; but because that cannot be, it is impossible, that, *he is dead*, should be predicated of him.

To conclude, *d* some held with *Diodorus*, that whatsoever is past, is true of necessity. That to impossible there followeth not a possible, and that what cannot be done, neither is nor shall be true. Others (as *Cleanthes* and *Antipater*) that something is possible that neither is nor shall be; that to possible followeth not impossible; and that which is past, is not true of necessity. Others, that something is possible which is not true; that whatsoever is past, is true of necessity, and that to possible followeth also impossible.

Furthermore of Axioms, some are *e probable*, some *paradoxal*, some *reasonable*. A *probable* Axiom is that which perswadeth us by a specious show to assent unto it; as *whatsoever bringeth forth another, is a Mother*; which is false, for the Hen is not the Mother of the Egg.

f Paradoxal Axioms are those which seem true only to the wise, *g* contrary to the opinion of all others. These are likewise in other Arts, besides Philosophy; for what is stranger than to prick the Eyes for the recovery of Sight? If we say this to one ignorant of Chirurgery, will he not laugh at it? Is it not therefore strange, that such things as are true in Philosophy should seem paradoxes to the unlearned.

i A *reasonable* Axiom, is that which hath many conditions requisite to the Truth thereof, as, *I shall live to Morrow*.

CHAP. XXIV.

Of Reciprocal Axioms.

Hitherto of the contrariety and repugnance of Axioms. Now of their consent and agreement, whereby one followeth and is correspondent to another, either according to Truth or falsehood, by *μεταπείσεις*, *reciprocation*.

Of Reciprocation there are three kinds: The first *ἀναστροφή*, *perversion*, a migration into false; the second *ἀντιστροφή*, *conversion*, a migration into true; the third *ἰσοδυναμία*, *equipollence*, into the same.

CHAP. XXV.

Of Signs.

TO the place of, Axioms appertain likewise Signs. *a* Sign is an Axiom antecedent, in a true connex, and having power to detect the consequent. *a Sext. Emp. hypot. 2. 1.*

b Sign is taken two ways: Commonly, for whatsoever falleth under any Sense, and signifieth something that proceedeth from it: And properly, for that which declareth a thing, which is not manifest. *b Sext. adv. log. cap. de signo.*

Things which are certain require no sign, for they are comprehended of themselves; neither those which are wholly uncertain, for they can no way be comprehended; but those only which are uncertain in time, or by nature, may be comprehended by signs, but not by the same. Things that are uncertain in time, are comprehended by commemorative signs; things uncertain by nature, are comprehended by demonstrative. *Sext. Emp. ibid. de Pyrrh. hyp. 2. 10. Galen. Philos.*

Of Signs therefore, some are *demonstrative*, others *communicative*. A *communicative* sign is that which is so near to the thing, that together with the sign the thing it self appeareth, into the knowledge whereof the sign bringeth us, as *Smoke*, which when we see, we know it proceeds from Fire. A *demonstrative* sign is that, which not being observed before with an evident sign, leads us by that to the knowledge of the thing; as when a Female hath Milk, we presently know that she hath brought forth.

CHAP. XXVI.

Of Reasons or Arguments.

Dialectick is the discipline of Speech, concluded by Reason. Reason, *λόγος*, sometimes called also *Argument*, and *Interrogation*, is according to *a Crinis*, and that which consists of one or more sumptions, and an assumption, and an inference; as

If it be day it is light. } *Sumption.*
But it is day: } *Assumption.*
Therefore it is light. } *Inference.*

The Reason of the Stoicks differs from the Syllogisms of Aristotle in three respects: *b* First, a Syllogism, according to Aristotle, cannot have less than two propositions, a reason may have but one; as, *Thou livest, therefore thou breathest*: which kind Antipater calls *μονολήμματα*. Secondly, in Syllogisms, something besides that which is granted in the premises; but in Reasons, the conclusion

R r

conclusion may be the same with both, or either of the sumptions. The first are called *διαφορέμενοι*, as,

If it is day, it is day.

But it is day,

Therefore it is day.

c Alex. Aphrod.
in anal. prior.

c The second are called *ἀναφορῶς πρὸς τὸν λόγον*, as

It is either day or not day.

But it is not day.

Therefore it is not day.

d Alex. Aphrod.
in anal. prior.

d Lastly, in Syllogisms, the conclusion must necessarily follow by reason of the premises, whereas there are three kinds of reasons which have not this property: The first, *μονολήμματα*, already mentioned: The second *ἀμεθόδως πρὸς τὸν λόγον*, not methodically conclusive reasons; as

The first is greater than the second.

The second greater than the third:

Therefore the first is greater than the third.

This concludes necessarily, but not Syllogistically, unless this proposition be put in the first place: *What is greater than another, is greater also than that which is less than that other.* Of the same kind is that Theorem in the first of Euclid's Elements, *This line is equal to that, therefore this line is likewise equal to that*; which is true indeed; but to conclude Syllogistically, requires this universal Proposition, *Those which are equal to a third, are equal to one another.*

e Alex. Aphrod.
in anal. prior.
in Topic. I.

The third kind of reasons, from which Syllogism differeth by this property, are (e) *παρέκκλιοντες λόγοι* redundant reasons, and those of two kinds. The first are such as have a superfluous sumption; as,

Every just thing is honest,

Every honest thing is good,

Every good thing is expetible in it self;

Therefore every just thing is good.

The second are those in which the proper conclusion is not infer'd, but something consequent, or accident, as that argument of Epicure:

Whatsoever is dissolved hath not sense,

Whatsoever hath not Sense pertaineth not to us.

Therefore death pertaineth not to us.

Whereas to conclude Syllogistically, we should say, *Therefore whatsoever is dissolved pertaineth not to us.*

f Not πρὸς λόγον as the learned Burhus hath observed, dial. Cic. 6. 2.

In a reason or argument the *sumption* *λήμμα* and the *assumption* *πρόσληψις* (termed by Aristotle *τὸ μέλαν*) are axioms received by consent of the Adversary, for construction of that which is called Inference *ἐπιφορὰ* (by Aristotle *συμπέρασμα* conclusion) because it is infer'd from the rest.

g Galen. de Doctrina Hippocr. & Plat. lib. 2.

g Of Sumption and Assumption, according to Chrysippus, there are four differences: The first *Scientifick*: The second *Exercitative*, or (as Aristotle calls it) *Dialectick*; The third *Probable* and *Rhetorical*; The fourth *Sophistick*.

CHAP. XXVII.

Of conclusive Reasons.

a Laert. Sext. Empir.

a OF Reasons there are two kinds, *conclusive*, and *not-conclusive*. *Conclusive* Reasons are those, in which the *sumptions* being granted, from the concession thereof, the *Inference* seemeth to follow.

Conclusive reasons, in respect of their matter, are of two kinds, *true* and *false*. *True* are those, which from true sumptions collect a true inference. *Not true*, the contrary.

The Laws and Rules of true and false Reasons are these: Truth is consequent to Truth: As, if it is Day, it is Light. 2. False is consequent to False, as if it be false that it is night, it is likewise false that it is dark. 3. False is consequent to true: As Earth, if it flies is Earth. 4. False is not consequent to true: For, because it is Earth, it is not therefore consequent that it flies.

Again, of true reasons, some are *demonstrative*, others *not-demonstrative*. A *demonstrative* reason is that which by things that are certain, or perspicuous, collecteth that which is uncertain and less perspicuous: As if sweat issue through the Skin, we may understand pores; but sweat issues thro' the Skin; therefore we may understand pores.

Not *demonstrative* are contrary: As, If it is Day, it is Light; but it is day, therefore it is Light. Herein the Inference, *It is Light*, is certain.

CHAP. XXVIII.

Of Syllogistick conclusive Reasons, or Syllogism.

CONCLUSIVE Reasons, as to their form likewise are of two kinds; *Syllogistically conclusive*, and *not Syllogistically conclusive*.

a A *Syllogistically conclusive* Reasons (or Syllogisms) are those which either cannot be more concluded, or whereof one or more of the sumptions are reduced to those which cannot be concluded again; as, if Dion walks, he is moved.

Syllogisms (by which the Stoicks understand only the tropical, or hypothetical) are of three kinds, *connex*, *disjunct*, *conjunct*.

b A *connex* Syllogism is, when two are so connected in themselves, that one is the antecedent, the other the consequent, in such manner, as, if the antecedent be asserted, the consequent followeth, and the consequent being taken away, the antecedent is likewise taken away, as, if it be day, it is not night, this antecedent is true, therefore it followeth, it is Night. This kind of Syllogism pertains to the first and second Moods. In the first it is called from position of the antecedent, to position of the consequent; in the second, from negation of the antecedent, to negation of the consequent. The Laws concerning the Truth, or falshood of these Syllogisms are the same with those of *connex* Axioms.

Of *connex* Syllogisms there are two kinds; *connex in themselves*, as if it is light, it is light; but it is light, therefore it is light; and *connex by others*; as, if it is day, it is light; but it is day, therefore it is light.

c A *conjunct* Syllogism, is c when we deny something conjunct, and to these add another negation, and of these take the first, that what remains be taken away, as d it cannot be that a Legacy is Money, and Money not a Legacy; but a Legacy is Money, therefore Money is a Legacy.

e A *disjunct* Syllogism is that in which there cannot be more than one thing true, or; that in which if one be, the other is not, or if one be not, the other is; as, It is either day or night, but it is not night, therefore it is day; for one being asserted, the other is taken away, and so on the contrary. f The Evidence of this Syllogism Chrysippus conceives to be so great, that even Dogs have knowledge thereof. For coming to a place where are three ways, if by the scent they find that the

Beast

Beast hath not gone in two of them, they run directly to the third without scenting, as if they argued thus, the Beast went either this way, or that way, but neither this way nor that way, therefore that way: The Laws of disjunct Syllogisms are the same as those of disjunct axioms.

C H A P. XXIX.

Of MOODS.

a SYLlogistick, conclusive Reasons are disposed into Moods. Of Moods there are two kinds, the first *simple*, properly call'd a Mood, $\pi\rho\acute{o}\tau\omicron\varsigma$, defin'd a kind of figure of the Reason, as thus,

*If the first is, the second is,
But the first is,
Therefore the second is.*

(It is observable by the way, that the *Stoicks* for Letters used Numbers:) The other *compounded*, called $\lambda\omicron\gamma\omicron\lambda\acute{o}\gamma\omicron\varsigma$, as being consistent of both Reason and Mood, as,

*If Plato liveth, Plato breatheth,
But the first,
Therefore the second.*

This is used in a long Syntax, that it be not necessary to speak a long assumption, or a long Inference, but they abbreviate them thus, but the first, therefore the second.

Of Moods or Tropes there are two kinds, one of *Indemonstrables*, so term'd, not that they cannot be demonstrated, but because they conclude so evidently, that they need not be reproved; the other of *Demonstrables*.

Of *Indemonstrable Moods*, there are (according to *Chrysippus*) five, according to * others more or less.

The first wherein every reason consists of a Connex, and an Antecedent from which beginneth the connex, and the consequent is infer'd, as,

*If the first, then the second,
But the first,
Therefore the second.*

The second indemonstrable is, which, by the consequent of the Connex, and the contrary of the consequent, hath a conclusion contrary to the Antecedent, as,

*If it is day, 'tis light,
But it is night,
Therefore it is not day.*

The third is that which by a negative complication, and one of those which are in the complication, infers the contrary to that which remains, as,

*Plato is not both dead and alive,
But Plato is dead,
Therefore Plato is not alive.*

The fourth is that which by a disjunctive, and one of those which is in the disjunctive, concludeth the contrary to that which remains, as,

*Either 'tis the first or second,
But it is the first,
Therefore it is not the second.*

The fifth is that wherein the whole reason is connected by a disjunctive, and one of those which are in the disjunctive of the contrary, inferreth the rest, as,

*Either it is Night, or it is Day,
But it is not Night,
Therefore it is Day.*

C H A P. XXXI.

Of not-Syllogistick-conclusive Reasons.

a REasons not-Syllogistically-conclusive (which *a* *Laert.* are likewise especially called (as their Genus) conclusive in opposition to Syllogisms) are those which conclude not by way of Syllogism, as,

*It is false, that it is both Night and Day,
But it is day,
Therefore it is not Night.*

And this of *Chrysippus*.

*Whatsoever is good is laudable,
Whatsoever is laudable is honest,
Therefore whatsoever is good is honest.*

These not-Syllogistick, or *Categorick-Conclusives*, are frequently used by the *Stoicks* (as by *Zeno* in *Cicero*) but immethodically, not reduc'd to Mood and Figure. Those they applied only to Tropical Reasons, as in which consisteth the sole way and order of Inference. The *Categorical* are not Syllogisms, because in them something is ever omitted, and therefore they are $\alpha\mu\epsilon\theta\acute{o}\delta\omega\varsigma\ \pi\epsilon\sigma\chi\iota\nu\omicron\iota\tau\epsilon\varsigma$, immethodically conclusive; as in that Argument of *Chrysippus* last mentioned, two assumptions, and an inference are omitted, for it ought to be thus,

*If it be good, it is laudable,
But it is good,
Therefore it is laudable.*

And again,

*If it be laudable, it is honest,
But it is laudable,
Therefore it is honest.*

Hence are Derived those reasons which are called $\epsilon\mu\pi\acute{\alpha}\lambda\lambda\omicron\upsilon\tau\epsilon\varsigma$, and $\epsilon\mu\pi\acute{\alpha}\lambda\lambda\omicron\upsilon\tau\epsilon\varsigma$, *Adjicient* and *Adject*, consisting of propositions continually assuming without conclusions. *Adject* are those whose conclusion is omitted; *Adjicient*, those whose demonstrative proposition is omitted, as,

*The First of every second,
The Second of every Third,
The third of every fourth;
Therefore the first of every fourth.*

In this adject, the conclusion is omitted, which is, therefore the first of every third.

C H A P. XXXI.

Of not-conclusive Reasons.

a NOT-conclusive Reasons are those, whose *a* *Laert.* opposite to the inference is repugnant to the connexion of the Sumptions: *b* they are *Sext. Emp. adv. Logic.* four kinds. 1. By incoherence. 2. By redundance. 3. By being in an ill figure. 4. By defect.

By incoherence, when the Propositions have no conjunction or Communion with one another, nor with the Inference, as,

*If it is day, it is light,
But corn is sold,
Therefore it is Light.*

For neither, *it is day*, hath any communion with *Corn is sold*, nor both of them together, with, *it is Light*, but each dependeth upon something else.

By Redundance, when something is assumed to the proposition extrinsecal and superfluous, as,

*If it is day, it is light,
But it is day, and Virtue profiteth,
Therefore it is light.*

For *Virtue profiteth*, is superfluously assumed with the other proposition, the inference depending upon the other two.

By being in an ill figure, as this is a right figure,

*If the first, the second,
But the first is,
Therefore the second.*

But this,

*If the first, the second,
But not the second.*

Is not conclusive; not that in this Figure, there cannot be Reason which may collect Truth from Truth, for that it may do, as thus,

*If three are four, six are eight,
But three are not four,
Therefore six are not eight.*

But because there may be some ill reasons in it, as this,

*If it be day, 'tis light,
But it is not day,
Therefore it is not light.*

By Defect, when there wants one of the collective propositions, as,

*Riches are either ill or good,
But Riches are not good;
Therefore they are ill.*

For in the disjunct there wanteth this, or indifferent; so that to be perfect the sumption should be thus, Riches are ill, or good, or indifferent.

CHAP. XXXII.

Of fallacious Reasons or Sophisms.

BY Dialectick are discerned true and false Reasons: The latter are *Sophisms*, proper to *Sophists*, who dispute for vain-glory, or gain; as true Reasons are to *Logicians*, whose end is only to find out Truth.

Of fallacious Reasons there are many kinds; the *Quiescent* Reason, or *Sorites*, the *Lying*, the *Inexplicable*, the *Sluggish*, the *Dominative*, the *Vailed*, *Electra*, the *Horned*, the *Crocodilite*, the *Reciprocal*, the *Nullity*, the *Defective*, the *Mower*, the *Bald*, the *Occult*, the *Negative*.

a Sorites, named from *σός*, a heap, is *b* when from things evidently true, by short mutations, the dispute is brought to things evidently false: *c* As, *are not two few? Are not three so likewise; And four, and so on to ten? But, two are a few, therefore ten.* *d* It is called also *ισχυρίζων λόγος*, the quiescent reason, *e* because the way to understand it, is by stopping, and withholding the assent.

The lying reason, *ψευδόμενος λόγος*, is a captious Argument, not to be dissolved. Of this, see the Life of *Eubulides*.

f The inexplicable reason, *ἄσπερος λόγος*, so called, from the intricate nature thereof, not to be dissolved; wherefore it seems to be the same

with the lying, and perhaps the genus to most of those which follow.

The sluggish reason, *ἀργός λόγος*, is manifested by this example: *g* If it be decreed that you shall recover of this Sickness, you shall recover *h* whether you take Physick or not: Again, if it be decreed you shall not recover, you shall not recover, whether you take Physick or not. Therefore it is to no purpose to take Physick. This Argument is justly termed sluggish, saith *Cicero*, because by the same reason, all actions may be taken away from Life.

The Dominative Reason, *κυβεύων λόγος*: Of this already in the Life of *Diodorus*.

The vailed Reason, *ἐγκυκαλυμμένος λόγος*: Of this, and *Electra*, and the Horned Reason, *κερῶν* λόγος, in the Life of *Eubulides*.

The Crocodilite, so named from this *Aegyptian* *b* *Doxopus* in Fable: *b* A Woman sitting by the side of *Nilus*, a Crocodile snatch'd away her Child, promising to restore him, if she would answer truly to what he asked; which was, *Whether he meant to restore him or not?* She answer'd, *Not to restore him*, and challenged his promise, as having said the Truth: He reply'd, that if he should let her have him, she had not told true.

The reciprocal Reasons, *μεταπίπτοντες*, such was that of *i* *Protagoras* the Sophist, against *Evathlus*, a rich young man, his Disciple, who promised him a great sum of Money for teaching him, whereof half he paid in hand, the other half was to be paid the first that he should Plead before the Judges, and carry the Cause. Having learned long, and attained a great perfection in Rhetorick, he forbore to Plead in Publick, that he might defraud *Protagoras*. *Protagoras* sues him, and the Cause coming to a hearing, begins thus: *Know, foolish young man, that which way soever the Cause goes, whether for thee or against thee, thou must pay what I demand. If against thee, it will be given me by judgment; If for thee, thou must pay it according to our agreement.* *Evathlus* answers: *I might have been entrapped by your Subtily, if I did not Plead my self, but had employ'd some other to Plead for me. Now I rejoyce doubly in the Victory, that I shall be too hard for you, not only in Cause, but in Argument. Know therefore, my most wise Master, that which way soever the Cause goeth, either with me, or against me, I will not pay what you demand. If it go with me, the judgment will acquit me; if against me, you are to have nothing by our agreement.* The Judges not able to determine it, dismissed them both.

k The nullity, *ἔτις*, used by *Ulysses*, who called himself *ἔτις*, no Body, when he hurt *Polypheme*, whence it came to be so named.

The defective Reason, *ἐλλιπής λόγος*, mentioned by *Laertius* in *Zenone*: The Mower *θερίζων λόγος*, by *Lucian*: The Bald, *φαλακρός λόγος*, by *Laertius* in *Eubulide*: The occult, *διαλανθάνων λόγος*, by *Laertius* in *Eubulide*: The negative, *ἀποφάσκων λόγος*, by *Laertius* in *Chrysippo*, and by *Epicetus*. But of these enough.

CHAP. XXXIII.

Of Method.

THERE are two kinds of Disputation: *a* One, when the Truth it self is subtilly polished in the dispute: The other, when every expressi-

a *Suid.*
b *Ulpian.*
c *Laert.* the example be
falsely applied,
as *Euripus*
and *Casaubon*
have observed.
d *Laert.* in
Chrysip.
e *Cic.* *acad.*
quæst. 4.

f *Augel.* 9. 15.

g *Augel.* 5. 15.

k *Odys.*

a *Cic.* *Offic.*

on is accommodated to the vulgar Opinion; for, we must use popular and usual words, when we speak of popular opinions, which *Panætius* in the like manner hath done.

b Cic. de fin. 3. *b* The first way was peculiar to the Stoicks, short, acute, and spinous, called likewise Logick most worthy of Philosophy; for this useth definition, divisions, and the lights which they afford, as likewise similitudes, dissimilitudes, and the nice acute distinction of them.

c Senec. Epist. 14. 90. The vulgar way of dispute is likewise twofold, one by continued Oration; The other by Question and Answer: The first called *c Analytick*, or *d Rhetorical*; the other *e Topick*, or *f Dialectical*. *g* Tho' the first be delightful, yet the latter is more commodious, when we insist on particulars, and understand what every Man granteth, what every Man denieth, what we would have concluded from concessions, and brought to an end. For, when a Speech is carried on like a Torrent, altho it bears many things along with it; yet we can hold nothing, we cannot stop the rapid course of an Oration. *b* The other, concluding as *Zeno* used, more shortly and narrowly, lieth more open to reprehension.

a Cic. de nat. deor. 2. As a River in its Course, cannot at all, or very hardly be corrupted, but water shut up, easily: So by a fluent Oration, the faults of the opposer are carried quite away; in a narrow Speech, they are not easily defended.

But each of these methods hath a several use, the first is proper for exposition of Arts and Sciences, the other for Disputation.

THE SECOND PART.

CHAP. I.

ETHICK and the Parts thereof.

a Laert.

a THE Moral part of Philosophy is divided into these places; Of Appetite, Of Good and Ill, Of Passions, Of Virtue, Of the End, of the first Estimation, Of Actions, Offices, Exhortations and Dehortations.

Thus distinguisheth *Chrysippus*, *Archidemus*, *Zeno of Taris*, *Apollodorus*, *Diogenes* (the Babylonians) *Antipater* and *Possidonius*. But *Zeno* the Cittiean, and *Cleanthes*, as being more ancient, were less accurate in their manner of treating upon these things.

CHAP. II.

Of Appetite.

a Stob. Eclog. Ethic.

THE consideration of Ethick, beginneth properly from Appetite. *a* Appetite is moved by Phantasie of an Office, for it is, the impulsion of the Soul to something.

Appetite in rational and irrational Creatures is different; *ὁρεξις*, is not rational appetite, but a species of rational appetite. Rational appetite is defined an impulsion of the Intellect to the doing of something. *ὁρεσις* is a species of pra-

ctick appetite, being an impulsion of the Intellect to something future. Hence appetite is taken four ways, for rational and irrational Inclination, and for rational and irrational aversion. To these may be added the habit of Appetition, which is likewise called Appetite, the Origine of all appetitive Acts.

Of practick Appetite there are many species, of which are

1. *προβρεσις*, A Designation.
2. *ἐπιβρεσις*, An Appetite before Appetite.
3. *πρὸς πραξιν*, An Action before Action.
4. *ἐγχειρησις*, an Appetite to something now existent.
5. *διερεσις*, A Will by ratiocination.
6. *προαίρεσις*, A Will before a Will.
7. *βέλησις*, An Appetite joyned with Reason.
1. *θέλησις*, a spontaneous Will.

CHAP. III.

Of first Natural Appetite.

a THE first appetite of a living creature is to preserve it self, this being from the beginning proper to it by nature, as *Chrysippus* in his first Book of Ends, who affirms that the care of our selves, and the consciousness thereof, is the first property of all living Creatures. For, Nature producing a living creature, intended either to alienate it from it self, or to commend it unto its own care; but the first is not likely; it followeth therefore, that Nature commendeth to every thing the preservation of it self, whereby it repulseth whatsoever is hurtful, and pursueth what is convenient.

b As soon therefore as a living creature cometh into the World, it is conciliated to it self; commended to the conservation of it self and its own state, and to the Election of such things as may preserve its state; but alienated from Destruction, and from all such things as may destroy it. This is manifest, in as much as before the accession of Pleasure or grief, young creatures desire those things which conduce to their wellfare, and refuse the contrary; which would not be, if they did not love their own state, and fear destruction. Neither could they desire any thing without having some sense of themselves, whereby they love themselves, and what belong to them. Hence it is manifest, that the principle of this love is derived from themselves.

c Whereas some do hold the first appetite of a living creature to be that of pleasure, that is false.

d The greater part of Stoicks conceive that pleasure is not to be placed amongst the natural principles of love to our selves; for if Nature had so ordered it, many dishonest things would have followed. *e* Pleasure is an after-accession, when as Nature enquiring by it self into it self, receiveth those things which are agreeable to its constitution, after which manner living creatures are exhilarated, and plants sprout forth. Nature hath thus far made no difference betwixt plants and living creatures, that whereas plants are ordered without appetite or sense, there is in living creatures something according to the nature of plants: But, there being over and above in living creatures an innate appetite, whereby

whereby they go to those things that are proper for them, the natural part in them is governed by the appetitive.

f Cic. de fin. 3. *f* That we naturally love those things which are first proposed unto us by Nature, may be argued from hence, in that there is no man, if both were put to his choice, but had rather have all his Limbs able and sound, than useless and imperfect. These comprehensions we conceive fit to be acquired for their own sake, because they have in themselves something, as it were, complex, including Truth. This is discernable in young ones, whom we see delighted, tho it nothing concerns them, if they themselves find out any thing by reason. Even the Arts we conceive to be assumed for themselves, as well because in these there is something worthy assumption, as because they consist of knowledge, and contain some things constituted by reason and power.

C H A P. IV.

Of Appetites consequent to the first.

a Cic. de fin. 3. **T**HUS according *a* to the first innate principles of Nature, those things which are according to nature being experible in themselves their contraries avoidable in themselves, the first Office is to conserve it self in the state of nature; the next, to obtain those things which are according to nature.

Here beginneth good to be first understood, for it is the first conciliation of man to things according to nature. This good, as soon as man receiveth intelligence or notion thereof, and seeth the order and concord of Offices, he esteemeth far above those things which he formerly loved, and by rational knowledge collecteth, that herein is placed the chief good of man, laudable and experible in it self. To this chief good, which consisteth in homologie or convenience, all honest actions having reference, honesty it self, which is reckoned amongst the good, tho it rise afterward, is notwithstanding alone experible in its own power and dignity. But, of those which are the first objects of nature, none is experible in it self.

Now whereas offices proceed from the first natural objects, they must necessarily be referred to the same; so as all Offices tend to the fulfilling of the first natural appetites; yet, not so, as if therein consisted the ultimate good. Honest action is in the first conciliation of nature, for it is consequent, and ariseth as we said afterward; yet, it is according to nature, and much more allecive than all that go before it.

And seeing that all Offices proceed from the first natural appetites, even wisdom it self must be derived from thence likewise. But as it often happens, that he who is recommended to another, more esteemeth him to whom he is recommended, than the person which recommended him: so it is not strange, that we being recommended to wisdom by the first natural appetite, afterwards more esteem that Wisdom, than those things whereby we arrived at it. And as our Limbs are given to us for a certain reason of living, so the appetite of the Soul is given, not for every kind of life, but for one certain form of living; so likewise Reason and perfect Reason. For, as Action is proper to a Player, Motion to a

Dancer; yet, not any, but one certain kind: so the life that is to be acted, is in one certain kind, not in any, which kind we call convenient and consentaneous. Wisdom is not like the Art of a Pilot, or a Physician; but rather to that Action we mentioned, and to Dancing, that the extream, that is, the effect of the Art be in the Art it self, and not extrinsecal. There is another similitude betwixt Wisdom and these Arts, for in them are those things which are done rightly; yet, are not all the parts, whereof they consist, contain'd therein. Things done rightly, or Rectitudes, contain all numbers of Virtue; for, only Wisdom is wholly converted into it self, which is not in other Arts. But improperly is the Art of a Pilot and a Physician, compared with the ultimate of Wisdom: For, Wisdom includeth Fortitude and Justice, and judgeth all things that happen to Man to be below it, which happeneth not in other Arts: but none can hold these Virtues which we last mentioned, unless he affirm there is nothing that's different, but honest and dishonest.

C H A P. V.

Of Good and Ill.

Hitherto of Appetites; we come next to their Objects. *a* Things (according to *Zeno*) are whatsoever participate of Essence. Of Things, some are good, some ill, some indifferent. *a Stob.*

b Good is several ways defined by the Stoicks; *b Cic. de fin. 3.* but their definitions tend all to one end. *c* Good is Profit, or that which differeth not from Profit. *c Sext. 1. m. p. r. Parph. 3. 20.* Profit is Virtue, and a virtuous action; not different from Profit is a Virtuous Man, and a Friend. For Virtue being a *quodammodo* Hegemoniack, and virtuous action being an operation according to Virtue, is plainly Profit. A Virtuous man and a Friend is not different from profit; for Profit is a part of Virtuous, as being the Hegemoniack thereof. Now the wholes are neither the same with their parts, for a man is not a hand; nor different from their parts, for they subsist not without parts; wherefore the whole is not different from its parts, and consequently, a virtuous man being the whole, in respect of his Hegemoniack, which is profit, is not different from profit.

Good is by some defined, that which is experible in it self; by others, that which assisteth to felicity, or compleateth it: by *e Diogenes*, that which is absolute by nature [or, *f* that which is perfect, according to the nature of a rational creature.] *e Cic. de fin. 3. f Laert.* The consequent thereof is a beneficent motion, or state absolute in nature.

Whereas things are known, either by use, or conjunction, or similitude, or collation, by this fourth kind is the knowledge of good; for when from those things which are according to nature, the Mind ascendeth by collation of Reason, then it attaineth the notion of good.

b Good is known and armed, not by accession, increase, or comparison with other things, but by its proper power. For as Honey, tho it be most sweet: yet, in its proper kind of tast, not comparative to any other, we perceive it to be sweet: So this good of which we speak, is that which is most to be esteemed; but that estimation consisteth in the kind, not the magnitude. For estimation being neither amongst the good nor ill, whatsoever

whatsoever you apply it to, it will remain in its kind. Different therefore is the proper estimation of Vertue, which consisteth in the kind, not in increase.

i Laert. Stob. *i* To Good belongeth all Vertue, as Prudence, Justice, Temperance, Fortitude, and whatsoever participates of those, as Vertuous Actions, and Persons. *k* Accessions here are Joy, Cheerfulness, and the like.

l Laert. Stob. *l* Ills are the contrary Vices, as Imprudence, Injustice, Intemperance, Pusillanimity, and whatsoever participates of Vice, as Vicious Actions and Persons. *m* The accessions herunto are discontent, affliction, and the like.

n Stob. *n* Of Goods, some, as we have said, are Vertues, others not Vertues, as Joy, Hope, and the like. In like manner of Ills, some are Vices, as those already mention'd; others not Vices, as Grief and Fear.

o Stob. Again; *o* Of Goods, some are continual in all the Vertuous, and at all times; such is all Vertue, sound Sense, wise appetition, and the like. Others are intermissive, as Joy, Hope, and prudent Counsel, which are not in all the wise, nor at all times.

In like manner of Ills, some are continual in all, and always in the Imprudent, as all Vice, and imprudent sense, and imprudent Appetite: Others intermissive, as grief, fear, and imprudent answer, which are not always in the wicked, nor at all times.

p Laert. Stob. Sext. Emp. Pyrrh. hypot. 3. 21. *p* Again, of Good, there are three kinds, The first from which Profit cometh, as from its first cause, such is Vertue: The second, by which profit cometh, as Vertue, and vertuous Action: The third, that which may profit, as Vertue, and Vertuous Actions, and a Vertuous Man, and a Friend, and the Gods and good Demons. *q* Thus the second signification includeth the first; and the third, both the first and second.

r Laert. Stob. *r* In like manner of Ills, there are three kinds: First, that from which hurt originally proceedeth, as Vice: Secondly, that by which hurt cometh, as vicious Actions: Lastly, and most largely, whatsoever is able to hurt.

s Laert. Stob. Sext. Emp. Pyrrh. hyp. 3. 23. *s* Again, of Goods, some are in the Soul, as Vertue, and vertuous Actions: Some without the Soul, as a true Friend, a good Country, and the like: Some neither within nor without the Soul: As good and Vertuous Men.

t Laert. Stob. *t* In like manner of Ills, some are within the Soul, as Vices, and vicious Actions; some without the Soul, as imprudent Friends, Enemies, and the like, some neither within nor without the Soul, as wicked Men, and all that participate of Vice.

u Laert. Stob. *u* Of Goods within the Soul, some are habits, some affections, some neither habits nor affections. The Vertues themselves are affections; their studies habits, not affections; their acts neither habits nor affections.

x Laert. Stob. *x* In like manner of Ills, some are affections, as Vices; some habits only, as infirmities of mind, and the like; some neither habits nor affections, as vicious actions.

y Laert. Stob. Cic. de finib. 3. *y* Again, Of Goods, some are final, some efficient, some both final and efficient. A Friend, and the benefits arising from him, are efficient Goods. Fortitude, Magnanimity, Liberty, Delectation, Joy, Tranquillity, and all Vertuous actions, are final Goods. Both efficient and

final, as all Vertues, as they perfect Felicity they are efficient, as they constitute it as parts, thereof, final.

z Laert. Stob. *z* In like manner of Ills, some are final, some efficient, some both. Fear, baseness, servitude, stupidity, frowardness, grief, and all vicious actions, are final: Participant of, are vices, as they procure misfortune they are efficient, as they constitute it as parts thereof, final.

a Stob. *a* Again, Of Goods, some are expetible in themselves, not desired for the sake of any other: Others are preparatory to some other, called effectively expetible. The expetible in themselves are (according to Diogenes) of two kinds: 1. Ultimately expetible, as Beatitude. 2. Those which have in them the cause of being expetible, as every good hath.

b Stob. *b* Again, Of Goods some are necessary Beatitude, as all Vertues and their Acts; others not necessary, as Joy, delectation, and study. In like manner of Ills, some are necessary to infelicity, as all the vices and their Acts; others not necessary thereunto, as all passions and infirmities of the Soul and the like.

c Stob. *c* Again, Of Goods, some consist in motion, as Joy, delectation and the like; some in affection, as quiet, imperturbation; of those which consist in affection, some are likewise in habit, as the Vertues; others in affection only, as the former. Neither consist the Vertues only in habits, but other acts likewise, changed by a vertuous Man, in a manner into vertue. Of these Goods which are in habit, are those we call studies, as love of Learning, and the like. For these Arts by their affinity with Vertue lead directly to our chief end.

Again, *d* Of Goods, some are absolute, as Science; others relative, as honour, benevolence, friendship, and the like. *d Stob.*

e Stob. *e* Science is a certain infallible comprehension by reason. It is taken three ways. First, for a System of Sciences conjoyned together in a good Man; Secondly for a System of artificial Sciences, having a certainty. Lastly, for a demonstrative infallible habit of Phantasies by reason.

f Stob. *f* Friendship, is a community of Life, and consent of studies. The kinds thereof are fix.

1. *γνωσιώδης* a Friendship amongst known persons.

2. *συγγενεῖα*, amongst Familiars.

3. *ἐταρεία*, Amongst those of the same age.

4. *ξενία*, towards Strangers.

5. *συγγενική*, amongst Kindred.

6. *ἐρωτική*, from Love.

g Laert. Stob. *g* Again, of Goods, some are simple, as knowledge; others mixt, as, *εὐσενία*, a good use of Children conformable to Nature, as *εὐγυνεῖα*, good use of old Age conformable to Nature, *εὐζωία*, a good use of Life conformable to Nature.

Exemption from Grief, *ἀλυσία*, and conservation of Order, *ἐνταξία*, are the same with, as the mind is with prudence, and communion with goodness; yet are otherwise referred, which is observable likewise in the other vertues. Hence are the same distinctions applicable to ill.

h Laert. Stob. *h* Every good is beneficial, opportune, conducive, useful, commendable, fair, helpful, eligible, just.

Beneficial, *συμφερόν*, as conferring that where by we receive Benefit.

Opportune, *δίων*, as comprising that whereof we stand in need.

Condu-

Conducible, λυσιτελες, as resolving in it self the means, as the gain acquired by Traffick exceeds the charge.

Useful, χρησιμος, as conducing to our profit.

Commendable, ευχριστος, from the use.

Fair, καλον, as proportioned to the necessities of receivers.

Helpful, ἀφέλιμος, as it relieves us.

Eligible, αἰρετον, as being in reason to be preferred.

Just, δικαιον, as being conformable to Law.

Stob. On the contrary, every ill is unbeneficial, importune, inconducible, unuseful, uncommendable, foul, unhelpful, avoidable, and unjust.

Laert. *k* Perfect good, is called καλον, *Fair*, because it is absolute in all numbers required of Nature, and perfectly proportionate.

Laert. *l* Of *Fair*, (or *Honest*) there are four Species, *Just*, *Valiant*, *Temperate*, *Knowing*; in these are honest actions consummated.

Laert. *m* Likewise of αἰσεν, *foul*, (or *dishonest*) are four Species, *unjust*, *cowardly*, *dissolute*, *foolish*.

Laert. *n* *Honest*, is called καλον, *Fair*, first, because it renders those who are endued therewith, worthy of Praise; Secondly, because it is most suitable to its proper work; Thirdly, because 'tis an ornament; we say a wise Man is only good and fair.

Laert. *o* Only that which is good, is fair or honest: So *Hecato* in his third Book of Good; and *Chrysippus* of Fair. This is Virtue, and what participates thereof, which is all one as to say, that whatsoever is good, is honest likewise; and reciprocally whatsoever is honest, is good.

Cic. de fin. 3. *p* That what is honest, only is good, is prov'd thus. Whatsoever is good, is laudable; Whatsoever is laudable, is honest; therefore whatsoever is good is honest. Again, there is no good which is not expetible, nothing expetible which is not pleasant and amiable, therefore approvable, therefore laudable, therefore honest. Again, no Man can glory in a Life that is miserable or not happy, therefore to glory is proper, to the happy, but to glory relateth only to that which is honest, therefore honest is happy. And as he who is laudable, hath some eminent mark of renown and glory, for which he is justly stiled happy, the same may be said of the life of such a Man, whence if a happy life consist in Honesty, only that which is honest is to be esteem'd good. Moreover, what Man can be termed constant, firm, magnanimous, unless we grant that pain is not an ill? For, he who reckoneth Death amongst the Ills, cannot but fear it; so no Man in any thing can neglect and contemn that which he accounteth ill. This being granted, the next assumption is this, he who is magnanimous and valiant, despiseth, as if they were nothing, all things that can arrive to Man; whence it followeth, that nothing is ill which is not dishonest; and this sublime, excellent, magnanimous Person, accounting all humane things below him, confideth in himself and his own Life past and future, knowing that no Ill can happen to a Wise Man. Whereby we see that what is honest only is good, which is to live happily and honestly.

Cic. ibid. *q* On the other side, nothing is good, but what is honest; for who is, or ever was so feverently covetous, and of such disordinate affections, that the same things, for the attainment

whereof he would perpetrate any Wickedness, he had not much attain'd unto (setting aside all punishment) without all that wicked means? What advantage or fruit do we aim at, in desiring to know those things which are hidden from us, how they are moved, and by what causes agitated in Heaven? Who is so savage, so obdurate to natural Studies, that he abhors things worthy knowledg, receives them without Pleasure, or some benefit, and values them at nothing? Who is there, that when he heareth of the Actions, Speeches, Counsels of magnanimous Persons, eminent in all Virtue, is not affected with any Pleasure? Who is there, that being instituted in an honest Family, and ingenuously Educated, is not offended at dishonesty, though it bring no hurt to him? Who is there, that looks without trouble upon such as live impurely and flagitiously? Who doth not hate sordid, vain, light, frivolous Persons? If dishonesty were not in it self avoidable, why should Men, when they are in the dark, or in a Wilderness, abstain from any thing that is evil, but that the very deformity and dishonesty thereof deters them? Nothing therefore is more clear, than that honest things are expetible in themselves, and dishonest things avoidable in themselves.

Hence it followeth, that what is honest, is more estimable than those mean things which accrue by it. And when we say, that folly, temerity, injustice, and intemperance, are avoidable, in respect of those things which are consequent to them, it contradicts not the former assertion, that what is dishonest only is ill, because they relate not to the hurt of the Body, but to dishonest actions which proceed from Vice.

Laert. *r* All good is equal, and every good is highly expetible, and admits neither increase, nor decrease. *Cic. de fin. 3.* Here cometh in a great Controversie betwixt the *Stoicks* and the *Peripateticks*, which though *Carneades* affirms to be only verbal, *Cicero* holdeth to be more things than words.

Cic. ibid. *s* The *Peripateticks* hold, that all goods are requisite to happy Life; the *Stoicks*, that whatsoever is worthy estimation, comprehendeth happy life. Those holding pain to be an ill, it follows, that a wise Man cannot be happy upon the Rack. These who account not pain among the Ills, hold, that a wise Man continueth happy in the midst of Torments: For, if some bear those Pains with greater Courage for their Country, or some lighter cause, opinion, not nature increaseth or diminisheth the power of the Pain. Again, the *Peripateticks* asserting three kinds of good, affirm a Man to be so much the more happy, the fuller he is of external corporeal goods; or, in the *Stoicks* Expression, he who hath most corporeal estimables, is most happy, for as much as by them Beatitude is compleated. On the contrary, the *Stoicks* hold, that those goods which they call of Nature, make not by their frequency a life more happy, or are more expetible, or more estimable: For then wisdom being expetible, and health expetible, both together would be more expetible than Wisdom alone; whereas either being worthy estimation, both are not more worthy of estimation than wisdom alone. For the *Stoicks*, who held Health to be estimable, but place it not amongst the goods, hold likewise, that no estimation is to be preferred before Virtue.

tue. From this, the *Peripateticks* dissent, asserting that an honest action without Pain, is more expetible than the same action with pain ; the *Stoicks* otherwise. For, as a Taper is darkned by the light of the Sun, and as a drop of Water is lost in the vastness of the *Ægean* Sea, and as in the riches of *Crasus* the accession of one farthing, and one step in the way between this and *India*, so in that end of all good which the *Stoicks* assert, all the estimation of corporeal things must necessarily be obscur'd, overwhelm'd, and perish, by the splendor and magnitude of vertue. And as opportunity *ἐνκαιρία*, is not made any thing greater by production of time, for whatsoever is opportune hath its measure ; so right affection, *κατὰ φύσιν*, and the good it self placed in it, that it be conformable to Nature, admitteth no accession of increase. For as that opportunity, to those of which we speak, are not made greater by production of time, for which reason the *Stoicks* conceive, that a happy Life is not more to be desired, if it be long, than if it be short ; and they use this Simily: As it is the praise of a shooe to fit the Foot, neither are many Shooes preferr'd before two, nor the greater before the less : So in those things, whose good is confin'd to opportunity and convenience, neither are the more to be preferr'd before the fewer, nor the longer before the shorter. Nor do they argue acutely, who say, if long health be more to be esteem'd than short, then likewise a long use of wisdom, more than a short ; they understand not, that the estimation of Health is judged by space, that of vertue by opportunity ; as if they should say likewise a good death, or a good labour to a Woman in Travel, is better longer than short ; so that they see not, that some things are more esteemed for their shortness, others for their length.

C H A P. VI.

Of Eupathies.

^a **A**S soon as any object is presented to us, which seemeth good, Nature [*as we said*] drives, us on to the acquisition thereof, which being done constantly and prudently, is call'd Will ; imprudently and excessively, Desire. ^b Moreover, while we are so moved, that we are in some good, that happeneth also two ways, when the Soul is mov'd quietly and constantly according to reason, this is called Joy ; when vainly and excessively, Pleasure. ^c In like manner, as we desire good things by nature, so by nature we decline the Ill : This declination, if done according to reason, is called Caution, if without reason, Fear. ^d Caution is only in a wise man, of Fear he is not capable. Hence it appeareth, that there are three kinds of good affections of the Mind, called ^e *Eupathies*, or ^f *Constancies* ; Joy, Caution, Will. ^{1.} ^g Joy is contrary to Pleasure, as being a rational Elevation of the Mind. ^{2.} Caution is contrary to Fear, as being a rational declination of ill. ^{3.} Will is contrary to desire, as being a rational Appetite. These are the primary Eupathies ; and as under the primary Passions are comprehended ma-

ny subordinate passions ; so are there secondary Eupathies subordinate to those. Under Joy are ^{1.} *Delectation*. ^{2.} *Cheerfulness*. ^{3.} *Æquanimity*. Under Caution, ^{1.} *Respect*. ^{2.} *Clearness*. Under Will are, ^{1.} *Benevolence*. ^{2.} *Salutation*. ^{3.} *Charity*. Notwithstanding that Eupathies and Passions are contrary ; yet are there but three Eupathies, *Cic. Tus. quest. 4.* though there are four Passions ; for there is no Eupathy contrary to Grief.

C H A P. VII.

Of Passions.

^a **F**rom falsities proceedeth a perversity of Intellect, hence spring up several passions, and causes of disorder. ^b *Zeno* defineth passion, a præternatural motion of the Soul, (or as ^c *Cicero* renders it, *a commotion of the Soul, averse from right Reason, against Nature.*) Others more briefly, a more vehement Appetite. More vehement they call that, which recedeth from the constancy of Nature, and ^d is contrary to nature, wherefore all passion is an excessive stupid desire. ^e The kinds of Passion arise from two opinionated goods, and two opinionated Evils, so they are four. From the good, *desire* and *pleasure* ; pleasure from present good, desire from future ; from the ill, *Fear* and *Grief* ; fear from the future, grief from the present ; from these things, whose coming we fear, when they do come, grieve us. Pleasure and desire arise from an opinion of good things, desire is fervently transported to that which seemeth good, pleasure rejoiceth when we have obtained what we desire. Thus ^f *desire* and *fear* go foremost, that to apparent good, this to apparent ill ; *pleasure* and *grief* follows ; pleasure, when we attain what we desire, ^{*} grief, when we incur what we fear. ^{*} *λαττω δταν περιπεσωμεν* *ετι. so supply the Text.* ^g All passions arise from *Judgment* and *Opinion*, whence they are more strictly defined ; (that it may appear not only how vicious they are, but also that they are in our power) thus ; ^b *Grief* is a fresh opinion of present ill, where in it seemeth fit that the Mind be contracted and dejected, or ⁱ a contraction of the Soul caused by opinion of present ill. ^k *Pleasure* is a fresh opinion of present good, wherein it seemeth good that the Mind be exalted, or ^l an irrational elevation of mind to something that seemeth eligible. ^m *Fear* is an opinion of eminent ill, which seemeth to be intolerable ; or a contraction of the Soul disobedient to Reason, caused by expectation of ill. ⁿ *Desire* is an opinion of good to come, that if it were present, it were fit for our use, or ^o an appetite disobedient to Reason, caused by the opinion of consequent good. These four are, as *Hecato* saith, primary passions, under each of which there are subordinate passions, several species belonging to their proper genus. Under *Grief* at these kinds, ^p *Envy*, *φθονος* *invidentia* ; a grief at the prosperity of others, ^q which doth no hurt to him that envieth, ^{*} for some Men desire to see him that envieth, ^{*} for some Men desire to see their

their neighbours suppressed, that themselves might be advanced above them. For if a Man grieve at the prosperity of another, whereby he is damaged, he is not properly said to envy, as that of *Hector* to *Agamemnon*; but he who is nothing damaged by the prosperity of another, yet grieveth thereat, truly envieth.

r Cic.

r *Emulation*, ζήλος, (not here taken for the imitation of Virtue, for that is laudable) a grief that another Man enjoyeth that which we desire and want, or as *Laertius*, a grief for another's felicity, which we wish to our selves, and an emulation thereof, as greater than our own.

s Laert.

t Cic.

s *Jealousie*, ζήλος, *obtrudation*, a grief lest another enjoy what we love and possess.

u Laert.

x Cic.

u *Compassion*, ἔλεος, *miseriordia*, a grief for the misery another suffers undeservedly, y for no Man compassionates the punishment of a Parricide or Traytor.

y Laert. Cic.

z Cic. Stob.

y *Anguish*, ἄχος, *Anger*, an oppressive grief. z *Mourning*, πένθος, *Luctus*, grief for the death of a Friend that was dear to us.

a Cic.

a *Wailing*, Μῆρor, a grief accompanied with Tears.

b Cic. Laert.

c Cic.

b *Trouble*, ὀδῶν, *erumna*, a laborious piercing grief.

c *Sorrow*, Dolor, a vexatious grief, perhaps the same which in *Stobæus* is termed ὀση, a grief, with conflict of Spirit.

d Cic.

e Laert.

d *Lamentation*, ὀνία, a grief with thoughtfulness, e proceeding from, and encreasing by consideration and discourse.

f Cic.

f *Molestia*, a permanent grief.

g Cic.

h Cic.

g *Affliction*, a grief with corporeal torment.

h *Desperation*, a grief without any hope of amendment.

i Laert.

k Stob.

i *Ενόχλησις*, an urgent grief attended by difficulty.

k *Ἀχος*, a grief taking away the voice.

l Laert.

l *Σύγχυσις*, an irrational Grief corroding, and hindring us from enjoying the present.

Under *Pleasure* are,

m Cic. Laert.

whence sup-

ply Stobæus

where (Plea-

sure being o-

mitted) these

are applied to

a wrong Head.

n Cic. Laert.

m *Malevolence*, ἐπιχαιρεκακία, a Pleasure at another's Ill, without any good to our selves. This hath no real subsistence; for no good man was ever known to rejoice at the harm of another.

n *Delectation*, κίλησις, a Pleasure affecting and soothing the Mind by the Ear, and in like manner by the Eye, touch, smell, or taste, which are all of one kind.

o Cic.

o *Jactation*, a boasting Pleasure, with insolent, behaviour.

p Laert.

p *Τέσις*, quasi *τέσις*, an inclination of the Mind to dissoluteness.

q Laert.

q *Διάχυμα*, the Dissolution of virtue.

r Stob.

r *Ἀσμένισμος*, a pleasure from things not expected.

s Stob.

s *Γοῖσις*, a Pleasure caused by Sight, without Deceit.

Under *Fear*, are

t Laert. Stob.

u Laert. Stob.

t *Dread*, δῆμα, a fear causing δέος.

u *Sloth*, ὄνος *Pigritia*, a fear of future Action, or susception of Labour.

* Laert. Stob.

* *Shame*, αἰχμή, a fear of Ignominy.

y Laert.

z Laert.

y *Ἐκπληξίς*, a fear of some unusual Phantasia.

z *Θόρυβος*, a fear with loss, or trepidation of voice.

a Laert.

a *Ἀγωνία*, a fear of something uncertain, or a fear of offending or falling.

b Stob.

c Stob.

b *Δεισιδαιμονία*, a fear of Gods or Demons.

c *Δέος*, a fear of some grievous thing.

d *Terrour*, a Fear, which by striking the Mind causeth redness, paleness, trembling, or gnashing of the Teeth.

e *Timor*, a fear of approaching ill.

Cic.

f *Pavor*, a Fear thrusting the Mind out of its Place.

g *Exanimatio*, a Fear consequent, and as it were companion to *Pavor*.

h *Conturbatio*, a fear, which disperseth all our Thoughts.

i *Formido*, a permanent Fear.

i Cic.

k The Passions subordinate to Desire, are generally two, *Anger* and *Love*.

k Stob.

l *Anger* is a desire of taking revenge upon those by whom we conceive our selves wrong'd.

l Laert.

m The Species thereof are,

m Stob.

n *Θυμός*, or as *Cicero*, *ἐκπαισμός*, *excandescencia*, *Anger* beginning.

n Laert.

o *Χόλος*, *Anger* encreasing.

o Laert.

p *Μῆνις*, *odium*, *Anger* inveterate.

p Cic. Stob.

q *Κόλος*, *Inimicitia*, anger watching the occasion of Revenge.

q Cic. Stob.

r *Πικρία*, anger breaking forth into action.

r Stob.

s *Μίσος*, a desire whereby we wish ill to another, with continual progression.

s Laert.

t *Malice*, *Discordia*, a bitter anger, with utmost hatred, conceived in the Heart.

t Cic.

u *Φιλονειμία*, a desire conversant in difference of opinions.

u Laert.

* *Love* is an impulsion of good-will for apparent Beauty, y whereby it is distinguish'd from the love of the Vertuous, which is a voluntary susception of labour for true Beauty.

* Stob.

The Species of love are,

z *Σπένδις*, *indigentia*, an (inexpleable) desire of that which we want, and being separated from it, in vain incline to it.

z Laert.

a *Πέθος*, *desiderium*, a desire to see that which is not present. They distinguish these two thus:

a Stob.

Desire is of those things which are said, or praedicated of any thing which they call *Categorems*, as to have Riches, to take Honours; Indigence is of the things themselves; as of honours of money

b Cic.

c *ἱμερος*, desire of conversation of that which is absent.

c Stob.

d *Φιλανδονία*, desire of Pleasure.

d Stob.

e *Φιλοπλησία*, desire of Riches.

e Stob.

f *Φιλοδοξία*, desire of Glory.

f Stob.

g In all these Passions there is Opinion.

g Stob.

h Opinion is a weak assent. i Hence passions, (as *Chrysippus* in his Book of Passions affirms) are

h Laert.

Judgments; for Avarice is an opinion, or false Judgment that Money is good; Drunkenness and

i Laert.

Intemperance, are the like. k Opinion is like-

k Stob.

wise sudden from the contractive motion of an unreasonable elation of the Mind, unreasonable and praternatural, in as much as it is not obedient to reason. For every passion is violent:

Wherefore oftentimes, though we see in those that are transported by passion, the inconvenience thereof; yet notwithstanding, the same Persons that condemn it, are carried away by it, as by a headstrong Horse, and therefore properly may use that saying:

Against my Judgment Nature forceth me, Meaning by Judgment, the knowledge of right things; for Man is carried beyond Nature by Passion, to transgress natural reason and right.

l All those who are led by Passion, are diverted from Reason, but in another manner than those

l Stob.

those who are deceived. For the deceived, as for example, They who think Atomes to be the principles of all things, when they come to know that they are not, change their Judgment. But, those that are in passion, although that they are taught not to grieve, or fear, or give way to any passion in the Soul, yet they do not put them off, but are lead on by their passions, until they come to be subject to their tyrannical sway.

C H A P. VIII.

Of Sickness and Infirmities.

a Cic. Tusc.
quest. 4.

THE Fountain of all passions is Intemperance, which is a total defection from the Mind, and from right reason, so averse from the prescription of Reason, that the appetites of the Soul can by no means be ruled, or contained. As therefore Temperance allayeth Appetites, and causeth them to obey right reason, and preserveth the considerate judgments of the Mind; so Intemperance, the Enemy thereto, enflameth, troubleth, and inciteth the state of the Soul. Thus Griefs and Fears, and the rest of the passions, all arise from this. For, as when the blood is corrupt, or flegm, or choler aboundeth, sicknesses or infirmities arise in the Body; So the disorder of ill opinions, and their repugnance to one another, divesteth the Soul of health, and troubleth it with Diseases.

b Laert. Stob.
Cic.

By passions the Mind becometh indisposed, and as it were sick. *Sickness* of Mind, νοσημα, is an opinion and desire of that which seemeth greatly expetible, but is not such, as love of Women, of Wine, of Money. These νοσηματα, have likewise their contraries in the other extreme, as hatred of Women, of Wine, of Money.

c Laert. Stob.
Cic.

This sickness of mind happening with imbecillity, is called ἀρρώστια, *infirmity*. For, as in the body there are Infirmities, as Gouts, Convulsions, and the like; so are there infirmities in the Mind, as love of glory, love of pleasure. And as in Bodies there is a propensity to some particular Diseases; so in the Mind there is a proclivity ἐνεμπλωσία, or ἐνεκαταρτυσία, to some particular passions, as φθονεία, *propensity to Envy*, ἀνελεημοσύνη, *propensity to unmercifulness*, and the like.

d Cic. Tusc.
quest. 4.

In this place, much pains hath been taken by the *Stoicks*, chiefly by *Chrysippus*, to compare the Sicknesses of the Mind with those of the Body.

Passion (for as much as opinions are constantly and turbulently tossed up and down) is always in motion; and when this fervour and concitation of the Mind is inveterate, and, as it were, settled in the Veins and Marrow, then ariseth Sickness and Infirmities, and those aversions which are contrary to those infirmities and diseases. These differ only intentionally, but really are the same, arising from desire and pleasure; for when Money is desired, and reason not immediately applied, as a Socratick Medicine to cure that desire, the evil spreadeth thro' the veins, and cleaveth to the Bowels, and becometh sickness and infirmity, which when they grow in-

veterate, cannot be plucked away. The name of this sickness is Avarice. In like manner arise other Sicknesses, as desire of Glory, desire of Women, φιλογυνεία, and the rest of Sicknesses and Infirmities. Their contraries arise from fear, as hatred of Women, μισογυνεία, hatred of Mankind, inhospitality, all which are infirmities of the Mind, arising from fear of those things which they fly and shun.

Infirmity of Mind is defined a vehement opinion, inherent, and wholly implanted in us, of a thing not to be desired, as if it were exceedingly to be desired. That which ariseth from aversion, is defined a vehement opinion, inherent, and thoroughly implanted in us, of a thing that ought not to be shunned, as if it ought to be shunned. This opinion is a judging our selves to know what we have not.

Under *Infirmity* are these species, *Love of Avarice, of Honour, of Women, of curious Meats*, and the like. Love of Money, Avarice, is a vehement opinion, inherent, and thoroughly implanted in us, as if it were exceedingly to be desired. In the like manner are all the rest defined.

Aversions are defined thus, *Inhospitality* is a vehement opinion, inherent, and thoroughly implanted in us, that Guests ought to be shunn'd. In like manner is defined hatred of Womankind, such as was that of *Hippolitus*; and of Mankind, as that of *Timon*.

As some are more prone to one Sickness than to another; so are some more inclinable to fear, others, to other Passions; in some is anxiety, whereby they are anxious; in others choler, which differeth from anger; for it is one thing to be cholerick, another to be angry, as anxiety differs from grief; for all are not anxious who are sometimes grieved, nor are all that are anxious griev'd always: As there is a difference betwixt Ebriety and Ebriosity, and it is one thing to be a Lover, another to be Amorous.

This propensity of several Persons to several Sicknesses, is call'd from an Analogy to the Body, *Infirmity*, whereby is understood a propensity to be Sick: But in good things, because some are more apt to some goods than to others, it is still Facility, in ill things Proclivity, implying a lapsion; in neuters it hath the former name.

As there is sickness, infirmity, and defect in the Body, so in the Mind. Sickness is the corruption of the whole Body. Infirmity is Sickness, with some weakness. Defect is, when the parts of the Body disagree with one another, whence ariseth pravity, distortion, deformity of the Limbs; so that those two, sickness and infirmity, arise from the confusion and trouble of the health of the whole Body; defect is seen in perfect health. But, in the Mind, sickness is not distinguished from infirmity, but by cogitation only.

Vitiosity is a habit or affection, inconstant in it self, and oft differing in the whole course of Life; so that in one by the corruption of opinions, is bred sickness and infirmity; in the other, inconstancy and repugnance. For, every vice hath not disagreeing parts, as of them who are not far from Wisdom, that affection is different from self, as being unwise, but not distorted nor depraved.

Sickness and Infirmities are parts of Vitiosity; but, whether Passions are parts thereof also, it is a question. For Vices are permanent affections, Passions are moving Affections, so that they cannot be parts of permanent Affections.

And as in all things the Soul resembleth the Body, so in good likewise. In the Body, the chiefest are Beauty, strength, health, soundness, agility; so likewise in the mind. And as the good temper of the body is, when those things whereof we consist, agree well among themselves: so the health of the Soul is, when the Judgments and Opinions thereof agree. This is the virtue of the Soul, which some affirm to be Temperance; others, a Soul obedient to the precepts of Temperance, and obsequious thereunto, not having any speciousness of her own. But, whether one or other, it is only in a wise man; yet there is one kind of health of the Soul, which is common also to the unwise, when by the care of Physicians, the Distemper of the Mind is removed.

And as there is in the Body an apt figure of the Limbs, together with a sweetness of Colour, which is called Beauty; so in the Soul, equality, and constancy of Opinions, and Judgments following Virtue, with a certain firmness and stability, or, including the very power of Virtue, is called Beauty.

Likewise correspondent to the Powers, Nerves, and efficacy of the Body, in the same terms are named the Powers of the Soul. Agility of Body is called quickness; the same commendation is ascribed to Wit, in respect that the Soul over-runmeth many things in a short time.

Only there is this difference betwixt Souls and Bodies: strong Souls cannot be Assaulted by Diseases, strong Bodies may. But the offenses of Bodies may happen without any fault; those of the Soul cannot, all whose Sicknesses and Passions proceed from contempt of Reason, and therefore are in Men only; for, tho' Beasts do some things like this, yet, they fall not into Passions.

Betwixt acute and obtuse Persons, there is this difference, the Ingenious, as *Corinthian* Brass rusteth, slowly falling into Sickness, and more quickly get out of it: the dull do not so; neither doth the Soul of an Ingenious Person fall into every Sickness and Passion; for, there are not many things extremely Savage and Cruel, and some also have a shew of Humanity, as Compassion, Grief, Fear.

But the Infirmities and Sicknesses of the Mind are less easily rooted out, than those great Vices which are contrary to the Virtues; for, the sicknesses remaining, the Vices may be taken away, because the Sicknesses are no sooner healed, than the Vices are removed.

CHAP. IX.

Of Virtue and Vice.

a **V**irtue is a convenient Affection of the Soul throughout all Life.

Of Virtues there are three kinds: The first *general*, taken for any perfection of a thing, as of a Statue: The second are *c* *Sciences*, or *Contemplative*, which, according to *Hecaton*, consist in speculation, as *Prudence* and *Justice*. *d* The third *not Sciences*, or *not Contemplative*, which are con-

sidered as consequent to the speculative; as, *Health, Strength, Hope, Joy*, and the like. Health is consequent to Temperance, a Theoretick Virtue, as Strength to the Building of an Arch. They are called *not-contemplative*, because they require no assent, but are by after-accession, and common even to the wicked, as health and strength.

Vice is the contrary to Virtue, *e* for the rational creature is perverted sometimes by the persuasion of exterior things, sometimes by the counsel of those with whom he converseth, contrary to nature, who gives us inclinations unperverted.

Of Vices therefore there are two kinds: The first, *f* *Ignorance* of those things whereof Virtues are the knowledge; as Imprudence, Intemperance, Injustice; The second *not-ignorances*; as, Pusillanimity, Imbecillity.

g *Panctius* asserteth two Virtues, *Theoretick* and *Practick*: others three, *Rational, Natural, Moral*. *Possidonius* four; *Cleanthes, Chrysippus*, and *Antipater* more; *Apollodorus* one only, *Prudence*.

b Of Virtues, some are *primary*, others *subordinate*. The *primary* are four, *Prudence, Temperance, Fortitude, Justice*; the first conversant in Offices, the second in Appetite, the third in Tolerance, the fourth in Distribution.

i *Prudence* is the Science of things that are to be done, and not to be done, and neuter; or the knowledge of good, bad and neuter in civil life.

k The Virtues subordinate to Prudence are five. *Ἐυβουλία*, *l* The Science of things that are to be done, how they may be done beneficially.

Ἐυλογισία, The Science of comprehending things to be effected.

Ἀγχίνοια, The Science of finding out our office.

Ναυεχία, The Science of attaining the scope in every thing.

Ἐυμυχανία, The Science of finding out the issues of things.

m *Temperance*, is the Science of things expetible, avoidable, and neuter. Under Temperance are these Species.

Ἐυταξία, *n* The Science of time and order for the well doing of things.

Κοσμιότης, *o* The Science of honest and dishonest motions.

Αἰδομεσύνη, *p* The Science of avoiding just blame.

q *Fortitude*, is the Science of things grievous, not grievous and neuter; the Species under it these:

Ἐγχεσίεια, *r* A Science tenacious of right Reason.

Κασιεία, *s* a Science persisting in right judgment.

Θαράλας, *t* A Science whereby we trust.

Μεγαλοψυχία, *u* The Science of overcoming those things which happen to the good and bad.

Ἐυψυχία, *** A Science of the Soul which renders her invincible.

Φιλοπονία, *y* The Science of going through to the attainment of that which we propose to ourselves.

z *Justice* is the Science of distributing to every one according to his desert; under Justice are four subordinate Virtues.

Ἐυσέβεια, *a* The Science of Worshipping the gods.

Χρηστότης,

Χρησότης, The Science of well-doing.

Ἐξοικονομία, The Science of equality in community.

Ἐυσυναλλαξία, The Science of contracting honestly with others.

b Laert

b In like manner of Vices, some are primary, others subordinate to the primary. The primary vices are, *Imprudence, Intemperance, Pusillanimity, Injustice.*

c Stob. Ἀγο-
σίων δὲ ἀγ-
νοίαν ἀγαθῶν,
κακῶν, καὶ
ἐδεδείκται.
ἀγνοίαν ὅν
σοφιστικόν, καὶ
ἐδεδείκται, ὅ
supply the text.

c *Imprudence* is the ignorance of things good, ill, and neuter; and the ignorance of things to be done, not to be done, and neuter.

Intemperance is the ignorance of things expetible, avoidable and neuter.

Pusillanimity is the ignorance of things grievous, not grievous and neuter.

Injustice is the ignorance of distributing to every one according to his deserts.

d Stob.

d The subordinate vices to these are correspondent to the secondary Virtues, as, ἀπειρία, ἐκαστοσύνη, κακοβουλία, which are defined answerably to their opposite Virtues.

e Stob.

e These Virtues are perfect, and consist in contemplation; but, there are other virtues, which are not Arts, but Faculties, consisting in Exercise, as, health of the Soul, integrity and strength thereof, and pulchritude. For, as the health of the Body is a good temperature of hot, cold, dry, and moist; so the health of the Soul is a good temperature of the Doctrines in the Soul. And as the strength of the Body consisteth in a tension of the Nerves; so the strength of the Soul in a proper extension thereof to judgment and action. And as the Beauty of the Body is a symmetry of all the parts to one another, and to the whole: so the beauty of the Soul is the symmetry of the Reason and parts thereof, to the whole, and to one another.

f Stob.

f All those Virtues which are Sciences and Arts, have common theorems, and the same end, wherefore they are (as g *Zeno* saith) inseparable, connexed to one another, as *Chrysippus, Apollodorus* and *Hecaton* affirm. He who hath one, hath all, (saith b *Chrysippus*) and he who doth according to one, doth according to all. He who hath virtue, is not only contemplative, but also practick of those things which are to be done. Things which are to be done are either expetible, tolerable, distributable, or retainable; so that whosoever doth one thing wisely, doth another justly, another constantly, another temperately; and so is both wise, magnanimous, just, and temperate.

i Stob.

i Notwithstanding these Virtues differ from one another by their heads: For, the heads of Prudence are, to contemplate and do well; that which is to be done in the first place, and in the second, to contemplate what things are to be avoided, as obstructive to that which is to be done. The proper head of Temperance is to compose our own appetites in the first place, and to consider them; in the second, those under the subordinate virtues, as being obstructive and diver-
sive of appetites. The heads of Fortitude are in the first place, to consider all that we are to undergo; in the second, other subordinate Virtues. The heads of Justice are in the first place, to consider what every one deserves; in the second, the rest: For all virtues consider the things that belong to all, and the subordinate to one another. Whence *Panetius* saith, it is in virtue as in many

Archers, who shoot at one Mark, distinguished by divers colours: every one aims at the mark, but one proposes to himself the white line, another the black, and so of the rest. For, all these place their ultimate end in hitting the mark, but every one proposes to himself a several manner of hitting: so all Virtues have Beatitude, which is placed conformably to nature for their end, but several persons pursue it several ways.

k As virtues are inseparable, so are they the same substantially with the supream part of the Soul, in which respect all virtue is said to be a Body, for the Intellect and Soul are a Body; for the Soul is a warm spirit innate in us. Therefore our Soul is a living creature, for it hath life and sense, especially the supream part thereof, called the Intellect. Wherefore all virtue is a living creature, because it is essentially the intellect. And therefore *θεωήσις θεόειρα*, for that expression is consequent to this assertion.

l Between virtue and vice there is no medium (contrary to the Peripatericks, who assert a mean progression betwixt virtue and vice) for all men have a natural appetite to good: and as a stick is either straight or crooked, so man must be either just or unjust; but cannot be either more or less just or unjust.

m That Virtue may be learned, is asserted by *Chrysippus*, in his first Book of the End, and by *Cleanthes* and *Possidonius* in his Exhortations, and *Hecaton*, because men of bad are made good.

n That it may be lost, is likewise affirmed by *Chrysippus*, denied by *Cleanthes*. The first saith, it may be lost by Drunkenness or Madness: the other, that it cannot be lost, by reason of the firm comprehensions of the Soul.

o Virtue is in it self Virtue, and not for hope or fear of any external thing. It is expetible in it self; for which reason, when we do any thing amiss, we are ashamed, as knowing that only to be good, which is honest.

p In Virtue consisteth Felicity, for the end of Virtue is to live convenient to Nature. Every Virtue is able to make a Man live convenient to Nature: for, Man hath natural inclinations for the finding out of Offices, for the compoture of Appetites, for tolerance and distribution. Virtue therefore is self-sufficient to Beatitude, as *Zeno, Chrysippus*, and *Hecaton* assert. For it, saith he, Magnanimity, as conceiving all things to be below it self, is self-sufficient, and that be a part of Virtue, Virtue it self, which despiseth all things that obstruct her, must also be self-sufficient to Beatitude. But *Panetius* and *Possidonius* deny that Virtue is self-sufficient, affirming, that it requireth the assistance of health, strength, and necessities; yet, they hold, that Virtue is always used, as *Cleanthes* affirms, for it cannot be lost, and is always practis'd by a perfect mind, which is good.

s Justice is not by nature, but by prescription, as Law and right reason: Thus *Chrysippus* in his Book of Honesty.

t Virtue hath many Attributes, it is called, 1. Ἀγαθόν, a good, because it leadeth us to right life.

2. Ἀρετὴν, because it is approved without any controversie, as being most excellent.

3. σπουδαῖον, because 'tis worthy of much study.

4. Ἐπαινετὸν, because it may justly be praised.

5. Καλόν, because it inviteth those that desire it.

6. Συμφέρον;

6. Συμφέρων, because it conduceth to goodness of Life.

7. Χρήσιμον, because it is useful.

8. ἄριστον, because it is rightly expetible.

9. ἀνεργητὸν, because being present it profiteth; being absent, it doth not.

10. λυσιτελεῖς, because it hath an use that exceeds the labour.

11. ἀνάρκτες, because it is alone sufficient to him that hath it.

12. ἀνενδεές, because it takes away all want.

13. Σποχρῶν, because it is common in use, and extendeth to all the uses of life.

C H A P . X.

Of the End.

a Stob.

THE End is that, for whose sake all Offices are done, but it self is not done for the sake of any : or that to which all things done conveniently in life are referred, it self is referred to nothing.

b Stob.

b The end is taken three ways: First, for the final good, which consisteth in rational conversation: Secondly, for the scope, which is convenient life, in relation thereto: Lastly, for the ultimate of expetibles, unto which all the rest are referred.

c Stob.

c Scope and end differ; for Scope is the proposed Body, which they who pursue Beatitude aim at. Felicity is proposed as the scope, but the end is the attainment of that felicity. If a man throw a Spear or an Arrow at any thing, he must do all things that he may take his aim aright, and yet so, as to do all things whereby he may hit: So when we say, it is the ultimate end of Man to obtain the principles of Nature, we imply in like manner, he must do all things necessary to taking aim, and all things likewise to the hitting of the Mark; but, this is the last, the chief good in life, that is to be selected, not desired.

e Stob.

Reason being given to rational creatures, for the most perfect direction, to live according to reason, is in them to live according to nature, that being the Artificer of Appetite. Hence *c* Zeno first (in his discourse of humane nature) affirms, that the end is, to live conformably, that is, to live according to ones own Reason concordantly, as on the contrary, Savage Beasts that are always at difference, live miserably.

f Stob.

f The followers of Zeno, conceiving his expression not full enough, enlarged it. First Cleanthes his Successor, added *to nature*, making it up thus, *The End is to live conformably to Nature, which is to live according to Virtue*: for Nature leads us to Virtue. Thus Cleanthes in his Book of Pleasure, and Possidonius, and Hecaton in his Book of Ends.

g Stob.

g Chrysippus, to make the expression of Cleanthes more clear, expounds it thus, *To live according to expert knowledge of things which happen naturally*: For our natures are parts of the Universe, our end therefore is to live conformably to Nature, which Chrysippus, in his first Book of Ends, expounds, both our own proper humane Nature, and likewise the common nature of the Universe, But Cleanthes allows only common Nature to be followed, and not the particular. To live according to this knowledge, is all one, as to live according to Virtue, not doing any thing forbidden by

our common Law. Right Reason, which is current amongst all, being the very same that is in God, the Governor of all. The virtue thereof, and the beatitude of a happy man, is, when all things are ordered according to the correspondence of a mans Genius, with the will of him who Governs the Universe.

b Diogenes defineth the End, *a good use of Reason, in the election and refusal of natural things, choosing those that are according to nature, and refusing those that are repugnant to nature*. So likewise Antipater.

Archidemus defineth it; *To live, performing compleatly all offices, choosing of those things which are according to nature, the greatest and most principal, and not to be able to transgress them*.

Panetius, *to live according to the appetites given us by nature*.

Possidonius, *to live contemplating the truth and order of the Universe*.

i Thus by living according to nature, the Stoicks understand three things: First, to live according to the knowledge of those things which happen by nature. This is Zeno's End, to live convenient to nature. Secondly, to live, preserving all, or the greater part of mean Offices. This exposition differeth from the former; for that is a Rectitude, proper only to a wise man, this is the office of a progressive, not perfect person, which may likewise be to the foolish. The third is, to live in enjoyment of all, or the greater part of those things which are according to nature. This is not constituted in our action, for it consisteth of that kind of life which enjoyeth virtue, and of those things which are according to nature, and are not in our power.

k The chief good therefore, is to live suitably to the knowledge of those things which arrive by nature, elective of those which are according to nature, and rejective of those which are contrary to nature. *l* This is to live conveniently and conformably to nature, when the Soul entering into the path of Virtue, walketh by the steps and guidance of right reason, and followeth God. That which is in other arts is artificial, is here epigematick and consequent.

m This End is Beatitude. Beatitude by Zeno, is defined *a good course of life*, which definition is used likewise by Cleanthes and Chrysippus, and all their followers, who affirm Beatitude to be nothing but a happy life.

n Fair, and good, and Virtue, and that which participates of Virtue, are equivalent terms, whence it follows that *n* Beatitude is all one with living according to Virtue. *o* And as Good, and Virtue admit no degrees of increase or diminution, neither doth the ultimate end of all good and virtue increase or diminish. For, as they who are drowned, are no more able to breath, tho they are nearer to the top of the Water than they who are in the bottom; nor a little Whelp, the time of whose sight approacheth, see any more than one that is newly littered; so he, who hath made some little progress in Virtue, is no less in misery than he who hath made none.

CHAP. XI.

Of Indifferents.

a Cic. de fin. 3. OF things, as we have said, some are good, some ill, some indifferent. *a* To deny this difference of things, would be to confound all life; as *Aristo* doth; neither could there be any function or act of Wisdom, since that, if amongst those things which appertain to life there were no difference, no election were requisite.

Laert. Good and ill, as we said, are those things which are honest or dishonest. Of these hitherto. Betwixt both these, there are some things which confer nothing to happy or unhappy life, called Indifferents. *b* To profit is a motion or state proceeding from Virtue; to hurt is a motion or state proceeding from Vice; but Indifferents neither profit nor hurt; such are Life, Health, Pleasure, Beauty, Strength, Riches, Honour, Nobility, and their contraries; Death, Sickness, Grief, Deformity, Imbecillity, Poverty, Dishonour, Meanness, and the like. Thus *Hecaton* in his seventh Book of *Ends*, and *Apolloderus* in his *Ethicks*, and *Chrysippus*. These therefore are not goods, but indifferents. For, as the property of heat is to warm, not to cool; so is it of good to profit, not to hurt. But health and wealth do not hurt more than they profit, therefore health and wealth are not goods. Again, that which we may use ill as well as well, is not good; but health and wealth may be used ill as well as well, therefore health and wealth are not goods. Yet *Possidonius* reckons these amongst goods. But *Hecaton* in his 19th of Good, and *Chrysippus* of Pleasure, will not allow Pleasure a good: For Pleasures are dishonest, but nothing dishonest is good.

c Cic. de fin. 3. *c* Moreover, Riches, as *Diogenes* conceiveth, have not only this power that they guide to Pleasure and good health, but that they comprise them. They do not the same in Virtue nor in other Arts, whereto Money may be a guide, but it cannot contain them. Thus if Pleasure or health were good, Riches likewise should be numbered amongst the good; but if wisdom be good, it followeth not that Riches likewise be good, nor that any thing which is not reckoned amongst the good; that which is good cannot be contained by any thing which is not amongst the good. And also for this reason, because Sciences and comprehensions of things, by which Arts are produced, move appetition; but if Riches are not reckoned among the good, it followeth that no Art can be contained in Riches, and much less any Virtue, for Virtue requireth far more study and exercise than Art, and compriseth the firmness, stability, and constancy of all life, which Art doth not.

d Seat. Emp. Pyrb. hyp. 3. 22. whence supply Laertius and Stobaeus. *d* Things are said to be indifferent in three respects: First, if they move neither appetite nor aversion, as, if the Stars be of even number, or to have even or uneven hairs on our head, to stretch out the finger this way or that way, to take up a straw, and the like. Secondly, things are said to be indifferent which move appetite and aversion equally, not one more than the other; as in two pieces of Silver of equal value, no way different, which to him who comes to make choice of either, are indifferent. There is an ap-

petition to the election of one, but not more of this than of that. The third kind of indifferents are those which are neither good nor ill, expectable nor avoidable, conducing neither to happiness nor unhappiness. In this Sense all things are called indifferent, which are betwixt Virtue and Vice, as Health, Wealth, Strength, Glory, and the like; for we may be happy without these, tho their use hath some relation to happiness, their abuse to unhappiness. In this sense whatsoever we may sometimes use well, other times ill, is indifferent, which kind appertaineth chiefly to Ethick.

e Again, of indifferents some are *Natural*, and move appetite, as health, strength, soundness of sense, and the like; some *Præternatural*, which move aversion, as sickness, infirmity, and the like; some *Neuter*, which move neither appetite nor aversion, as the constitution of the Soul and Body, one capable of receiving Phantasies, the other wounds. *e Stob.*

f Of Natural and præternatural indifferents, *f* some are *primary*, others by *participation*. *Primary* natural indifferents are motions or affections convenient with reason, as health and strength. *Participant* are those by which that motion or affection is communicated, as a healthful Body, sound Sense. *g* *Præternatural* Indifferents are the *g Stob.* contrary to these.

CHAP. XII.

Of Estimation.

E *Stimation*, *ἀξιολογία*, is a certain concurrence with convenient life, *a* which concerns all good. *a Laert. b Stob.* *b* Estimation is twofold; one, a mediate power or use concurring with life according to nature; such we call health or wealth, as far as they conduce to life, according to nature. The other is the valuation of the Estimator, imposed by him who is skilfull in such things.

c Again, *Estimation* is taken three ways: First, *c Stob.* for absolute *donation*: Secondly, for *return of approbation*: Thirdly, as *Antipater* calls it, *Elective*, by which, when some things are proposed, we rather choose these than those; as health before sickness, life before death, and riches before poverty. In like manner, *disestimation* is taken three ways, the terms only changed to the contrary. *Donation* according to *Diogenes*, is a judgment, that a thing is according to nature, or conferreth use thereto. *Approbation* is in man, not in things. *Election* only in the good, not the indifferent.

d Hence followeth another distinction of indifferents, whereof some are *preferred*, some *rejected*, some *neither preferred nor rejected*. *Preferred* are those, which tho they are indifferents, have nevertheless a sufficient reason why they are to be had in estimation, as health, soundness of sense, exemption from grief, glory, and the like. *Rejected* are those, which are not worthy any estimation, as poverty, sickness, and the like. *Neuter* are those, which are neither preferred nor rejected, as to extend or contract the finger. *d Laert. Stob. Sext. Empir. Pyrb. hyp. 3.*

These terms preferred, *προηγούμενον*, and rejected, *ἀπορριπτόμενον*, were invented by *Zeno*, upon this ground: *e* As when we speak of the *e Cic. de fin. 3.* Court,

Court, no man faith, the King himself is preferred to Dignity, but those who are in some Honour, next and second to him in Rank: so when we speak of life, we call not those things which are in the first place, the preferred or promoted, but those which are in the second: and so likewise in the rejected. Now forasmuch as good hath the first place, it follows, that what is preferred, is neither good nor ill. No good is reckoned amongst the preferred, because that hath the greatest estimation; but the preferred having the second estimation, approacheth somewhat to the nature of good. It is called preferred, not that it conduceth to Beatitude, but in respect of the rejected. We define it thus: *An Indifferent with mean estimation*; for it could not be, that nothing should be left in mean things, that is according to, or contrary to nature, neither being left, that nothing should be placed in them, which is sufficiently estimable; this being granted, that there is not something preferred. Rightly therefore this distinction is made, and may more fully be explained by this simily. As if we should suppose our ultimate end, to be so to cast the Die that it may chance right, the Die that shall be so cast as to fall right, must have something proposed and preferred towards its end; and on the other side the contrary; yet the proposition of the Die, nothing conduceth to that end; so those which are preferred, relate indeed to the end, but nothing pertain to the power and nature thereof.

f Laert. Stob.

f Of the *preferred*, some are in the *Soul*, as ingenuity, art, progression, and the like; some in the *Body*, as Life, Health, Strength, Ability, Soundness, Beauty; some *external*, as Riches, Honour, Nobility, and the like.

g Laert. Stob.

g In like manner of the *rejected*, some are in the *Soul*, as Habitude, Ignorance; some in the *Body*, as Death, Sickness, Infirmary, Maim, Deformity. Some *external*, as Poverty, Dishonour and Meanness.

Likewise of the *Neuter*, some are in the *Soul*, as Imagination, Assent; some in the *Body*, as whiteness, blackness; some *external*, which having no estimation or use, are of little value.

Those which are preferred in the *Soul*, conduce more to living according to Nature, and are of more worth than those of the *Body*, or the *external*, as to have a good disposition of mind, is better than to have a good disposition of Body.

b Stob.

b Again, of the *preferred*, some are preferred for *themselves*, as ingenuity, countenance, state, notion, and the like; some for *others*, because they effect something, as Riches, and Nobility; some *both for themselves and others*, as health, strength, soundness, ability: for themselves, as being according to Nature; for others, as affording no small benefit.

i Cic. de fin. 3.

i As concerning *Reputation*, εὐδοξία, Chrysippus and Diogenes affirm, that being separated from utility, we should not so much as stretch out our finger for it. But those who followed them, not able to withstand Carneades, affirmed Reputation to be preferred for it self, and that it was proper for an ingenuous man freely educated, to desire to be well spoken of by his Parents, Kindred, and good men, and that for the thing it self, not for the use thereof; adding, that as we provide for Children, though to be born after

our death; so we must provide for future Reputation after death, even for its own sake separated from all use.

k In like manner of the *rejected*, some are rejected for *themselves*, some for *others*, some *both for themselves and others*, which appears by the Rule of Contraries.

C H A P. XIII.

Of Actions and Offices.

OF those *Actions* which proceed from appetite, some are *Offices*, some *præter Offices*, some *neuter*.

a *Office* is that which is preferred, and hath a good reason for the doing thereof, as being convenient to life; or, as others, Office is whatsoever Reason requireth to be done, as to honour our Brethren, Parents, Country, to relieve our Friends. Zeno first gave it this name, τὸ καθήκον, *Office*, and τὸ κατὰ τὴν φύσιν. It is an action conformable to the dictates of nature, and extends even to Plants, and irrational living creatures, for Offices may even be observed in those.

Præter-office is an action, which reason acquireth that we do not, as, to neglect our Parents, to contemn our Brethren, to disagree with our Friends, to despise our Country, and the like.

Neuter are those Actions which Reason neither requireth nor forbiddeth, as the taking up of a Straw.

b Of *Offices*, some are *perfect*, called καλοῦσθαι, *Rectitudes*, actions done according to Virtue; as, to do wisely, to do justly: others *not-rectitudes*, actions which have not a perfect office, but a mediate; as to Marry, to go an Embassie, to Discourse, and the like.

Of *Rectitudes*, some are in things requisite, others not: Of the first kind are, to be wise, temperate, and the like: Of the second, those which are not requisite to the being such. In like manner are *præter-offices*.

Again, of *Offices*, some are *ordinary*, as, to have a care of our selves, of our limbs, and the like: Some *extraordinary*, as, to maim our selves, throw away our goods. Accordingly is it of *præter-offices*.

Again, of *Offices*, some are *continual*, as, to live vertuously: some *intermissive*, as, to question, answer, walk, and the like. Accordingly it is of *præter-offices*.

c Office is a mean thing, placed neither amongst the good, nor their contraries; for, there is something in this approvable, so as a right reason may be given for it, as done approvably. That which is so done is office. And forasmuch as in those things which are neither Virtues nor Vices, there is something which may be of use, it is not to be taken away. Again, it is manifest, that a wise man doth something in these mean things, he therefore, when he doth it, judgeth that it is his office so to do; but, a wise man is never deceived in judgment, therefore there is an office in mean things. Again, we see there is something which we call a thing, rightly done, or Rectitude, but that is a perfect office; therefore there is an inchoat office; as, if it be a Rectitude justly to restore a depositum; to restore a depositum must

must be a simple Office. The Addition of *justly* makes it Rectitude, the simple Restitution without the additional term, is an Office.

(d) *Cic. de fin.* 3. (d) And since it is not to be doubted, but that in mean things, some are to be performed, others rejected, whatsoever is done in that manner, is comprehended in common Office; whence it is manifest, that all men by nature loving themselves, as well the foolish as the wise, will take those things which are according to Nature, and reject the contrary. This is therefore one common Office of the wise and unwise, conyersant in mean things.

All Offices proceeding from these, it is justly said, that to those are referred all our thoughts, even the forsaking of Life, or continuing in it. In whom most things are according to Nature, the Office of that Person is to remain in Life; in whom there are, or are foreseen to be more things contrary to Nature, his Office is to forsake Life, altho' he be happy, and of a fool to continue in Life, altho' he be miserable; for that good, and that ill, as we have often said, are things that follow afterwards. The first Principles of natural Appetite, fall under the Judgment and Election of a wise Man, and is as it were the matter subjected to Wisdom. Thus the reason of continuing Life, or forsaking it, is to be measured by all those things we mentioned. For, neither are they who enjoy Vertue, obliged to continue in Life, nor they who live without Vertue to Die; and it is often the Office of a wise Man, to part with his Life, even when he is most happy, if it may be done opportunely, which is to live conveniently to Nature. This they hold, that to live happily, depends on opportunity; for Wisdom commandeth, that a wise Man, if it be required, should part with his Life. Wherefore Vice having not Power to bring a cause of voluntary Death, it is manifest, that the Office even of Fools, who are likewise wretched, is to continue in Life, if they are in the greater part of those things, which we hold to be according to Nature. And forasmuch as going out of Life, and continuing in it, be alike miserable, neither doth continuance make his Life more to be avoided; we say not therefore without cause, that they who enjoy most Naturals, should continue in Life.

Hitherto it appertains to know, that the love of Parents towards their Children is the effect of Nature, from which beginning we may track all Mankind, as proceeding from thence. First, by the Figure and Parts of the Body, which declare, that Nature carefully provided for Procreation. Neither can these two agree, that Nature orders Procreation, and takes no care that those which are procreated should be loved: For even in Beasts the Power of Nature may be seen, whose care when we behold in bringing up of their Young, methinks we hear the very Voice of Nature her self. Wherefore as it is manifest that we abhor Pain by Nature, so it is likewise apparent, that we are driven by Nature to Love those we have begotten.

Hence ariseth a common natural Commendation of Men amongst Men, that it behoveth a Man not to seem alienate from Man, for this very Reason, because he is Man. For, as among the Parts of the Body, some are made only for

themselves, as the Eyes and Ears; others assist towards the use of other Parts, as the Thighs and Hands: so, tho' some huge Beasts are born only for themselves; yet, that Shell-Fish which is called *Patula prima*, and the *Pinnoteres*, so named from keeping its Shell, which shutteth it self up so close, as if it taught others to look to themselves; as also Ants, Bees, Storks, do something for the sake of others. Much nearer is the Conjunction of Mankind; so that we are inclined by Nature to Conventions, Counsels, Citities.

(e) Whatsoever is produced upon the Earth, (e) *Cic. offic. 1.* is created for the use of Man; but Men are generated for Men that they may profit one another. In this we ought to follow Nature our Leader, and to bring forth common benefit to the publick by mutual Offices, by Giving, by Receiving, by Arts, by Endeavours, and by Faculties, to unite the Society of Man with Man.

(f) The World is governed by the Power of (f) *Cic. d. 1.* God; it is as it were, a common City of Men *finib. 3.* and Gods, and each of us is a part of the World; whence it followeth by Nature, that we should prefer the common Benefit before our own. For as Laws prefer the safety of the general before that of any particular; so a good and wise Man, conformable to Law, not ignorant of Civil Office, taketh more care for the Benefit of the general, than of any particular, or of his own. Nor is he who betrays his Country more to be condemned, than he who deserts the common Benefit or Safety. Whence it followeth, that he is to be commended who undergoeth Death for the Commonwealth, and teacheth us, that our Country is dearer to us than our selves. And because that Speech is esteemed inhumane and wicked of those who affirm, They care not when they are dead, if all the Earth were set on Fire; it is certainly true, that we are likewise to provide for those who shall hereafter be, even for their own sake. From this Affection of the Soul, whence proceed Wills and Commendations of dying Persons, as also, forasmuch as no Man will live Solitary in a Desert, even with the greatest abundance or plenty; it is easily understood that we are born for Conjunction, Congregation, or natural Community; we are impelled by Nature to benefit others the most that we can. All these are Offices, chiefly by teaching and communicating the Reasons of Prudence, so that it is not easie to find one, who will not communicate to some other what he knoweth himself. Thus we are not only inclined to learn, but also to teach. And as it is given to Bulls by Nature, to fight even with Lions, for their Heifers, with great force and impetuosity; so they who abound in Wealth, and are able to do it (as is related of *Hercules* and *Bacchus*) are incited by Nature to preserve Mankind. Likewise, when *Jupiter* is stil'd *Optimus* and *Maximus*, *Salutaris*, *Hospitalis*, *Stator*, we hereby express that the safety of Mankind is under his Tuition. But we cannot expect, if we our selves are vile, abject, and neglected amongst our selves, that we should be dear to the immortal Gods, and loved of them. As therefore we make use of our Limbs, before that we have learnt for what cause of Utility we have them; so are we conjoined and con-

fociated amongst our selves by Nature to civil Community, which if it were otherwise, neither would there be any room for Justice or Goodness.

(g) Laert. Yet tho' there are mutual Chains betwixt Man and Man, Man hath no common right with Beasts, [(g) by reason of our dissimilitude, as both Chrysippus and Posidonius affirm] for all other things, saith Chrysippus, were made for Men and the Gods; but they for Community and Society one with another; so that Men may make use of Beasts for their benefit, without doing any wrong.

Moreover, since the Nature of Man is such, that there is a certain civil Right betwixt him and all Mankind, he who preserveth that Right is just; who transgresseth it, unjust. But as in a Theater, tho' it be common, that room which a man possesseth, is justly said to be his place; so this civil Right in a City and the VWorld, doth not repugn to the Propriety of particular Persons.

In order to the Conservation of all Society, Conjunction, and Dearness betwixt Man and Man, Emoluments and Detriments, *ωφελήματα* and *βλάμματα*, which benefit or hurt, must be common amongst them, and not only common but equal. Convenients and Inconvenients, *εὐχρησθήματα*, and *δυσχρησθήματα* must be common, but not equal. Those which benefit or hurt, are either good or ill, and therefore must necessarily be equal; Convenient and Inconvenient are ranked amongst the preferred and rejected, and therefore cannot be equal: Emoluments and Detriments are common, but Rectitudes and Sins not common.

Herein Friendship is requisite, as being one of those things which benefit. Some affirm, That a good Man ought to be as much concern'd for his Friend as for himself; others, that every Man ought to be most concern'd for himself. Yet these latter confess, that it is contrary to Justice, wherunto we are born, to take away any thing from another, and assume it to our selves.

Neither can Friendship be contracted, nor Justice performed for private respects and advantages, for then these advantages might overthrow and pervert them. But neither could Justice, or Friendship be at all, unless they were expetible in themselves. Justice is by Nature; it is contrary to a wise man, not only to do an injury, but even to hurt. Neither can it be right to injure those who are our Friends, or have deserved well of us; Equity cannot be separated from Utility; whatsoever is equal and just, is likewise honest; and reciprocally, whatsoever is honest, is equal and just.

(h) Cit. offic. lib. 1. and again, lib. 3.

(b) Panetius, who discoursed most accurately of Offices, proposeth three kinds wherein Men use to deliberate or consult of Offices: First, when they doubt, whether that of which the question is, be Honest or Dishonest. Secondly, whether it be Profitable or Unprofitable. Thirdly, if that which hath the shew of Honesty, be Repugnant to that which seems Profitable.

(i) Laert.

(k) Sext. Empir. Pyrrh. hypot. 3. 25.

(i) Next the Gods, we are to reverence our Parents and Brethren. (k) As concerning the Burial of Parents, Chrysippus saith, it ought to be done in the most simple manner. For the Body,

as the Nails, Teeth or Hair, thereof nothing pertaineth to us, and therefore ought not to be used with any curiosity or respect. Flesh, if it be useful, ought to be converted into Aliment (tho' it were a part of our own Body, as the Foot) as is proper to it; if useless, put under Ground, or thrown into some remote Place, without more respect than we have of our Nails or Hair when cut off.

(l) Concerning the Office of the Buyer, and the Seller, Diogenes the Babylonian, and Antipater his Disciple differ. Antipater holds that all must be laid open, that the Buyer be not ignorant of any thing that the Seller knoweth; Diogenes, that the Seller as far as is appointed by Civil Law, ought only to tell the Faults, and to conceal the rest, for as much as he in selling desireth to sell to his best advantage.

Hecaton in his sixth Book of Offices, is full of this Questions, as whether a good Man in a dearth may give over House-keeping. He disputes it on both sides, but concludes that the Office is directed rather by Profit than Humanity.

He questions, Whether if at Sea a Ship be to be disburthen'd by the casting out of something, we should rather cast over board a Horse of great price, or a Slave worth little. In this case, private Interest leads one way, Humanity another.

If a Fool in a Shipwrack catch hold of a Plank, may a wise Man wrest it from him, if he can? He saith, he may not, for it is injurious. What may the Master of the Ship? May not he take his own? No; no more than he may throw a Passenger out of the Ship, because it is his own, into the Sea. For until they come to the place to which they are bound, the Ship is not the Master's, but the Passengers.

What if two Shipwrack'd Persons light upon one Plank, and both pluck at it, should one give it over to the other? Yes; but to him, who, it is more expedient, should live, either for his own sake or the Commonwealth. But what if these be alike in both? There will be no Contention, but either as it were by Lot, or Mication with the Fingers (*giuoco della mora*) one will give place to the other.

What if a Father rob Temples, undermine the publick Treasury, should the Son reveal it to the Magistrates? It were a great Wickedness. On the contrary, he ought to defend his Father; if he be called into question. But is not our Country before all Offices? Yes, but it is for the good of our Country to have Citizens pious to their Parents.

What if a Father should aim at Possession of the Tyranny, or endeavour to betray his Country, shall the Son keep his Counsel? He shall beseech him not to do it. If that prevail not, he shall accuse him, yea, threaten; and lastly, if the matter shall tend to the destruction of the Country, he shall prefer the safety of the Country before that of his Father.

If a wise Man receive Counterfeit Money for good, if afterwards he know it to be Counterfeit Money, may he pay it where he owes any thing, for good? Diogenes saith he may, Antipater, that he may not.

If a Man sell Wine that will not last, and know it to be such, ought he to declare it or no? Diogenes thinks he is not obliged, Antipater conceives a good Man must. These are, as it were, Cases of Controversie amongst the Stoicks.

C H A P.

C H A P. XIV.

Of Prater-Offices.

(a) **A**S every perfect Office in a rational Creature is a Rectitude, and always compleat in all numbers; so every Prater-office in a rational creature is a sin. A sin is that which is done contrary to right reason, or in which something of Office is omitted by a rational Creature. (b) A good deed is the command of the Law. Sin the prohibition of the Law. Hence it is that the Law forbiddeth fools and madmen many things, but prescribeth them nothing, because they are not capable of doing any thing well.

(c) All sins are impiety, as being a resisting of the will of the Gods. The Gods love Virtue and its works; they hate Vice and its works. Every sin therefore displeaseth them, and consequently is impiety.

(d) All sins are equal (so Chrysippus in the first of his moral questions, and Persæus, and Zeno) though not alike, for they flow from one fountain, as it were of Vice, and the judgment is the same in all, but by the external object by which the judgment is made, they are rendred unlike. That they are equal, is evident from this: If there be not one truth more truth than another, nor one falshood more falshood than another, neither is one deceit more deceit than another, nor one sin more sin than another. He who is distant from Canobus a hundred furlongs, and he who is distant but one furlong, are both alike not at Canobus: So he who sins more, and he who less, are both alike not in the right way.

Yet, though sins are equal, there are some differences in them, forasmuch as some proceed from an obdurate incurable affection, others from an affection not obdurate nor incurable. And though every lie is equally a lie, yet all men do not lie equally; but, every sin is equally sin; for every sin consisteth in lying. Thus Chrysippus, Persæus, and Zeno. But Heraclides of Tarsis, friend to Antipater, and Athenodorus, hold, that sins are unequal.

C H A P. XV.

Of wise or virtuous Persons Paradoxes.

THere are (according to Zeno) two kinds of men, the wise or virtuous, and the vicious. The wise make use of Virtue through the whole course of their life, the vicious of Vice.

(a) Of the wise there are two sorts, one in perfection, consummate; the other in progression, procedent. Of the first are these following Paradoxes to be understood; (b) not that the Stoicks positively affirm there ever was such a one in nature, (for (c) Zeno, Cleanthes, and Chrysippus, were great and venerable persons, yet did not attain the height of human nature) but, that such a one might possibly be.

(d) A wise man is void of passion; for he cannot fall. There is another kind of Person void of passion likewise, a wicked man that is obdurate and inflexible.

(e) A wise man is void of pride; honour and

dishonour are alike to him. There is another kind of person void of pride, a wicked man, equally inclinable to dishonour as to honour.

(f) A wise man is austere; for he neither speaketh for complaisance, nor admitteth any thing spoken in that kind. There is another sort of austere persons, which resemble fowre wine, not fit for drinking, but for medicines only.

(g) A wise man is sincere; for he taketh care, that he be not thought better than he is, by reason of some specious shew, and withal to express whatsoever good he hath, without any Rhetorical gloss.

(h) A wise man is not pragmatical; for he declines the doing of any thing that is beyond his office.

(i) A wise man is never drunk, for although he drink wine; for he never sinneth, but doth all things according to Virtue.

(k) A wise man is never mad; yet sometimes strange phantasies may occur to him through melancholly or deliration, not according to the reason of eligibles, but praternatural.

(l) A wise man is never grieved; for grief, according to Apollodorus, is an irrational contraction of the Soul.

(m) A wise man is divine; for he hath God with himself; but a wicked man is an Atheist. An Atheist is taken two ways, for him who is an enemy to the Gods, and for him who believeth there are no Gods; which all wicked men do not.

(n) A wicked man is impious, because he doth all things according to Vice, as the good according to Virtue; and he who hath one Vice, hath all. He is an enemy to the Gods, for enmity is the discord of life, as amity is the concord. The wicked differs from the Gods in his course of life, and therefore is an enemy to them, for they account all their enemies who are contrary to them. The wicked are contrary to the good; God is good, therefore the wicked are enemies to God.

(o) A wise man is religious; for he is skilful in all Divine rites. Religion is the Science of Divine worship. He sacrificeth to the gods, and is pure, detesting all sin, holy and just in Divine things.

(p) A wise man only is a Priest, skilful in Sacrifices, business of the Temple, Expiations, and other things proper to the Gods.

(q) A wise man is a Prophet, endued with the Science of those signs which are communicated by Gods or Demons which belong to humane life. In him therefore are all kinds of vaticination, as well by dreams, birds, and other things.

(r) A wise man reverenceth and loveth his Parents and Brethren, next the Gods. He hath like wife an innate love of his Children, which the vicious hath not.

(s) A wise man ought to apply himself to some Office in the Commonwealth, (according to Chrysippus) unless otherwise diverted: For he will encourage Virtue, and suppress Vice, (t) especially in those Commonwealths which are far from perfection. He ought to make Laws, instruct Men, prescribe Rules. To which is opposite, study of Popularity, specious Deceit, prescription of things Unprofitable, which are not competible to a wise man.

(u) A wise man ought to marry (as Zeno in his Commonwealth) that he may have Children.

- (x) Laert. (x) *A wise man doth not opinionate* or think, but believe or know; for he never assents to any falsity. (y) Ignorance is an infirm assent; he thinks all firmly. There are two kinds of opinion, one an assent to things not comprehended, the other a weak belief. Neither of these are in a wise man, for he never assented without comprehension, and then always firmly; for nothing is hidden from him, otherwise he might have a false opinion. Therefore he is never diffident. Faith is proper to a wise man, for it is a firm exstimation. A Science is a firm habit, therefore a wicked man doth neither know nor believe.
- (z) Laert. Cic. de finib. lib. 3. (z) *A wise man must imitate the Cynicks*; for Cynicism is the nearest way for virtue, as *Apolodorus* in his *Ethick*: (a) Others say, a wise man ought to continue in that Sect, if he have been thereof; but if he have not, not to enter into it.
- (a) Stob. (b) *A wise man may upon occasion eat man's flesh*. Of this already amongst the Offices.
- (b) Laert. (c) *A wise man is only free*, the wicked are slaves; for liberty is the power of doing according to our own Judgment. Servitude is a privation of the power of doing according to our own judgment. There is another kind of Servitude which consisteth in subjection, a third in being possessed and subjected, to which is opposed vicious domination.
- (c) Laert. Cic. Paradox. (d) *A wise man is only a King*; for Monarchy is a Principality subordinate to none, which only consists in the wise, as *Chrysippus* in his *Treatise*. *That Zeno used words properly*. For (saith he) a Prince must know both good and bad, which none of the wicked knoweth. (e) Dominion and the kinds thereof, Monarchy, Magistracy, Generalship, Admiralty, and the like, are only proper to a wise man; therefore the wise only command, though not actually, yet potentially.
- (d) Laert. (f) *A wise man is only proper to be a Magistrate, Judge, and Orator*; but not any of the wicked.
- (e) Stob. (g) *A wise man is void of sin*; for he cannot fall into error.
- (f) Laert. (h) *A wise man is innocent, and uninjurious*; for he cannot hurt either himself or others, (i) nor receive, nor do any injury: For injury is a hurtful injustice, which is not competent to a wise man, although he may be unjustly assaulted: For he having within himself all good and virtue, is not capable of vice or harm.
- (g) Laert. (h) *A wise man is innocent, and uninjurious*; for he cannot hurt either himself or others, (i) nor receive, nor do any injury: For injury is a hurtful injustice, which is not competent to a wise man, although he may be unjustly assaulted: For he having within himself all good and virtue, is not capable of vice or harm.
- (h) Laert. Stob. (k) *A wise man is not merciful*, nor pardons any, remitting nothing of the punishments inflicted by Law, as knowing them to be proportioned to, not exceeding the offence; and that whosoever sinneth, sinneth out of his own wickedness. A wise man therefore is not benign; for he who is benign, mitigates the rigor of Justice, and conceives the punishments inflicted by Law to be greater than they ought: But a wise man knoweth the Law to be good, or a right reason, commanding what is to be done, and what not.
- (i) Laert. (l) *A wise man nothing wonders at those things which seem Paradoxal*, as *Charon's Cave*, the ebbing and flowing of the Sea, and hot Springs, and ebullitions of Fire.
- (m) Laert. (m) *A wise man will not live in a desert*; for he is communicative by nature, and practick, and will undertake exercise to strengthen his body.
- (n) *A wise man will pray*, requesting good things of the Gods, as *Possidonius* affirms, in his first of Offices, and *Heccaton* in his Thirteenth of Paradoxes.
- (o) *A wise man only is a friend*: Friendship is only amongst the wise, for in them only is an unanimity as to things that concern life and community, so as our friends may make use of them as freely, as we our selves. Unanimity is the Science of common good. A friend it expectible in himself. Plenty of friends is a good: But amongst the wicked, there is no friendship; for friendship being real and not feigned, it is impossible it should consist without faith and constancy. But, in the wicked, there is infidelity, and inconstancy, and hostility, and therefore not friendship, but some external connexions, whereby necessity or opinion ties them together.
- (p) *A wise man doth all things well*; as we say, all Pipes play the *Ismenian* tune well. (q) He doth all things wisely, temperately, prudently, modestly, and according to the other virtues, throughout the whole course of his life. A wicked man doth all amiss, sinning in the whole course of his life, inconstant by nature, often grieved by his own ill actions, wretched and troubled, forasmuch as he is vexed at the thing done, so much is he angry at himself for being the Author of it.
- (r) *A wise man loveth (s) (virtuously) those whose beauty expresses their inward virtue*. Thus *Zeno*, *Chrysippus*, and *Apolodorus* affirm. For love is an impulsion of benevolence, raised from beauty, which love is not of conjunction, but of friendship. For this reason, *Zeno*, though he were in love with *Thrasonides*, a young woman that was in his power, yet suppresseth his affection because she was averse from him. This *Chrysippus* calls the love of friendship; it is no way commendable, for beauty is the flower of virtue.
- (s) *A wise man upon occasion will die voluntarily* for his Country and friends; or, in case he be seized by some excessive pain, loss of his senses, or incurable diseases.
- (t) *A wise man is every way augmented*, for he is every way augmented; *αὐτῶς*, for he hath attained the just height of wisdom; *ἀνίκητος*, for he is invincible, and insuperable. The wicked are the contrary.
- (u) *A wise man is every way augmented*, for he is every way augmented; *αὐτῶς*, for he hath attained the just height of wisdom; *ἀνίκητος*, for he is invincible, and insuperable. The wicked are the contrary.
- (x) *A wise man profiteth the wise, and is mutually profited by all the wise*, though not friends or acquaintance; for betwixt them there is a concord and community of goods; and he who benefiteth another, benefiteth likewise himself. A wicked man neither conferreth nor receiveth benefits; for one is to move towards virtue, the other is to be moved towards virtue.
- (y) *A wise man is a good Oeconomist*, skilful to acquire Wealth. Oeconomist is a habit Active, and Contemplative in the Business of a Family; Oeconomy is the ordering of Expences, Works and Possessions; the Science of Acquisition is a Reason, whereby Wealth is attained, which some account in indifferents, others in good. But no wicked Man is a good Oeconomist, since only a wise Man knoweth from whence, how, and how far gain may be acquired.
- (z) *A wise Man only is perfect*, for he wanteth no Virtue; a wicked Man is imperfect, for he hath no Virtue. Therefore the wise are always happy,

happy, the wicked miserable; which happiness, according to *Chrysippus*, differs nothing from that of God, nor is less expetible. The wicked partake of no good, because Virtue, and that which partakes thereof, is good, and those things which are convenient and requisite are proper only to the wise, as the contraries to the wicked.

(a) *Stob.* (a) *A wise Man is only Rich*; for good is true Riches, and ill true Poverty; a wicked Man is Poor, not having the means to become Rich.

(b) *Stob.* (b) *A wise Man is only Obedient*; the wicked can neither Obey nor Command.

(c) *Stob.* (c) *A wise Man only is honourable*; for honour is the reward of Virtue, the wicked wanting this, are justly dishonourable.

(d) *Stob.* (d) *A wise Man is only Ingenuous and Noble*, according to some of the Stoicks; but others deny it, referring these not to Nature, but Institution only, according to the Proverb, Custom is a second Nature. So that Ingenuity is an habit of Nature or Institution, apt to Virtue; Nobility is a habit of Descent or Institution, apt to Virtue.

(e) *Stob.* (e) *A wise Man is Pleasing, Perswasive, Opportune and Sincere*; for he is expert in every thing, affable in Conversation, and helpful to the Publick: The wicked are the contrary.

(f) *Stob.* (f) *A wise Man is the best Physician*; for he hath considered his Constitution, and those things which are requisite for his Health.

(g) *Stob.* (g) *A wise Man may lawfully part with his Life*, the wicked cannot, because in their Life they never acquire Virtue, nor eschew Vice. But Life and Death are limited by Offices; and their contraries.

(h) *Stob.* (h) *A wise Man will accept of Empire, and cohabit with Princes*; but not unless he perceive it may be done without danger, and to much advantage.

(i) *Stob.* (i) *A wise Man never lieth*; for he who speaketh a falsehood is not properly said to lie, unless it be with intent to deceive. A lie may be used many ways without assent, as in War against Enemies, or in the like necessity.

(k) *Stob.* (k) *A wise Man neither deceiveth, nor is deceived*; for he never sinneth, he useth not his sight, hearing, or any other Sense ill. He is not suspicious, nor repenteth, for both these are proper to fallacious Assent. He can no way be chang'd, or err, or opinionate.

(l) *Stob.* (l) *A wise Man only* (tho' not all wise Men) *is happy in Children, in old Age, in Death*.

(m) *Stob.* (m) *A wise Man doth nothing contrary to his Appetite*; for all such things are done with a Privation, and nothing adverse unforeseen happeneth to him. (n) But in the Primitive time, there was some wise Man that did not desire or will any thing, because that those things which were then present, were not sufficient to be required by him.

(o) *Stob.* (o) *A wise Man is meek*; for meekness is a habit whereby things are done meekly, not breaking forth into Anger.

(p) *A wise Man is Peaceful and Modest*; Modesty is the Science of decent Motion; Tranquillity the order of natural Motions. The contrary to these are seen in the wicked.

(q) *A wise Man is free from all Calumny*; he Calumniates none, and is not Calumniated by any; for Calumny is a lying Imputation of feigned Friends, to which the wise are not liable, for they are true Friends; the wicked are, for they are feigned.

(r) *A wise Man delayeth nothing*; for delay is an Omission of Office through Slothfulness, of which *Hesiod*,

*Nothing deferr a Year, a Month, a Day;
He fights against himself that doth delay.*

(s) *A wise Man can only incite, and be incited to Virtue*, a Fool cannot; for he neglecteth Precepts, and goeth no further than the Words, not proceeding to Action. A wicked Man is not desirous to Hear or Learn, as not being capable by Reason of his Imprudence of what is rightly said; whence it followeth, that he can neither be incited nor incite to Virtue. He that is capable to be incited, or to incite, must be prepared by Philosophy, which is not competible to a wicked Man; for he who diligently heareth Philosophers, is not prepared to Philosophy, but he who expresseth their Doctrine in their Life and Actions. This no wicked Man can do, for he is prepossess'd by Vice. If he should be incited, Vice would pull him back; but none that is vicious incited to Virtue, as none Sick to Health.

(t) *Every wicked Man is an Exile, wanting Law and Country*, for both these are good. That a City or Country is good, *Cleanthes* proveth thus. If there be a Habitation, where those, who fly for Succour, find Justice, it is Good; but a City is such a Habitation, therefore a City is Good. A City is taken three ways; for a Habitation, for a Convention of Men, and for both. In the two latter Significations it is called Good.

(u) *Every wicked Man is Rustick*; for Rusticity is Ignorance of Laws and Civil Manners. A wicked Man refuseth to live according to Law, and is hurtful as a Savage Beast.

(x) *A wicked Man is Tyrannical, Cruel, Violent and Injurious*, whensoever he gets an Occasion.

(y) *A wicked Man is Ungrateful*, not obliging nor requiring; for he doth nothing by Friendship.

(z) *A wicked Man is not Perseverant*; for Perseverance is the Science of obtaining our purpose, not being deterred by Labour.

(a) *A wicked Man is not capable of the right of Donation*. Donation is the good bestowing of Estimation, but nothing that is good is competible to the wicked.

(b) *Every wicked Man is delighted with his Wickedness*, which we may perceive not so much by his Discourse, as Actions, which shews that he is carried on to Wickedness.

THE THIRD PART.

CHAP. I.

PHYSICK, and the parts thereof.

(a) Laert. (a) **P**hyſick is divided into theſe places; *Of Bodies, Of Principles, Of Elements, Of Gods, Of Place, Of Vacuum*: Thus eſpecially; but generally into three places; *Of the World, Of Elements, Aitiologicke of Cauſes.*

That concerning the *World*, is divided into two parts; whereof one Contemplation, is common alſo to the Mathematicks, concerning fixed Stars and Planets; as whether the Sun be of the ſame Magnitude as he appears to be, and whether the Moon be ſo likewiſe; of their Periods and the like: The other, Contemplation, proper only to Phyſick, to enquire into the Eſſence of theſe; whether the Sun and Stars conſiſt of Matter and Form; whether Generate or Ingenerate, whether Animate or Inanimate, whether Corruptible or Incorruptible, whether govern'd by Providence, or the like.

The Place concerning *Cauſes*, is likewiſe two-fold; whereof one, Contemplation, is common alſo to the Medicinal Diſquiſitions, whereby they enquire concerning the principal part of the Soul, and thoſe things which are produced in the Soul and Seed, and the like. The other is likewiſe uſurped by the Mathematicks, as, in what manner we ſee, what is the cauſe of the ſecond Phantaſie? How are made Clouds, Thunder, Rainbows, Halo's, Comets, and the like?

CHAP. II.

Of Bodies.

(a) Senec. Epist. 89. (a) **N**atural Philoſophy beancheth into two parts, of Corporeals and Incorporeals.

(b) Laert. A Body is that which doeth or ſufficeth; (b) It is the Senſe with Eſſence or Subſtance, and finite: (c) Whatſoever is, is a Body, for whatſoever is, either doeth or ſuffereth.

(d) Laert. (d) Principles are Bodies void of Form. Elements are Bodies endued with Form.

(e) Plut. plac. Phil. 1. 11. (e) Cauſes are Corporeal; becauſe they are Spirits.

(f) Plut. cont. Stoic. (f) Qualities are Corporeal; for they are Spirits, and aërial Intentions, which affect the parts of all things, generated with Form and Figure.

(g) Plut. cont. Stoic. Tertul. de anima, cap. 6. (g) Virtues, Vices, Arts, Memory, Phantaſies, Affections, Appetitions, Aſſents, are Bodies exiſting in the Supream part of the Soul.

(h) Sen. Ep. 113. (h) The Soul is a Body, becauſe it maketh us to be living Creatures.

(i) Night and Day are Bodies.

(k) Voice is a Body, for it maketh that which is heard; in a word, whatſoever is, is a Body and a Subject, ((l) for the Stoicks take a way intellectual Subſtances, affirming all things that are, to be comprehended by Senſe) only differences are not ſubſiſtent.

(m) A ſolid Body (according to *Apollodorus*) (m) is diviſible three ways, into length, breadth and depth.

A Superſicies is the term of a Body, or that which hath only Length and Breadth, but no Depth; thus *Poſſidonius*.

A Line is the term of a Superſicies, or a Length without Breadth, that which hath Length only.

A Point is the term of a Line, or the leaſt mark.

(n) A Body is diviſible into Infinite, yet it conſiſteth not of infinite Bodies. (n) Stoic. Phyſ. 17.

CHAP. III.

Of Principles.

(b) **T**HE place concerning Bodies, is divided into two degrees, into thoſe which produce, and thoſe which are produced; the firſt Principles, the ſecond Elements. (a) Senec. Ep. 79.

(b) Principles and Elements differ: Principles are Ingenerate, Incorruptible: Elements ſhall periſh by Conflagration. Moreover, Principles are Bodies, and void of Form; Elements have Form. (b) Laert.

(c) There are two Principles of all things, the Agent, and the Patient: The Patient is a Subſtance void of Quality, called Matter: the Agent is the Reaſon which is in the Matter, God. (c) Laert.

(d) Matter is ſluggiſh, a thing ready for all things, but will ceaſe if none move it. The Cauſe, that is, the Reaſon formeth matter, and moldeth it which way he pleaſeth, out of which he produceth various Works. There muſt therefore be ſomething out of which a thing is made, and alſo by which it is made. This is the Cauſe, that Matter. (e) The Cauſe or active Reaſon is God. (d) Sen. Ep. 65. (e) Ibid.

(f) In the Agent there is Power, in the Patient a certain Matter [or Capacity,] and in both, both; for Matter it ſelf could not Cohere, if it were not kept together by Power, nor that Power without ſome Matter; for there is nothing, which is not compelled to be ſomewhere. (f) Cic. (g) Both

(g) *Laert.* 7. 3. (g) Both these, God and the World, the Artist and his Work, they comprehend within this term, *Nature*, as if Nature were God mixed through the World. (b) Sometimes they call that Nature which containeth the World, sometimes that which generateth and produceth things upon the Earth.

(i) *Stob. Phys.* 1. 15. The Agent is, as we said, called the Cause. (i) A Cause, according to *Zeno*, is that by which there is an Effect, which is not a Cause; or, as *Chrysippus*, the Reason of the Effect; or, as *Possidonius*, the first Author of a thing. A Cause is a Body, a not-Cause a Categorem. It is impossible that the Cause being assigned, the Effect should not be present, which is to be understood thus: The Soul is the Cause through which we Live, Prudence the Cause by which we are Wise. It is impossible that he who hath a Soul should not Live, or he who hath Prudence should not be Wise.

C H A P. IV.

Of Matter.

(a) *Laert.* (a) THE Substance of all [(b) qualitative] Beings, is first Matter, according to *Zeno* and *Chrysippus*, in his first of *Physicks*.

(c) *Laert.* (c) Matter is that of which every thing is made; it hath two Names, *ὑποκείμενα* Substance, and *ὑλὴ* Matter. Substance is of all things in general, Matters of particulars.

(d) *Laert.* (d) Universal Matter is [(e) according to *Zeno*, wholly Eternal] not admitting, as *Chrysippus* saith, encrease or decrease.

(f) *Laert.* (f) Particular Matter admitteth Augmentation and Diminution, (g) for it remaineth not always the same, but is separated and mixed, so that, according to *Chrysippus*, its parts perish by Separation, and exist by mutual Mixture. But those who call Fire, Air, Water and Earth, Matter, assert not a thing void of Form, but of a Body.

(h) *Stob. Phys.* 14. (h) Matter is a Body, [(i) and Finite.] *Possidonius* saith, that the Substance and Matter of the Universe is void of Quality and Form, in as much as it hath not a certain Figure and Quality in it self; but it is always seen in some Figure and Quality. But the substantial Nature of the Universe differs from Matter intentionally only.

(k) *Laert.* (k) Matter is passible; for if it were immutable, things could not be generated of it. Hence it followeth, that it is divisible into infinite; yet, it self, as *Chrysippus* saith, is not infinite; for nothing that is divisible is infinite, but Matter is continuous.

(l) *Stob. Phys.* 14. (l) Through this Matter, *Zeno* affirmeth, that the Reason of the World, which some call Fate, is diffused as Seed.

C H A P. V.

Of the World.

OF this Matter was made the World. The World hath several Appellations, *κόσμος*, the World; *τὸ πᾶν*, the All; *τὸ ὅλον* the Whole.

(a) *κόσμος*, World, is taken three ways: first, (a) *Laert.* for God himself, who is properly qualified with all Essence, Incorruptible and Ingenerate, who framed the Universe after a certain period of time, who resolved all Nature into himself, and again generated it out of himself. Secondly, for the Itary Ornament: and thirdly, that which consists of both.

(b) The All, *τὸ πᾶν*, is one way taken, as *Apolodorus* saith, for the World, and another way for the System of the World, and the Vacuity beyond it. The World is Finite, the Vacuity Infinite.

(c) Thus likewise they distinguish betwixt (c) *Stob. Phys.* *τὸ πᾶν*, and *τὸ ὅλον*: *τὸ πᾶν*, includeth also an infinite Vacuity, in which the World is: *τὸ ὅλον* signifies the World without that Vacuity, which neither is increased nor diminished; but its parts are sometimes extended, sometimes contracted. It began from the Earth as its Center, for the Center is the beginning of a Circle.

(d) The World is that which is properly qualified with the Essence of all things; or, as (d) *Laert.* (e) *Chrysippus* and (f) *Possidonius* define it, a System of Heaven and Earth, and of the Natures therein contained; or a System of God and Men, and of all things that were made for them.

(g) The World was made by God; for if (g) *Laert.* (faith *Chrysippus*) there be any thing which produceth such things as Man, tho' indued with Reason, cannot produce, that (doubtless) is greater and stronger, and wiser than Man. But a Man cannot make the Cœlestial things; therefore that which made them, transcendeth Man, in Art, Counsel, Prudence and Power, and what can that be but God?

(b) The World was made for those animate (b) *Cic. de* Essences which have the use of Reason, these are *nat. 2.* the Gods and Men, than whom nothing is better. (i) All things of which it consisteth, and (i) *Laert.* (j) *Stob. Phys.* 13. which it produceth within it self, are accommodated to the use of Man.

The World was made in this manner; (k) (k) *Laert.* God in the beginning being alone by himself, converted all Substance (which according to *Zeno*, was Fire) first into Air, then into Water. And as in the Plant the Seed is contained; so God, who is the prolific Reason of the World, left such a Seed in the Humidity, as might afford easie and apt Matter for the Generation of those things that were to be produced.

(l) *Zeno* addeth, that one part tending downward, was condensed into Earth, another part (l) *Laert.* (m) *Stob. Phys.* 20. remained pure Water; and partly, being exhal'd, Air, of a particle of which Air flashed out Fire.

(m) *Cleanthes* describeth it in this manner. (m) *Stob. Phys.* 20. The Universe being set on Fire, the middle part thereof first settled downwards, then the next parts by little and little were quenched. Thus the Universe being wet, the extreame fire, (the middle part opposing it) sprang upward, and began the constitution of the World; and the revolution of this constitution shall never end. For as the parts of every thing are at certain times produced of Seed; so the parts of the Universe (amongst which are living Creatures and Plants) are produced in their Seasons; and as some reasons of the parts are mixed together in the Seed, which being compos'd, are again dissolved; so of one are all things made; and again, of one

is all compounded by an equal and perpetual revolution.

(n) *Laert.* (n) The World is *One*, of the same corporeal substance, and of a Spherical figure, for this is of all figures most apt for motion. Thus *Zeno*, *Chrysippus*, *Possidonius*, and others.

(o) *Laert.* (o) The World is seated in an infinite incorporeal vacuity, which is beyond it, circumfused about it, (p) into which the World shall be dissolved by Conflagration. The World is finite, the vacuity infinite; yet (q) *Possidonius* saith it is no more than will suffice for the revolution of the World, when it shall perish. (r) By this argument they confute the motion of Atoms downward, introduced by *Epicure*; for in that which is infinite, there are no local differences of high or low.

The World is not heavy, because the whole Fabrick thereof consisteth of heavy and light Elements, and being placed in the midst, whither such bodies tend, it keepeth its place.

(s) *Laert.* (s) In the World there is no vacuity, but it is compleatly one, for that necessitates a conspiracy and harmony, betwixt Celestials and Terrestrials.

(t) *Plut. contra Stoic.* The World only is (t) self-sufficient, because it alone hath all in it self, whereof it standeth in no need. Of it self it is nourished and augmented, whereas the parts are transmuted and converted into one another.

(u) *Plut. contra Stoic.* The World is a (u) perfect body; the parts of the World are not perfect, because they are respective to the whole, and not of themselves. The Universe is by Nature apt to move it self in all Parts, to contain, preserve, and not break, dissolve and burn it self, the Universe sending and moving the same point, and the parts thereof having the same motion from the Nature of the body. Like it is that this first motion is naturally proper to all Bodies, namely, to incline towards the midst of the World, considering the World moveth so in regard of it self; and the parts likewise, in that they are parts of the whole.

(x) *Laert.* (x) The World is a living Creature, rational, animate and intellectual, (so *Chrysippus*, *Apollodorus* and *Possidonius*) and hath an animate sensible essence. For a living Creature is more excellent than that which is not a living Creature; but nothing is more excellent than the World, therefore the World is a living Creature. That it is animate is manifest from our Soul, which is a piece thereof taken out of it. (But *Boethius* denies that the World is a living Creature.)

(y) *Laert.* (y) The Mind or Providence passeth through every part thereof, as the Soul doth in us, but in some parts more, in others less; through some permeating, as a habit, as in the Bones and Nerves; through some as a mind, as through the principal (Hegemonick) part. In like manner the whole World is an animate rational Creature, the Hegemonical part thereof is the *Æther*, as *Antipater* the *Tyrian* in his Eighth Book of the World. But *Chrysippus* in his first of *Providence*, and *Possidonius* of the *Gods*, affirm, that Heaven is the Hegemonick of the World; *Cleanthes*, the Sun. But *Chrysippus* in the same Book (differing from what he said before) affirmeth it to be the purest part of the *Æther*, which they call the first God, sensibly, because it passeth through all in the air,

and through all living Creatures and Plants, but through the Earth as a habit.

(z) The World, according to the greater part (z) *Laert.* of Stoicks, is corruptible, for it is generated in the same manner as things comprehensible by sense. Again, if the parts thereof be corruptible, the whole is also corruptible; but the parts of the World are corruptible, for they are daily changed into one another, therefore the whole it self is corruptible. And again, if any thing admit any change into the worse, it is corruptible; but the World doth, for it admitteth exsiccation, and inundation; therefore, &c.

(a) The World shall perish by fire, caused (a) *Phil. Jud. de Immortal. mundi.* by the power of fire which is in all things, which after a long time, consuming all the moisture, shall resolve all things into it self. The Moon, Stars and Sun, saith (b) *Cleanthes*, shall perish, but (b) *Plut. contra Stoic.* God shall assimilate all things to himself, and resolve all into himself. (c) This opinion of the general Conflagration of the World, was held by (c) *Numer. pud. Engeb.* the first and most ancient of this Sect, *Zeno*, *Cleanthes* and *Chrysippus*.

(d) This first is the seed of the World; after (d) *Plut. contra Stoic.* the Conflagration it diffuseth it self even into the Vacuity that was beyond the World. Afterwards, by order of the same reason which made the World, it shall withdraw and contract it self towards the generation of a new World, yet not be quite extinguished, but so as that some portion thereof remain, forasmuch as it is the cause of motion.

But (e) *Boethius*, *Possidonius*, and (f) *Panætius* (e) *Phil. Jud. de Immortal. mundi.* deny this Conflagration of the World, conceiving (f) *Cic. de Nat. Deor.* rather that the World is eternal, to whom likewise *Diogenes* the *Babylonian* assents.

CHAP. VI.

Of Elements.

(a) GOD having converted, as we said, all (a) *Laert.* matter into moisture, and prepared it for the generation of future things, in the next place produced the four Elements, Fire, Water, Air, and Earth. Of these discourseth *Zeno* in his Book of the Universe, and *Chrysippus* in his first of Physicks, and *Archedemus* of Elements.

(b) Element is that of which generated (b) *Laert.* things are first made, and into which they are resolved. The four Elements are matter or substance endued with quality. Fire is hot, Water moist, Air cold, Earth dry; yet not so, but that in Air there is part of the same quality; for in the highest it is Fire, which is called *Æther*, in which is generated the first Sphere of Planets; next Air, then Water, the basis of all, Earth being placed in the midst of all.

(c) Of the four Elements, two are light, Fire (c) *Laert.* and Air; the other two, Earth and Water, heavy, which properly tend to the Center; but the Center it self is no way heavy.

CHAP. VII.

Of Fire.

(a) *Stob.* THE first Element is that of *Fire*, which as all Bodies tend to the middle, inclineth, as much as the lightness of its Nature permits, to the centre of the World, by a circular motion round about it.

(b) *Stob.* There are (according to *Zeno*) two kinds of Fire, one artificial, requisite to the use of life, which converteth nutriment into it self; the other inartificial (so (c) *Cicero* renders ἀτεχνητόν) by which all things grow, and are preserved;

(d) *De Nat. deor. 2.* (d) *Cic. de Nat. deor. 2.* for whatsoever is nourished and groweth, compriseth within it self the power of heat. This Fire is diffused through all the parts of the World, and they are all sustained by it. That it is in the Earth, appeareth by Seeds and Roots, which spring up and grow by the temperament of this heat. That it is in Water appeareth, forasmuch as Water is susceptible of greater cold, as by freezing. It is consequently in air also; that being a vapour extracted from Water, and supply'd by motion of the heat which is in the Water. But primarily, and originally, it is in the Element of Fire, a Nature absolutely hot, which dispenseth salutary vital heat to all other things.

(e) *Stob. Phys. p. 47.* (e) This is Nature, saith *Zeno*, and the Soul: Of Fire consist the Sun, Moon, and Stars.

CHAP. VIII.

Of the Stars.

(a) *Cic. Nat. deor. 2.* (a) IN the æther are generated the Stars of the noblest and purest part thereof, without admixture of any other Nature, wholly hot and pellucid, animate creatures indued with Sense and Intellect.

(b) *Stob. Phys.* (b) *Possidonius* defineth a Star, a Divine Body, consisting of ætherical fire, splendid and fiery, never resting, but always moving circularly.

(c) *Cic. Nat. deor. 2.* (c) That the Stars are wholly fiery, *Cleanthes* proveth by the testimony of two senses, touch and sight. For the Lustre of the Sun is brighter than of any fire, seeing that it shines so far and wide, to so vast a world; and such is its touch, that it not only warmeth, but oftentimes burneth, neither of which it would do if it were not fiery.

Now (saith he) the Sun being fiery, is either like that fire which is requisite to the use of life, or unto that which is contained in the bodies of living creatures; but this our fire, which the use of life requireth, is a consumer of all things, disturbeth and dispatcheth all things. On the contrary, the other is corporeal, vital, and salutary, it conserveth all things, it nourisheth, encreaseth, sustaineth, and affecteth with sense; therefore, saith he, there's no question to which of these fires the Sun is like, for he causeth all things to flourish and sprout up, according to their several kinds: Wherefore the fire of the Sun being like those fires which are in the bodies of living creatures, the Sun must be a living creature also, and so must be likewise the rest of the Stars in the celestial fire, which is called Æther or Heaven.

*. For seeing that of living creatures, one kind * *Cic. Nat. deor. 2.* is generated in the earth, other kinds in the water, others in the air, it were absurd to think, that in that part which is most apt for generation of living creatures, no living creature is generated. The Stars possess the Æther, which being most rare, and in perpetual agitation and vigor, it is necessary the living creature that is generated in it, be endued with most acute sense, quickest mobility. The Stars therefore have sense and intelligence; whence it followeth, that they are to be reputed Gods. For we say, that they who live in the purest air, are much more acute and understanding, than those who live in a thick climate: The diet likewise is thought to conduce not a little to the sharpening of the understanding. Whence it is probable, the Stars are endued with most excellent understanding, forasmuch as they dwell in the ætherial part of the World, and are nourished with exhalations from the Sea and Earth, extenuated by a long distance.

The sense and intellect of the Stars is chiefly manifest from their order and constancy, for nothing can be moved by proportion and number without providence, in which nothing is temerarious, nothing various, nothing casual. But the order of Stars, and constancy throughout all eternity, cometh neither from Nature, for that is void of Reason, nor from Fortune, which affecteth Variety, and disalloweth Constancy.

Again, all things are moved either naturally, or violently, or voluntarily. Those which move naturally, are carried either by their weight downward, or by their lightness upwards, neither of which is proper to the Stars, for their motion is circular. Neither can it be said, that they are moved violently against their own nature; for what power can be greater? It remaineth therefore that their motion be voluntary.

(d) No fire can subsist without some aliment, (d) *Cic.* (e) the Stars therefore are nourished by the vapours of the Earth. (e) *Laert.*

(f) Of Stars (according to *Chrysippus*) there are two sorts, both which are by nature divine, animate, and providential, the fixed and the Erratick. The multitude of the fixed is incomprehensible; the Erratick are lower than the fixed; The fixed are all ranked in one superficies, as is manifest to the sight; the Erratick in several. The Sphere of fixed Stars includeth that of the Erratick. The highest of the Erratick, and next to the fixed Stars, is the Sphere of *Saturn*, next, that of *Jupiter*, after which, that of *Mars*, then that of *Mercury*, then that of *Venus*, then that of the *Sun*, and lastly that of the *Moon*, which being nearest the air, seemeth therefore aerial, and hath greatest influence upon Terrestrial Bodies.

(g) *Saturn*, φάνον, finisheth his course in almost thirty years; *Jupiter*, φαέθων, in twelve; *Mars*, *ποσειδών*, in twenty four Months wanting six days; *Mercury*, εἰλβων, in a year; *Venus*, εωσφύρις, (lowest of the five Planets) in a year. (g) *Cic. de Nat. deor. 2.*

(h) The *Sun* and the *Moon* are properly called ἀστὲρ, Stars; but ἀστὴρ and ἀστὲρ differ; for every ἀστὴρ is ἀστὲρ, but not the contrary. (h) *Stob.*

(i) The rising of a Star, *Chrysippus* defineth, its advancement above the Earth; and the setting thereof its occultation under the Earth. The same Stars at the same time rise to some, and

U a for

set to others. The apparition of a Star, ἐμπόλη, is its rising together with the Sun; and the setting thereof, is its setting with the Sun: For setting is taken two ways, in opposition to rising, and in opposition to apparition. As the apparition of the Dog-star is its rising together with the Sun, and its setting is its occultation under the Earth together with the Sun, the same is said of the Pleiades.

CHAP. IX.

Of the Sun.

- (a) Cic. Nat. deor. 2. (a) **N**ext Venus (the lowest Planet) is the Sun, the (b) chief of all that consist of this ætherial fire. The Sun is defined by Cleanthes and Chrysippus, an intellectual Taper, gather'd and kindled from the vapours of the Sea.
- (c) Laert. (c) Possidonius defineth the Sun a most pure fire, greater than the Earth, of a Spherical figure (as (d) Stob. p. 57. (d) Cleanthes also affirms) answerable to that of the World.
- (e) Laert. (e) That the Sun is fiery, is manifest in that it hath all the operations of (f) fire; and forasmuch as he is fire, it followeth that he must be nourished. (g) The Sun is nourished by exhalations from the great Ocean.
- (f) Cic. (f) According to the expansion of this subjected aliment, saith Cleanthes, in his motion from Tropick to Tropick, removeth in a spiral line, from the Æquinoctial towards the North, and towards the South. (i) Zeno saith, he hath two motions, one with the World from East to West, the other contrary, through the Signs.
- (i) Stob. p. 57. (i) That the Sun is greater than the Earth, appeareth in that it enlightheth, not only all the Earth, but Heaven also. Again, the shadow of the Earth being conical, argues the Sun to be greater than the Earth. Again, it is visible everywhere by reason of its magnitude.
- (k) Laert. (k) The Sun is Eclipsed by interposition of the Moon betwixt us and that part of the Sun which is toward us, (as Zeno in his Book of the Universe.) For meeting the Sun, and coming under him, she seemeth to darken his light, and afterwards to disclose it again, as will appear in a Basin of water.

CHAP. X.

Of the Moon.

- (a) Stob. Phys. p. 59. (a) **I**N the lowest part of the æther is the Moon: The Moon (according to Zeno) is an intellectual wife, igneous Star, consisting of artificial fire. Cleanthes saith, she is of a fiery substance, and of a dirty figure. (b) Lipsius for πηλοειδής, dirty, substitutes πηλοειδής, as if of the same figure, as a Hat or Cap. But perhaps there needs no alteration, for they (c) affirmed, as she is nearer to the Earth than the Sun, so is she of a more terrene Nature. (d) Possidonius and most of the Stoicks affirm, she is mixt of fire and air, (e) by reason of which diversity of substance she is not subject to corruption. (f) To this mixtion of air in her composition, they impute likewise those spots which are seen in her face. (g) She is greater

than the Earth, as well as the Sun is, and Spherical as the Sun, yet appeareth in various figures, the Full Moon, First Quarter, New Moon, Last Quarter.

(b) Chrysippus saith, she is a fire collected after the Sun, from the exhalation of fresh Waters, for which cause she is likewise nourished by them, as (i) Possidonius also asserteth.

(k) Her motion is spiral; (l) Zeno saith, she hath two motions, as the one with the World from East to West, the other contrary through the Signs. (m) The period of her course is called a Month; μήν, is likewise that part of the Moon which appeareth to us, for one half of her is always turned towards us. Laert.

The Moon is Eclipsed when she falleth into the shadow of the Earth. For although every Month she is opposite to the Sun, yet she is then only eclipsed when she is fullest, by reason of the obliquity of her course, whereby her latitude is varied towards the North and South. When therefore she happens to be near the Ecliptick, and opposite to the Sun, she is Eclipsed; which happens (as Possidonius saith) in Libra and Scorpio, and in Aries and Taurus. Thus Laertius; but Possidonius seems to have been ignorant of, or not to have considered the motion of the Nodes of the Moon (commonly called Caput & Cauda Draconis) whereby the restitution or period of Eclipses is made in nineteen years, (κατὰ τὸ ὁλοσχερὲς εἶεν) which was the ground of Meton's Period, and of the Cycle of the Moon, in the Julian Calender.

CHAP. XI.

Of Air.

- (a) **N**Ext the sphere of the Moon (saith Chrysippus) is the Element of Air, interposed betwixt the Sea and Heaven (b) spherical in figure) (c) consecrated by the name of (d) Juno, Sister and Wife of Jupiter, who is the Æther; (e) betwixt these there is a near conjunction.

(e) The Air is divided into three Regions, the highest, the middle, and the lowest. The highest Region is the hottest, and driest, and rarest, by reason of the vicinity of the eternal fires. The lowest and nearest to the Earth is thick and caliginous; because it receiveth terrene exhalations. The middle Region is more temperate than the higher and lower, as to ficcidity and rarity, but colder than both. This, wherein the clouds and winds are generated, is, according to Possidonius, forty furlongs above the Earth. Next to it is the pure and liquid air of untroubled light. From the turbulent part to the Moon is twenty hundred thousand furlongs.

(f) To the Air is attributed the primitive cold.

(g) As concerning things in the Air, Winter is the rigor of the Air, next above the Earth, occasion'd by the remoteness of the Sun, and is the coldest of the Seasons of the year. Spring is the season succeeding Winter, preceding Summer, and is a good temperature of the Air, occasion'd by approach of the Sun. Summer is that season of the year, when the Air above the Earth is warmed, by the Sun's access towards the North.

Autumn

Autumn that season of the year which followeth Summer, and precedeth Winter, is made by the return of the Sun from us.

(b) Laert.

(b) Winter cometh, when the air is predominant in thickness, and is forced upward: Summer, when the fire is predominant, and driven downward.

(i) Plut. plac. Phil. 3. 7.

(i) Wind is a fluxion of the air, having several names, from the variety of places; as for example: That which bloweth from the darkness of the night, and Sun-setting, is called *Zephyrus*: from the East and Sun-rising, *Apeliotes*; from the North, *Boreas*; from the South, *Lybs*. (k) It is occasion'd by the Sun's extenuation of the vapours.

(k) Laert.

(l) Laert.

(l) The *Rain-bow* is a reflection of the Sun's beams from a humid Cloud: Or, as *Possidonius*, an apparition of part of the Sun or Moon in a Cloud, dewy, concave, and continuous to the phantasia, as in a Looking-glass, the representation of a Circle.

(m) Laert.

(m) *Comets* are fires subsisting of thick air, carried up to the ætherial place.

(n) Laert.

(n) *Σέλας* is an accension of sudden fire, swiftly carried through the air, appearing lengthways.

(o) Laert.

(o) *Rain* is a conversion of clouds into water, when either from the Earth, or from the Sea, by the power of the Sun, the humour is drawn upwards ineffectually.

(p) Laert.

(p) *Frost* is congealed rain.

(q) Laert.

(q) *Hail* is a concrete cloud, dispersed by the wind.

(r) Laert.

(r) *Snow* is humidity, from a concrete cloud, according to *Possidonius*.

(s) Laert.

(s) *Lightning* is an accension of clouds, which are driven by the winds upon on another, and broken, according to *Zeno*.

(t) Laert. Plut. plac. Phil. 3. 3. Stob. p. 65.

(t) *Thunder* is a noise occasion'd by the collision of clouds.

(u) Laert.

(u) *Thunderbolt* is a strong inflammation rushing upon the Earth with great violence, when the clouds by impulsions of the winds are broken against one another. Some define it a conversion of fiery inflamed air, violently rushing down.

(x) Laert.

(x) *Typho* is a violent Thunder, thrust down with a great force of wind, or a smoking wind, which rusheth down upon the breaking of the cloud.

Prefter is a cloud inclosed with fire by wind in the concavity of the Earth: There are many kinds, *Earthquakes*, *Chasmas*, and the like.

C H A P. XII.

Of Water and Earth.

(a) Stob.

That part of the World (saith (a) *Chrysippus*) which is the most solid support of Nature, as bones are in a living Creature, is called the Earth: About this the Water is evenly diffused. The Earth hath some uneven parts arising out of the Water, called Islands, or, if of large extent, Continents, from the ignorance of man, who knows not, that even those are Islands, in respect of the great Ocean.

(b) Plut. plac. Phil. 3. 9. Laert.

The Earth is in the midst, being in the nature of a Center (b) one and finite, (c) spherical in figure. The Water is likewise spherical, having the same Center with the Earth.

(c) Plut. plac. Phil. 3. 10.

The Earth hath five *Zones*, one Northern, beyond the Artick Circle, uninhabitable through extremity of Cold; another Temperate; a third not habitable by reason of extream Heat, whence it is called Torrid; a fourth Temperate; a fifth Southern, not habitable by reason of Cold. * But *Possidonius* conceiveth the Climate under the Equinoctial to be Temperate; for, saith he, under the Tropicks where the Sun dwells longest, the places are habitable, and why not then under the Æquator? Again, the Night being equal to the Day, affordeth leisure enough for refrigeration, which is assisted likewise by showers and winds.

* Cleomed.

* The generation of the world began from the Earth, as from the Center; for the Center is the beginning of a sphere.

(d) Plants have not any soul at all, but spring up of themselves, as it were by chance. (d) Plut. plac. Phil. 5. 56.

C H A P. XIII.

Of Mixture and Temperament.

Chrysippus asserteth a (a) Spirit moving it self (a) Stob. Phys. 20. to it self, and from it self, or a spirit moving it self backwards and forwards. He calleth it spirit, as being moved air, answering in some proportion to the Æther, so that it both meets in one; and this motion is only according to those who think, that all nature receiveth mutation, solution, composition, and the like.

Composition, mixture, temperament and confusion are different. Composition is a contract of bodies, whose superficies are contiguous to one another, as in heaps of grain or sand. Mixture if of two or more bodies, whose qualities are diffused through the whole, as we see in fire, and red hot iron, and in our own souls; for everywhere there is a diffusion through entire bodies, so as one body doth pass through another. Temperament is of two or more humid bodies, whose qualities are diffused through the whole. Mixture is also common to dry bodies, as to fire and iron, to the soul and the body, temperament only to the humid. For qualities appear from the temperament of several humid things, as of Wine, Honey, Water, Vinegar, and the like; that in such temperament, the qualities of the things tempered remain, is evident from this, that oftentimes they are by some art separated from one another. For if we put a sponge dipped in oyl into wine mixt with water, the water, separating it self from the wine, will gather to the sponge. Lastly, confusion is the transmutation of two or more qualities into another of a different nature, as in composition of Unguents and Medicines.

C H A P. XIV.

Of Generation and Corruption.

(a) *Possidonius* asserteth four species of Generation and Corruption, of things that are, in (a) Stob. Phys. to things that are; (for that of things that are not, and of things that are not to be rejected, conceiving there is none such.) Of transmutations U u 2 into

into things that are, one is by division, another by alteration, a third by confusion, a fourth of the whole by resolution. Of these, alteration concerneth the substance, the other three are of the qualities which inhere in the substance. According to these are generations made. But the substance it self is neither augmented nor diminished by apposition or detraction, but is only altered as happeneth to numbers and measures. But in things properly qualited, as *Dion* and *Theon*, there is augmentation and diminution, wherefore the quality of each remaineth from the generation until the corruption thereof, in plants and living creatures which are capable of corruption. In things properly qualited, he asserted two susceptible parts; one according to the substance, another according to the quality. This, as we have often said, admitteth augmentation and diminution. Neither is the thing properly qualited, and the substance out of which it is, all one, nor divers, but only, not all one, because the substance is a part, and occupateth the same place; but things that are divers have distinct places, and are not consider'd in part. That as to the thing properly qualited, and as to the substance, it is not the same, *Mnesarchus* affirmeth to be evident, because it is necessary, that to the same happen the same things. For if, for example, a man having formed a horse, should break it, and make a dog, we would presently, beholding it, say, this was not before, but it is now: So are the qualited and the substance divers. Neither is it likely that we should all be the same as to substance; for it often happens, that the substance is preexistent to the generation, as the substance of *Socrates* was, before *Socrates* was; and after the corruption and death of *Socrates*, the substance remaineth, though *Socrates* himself be not.

C H A P. XV.

Of Motion.

(a) *Stob.*

(a) **M**otion (according to *Chrysippus*) is a mutation of Parts, either in whole or in parts, or an excession out of place, either in whole or in part, or a change according to place, or figure. *Faculation* is a vehement motion from on high. *Rest* is partly a privation of Motion in a Body, partly the same habit of a Body before and after. There are two first Motions, *right* and *oblique*; from the Mixtion of these ariseth great variety of Motions.

(b) *Stob.*

(b) *Zeno* affirms the parts of all things consisting by themselves, are moved towards the middle of the whole, and likewise of the World it self; wherefore it is rightly said, that all parts of the World tend to the middle thereof, and principally the heavy, and that there is the same cause of the *Rest* of the World, in the infinite vacuity, and of the *Rest* of the Earth, in the World, in the midst of which it is constituted as a point. All Bodies have not Gravity, as Air and Fire; yet these in some manner tend to the midst of the World.

C H A P. XVI.

Of Living Creatures.

(a) **O**F animate Creatures there are two kinds, (a) *Plut. Pl. Pl.* (for Plants, as we said, have no Souls) some are Appetitive and Concupiscible, others Rational. The Soul, according to *Zeno*, *Antipater*, and *Possidonius*, is a hot Spirit, for hereby we Breathe and Move. *Cleanthes* saith, we Live so long as that heat holdeth.

Every Soul hath Sense, and is a Spirit innate in us, wherefore it is a Body, and shall not continue after Death; yet is it by Nature corruptible, notwithstanding that it is a part of the Soul of the Universe which is incorruptible: Yet some hold, that the less firm Souls, such are those of the unlearned, perish at the Dissolution of the Body; the stronger, as those of the wise and virtuous, shall last even until the general Conflagration.

(b) The Soul hath eight parts, whereof five (b) *Lact. Plut. plac. phil. 4. 4.* are the Sences, the sixth Generative, the seventh Vocal, the eighth Hegemonick.

(c) The Supream or Hegemonick part of the (c) *Plut. plac. phil. 4. 4.* Soul, is that which maketh Phantasies, Assent, Sense, Appetite. This Supream part is called Rotiocination; (d) it is seated in the Heart, (d) *Plut. plac. phil. 4. 4.* some say in the Head, as in its Sphere.

(e) From the Hegemonick issue, are extend- (e) *Plut. plac. phil. 4. 21.* ed to the Body the seven other parts, which it guideth by their proper Organs, as a Fish its Claws.

Sense is an Apprehension by the Sensitive Organ, or a Comprehension. Sense is taken many ways: For the Faculty, Habit, Act, Phantasie, whereby the sensible Object is comprehended, and the Hegemonick parts of the Soul are called Sense. Again, the Sensories are intelligent Spirits diffused from the Hegemonick to the Organs.

(f) The Sences are Sight, Hearing, Smell, (f) *Plut. plac. phil. 4. 21.* Taste, Touch:

(g) *Sight* is a Spirit extended from the Hege- (g) *Plut. plac. phil. 4. 21.* monick part to the Eyes. *Sight* is made by Contraction of that Light which is between the Eye and the Object, into a Cone, according to *Chrysippus*. *Apollodorus* saith, that part of the Air which is Conical is next the Sight, the Base next the Object; so as that which is seen is pointed out to by the Air as by a stick.

Colour is the first Figuration or Habit of matter.

Darkness is visible, for from the Sight there issueth a Splendor which passeth round about that Darkness. Neither is the Sight deceived, for it truly sees that it is Dark. *Chrysippus* saith, that we see according to the Intention of the mediate Air, which is struck by the visual Spirit, which passeth from the Hegemonick to the Apple of the Eye, and after that blow, falleth upon the Ear next, extending it self in a Conical Figure. Again, from the Eye are emitted fiery Rays, not black or dusky, and therefore Darkness is visible.

(i) *Hearing* is a Spirit extended from the He- (i) *Plut. plac. phil. 4. 21.* gemonick part to the Ears. *Hearing* is made when the Air betwixt the Speaker and Hearer is verberated in a Circulation, and at last by Agitation, passeth in at the Ears, as the circles that are made in a Pond, by casting in a Stone.

(k) *Smel-*

- (k) *Plac. Phil.* 4. 21. (*k*) *Smelling* is a Spirit extended from the Hegemonick to the Nostrils.
- (l) *Plut. ibid.* (*l*) *Tasting* is a Spirit extended from the Hegemonick to the Tongue.
- (m) *Plut. ibid.* (*m*) *Touching* is a Spirit extended from the Hegemonick part to the Superficies; so that it perceiveth that which is obliged to it.
- (n) *Plut. ibid.* (*n*) The sixth part of the Soul is the Generative, which is a Spirit from the Hegemonick to the *Parastate*; of this part, see *Laertius* from *αἴσθημα δὲ λήγουσιν εἶναι, ὅτι τοῦ ὧς ὁ σφαῖρος*, and *Plutarch de Philosoph. Plac. lib. 5. cap. 4, 5, 9, 11, 12, 13, 15, 16, 17, 23.*
- (o) *Plut. ibid.* (*o*) The seventh and last part of the Soul, is that which *Zeno* calls Vocal, commonly called the Voice. It is a Spirit proceeding from the Hegemonick part to the Throat, Tongue, and other proper instruments of Speech. (*p*) Voice is Air, not composed of little pieces, but whole and continuous, having no Vacuity in it. This Air being struck by the Wind, spreadeth into Circles infinitely, until the Air round about it be filled like the Water in a Pond by throwing in of a Stone, only the Water moves spherically, the Air circularly. Voice is a Body, for it acteth, it striketh upon, and leaveth an Impression in our Ear, as a Seal in Wax. Again, whatsoever moveth and disturbeth some Affection, is a Body; Harmony moveth with delight, Discord disturbeth. Again, whatsoever is moved is a Body, but Voice is moved and reverberated from smooth Places, as a Ball against a Wall. So in the *Egyptian* Pyramids, one Voice is redoubled four or five times.
- (p) *Plut. Pl. Ph. 4. 19.*

CHAP. XVII.

Of GOD.

Hitherto of the material Principle, and that which is produced of it; we come now to the other Principle, the Agent, *God*.

- (a) *Cic. nat. deor. lib. 2.* (*a*) This question they divide into four parts; first, that there are Gods; secondly, what they are; thirdly, that they order the World; fourthly, that they take care of human Affairs.

Cic. ibid. *Cleanthes* saith, That the notions of God are imprinted in the minds of Men from four Causes. First, from Divination, for the Gods afford us signs of future things, wherein if there be any mistake, it is not from their part, but from the Error of humane Conjecture. The second is from the multitude of good things we receive by the temperature of Heaven, the fertility of the Earth, and abundance of other benefits. The third from the Terror of Thunder, Tempest, Rain, Snow, Hail, Devastation, Pestilence, Earthquakes, and sometimes Groanings, showers of Stones and Blood, Portents, Prodigies, Comets, and the like; with which men are affrighted into a belief, that there is a heavenly Divine Power. The fourth and greatest cause is the *Æquability* of the Motion and Revolution of Heaven, the Sun, Moon and Stars, their Distinctions, Variety, Beauty, Order, the very sight wherof declares that they were not made by chance.

- (b) *Cic. ibid.* That there are Gods, *Chrysippus* proveth thus: (*b*) If there is something in Nature, which the

Mind, Reason, Power, and Faculties of Man could not make, that which did make it is better than Man; but Celestial things, and all those, whose order is Sempiternal, could not be made by Man; there is therefore something which made them, which is better than Man, and what is that but God? For if there are no Gods, what can there be in Nature better than Man? For in him only is reason, than which nothing is more excellent. But for a man to think that there is nothing in the World better than himself, is a foolish Arrogance. Therefore there is something better, and consequently there is a God.

(c) *Zeno* more concisely thus; That which is Rational, is better than that which is Irrational; but nothing is better than the World, therefore the World is Rational. In like manner may be proved that the World is wise, that it is happy, that it is eternal, for all these are better than the want of these: But there is nothing better than the World; whence it followeth that the World is God.

Again, he argues thus. No part of an insensible thing hath Sense; but the parts of the World have Sense, therefore the World hath Sense.

He proceedeth to urge this more strictly: Nothing, saith he, that is void of Mind and Reason, can of it self Generate that which is Animate and Rational; but the World generates animate and rational Creatures, therefore the World is animate and rational.

Likewise, according to his Custom, he concludeth his Argument with a Similitude: If out of an Olive-tree should come harmonious Pipes, that made Musick, you would not doubt, but that the Science of Musick were in the Olive-tree. What if a Plain-tree should bear Musical Instruments? You would think there were Musick in those Plain-trees: Why then should we not judge the World to be animate and wise, that produceth out of it self animate and wise Creatures?

There is nothing besides the World which wanteth nothing, and which is perfect and compleat in all its Numbers and Parts: For as the cover, saith *Chrysippus*, was made for the Shield's sake, and the Scabbard for the Sword's; so besides the World, all other things were made for the sake of something else. Fruits of the Earth were made for living Creatures, living irrational Creatures for the use of Man, Horses for Carriage, Oxen for Tillage, Dogs for Hunting and Defence; but Man himself was made to contemplate and imitate the World. Not that he is at all perfect, but only a part of that which is perfect. But the World it self, forasmuch as it comprehendeth all things, neither is there any thing which is not in it, is every way perfect. What therefore can be wanting to that which is best? But there is nothing better than the Mind and Reason, therefore these cannot be wanting to the World.

Chrysippus addeth this Comparison: As all things are best in the most perfect and mature Creatures, as in a Horse better than in a Colt, in a Dog better than in a Whelp, in a Man better than in a Child: So that which is best in all the World, must be in that which is perfect and absolute; but

but, than the World, nothing is more perfect, nothing better than Virtue, therefore the World hath proper Virtue. The Nature of Man is not perfect; yet in Man there is Virtue, how much more then in the World? The World therefore hath Virtue, therefore it is wise, and consequently God.

(d) Thus the notion and apprehension men have of God, is, first, by conceiving the beauty of those things which are objected to their eyes, for no beautiful thing hath been made by chance and adventure, but composed and framed by some ingenious and operative art. Now that the Heaven is beautiful, appeareth by the form, colour, and bigness thereof, by the variety also of Stars disposed therein. Moreover, the World is round in manner of a Ball, which figure of all others, is principal and most perfect, for it alone resembleth all the parts; for being round it self, it hath the parts also round.

(e) As to the second part of the question, (e) God is an Immortal being, rational, perfect, or intellectual in Beautitude, void of all evil, provident over the World, and things in the World, not of humane form, maker of all, and as it were father of all.

(f) They define God a spirit full of intelligence, of a fiery nature, having no proper form, but transforming himself into whatsoever he pleaseth, and resembling all things.

We understand by God, saith *Antipater*, a living nature or substance, happy, incorruptible, doing good to mankind. All men acknowledge the Gods immortal. They who deprive the Gods of beneficence, have an imperfect notion of them, as they likewise, who think they are subject to generation and corruption.

(g) Yet are there some Gods, saith *Chrysippus*, generative and mortal, as well as there are others ingenerate: [The (h) World, Stars, and Earth are Gods, but the supreme God is the ætherial mind, *Jupiter*.] The Sun, Moon, and other such like Gods were begotten; but *Jupiter* is eternal. Other Gods use a certain nourishment, whereby they are maintained equally; but *Jupiter* and the World after another sort than the generated, which shall be consumed by fire. *Jupiter* groweth continually, until such time as all things be consumed in him, death being the separation of the soul and body; for seeing that the soul of the World never departeth at all, but augmenteth continually, until it have consumed all the matter within it self, we cannot say that the World dieth.

(i) The substance of God, *Zeno* affirms to be the whole World and Heaven; so also *Chrysippus* in his 11th of the Gods, and *Possidonius* in his first of the Gods. But *Antipater* in his *Seventh of the World*, affirms his substance to be aerial. *Boethius* in his Book of Nature, saith, the substance of God is the Sphere of fixed Stars. Sometimes they call him a nature containing the World, sometimes a nature producing all upon Earth.

As concerning the third part of the question, they affirm, that (k) God is an operative artificial fire, methodically ordering and effecting the Generation of the World, comprehending in himself all prolifick reason, by which every thing is produced according to Fate. God is a Spirit, diffused through the whole World, having

several denominations, according to the several parts of the matter through which he spreadeth, and the (l) several effects of his power shewn therein. They call him *Δία*, as *Διόνυσος*, by whom all things are: *Ζωία*, as the Author *τῆς ζωῆς*, of Life. *Minerva*, as diffused through the æther; *Juno*, as through the air; *Vulcan*, as through the (m) artificial fire; *Neptune*, as through the water; *Ceres*, as through the Earth. In like manner the rest of his Names were imposed with respect to some property. (n) This place was first discoursed upon by *Zeno*, after whom *Cleanthes* and *Chrysippus* dilated more largely upon it.

(o) By this Providence, the World, and all parts of the World, were in the beginning constituted, and are in all time ordered. This disputation they divided into three parts: The first, from the same reason that teacheth us there are Gods, inferreth, that the World is ordered by them, seeing that there is nothing higher or more excellent than this administration. The second, from that reason which teacheth us, that all things are subjected to an understanding nature, and exquisitely ordered by it, inferreth, that it is generated of animate Principles. The third place is derived from admiration of Cœlestial and Terrestrial things. Upon these *Cicero* discourseth at large, according to the opinion of the Stoicks.

As to the fourth part of the question in general concerning the Gods, that they have a particular providential care of mankind, it is manifest, in that whatsoever is in this World was made for the use of man, and is conducive thereunto; and if for the whole species, they must consequently have the same care of particulars, which they express by many portents, and all those signs whereupon the Art of *Divination* depends, there was never any great person without some divine inspiration. But we must not argue from hence, that if the Corn or Vineyard of any man be hurt by a Tempest, or Fortune deprive him of any of the conveniencies of life, that he to whom this hath happened, may be judged to be hated or neglected of God. The Gods take care of great things, the little they neglect; but to great persons all things have always a happy issue.

(p) *Chrysippus* in his fourth Book of *Providence* saith, there is nothing more ignorant, nothing more sordid than those persons, who think, Good might have been without Ill. For Good and Ill being contraries, it is necessary that both consist together mutually, sustaining one another, as it were by opposition. For how could we understand *Justice*, unless there were *Injuries*? What is *Justice*, but a privation of *Injustice*? How can *Fortitude* be understood, but by opposition to *Fear*? How *Continence*, but from *Intemperance*? How *Prudence*, if there were not *Imprudence*? Why do not these Fools desire that *Truth* might be without *Falshood*? Such are *Good* and *Ill*, *Happiness* and *Misery*, *Grief* and *Pleasure*; one is ty'd to the other, as *Plato* says, by their contrary ends.

(q) Here followeth the Question, Whether that Providence which framed the World and Mankind, did make likewise those corporeal Infirmities and Sickneses which Men suffer. *Chrysippus* affirmeth, it was not the intent of Nature to

(l) Laert.

(m) Perhaps it should be *ἀνθρώπων*, tho' *Æschylus* ascribe this to *Vulcan*, *πᾶσι*, *τῶν πᾶσι*, (n) Cic.

(o) Cic.

(p) Agel. lib. 6. cap. 1.

(q) Agel. ibid.

to make Men obnoxious to Sickneſs: For this agreeth not with the Author of Nature, and Parent of all good things; but he having generated many great things, moſt apt and uſeful, other things alſo, incommoſious to thoſe which he made, were aggenerated together with them, coherent to them, made, not by Nature, but certain neceſſary conſequence *κατὰ παρακολούθησιν*. As, ſaith he, when Nature framed the Bodies of Men, more ſubtle reaſon and the benefit of the World, would have required that the Head ſhould have been made of the ſmalleſt and thin bones; but this utility would have been followed by another extrinſecal inconvenience of greater conſequence, that the Head would be too weakly defended, and broken with the leaſt blow. Sickneſſes therefore and Diſeaſes are engendred whiſt health is engendred. In like manner, ſaith he, whiſt *Virtue* is begotten in Man, by the counſel of Nature, Vices likewiſe are begotten by contrary affinity.

C H A P. XVIII.

Of Nature.

- (a) *Plut. plac. 1. 28. Laert.* (a) **N**Ext *Jupiter*, *Poſſidonius* placeth Nature. By Nature they ſometimes underſtand that which containeth the World, ſometimes that which produceth things upon Earth; both which, as we ſaid, is to be underſtood of God. For that Nature which containeth and preſerveth the World, hath perfect ſenſe and reaſon, which power is the Soul of the World, the Mind and Divine Wiſdom. (b) Thus under the term of Nature, they comprehend both God and the World, affirming that the one cannot be without the other, as if Nature were God permeating through the World, God the Mind of the World, the World the Body of God. (c) This *Chryſippus* calleth *Common-Nature* in diſtinction from particular Nature.
- (b) *Laſtant. lib. 7. cap. 3.* (b) Thus under the term of Nature, they comprehend both God and the World, affirming that the one cannot be without the other, as if Nature were God permeating through the World, God the Mind of the World, the World the Body of God. (c) This *Chryſippus* calleth *Common-Nature* in diſtinction from particular Nature.
- (c) *Plut.* (c) This *Chryſippus* calleth *Common-Nature* in diſtinction from particular Nature.
- (d) *Laert.* (d) Nature is defined by *Zeno* an artificial fire, proceeding in the way of Generation, which is the fiery ſpirit, the Artiſt of forms; by others, a habit receiving motion from it ſelf, according to prolifick reaſon, and effecting and containing thoſe things which ſubſiſt by it, in certain definite times, producing all things, from which it ſelf is diſtinct by Nature, propoſing to it ſelf theſe two ends, Utility and Pleaſure, as is manifeſt from the production of Man.

C H A P. XIX.

Of Fate.

- (a) *Stob. 1. 9. Plut.* (a) **T**HE third from *Jupiter* (according to *Poſſidonius*) is Fate, for *Jupiter* is firſt, next Nature, then Fate.
- (b) *Plut. pl. Phil. 1. 28.* (b) They call Fate a concatenation of Cauſes, that is, an order and connexion which cannot be tranſgreſſed.
- Fate is a cauſe depending on Laws, and ordering by Laws, or a reaſon by which the World is ordered.
- (c) *Laert.* (c) Fate is, according to *Zeno*, the motive power of matter, diſpoſing ſo and ſo, not much differing from Nature and Providence.

(d) *Panetius* affirmeth Fate to be God. (e) *Chryſippus* defineth Fate a ſpiritual power, governing the World orderly; or, (f) a ſemipiternal and indeclinable ſeries and chain of things, it ſelf rolling and implicating it ſelf by eternal orders of conſequence, of which it is adapted and connected; or, as *Chryſippus* again in his Book of *Definitions* hath it, (g) the reaſon of the World, or Law of all things in the World, governed by Providence; or the reaſon why things paſt have been, the preſent are, the future ſhall be. For Reaſon, he uſeth Truth, Cauſe, Nature, Neceſſity, and other terms, as attributed to the ſame thing in different reſpects. Fate from the ſeveral diſtributions thereof, is called *Clotbo*, *Lachefis* and *Atropos*. *Lachefis*, as it diſpenſeth to every one, as it were by lot; *Atropos*, as it is an immutable diſpenſation, from all eternity; *Clotbo*, in alluſion to the reſemblance it hath with ſpinning and twiſting of Threads.

(b) Neceſſity is a cauſe invincible, moſt violent, and inforcing all things. (i) Fortune is a Cauſe unknown and hidden to humane reaſon. For ſome things come by Neceſſity, others by Fate, ſome by deliberate Counſel, others by Fortune, ſome by Caſualty.

(k) But Fate, being a connexion of Cauſes interlaced and linked orderly, comprifeth alſo that cauſe proceedeth from us.

(l) That all things are done by Fate, is affirmed by *Zeno* in his Book of Fate, and *Poſſidonius* in his ſecond Book of Fate, and *Boethius* in his 11th of Fate. Which (m) *Chryſippus* proves thus: If there is any motion without a cauſe, then every axiom is not either true or falſe; for that which hath not efficient cauſes, will be neither true nor falſe; but every axiom is either true or falſe, therefore there is no motion without a cauſe. And if ſo, then all things that are done, are done by precedent cauſes, and if ſo, all things are done by Fate. That all axioms are either true or falſe, *Cicero* ſaith, he labour'd much to prove, whereby he takes away, *Poſſibles*, *Indeterminates*, and other diſtinctions of the *Academicks*, of which ſee *Alcinous*, Chap. 26.

(n) In answer to the ſluggiſh reaſon, if it be your fate to die of this ſickneſs, you ſhall die whether you have a Phyſician or no; and if it be your fate to recover, you ſhall recover whether you have a Phyſician or not. *Chryſippus* ſaith, that in things ſome are ſimple, ſome conjunct. Simple is thus, *Socrates* ſhall die on ſuch a day; for whether he do any thing or not, it is appointed he ſhould die on ſuch a day. But if it be deſtin'd thus, *Laius* ſhall have a ſon *Oedipus*, it cannot be ſaid, whether he accompany with a woman or not, for it is a conjunct thing, and confatal, as he terms it, becauſe it is deſtin'd that *Laius* ſhall lye with his wife, and that he ſhall get *Oedipus* of her. As if we ſhould ſay, *Milo* ſhall wreſtle at the Olympick Games, and another ſhould infer, then he ſhall wreſtle whether he have an adverſary or no, he were miſtaken; for that he ſhall wreſtle is a conjunct thing, becauſe there is no wreſtling without an adverſary. Thus are refell'd all ſophiſms of this kind, (you ſhall recover whether you have a Phyſician or not) for it is no leſs determined by fate that you ſhall have a Phyſician, than that you ſhall recover. They are confatal.

Thus

Thus there being two Opinions of the old Philosophers ; one, That all things are so done by Fate, that Fate inferreth a Power of Necessity, as *Democritus*, *Heracitus*, *Empedocles* and *Aristotle* held ; the other, That the motions of our Souls were voluntary without any Fate : *Chrysippus*, as an honourable Arbitrator, took the middle way betwixt these, but inclining most to those who conceive the motions of our Souls free from necessity. The Antients, who held all things to be done by Fate, said, It was by a violence and necessity ; those who were of the contrary Opinion, denied that Fate had any thing to do with our Assent, and that there was no necessity imposed upon Assents. They argued thus : If all things are done by Fate, all things are done by an antecedent Cause ; and if Appetite, then likewise those things which follow Appetite, therefore Assents also. But, if the cause of Appetite is not in us, neither is the Appetite it self in our Power ; and if so, neither those things which are effected by Appetite are in our Power, and consequently neither Assents nor Actions are in our Power ; whence it followeth, that neither Praise can be Just, nor Dispraise, nor Honour, nor Punishment ; but this is false, therefore all things are not done by Fate.

But *Chrysippus* not allowing this necessity, yet maintaining that nothing happened without precedent Causes, distinguisheth thus. Of Causes, saith he, some are perfect and principal, others assistant and immediate. When we say, all things are done by Fate, from antecedent Causes, we understand not the perfect and principal Causes, but the assistant and immediate. He therefore Answers the former Objection thus : If all things are done by Fate, it followeth, that all things be done by antecedent Causes, but not by the principal and perfect, but by the assistant and immediate, which tho' they be not in our Power, it followeth not, that the Appetite likewise is in our Power. This Argument therefore concludes well against those who joyn Necessity with Fate, but nothing against those who assert antecedent Causes not perfect nor principal. What assent is, and how it cometh to be in our Power, we have already shewn in the *Logick*.

Hence it followeth, that (o) notwithstanding (s) *Agell. 6. 2.* that all things are necessarily co-acted and connected by Fate, with a certain principal Reason ; yet (saith *Chrysippus*) our Minds are so obnoxious to Fate, as their property and quality is. For, if at the first by nature they were formed soundly and profitably, all that Power which cometh upon them extrinsically from Fate, they transmit easily and inoffensively : But if they are Harsh, Ignorant and Rude, not supported by any helps of good art, altho' they are pressed by little or no conflict of fatal incommodity, yet by their own Unluckiness, and voluntary Impulsion, they rush into continual Sins and Errors, which thing maketh that this natural and necessary Consequence of things, which is called Fate, be by this Reason. For it is as it were fatal, and consequent in its kind, that wicked Minds should not be without Sins and Errors, an instance whereof he bringeth not unapposite. *As, saith he, a rolling Stone, if you turn it down a steep

Place, you first give it the cause and beginning of its Precipitation, but afterwards it rolleth headlong of it self ; not that you make it do so any longer, but because its Figure, and the Volubility of its form is such. In like Manner, Order, and Reason, and Necessity, moveth the beginnings of Causes ; but the impetuosity of our Thoughts and Minds, and our own Actions, are guided by every Man's private Will and Mind. Thence, continueth he, the *Pythagoreans* say,

Men of their own accord their Ills procure.

As conceiving that all Ills proceed from themselves, and according to their own Appetites, when they Sin and Offend, and according to their own mind and design.

For this Reason he denieth, That we ought to suffer and hear such wicked, or idle, or noxious, or impudent Persons, who being taken in some fault and wickedness, have recourse to the necessity of Fate, as to a Sanctuary, affirming, that they have done wickedly, is not to be attributed to their timidity, but to Fate.

CHAP. XX.

Of Not-Bodies, or Incorporeals ; and first of Dicibles.

HERETO of Bodies ; we come next to the second place of Physick, concerning Not-Bodies, or Incorporeals. Incorporeal is that which may be, but is not contained in Bodies. (a) Of those there are four kinds, Dicibles, Vacuum, Place and Time. (a) *Sext. Emp.*

Dicible is that which consisteth according to rational Phantasie, a mean betwixt Notion and Thing. Of this already in the *Logick*.

CHAP. XXI.

Of Vacuum and Place.

THE second Incorporeal is *Vacuum*, which is the Solitude or Vacuity of a Body. In the World there is no Vacuum, neither in the whole nor in any part : Beyond it there is an infinite Vacuity, into which the World shall be resolved. Of this already in the Chapter concerning the World.

Next is Place : Place is that which is fully occupied by the Body ; or, as *Chrysippus* defines it, that which is or may be occupied by one or more things. Thus it differs from Vacuity, which hath no Body, and from Space, which is occupied but in part, as a Vessel half full of Wine.

CHAP. XXII.

Of Time.

LAST of the Incorporeals is *Time*. Time is, according to many of the Stoicks, the motion of it self, not of Heaven, and had no beginning of

of Generation: *Chrysippus* saith, That Time is the measure of Slowness or Swiftneſs. *Zeno* defined it the interval of Motion, and measure of Slowness and Swiftneſs, according to which, all things were and are.

Possidenius saith, That some are wholly infinite, as all Time; some only in part, as the past and future; for they are joyned together by the present. He defined Time the interval of Motion, or the measure of Swiftneſs and Slowness, one part of it being present, the other future, the present connected to the future by something like a point. It is called *πρὸς ὅσον*, attributed to the least part of Time that falleth under Sense, subsisting according to the difference of past and future.

Chrysippus saith, That Time is the interval of Motion, the measure of Swiftneſs and Slowness,

a consequent interval to the Worlds motion, according to which all things are, and are moved, unless rather there be a twofold Time, as the Earth, and Sea, and Vacuity, and Universe, have the same names with their parts. And as Vacuity is every way infinite, so Time is both ways infinite, for the present and future have no end. He likewise asserts, That no entire present is Time, for continuous things being divided into Infinite, Time likewise admitteth of the same Division; so that no Time is properly present, but so called, after a less accurate manner. The present only is subsistent, unless it be understood as of *Categorems*; as, walking is attributed to him that walketh, but not to him that sitteth or lieth. Thus much for the *STOICAL PHILOSOPHY*.

CLEANTHES.

CHAPTER I.

His LIFE.

Cleanthes was of *Aſſus* an *Æolian* City (fortified, as *Strabo* describes it, both by Nature and Art) Son of *Phanias*. He was first according to *Antisthenes* a Wrestler, and coming to *Athens*, having no more than four Drachms, he applied himself first to *Crates*, then to *Zeno*, whom he heard constantly, and persevered in his Philosophy and Opinions.

He was much commended for his Laboriousness, in as much as being poor, he went by Night to the Gardens to draw Water, and in the Day time studied Philosophy. Hence he was called *ορεάντης*. *The Drawer of Water*.

Being cited to the Court to give an Account how he lived, being so Healthful and Lusty, he produced the Gardner, under whom he drew Water, and a Woman, for whom he ground Meal, to Witness how he subsisted. The *Areopagites* wondering hereat, allotted him 10 *mina*, which *Zeno* would not suffer him to accept. *Antigonus* gave him 3000 *mina*. On a time leading some young Men to a Spectacle, the Wind blew back his Cloak, and discovered that he had no Coat; whereupon the *Athenians* much applauded him, and, as *Demetrius* the *Magnesian* saith, bestowed a Coat upon him.

Laert. Plut.

Antigonus, who was his Auditor, ask'd him why he drew Water, he answer'd, *Do I only draw Water? Do I not also dig and water the Ground, and all for the sake of Philosophy?* For *Zeno* brought him up to this, and bad him bring him an *Obolus* gained by his Labour. Upon a time

he brought in his gains before all his Disciples, saying, *Cleanthes, if he would, could maintain another Cleanthes; but they who have wherewithal to maintain themselves, would be suppl'd by others; yet study Philosophy nothing the more diligently.* Hence *Cleanthes* was called a *second Hercules*. He was very Laborious, but dull and slow.

He used to write the Dictates of *Zeno* in Shells, and the Shoulder-blades of Oxen, for want of Money to buy Paper. He was his Auditor 19 years.

For these Reasons, tho' *Zeno* had many other eminent Disciples, yet he succeeded him in the School.

CHAPTER II.

His Apothegms.

(a) **H**IS Fellow-Disciples derided him, he (a) *Laert.* took it patiently, and being called *Ass*, answered, he only could bear *Zeno's* burthen.

Another time being reproached as Timorous, *Therefore*, saith he, *I sin little.*

Preferring his own Poverty before the Plenty of the Rich; *Whilst they*, saith he, *Play at Ball, I Manure a hard barren Soil.*

He often chid himself, being all alone, which *Aristo* over-hearing; whom, saith he, do you chide? he smiling, answered, *A Grayheaded old Fellow without Wit.*

To one that said, *Arcefilas* abrogated the Offices of Life; Peace, faith he, dispraise him not, for tho' he take away Offices in Discourse, he commends them in his Actions; To whom *Arcefilas* saying, I cannot endure Flattery; I do indeed Flatter, replies *Cleanthes*, when I say, you speak one thing and do another.

To one that asked what he should teach his Son; he answer'd in the words of *Electra*;

Peace, peace, a little Step.

A *Lacedemonian* saying, that Labour was good, he laughed, answering,

My Son, thou of a gen'rous Race art come.

Disputing with a young Man, he asked him whether he did feel; the other answers he did; he replied, *Why then do I not feel that you feel?*

Sofythus the Poet, saying in the publick Theatre when *Cleanthes* was present;

Those whom Cleanthes madness leads away; he sat still, not changing his Countenance; whereupon the Auditors applauding him, turned out *Sofythus*, who afterwards coming to *Cleanthes*, told him he was sorry that he had reproached him; *Cleanthes* answer'd, *It were unfit I should behold unconcerned Bacchus and Hercules derided by the Poets, and be angry at a little word against my self.*

He compared the *Peripateticks* to *Lutes*, that make good Musick, but hear it not themselves.

Holding, according to *Zeno*, that the mind may be discerned in the Countenance, some merry young Men brought an effeminate Youth to him rustically Cloathed, desiring his Opinion of that Man's Disposition. He bad him depart, which the other going to do, sneezed; *Cleanthes* presently cried out, *I have found out the Man, he is Effeminate.*

To one that was all alone talking to himself, *You Discourse*, faith he, *with a Man that is not Ill.*

To one that reproached him with his Age, *I would be gone*, faith he, *but when I consider that I am in Health, fit to Write and Study, I rather chuse to stay.*

(b) Cic. de Finib. lib. 2.

(b) *Cleanthes* bad those who came to hear him, to fancy Pleasure painted in a Tablet, richly habited and adorned, sitting on a Throne, the Virtues standing about her, as her Handmaids, doing nothing else but wait on her Commands, whispering in her Ear (if it can be fancied of a Picture) to bid her take heed of doing any thing imprudently, that may offend the Minds of Men, or anything that may occasion Grief.

(c) Stob. Ser. 116.

(c) He said, Whosoever sweareth at the same time sweareth truly, or forswearth himself: If he intend to do that which he sweareth, tho' he do it not, he sweareth truly; if he intended it not, he is forsworn.

(d) Ser. 126.

(d) One observing him silent, said to him, why do you hold your Peace? It is pleasant to talk to Friends; *It is indeed*, answer'd *Cleanthes*, *but the more pleasant it is, the more we ought to allow them the freedom of it.*

(e) Ser. 210.

(e) He said, That unlearned Men differed from Beasts in their Figure.

(f) Ser. 212.

(f) Being demanded why amongst the Ancients, when there were fewest Philosophers, there were more Eminent than at this time; he an-

swer'd, *Because then they minded the thing it self, now only in Words.*

(g) To one that asked him, how a Man might be Rich, he answered, by being Poor in Desire.

CHAP. III.

His Writings.

HE left behind him (faith *Laertius*) these excellent Books:

Of Time.

Of Zeno's Philosophy.

Explications of Heraclitus 3.

Of sense 4.

Of Art.

To Democritus.

To Aristarchus.

To Erillus.

Of Appetite 2.

Archæology.

Of God.

Of Giants.

Of Hymeneals.

Of a Poet.

Of Office 3.

Of right Consultation.

Of Gratitude.

Protreptick.

Of Virtues.

Of Ingenuity.

Of Gorgippus.

Of Envy.

Of Love.

Of Liberty.

The Art of Love.

Of Honour.

Of Glory.

The Politick.

Of Counsel.

Of Laws.

Of Judging.

Of the Reason of Living.

Of Speech 3.

Of the End.

Of honest Things.

Of Actions.

Of Science.

Of a Kingdom.

Of Friendship.

Of a Symposium.

That the Vertue of Man and Woman is the same.

That a wise Man may use Sophisms.

Of Chria's.

Dissertations 2.

Of Pleasure.

Of Properties.

Of Inexplicables.

Of Dialectick.

Of Tropes.

Of Categorems.

Besides these, are mentioned

(a) *Of Atoms.*

Of Brass.

(b) *Of Sumptions.*

Fabulous Traditions.

(c) *The Art of Rhetorick.*

(a) Laert. vii.
Zen.
(b) Athen.
deipn.
(c) Cic. de fin.
l. 4.

CHAP. IV.

His Death.

HE lived according to *Laertius* 80 Years, according to *Lucian*, 99. The occasion of his Death this, being troubled with a foreness of his Gums (*Stobaeus* faith, an Ulcer under his Tongue) he was enjoined by the Physicians to fast two days; which he did; and was well;

then they told him he might eat again, but he would not, saying, he was now gone a great way on his Journey; (a) *would you have me, faith (a) Stob.* he, *having past over the greatest part of my Life, return back again, and begin it anew?* (b) *Ha- (b) Laert.* ving fasted two days more, he Died. (c) *Simplicius* faith, he saw an exquisite statue (c) *In Epist.* of *Cleanthes* in *Affus*, an example of the magnificence of the Roman Senate, dedicated to his Honour.

CHRYSIPPUS.

CHAP. I.

His Life.

Chrysippus was of *Soli*, (a City of *Cilicia*, afterwards called *Pompeiopolis*) his father was of *Tarsis*, named *Apollonius*, or, as *Suidas*, *Apollonides*, who came and lived at *Soli*, which perhaps gave *Laertius*, and from him *Suidas*, occasion to doubt whether *Chrysippus* himself were not of *Tarsis*.

He first exercised in the *Hippodrome*. *Hecaton* faith, that having waisted his Patrimony in the King's service, he applyed himself to Philosophy. Coming to *Athens*, he heard, as some affirm, *Zeno*, or rather (as *Dioscles* and others) *Cleanthes*, from whom whilst he was yet alive he dissented. He was an eminent Philosopher, Ingenious and Acute in every thing; so that in most opinions he differ'd from *Zeno* and *Cleanthes*, to whom he would only say, *tell me the Doctrines, and let me alone for Proofs*. If at any time he crossed *Cleanthes* in dispute, he was afterwards sorry for it, often saying,

*Of happiness in all I am possess'd,
But in Cleanthes; there alone unblest'd.*

He was so famous for *Dialectick*, that it was a common speech, *If the Gods themselves would use Dialectick, they would make use only of the Chrysippean*. But he more was plentiful in matter, than free in expression.

He was infinitely studious and industrious, as appeareth from the multitude of his Books. An old Woman that waited on him said, that he wrote every day 500 Paragraphs.

When any question'd him in private, he answer'd meekly and freely; but as soon as any company came, he grew eager and litigious, saying,

*Brother, there hangs a cloud before your Eyes;
Cast quite away this madness, and be wise.*

When he drunk at Feasts, he lay very still, only shook his Legs; whereupon his Woman said, *Chrysippus's legs only are drunk.*

He had so good an opinion of himself, that to one who asked him to whom he should commend his Son, he answered, *To me; for if I knew any better, I would bear Philosophy of him myself*: Whence it was said of him,

*He is inspir'd by Jove,
The rest like shadows move.*

As also that,

*Had not Chrysippus been,
No Stoa we had seen.*

Arcefilaus and *Lacydes* (as *Sotion* faith) coming *Laert.* into the *Academy*, he studied Philosophy with them, whence he disputed against Custom, and for Custom, and of *Magnitude* and *Multitude*, using the arguments of the *Academicks*.

(b) He was a great despiser of Honours, for of (b) *Laert.* all his Writings, he Dedicates none to any King. (c) He was content with little; for (d) he lived (c) *Stob.* without any other attendants than one old Wo- (d) *Laert.* man; and when *Ptolomy* wrote to *Cleanthes*, desiring he would come to him, or send some one of his Disciples, *Sphaerus* went, but *Chrysippus* refused.

Having sent for *Aristocreon* and *Philocrates*, his sisters sons, he first taught in the *Lyceum* in the open Air, as *Demetrius* writes.

CHAP. II.

His Apophthegms.

- (a) *Laert.* (a) **T**O one that blamed him for not hearing *Aristo* as many did; If I should follow many, saith he, I should not study Philosophy. To a Dialectick assaulting *Cleanthes* with Sophisms: *Leave*, saith he, *diverting an aged Person from serious things; propound those to us that are young.*
- (b) *Stob.* (b) He said, meditation is the fountain of discourse.
- (c) *Stob. Ser.* (c) He said, drunkenness is a lesser madness.
- (d) *Ser. 48.* (d) He said, a wife man grieveth, but is not troubled, for his mind yields not to it.
- (e) *Ser. 71.* (e) To one that said to him, Your friend revileth you behind your back: *Blame him not*, saith he, *for he might do it before my Face.*
- (f) *Ibid.* (f) To a wicked man that cast many aspersions upon him: *You have done well*, saith he, *not to omit any thing that is in your self.*
- (g) *Ibid.* (g) Being told that some spoke ill of him; *It is no matter*, saith he, *I will live so, that they shall not be believed.*
- (h) *Ser. 116.* (h) He said, there is a difference between swearing true, and swearing truly; and betwixt swearing false, and forswearing. That which is sworn, at the time that it is sworn, must necessarily be either true or false, seeing that the form of swearing is an *Axiom*: But he that sweareth, at the same time that he sweareth, is not necessarily perjur'd, or sweareth true, because the time is not yet arrived that must determine his Oath. For as a man is said to have covenanted truly or falsely, not when the covenant is made, but when the time whereby it is limited is come: So a man is said to swear truly or falsely, when the time comes wherein he promised to make good his oath.
- (i) *Ser. 151.* (i) Being demanded why he did not undertake the government of the Commonwealth; *Because*, saith he, *If I govern ill, I shall displease the Gods; if well, the People.*
- (k) *Ser. 249.* (k) He said, he who hath arrived at perfection, dischargeth all offices, omitting none, yet his life is not happy, for Beatitude is a post-accession thereto, when as the mean actions acquire a constancy, habit, and peculiar confirmation.

CHAP. III.

His Writings.

BECAUSE, saith *Laertius*, his Writings were very celebrated, we shall give an account of them digested according to their subjects: They were these.

Of the Logical place, Theses.
Logick.
Philosophick Commentaries.
Dialectick definitions, to Metrodorus, 6.
Of Dialectick names, to Zeno 1.
Dialectick art, to Aristagoras 1.
Of connex Probables, to Dioscorides 4.

The first Order of the Logical place of things.

Of Axioms 1.
Of not-simple Axioms 1.
Of Connex, to Athenades 2.
Of Negatives, to Aristagoras 3.
Of Catagoreuticks, to Athenodorus 1.
Of things spoken by privation, to Thearus 1.
Of best Axioms, to Dion 3.
Of Indefinites 4.
Of things spoken according to Time 2.
Of perfect Axioms 2.

The second Order.

Of true disjunct, to Gorgippides 1.
Of true connex, to Gorgippides 4.
Division, to Gorgippides 1.
Of Consequents 1.
Of that which is for three, to Gorgippides 1.
Of Possibles, to Clitus 4.
Of Significations, against Philo 1.
What are false 1.

The third Order.

Of Precepts 2.
Of Interrogations 2.
Of Percontation 4.
Epitome of Interrogation and Percontation 1.
Epitome of Answers 1.
Of Question 2.
Answer 4.

The fourth Order.

Of Categorems, to Metrodorus 10.
Of right and supine, to Philarchus 1.
Of Conjunctions, to Apollonides 1.
To Pasylus, of Categorems 4.

The fifth Order.

Of the five cases 1.
Of expressions defined according to the subject 1.
Of Assimilation, to Stefagoras 2.
Of Appellatives 2.

Of the Logical place concerning words, and their reasons. The first Order.

Of singular and plural expressions 6.
Of Words, to Soligenes and Alexander 5.
Of the anomaly of Words, to Dion 4.
Of Sorites pertaining to voice 3.
Of Solæcisms, to Dionysius 1.
Of unusual speech 1.
Words, to Dionysius 1.

The second Order.

Of the elements of speech 5.
Of the syntax of things said 4.
Of the syntax and elements of speech, to Philip 3.

Of the elements of speech, to Nicias 1.
Of Relative speech.

The third Order.

Of Not-dividends 2.
Of Amphibolies, to Apollas 4.
Of Tropical Amphibolies 1.
Of Connex Tropical Amphibolies 2.
Upon Panthœdus, of Amphibolies 2.
Introduction to Amphiboly 5.
Epitome of Amphibolies, to Epicrates 1.
Connex to the Introduction of Amphibolies 2.

Of Logical place concerning Reasons and Moods: The first Order.

The Art of Reasons and Moods, to Dioscorides 5.
Of Reasons 3.
Of the Composition of Moods, to Stefagoras 2.
Comparison of Tropical Axioms 1.
Of reciprocal Reasons and Connex 1.
To Agatho, or of sequent Problems 1.
Of Inferences, to Aristagoras 1.
Of placing the same Reason in diverse Moods 1.
Against those who oppose that the same Reason may be placed in Syllogistick and not Syllogistick Moods 2.
Against those who oppose the Reduction of Syllogisms 3.
Against Philo's Book of Moods, to Timostratus 1.
Logical Conjuncts, to Timocrates, and Philomathes.
Upon Reason and Moods 1.

The second Order.

Of conclusive Reasons, to Zeno 1.
Of first indemonstrable Syllogisms, to Zeno 1.
Of Reduction of Syllogisms 1.
Of Redundant Syllogisms, to Pasylus 2.
Theorems of Solæcisms 1.
Syllogistick Introductions, to Zeno 1.
Introductions to Moods, to Zeno 3.
Of Syllogisms false in Figure 5.
Syllogistick Reasons by Reduction in Indemonstrables 1.
Tropical Questions to Zeno and Philomathes (suspected to be spurious) 1.

The third Order.

Of Coincident Reasons, to Athenades 1.
spurious.
Coincident Reasons as to the Medium 3.
spurious.
Of Aminius's Disjunctions 1.

The fourth Order.

**Of Hypotheses, to Meleager 3.*
Hypothetick Reasons in Law, to Meleager 1.
Hypothetick Reasons for Introduction 2.

Hypothetick Reasons of Theorems 2.
Solution of Hedyllus's Hypotheticks 2.
Solution of Alexander's Hypotheticks 3.
spurious.
Of Expositions, to Leodaimas 1.

The fifth Order.

Of Introduction to the lying Reason, to Aristocreon 1.
Lying Reasons to the Introduction 1.
Of the lying Reason, to Aristocreon 6.

The sixth Order.

Against those who think true and false are one, 1.
Against those who dissolve the lying Reason by Distinction 2.
Demonstration, that Infinites are not to be divided 1.
Upon that which hath been said against the Divisions of Infinites, to Pasylus 3.
Solutions according to the Ancients, to Dioscorides 1.
Of the Solution of the lying Reason, to Aristocreon 3.
Solution of Hedyllus's Hypotheticks, to Aristocreon and Apollas.

The seventh Order.

Against those who say the lying Reason hath false Sumptions 1.
Of the Negative, to Aristocreon 2.
Negative Reasons, to Gymnasis 1.
Of the diminutive Reason, to Stefagoras 2.
Of opinionative and quiescent Reasons, to Onelior 2.
Of the veiled Reason, to Aristobulus 2.
Of the occult Reason, to Athenades 1.

The eighth Order.

Of the Nullity, to Menecrates 8.
Of Reasons consisting of Indefinite and Definite, to Pasylus 2.
Of the Nullity, to Epicrates 1.

The ninth Order.

Of Sophisms, to Heraclides and Pollis 2.
Of insoluble Dialectick Reasons, to Dioscorides 5.
Against Arcefilaus's method, to Sphaerus 1.

The tenth Order.

Against Custom, to Metrodorus 6.

Of the Logical place besides these four differences, there are dispersed, not containing in the Body of Logical Questions, 39.

Of the Ethick place, for Direction of moral Notions: The first Order.
Description of Speech, to Theoporus 1.
Moral Theses 1.

Proba-

Probable Sumptions for Doctrines, to Philomathes 3.
Definitions of civil Persons, to Metrodorus 2.
Definitions of wicked Persons, to Metrodorus 2.
Definitions of mean Persons, to Metrodorus 2.
General Definitions, to Metrodorus 7.
Definitions of other Arts, to Metrodorus 2.

The second Order.

Of Things like, to Aristocles 3.
Of Definitions, to Metrodorus 7.

The third Order.

Of things not rightly Objected against Definitions, to Laodamas 7.
Probables for Definitions, to Dioscorides.
Of Species and Genus, to Gorgippides 2.
Of Divisions 1.
Of Contraries, to Dionysius 2.
Probables for Divisions, Genus's and Species.
Of Contraries 1.

The fourth Order.

Of Etymologicks, to Diocles 6.
Etymologicks, to Diocles 4.

The fifth Order.

Of Proverbs, to Zenodotus 2.
Of Poems, to Philomathes 1.
How Poems must be heard 2.
Against Criticks, to Diodorus 1.

Of the Moral place of common Speeches, according to Arts and Virtue: The first Order.

Against Rescriptions, to Timonax 1.
How we think and speak Singulars 1.
Of Notions, to Laodamas 2.
Of Suspicion, to Pythonax 2.
Demonstration that a wise Man doth not Opinionate 1.
Of Comprehension, and Science, and Ignorance 4.
Of Speech 2.
Of the use of Speech, to Leptines.

The second Order.

That the Ancients approved Dialectick with Demonstration, to Zeno 2.
Of Dialectick, to Aristocreon 4.
Upon the Objections against Dialectick 3.
Of Rhetorick, to Dioscorides 4.

The third Order.

Of Habitude, to Cleon 3.
Of Art and Sloth, to Aristocreon 4.
Of the differences in Virtues, to Diodorus.
What Virtues are 1.
Of Virtues, to Pollis.

Of the Moral place concerning Good and Ill: The first Order.

Of Honesty and Pleasure, to Aristocreon 10.

Demonstration, that Pleasure is not the chief end 4.

Demonstration, that Pleasure is not Good 4.

*Of those which are said *****.*

Thus concludes the seventh Book of *Laertius*; and who seeth not that the last of these Titles is defective, and moreover that the rest of the *Orders*, concerning this place of *Good and Ill*, (whereof this is but the first) are wanting. Doubtless the end of this Book is Imperfect, and wanteth, if not the Lives of any Stoical Philosophers, who succeeded *Chrysippus* (whereof he mentions *Zeno*, and others elsewhere) yet at least a considerable part of his Catalogue, containing the rest of his *Ethick* *Writings*, and all his *Physick*, many of which are elsewhere cited even by *Laertius* himself, which as the learned *Casaubon* had observed, he would not have ascribed to *Laertius*'s neglect that *Chrysippus*'s Book of *Laws* is not mentioned. Of his *Ethick* *Writings*, besides those here named, were these,

- | | |
|--|---|
| (a) <i>Of Laws.</i> | (a) <i>Ael. 14.4.</i> |

cited
(o) *Of Vacuity.*
(p) *Epistles.*

The Number of all his Writings, according to *Laertius*, was 705. He wrote so much, that he had often occasion to Treat upon the same Subject, and setting down whatsoever came into his Mind, he often corrected and enlarged it by the Testimonies of others; whence having in one Book inserted all *Euripides's Medea*, one having the Book in his hand, answer'd another, that asked him what Book it was, It is *Chrysippus's Medea*. And *Apollodorus the Athenian*, in his *Collection of Doctrines*, asserting, that *Epicurus* had written many Books upon his own Strength, without using the Testimonies of others, and that he therein far exceed *Chrysippus*, adds these words; *For if a Man should take out of Chrysippus's Writings, all that belongs to other Men, he would leave the Paper blank.*

(q) *De Benef.* *Seneca* gives this Censure of him: (q) He is most Subtile and Acute, penetrating into the depth of Truth. He speaks to the thing that is to be done, and useth no more words than are necessary to the understanding thereof; but adds, that his (r) Acuteness being too fine, is many times blunted, and retorted upon it self; even when he seems to have done something, he only pricks, not pierceth.

(l) *Laert.* (f) Some there are who inveigh against him, as one that wrote many obscene Things, not fit to be spoken, as in his *Commentary of the Ancient Physiologists*; what he writes concerning *Jupiter* and *Juno*, is obscenely feigned, delivering that in 600. Paragraphs, which the most impudent Person would not have committed to Writing; for, say they, he hath related the Story most unhand somely; and tho' he prais'd it as natural, yet it becometh *Curtezans* rather than Gods.

Moreover, what he saith of those that writ of *Tables*, is false, not to be found in *Polemo*, nor *Hippocrates*, nor *Antigonus*, but forged by himself.

In his Book of *Commonwealth*, he allows Marriage with the Mother and a Daughter, and repeats the same in the beginning of his Book, *Concerning Things expetible in themselves.*

In his third Book of *Justice*, extending to a thousand Paragraphs, he advised to feed upon the very Dead.

In his second Book of *Life and Transaction*, he affirmeth, A wise Man ought to take care to provide himself Food; but to what end must he provide himself Food? For Livelihood? Life is an *indifferent*. For Pleasure? Pleasure also is *indifferent*. For Virtue? That is *Self-sufficient* for *Beatitude*. Such kinds of Acquisition of Wealth are very Ridiculous. If they proceed from a King, there is a necessity of complying with him; if from a Friend, that Friendship is Venial; if from Wisdom, that Wisdom is mercenary. For these things; saith *Laertius*, some have inveigh'd against him.

C H A P. IV.

His Death.

HE died, according to *Apollodorus*, in the 143d Olympiad, (to supply *Laertius*, in whom the centenary Number is wanting by *Suidas*) having lived 73 years.

The manner of his Death is differently related; *Hermippus* affirms, That being in the *Odeum* (a kind of publick Theatre at *Athens*) his Disciples called him away to Sacrifice, and thereupon taking a draught of Wine he was immediately seized by a *Vertigo*, of which at the end of five days he died. Others report, he died of excessive Laughter: Seeing an Ass eat Figs, he bid his Woman offer it some Wine, and thereat fell into such extremity of Laughter, that it killed him.

As to his Person, he was very little, saith *Laertius*, as appeareth, by his Statue in the *Ceramik*, which is almost hid by the Horse that stands next it, whence *Carneades* called him *νεκροσκόπος*, *hid by a Horse*. The Posture of this Statue, *Cicero* saith, was Sitting, and stretching forth his Hand. *Pausanius* saith, It was set up in the *Gymnasium*, called *Ptolomean* from the Founder, not far from the *Forum*.

Laertius reckons four more of this Name.

The first, a Physician, to whom *Erasistratus* acknowledgeth himself beholding for many things.

The second, his Son, Physician to *Ptolomy*, who, upon the Calumnies of some that maligned him, was publicly punished and beaten with Rods.

The third, Disciple to *Erasistratus*.

The fourth, a Writer of *Georgicks*.

Z E N O.

(a) *Suidas.* (a) ZENO was of *Tarsis*, or according to others, of *Sidon*, his Father named *Dioscorides*. He was Disciple to *Chrysippus*, and his Successor in the School. (b) He wrote few Books, but left behind him many Disciples. (b) *Laert. vit. Zen.*

DIOGENES.

(a) Laert.
vit. Diog.

(a) **D**IOGENES was born at *Seleucia*, he was surnamed the *Babylonian*, from the Vicinity of that place. He was Disciple of *Chrysippus*, and is stiled by *Cicero* an eminent and ferocious Stoick. (b) *Seneca* relates That discoursing earnestly concerning Anger, a foolish Young Man standing by, spat in his Face,

which he took meckly and discreetly, saying, *I am not Angry, but am in doubt whether I ought to be so or not.* He was one of the three that was sent from *Athens* on Embassy to *Rome*; of which already in the Life of *Carneades*, who learn'd Dialectick of him. *Cicero* saith, he lived to a great Age. Amongst other things, he wrote a Treatise of *Divination*.

(b) De inst.
38.

ANTIPATER.

(a) Laert.
(b) De Officiis
3.

(a) **A**NTIPATER was of *Sidon*, Disciple to (b) *Diogenes* the *Babylonian*, *Cicero* calls him a most acute Person; *Seneca*, one of the great Authors of the Stoical Sect. (c) He declined to dispute with *Carneades*, but filled his Books with Confutations of him, whence he

was called *καλαμοβίας*, *The clamorous Penman.* (d) He disputed much against those who asserted *nothing*. Besides other things, he writ two Books of *Divination*. (e) *Cicero* at the latter end of his second Book of *Offices*, saith, he then was lately dead at *Athens*.

(c) Plut. de
Garrul.

PANÆTIUS.

(a) Strab. 1.
4.(b) Cic. de
Divin. lib. 1.

(c) Plut. Apoph.

(d) Acad. 2.
4.Cic. Tusc. quest.
lib. 1.

(a) **P**ANÆTIUS was of *Rhodes*, his Ancestors eminent for Martial Affairs and Exercises. He was (b) Disciple to *Antipater*, intimate Friend to (c) *P. Scipio Africanus*, whom he accompanied in his Journey to *Alexandria*. *Cicero* calls him, (d) *Almost Prince of the Stoicks*, a Person extremely Ingenious and Grave, worthy the familiarity of *Scipio* and *Lælius*. He was a great Admirer of *Plato*, whom every where he calleth, *Divine, most Wise, most Holy, the Homer of Philosophers*. But his Opinion of the Immortality of the Soul, he approved not, arguing thus; Whatsoever is generated, dieth; but Souls are generated, as is manifest from the likeness of those that are begotten, to their Parents, not

only in Body, but in Disposition. His other Argument was, There is nothing that is grieved or pained, but is subject to be Sick; whatsoever is subject to Sicknes, is likewise subject to Death; Souls are subject to Grief, therefore they are subject to Death.

He alone rejected Astrological Predictions, and receded from the Stoicks, as to *Divination*; yet would not positively affirm there was no such Art, but only that he doubted it.

He wrote three Books of *Offices*, much commended by *Cicero*.

Lipsius Conjectures he died old, because *Cicero* affirmeth out of *Posidonius*, that he lived thirty Years after he had written his Books of *Offices*.

POSIDONIUS.

Strab. lib. 14.

Cic. Tusc. qu. 1.
2.

(a) **P**OSIDONIUS was born at *Apamea* in *Syria*. He lived at *Rhodes*, and there managed civil Affairs, and taught Philosophy. *Pompey* in his return from *Syria*, went to *Rhodes* purposely to hear him, and coming to his Door, forbade the Lictor to knock, as was the Custom; but he (saith *Pliny*) to whom the *East* and *West* had submitted, himself submitted his *Fasces* at this Gate. But understanding that he was very Sick of a great Pain in his Joynts, he resolved only to give him a visit. At his first Coming and Salutation, he told him with much Respect, that he was extremely sorry he could not hear him. *Posidonius* answer'd, *You may, for no corporeal Pain shall make me frustrate the coming of so great a Person*: And thereupon he discoursed

seriously and copiously upon this Subject, as he lay in his Bed, *That nothing is good, but what is Honest.* And as often as his Pain took him, he would say, *Pain, it is to no purpose; tho' thou art troublesome, I will never acknowledge thou art Ill.*

He made a *Spear*, wherein were all the Conversions of the Sun, Moon and Planets, exactly as they moved in the Heavens every day and night.

Of his Writings are cited by *Cicero*, five Books of *Divination*; as also five Books of the *Nature of the Gods*.

Thus far we have a continued Succession of the Stoick Philosophers, the last School, according to *Laertius's* Disposition, of those that were descended from *Thales*.

The End of the Eighth Part.

Francis Lord Verulam

Advancement of Learning, Lib. 3. Sect. 5.

AS for the *Placits* of Ancient Philosophers, as were those of Pythagoras, Philolaus, Xenophon, Anaxagoras, Parmenides, Leucippus, Democritus, and others, (which men use disdainfully to run over); it will not be amiss to cast our eyes with more reverence upon them. For although Aristotle (after the manner of the race of the Ottomans) thought he could not safely reign, unless he made away all his Brethren; yet to those who seriously propound to themselves the inquisition and illustration of Truth, and not Dominion or Magistrality, it cannot but seem a matter of great profit, to see at once before them, the several Opinions of several Authors touching the Natures of things. Neither is this for any great hope conceiv'd, that a more exact truth can any way be expected from these or from the like Theories: For, as the same *Phænomena*, the same *Calculations*, are satisfied upon the Astronomical Principles, both of Ptolomy, and Copernicus: So the popular experience we imbrace, and the ordinary view and face of things, may apply it self to many several Theories; whereas a right investigation of Truth requires another manner of severity and speculation. For as Aristotle saith Elegantly, *That Children at first indeed call all men Fathers; and women Mothers; but afterwards they distinguish them both*: So certainly experience in Childhood, will call every Philosophy, Mother; but when it comes to ripeness, it will discern the true Mother. In the mean time it is good to read over divers Philosophies, as divers Glosses upon Nature; whereof, it may be, one in one place, another in another, is more corrected: Therefore I could wish a Collection made, but with diligence and judgment, *De Antiquis Philosophiis*, out of the lives of Ancient Philosophers; out of the Parcels of Plutarch, of their *Placits*; out of the Citations of Plato; out of the Confutations of Aristotle; out of a sparfed mention found in other Books, as well of Christians, as of Heathens, (as out of Lactantius, Philo, Philostratus, and the rest.): For I do not yet see extant a work of this Nature. But here I must give warning, that this be done distinctly, so as the Philosophies, every one sever'dly, be composed and continued, and not collected by titles and handfuls as hath been done by Plutarch. For every Philosophy, while it is entire in the whole piece, supports it self; and the Opinions maintained therein, give light, strength, and credence mutually one to the other; whereas if they be simple and broken, it will sound more strange and dissonant. In truth, when I read in Tacitus the Actions of Nero, or of Claudius, invested with Circumstances of Times, Persons, and Inducements, I find them not so strange, but that they may be true: But when I read the same Actions in Suetonius Tranquillus, represented by Titles and common Places, and not in order of Time, they seem monstrous, and altogether incredible. So is Philosophy when it is propounded entire; and when it is sliced and articed into fragments.

MONTAIGNE, *Essays*, Chap. 12.

How much do I desire, that, in my life-time, either some other, or Justus Lipsius, the most knowing person that is left us, of a most polished and judicious wit, truly allied to my Turnebus, had both the will and the health, and leisure enough to collect in one Register, according to their divisions and their classes, sincerely and curiously, as much as we can see thereof, the opinions of the ancient Philosophy, upon the subject of our Being, and of our Manners, its Controversies, the credit and succession of its Sects, the application of the Life of the Authors and followers, to their precepts in memorable and exemplary accidents! What an excellent and profitable work would this be?

THE
HISTORY of PHILOSOPHY.

The NINTH PART.
Containing the *ITALICK* Sect.

PYTHAGORAS

CHAP. I.

The Country, Parents, and Time of Pythagoras.

THE *Italick* Sect was distinct from the *Ionick* ly, which from the frequency of Greek Colonies, in respect of the Author, Place, Discipline, was called *Magna Græcia*. Yet was not the and Doctrine; denominated from that part of Ita- Author, *Pythagoras*, an Italian; (a) for, tho' some (a) *Porphy. de vit. Pythag.*

(b) *Plut. Sym.* some think, his Father was of *Metapontum*; (b) some, a *Tyrrhene*, of *Etruria* in *Italy*, yet (c) *Diogenes* and others report him a *Tyrrhene*, of the race of those who inhabited *Lemnus*, *Imbrus*, and *Scyrus*; and that coming upon Traffick to *Samus*, he settled there, and was made free. With these concurs (d) *Aristoxenus*, (to whom *Clemens Alexandrinus* joyneth *Aristarchus* and *Theopompus*) who ((e) in the life of *Pythagoras*) saith, (f) That he was born in one of those Islands which the *Athenians* won, and expelled the ice the *Tyrrhenians*. Whence *Suidas* saith, that *Pythagoras* was a *Samian*, but by birth a *Tyrrhenian*, brought over young by his father from *Tyrrhenia* to *Samus*. And indeed his Country seems inscrutable to (g) *Lycus*; to (h) *Josephus* no less difficult to find out, than that of *Homer*.

Nor is it strange, that the Country of his Father should be question'd, since it is not agreed concerning his name and quality: (i) *Justin* calls him *Demaratus*, (and *Johannes Sarisburiensis*, from *Justine*, *Maratus*) (k) others, *Mamercus*: But the greater part of Writers agree, that he was called (l) *Mnesarchus*; his profession, according to *Hermippus* and others, a Graver of Rings; according to others, a Merchant.

(m) Some there are who affirm, he was a *Phliasian*; *Pausanias* reports, that he was Son of *Euphron*, Grandson of *Hippasus*, who upon the taking of *Phlius* by the *Dorians*, fled to *Samus*. (o) Others, that he was Son of *Hippasus*; *Hippasus* was Son of *Euthyphron*, *Euthyphron* of *Cleonymus*, who was banished out of *Phlius*; and that *Mamercus* (or rather *Mnesarchus*) lived in *Samus*, whence *Pythagoras* was said to be a *Samian*. (p) *Cleanthes* relates he was a *Syrian*, of the City *Tyrus* in *Syria*, (or rather in *Phœnicia*) whence making a Voyage to *Samus* for Traffick, at such time as the *Samians* were much oppress'd with Famine, he furnished them with Corn, in requital whereof, they made him free of their Country. (q) *Hippobotus* saith, that *Pythagoras* was a *Samian*.

Indeed, the most general and approved opinion is, that *Mnesarchus* was a *Samian*, descended from *Anceus*, who first brought a Colony into *Samus*; and that *Pythagoras*, his Son, was born at *Sidon* in *Phœnicia*; but by education, as well as extraction, a *Samian* also. This is ratify'd by the authority of *Jamblichus*, who begins his life with this fabulous Narration.

(r) *Jamblichus* vit. (r) It is reported, that *Anceus*, who liv'd at (s) Same in *Cephalenia*, was descended from *Jupiter*, [others say from *Neptune* and *Astypalæa*] an opinion occasioned by his virtues, or some particular greatness of soul. In prudence and magnanimity he excelled all other *Cephalenians*. This *Anceus* was commanded by the *Pythian Oracle*, to gather together a Colony out of *Cephalenia*, *Arcadia*, and *Thessaly*, augmenting it from *Athens*, *Epidaurus*, and *Chalcis*; and that having got them together under his command, he should people an Island, named from the richness of the soyl *Melamphyllus*, (t) black-leaf) and call the City which they built *Samus*, from Same in *Cephalenia*. The Oracle was thus:

Instead of Same, *Samus* thou (an Isle)
Shalt plant *Anceus*, which men *Phyllas* style.

That this Colony was drawn from those several places, appears not only from their religious rites and sacrifices, (which are derived from the Countries out of which those people came) but also from the affinities and mutual conventions made by the *Samians*. *Mnesarchus* and *Pythais*, the parents of *Pythagoras*, are said to be descended from the family of the same *Anceus*, that planted this Colony there. [(u) Of *Pythais*, it is confirmed by (u) *Porphyry*, *Apollonius*.] Which nobleness of their extraction, being much celebrated amongst their Country-men, a *Samian Poet* declar'd him to be the son of *Apollo*, in (x) these words.

(x) Cited also by *Porphyrius*:

Pythais of all *Samians* the most fair,
Jove-lov'd *Pythagoras* to *Phœbus* bare:

Which report was rais'd thus. This *Mnesarchus* the *Samian* being upon occasion of Traffick at *Delphi*, with his Wife, who was at that time newly with Child, and not known to be so; he enquired of the Oracle concerning his Voyage to *Syria*. The Prophetess told him, That his Journey should be according to his mind, very advantageous. That his Wife was already with Child, and should bring forth a Son that should exceed all men that ever were, in Beauty and Wisdom, and through the whole course of his Life conduce much to the benefit of Mankind. *Mnesarchus* considering, That the Oracle would not have spoken of his Son, seeing that he demanded nothing concerning him, if there were not something extraordinary to be expected from him, immediately hereupon changed the Name of his Wife, which before was *Pai thenis* to *Pythais*, from the Prophetess; and as soon as She was delivered at *Sidon* in *Phœnicia*, they called the Child *Pythagoras*. For *Epimenides*, *Eudoxus*, *Xenocrates*, [and others mentioned by (y) *Apollonius*] are to be rejected, who affirm (y) *Porphyry*. *Apollo* at that time lay with *Pythais*, (z) and got pag. her with Child, (She not being so before) and (z) Adding & thereupon foretold it by the Prophetess, this is not to be admitted. But that the Soul of *Pythagoras*, being of the Regimine of *Apollo*, (whether as a Follower, or some other way more near to him) was sent to men, none can doubt, since it may be evinc'd by these circumstances of his Birth, and the universal Wisdom of his mind. Thus much (saith *Jamblichus*) concerning his Generation. Whence we see the Greeks did so much admire his Wit, that they thought it could be nothing less than Divine, and thereupon fabled *Apollo* to be his Father.

Pythagoras was the youngest of three Sons; the eldest (a) *Cleanthes*, calls *Eunestus*; *Luertius*, (a) *Porphyry*, and *Suidas* *Eunomus*; the second, *Tyrrhenus*. He had likewise an Uncle, *Zoilus*, mentioned by *Laertius*.

The reasons for establishing the times concerning *Pythagoras*'s life will hereafter be set forth, upon occasion of his going into *Italy*. In the mean time I shall desire it may be admitted, that he was born about the third year of the fifty-third Olympiad: That being eighteen years old, he heard *Thales* and others. Then he went to *Phœnicia*, thence into *Egypt*, where he staid twenty-two years; afterwards at *Babylon* twelve years, then returned to *Samus*, being fifty-six years old; and from thence went into *Italy*. The particulars whereof shall in their several places be more fully discoursed.

C H A P. II.

His first Education and Masters.(a) Vit. Pyth.
cap. 2.

MNesarchus (saith (a) *Jamblicus*) returning from Syria to Samus, with much wealth, and abundance of Merchandize, built a Temple, which he dedicated to Apollo the Pythian, and brought up his son in several excellent disciplines, committing him sometimes to Creophylus, sometimes to Pherocydes of Syrus, and to almost all the Prefects of the Temple; as being blest with the fairest and most divine son that ever man had.

(b) Laert.

(c) St. August.
Ep. 9. ad Volus.

Some there are who affirm, that (b) he was first a Wrestler; and that (c) when Pherocydes first discoursed among the Greeks, concerning the immortality of the Soul, Pythagoras the Samian, moved at the novelty of the discourse, became of a Wrestler, a Philosopher. But these relations seem to have been occasion'd by confounding Pythagoras the Philosopher with a Wrestler of that name, his contemporary, of whom hereafter.

(d) Porph. p. 2.

(e) In Pythag.

(d) *Cleantes* and (e) *Suidas* relate, That he first heard Pherocydes the Syrian, at Samus; and in the second place *Hermodamas*, τῷ Κρεοφύλῳ, the Creophylian, at the same Samus, then very old.

(f) Jamb.

(f) *Hermodamas* was his name, but he was surnamed *Creophylus*. Wherefore perhaps instead of τῷ Κρεοφύλῳ, should be (g) read, τῷ Κρεοφύλῳ; or else he was termed a *Creophylian*, as well as surnamed *Creophylus*; (b) for that reported to be descended from *Creophylus* a (i) Samian, who, in times past, entertained *Homer* as his guest, and was, as some say, his Master and his Rival in Poetry. But (k) *Apuleius*, who saith, *Hermodamas*, or *Leodamas*, as he calls him, was disciple to that *Creophylus*, an error no less in Chronology, than when he saith, *Pythagoras* was Disciple to *Plato*, unless the whole Text be corrupted.

(l) Jam. contin.

(l) *Pythagoras* his father dying, he grew up in prudence and temperance, being, whilst he was yet very young, generally much respected and honoured, even by the most aged. His presence and discourse attracted all persons; to every one on whom he looked, he appeared worthy admiration, insomuch that many averred, he was the son of a deity. He being thus confirm'd by the great opinions that were had of him, by the education of his infancy, and by his natural excellency, made himself daily more worthy of these advantages, adorning himself with Devotions, with Sciences, with excellent Conversation, with constancy of Mind, with grave Deportment, and with a sweet inimitable Serenity; never transported with anger, laughter, emulation, contention, or any other disorder; living like some good genius, come to converse in Samus. Hereupon, tho' young, a great report was spread of him, to *Thales* at Miletus, to *Bias* at Priene, two of the Sages, and to all the Cities thereabout; many in all those parts commending the young man, made him famous, calling him by a Proverb, [The Samian Gomer] or, [The fair-hair'd Samian].

About this time began the tyranny of *Polycrates*, when *Pythagoras* about eighteen years old, foreseeing the event, and how obstructive it would prove to his designs, and to the pursuit of Learning,

which he intended above all things, [(m) being (m) *Laert.* young, and delirous of knowledge, left his Country to go to travel] stole away privately by night, taking with him *Hermodamas*, (surnamed *Creophylus*, who was Host to *Homer*) and made a voyage to *Pherocydes*, [at *Lisbus*, to whom, *Laertius* saith, he was recommended by his Uncle *Zoilus*] and to *Anaximander*, the natural Philosopher, and to *Thales* at Miletus. With each of these he conversed severally in such manner, that they all lov'd him, admired his parts, and communicated their learning to him. [(n) Under *Anaximander* the Milesian, he is said to have studied the knowledge of natural things] *Thales* entertained him kindly, and, wondring at his excellency above other youths, which much surpassed the report he had received, assisted him as far as he was able in Sciences; withal, accusing his own age and infirmity, he advised him to make a voyage to Egypt, there to get acquaintance with the Priests of Memphis and (o) *Diospolis*, since of them he had learned those things, for which he was by many esteemed wise, tho' he were not of such forwardness, neither by nature or education, as he saw *Pythagoras* to be. Whence he presaged, that, if he conversed with those Priests, he should become the most Divine and Wisest of Men.

This *Pherocydes* fell sick at *Delus*: That he outlived not the fifty-seventh Olympiad, is manifest from a (p) Letter which he writ the day before (p) *Laert.* his death to *Thales*, who died the first year of the Olympiad following. And tho' the greater part of Authors write, that at the same time, when the Cylonians in Crotana, conspir'd against the Pythagoreans, which was not long before *Pythagoras* died) *Pythagoras* was gone from Italy to *Delus*, to visit and bury *Pherocydes*, yet *Dicaearchus* and other more accurate Authors (saith * *Porphyrius*) averr, that *Pythagoras* was present when that conspiracy broke forth; and that *Pherocydes* died before *Pythagoras* departed from Samus. The former relation hath imposed, among others, † upon the learned *Salmasius*, who, † to reconcile this with other circumstances concerning *Pherocydes*, is constrain'd to imagine another person of the same name. It was therefore before *Pythagoras* left Samus, that (q) *Pherocydes*, being desperately seized by a Phthiriasis, he went to visit him, and attended him in his sickness until he died, and then performed the rites of funeral, as to his Master. For *Laertius* and *Porphyrius* add, that after the death and burial of *Pherocydes*, he returned to Samus, out of a desire to enjoy the society of *Hermodamas*.

(r) *Phavorinus*, in the seventh Book of his various History, and (s) *Porphyrius*, relate, that after he had lived a while with *Hermodamas*, he first taught Wrestlers, and of them *Eurimenes*, to diet with flesh, (whereas other Wrestlers used to eat dry'd Figs, Cheese-curds, and Whey) whereby he became Victor at the Olympick Games. But *Laertius* and (t) *Jamblicus* observe, that this is falsely ascribed to *Pythagoras* the Samian, (for he allowed not the eating of flesh) but was indeed the invention of *Pythagoras*, son of *Eratocles*, of whom hereafter.

How be travelled to Phœnicia.

(b) Reading
ὅζαι, ἔτιωσ.

Here he conferred with the Prophets, successors of *Mocrus* the Physiologist, and with others, and with the *Phœnician* Priests, and was initiated into all the mysteries of *Byblus*, and *Tyre*, and sundry of the (b) principal sacred Institutions in divers other parts of *Syria*, not undergoing these things out of Superstition, as may be imagined; but out of love to knowledge, and a fear, lest any thing worthy to be known, which was preserved amongst them, in the miracles or mysteries of the gods, might escape him. Withal, not being ignorant, that the rites of those places were deduced from the *Egyptian* ceremonies, by means whereof he hoped to participate of the more sublime and divine mysteries in *Egypt*, which he pursued with admiration, as his Master *Thales* had advised him.

How he travell'd to Egypt:

* For. $\mu\acute{o}\nu\omicron\nu\nu\tau\epsilon$
 $\delta\iota\phi\upsilon\epsilon\gamma\zeta\acute{\alpha}\mu\epsilon-$
 $\nu\Theta$, reading
 $\epsilon\pi\alpha\phi\upsilon\epsilon\gamma\zeta\acute{\alpha}-$
 $\mu\epsilon\nu\Theta$ $\tau\epsilon$ $\mu\acute{\omega}\nu$
 $\epsilon\iota\varsigma$ $\text{'Α} \iota \gamma \nu \eta \tau \omicron \nu$
 $\delta \acute{\alpha} \pi \eta \lambda \alpha \upsilon \varsigma, \delta \iota \varsigma.$

of all the *Egyptian* Letters, which is called *Epigraphick*; the second, *Hieratick*, used by those who write of Sacred things; the last and most perfect *Hieroglyphick*, whereof one is *Curio-logicck*, the other, *Symbolick*. Of the *Symbolick*, one is properly spoken by *Imitation*, another is written

written as it were *Tropically*; another on the contrary doth allegorize by *Ænigms*. For instance, in the *Kyriologick* way, to express the Sun, they make a Circle; the Moon, a Crescent. *Tropically* they do properly traduce, and transfer, and express by exchanging some things, and variously transfiguring others. Thus when they deliver the praises of Kings, in Theological Fables, they write by *Anaglyphicks*. Of the third kind, by *Ænigms*, let this be an example: All other Stars, by reason of their oblique course, they likened to the bodies of Serpents, but the Sun to that of a *Beetle*, because having formed a ball of Cow-dung, and lying upon its back, it rolls it about (from claw to claw.) They say moreover, that this creature liveth six months under ground, and the other half of the year upon the earth; and that it immits seed into the Globe (of the earth) and so generates, there being no female of that species. Hitherto *Clemens*.

(i) Jam. cap. 4. continuing.

(k) Laert. 1. Strom. 1. pag. 302.

Thus (b) being acquainted with the learning of that Nation, and enquiring into the Commentaries of the Priests of former times, he knew the observations of innumerable Ages, as *Valerius Maximus* saith. And (i) living admir'd and belov'd of all the Priests and Prophets with whom he conversed, he informed himself by their means accurately, concerning every thing; not omitting any person, eminent at that time for learning, or any kind of religious rites; nor leaving any place unseen, by going into which he conceived that he might find something extraordinary. [For (k) he went into the *Adyta* of the Egyptians, and, as (l) *Clemens* saith, permitted himself to that end to be circumcised) and learned things not to be communicated concerning the gods, mystick Philosophy.] He travelled to all the Priests, and was instructed by every one, in that wherein they were particularly learned. In Egypt he lived twenty-two years, in their Private Sacred Places, studying Astronomy and Geometry, and was initiated (not cursorily or casually) into all the religious Mysteries of the Gods.

Laertius saith, He made three Cups of silver, and presented them to each [Society] of the Egyptian Priests; which, as we said, were three, of *Heliopolis*, *Memphis*, and *Thebes*.

(f) de finib. 5. (g) Florid. 2. (h) Præp. 10.

(i) lib. 8. cap. 7. (k) lib. 4. c. 2.

(a) **A** Masis dying in the third year of the sixty-third Olympiad, (which was the 223d. of *Nabonasser*) his son *Psammitus* succeeded him, who is by *Cresias* named *Amistæus*, and seems to be the same whom (b) *Pliny* calls *Semniserteus*, (tho' (c) others interpret it of *Amasis*) in whose Reign, saith he, *Pythagoras* was in Egypt. At this time *Cambyſis* invaded and conquered Egypt, (d) by whom *Pythagoras* was taken prisoner, and sent to Babylon. There he lived [(e) with the most excellent among the Chaldeans, and] with the Magi, the Persian Magi, (for so (f) *Cicero*, (g) *Apuleius*, and (h) *Eusebius* term them) in respect that Babylon was then under that Monarchy; which is the meaning also of (i) *Valerius Maximus*, and (k) *Lactantius*, who affirm, that he went from Egypt to the

Persians, (not to Persia, as (l) some conceive) and resigned himself to the most exact prudence of the Magi to be formed.

(m) The Magi received him kindly, and instructed him in the most profound and sublime mysteries of the worship of the gods. By their means also he arrived at the height of Arithmetic, Musick, and other Mathematical Sciences. From them, saith (n) *Valerius Maximus*, he, with a docile mind, received the motions of the Stars, their power, property, and effects, (o) their states and periods; the various effects of both in the natures of men, as likewise the remedies of diseases, which are purchased at vast rates by Sea and Land.

Of the Chaldeans, with whom he lived in Babylon, (p) *Diogenes* particularly instanceth *Zabratius*, by whom he was cleansed from the pollutions of his life past, and instructed from what things virtuous persons ought to be free; and learnt the discourse concerning Nature, (Physick) and what are the principles of the Universe. This *Zabratius* was probably the same with that *Zoroastres*, one of the Persian Magi, whom, (q) *Apuleius* saith, he chiefly had for Teacher, terming him, *Omni's divini arcanum antistatem*: And the same with *Mazaratus* the Assyrian, whom (r) *Alexander*, in his Book of Pythagorick Symbols, affirms to have been Master to *Pythagoras*; the same whom (s) *Suidas* calls *Zares*; *Cyril*, *Zaran*; *Plutarch*, *Zaratas*: Whence (t) some conceive, that they all mean *Zoroastres* the Magus, who was also called *Zarades*, as evidently appears from *Theodoret* and *Agathias*. Indeed he could not hear *Zoroastres* himself, as being some Ages later; yet it appears from the relation of *Apuleius*, that many conceived *Pythagoras* to have been a follower of *Zoroastres*. Perhaps him whose doctrine *Pythagoras* embraced, (for (u) *Clemens* saith, he explained *Zoroastres* the Persian Magus) posterity believed to have been his Master. This *Nazaratus* the Assyrian, was by some supposed to be the Prophet *Ezekiel*, which opinion *Clemens* oppugns; nevertheless (as Mr. *Selden* observes) the most accurate Chronology teacheth, that *Ezekiel* and *Pythagoras* flourished together, betwixt the 50th and 52d. Olympiad; and therefore the account of time hinders not, but that this *Nazaratus* might be *Ezekiel*.

(x) *Diogenes* (in his Treatise of incredible things, beyond *Thule*) adds, that he went also to the Hebrews, which (y) *Lactantius* expressly denies. (z) *Eusebius* saith, He is reported to have heard the Persian Magi, and the Diviners of the Egyptians, at what time some of the Jews were gone to Babylon, others to Egypt. That he conversed with the Jews at Babylon, (saith the (a) Bishop of Armagh) may be argued, for that he transferred many of their Doctrines into his Philosophy, as *Hermippus* declares in his first Book of things concerning *Pythagoras*, cited by (b) *Josephus*; and in his first Book of Law-givers, cited by (c) *Origen*, which likewise is confirmed by (d) *Aristobulus* the Jew, a Peripatetical Philosopher, in his first Book to *Philometor*; who moreover was induced by the same reason to believe, that the Books of *Moses* were translated into Greek before the Persian Empire; whereas it is much more probable, that *Pythagoras* receiv'd that part of his Learning from the conversation which he had with the Hebrews.

Alex.

(e) Clem. Alex.
Strom. 1.

(e) Alexander adds, that he heard the Galatæ and the Brachmanes. From Chaldea (saith Apuleius) he went to the Brachmanes; these are wise persons, a Nation of India, for which reason he went to their Gymnosophists. The Brachmanes conferred many things to his Philosophy; what are the documents of minds, what the exercises of bodies, how many are the parts of the soul, how many the vicissitudes of life; what torments or rewards, according to their merits, are allotted to men after death.

(f) Porph.

(f) Diogenes adds, that he went also to Arabia, and lived with the King there; but it is not easie to find the name of the Court of the King of that wandring Nation.

(g) Clem.
Strom. 1.

(h) Porph. p. 8.

(i) Porph. p. 4.

As concerning his Learning, it is generally said, that (g) he learned many, and those the most excellent parts of his Philosophy, of the Barbarians. (h) Diogenes affirms, he gained the greatest part of his wisdom from these Nations. (i) The Sciences which are called Mathematical, he learnt of the Egyptians, and the Chaldeans, and the Phœnicians; for the Egyptians were of old studious of Geometry; the Phœnicians, of numbers and proportions; the Chaldeans, of Astronomical Theorems, divine rites, and worship of the gods; and other institutions concerning the course of life, he learned and received of the Magi. These are more generally known, as being committed to writing; but the rest of his institutions are less known.

(k) Joseph. contra Apion. lib. 1.

(l) Vossius de Philos. Sect. cap. 6. sect. 2.

(k) Hermippus saith, He embraced the opinions of the Thracians; which (l) some interpret of Pittacus, whose Father Hyrrhadius was of that Country: But with more reason may it be understood of Orpheus, from whom Jamblichus acknowledgeth, that he derived much of the Theological part of his Science.

CHAP. VI.

How he returned to Samus.

Jamb. c. 2, 5.
(for the Chapters are ill distinguished.)

HAVING lived at Babylon twelve years, he returned to Samus, [for that he was re-deemed by one Gyllus Prince of Crotona, Apuleius cites but for a less creditable relation] about the fifty-sixth year of his age, where being known by some of the most ancient persons, he was looked upon with greater admiration than before, for he seemed to them more wise, more beautiful, and more divinely majestic. His Country summoned him to some publick employment, that he might benefit the generality, and communicate his knowledge: Which he not refusing, endeavoured to instruct them in the symbolical way of learning, altogether resembling that of the Egyptians, in which he himself had been instituted. But the Samians not affecting this way, did not apply themselves to him.

Pythagoras, tho' he saw that no man came to him, or sincerely affected his learning, endeavoured nevertheless all possible ways to continue amongst them, not despising or undervaluing Samus, because it was his Country. And whilst he was very desirous that his Country-men should taste, tho' against their wills, the sweetness of his Mathematicks, he observed in a Gymnasium, a young man that play'd at Tennis dexterously and nimbly, but otherwise poor and indigent: And imagining that this Youth would be wholly guided by him, if without labour he should

supply him with necessaries; when they had done washing, he called him, to him and told him, That he would continually furnish him with all things, sufficient for his maintenance, if he would learn briefly, and without labour, and constantly (that he might not be over-burthened) some Mathematicks, which he himself, when he was young, had learned of the Barbarians, which had now left him, by reason of old age and forgetfulness. The Youth promising, and being allured by the hopes of maintenance, he endeavoured to initiate him in Arithmetick and Geometry, drawing the demonstration of each in a Table; and teaching him, he gave the young man for every Scheme (or Diagram) three Oboli, as a reward and compensation. And this he continued to do a long time, out of a love of glory, and industriously bringing him into the Theory by an exact method. But when the young man, having made a good progress, was sensible of the excellency, both of the pleasure and the consequences in Mathematicks, the wise man perceiving it, and that he would not now quit his learning, what inconvenience soever he might suffer, pretended, that he had no more Trioboli to give him. 'Tis no matter, saith the youth, I am able to learn and receive your Arithmeticks without it. Here replied, But I have not sufficient to find food for my self, wherefore I must now give over, to acquire necessaries for every day, and daily food; nor is it fit now to be taken up with Tables and fruitless Studies. Whereupon the young man, loth to be hindered from continuing his learning, replied, I will supply you, and in some manner require you; for I will give you for every Scheme three Oboli. And from thence forward became so much in love with Mathematicks, that he alone of all the Samians was commended with Pythagoras, being likewise of the same name, son of Eratocles. His Aleiptick Commentaries are extant, and his directions to the Wrestlers of that time, to eat flesh instead of dried Figs; which by some are falsely ascribed to Pythagoras the son of Mnesarchus, [as is formerly intimated] but by * Pliny, * lib. 23. cap. 7. to one of that name; who professed Exercises of the Body, which agreeth with the relation of Jamblichus.

CHAP. VII.

How he went to Delus, Delphi, Creet, and Sparta.

NOT long after, according to the relation of (a) Jamblichus, Pythagoras went to Delus, where he was much admir'd by the Inhabitants, for that he prayed only at the Altar of Apollo Genitor, called (b) unbloody, [which stands behind the horn Altar] (c) because at it were offered only Wheat, and Barley, and Cakes; but no Victim, as Aristotle saith, in his Treatise concerning the Delian Commonwealth) and applied himself to none but the attendants thereof.

From Delus, (d) Jamblichus saith, he went to all places of Oracle. (e) At Delphi he writ an Elegy upon the Tomb of Apollo, whereby he declared, that Apollo was son of Silenus, but slain by Pyrho, and buried in the place called (f) Triops, which was so named, for that the three daughters of Triopas mourned there for Apollo. At Delphi also (g) Aristoxenus saith) he learned many moral documents of Themistoclea.
